 5 (See section Business Validation). The result of this check can be:

- 6 | **[Business Validation NOK]** If the Amendment Instruction is not valid, it is rejected and T2S sends a  
 7 "Rejected" SecuritiesSettlementConditionModificationStatusAdvice with the corresponding reason code(s)  
 8 to inform the T2S Actor (Instructing party) that its Amendment Instruction has been rejected.

1 | **I [Business Validation OK]** If the Amendment Instruction passes the Business Validation, then T2S  
2 | sends an "Accepted" SecuritiesSettlementConditionModificationStatusAdvice to inform the T2S Actor (In-  
3 | structing party) that its Amendment Instruction has been accepted and continues with its processing.

#### 4 | 2.8.3.2 Referenced Instruction Status Check

5 | T2S checks the status of the Referenced Instruction to identify if the Amendment Instruction can be execut-  
6 | ed. The result of this check can be:

7 | **I [Referenced Instruction Status Check NOK]** If the Referenced Instruction fulfils any of the follow-  
8 | ing conditions:

- 9 | – The Settlement Status of the Referenced Settlement Instruction or Settlement Restriction is "Settled";
- 10 | – The Settlement Status of the Referenced Settlement Instruction or Settlement Restriction is "Partially  
11 | Settled" and the modification does not refer to "Priority";
- 12 | – The Cancellation Status of the Referenced Settlement Instruction or Settlement Restriction is "Can-  
13 | celled";
- 14 | – The Referenced Settlement Instruction is identified as CoSD and the Amendment Instruction does not  
15 | aim to remove a linkage having the CSD as the Instructing Party.

16 | The Amendment Instruction is rejected and T2S sends a "Denied" SecuritiesSettlementConditionModifica-  
17 | tionStatusAdvice with the relevant reason code to inform the T2S Actor (Instructing party) that its Amend-  
18 | ment Instruction has been denied.

19 | **I [Referenced Instruction Status Check OK]** If the Referenced Instruction does not fulfil any of the  
20 | conditions, then T2S modifies the Referenced Instruction <sup>464</sup> and sends an "Executed" SecuritiesSettle-  
21 | mentConditionModificationStatusAdvice to inform the T2S Actor (Instructing party) that its Amendment  
22 | Instruction has been executed.

### 23 | 2.8.4 Inbound and outbound messages

#### 24 | 2.8.4.1 Inbound message

25

ISO MESSAGE	ISO CODE
SecuritiesSettlementConditionModificationRequest	sese.030.001.08

464 In case the Referenced Instruction is under Partial Release Process and the Amendment Instruction adds a settlement link or disallows partial settlement, the Partial Release Process will be cancelled. Also, in case the Amendment Instruction adds a non-reciprocal link towards a different Settlement Instruction which is under Partial Release Process, this Partial Release Process will be cancelled.

3 2.9 Send Amendment Instruction of a Settlement Restriction on  
4 Cash Balance

5 2.9.1 Introduction

6 This section describes, based on a use case, the outbound messages resulting from the processing of an  
7 Amendment Instruction received in T2S via the inbound message IntraBalanceMovementModificationRe-  
8 quest.

9 This use case covers the situation where a T2S Actor wants to send an Amendment Instruction (See section  
10 Instruction Amendment) to amend a Settlement Restriction on Cash Balance.

11 Only the T2S Actor - Instructing party of the Amendment Instruction, is involved in this use case.

12 2.9.2 Activity Diagram

13  
14 The inbound message for an Amendment Instruction is processed as follows:

15 2.9.2.1 Communication Processing

16 Detailed description can be found at section [Communication processing](#) [▶ 915].

1 2.9.2.2 Amendment Instruction Lifecycle Processing

2 Detailed description can be found at section [Amendment Instruction Lifecycle Processing](#) [▶ 986].

3 **2.9.3 Amendment Instruction Lifecycle Processing**

4

5 2.9.3.1 Business Validation

6 T2S checks whether the Amendment Instruction passes the Business Validation, including privilege check  
 7 (See section Business Validation). The result of this check can be:

- 1 | **[Business Validation NOK]** If the Amendment Instruction is not valid, it is rejected and T2S sends a
- 2 | "Rejected" IntraBalanceMovementModificationRequestStatusAdvice with the corresponding reason
- 3 | code(s) to inform the T2S Actor (Instructing party) that its Amendment Instruction has been rejected.
- 4 | **[Business Validation OK]** If the Amendment Instruction passes the Business Validation, then T2S
- 5 | sends an "Accepted" IntraBalanceMovementModificationRequestStatusAdvice to inform the T2S Actor
- 6 | (Instructing party) that its Amendment Instruction has been accepted and continues with its processing.

7 | 2.9.3.2 Referenced Settlement Restriction Status Check

8 | T2S checks the status of the Referenced Settlement Restriction to identify if the Amendment Instruction can  
9 | be executed. The result of this check can be:

- 10 | **[Referenced Settlement Restriction Status Check NOK]** If the Referenced Settlement Restriction
- 11 | fulfils any of the following conditions:
- 12 | – The Settlement Status of the Referenced Settlement Restriction is "Settled";
- 13 | – The Settlement Status of the Referenced Settlement Restriction is "Partially Settled" and the modifica-
- 14 | tion does not refer to "Priority";
- 15 | – The Cancellation Status of the Referenced Settlement Restriction is "Cancelled".

16 | The Amendment Instruction is rejected and T2S sends a "De-

17 | nied" IntraBalanceMovementModificationRequestStatusAdvice with the relevant Reason Code to inform the

18 | T2S Actor (Instructing party) that its Amendment Instruction has been denied.

- 19 | **[Referenced Settlement Restriction Status Check OK]** If the Referenced Settlement Restriction
- 20 | does not fulfil any of the conditions, then T2S modifies it and sends an "Executed" IntraBalanceMove-
- 21 | mentModificationRequestStatusAdvice to inform the T2S Actor (Instructing party) that its Amendment
- 22 | Instruction has been executed.

## 2.10 Send Hold/Release Instruction

### 2.10.1 Introduction

This section describes, based on a use case, the outbound messages resulting from the processing of a Hold/Release Instruction received in T2S via the inbound message SecuritiesSettlementConditionModificationRequest.

This use case covers all the situations where a T2S Actor wants to send a Hold/Release Instruction (See section Hold and Release):

- | By putting the Party Hold indicator of the Hold/Release Instruction to "Yes" (Hold Instruction) or "No" (Release Instruction);
- | By putting the CSD Hold indicator of the Hold/Release Instruction to "Yes" (Hold Instruction) or "No" (Release Instruction);
- | By putting the CSD Validation Hold indicator of the Release Instruction to "No" (Release Instruction).

The following T2S Actors are potentially involved in this use case:

- | T2S Actor - Instructing party: The T2S Party or the relevant CSD, sender of the Hold/Release Instruction;
- | T2S Actor - Counterparty: The T2S Actor that instructed the Settlement Instruction's Counterpart.

### 2.10.2 Activity Diagram

#### 2.10.2.1 Communication Processing

Detailed description can be found at section [Communication processing](#) [ > 915].

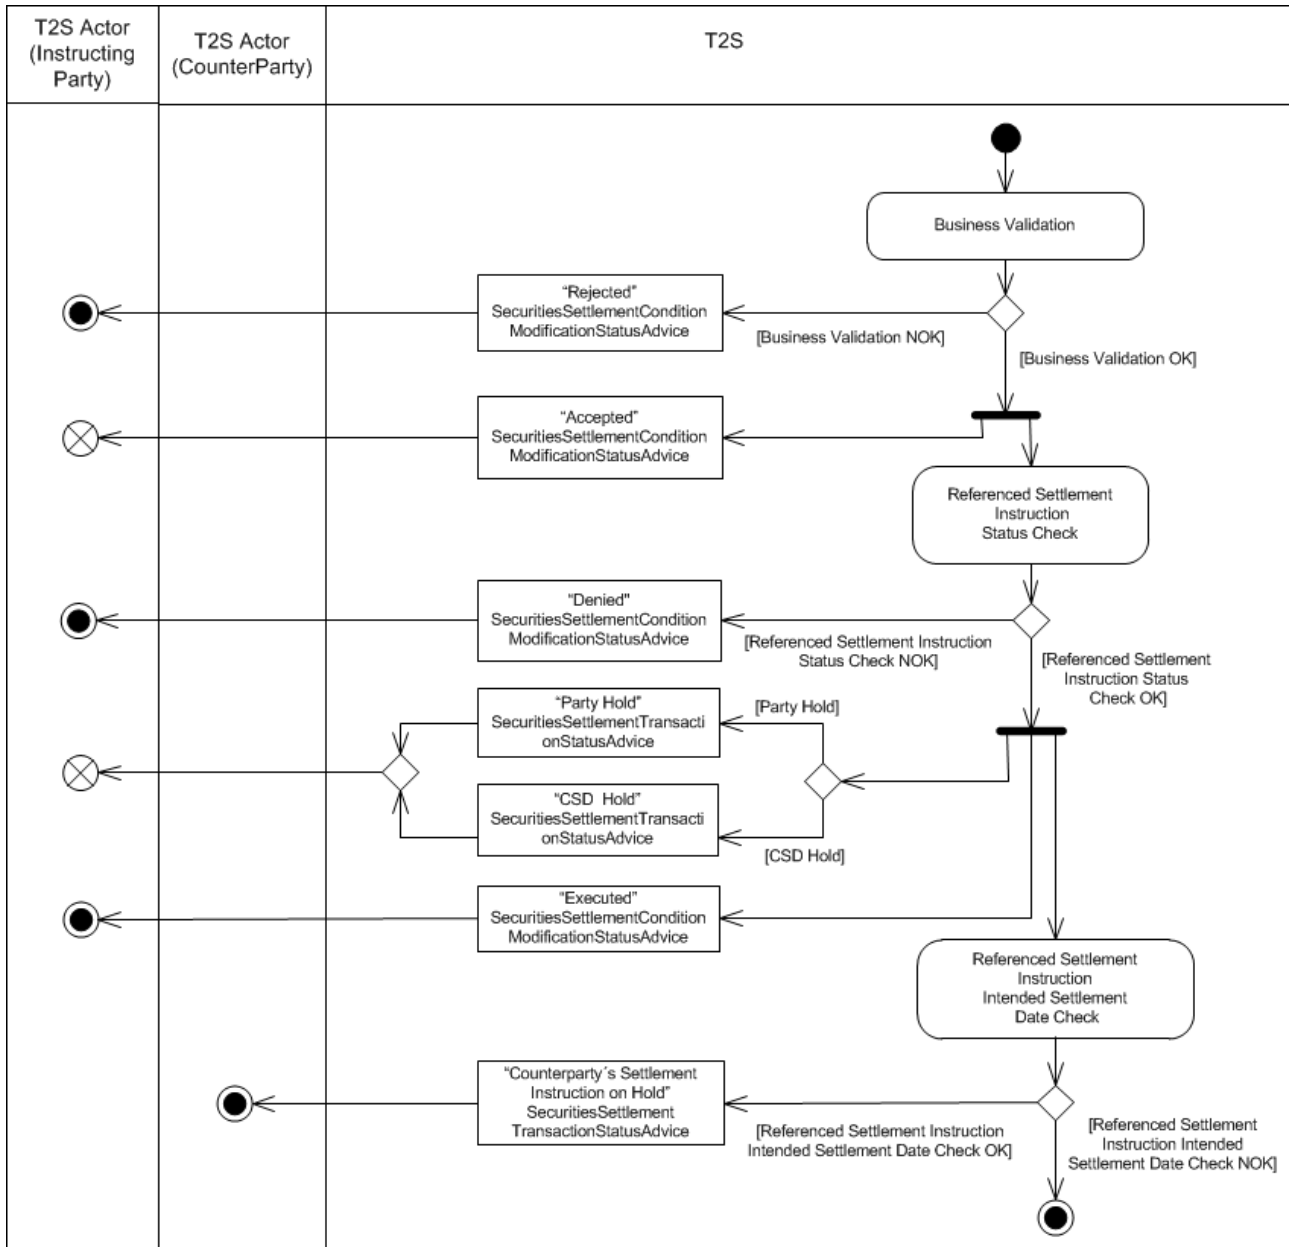

1 2.10.2.2 Lifecycle Processing Hold Instruction

2 Detailed description can be found at section [Lifecycle Processing Hold Instruction](#) [▶ 989].

3 2.10.2.3 Lifecycle Processing Release Instruction

4 Detailed description can be found at section [Lifecycle Processing Release Instruction](#) [▶ 991].

5 **2.10.3 Lifecycle Processing Hold Instruction**

6

7 2.10.3.1 Business Validation

8 T2S checks whether the Hold Instruction passes the Business Validation, including privilege check (See sec-  
9 tion Business Validation). The result of this check can be:

1 | **[Business Validation NOK]** If the Hold Instruction is not valid, it is rejected and T2S sends a "Rejected" SecuritiesSettlementConditionModificationStatusAdvice with the corresponding reason code(s) to inform the T2S Actor (Instructing party) that its Hold Instruction has been rejected.

4 | **[Business Validation OK]** If the Hold Instruction passes the Business Validation, then T2S sends an "Accepted" SecuritiesSettlementConditionModificationStatusAdvice to inform the T2S Actor (Instructing party) that its Hold Instruction has been accepted and continues with its processing.

### 7 | 2.10.3.2 Referenced Settlement Instruction Status Check

8 | T2S checks the status of the Referenced Settlement Instruction to identify if the Hold Instruction can be executed. The result of this check can be:

10 | **[Referenced Settlement Instruction Status Check NOK]** If the Referenced Settlement Instruction fulfils any of the following conditions:

12 | – The Settlement Status of the Referenced Settlement Instruction is "Settled";

13 | – The Cancellation Status of the Referenced Settlement Instruction is "Cancelled";

14 | – The relevant hold status (Party Hold Status / CSD Hold Status) of the Referenced Settlement Instruction is already put to "Yes";

16 | – The Referenced Settlement Instruction is identified as CoSD.

17 | The Hold Instruction is rejected and T2S sends a "Denied" SecuritiesSettlementConditionModification-  
18 | StatusAdvice with the relevant reason code to inform the T2S Actor (Instructed Party) that its Hold  
19 | Instruction has been denied.

20 | **[Referenced Settlement Instruction Status Check OK]** If the Referenced Settlement Instruction  
21 | does not fulfil any of the conditions above, or Partial Release Process is activated <sup>465</sup>, then T2S sends a  
22 | "Party Hold" SecuritiesSettlementTransactionStatusAdvice or "CSD Hold" SecuritiesSettlementTransac-  
23 | tionStatusAdvice to inform that its Settlement Instruction has been put on hold and consequently sends  
24 | an "Executed" SecuritiesSettlementConditionModificationStatusAdvice to inform the relevant T2S Actor  
25 | (Instructing party) that its Hold Instruction has been executed.

### 26 | 2.10.3.3 Referenced Settlement Instruction Intended Settlement Date Check

27 | T2S checks if the Intended Settlement Date of the Referenced Settlement Instruction has been reached in  
28 | order to communicate to the T2S Actor (Counterparty) that its Settlement Instruction will not be settled due  
29 | to the hold status of the Instructing Party's Settlement Instruction. The result of this check can be:

30 | **[Referenced Settlement Instruction Intended Settlement Date Check NOK]** If the Intended  
31 | Settlement Date has not been reached, T2S does not perform any communication to the T2S Actor  
32 | (Counterparty).

33 | **[Referenced Settlement Instruction Intended Settlement Date Check OK]** If the Intended Set-  
34 | tlement Date has been reached, T2S sends a "Counterparty's Settlement Instruction on Hold" Securi-

---

465 In case the Referenced Settlement Instruction is under Partial Release Process the Hold Instruction is executed and the Partial Release Process is cancelled.

1 tiesSettlementTransactionStatusAdvice to inform the relevant T2S Actor (Counterparty) that its Settle-  
 2 ment Instruction can not be settled due to its Counterparty's Settlement Instruction is on Hold. No com-  
 3 munication is sent to the T2S (Instructing Party) since it was already advised of the Hold status in the  
 4 previous step.

5 **2.10.4 Lifecycle Processing Release Instruction**

6

7 **2.10.4.1 Business Validation**

8 T2S checks whether the Release Instruction passes the Business Validation, including privilege check (See  
 9 section Business Validation). The result of this check can be:

- 1 | **[Business Validation NOK]** If the Release Instruction is not valid, it is rejected and T2S sends a "Re-  
2 | jected"SecuritiesSettlementConditionModificationStatusAdvice with the corresponding reason code to in-  
3 | form the T2S Actor (Instructing party) that its Release Instruction has been rejected.
- 4 | **[Business Validation OK]** If the Release Instruction passes the Business Validation, then T2S sends  
5 | an "Accepted"SecuritiesSettlementConditionModificationStatusAdvice to inform the T2S Actor (Instructing  
6 | party) that its Release Instruction has been accepted and continues with its processing.

#### 7 | 2.10.4.2 Referenced Settlement Instruction Status Check

8 | T2S checks the status of the Referenced Settlement Instruction to identify if the Release Instruction can be  
9 | executed. The result of this check can be:

- 10 | **[Referenced Settlement Instruction Status Check NOK]** If the Referenced Settlement Instruction  
11 | fulfils any of the following conditions:

- 12 | – The Cancellation Status of the Referenced Settlement Instruction is "Cancelled";
- 13 | – The relevant hold status (Party Hold Status / CSD Hold Status / CSD Validation Hold) of the refer-  
14 | enced Settlement Instruction is already "No".

15 | The Release Instruction is rejected and T2S sends a "Denied" SecuritiesSettlementConditionModifica-  
16 | tionStatusAdvice with the relevant reason code to inform the relevant T2S Actor (Instructing party)  
17 | that its Release Instruction has been denied.

- 18 | **[Referenced Settlement Instruction Status Check OK]** If the Referenced Settlement Instruction  
19 | does not fulfil any of the conditions above, T2S executes the Release Instruction and sends an "Execut-  
20 | ed" SecuritiesSettlementConditionModificationStatusAdvice to inform the relevant T2S Actor (Instructing  
21 | party) that its Release Instruction has been executed and an "Other Hold remain(s)" SecuritiesSettle-  
22 | mentTransactionStatusAdvice or "No Hold remain(s)" SecuritiesSettlementTransactionStatusAdvice to in-  
23 | form the relevant T2S Actor (Instructing Party) that its Settlement Instruction has been released.

#### 24 | 2.10.4.3 Referenced Settlement Instruction Hold Status Check

25 | T2S checks the Hold status of the Referenced Settlement Instruction to identify if it remains on Hold due to  
26 | a different Hold type (See section Hold and Release):

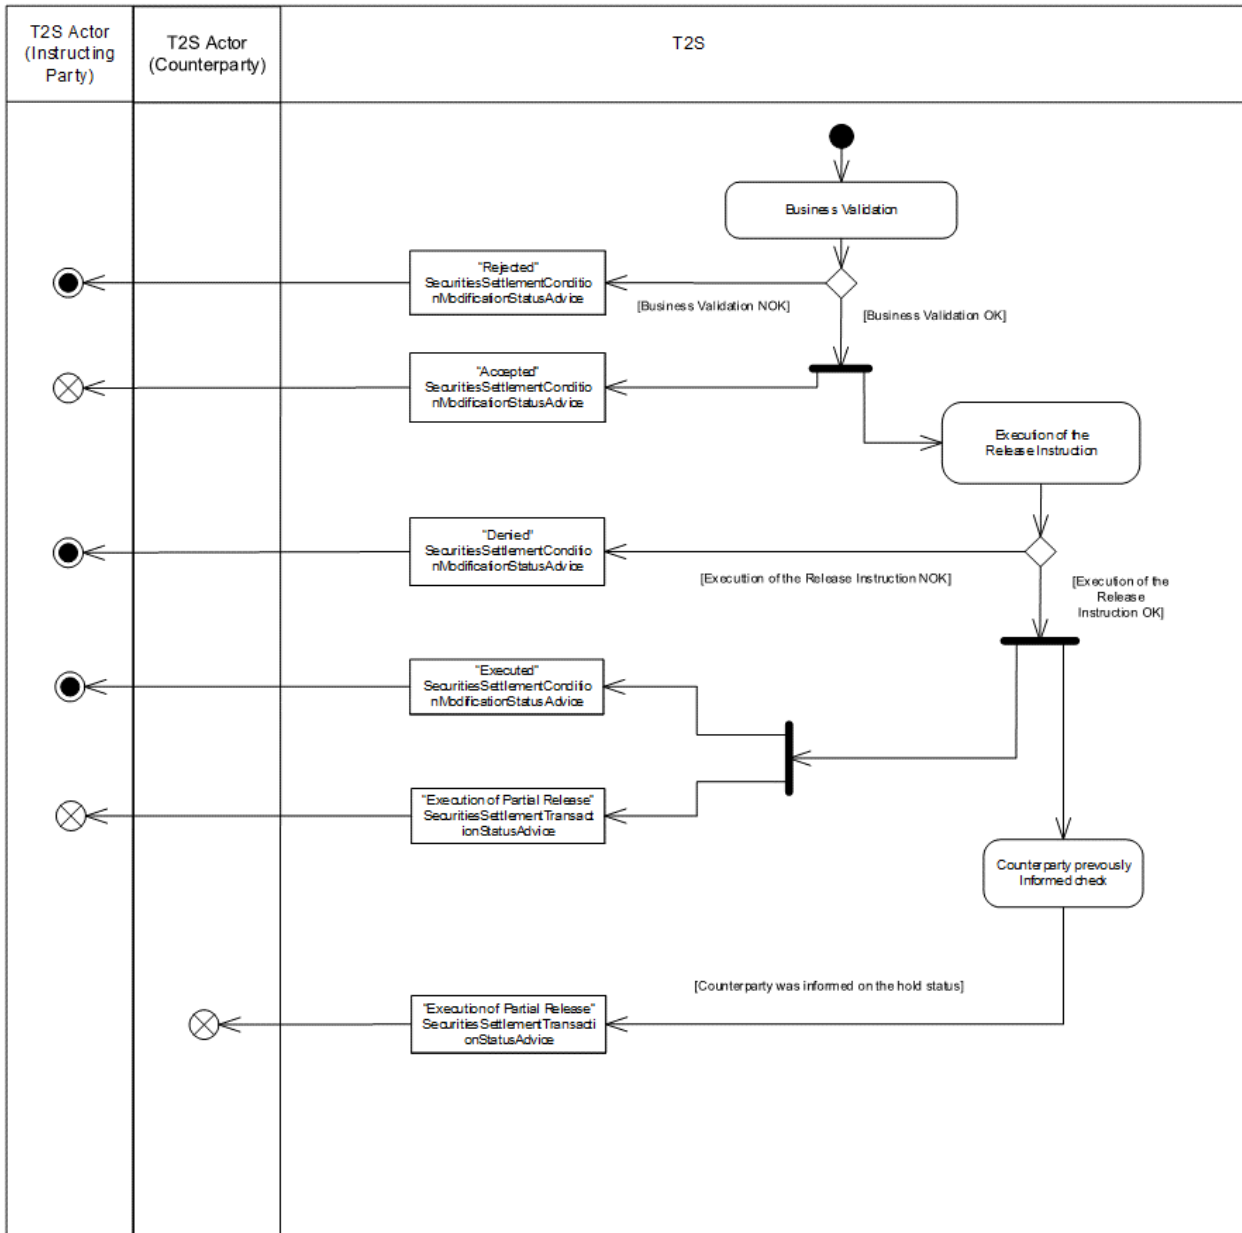

- 27 | **[Referenced Settlement Instruction Hold Status Date Check NOK]** If the Referenced Settlement  
28 | Instruction is still on Hold due to any other Hold type, T2S sends an "Other Hold remain(s)" Securities-  
29 | SettlementTransactionStatusAdvice to inform the relevant T2S Actor (Instructing party) that its Settle-  
30 | ment Instruction still remains on Hold together with the corresponding reason code for the remaining  
31 | Hold type(s).

- 32 | **[Referenced Settlement Instruction Hold Status Date Check OK]** If the Referenced Settlement  
33 | Instruction is no longer on Hold and therefore fully released, T2S sends a "No Hold remain" Securities-  
34 | SettlementTransactionStatusAdvice to inform the relevant T2S Actor (Instructing party) that its Settle-  
35 | ment Instruction has been fully released and it can be further processed.

- 
- 1 2.10.4.4 Counterparty previously informed Check
- 2 T2S checks if the Referenced Settlement Instruction's Counterparty has been informed on the Hold status of
- 3 its instruction. The result of this check can be:
- 4 | **[Counterparty was not informed on the Hold status]** If the T2S Actor (Counterparty) was not pre-
- 5 viously informed on the pending status of its Settlement Instruction due to the Hold of its Counterparty's
- 6 Settlement Instruction, T2S does not perform any communication.
- 7 | **[Counterparty was informed on the Hold status]** If the T2S Actor (Counterparty) was previously
- 8 informed on the pending status of its Settlement Instruction due to the Hold of its Counterparty's Set-
- 9 tlement Instruction, T2S sends a "Counterparty's Settlement Instruction is released" SecuritiesSettle-
- 10 mentTransactionStatusAdvice to inform the relevant T2S Actor (Counterparty) that its Settlement In-
- 11 struction is no longer pending due to the Hold status of its Counterparty's Settlement Instruction and can
- 12 be settled.

1 **2.10.5 Lifecycle Processing Partial Release Instruction**

2  
3

4 **2.10.5.1 Business Validation**

5 T2S checks whether the Release Instruction that triggers the Partial Release Process passes the Business  
6 Validation, including privilege check. The result of this check can be:

7 | [Business Validation NOK] If the Release Instruction is not valid, it is rejected and T2S sends a "Reject-  
8 ed" SecuritiesSettlementConditionModificationStatusAdvice with the corresponding reason code to inform  
9 the T2S Actor (Instructing party) that its Release Instruction has been rejected.

10 | Among other standard validations, the following specific checks are performed:

- 11 - The Referenced Settlement Instruction exists;

- 1 – The quantity to be released is lower than the original quantity of the Referenced Instruction;
- 2 – The quantity to be released complies with the SUM;
- 3 – The number of decimals of the Settlement Quantity of a Party Release Instruction must be equal or
- 4 lower to the number of decimals of the number of decimals of the Settlement Multiple of the related
- 5 security
- 6 – The Settlement Quantity stated in the Party Release Instruction must be expressed using the same
- 7 Settlement Type specified in T2S Reference Data
- 8 – The Referenced Settlement Instruction has reached its Intended Settlement Date;
- 9 – Underlying SI is not an internally generated instruction
- 10 – Underlying SI is delivering securities
- 11 | [Business Validation OK] If the Release Instruction passes the Business Validation and T2S sends an "Ac-
- 12 cepted" SecuritiesSettlementConditionModificationStatusAdvice to inform the T2S Actor (Instructing par-
- 13 ty) that its Release Instruction has been accepted, and continues with its processing.

#### 14 2.10.5.2 Execution of the Release Instruction

15 T2S checks whether the accepted Release Instruction can be executed. The result of this check can be:

- 16 | [Execution of the Release Instruction NOK] If any of the following execution checks is not passed:
- 17 – The Referenced Settlement Instruction is a delivering Settlement Instruction;
- 18 – The Referenced Settlement Instruction is matched;
- 19 – The Referenced Instruction is not settled;
- 20 – The Referenced Instruction is not cancelled;
- 21 – The Referenced Instruction is not identified with CoSD Flag;
- 22 – The Party Hold status of the Referenced Settlement Instruction is "Yes";
- 23 – The quantity to be released complies with partial settlement rules regarding MSU, SUM and cash
- 24 threshold;
- 25 – No other hold applies to the Referenced Instruction or its counterparty instruction;
- 26 – None of the related realignment Settlement Instructions are on Hold;
- 27 – The Referenced Instruction and its counterparty instruction allow partial settlement;
- 28 – The Referenced Instruction and its counterparty instruction are not constrained by any settlement
- 29 link;
- 30 – The Referenced Instruction and its counterparty instruction are not constrained by any non-reciprocal
- 31 link;
- 32 – The Referenced Instruction and its counterparty instruction have not reached their cut-off time.
- 33 T2S cancels the Partial Release Process, denies the Release Instruction and sends a "Denied" Securi-
- 34 tiesSettlementConditionModificationStatusAdvice with the relevant reason code to inform the relevant
- 35 T2S Actor (Instruction party) that its Release Instruction has been denied.

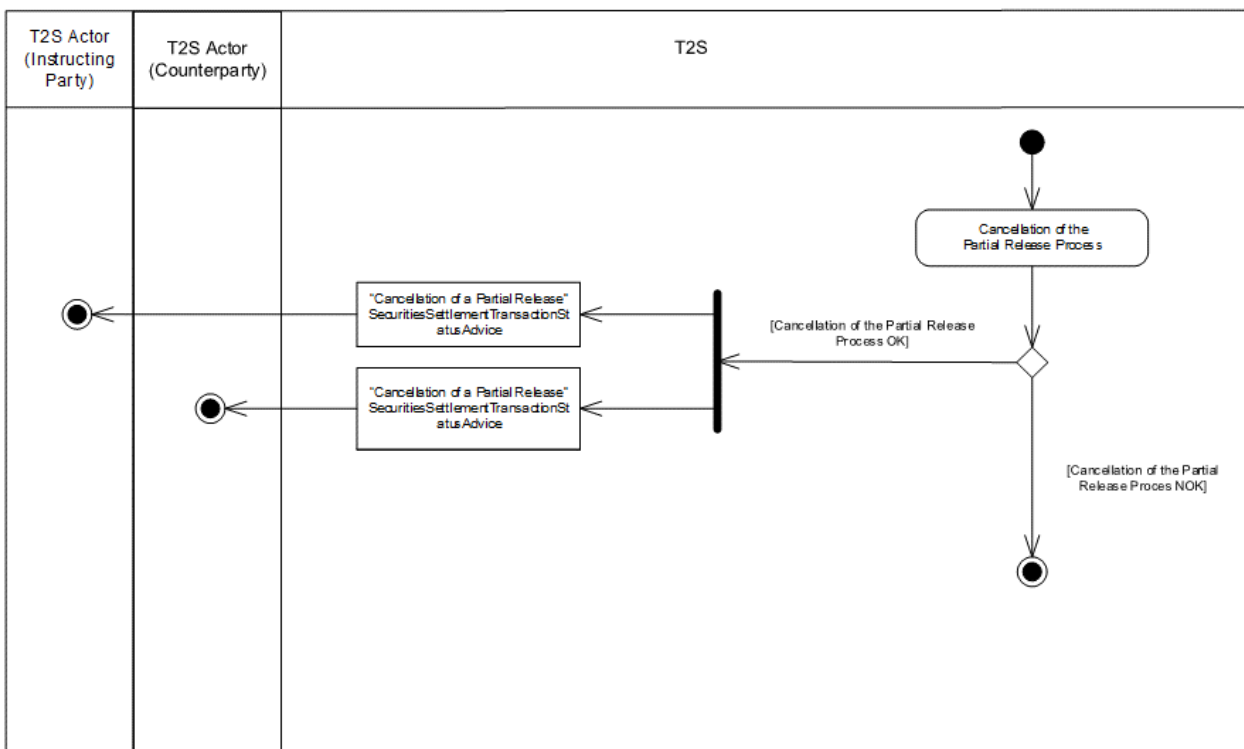

1 | [Execution of the Release Instruction OK] If all the relevant execution checks are passed T2S executes  
 2 | the Release Instruction and sends an "Executed" SecuritiesSettlementConditionModificationStatusAdvice  
 3 | to inform the relevant T2S Actor (Instructing Party) that its Release Instruction has been executed. T2S  
 4 | also sends a "Execution of Partial Release" SecuritiesSettlementTransactionStatusAdvice with the Party  
 5 | Hold indicator set to "True", and including information on the partially released quantity and quantity  
 6 | remaining on hold to inform the relevant T2S Actor (Instructing party) that the Referenced Settlement  
 7 | Instruction still remains on Party Hold but is now under Partial Release Process.

8 | 2.10.5.3 Counterparty previously informed Check

9 | T2S checks if the Referenced Settlement Instruction's Counterparty has been informed on the Hold status of  
 10 | its instruction. The result of this check can be:

11 | | [Counterparty was informed on the Hold status] If the T2S Actor (Counterparty) was previously informed  
 12 | on the pending status of its Settlement Instruction due to the Hold of its Counterparty's Settlement In-  
 13 | struction, T2S sends a "Execution of Partial Release" SecuritiesSettlementTransactionStatusAdvice with  
 14 | the Party Hold indicator set to "False", and including information on the partially released quantity and  
 15 | quantity remaining on hold to inform the relevant T2S Actor (Counterparty) that the Referenced Settle-  
 16 | ment Instruction is now under Partial Release Process.

17 | 2.10.5.4 Cancellation of the Partial Release Process

18 |  
 19 | T2S checks that the conditions required for the Partial Release Process are always met while the process is  
 20 | in progress. The result of this check can be:

21 | | [Cancellation of the Partial Release Process OK] If any of the following cancellation conditions is fulfilled:

- 1 – Any new holds apply to the Referenced Instruction or the counterparty instruction;
- 2 – The Partial Settlement of the Referenced Instruction or the counterparty instruction is disallowed i.e.
- 3 Partial Settlement Indicator set to 'NPAR';
- 4 – A Business Link is added through an amendment or a non-reciprocal link;
- 5 – The Partial Release Process has not fully settled the released quantity by the relevant cut-off time;
- 6 – The released quantity is less than the quantity resulting from the cash threshold equivalent in the un-
- 7 derlying settlement instruction;
- 8 – The referenced Settlement Instruction under ongoing partial Release is fully released.
- 9 T2S cancels the Partial Release Process and sends a "Cancellation of a Partial Release" Securities-
- 10 SettlementTransactionStatusAdvice to inform the relevant T2S Actors (Instructing party and Counter-
- 11 party) that their Settlement Instruction cannot be partially settled, including a dedicated error code
- 12 describing that the hold status was reassigned by T2S due to the cancellation of the Partial Release
- 13 Process. Upon cancellation of the Partial Release Process, T2S performs a [Settlement Eligibility Check](#)
- 14 [▶ 934] triggering the relevant status advice messages if applicable (i.e. change from the last busi-
- 15 ness rule or reason code communicated).
- 16 | [Cancellation of the Partial Release Process NOK] If none of the cancellation conditions is met the Partial
- 17 Release Process remains in progress until the full settlement of the partially released quantity.
- 18 The relevant T2S actor (Instructing party) can also cancel the Partial Release Process by sending a Hold
- 19 Instruction with "Party Hold" Status or a standard Release Instruction.

## 1 2.11 Send Cancellation Instruction of a Settlement Instruction or a 2 Settlement Restriction on Securities Position

### 3 2.11.1 Introduction

4 This section describes, based on a use case, the outbound messages resulting from the processing of a Can-  
5 cellation Instruction received in T2S via the inbound message SecuritiesTransactionCancellationRequest.

6 This use case covers all the situations where a T2S Actor wants to send a Cancellation Instruction (See sec-  
7 tion Instruction Cancellation) to:

- 8 | Cancel a Settlement Instruction;
- 9 | Cancel a Settlement Restriction on securities position.

10 The following actors are potentially involved in this use case:

- 11 | T2S Actor - Instructing party of the Settlement Instruction or Settlement Restriction on Securities Posi-  
12 tion;
- 13 | T2S Actor - Counterparty of the Settlement Instruction.

### 14 2.11.2 Activity Diagram

15 The following diagram details all the processing steps for the cancellation of a Settlement Instruction or Set-  
16 tlement Restriction on securities position triggered by the sending of a Cancellation Instruction by a T2S  
17 Actor.

- 1
- 2 For the execution of Cancellation Instruction the following steps are performed by T2S.
- 3 2.11.2.1 Communication Processing
- 4 Detailed description can be found at section [Communication processing](#) [▶ 915].
- 5 2.11.2.2 Cancellation Instruction Lifecycle Processing
- 6 Detailed description can be found below.

1 **2.11.3 Cancellation Instruction Lifecycle processing**

2

3 **2.11.3.1 Business Validation**

4 T2S checks whether the Cancellation Instruction passes the business validation, including privilege check  
 5 (See section Business Validation). The result of this check can be:

- 6 | **[Business Validation NOK]** If the Cancellation Instruction is not valid, the instruction is rejected and
- 7 | T2S sends a "Rejected" SecuritiesTransactionCancellationRequestStatusAdvice with the corresponding

1 reason code(s) to inform the T2S Actor (Instructing party) that its Cancellation Instruction has been re-  
2 jected.

3 | **[Business Validation OK]** If the Cancellation Instruction passes the business validation, then T2S  
4 sends an "Accepted" SecuritiesTransactionCancellationRequestStatusAdvice to inform the T2S Actor (In-  
5 structing party) that its Cancellation Instruction has been accepted and can be processed and continues  
6 with its processing.

### 7 2.11.3.2 Referenced Instruction status check

8 T2S checks that the status of the Referenced Instruction allows the processing of the cancellation. The result  
9 of this check can be:

- 10 | **[Referenced Instruction Status Check NOK]** If the Referenced Instruction fulfils any of the follow-  
11 ing conditions:
- 12 – The Settlement Status of the Referenced Settlement Instruction or Settlement Restriction is "Settled";
  - 13 – The Cancellation Status of the Referenced Settlement Instruction or Settlement Restriction is "Can-  
14 celled";
  - 15 – There is a Realignment Instruction related with the Referenced Settlement Instruction that fulfils a  
16 CoSD Rule, and the Instructing Party is not the Instructing Party's CSD;
  - 17 – The Referenced Settlement Instruction is identified as CoSD, and the Instructing party is not the In-  
18 structing Party's CSD (See section Instruction Cancellation);
  - 19 – There is a pending Cancellation Instruction from the same Instructing Party for the same Settlement  
20 Instruction.

21 The Cancellation Instruction is rejected and T2S sends a "Denied" SecuritiesTransactionCancellation-  
22 RequestStatusAdvice with the relevant Reason Code to inform the T2S Actor (Instructing party) that  
23 its Cancellation Instruction has been denied.

24 | **[Referenced Instruction Status Check OK]** If the Referenced instruction does not fulfil any of the  
25 conditions, T2S analyses the type of instruction and whether the Settlement Instruction is matched. The  
26 result of this check can be:

- 27 – **[Referenced Instruction is an Unmatched Settlement Instruction or Settlement Re-**  
28 **striction]** T2S continues with the Execution of the Cancellation Instruction.
- 29 – **[Referenced Instruction is a Matched Settlement Instruction]** in this case T2S continues with  
30 the Counterparty's Cancellation Instruction check to perform the matching of the Cancellation Instruc-  
31 tion received since, in order to cancel a matched Settlement Instruction, bilateral cancellation is need-  
32 ed (See section Instruction Cancellation).

1 2.11.3.3 Counterparty's Cancellation Instruction check

2  
3 T2S checks the Match Status of the Cancellation Instruction. This check can result in:

- 4 | **[Already Matched Cancellation Instruction]** T2S continues with the Execution of the Cancellation
- 5 | Instruction.
- 6 | **[Unmatched Cancellation Instruction]** In case the Cancellation Instruction enters T2S as Un-
- 7 | matched, T2S checks if the Counterparty's Cancellation Instruction has been received in T2S in order to
- 8 | match them (bilateral cancellation is needed).
- 9 |   – **[Counterparty's Cancellation Instruction Not Received]** T2S sends a "Pending Cancellation,
- 10 |   awaiting confirmation from the Counterparty" SecuritiesTransactionCancellationRequestStatusAdvice
- 11 |   to the T2S Actor (Instructing party) and a "Cancellation Request-
- 12 |   ed"SecuritiesSettlementTransactionStatusAdvice to the T2S Actor (Counterparty) (See section Al-
- 13 |   legement).
- 14 |   – **[Counterparty's Cancellation Instruction Received]** T2S matches the Cancellation Instructions,
- 15 |   continues with the Execution of the Cancellation Instruction.

1 2.11.3.4 Execution of the Cancellation Instruction

2 T2S executes the Cancellation Instruction in real time and sends an "Executed" SecuritiesTransactionCancel-  
3 lationRequestStatusAdvice to inform the T2S Actor (Instructing party) that its Cancellation Instruction has  
4 been executed.

5 2.11.3.5 Denial of the Cancellation Instruction

6  
7 If the Referenced Instruction fulfils any of the conditions that does not allow its cancellation (See section  
8 Instruction Cancellation) while waiting for the Counterparty's Cancellation Instruction to be received in T2S,  
9 the Cancellation Instruction is denied. T2S cancels the Cancellation Instruction and sends a "Denied" Securi-  
10 tiesTransactionCancellationRequestStatusAdvice to inform the T2S Actor (Instructing party) that its Cancell-  
11 ation Instruction has been denied.

12 2.11.3.6 Referenced Instruction Cancellation Processing

13 T2S checks the instruction type of the referenced instruction to be cancelled. This check can result in:

- 14 | **[Settlement Instruction]** T2S cancels the Settlement Instruction and stops its further processing in  
15 T2S. The effect on the Settlement Instruction is described at section [Settlement Instruction Cancellation](#)  
16 [Processing](#) [▶ 947].
- 17 | **[Settlement Restriction]** T2S cancels the Settlement Restriction and stops its further processing in  
18 T2S. The effect on the referenced Settlement Restriction on securities balance is described at section [Se-](#)  
19 [curities Settlement Restriction Cancellation Processing](#) [▶ 960].

20 Detailed description of the process can be found at section Instruction Cancellation.

6 **2.12 Send Cancellation Instruction of a Settlement Restriction on**  
7 **cash balance**

8 **2.12.1 Introduction**

9 This section describes, based on a use case, the outbound messages resulting from the processing of a Can-  
10 cellation Instruction received in T2S via the inbound message IntraBalanceMovementCancellationRequest  
11 message to cancel a Settlement Restriction on cash (See section Instruction Cancellation).

1 **2.12.2 Activity Diagram**

2  
3 For the execution of Cancellation Instruction the following steps are performed by T2S:

4 2.12.2.1 Communication Processing

5 Detailed description can be found at section [Communication processing](#) [ ▶ 915].

6 2.12.2.2 Cancellation Instruction Lifecycle Processing

7 Detailed description can be found below.

1 **2.12.3 Cancellation Instruction Lifecycle processing**

2

3 **2.12.3.1 Business Validation**

4 T2S checks whether the Cancellation Instruction passes the business validation, including privilege check  
 5 (See section Business Validation). The result of this check can be:

- 6 | **[Business Validation NOK]** If the Cancellation Instruction is not valid, the instruction is rejected and  
 7 T2S sends a "Rejected" IntraBalanceMovementCancellationRequestStatusAdvice with the corresponding

1 reason code(s) to inform the T2S Actor (Instructing party) that its Cancellation Instruction has been re-  
2 jected.

3 | **[Business Validation OK]** If the Cancellation Instruction passes the business validation, then T2S  
4 sends an "Accepted" IntraBalanceMovementCancellationRequestStatusAdvice to inform the T2S Actor  
5 (Instructing party) that its Cancellation has been accepted and can be processed and continues with the  
6 processing of the Cancellation Instruction.

7 2.12.3.2 Referenced Settlement Restriction status check

8 T2S checks that the status of the Referenced Settlement Restriction allows the processing of the cancella-  
9 tion. The result of this check can be:

10 | **[Referenced Settlement Restriction Status Check NOK]** If the Referenced Settlement Restriction  
11 fulfils any of following conditions:

- 12 – The Settlement Status of the Referenced Settlement Restriction is "Settled";
- 13 – The Cancellation Status of the Referenced Settlement Restriction is "Cancelled";

14 The Cancellation Instruction is rejected and T2S sends a "Denied" IntraBalanceMovementCancellat-  
15 ionRequestStatusAdvice with the relevant Reason Code to inform the T2S Actor (Instructing party)  
16 that its Cancellation Instruction has been denied;

17 | **[Referenced Settlement Restriction Status Check OK]** If the Referenced Settlement Restriction  
18 does not fulfil any of the conditions, the processing of the Cancellation Instruction continues with its ex-  
19 ecution, and T2S sends an "Executed" IntraBalanceMovementCancellationRequestStatusAdvice to inform  
20 the T2S Actor (Instructing party) that its Cancellation Instruction has been executed.

21 2.12.3.3 Settlement Restriction Cancellation Processing

22 T2S cancels the referenced Settlement Restriction on cash balance and stops its further processing in T2S.

23 The effect on the referenced Settlement Restriction on cash balance is described at section [Cash Settlement](#)  
24 [Restriction Cancellation Processing](#) [▶ 968].

25 Detailed description of the process can be found at section Instruction Cancellation.

## 2.13 Send immediate liquidity transfer

### 2.13.1 Introduction

This section describes, based on a use case, the outbound messages resulting from the processing of a Liquidity Transfer received in T2S via the inbound message LiquidityCreditTransfer. This use case covers all the situations where a T2S Actor wants to transfer liquidity (See section Liquidity Transfer) from a T2S Dedicated Cash Account <sup>466</sup> to:

- | Another T2S Dedicated Cash Account;
- | An RTGS account.

The following Actors are potentially involved in the Use Case:

- | T2S Actor (Business Sending Party): The Instructor of the Liquidity Transfer;
- | T2S Actor (Debtor): The Owner of the T2S Dedicated Cash Account debited by the Liquidity Transfer (the Business Sending Party and the Debtor can also be the same T2S Actor in case the Business Sending Party and the Debtor do not differ);
- | T2S Actor (Creditor): The Owner of the T2S Dedicated Cash Account credited by the Liquidity Transfer;
- | CB (RTGS): in case of outbound Liquidity Transfers the CB that is in charge of the RTGS system or, in case of internal Liquidity Transfers, the CB of Creditor.
- | CB of Debtor: Involved CB on debited side

### 2.13.2 Activity Diagram

The Activity Diagram shows all the interactions between the relevant T2S Actors and T2S concerning Immediate Liquidity Transfers.

466 Liquidity Transfers from an RTGS account to T2S are described in section [Execution of Liquidity Transfer from RTGS to T2S](#) [ 1012].

- 1
- 2 2.13.2.1 Communication Processing
- 3 Detailed description can be found at section [Communication processing](#) [► 915].

### 1 2.13.2.2 Business Validation

2 Several business validations, including the privilege check, are carried out. The result of the validations after  
3 the receipt of the Liquidity Transfer can be <sup>467</sup>:

4 | **[Business Validation NOK]** In case the business validation was not successful a "Rejection" Receipt is  
5 sent to T2S Actor (Business Sending Party) indicating the error which occurred.

6 | **[Business Validation OK]** In case the business validation was successful, an "Accepted Liquidity  
7 Transfer" Receipt is sent to T2S Actor (Business Sending Party) and the Liquidity Transfer is processed  
8 within T2S.

### 9 2.13.2.3 Execution/Settlement

10 The Liquidity Transfer is submitted to settlement. The result of the settlement process can be:

11 | **[No Execution]** In case the settlement process was not successful an "Information to T2S Actor – Li-  
12 quidity transfer Status" Receipt is sent to T2S Actor (Business Sending Party) indicating the settlement  
13 status "unsettled".

14 | **[Full or Partial Execution]** In case the settlement process was successful the settlement status of the  
15 Liquidity Transfer is set to "partially settled" or "settled" and the following messages are sent <sup>468</sup>:

16 – "Information to T2S Actor- Ceiling notification" ReturnAccount is sent to the owner of the credited ac-  
17 count (T2S Actor (Creditor)) in case the available liquidity on the respective T2S Dedicated Cash Ac-  
18 count exceeds the defined maximum amount (ceiling). In case of an Outbound Liquidity Transfer this  
19 message is sent to the owner of the RTGS transit account.

20 – "Information to T2S Actor – Floor Notification" ReturnAccount is sent to the owner of the debited ac-  
21 count (T2S Actor (Debtor)) in case the available liquidity on the respective T2S Dedicated Cash Ac-  
22 count falls under the defined minimum amount (floor).

23 – "Information to T2S Actor – Liquidity transfer Status" Receipt is sent to T2S Actor (Business Sending  
24 Party) indicating full or partial execution.

25 – "Information to T2S Actor - Debit Notification" BankToCustomerDebitCreditNotification is sent to T2S  
26 Actor (Debtor) and the responsible CB (CB of Debtor) quoting which amount has been debited on the  
27 T2S Dedicated Cash Account.

28 – "Information to T2S Actor - Credit Notification" BankToCustomerDebitCreditNotification is sent to T2S  
29 Actor (Creditor) and the responsible CB (CB (RTGS)) quoting which amount has been credited on the  
30 T2S Dedicated Cash Account (in case of internal Liquidity Transfers) or on the RTGS Account in the  
31 respective RTGS and RTGS dedicated Transit Account (in case of outbound Liquidity Transfers).

32 – "Outbound Liquidity Transfer" LiquidityCreditTransfer is sent to the RTGS system for processing (only  
33 in case of outbound liquidity transfer).

---

467 The messages are sent according to the Message Subscription preferences, for further details please see section Message subscription

468 The messages are sent according to the Message Subscription preferences, for further details please see section Message subscription.

## 6 2.14 Send RTGS answer

### 7 2.14.1 Introduction

8 This section describes, based on a use case, the outbound messages resulting from the processing of an  
9 RTGS answer received in T2S via the inbound message Receipt. This use case covers all the situations where  
10 an RTGS answer is received after an Outbound Liquidity Transfer (See section Liquidity Transfer) was per-  
11 formed in T2S.

12 The only T2S Actor potentially involved in the use case is "CB (RTGS)", the CB to which belongs the respec-  
13 tive RTGS system.

14 Outbound Liquidity Transfers to CLM or the TARGET Services will be handled in the same way as Outbound  
15 Liquidity Transfers to another RTGS system making use of the same messages and communication mecha-  
16 nisms. <sup>469</sup>

---

469 Please note that the described functionality won't be available before CSLD go-live.

1 **2.14.2 Activity Diagram**

2 The following Activity Diagram shows all the interactions between T2S and the CBs in respect of sending  
 3 RTGS answers after Outbound Liquidity Transfers.

4

5 **2.14.2.1 Communication Processing**

6 Detailed description can be found at section [Communication processing](#) [▶ 915].

7 **2.14.2.2 Business Validation**

8 Several business validations, including the privilege check, are carried out. The result of the validations after  
 9 the receipt of the RTGS answer can be:

- 10 | **[Business Validation NOK]** In case the RTGS answer is received more than once (duplicate RTGS an-  
 11 | swer) or an unexpected RTGS answer is received (i.e. the answer is not related to an outbound Liquidity  
 12 | transfer”) or a CB sends an RTGS answer belonging to a Liquidity Transfer related to another RTGS sys-  
 13 | tem (the reference given in the RTGS answer is referring to a liquidity transfer, which took place be-  
 14 | tween T2S and another RTGS system) an “Information to T2S Actor (CB Info RTGS rejection/Invalid  
 15 | RTGS answer)”Receipt is sent.
- 16 | **[Business Validation OK]** In this case, the processing in RTGS Status Management continues.

1 2.14.2.3 RTGS Status Management

2 After having received the RTGS answer from the CB, RTGS Status Management checks the status and sets  
3 the RTGS status to "RTGS rejection" or "RTGS confirmation". The result of the checking can be:

4 | **[RTGS Confirmation]** In this case (implying that the liquidity transfer has been booked successfully  
5 within the RTGS system) processing finishes.

6 | **[RTGS Rejection]** In this case (implying that the liquidity transfer is not processed within the RTGS  
7 system) an "Information to T2S Actor (CB Info RTGS rejection/Invalid RTGS answer)" Receipt is sent to  
8 the respective CB indicating the error which occurred. Additionally an Internal Liquidity Transfer will be  
9 initiated to reverse the booking and credit the customers DCA which was debited in the underlying Out-  
10 bound Liquidity Transfer.

11 **2.14.3 Inbound and outbound messages**

16 **2.15 Execution of Liquidity Transfer from RTGS to T2S**

17 **2.15.1 Introduction**

18 This section describes, based on a use case, the outbound messages resulting from the processing of an  
19 inbound Liquidity Transfer received in T2S via the inbound message LiquidityCreditTransfer. This use case  
20 covers all the situations where a T2S Actor wants to transfer liquidity from an RTGS account to a T2S Dedi-  
21 cated Cash Account (See section Liquidity Transfer).

22 The following T2S Actors are potentially involved in the use case:

- 23 | CB: The CB, which is in charge of the sending RTGS system;
- 24 | T2S Actor (Creditor): The Owner of the T2S Dedicated Cash Account credited by the Liquidity Transfer.

25 **2.15.2 Activity Diagram**

26 The Activity Diagram shows all the interactions between the relevant T2S Actors, CB and T2S concerning  
27 Liquidity Transfers from RTGS system to T2S (Inbound Liquidity Transfer).

1

2 2.15.2.1 Communication Processing

3 Detailed description can be found at section [Communication processing](#) [► 915].

4 2.15.2.2 Business Validation

5 Several business validations, including privilege check, are carried out. The result of these validations can be  
6 470:

- 7 | **[Business Validation NOK]** In case the business validation was not successful a "Rejection" Receipt is
- 8 | sent to the RTGS system via the CB indicating the errors which occurred.
- 9 | **[Business Validation OK]** In case the business validation was successful, the Liquidity transfer is pro-
- 10 | cessed within T2S.

470 The messages are sent according to the Message Subscription preferences, for further details please see section Message subscription.

### 2.15.2.3 Execution/Settlement

The Liquidity Transfer is submitted to Settlement. The result of the Settlement can lead to a violation of the ceiling amount on the Dedicated Cash Account, if a ceiling amount exists.

The following messages are sent <sup>471</sup>:

- 1 | "Information to T2S Actor- Ceiling notification" ReturnAccount is sent to the owner of the credited account (T2S Actor (Creditor) in case the available liquidity on the respective T2S Dedicated Cash Account exceeds the defined maximum amount (ceiling);
- 2 | "Information to T2S Actor- Floor notification" ReturnAccount is sent to the owner of the RTGS transit account (CB (RTGS)) in case the available liquidity on the RTGS transit account falls under the defined minimum amount (floor);
- 3 | "Information to RTGS system" Receipt is sent to the RTGS system via the CB indicating that the settlement status of the liquidity transfer order is "executed";
- 4 | "Information to T2S Actor - Credit Notification" BankToCustomerDebitCreditNotification is sent to T2S Actor (Creditor) and the responsible CB indicating the reference of the T2S Dedicated Cash Account credited and the cash amount credited,
- 5 | "Information to T2S Actor - Debit Notification" BankToCustomerDebitCreditNotification is sent to the CB indicating which amount has been debited on the RTGS account and RTGS dedicated transit account in the RTGS system.

## 2.16 Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS

### 2.16.1 Introduction

This section describes, based on use case, the outbound messages resulting from the processing of a Liquidity Transfer created within T2S by an Event. This use case covers all the situations where liquidity from a T2S Dedicated Cash Account is transferred to an RTGS system via Standing or Predefined Liquidity Transfer Orders (See section Liquidity Transfer).

The following Actors are potentially involved in the communication with T2S:

- | T2S Actor (Debtor): The owner of the T2S Dedicated Cash Account debited by the use case;
- | CB (RTGS): The CB, which is in charge of the RTGS system;
- | The CB of Debtor.

### 2.16.2 Activity Diagram

The Activity Diagram shows all the interactions between the relevant T2S Actors and T2S concerning Standing and predefined Liquidity Transfer Orders.

1

2 2.16.2.1 Retrieval of the Liquidity Transfer Orders

3 After the time or the business event for the Standing or Predefined Liquidity Transfer Order is reached, T2S  
4 retrieves the relevant Liquidity Transfer Orders.

5 2.16.2.2 Execution/Settlement

6 After the retrieval of the Liquidity Transfer Orders, each related Liquidity Transfer is submitted to settlement.

7 The result of the settlement process can be <sup>472</sup>:

472 The messages are sent according to the Message Subscription preferences, for further details please see section Message subscription

- 1 | **I [No execution]** In case the settlement process was not successful (this is for example the case, if no  
2 | liquidity is on the T2S Dedicated Cash Account or an Intraday Restriction applies), the settlement status  
3 | is set to "unsettled" and the process is finished within T2S.
- 4 | **I [Full or partial execution]** In case the settlement process was successful the settlement status is set  
5 | to "partially settled" or "settled" and the following messages are sent <sup>473</sup>:
- 6 | – "Information to T2S Actor- Ceiling notification" ReturnAccount is sent to the owner of the RTGS Trans-  
7 | it Account (CB (RTGS)) in case the available liquidity on this RTGS Transit Account exceeds the de-  
8 | fined maximum amount (ceiling),
- 9 | – "Information to T2S Actor – Floor Notification" ReturnAccount is sent to the owner of the T2S Dedi-  
10 | cated Cash Account debited (T2S Actor (Debtor)) in case the available liquidity on this T2S Dedicated  
11 | Cash Account falls under the defined minimum amount (floor),
- 12 | – "Information to T2S Actor - Debit Notification" BankToCustomerDebitCreditNotification is sent to the  
13 | owner of the T2S Dedicated Cash Account debited (T2S Actor (Debtor)) and the responsible CB (CB of  
14 | Debtor) indicating the reference of the T2S Dedicated Cash Account debited, the original indicated  
15 | amount and the cash amount debited,
- 16 | – "Information to T2S Actor - Credit Notification" BankToCustomerDebitCreditNotification is sent to the  
17 | CB (RTGS) quoting which amount has been credited on which RTGS Account and on the RTGS dedi-  
18 | cated Transit account.
- 19 | – "Outbound Liquidity Transfer" LiquidityCreditTransfer sent to the RTGS System via the CB for pro-  
20 | cessing.

21 | **2.16.3 Inbound and outbound messages**

473 The messages are sent according to the Message Subscription preferences, for further details please see section Message subscription

1 **2.17 End-of-Day Cash Management**

2 **2.17.1 Introduction**

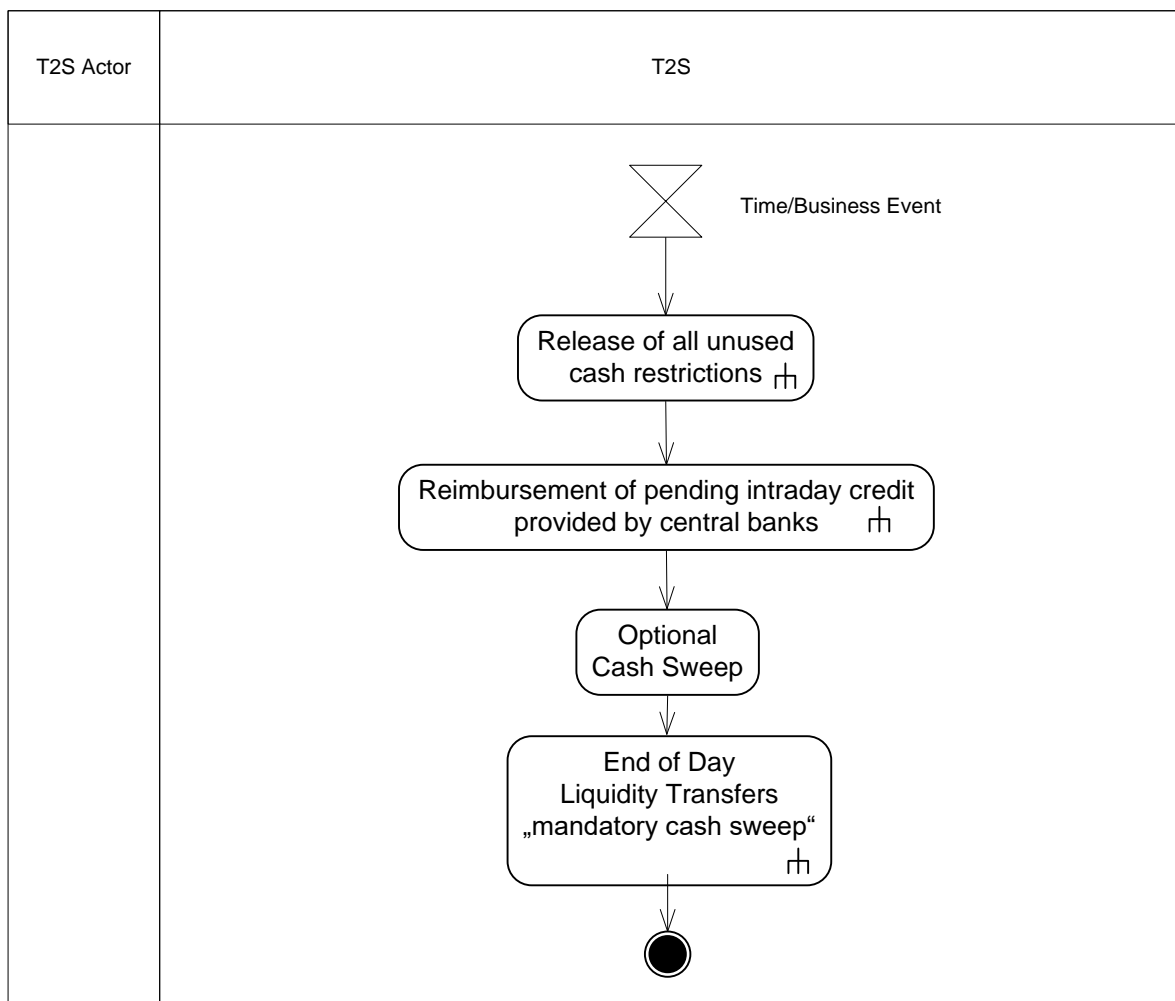

3 This section describes, based on a use case, the outbound messages resulting from the processing of end of  
4 day cash management within T2S (See section End of Day Cash Management).

5 The following actors are potentially involved in the communication with T2S:

- 6 | T2S Actor – Owner of the involved T2S dedicated cash account;
- 7 | T2S Actor – Collateral supplier;
- 8 | T2S Actor – Intraday credit provider;
- 9 | CB (RTGS) – The RTGS system to which the Liquidity Transfer is sent.

10 **2.17.2 Activity Diagram**

11 This Activity Diagram provides an overview of the end of day cash management.

12

1 2.17.2.1 Release of all unused cash restrictions

2

3 Releasing all unused cash restrictions

4 T2S identifies the restrictions references in restricted cash balances (i.e. blocking, CoSD blocking or reserva-  
 5 tion) not used during the current settlement day, in order to transfer the restricted cash to the deliverable  
 6 cash balance of the considered T2S dedicated cash account

7 This process may result in the detection of the following settlement contexts:

- 8 | **[Released unused cash restrictions]** For each unused restrictions references in restricted cash bal-  
 9 ances, T2S creates an additional T2S generated Settlement Restrictions corresponding to the transfers  
 10 from the restricted cash balances to the deliverable cash balances. The T2S generated Settlement Re-  
 11 strictions are then processed for a settlement attempt and an automatic regeneration can be created ac-  
 12 cording to the related restriction type processing:

- 1 – **[CoSD blocking]** In case of restriction reference related to a CoSD Blocking, T2S generates an au-  
2 tomatic increase for the next settlement day;
- 3 – **[Blocking/reservation]** In case of restriction reference related to a blocking or a reservation, no  
4 automatic increase regeneration is created and T2S continues with its processing.
- 5 | **[No cash restriction released]** When there is no remaining unused restriction references in restricted  
6 cash balances, T2S continues with its processing.

#### 7 Cash Settlement Restriction Settlement Processing

8 Detailed description can be found in section [Cash Settlement Restriction Settlement Processing](#) [▶ 965].

#### 9 Generating increase of cash CoSD blocking for the next settlement day

10 In case of restriction references related to cash balances for CoSD blocking, T2S automatically generates an  
11 increase Settlement Restriction to re-block the released amount at the beginning of the next settlement day.  
12 For this aim, T2S creates an additional T2S generated CoSD blocking Settlement Restrictions to increase the  
13 cash restrictions for the next settlement day (See section [Send Settlement Restriction on Cash Balance](#)  
14 [▶ 962]).

15 To deny the CoSD release while the CoSD blocking is not regenerated, the settlement status reason code  
16 "CoSD Awaiting from Administering Party" of the underlying CoSD on hold Settlement Instruction is emptied.  
17 For this purpose, the instructing party and the administering parties of the CoSD rule are then provided  
18 again with a "CoSD Hold" SecuritiesSettlementTransactionStatusAdvice.

#### 19 Cancelling all cash reservations having a pending part

20 T2S identifies Settlement Restrictions, that have partially settled and that relate to the released restrictions  
21 references in restricted cash balances, in order to cancel the pending part.

22 This process may result in the detection of the following settlement contexts:

- 23 | **[Pending cash reservations]** When partially settled Settlement Restrictions related to cash reserva-  
24 tion are identified, T2S cancels the partially settled Settlement Restrictions related to cash reservation.  
25 For each cancellation, a "Cancelled" IntraBalanceMovementStatusAdvice with its corresponding reason  
26 code is sent to the T2S Actor (Instructing party);
- 27 | **[No pending cash reservation]** When there is no pending Settlement Restrictions related to cash res-  
28 ervation, T2S continues with its processing.

1 2.17.2.2 Reimbursement of pending intraday credit provided by central banks

2

3 Management of pending reverse collateral Settlement Instructions

4 Firstly, T2S identifies the held reverse collateral Settlement Instructions, related to a central bank collateralisation, in order to release them.

6 This process may result in the detection of the following settlement contexts:

7 **I [Release of hold reverse collateral Settlement Instructions]** When held reverse collateral Settlement Instructions, related to a central bank collateralisation, are identified:

8 – T2S updates the party hold indicator of those pending reverse collateral Settlement Instructions to “No”. For each released pending reverse collateral Settlement Instructions, T2S sends:

9 – To the collateral supplier and the credit provider, a “No hold remain(s)” SecuritiesSettlementTransactionStatusAdvice for the notification of the update of the released reverse collateral Settlement Instruction;

1 – The released reverse collateral Settlement Instructions (and in case of pledge sub the linked reverse  
2 collateral Settlement Restrictions) are then processed with the pending reverse collateral Settlement  
3 Instruction already released (See next point);

4 | **[Pending reverse collateral Settlement Instructions already released]** Once released (automat-  
5 ically by T2S or previously by the involved payment/settlement bank which received the intraday credit),  
6 T2S checks if the available liquidity on the involved T2S dedicated cash account is sufficient for the re-  
7 imbursement with the following possible results:

8 – **[Insufficient available cash]** If the amount, available in the debited T2S dedicated cash account, is  
9 insufficient to reimburse the pending reverse collateral Settlement Instruction related to a central  
10 bank collateralisation, T2S attempts a potential liquidity rebalancing from other T2S dedicated cash  
11 account;

12 – **[Sufficient available cash for the reimbursement]** If the amount, available in the debited T2S  
13 dedicated cash account, is sufficient for the reimbursement, the reverse collateral Settlement Instruc-  
14 tions (and, in case of pledge sub, the linked reverse collateral Settlement Restrictions) are then pro-  
15 cessed for their booking;

#### 16 Liquidity rebalancing between T2S dedicated cash accounts

17 Liquidity rebalancing is achieved if the amount, available in the T2S dedicated cash account and debited by  
18 the pending reverse collateral Settlement Instruction, is not sufficient.

19 In this case, T2S triggers the rebalancing of available cash, from other T2S dedicated cash account owned  
20 by the same payment/settlement bank, for the missing amount:

21 | the collateral provider is provided with:

22 – "Debit notification "BankToCustomerDebitCreditNotification for each debited cash account;

23 – "Credit notification "BankToCustomerDebitCreditNotification for each credited cash account;

24 The rebalancing is achieved with the possible results:

25 | **[Insufficient possible rebalancing]** If the possible cash rebalancing are not sufficient for the reim-  
26 bursement, T2S triggers a relocation of collateral;

27 | **[Sufficient possible rebalancing for reimbursement]** When the possible cash rebalancing is suffi-  
28 cient to reimburse the pending reverse collateral Settlement Instruction, related to a central bank collat-  
29 eralisation, the necessary T2S generated Liquidity Transfers are then processed for their booking, with  
30 the reverse collateral Settlement Instructions (and, in case of pledge sub, with the linked reverse collat-  
31 eral Settlement Restrictions);

#### 32 Relocation of collateral

33 Relocation is achieved when the amount, available in all T2S dedicated cash accounts of the pay-  
34 ment/settlement bank, is not sufficient to reimburse the pending reverse collateral Settlement Instructions.

35 In this case T2S performs a relocation of collateral through additional T2S generated collateral relocation  
36 Settlement Instructions and a corresponding cash debit on the T2S central bank account.

37 For each T2S generated collateral relocation Settlement Instructions, a "Collateral" SecuritiesSettle-  
38 mentTransactionGenerationNotification is sent to the involved T2S Actors (i.e. the central bank which pro-

1 vided the liquidity in the RTGS system –and possibly its collateral management system-, the owner of the  
2 T2S Dedicated cash account, the collateral supplier) according to their messages subscription).

3 The T2S generated collateral relocation Settlement Instructions, the T2S generated liquidity transfers for  
4 rebalancing if any, the pending reverse collateral Settlement Instructions (and, in case of pledge sub, the  
5 pending reverse collateral Settlement Restriction) are then processed for their booking.

#### 6 *Booking*

7 Detailed description can be found in section [Booking](#) [▶ 936].

#### 8 2.17.2.3 Optional Cash Sweep

9 The T2S Actor has the possibility to opt for an optional cash sweep before the End of Day Liquidity Transfers  
10 takes place. This optional cash sweep is managed in the same way as the Standing and predefined Liquidity  
11 Transfers therefore no debit transfer is created in case a Central Bank account has a negative balance.

12 Please refer [Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS](#) [▶ 1016]. For  
13 Euro denominated Dedicated Cash Accounts the T2S Actor has the possibility to make use of a second op-  
14 tional cash sweep shortly after the Liquidity Transfer Cut – off. <sup>474</sup>

#### 15 2.17.2.4 End of Day Liquidity Transfers

16 The following Sub Diagram shows all the interactions between the relevant T2S Actors and T2S concerning  
17 End of Day Liquidity Transfers

---

474 Please note that the described functionality won't be available before CSLD go-live.

1

2 ***Balance Check on T2S dedicated cash account***

3 After the release of unused cash restrictions, and the release of auto-collateralisation, T2S checks during the  
 4 “automated cash sweep” the remaining liquidity on each T2S dedicated cash account. The results can be  
 5 one of the following:

- 6 | **[Balance of zero]:** In case no remaining liquidity is left on the T2S dedicated cash account, no further  
 7 steps are required and the process ends.

1 | **[Balance deviating from zero]** <sup>475</sup>: In case the remaining balance is deviating from zero Liquidity  
2 | Transfers are generated and processed within T2S (debiting the T2S Dedicated Cash Account and credit-  
3 | ing the RTGS account which is linked to this T2S Dedicated Cash Account).

#### 4 | Execution / Settlement of a Liquidity Transfer

5 | The Liquidity Transfer is submitted to settlement. After the settlement the following messages are sent:

- 6 | | "Information to T2S Actor – Floor Notification" ReturnAccount is sent to the owner of the respective ac-  
7 | | count (T2S Actor (Debtor)) in case the available liquidity on the respective T2S Dedicated Cash Account  
8 | | falls under the defined minimum amount (floor).
- 9 | | "Information to T2S Actor – Ceiling Notification" ReturnAccount is sent to the owner of the respective ac-  
10 | | count (CB (RTGS)) in case the available liquidity on the respective RTGS Transit Account exceeds the de-  
11 | | fined maximum amount (ceiling).
- 12 | | "Information to T2S Actor – Debit Notification" BankToCustomerDebitCreditNotification is sent to the  
13 | | owner of the T2S dedicated cash account debited (T2S Actor) and the responsible CB indicating the ref-  
14 | | erence of the T2S Dedicated cash account debited and the cash amount debited for the Liquidity trans-  
15 | | fer,
- 16 | | "Information to T2S Actor – Credit Notification" BankToCustomerDebitCreditNotification is sent to the CB  
17 | | (RTGS) quoting which amount has been credited on the RTGS Account and on the RTGS dedicated  
18 | | Transit Account in T2S,
- 19 | | "Outbound Liquidity Transfer" LiquidityCreditTransfer is sent to the RTGS System for processing in case  
20 | | the remaining amount on the T2S dedicated cash account is positive,
- 21 | | "Outbound Liquidity Transfer" LiquidityDebitTransfer is sent to the RTGS System for processing in case  
22 | | there is a negative amount on the Central Bank account.

### 23 | **2.17.3 Inbound and outbound messages**

#### 24 | 2.17.3.1 Inbound message

25 | No Inbound message.

#### 26 | 2.17.3.2 Outbound messages

27

ISO MESSAGE/ MESSAGE UTILISATION	ISO CODE

## 1 2.18 Send Query

### 2 2.18.1 Introduction

3 This universal use case covers those information services which are available to T2S Actors in A2A mode. Via  
4 queries T2S Actors can read reference data and dynamic data of T2S (See section Query management).

### 5 2.18.2 Activity Diagram

6 The Activity Diagram shows all the interactions between the relevant T2S Actors and T2S concerning que-  
7 ries.

1

2 2.18.2.1 Communication Processing

3 Detailed description can be found at section [Communication processing](#) [► 915].

4 2.18.2.2 Business Validation and Extraction of the business Data

5 The query message is validated by T2S against the access rights of the T2S Actor and against different busi-  
 6 ness rules. After a successful business validation the extraction of the requested business data is triggered.  
 7 Depending on the query message, the necessary business data are extracted from the respective data  
 8 stores. This may result in:

- 9 | **[Business Validation OK and Extraction of the Business Data OK]** A Query Response Message for  
 10 Business Data including requested business data is sent back to the requesting T2S Actor, i.e. either the  
 11 found data sets or a notification that the extraction returned a zero result.
- 12 | **[Business Validation NOK or Extraction of the Business Data NOK]** A Query Response message  
 13 for Operational Error is sent back to the requesting T2S Actor indicating the error(s) which occurred.

1 **2.18.3 Inbound and outbound messages**

2 Send Query is a universal use case. Consequently there are a number of messages which are processed  
3 according to this scheme. Please refer to the Messages Mapping Table below in order to get a complete list  
4 of inbound and outbound messages used for each query type:  
5

- 1 Section Query management provides information about the availability of queries via Application-to-
- 2 Application mode and User-to-Application mode.
- 3 *Query Response Messages for Operational Error and Query Response Messages for Business Data* are not
- 4 subject to pagination.
- 5 An exception applies to those messages send out as response to the Report Query that may be subject to
- 6 pagination (Please see also sections [Receive Report](#) [▶ 1035] and Outbound traffic exceeding given size limi-
- 7 tations).
- 8 It has to be mentioned that the interactions between T2S Actors and T2S may differ from the described
- 9 behaviour in case of queries which use reda.012 or reda.021 as query response messages.

## 2.19 Receive Report

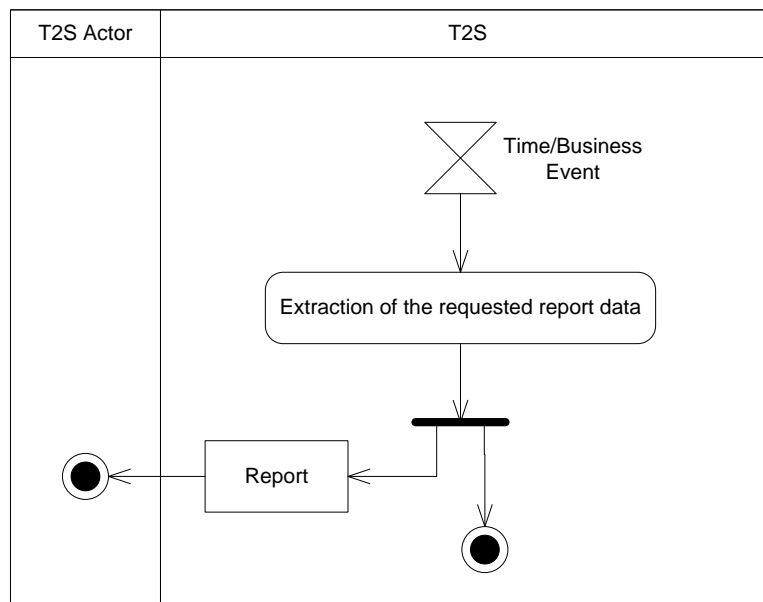

### 2.19.1 Introduction

This universal use case covers those information services which are available to T2S Actors in A2A push mode. Via reports T2S Actors are periodically provided with a set of defined reports (Settlement Instructions, balances and reference data reports) according to their access rights (See section Report generation).

The use case description below illustrates the general mechanism for the creation of all reports and their sending out from the platform to the T2S Actor who wishes to receive this information from T2S.<sup>476</sup> The logic of processing as described below applies for the different report messages T2S sends in A2A mode.

### 2.19.2 Activity Diagram

The following diagram displays the processing step which is triggered by a predefined Time/ Business Event in T2S.

#### 2.19.2.1 Time/ Business Event

The Time/ Business Event is scheduled within T2S. It triggers the processing of a report generation<sup>477</sup>.

For the process of report generation it is essential that a T2S System User configured a report in advance in reference data.

<sup>476</sup> For receiving a Report at a later date the T2S Actor is able to send a Report Query to get the latest available report. See section [Send Query](#) [► 1026]. Please note, that this is not possible for Reports delivered as flat files.

<sup>477</sup> In case of the Monthly Aggregated Amounts report, the Business Event is scheduled every T2S settlement day within T2S. However, only triggers the processing of the Monthly Aggregated Amounts report generation on the Monthly Reporting Day (the 14th business day of the month)

## 1 2.19.2.2 Extraction of the requested report data

2 When a report generation is triggered, T2S accesses the relevant data stores in order to extract all data  
3 which are necessary for the report. If necessary according to the type of the desired report, calculations on  
4 raw data are then done to obtain the defined aggregated values. Subsequently, the report data is sorted,  
5 grouped and formatted. The final report is created, stored in a data store and sent to the previously defined  
6 recipients. This is done even in case there are no business data to be reported.

7 **2.19.3 Outbound messages**

8 Receive report is a universal use case for a number of messages which are processed according to the  
9 scheme described above. Please refer to the Messages Mapping Table below in order to get a complete list  
10 of ISO20022 messages used for each report type:  
11

REPORT TYPE	ISO20022 MESSAGE	ISO CODE

Statement of settled intra-position movements (Complete /Delta)	IntraPositionMovementPostingReport	semt.016.001.07

1 The Statement of Holdings, Statement of Transactions, Statement of Pending Instructions, Statement of  
2 Pending Intra-Position Movements and Statement of Settled Intra-Position Movements can also be delivered  
3 as flat files if opted for by a party. Please see section [Receive Flat File Report](#) [▶ 1038] for additional infor-  
4 mation. Section 1.6.4.2 "Report generation" provides information about the availability of reports via Applica-  
5 tion-to-Application mode and User-to-Application mode.

## 6 2.20 Receive Flat File Report

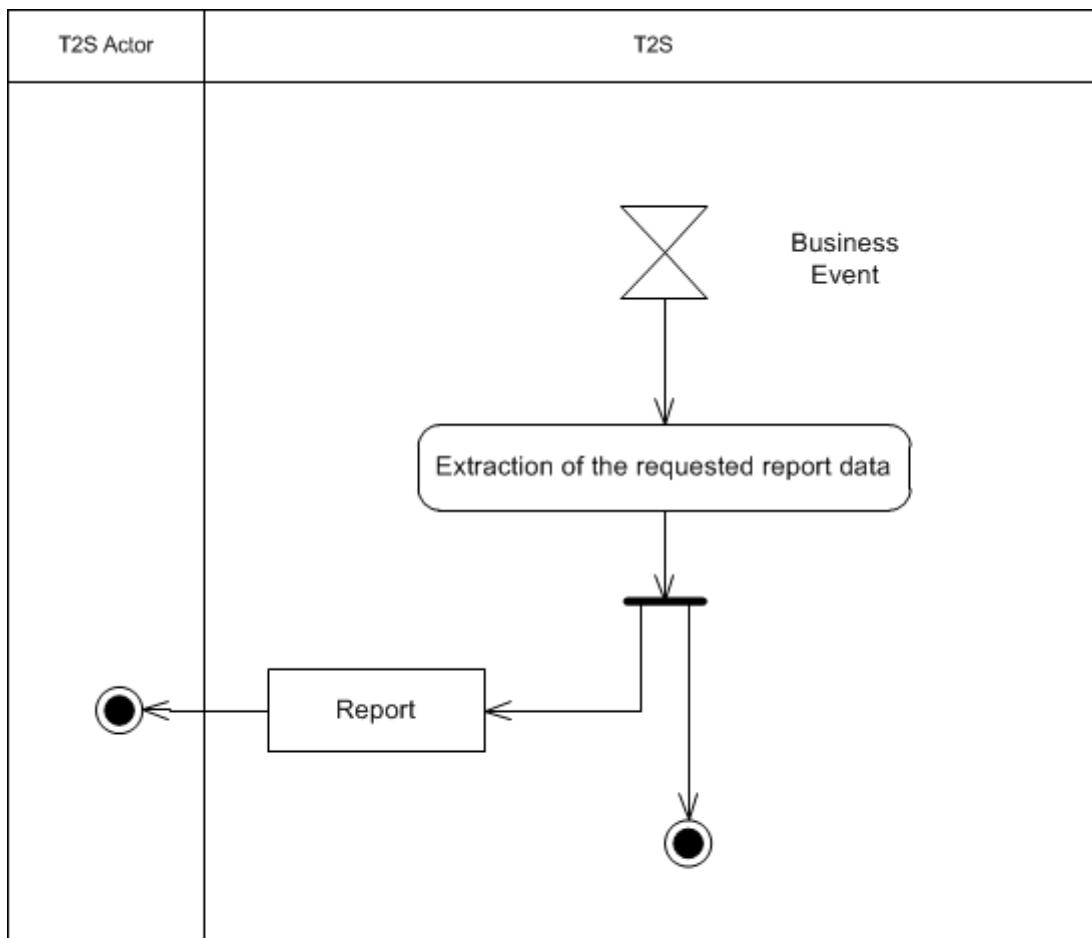

### 7 2.20.1 Introduction

8 This universal use case covers those information services which are available to CSDs as flat file reports. In  
9 this case CSDs are periodically provided with a set of defined flat file reports (Settlement instructions, bal-  
10 ances etc ...) according to their access rights (See section Flat File Report Generation for CSDs).

11 The use case description below illustrates the general mechanism for the creation of flat file reports and  
12 delivery from the platform to the CSD who wishes to receive this information from T2S. The logic of pro-  
13 cessing as described below applies for the different flat file reports sent by T2S.

### 14 2.20.2 Activity Diagram

15 The following diagram displays the processing step which is triggered by a predefined Business Event in T2S.

1

2 2.20.2.1 Business Event

3 The existing Business Events within T2S trigger the processing of a flat file report generation <sup>478</sup>.

4 For the process of flat file report generation it is essential that the T2S Operator configured a report in ad-  
5 vance in reference data.

6 2.20.2.2 Extraction of the requested report data

7 When a flat file report generation is triggered, T2S accesses the relevant data stores in order to extract all  
8 data which are necessary for the report. If necessary according to the type of the desired report, calcula-  
9 tions on raw data are then done to obtain the defined aggregated values. Subsequently, the report data is  
10 sorted, grouped and formatted. The final report is created, stored in a data store and sent to the previously  
11 defined recipients. Empty files are sent when there is no business data to be reported.

---

478 In case of the Monthly Aggregated Amounts flat file report, the Business Event is scheduled every T2S settlement day within T2S. However, only triggers the processing of the Monthly Aggregated Amounts flat file report generation on the Monthly Reporting Day (the 14th business day of the month)

## 1 ~~2.21 Maintain Reference Data Object~~

### 2 ~~2.21.1 Introduction~~

3 ~~This generic use case is carried out in the CRDM component and covers all the situations where~~  
4 ~~a T2S Actor wants to perform a Reference Data Maintenance processes on any Reference Data~~  
5 ~~object, including:~~

6 | ~~Create operations;~~

7 | ~~Update operations;~~

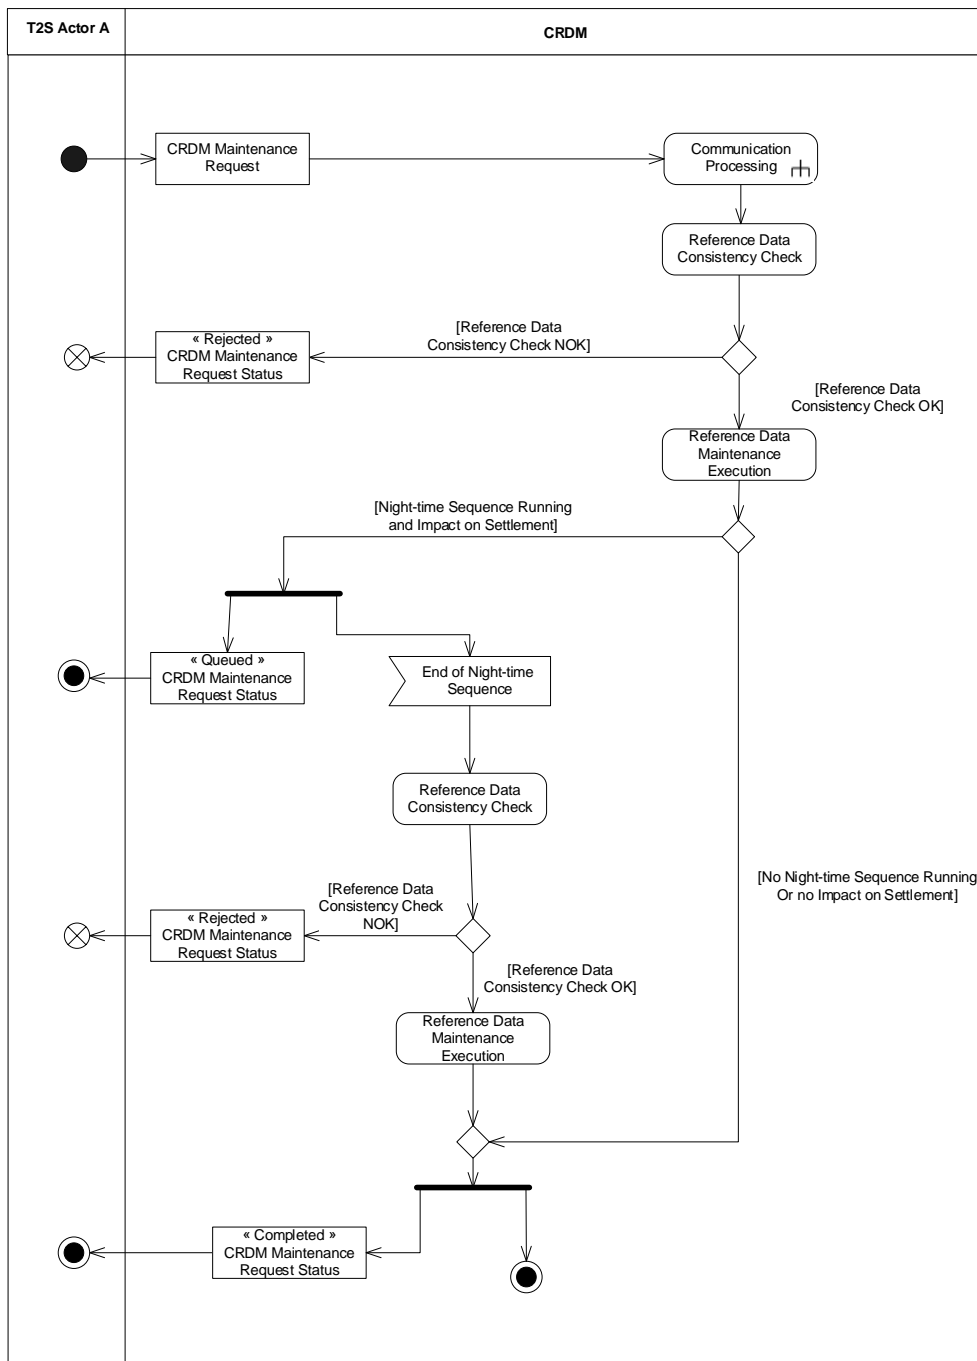

8 | ~~Delete operations.~~

					"Queued"			ap- proach}

1 2.21.2.1 Communication Processing

2 ~~Detailed description can be found at section Communication processing.~~{Split book approach}

3 2.21.2.2 Reference Data Consistency check

4 ~~The reference data consistency check validates the incoming message from a business point of~~  
5 ~~view and it can result in:~~

6 | ~~[Reference Data Consistency Check NOK] The request is not carried out and the user re-~~  
7 ~~ceives a "Rejected" CRDM Maintenance Request Status message informing him of the out-~~  
8 ~~come and the reasons for rejection.~~

9 | ~~[Reference Data Consistency Check OK] If the check is successful, Reference Data Mainte-~~  
10 ~~nance Execution is performed.~~{Split book approach}

11 2.21.2.3 Reference Data Maintenance Execution

12 ~~Reference Data Maintenance Execution checks whether a night time settlement sequence is~~  
13 ~~currently running. This check can result in:~~

14 | ~~[Night time Sequence Running and Impact on Settlement] If there is a night time settle-~~  
15 ~~ment sequence running, and the requested CRDM maintenance process has an impact on~~  
16 ~~the ongoing settlement process, the request is queued and re-submitted to the consistency~~  
17 ~~check at the end of the sequence. In this case, the user still receives a "Queued" CRDM~~  
18 ~~Maintenance Request Status message informing him of this situation.~~

19 | ~~[Night time Sequence Not Running or No Impact on Settlement] In which case the request~~  
20 ~~is executed and the user is notified via a "Completed" CRDM Maintenance Request Status~~  
21 ~~message. If required, T2S performs also a revalidation of instructions affected by this~~  
22 ~~change (see section Revalidation process) and/or a forced auto-collateralisation reim-~~  
23 ~~bursement (see section Central bank collateralisation limit management process).~~

24 ~~Reference Data Maintenance Execution does not perform this check when processing previous-~~  
25 ~~ly queued Reference Data Maintenance requests, between the end of the previous night time~~  
26 ~~settlement sequence and the following one (See section Night time settlement (NTS)). In this~~

1 ~~case there can not be an impact on the settlement process and T2S can process all the Refer-~~  
2 ~~ence Data Maintenance requests previously queued. (Split book approach)~~

## 3 ~~2.22 Restrict Reference Data Object~~

### 4 ~~2.22.1 Introduction~~

5 ~~This generic use case is carried out in the CRDM component and covers all the situations where~~  
6 ~~a T2S Actor wants to perform a Reference Data Restriction process on a specific Reference Data~~  
7 ~~object:~~

8 | ~~Party restriction;~~

9 | ~~Securities restriction;~~

10 | ~~Securities Account restriction;~~

11 | ~~T2S Dedicated Cash Account restriction;~~

12 | ~~Earmarking at Securities Account level.~~

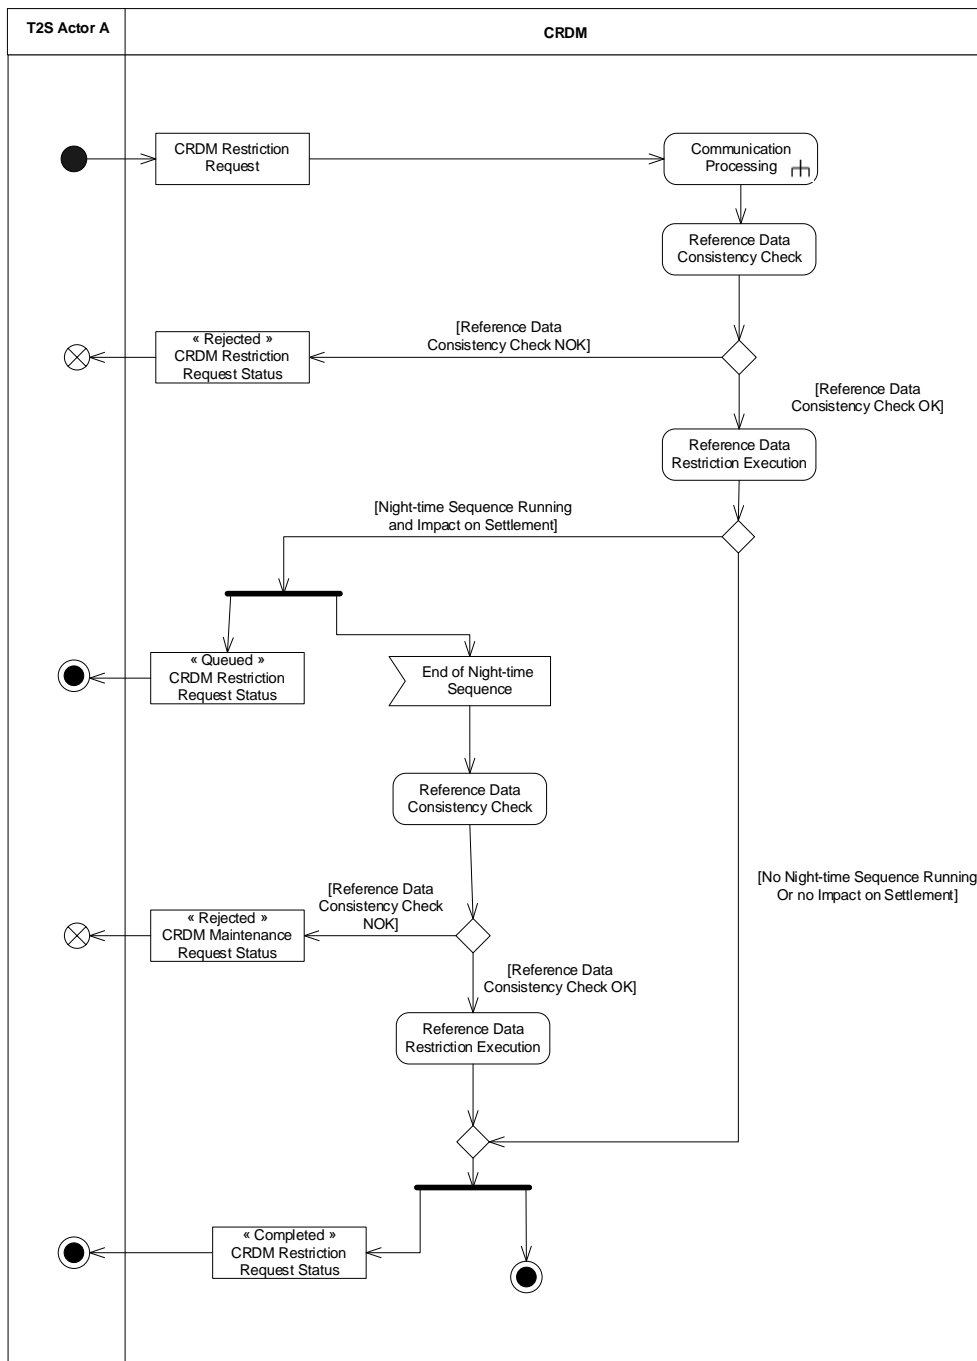

13 ~~All the T2S Actors' users granted with the appropriate privileges (See section Access rights) are~~  
14 ~~potentially involved in this use case.~~

15 ~~For more details on how Restrictions are configured in Reference Data, see section Restriction~~  
16 ~~types. (Split book approach)~~

### 17 ~~2.22.2 Activity Diagram~~

18 ~~The following diagram details all the processing steps of the Restrict Reference Data Use Case:~~

1

2 **This table allows mapping between the generic message names used on the activity diagram**  
 3 **and the actual names of the inbound and outbound messages.**

5 | ~~nance Execution is performed. (Split book approach)~~

#### 6 | ~~2.22.2.3 Reference Data Restriction Execution~~

7 | ~~Reference Data Maintenance Execution checks whether a night-time settlement sequence is~~  
8 | ~~currently running. This check can result in:~~

- 9 |  ~~| [Night-time Sequence Running and Impact on Settlement] If there is a night-time settle-~~  
10 | ~~ment sequence running, and the requested CRDM Restriction process has an impact on the~~  
11 | ~~ongoing settlement process, the request is queued and re-submitted to the consistency~~  
12 | ~~check at the end of the sequence. In this case, the user still receives a "Queued" CRDM Re-~~  
13 | ~~striction Request Status message informing him of this situation.~~
- 14 |  ~~| [Night-time Sequence Not Running or No Impact on Settlement], in which case the request~~  
15 | ~~is executed and the user is notified via a "Completed" CRDM Restriction Request Status~~  
16 | ~~message. If required, T2S performs also a revalidation of instructions affected by this~~  
17 | ~~change. (Split book approach)~~

## 18 | 2.23 System Status Notification

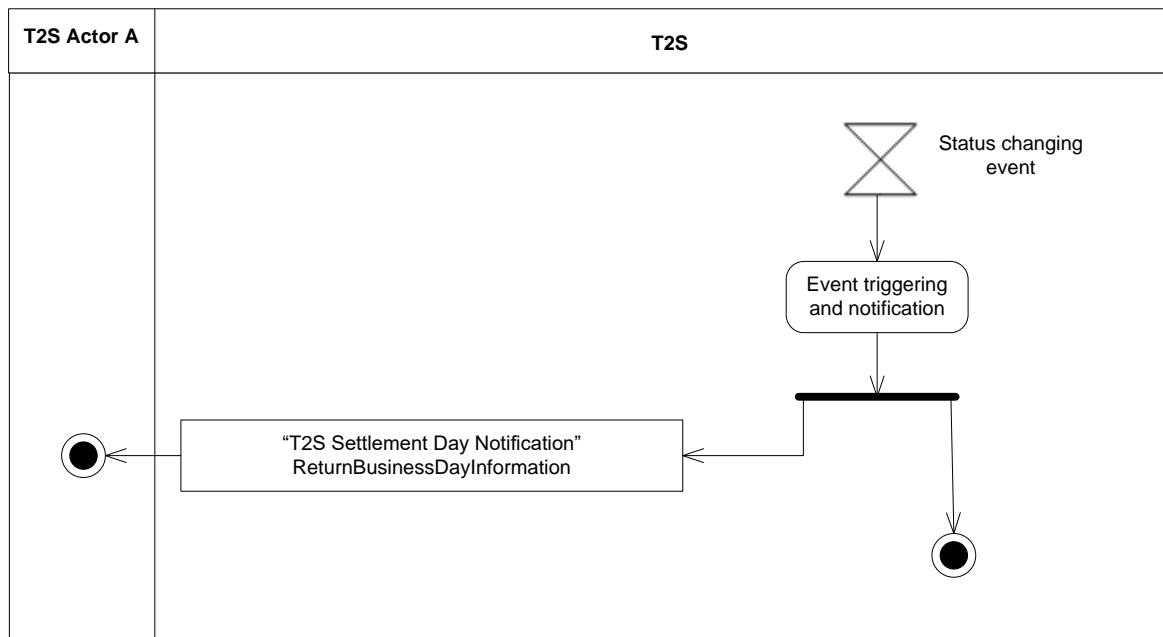

### 19 | 2.23.1 Introduction

20 | Throughout the T2S settlement day, certain events may trigger a change in the system status, which defines  
21 | the processing period T2S is currently in. This use case describes the notification sent from T2S to the T2S  
22 | Actors upon each of these system status changes. Section Overview description of the settlement day pro-  
23 | vides the exhaustive list of system statuses T2S can notify.

24 | Any T2S Actor may subscribe to receive these notifications. For more information on the structure of the T2S  
25 | settlement day, see sections Overview description of the settlement day and Detailed description of the set-  
26 | tlement day.

### 27 | 2.23.2 Activity Diagram

28 | The following diagram details all the processing steps of the System Status Notification use case:

1

2 **2.23.2.1 Event Triggering and Notification**

3 When the status of the settlement day changes, a notification is sent to the T2S Actor and, simultaneously,  
4 T2S starts the processes associated to the new processing period. For more information on the structure of  
5 the settlement day and the management of events, see section Settlement Day.

6 T2S notifies the following statuses to the T2S Actor:

- 7 | Start of Day period
- 8 | First night-time cycle
- 9 | Last night-time cycle
- 10 | Real-time settlement
- 11 | Real-time settlement closure
- 12 | End of Day period
- 13 | Maintenance window

14 **2.23.3 Inbound and outbound messages**

15 **2.23.3.1 Inbound message**

16 No inbound message (Event triggered).

17 **2.23.3.2 Outbound messages**

## 2.24 Resend Message or File

### 2.24.1 Introduction

This section describes, based on a use case, the outbound messages (including reports) or outbound files (multi-messages with file header; see message BusinessFileHeader) resulting from the processing of a ResendRequest message. This use case covers all situations where a T2S Actor asks T2S to send again an outbound message or outbound file that was already sent.

The following actors are potentially involved in the use case:

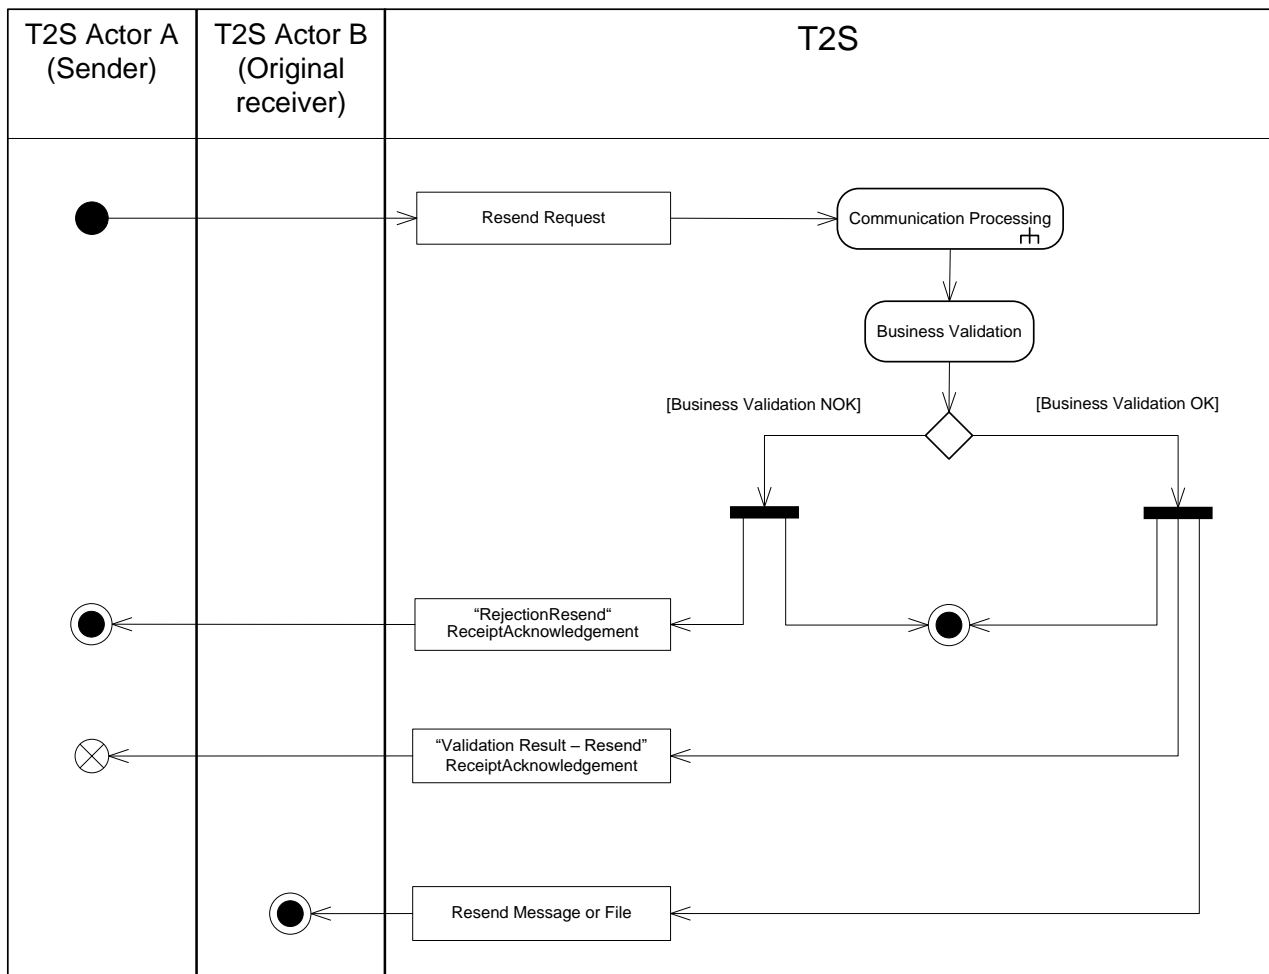

- | T2S Actor A (Sender): The actor requesting the resending of the outbound message or outbound file;
- | T2S Actor B (Original receiver): The original recipient of the outbound message or outbound file (might be identical to T2S Actor A).

T2S Actors are able to request the resending of:

- | Messages (send in an outbound file or as single message) for one or several message(s) within one request by the:
  - | Specified sequence number(s);
  - | Specified sender message reference(s);
  - | Outbound files.

### 2.24.2 Activity Diagram

This Activity Diagram shows all the interactions between the relevant T2S Actors and T2S concerning the processing of a ResendRequest message in A2A mode.

1

2 2.24.2.1 Communication Processing

3 Detailed description can be found at section [Communication processing](#) [ 915].

4 2.24.2.2 Business Validation

5 Several business validations, including privilege check, are carried out. The result of these validations can  
6 be:

- 7 | **[Business Validation NOK]** In case the business validation was not successful (e.g. the messages to  
8 be resent is not found), a "RejectionResend" ReceiptAcknowledgement is sent to the T2S Actor A (Send-  
9 er) indicating the errors which occurred.
- 10 | **[Business Validation OK]** In case the business validation was successful, a "Validation Result –  
11 Resend" ReceiptAcknowledgement is sent to the T2S Actor A (Sender) and the requested message is re-  
12 sent to T2S Actor B (Original receiver).

13 **2.24.3 Inbound and outbound messages**

14 Resend Message is a universal use case. Consequently there are a number of messages which are processed  
15 according to this scheme. Please refer to the table of outbound messages below where all messages which

1 can be resent are exhaustively listed. An exception is the ReceiptAcknowledgement message which is refer-  
2 enced as response to the resend request. The ReceiptAcknowledgement message cannot be resent.

3 In case of resending a file, the resent file has exactly the same structure as the originally sent file (See sec-  
4 tion File Header).

1 **2.25 Receive Invoice**

2 **2.25.1 Introduction**

3 This section describes, based on a use case, the outbound message resulting from the processing of an in-  
4 voice in BILL. This use case covers the sending of an invoice after its creation which.

5 The Actors involved in the use case are the CSD/ CB/CB Participant recipient of the invoice.

6 **2.25.2 Activity Diagram**

7 The Activity Diagram shows all the interactions between BILL and relevant CSD/CB/CB Participant in respect  
8 of invoices.

9

10 **2.25.2.1 Invoice Production**

11 On request, BILL sends to the authorised actor a BillingReport (camt.077) message containing the invoice.

12 The invoice sending request is triggered after the invoice creation.

13 **2.25.3 Inbound and outbound messages**

14 **2.25.3.1 Inbound message**

15 No inbound message.

16 **2.25.3.2 Outbound messages**

BillingReport / "Invoice"	camt.077.001.01

## 2.26 Receive Invoice Cancellation

### 2.26.1 Introduction

This section describes, based on a use case, the outbound message resulting from the processing of an invoice cancellation request by the T2S Operator. The T2S Operator initiates the Invoice cancellation after a CSD/CB asked for the cancellation of an invoice.

The Actors potentially involved in the use case are the CSD/CB/CB Participant recipient of an invoice cancellation.

### 2.26.2 Activity Diagram

The Activity Diagram shows all the interactions between the relevant T2S Actors and BILL in respect of invoice cancellations.

#### 2.26.2.1 Cancellation Creation

On request, BILL sends to the authorised actor a BillingReport (camt.077) message containing the invoice cancellation data. The Operator can trigger the request to cancel a previously generated invoice upon an ECB (for CBs and CSDs) or CBs (for their participants) request.

### 2.26.3 Inbound and outbound messages

#### 2.26.3.1 Inbound message

No inbound message.

1 2.26.3.2 Outbound messages

ISO Message/ Message Usage	ISO Code
BillingReport / "Invoice Cancellation"	camt.077.001.01

3 2.27 Receive Consumption Data

4 2.27.1 Introduction

5 This section describes the outbound message resulting from the sending of the consumption data in BILL.

6 2.27.2 Activity Diagram

7 The Activity Diagram shows all the interactions between the relevant T2S Actors and BILL in respect of of  
8 consumption data sending.

9

10 2.27.2.1 Consumption Data

11 On request, BILL sends to the authorised actor a BillingReport (camt.077) message containing the consump-  
12 tion data.

13 The consumption data sending request is triggered after the consumption data creation.

14 2.27.3 Inbound and outbound messages

15 2.27.3.1 Inbound message

16 No inbound message.

1 2.27.3.2 Outbound messages  
2

3 2.28 A2A Send Direct Debit to CLM

4 2.28.1 Introduction

5 This section describes the outbound message resulting from the sending of the direct debit in BILL.

6 2.28.2 Activity Diagram

7 The Activity Diagram shows all the processing steps in respect of direct debit sending:

8  
9 2.28.2.1 Direct Debit

10 On request, BILL sends to CLM a FinancialInstitutionDirectDebit (pacs.010) message containing the direct  
11 debit.

12 The direct debit sending request is triggered in the Participant invoice due date, after the send invoice pro-  
13 cess.

14 Detailed information about FinancialInstitutionDirectDebit message could be found in the related section of  
15 the CLM UDFS [CLM – User Detailed Functional Specification].

16 The consumption data sending request is triggered after the consumption data creation.

## 2.29 Bulk Load Securities Valuations

### 2.29.1 Introduction

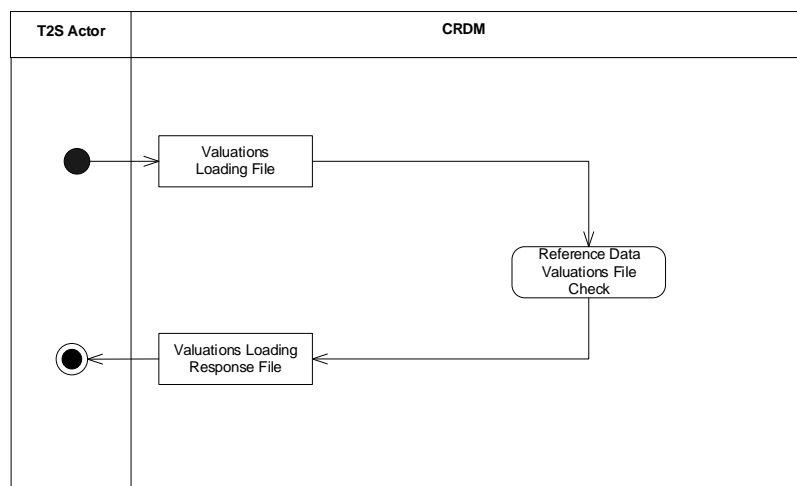

~~This use case is carried out in the CRDM component and covers the standard situation of a Central Bank or Payment Bank T2S Actor loading its Securities Valuations. Securities Valuations are normally loaded by means of a flat file which follows a specific format.~~

~~The U2A/A2A channel for loading Securities Valuations can be used by Central Banks and Payment Banks in contingency situations as an alternative method.~~

~~In order for the valuations to be loaded for the next business day, the file must be provided before 19:00. (Split book approach)~~

### 2.29.2 Activity Diagram

~~The following diagram details all the processing steps of the Bulk Load Securities Valuations Use Case:~~

~~{Split book approach}~~

#### 2.29.2.1 Reference Data Valuations File Check

~~This step validates each row of the file from a business point of view against the existing Reference Data. The result, regardless of the outcome is that CRDM sends a Response File to the T2S Actor. For each processed row contained in the file, two outcomes are possible:~~

- ~~| The insertion triggers an error, in which case the Securities Valuation is not loaded and a row is provided in the Response File with the error description.~~
- ~~| The insertion does not trigger an error, in which case the Securities Valuation is loaded successfully.~~

~~The Response File sent to the T2S Actor will therefore contain a generic response and a variable number of rows, one for each insertion which triggered an error and was consequently not processed.~~

1 ~~The checks applied to the rows in the input file are the same as the ones in place for the stand-~~  
2 ~~ard U2A/A2A channel.~~{Split book approach}

## 3 ~~2.30 Bulk Load Securities Subject to Cash Penalties~~

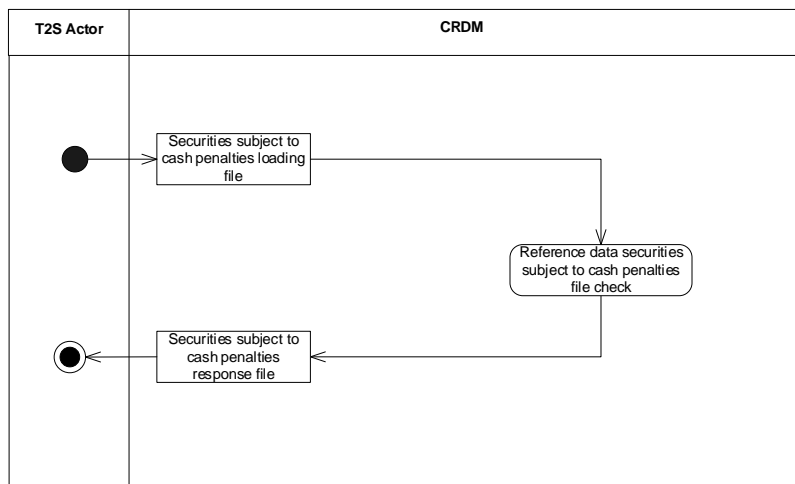

### 4 ~~2.30.1 Introduction~~

5 ~~This use case is carried out in the CRDM component and covers the standard situation of a CSD~~  
6 ~~Actor loading its list of Securities Subject to Cash Penalties. Securities Valuations can be loaded~~  
7 ~~by means of a flat file which follows a specific format.~~

8 ~~The U2A channel for loading Securities Subject to Cash Penalties can be used by CSDs as an~~  
9 ~~alternative method.~~{Split book approach}

### 10 ~~2.30.2 Activity Diagram~~

11 ~~The following diagram details all the processing steps of the Bulk Load Securities Subject to~~  
12 ~~Cash Penalties Use Case:~~

13  
14 {Split book approach}

### 15 ~~2.30.2.1 Reference Data Securities Subject to Cash Penalties File Check~~

16 ~~This step validates each row of the file from a business point of view against the existing Ref-~~  
17 ~~erence Data. The result, regardless of the outcome is that CRDM sends a Response File to the~~  
18 ~~T2S Actor. For each processed row contained in the file, two outcomes are possible:~~

- 19 | ~~The insertion triggers an error, in which case the Security Subject to Cash Penalties is not~~  
20 ~~loaded and a row is provided in the Response File with the error description.~~
- 21 | ~~The insertion does not trigger an error, in which case the Security Subject to Cash Penalties~~  
22 ~~is loaded successfully.~~

23 ~~The Response File sent to the T2S Actor will therefore contain a generic response and a variable~~  
24 ~~number of rows, one for each insertion which triggered an error and was consequently not pro-~~  
25 ~~cessed.~~

1 ~~The checks applied to the rows in the input file are the same as the ones in place for the stand-~~  
2 ~~ard U2A channel.~~ {Split book approach}

## 3 ~~2.31 Bulk Load Daily Prices for Penalties~~

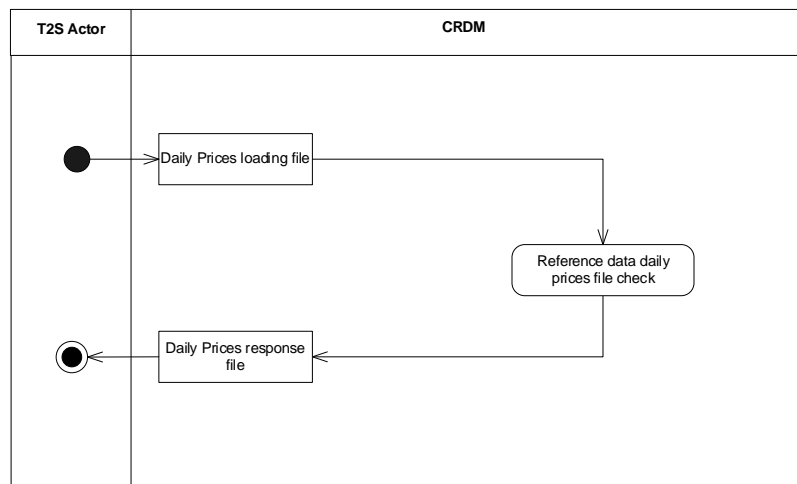

### 4 ~~2.31.1 Introduction~~

5 ~~This use case is carried out in the CRDM component and covers the standard situation of a CSD~~  
6 ~~Actor loading its list of Daily Prices for Penalties. Daily Prices can be loaded by means of a flat~~  
7 ~~file which follows a specific format.~~

8 ~~The U2A channel for loading Daily Prices can be used by CSDs as an alternative method.~~ {Split  
9 book approach}

### 10 ~~2.31.2 Activity Diagram~~

11 ~~The following diagram details all the processing steps of the Bulk Load Daily Prices for Penal-~~  
12 ~~ties Use Case:~~

13  
14 {Split book approach}

#### 15 ~~2.31.2.1 Reference Data Daily Prices File Check~~

16 ~~This step validates each row of the file from a business point of view against the existing Ref-~~  
17 ~~erence Data. The result, regardless of the outcome is that CRDM sends a Response File to the~~  
18 ~~T2S Actor. For each processed row contained in the file, two outcomes are possible:~~

- 19 | ~~The insertion triggers an error, in which case the Daily Price is not loaded and a row is pro-~~  
20 ~~vided in the Response File with the error description.~~
- 21 | ~~The insertion does not trigger an error, in which case the Daily Price is loaded successfully.~~

22 ~~The Response File sent to the T2S Actor will therefore contain a generic response and a variable~~  
23 ~~number of rows, one for each insertion which triggered an error and was consequently not pro-~~  
24 ~~cessed.~~

1 ~~The checks applied to the rows in the input file are the same as the ones in place for the stand-~~  
 2 ~~ard U2A channel.~~ {Split book approach}

## 3 2.32 Send Penalty Modification Requests

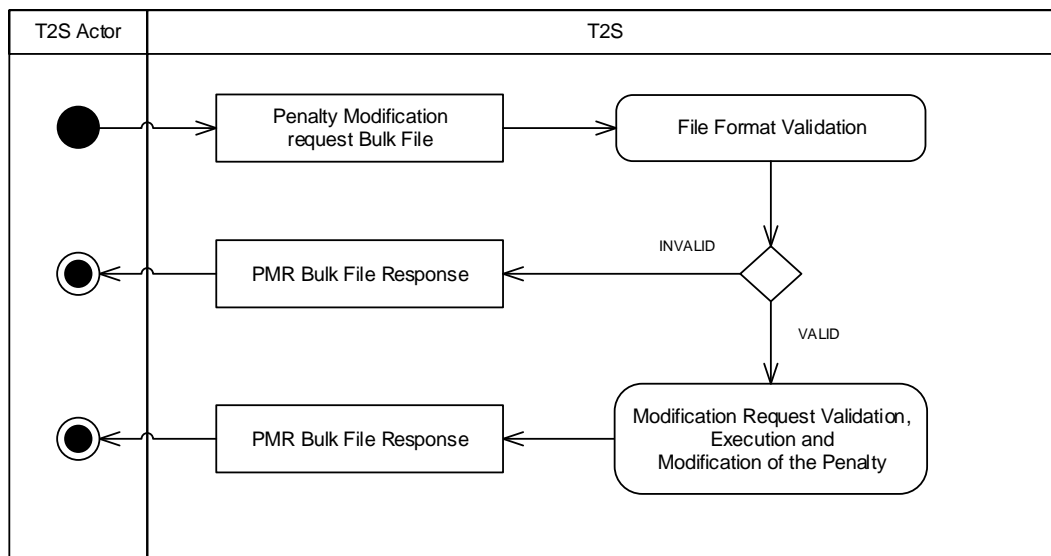

### 4 2.32.1 Introduction

5 This use case covers the situation of a CSD T2S Actor sending Penalty Modification requests by means of a  
 6 flat file, which follows a specific format (See section Penalty Modification Request bulk file format specifica-  
 7 tions ). As described in that section Penalty Modification Request bulk file format, only authorised CSDs in-  
 8 cluded in a "white list" are allowed to send such files.

9 Penalty Modification request Bulk Files can be sent at any time, but they will be queued during the pro-  
 10 cessing of penalties and during the maintenance window. Hence, in order to have the related modifications  
 11 in the Penalties reported in the current business day's List of Modified Penalties report, the file must be se  
 12 before the deadline for provision of Penalty Modification requests (see section Settlement Day). Otherwise,  
 13 they will be reported in the following business day's List of Modified Penalties report.

### 14 2.32.2 Activity Diagram

15 The following diagram details the processing steps of the Penalty Modification request Bulk File Use Case:

#### 17 2.32.2.1 File Format Validation

18 This steps checks that the file complies with the format specifications required Penalty Modification Request  
 19 bulk file format.

20 In case that any of these criteria is not fulfilled, T2S sends a Response File to the T2S Actor, indicating the  
 21 File Format Error Text and the File Identifier. Otherwise, T2S proceeds to process, in Penalty Mechanism, the  
 22 Modification request validation, execution and modification of the Penalty.

23

---

### 1 2.32.2.2 Modification Request Validation, Execution and Modification of the Penalty

2 This step validates each record or Penalty Modification Request (row of the Body of the file) file from a busi-  
3 ness point of view against the Business Rules set for the modification of penalties.

4 The result, regardless of the outcome, is that T2S sends a Response File to the T2S Actor. For each pro-  
5 cessed record contained in the file, two outcomes are possible:

6 | The Penalty Modification request triggers an error, in which case it is provided in the Response File with  
7 updated Status "Rejected" and with the error description;

8 | The Penalty Modification request does not trigger an error, in which case it is provided in the Response  
9 File with updated Status "Executed" (and the relevant actions over the Penalty according to the request  
10 are performed).

11 The Response File sent to the T2S Actor will therefore contain the original File header and footer, and a row  
12 for each record of the body or Penalty Modification request.

13 The checks applied to the Penalty Modification requests in the input file are the same as the ones in place  
14 for the U2A channel.

## 3 Catalogue of messages

### 3.1 Introduction

#### 3.1.1 Purpose and scope of the Catalogue of Messages

Starting from the formalised illustration of the T2S application processes in Chapter 2 the Catalogue of Messages provides a detailed description of the entire set of ISO messages - customised to the specific needs of T2S - available to the T2S Actors. The objective of the Catalogue of Messages is to allow the reader finding the necessary information related to messaging which is needed to establish a functioning system of application-to-application communication between T2S and the T2S Actors.

#### 3.1.2 Structure of the Catalogue of Messages

The Catalogue of Messages lists up all the ISO messages T2S requires to support the T2S Actors business processes. This detailed message description in section [List of Messages](#) [▶ 1098] is framed by an introductory section [General information](#) [▶ 1069] and a detailed appendix.

The introductory section in section [General information](#) [▶ 1069] provides general information on the concept of messaging in T2S or/and information applicable to all messages in T2S. The appendix contains comprehensive lists of relevant technical details for each message (i.e. the business rules applying to the messages and the values/codes applying to the relevant elements of the T2S messages).

The messages described in section [List of Messages](#) [▶ 1098] are grouped according to the "business areas" used in ISO 20022<sup>479</sup> to facilitate orientation for the reader. Each message description consists of three sections:

- I One section to explain the scope of the concerned message and to provide high-level information to the reader about its purpose in T2S;
- I One section to provide detailed information on the T2S schema file corresponding to the relevant message. Besides providing an overview of the message outline, this section contains a link to the online resources where the schema file in xsd and Excel format and the respective schema documentation in HTML and PDF format and the message examples can be accessed. This section furthermore contains a list of all the business rules applicable to the message;
- I One section to illustrate in detail the different usages (for outbound messages) or query and instruction types (for inbound messages) in accordance to the use cases of Chapter 2 (e.g. related to differences at message element level to determine whether a message serves purpose A or purpose B).

---

479 [http://www.iso20022.org/catalogue\\_of\\_messages.page](http://www.iso20022.org/catalogue_of_messages.page)

### 1 **3.1.3 Breakdown of the message descriptions**

#### 2 3.1.3.1 Overview and scope of the message

3 This section provides general information about the scope of the message within the context of T2S. Besides  
4 illustrating the purpose of the message within T2S it informs about the sender and receiver of this particular  
5 message within T2S.

6 For T2S inbound messages it mentions the possible different instructions or queries for the concerned mes-  
7 sages (if applicable) and informs the reader about the corresponding response message foreseen in T2S.

8 For T2S outbound messages it mentions the possible different usages covered by the message (if applica-  
9 ble).

#### 10 3.1.3.2 The T2S-specific schema

11 This section starts with an outline of the message building blocks applicable to the schema. The reader can  
12 find guidance on whether this building block is optional or mandatory and what sort of information it con-  
13 tains.

14 The section also contains the respective hyperlinks for the online resources related to the messages, includ-  
15 ing the in-depth schema file descriptions. The reader can access the schema file both in XSD and Excel for-  
16 mat. These schema files were customised to the needs of the specific utilisation of the messages in T2S and  
17 hence contain explanatory annotations and definitions clarifying these possible specificities. Besides the  
18 schema file representation the reader can access documentation available in HTML and PDF providing fur-  
19 ther explanations on the specific utilisation of the concerned message in T2S.

20 The T2S-specific schemas reflect the latest available status of the respective ISO message, i.e. including all  
21 the changes occurring during the regular ISO maintenance cycles for these messages. Under certain condi-  
22 tions the schema documentation anticipates upcoming changes to the ISO messages which are caused by  
23 ISO Change Requests launched specifically to cover T2S requirements. These changes are thus not yet in-  
24 corporated into the schema files as their availability follows the yearly maintenance cycle. Within the schema  
25 documentation the reader is nonetheless informed about such changes in advance and can identify future  
26 changes to the T2S messages already at this point in time.

27 For T2S inbound messages the section concludes with a table listing up the set of T2S business rules appli-  
28 cable to the described message. The table shows at message element level the business validations the  
29 message undergoes when received by T2S.

#### 30 3.1.3.3 The message in business context

31 This section provides a concrete example on the utilisation of the message in the T2S context.

32 For T2S inbound messages with several purposes (instructions or queries) and for T2S outbound messages  
33 with several usages, the section provides the specific setup of the message in order to perform the foreseen  
34 task:

- 35 | It provides the scope of the specific types of instructions/queries or usages and details, e.g. the query  
36 parameters applicable to the specific case;

1 | In a sub-section on "Specific message requirements", a message extract is provided in a table format  
2 | showing the necessary elements of the message to fulfil the purpose described. The extract only depicts  
3 | the part of the message which requires the particular necessary configuration and may thus deviate from  
4 | the overall XML structure of the message.

5 | A complete message sample in XML format provides the reader with a concrete example on how the  
6 | message is to be used in a specific business situation which refers to the particular instruction/query or  
7 | usage. All data used are fictional.

8 | For T2S inbound and outbound messages with only one purpose or usage, the section is usually composed  
9 | of a message sample illustrating the message given a specific business situation referring to the particular  
10 | purpose or usage of the message.

11 | The tables within the sub-section "Specific message requirements" are present:

12 | | For T2S outbound messages, when these messages contain several distinct "message usages"

13 | | For T2S inbound messages, when these messages are referred to in the message descriptions as having  
14 | distinct "instruction types" or "query types.

15 | For all other messages the T2S-specific schema is the sole source of information. In any case, the infor-  
16 | mation contained in these tables for itself is not supposed to be self-sufficient and must be understood as  
17 | clarifying the respective T2S-specific schema and the related schema documentation.

18 | Within the "Utilisation" column of the tables the reader is familiarised with the relevant content of the con-  
19 | cerned message element in the context of the concerned message usage or instruction/query type. This  
20 | column does not include any sample data but provides generic information applicable to the message ele-  
21 | ment. In case codes or values are listed in this column, they should be understood as the comprehensive set  
22 | of all possible values for the element in the context of the concerned message usage or instruction/query  
23 | type.

### 24 | **3.1.4 References**

25 | The specification of the messages used in T2S is based on several input sources the most relevant of them  
26 | being:

27 | | The T2S Business Justification co-submitted by T2S and SWIFT Standards for the development of new  
28 | ISO 20022 Financial Repository Items;

29 | [http://www.iso20022.org/documents/BJ/BJ042/ISO20022BJ\\_T2S\\_v2\\_with\\_comments.pdf](http://www.iso20022.org/documents/BJ/BJ042/ISO20022BJ_T2S_v2_with_comments.pdf)

30 | | The ISO 15022 / 20022 Reverse Engineering - Settlement And Reconciliation - Work Plan;

31 | | The ISO 15022 SWIFT Securities Message Usage Guide;

32 | | The ISO 15022 Category 5 UHB;

33 | | The SWIFT Standards MX Message Reference Guides for the relevant business areas of T2S.

## 3.2 General information

### 3.2.1 Message validation

#### 3.2.1.1 Structure of ISO 20022 messages

XML schema files conform to a compulsory overall structure foreseen for ISO 20022 messages.

Each schema file requires an XML declaration. This declaration provides information on the used XML version and the applicable character set within the message. XML declarations do not have an end tag as they are not part of the XML document itself and hence do not constitute an XML element.

Below the XML declaration, all schema files have a root element. This root element provides the name of the schema file, including information on the variant and the version<sup>480</sup> of the schema file. The actual content of the schema file is hence a sub-element of the root element. Similar to all other elements within the schema file, the root element also has an end tag at the end of the schema file.

The below example provides an indication of the overall structure of ISO 20022 messages.

```
<?xml version="1.0" encoding="UTF-8"?>
<Document xmlns:xsi=http://www.w3.org/2001/XMLSchema-Instance
xmlns="urn:iso:20022:tech:xsd:camt.033.001.03">
  <camt.033.001.03>
    <Assgnmt>
      <Id>ABCDEFGHIJKLMNPOQRSTUVWXYZ123456789012345</Id>
      <Assgnr>CORPBE22</Assgnr>
      <Assgne>CHASUS33</Assgne>
      <CreDtM>2002-07-21T08:35:30</CreDtM>
    </Assgnmt>
    <Case>
      <Id>Case001</Id>
      <Cretr>CORPUK33</Cretr>
      <ReopCaseIndctn>true</ReopCaseIndctn>
    </Case>
  </camt.033.001.03>
</Document>
```

When being sent as an ISO 20022 message, an XML document is referred to as message instance. The underlying schema file "explains" what makes up a valid message (i.e. it contains the necessary rules and definitions).

The message instances themselves consist of message components, choice components and message elements.

Message components are items which are used for setting up a message. These message components contain a set of message elements. In ISO 20022 these message components are usually linked to a particular

480 A "variant" is a restricted version of a global message which fits the needs of a particular community while remaining in strict compliance with the original ISO 20022 message. For example, optional items can be removed or made mandatory, choices can be removed to keep no or fewer options, internal code lists can be reduced to the subset of codes that will actually be used, size of text fields can be reduced, etc.

A "version" helps to cater for the evolution of message requirements and for the correction of possible problems and errors of a message. Upon the publication of a new message version a message switches from one way of being used to a new way of being used. Each message (variant) usually has one current version which is the most recent one. The former and the current version coexist for a certain while in order to ease the migration.

Example: Within the ReturnAccount message camt.004.001.08 the number 001 reflects the variant of the message in use whereas the number 01 reflects the current version of the message variant in use.

1 business component. A comprehensive overview of all standardized ISO 20022 message components is  
2 available in the Data Dictionary of ISO 20022.

3 Message elements are the constituents of the message components and are uniquely identified in each  
4 component. In ISO 20022 these message elements are usually linked to a particular business element.

5 Filled-in message elements occur as simple and complex data types. All message elements have such a par-  
6 ticular type. These data types specify the format of the possible values of a message element.

7 Simple types serve as a prescription on how to fill the respective message element in the message instance.

8 The simple type shown below prescribes the way in which the currency code must be entered:

```
<xs:simpleType name="ActiveCurrencyCode">  
  <xs:restriction base="xs:string">  
    <xs:pattern value="[A-Z]{3,3}" />  
  </xs:restriction>  
</xs:simpleType>
```

9

10 Complex types allow for choice and sequencing options within the message and do not (only) prescribe ways  
11 of filling message elements. They hence determine the structure of a message element. The complex type  
12 shown below allows for a choice on how to assure party identification in a message:

```
<xs:complexType name="FinancialInstrumentQuantity15Choice">  
  <xs:sequence>  
    <xs:choice>  
      <xs:element name="Unit" type="RestrictedFINDecimalNumber" />  
      <xs:element name="FaceAmt" type="RestrictedFINImpliedCurrencyAndAmount" />  
      <xs:element name="AmtsdVal" type="RestrictedFINImpliedCurrencyAndAmount" />  
    </xs:choice>  
  </xs:sequence>  
</xs:complexType>
```

13

14 ISO 20022 groups data types into standardized representation classes. These representation classes provide  
15 a set of possible data which can be inserted into the concerned message element.

16 For example, the message element "Bank Identifier" can be assigned to the representation class "BICIdentifi-  
17 fier" or message element "Text" can be assigned to the representation class "Max35Text".

18 Choice components allow the user of the message to choose between several possibilities. The message  
19 user may only choose one possible option in the instance.

20 Another term which specifies the partitioning within a message instance is the message item. Such a mes-  
21 sage item can be either a message building block or a message element. Message items which occur as XML  
22 tags within the message instance can appear at any level of nesting in the message.

23 A message building block is a message item which is specific to the concerned message (i.e. the user cannot  
24 find it in the ISO 20022 Data Dictionary). Within the corresponding schema file of the message the building  
25 block must be defined as an immediate child of the message. This is not to be confused with reusable  
26 groupings of one or more message elements, known as message components (i.e. that the user can find in  
27 the ISO 20022 Data Dictionary).

## 1 3.2.1.2 T2S in an environment of ISO 15022 and 20022 coexistence

### 2 **3.2.1.2.1 Context**

3 Upon its go-live, T2S will be operational in a period of standard coexistence between the ISO 15022 and the  
4 ISO 20022 message standard. In order to provide T2S Actors with a smooth and user-friendly business con-  
5 text during this period of coexistence, T2S adapted its message specifications in accordance to the interoper-  
6 ability requirements defined to manage the coexistence of standards.

7 The chosen approach ensures that T2S Actors, regardless of their individual ISO 20022 migration strategy,  
8 can rely on standards interoperability in an environment of ISO 15022-20022 coexistence and can communi-  
9 cate with T2S in the full scope of functionalities described within the UDFS.

10 However, T2S does not support ISO 15022 messages. Both inbound and outbound communication in T2S  
11 takes place in ISO 20022 (i.e. XML) format only.

12 The approach of standards interoperability in T2S is about the incorporation of limitations of ISO 15022  
13 messages into the ISO 20022 messages sent and received by T2S. No conversion of ISO 20022 messages  
14 into other standards such as ISO 15022 is foreseen within the scope of T2S. Any kind of conversion to MT-  
15 based ISO 15022 messages or other syntax formats remains therefore under the responsibility of the T2S  
16 Actors.

### 17 **3.2.1.2.2 Assuring the interoperability between ISO 15022 and ISO 20022 in T2S**

18 Based on the principle to rely on ISO 20022 messages for its inbound and outbound communication T2S  
19 does not take into account any kind of solution entailing the need to process information in MT format.  
20 However, the ISO 20022 messages used in T2S ensures convertibility for the T2S Actors between the coex-  
21 isting standards. For this reason T2S restricts its ISO 20022 messages in accordance to the limitations (in  
22 terms of field length, character set, etc.) to which ISO 15022 messages are subject. In the framework of the  
23 T2S-specific message customisation (described in the following section), these limitations are incorporated  
24 into all the schema files applicable to T2S, i.e. also into those ISO 20022 messages which do not have an MT  
25 equivalent (all non-S&R messages). The validations applied to incoming messages are based on these "re-  
26 stricted" ISO 20022 schema files. Hence, the message customisation in T2S served two distinct purposes: to  
27 insert T2S-specific rules into the schema files and to assure that the T2S ISO 20022 messages guarantee  
28 convertibility at T2S Actor level with MT-formatted messages based on the ISO 15022 standard.

29 These restricted schema files are comparable to the set of schema files SWIFT offered to the market as a  
30 follow-up to their MT/MX reverse engineering project. As one major element of the reverse engineering pro-  
31 ject, SWIFT assured for core securities-related business fields (Settlement & Reconciliation and Corporate  
32 Actions) the creation of ISO 20022 messages which are fully interchangeable with existing MT messages.  
33 Therefore, the ISO 20022 transition for institutions which are currently using ISO 15022 is eased to the ut-  
34 most extent.

35 For all newly-developed T2S messages no MT message equivalents exist. This follows the general strategic  
36 approach of SWIFT that new functions are to be developed under ISO 20022 only. Nevertheless, in order to  
37 follow a coherent approach and to ensure a consistent way of working in T2S, the use of these new mes-  
38 sages is also limited according to rules equivalent to coexistence rules. In these cases (representing more

1 than half of the messages used in T2S) there may be impacts on the functionality of T2S for those T2S Ac-  
2 tors which are not able to process ISO 20022 messages at all. The responsibility would be on CSD or DCP  
3 level to provide the entire extent of the T2S service and the full chain of functionalities to such users.

4 When – at any future point in time – the period of 15022/20022 coexistence expires, T2S will re-shift from  
5 its current restricted schema files to the sole usage of full ISO 20022 messages without restrictions. The  
6 assumption is that T2S would synchronise one of its messaging updates with this end of the coexistence  
7 period.

8 The detailed message descriptions in [List of Messages](#) [▶ 1098] provide the necessary information on the set  
9 of restrictions the T2S Actors needs to respect in order to have his messages processed. On a general level  
10 the rules assuring interoperability between ISO 15022 and ISO 20022 in T2S are the following:

#### 11 CoexistenceIdentificationRule

12 All transaction and document identifications or references must be 16 characters or less. The field must not  
13 start or end with a slash / or contain two consecutive slashes //.

#### 14 CoexistenceCharacterSetXRule

15 Characters used in all text fields must correspond to character set X, that is a-z A-Z 0-9 / - ? : ( ) . , ' + CR  
16 LF.

#### 17 CoexistencePartyProprietaryIdentificationRule

18 PartyProprietaryIdentification must be 34 characters or less. The field must not start or end with a slash '/'  
19 or contain two consecutive slashes '//

#### 20 CoexistenceNameAndAddressRule

21 The total of characters used in NameAndAddress must not be greater than 140.

#### 22 CoexistenceAmountRule

23 Amount length must not be greater than 15, including the decimal point.

#### 24 CoexistenceQuantityRule

25 Quantity length must not be greater than 15, including the decimal point.

#### 26 Coexistence35to30TextFieldRule

27 MarketIdentification/Description must be 30 characters or less. The field must not start or end with a slash  
28 '/' or contain two consecutive slashes '//

29 AlternateClassification identification must be 30 characters or less. The field must not start or end with a  
30 slash '/' or contain two consecutive slashes '//

31 (Long) number must be 30 characters or less. The field must not start or end with a slash '/' or contain two  
32 consecutive slashes '//

#### 33 CoexistenceNameRule

34 The total of characters used in NameAndAddress must not be greater than 350. The field must not start or  
35 end with a slash '/' or contain two consecutive slashes '//

#### 36 CoexistenceIssuerSchemeNameRule

1 Issuer length must be 4 characters and SchemeName length must be 4 characters or less. Issuer and  
2 SchemeName must be an ISO-registered Issuer and SchemeName.

3 Please find below a sample for the "CoexistenceIdentificationRule" (BizMsgIdr of the BAH):

4 | Full ISO20022 definition and format ("Text" means full ISO20022 UTF-8 character set):

#### 4.0 BusinessMessageIdentifier <BizMsgIdr>

**Presence:** [1..1]

**Definition:** Unambiguously identifies the Business Message to the MessagingEndpoint that has created the Business Message.

**Data Type:** Max35Text

**Format:** maxLength: 35  
minLength: 1

5

6 | Valid allocation of the BusinessMessageIdentifier in case of full ISO20022 usage:

7 <BizMsgIdr>ABCE123456789ABCDEFGHIJKLMNQRSTU</BizMsgIdr>

8 | ISO 20022 coexistence as used in T2S (only change of datatype and format):

**BusinessMessageIdentifier <BizMsgIdr>**

**Data Type:** RestrictedFINXMax16Text [valid characters are: a-z A-Z / - ? : ( ) . , ' + { } CR LF]

**Format:** maxLength: 16  
minLength:1

9

10 Valid allocation of the BusinessMessageIdentifier in case of coexistence ISO20022 usage:

11 <BizMsgIdr>9999999ABCDEFGHI</BizMsgIdr>

### 12 3.2.1.3 T2S-specific schema customisation

13 Based upon the enriched ISO schema files for its messages, once available, (i.e. after the enrichment of  
14 newly-developed messages by SWIFT Standards or after the publication of maintained messages in the con-  
15 text of a new standards release) these schema files were customised to adapt them to the specificities appli-  
16 cable in the context of T2S.

17 The customisation of the schema files used in T2S followed a particular approach which combines the needs  
18 of the T2S Actors to have a coherent logic across the messages and the need within T2S to have a usable  
19 and efficient schema definition. T2S derived this approach from the following customisation principles:

- 20 | Despite customisation T2S schema files are compliant with the initial ISO 20022 schema files;
- 21 | When possible, T2S customisation drops all the message elements with no direct connection to the user  
22 requirements of T2S;
- 23 | When possible, T2S customisation restricts element types to the T2S-specific usage;
- 24 | T2S customisation defines the necessary content of mandatory fields which cannot be pruned (i.e. "re-  
25 moved") from the ISO schema files;
- 26 | T2S customisation restricts the list of possible code values to the sole codes allowed in T2S;
- 27 | T2S customisation sets the length of the values to the length applicable in T2S;
- 28 | T2S customisation sets the occurrence of message elements to the occurrence applicable in T2S;

1 | T2S customisation makes optional message elements mandatory if their usage in T2S is always compulsory;  
2

3 | T2S customisation restricts the allowed characters to those used in T2S with a pattern;

4 | T2S customisation restricts numeric fields applicable to T2S (e.g. for amounts).

5 Based on the chosen approach four scenarios apply to the customisation for T2S purposes:

6 1. a (part of a) message only contains elements which are supported by T2S and there is hence no need  
7 for any pruning;

8 2. T2S does not need a certain element but it cannot be pruned in the message because of a particular  
9 customer need (specificity of the S&R area);

10 3. neither T2S nor T2S Actors need a certain element and therefore it is pruned;

11 4. neither T2S nor its users need a certain element but as mandatory element in the ISO schema file it  
12 cannot be pruned and may be filled with a dummy value in T2S.

13 For the scenarios 1, 3 and 4, T2S only allows message elements according to the T2S customised schema  
14 file. T2S rejects any inbound message containing message elements which are not part of the T2S custom-  
15 ised schema file. Message elements under the scope of scenario 4 are not subject to further processing in  
16 T2S. T2S Actor can hence fill these fields either with dummy values or real data (inserting real data does not  
17 lead to any processing, either).

18 For scenario 2 an alternative procedure applies. If message elements are present in the message and in the  
19 T2S customised schema file although the message element is per se dispensable, T2S nevertheless process-  
20 es the message. For these message elements only schema validations are applicable. T2S does not validate  
21 these elements against its business rules.

22 For scenario 2 there is one exception: as indicated above, S&R messages may contain more elements than  
23 necessary for the processing in T2S. T2S does not prune dispensable elements as these elements may be  
24 required for STP of T2S Actors.

25 However, for all messages, T2S prunes elements which are not within the general scope of its functionalities.

26 For example, with its SettlementConditionModificationInstruction message (sese.030) T2S enables T2S Ac-  
27 tors to modify their securities settlement conditions in T2S. T2S nevertheless pruned the elements being  
28 used for the modification of settlement conditions which are not modifiable in T2S. For this reason the "Re-  
29 quest Details Block" in the sese.030 message does not contain the pruned items "Automatic Borrowing" and  
30 "Matching Denial" (both are outside the scope of T2S functionalities).

31 T2S rejects messages during schema validation in cases where Actors:

32 | Use elements in the message which are not present in the T2S customised schema file;

33 | Use values in allowed elements but do not respect the restrictions of these values foreseen in the T2S  
34 customised schema.

35 | For T2S outbound messages the logic for filling message elements customised to be optional is derived  
36 from the concrete circumstances and purposes of the concerned messages:

- 1 | I For query response messages the filled message elements for outbound messages are those necessary  
2 | to convey the information requested by the corresponding query message;
- 3 | I For report messages the same applies, in accordance to the concrete configuration for the subscribed  
4 | reports;
- 5 | – For any other T2S outbound message the filling of optional fields also depends on either:  
6 | The corresponding inbound message with its specific intention,  
7 | – Or the purpose of the T2S-generated outbound message in case no inbound message precedes.  
8 | The sections “The message in business context” may contain message usages and/or message sam-  
9 | ples in which the content of given fields for a specific purpose or as a reply to a specific inbound mes-  
10 | sages are depicted.

#### 11 | 3.2.1.4 XML character set

12 | UTF-8 as the default encoding scheme in XML processing is the standard data format in T2S.

13 | The character set used in an XML document is defined via the encoding parameter of the XML declaration.

14 | For T2S the XML declaration shows the following:

```
15 | <?xml version="1.0" encoding="UTF-8" ?>
```

16 | UTF-8 is a Unicode character encoding of variable length. It has the capacity to represent every character of  
17 | the Unicode character set and is backwards compatible to ASCII (in contrast to UTF-16 or UTF-32). In the  
18 | vast majority of character representations in UTF-8 it only takes one byte to code one character <sup>481</sup>.

19 | UTF-8 is part of the ISO 10646 scheme which was published as a first draft in 1990. The idea is to assign a  
20 | unique code point to every character (i.e. letters, numbers, symbols, ideograms, etc.) covered by this stand-  
21 | ard. Whereas the standard foresees a maximum amount of 1.1 million of such code points some 100.000 are  
22 | attributed to abstract characters for the time being. The inclusiveness, however, is steadily augmenting as  
23 | characters from previously unrepresented writing systems are added.

24 | The ISO website offers a free-of-charge download of the complete definition of the ISO 10646 standard  
25 | including all the later amendments (e.g. of additional languages).

26 | To assure interoperability between ISO 15022 and 20022 in T2S, a number of deviations from the UTF-8  
27 | standard apply until the full ISO 20022 messages become operational in T2S after the assumed expiry of the  
28 | coexistence period. The detailed message descriptions as provided in [List of Messages](#) [► 1098] contain all  
29 | applicable restrictions with regard to the valid character set. They refer to character sets which are in use in  
30 | MT messages (see table below). The characters occurring in T2S messages during the coexistence period do  
31 | not go beyond those mentioned in the table below and thus allow for a smooth conversion from T2S MX  
32 | messages into MT equivalents in case of necessity at T2S Actor side.

---

481 | UTF-8 uses a single byte to represent 7-bit ASCII characters. Representation of extended characters takes between two and six bytes.

1  
2

**TABLE 208 - CHARACTER SETS USED IN MT MESSAGES**

X	Y	Z	Character	Description
*		*	"a" – "z"	26 small characters of the Latin alphabet
*	*	*	"A" – "Z"	26 capital characters of the Latin alphabet
*	*	*	"0" – "9"	10 numeric characters
*	*	*	"/"	Solidus (slash)
*	*	*	"_"	Hyphen
*	*	*	"?"	Question mark
*	*	*	":"	Colon
*	*	*	"("	Opening parenthesis
*	*	*	")"	Closing parenthesis
*	*	*	."	Full stop
*	*	*	","	Comma
*	*	*	"'"	Apostrophe
*	*	*	"+"	Plus
*	*	*	" "	Space
	*	*	"="	Equal to
	*	*	"!"	Exclamation mark
	*	*	"'"	Quotation mark
	*	*	"%"	Percentage
	*	*	"&"	Ampersand
	*	*	"*"	Asterisk
	*	*	"<"	Less than
	*	*	">"	Greater than
	*	*	":"	Semi-colon
		*	"@"	At
		*	"#"	Pound (hash)
*		*	CR	Carriage return
*		*	LF	Line feed

- 1 In the context of T2S 15022-20022 interoperability the following restrictions may occur within the used mes-  
2 sages:
- 3 | For IDs and references the concept of RestrictedFINXMax16Text replaces the ISO 20022 approach of  
4 Max35Text (i.e. the data element is restricted to 16 characters from character set X; the use of slashes  
5 or double slashes is disabled);
  - 6 | For names and addresses the concept of RestrictedFINXMax140Text replaces the ISO 20022 approach of  
7 NameAndAddress5 with Name: 350MaxText and Address: PostalAddress1 structured (i.e. the data ele-  
8 ment is restricted to 140 characters from character set X);
  - 9 | For safekeeping accounts the concept of RestrictedFINXMax35Text replaces the ISO 20022 approach of  
10 Max35Text (i.e. the data element is restricted to character set X);
  - 11 | For cash accounts the concept of RestrictedFINXMax34Text replaces the ISO 20022 approach of  
12 Max34Text (i.e. the data element is restricted to character set X);
  - 13 | For proprietary party IDs – e.g. as a CSD participant code - the concept of RestrictedFINXMax34Text re-  
14 places the ISO 20022 approach of Max34Text (i.e. the data element is restricted to character set X; the  
15 use of slashes or double slashes is disabled).

### 16 3.2.1.5 Schema validation

17 All ISO 20022 messages which arrive at the T2S Interface for further processing are subject to validation  
18 rules related to the syntax and structure of the message itself. In this context one can distinguish between  
19 well-formedness and validity of the message sent to T2S.

20 An ISO 20022 message is well-formed if it satisfies the general syntactical rules foreseen for XML documents  
21 as outlined in the above section. The major aspects to be respected are the following:

- 22 | The message only contains properly encoded Unicode characters;
- 23 | The specific syntax characters (e.g. "<" and "&") are not used in the message except in their function as  
24 mark-up delineation;
- 25 | The element-delimiting tags (i.e. start, end and empty-element tags) are correctly nested and paired and  
26 none of them is missing or overlapping;
- 27 | The start and end tags match exactly and are case-sensitive;
- 28 | The message has one root element which contains all the other element.

29 In contrast to other forms of representation the definition of XML documents is rather strict. XML processors  
30 cannot produce reasonable results if they encounter even slight violations against the principle of well-  
31 formedness. Any violation of this well-formedness automatically entails an interruption of the message pro-  
32 cessing and an error notification to the sender.

33 Every well-formed ISO 20022 message arriving at the T2S Interface undergoes a validity check according to  
34 the rules contained in the enriched T2S schema files. These T2S enriched schemas make the structure of the  
35 message visible to the user and provide all necessary explanations on the validations the message under-  
36 goes.

37 The T2S enriched schema files serve different purposes:

- 1 | I They provide a definition of all the elements and attributes in the message;
- 2 | I They provide a definition on what elements are child elements and on their specific order and number;
- 3 | I They provide a definition of the data types applicable to a specific element or attribute;
- 4 | I They provide a definition of the possible values applicable to a specific element or attribute.

5 T2S provides the T2S enriched schema file description in several formats: in xsd, Excel and HTML. This shall  
6 allow the user to accommodate himself with the format of his choice while having recourse to computer-  
7 processable information to the largest extent.

8 A short extract from an xsd schema file for exemplary purposes:

```
<?xml version="1.0" encoding="UTF-8" ?>
  <xs:schema                                xmlns="urn:iso:std:iso:20022:tech:xsd:DRAFT4semt.025.001.01"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  targetNamespace="urn:iso:std:iso:20022:tech:xsd:DRAFT4semt.025.001.01" elementFormDefault="qualified">
  <xs:element name="Document" type="Document">
  <xs:annotation>
  <xs:documentation source="Name" xml:lang="EN">Document</xs:documentation>
  </xs:annotation>
  </xs:element>
  <xs:simpleType name="AnyBICIdentifier">
  <xs:annotation>
  <xs:documentation source="Name" xml:lang="EN">AnyBICIdentifier</xs:documentation>
  <xs:documentation source="Definition" xml:lang="EN">Code allocated to a financial or non-financial institution by
  the ISO 9362 Registration Authority, as described in ISO 9362 "Banking - Banking telecommunication messages -
  Business identifier code (BIC)".</xs:documentation>
  </xs:annotation>
  <xs:restriction base="xs:string">
  <xs:pattern value="[A-Z]{6,6}[A-Z2-9][A-NP-Z0-9]([A-Z0-9]{3,3}){0,1}" />
  </xs:restriction>
  </xs:simpleType>
```

9  
10 Based on the relevant T2S enriched schema, the T2S interface performs the following validations for each  
11 incoming message instance:

- 12 | I Validation of the XML structure (starting from the root element);
- 13 | I Validation of the element sequencing (i.e. their prescribed order);
- 14 | I Validation of the correctness of parent-child and sibling relations between the various elements;
- 15 | I Validation of the cardinality of message elements (e.g. if all mandatory elements are present or if the  
16 overall number of occurrences is allowed);
- 17 | I Validation of the choice options between the message elements;
- 18 | I Validation of the correctness of the used character set;
- 19 | I Validation of the correctness of the code list values and their format.

20 Regarding the use of namespace prefixes, the messages used in T2S do not support the use of namespace  
21 prefixes which are hence not needed in T2S. However, messages received by T2S including namespace pre-  
22 fixes are processed properly (i.e. there is no validation performed at T2S level to check if namespace prefix-  
23 es are included in messages received). This applies to xml messages listed in this chapter, but not to bulk

1 files (see sections 4.5, 4.7 and 4.8) for which namespaces can be handled but only without any specific pre-  
2 fix.

3 Since not all messages used in T2S are envisaged to be submitted for ISO20022 registration a specific Uni-  
4 form Resource Name (URN) namespace for the non-registered messages is set up <sup>482</sup>. The namespace for  
5 the non registered reda messages has to be different in comparison to the ISO20022 namespace, i.e. non-  
6 registered messages' namespace should be "eurosystem" instead of "iso:std:iso:20022". The messages im-  
7 pacted by such namespace are the following:

8 reda.009, reda.014, reda.015, reda.016, reda.017, reda.018, reda.019, reda.020, reda.021, reda.022, reda.023,  
9 reda.024, reda.025, reda.026, reda.027, reda.028, reda.031, reda.032, reda.033, reda.034, reda.035, reda.036,  
10 reda.037, reda.038, reda.039, reda.040, reda.041, reda.042, reda.043, reda.044, reda.045, reda.046, reda.047.

11 This minor namespace change does not affect the messages in substance.

12 The following example shows the namespace in the T2S customised schema files for messages mentioned  
13 above:

```
<?xml version="1.0" encoding="UTF-8" ?>  
<xs:schema xmlns="urn:eurosystem:xsd:DRAFT1reda.044.001.01"  
  xmlns:xs="http://www.w3.org/2001/XMLSchema"  
  targetNamespace="urn:eurosystem:xsd:DRAFT1reda.044.001.01"  
  elementFormDefault="qualified">  
<xs:element name="Document" type="Document">  
14 [...]
```

15 For all other messages not listed above the following example shows the use of the ISO20022 namespace:

```
<?xml version="1.0" encoding="UTF-8" ?>  
<xs:schema xmlns="urn:iso:std:iso:20022:tech:xsd:semt.002.001.05"  
  xmlns:xs="http://www.w3.org/2001/XMLSchema"  
  targetNamespace="urn:iso:std:iso:20022:tech:xsd:semt.002.001.05" elementFormDefault="qualified">  
<xs:element name="Document" type="Document">  
16 [...]
```

### 17 3.2.1.6 Business validation

18 Besides validations which verify the correctness of the ISO 20022 message as XML document itself T2S also  
19 conducts validations which are based on the business context T2S operates in.

20 This business validation in T2S takes place on the basis of a set of pre-defined business rules which are  
21 available in the appendix to this document.

22 On a general level T2S verifies the validity of the transmitted message content against its static data reposi-  
23 tory.

24 In case of violations against existing business rules, T2S transmits them to the relevant T2S Actors directly  
via an outbound message. This message contains all the information the T2S Actor needs to fully understand  
why e.g. an intended step of processing could not be completed by the system.

---

482 Although these messages are not registered, their specific URN namespace has nevertheless to be registered by the respective registration authorities (registration process under course).

**EXAMPLE 215 - EXTRACT OF AN OUTBOUND MESSAGE SENT IN CASE OF BUSINESS RULE VALIDATION**

This example shows an extract of an outbound message sent to the T2S Actor in case of a business rule violation (duplicate of a liquidity transfer submission):

```
<ReqHdlg>  
  <StsCd>L011</StsCd>  
  <Desc>LLCI007- Incoming Internal, Outbound or Inbound LT is a duplicate submission.</Desc>  
</ReqHdlg>
```

In this example the T2S Actor has sent a LiquidityCreditTransfer message (camt.050) which tried to initiate a credit transfer which was already initiated by a previous message. The extract belongs to the camt.025 message (Receipt) the T2S Actor receives to be informed about this duplicate credit transfer initiation.

To allow for an unambiguous identification of the underlying business rule violation the message contains two distinct pieces of information:

**I L011**

Every T2S outbound message, transmitting error information to the T2S Actor contains a specific error code. Depending on the business area to which the sent message belongs, this is either a proprietary code of T2S (as in the case of L011) or a standardized ISO error code. In case this ISO error code is foreseen for several error scenarios it is supplemented by an ISO reason code which further defines the scope of the business rule violation. An example for such a combination of error code and reason code is <Rjctd> and DDAT as two standardized codes providing the reason for the rejection of an instruction in the field of securities settlement (e.g. because of logical errors related to the dates for trade and settlement events).

**I LLCI007**

In addition to the error code (ISO standardized or proprietary) the outbound error message in T2S also contains a 7-character business rule ID which is unique to T2S. This uniqueness assures an exact mapping between the business rule IDs in the message and all the business rules which need to be followed in T2S. The respective list in the appendix of this document, (section 4 "Appendices"), provides a comprehensive overview of all the T2S business rules and the corresponding business rule IDs as they are communicated in the messages. It is hence possible for the T2S Actor to unambiguously detect the source for business rule violations in all occurring circumstances.

To further facilitate the interpretation of T2S outbound error messages the messages also contain a short textual error description which is derived from the underlying business rule (in the case above: "The incoming Immediate Liquidity Transfer is a duplicate submission").

**EXAMPLE 216 - ERROR CODE AND REASON CODE**

ISO Error code <Rjctd> and Reason Code DDAT

**I Business rule MVSD401** The Trade Date of a Settlement Instruction has to be equal to or earlier than its Intended Settlement Date.

**I Error information** The Trade Date is later than the Intended Settlement Date

The appendix contains the exhaustive list of all business rules applicable to T2S. This list specifies all error-related information contained in the messages. The below extract depicts an exemplary part of this list.

1  
2

**EXAMPLE 217 - EXTRACT OF THE LIST OF T2S BUSINESS RULES**

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
IIMP083	If the instruction is against payment, then SettlementAmount must be present.	sese.023	sese.024	Processing Status=<Rjctd >	DMON	If the instruction is against payment, then SettlementAmount must be present.
MMPR207	The Hold statuses, except the CoSD Hold Status, of a Settlement Instruction referenced by a CoSD Release Instruction or its matched Settlement Instruction, must be "No"	sese.030	sese.031	Processing Status=<Dnd>	OTHR	Any other Hold Status apart from the CoSD Hold Status is "Yes".
MVCP030	If the relevant Depository is an external CSD, the sender of a Cancellation Instruction that intends to cancel a Settlement Instruction must be authorised to cancel a Settlement Instruction on behalf of that external CSD.	sese.020	sese.027	Processing Status=<Rjctd >	OTHR	The sender of the Cancellation Instruction is not authorised to cancel a Settlement Instruction on behalf of an external CSD.
SXAA005	A settlement instruction cannot be submitted to a settlement attempt, due to an intraday restriction set up on the ISIN code.	sese.023	sese.024	Settlement Status=<Pdg>	SBLO	Settlement Instruction is not settled because of an intraday restriction on the ISIN code used.
MVCM952	A Condition Modification Instruction that tries to amend a Settlement Restriction must modify only the settlement priority or	camt.072	camt.073	Processing Status=<Rjctd > / <Dnd>	OTHR	The Condition Modification Instruction does not refer to the settlement priority or linkages of the referenced Settlement Restriction.

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
	the linkages.					

1 According to business context, different scenarios may apply for the business validations to be performed by  
 2 T2S. The most prominent ones are presented below to clarify the understanding of the Business Rules pro-  
 3 posed into the document.

4 **3.2.1.6.1 Scenario 1: Business validation related to a single element of only one T2S**  
 5 **message**

6 One message element of one T2S message is subject to a specific business validation applicable only to this  
 7 message.

8 Cf. for instance to business rule IIMP083 applying to sese.023:

9 *"If the instruction is against payment, then SettlementAmount must be present".*

10 In the context of message sese.023 (SecuritiesSettlementTransactionInstruction):

- 11 | If the transaction involves any transfer of cash then the element SettlementAmount and its sub-elements  
 12 must be completed as per the format requirements.
- 13 | If the message element is missing or not filled according to the aforementioned requirement, then T2S  
 14 returns a message sese.024 (SecuritiesSettlementInstructionStatusAdvice) containing the status code  
 15 <Rjctd> and the reason code DMON to indicate that the related instruction has not been accepted by  
 16 T2S.

17 The information about this business rule is presented as follows into the appendix:  
 18

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
IIMP083	If the instruction is against payment, then SettlementAmount must be present.	sese.023	sese.024	Processing Sta- tus=<Rjctd>	DMON	If the instruction is against payment, then SettlementAmount must be present.

19 **3.2.1.6.2 Scenario 2: Business validation related to more than one element of only one T2S**  
 20 **message**

21 More than one message element of one specific T2S message is subject to a specific business validation  
 22 applicable only to this message.

23 Cf. for instance to business rule IIMP082 applying to sese.023:

24 *"If the instruction is a delivery then ReceivingDepository and Party1 must be present."*

25 In the context of message sese.023 (SecuritiesSettlementTransactionInstruction):

- 26 | Both message elements ReceivingDepository and Party1 must be present if the transaction is a delivery;

1 | Absence of either information would hinder the STP delivery of the securities. As a result, in such a situa-  
 2 | tion, T2S would return a message sese.024 (SecuritiesSettlementInstructionStatusAdvice) containing the  
 3 | status code <Rjctd> and the reason code OTHR to indicate that the related instruction has not been ac-  
 4 | cepted by the system.

5 | The information about this business rule is presented as follows into the appendix:  
 6 |

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
IIMP082	If the instruction is a delivery then ReceivingDepository and Party1 must be present.	sese.023	sese.024	Processing Status=<Rjctd>	OTHR	Receiving Depository and Party 1 not present in a delivery settlement instruction.

7 | **3.2.1.6.3 Scenario 3: Business validation related to one or more than one element of more**  
 8 | **than one T2S message**

9 | One or several message elements of more than one T2S message are subject to a specific business valida-  
 10 | tion (thus applicable to several T2S messages).

11 | Cf. for instance to business rule QMPC016 applying to camt..005/.076 and admi.006:

12 | *"The Date From must not be older than three calendar months."*

13 | In the context of message camt.005 (GetTransaction):

14 | | The message allows for retrieval of information related to cash accounts. Irrespective of the way the re-  
 15 | quest is formulated, the date or the specified date and time must not be older than 90 business days.

16 | | In case of violation against QMPC016 T2S would return a message camt.004 (ReturnTransaction) con-  
 17 | taining the reason code Q015 to indicate that the related query has not been accepted by the system.

18 | The same applies to inbound messages camt.076 and admi.006 with respective outbound messages  
 19 | camt.077 and admi.007.

20 | The information about this business rule is presented as follows into the appendix:

1

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
QMPC016	The Date From must not be older than three calendar months.	camt.005	camt.006	n/a	Q015	The Date From is older than three calendar months.
QMPC016	The Date From must not be older than three calendar months.	camt.076	camt.077	n/a	Q015	The Date From is older than three calendar months.
QMPC016	The Date From must not be older than three calendar months.	admi.006	admi.007	n/a	Q015	The Date From is older than three calendar months.

2  
3

**3.2.1.6.4 Scenario 4: Business validation referring to a T2S internal condition rather than to an inbound message**

4 Independently of any specific inbound message, the T2S system may send an error message, e.g. to warn of  
5 a situation that might block a regular operation.

6 Cf. for instance to business rule SXAA006:

7 *"A settlement restriction cannot be submitted to a settlement attempt, due to an intraday restriction set up  
8 on its cash account."*

9 For example, a message camt.067 (IntraBalanceMovementStatusAdvice) containing the status code <Pdg>  
10 and the respective reason code BLOC is sent to notify the T2S Actor about the status of an existing re-  
11 striction on a cash account. The receiver should therefore act accordingly or face the risk of rejected instruc-  
12 tions.

13 In this case, the business rule is not linked to an inbound message and the information is presented as fol-  
14 lows into the appendix:  
15

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
SXAA006	A settlement restriction cannot be submitted to a settlement attempt, due to an intraday restriction set up on its cash account.	Camt.066	camt.067	Settlement Status=<Pdg>	BLOC	Settlement Restriction is not settled because of an intraday restriction on the cash account used.

1 **3.2.1.6.5 Scenario 5: Business validation derived from a general rule in T2S triggering an**  
 2 **error message**

3 This situation generally occurs when an instruction infringes an established rule, independently of the cor-  
 4 rectness of the inbound message validation.

5 Cf. for instance to business rule QMPQ001:

6 *"A system user must have the appropriate privilege for the specified object to be permitted to query the*  
 7 *requested information."*

8 For example, a message camt.064 (LimitUtilisationJournalQuery) is sent to T2S to query the journal on the  
 9 usage of the limits for an account for which the sender does not hold sufficient privilege. T2S answers with a  
 10 message camt.065 (LimitUtilisationJournalReport) containing the reason code Q087 mentioning the insuffi-  
 11 cient privilege.

12 In this case, the business rule refers in general to all inbound messages and their respective outbound mes-  
 13 sage. The information is presented as follows into the appendix:  
 14

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
QMPQ001	A system user must have the appropriate privilege for the specified object to be permitted to query the requested information.	Any query message	All respective outbound messages	n/a	Q087	The System User has not the privilege to initiate such a request for the specified object.

15 **3.2.1.6.6 Scenario 6: Business validation derived from a general rule in T2S triggering a**  
 16 **technical error**

17 Irrespective of the inbound message format, T2S may report a technical error upon check by the interface at  
 18 technical level, even before the ISO message is identified.

19 Cf. for instance to business rule IIFV001:

20 *"The file must be valid according to the XML schema."*

21 For example, a wrongly formatted or truncated file is delivered to T2S. T2S answers with a message ad-  
 22 mi.007 including respective position of the dynamic error message(s) within the file and element name.

23 In this case, the business rule is not linked to a specific inbound message and the information is presented  
 24 as follows into the appendix:

1

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
IIFV001	The file must be valid according to the XML schema.	head.002	admi.007	n/a	I011	The file is not valid. <!--Dynamic error including element name.-->

### 2 **3.2.1.6.7 Scenario 7: Business validation applicable to the BAH regardless of the payload** 3 **message**

4 Upon receipt of any payload message, the characteristics of the Business Application Header of the business  
5 message are verified according to the defined validation.

6 Cf. for instance to business rule IIMS001:

7 *"A message type has to be supported."*

8 For example, a message type not supported by T2S is sent to the system which answers with a message  
9 admi.007 mentioning that the message is unknown to T2S.

10 In this case, the information about the business rule is presented as follows into the appendix:  
11

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
IIMS001	A message type has to be supported.	head.001	admi.007	n/a	I005	The received single message type is not known.

### 12 **3.2.1.6.8 Scenario 8: Business validation applicable to the BAH for a specific payload** 13 **message**

14 When receiving a payload message T2S verifies the content of the BAH according to validation rules specific  
15 to the payload.

16 Cf. for instance to business rule MVCP015:

17 *"The sender of a Settlement Restriction on Securities must be authorised to send a Settlement Restriction on*  
18 *Securities on a specific Securities Account."*

19 For example, a T2S Actor not authorised to restrict the settlement of securities for a respective securities  
20 account sends a message semt.013 to initiate such a restriction and T2S – after the negative check for au-  
21 thorisation at BAH level (via the message element <AppHdr/Sgntr/any>) - replies by sending a message  
22 semt.014 to inform the T2S Actor about the lacking authorisation for such a restriction.

23 In this case, the information about the business rule is presented as follows into the appendix (no explicit  
24 reference is made to the BAH):

1

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
MVCP015	The sender of a Settlement Restriction on Securities must be authorised to send a Settlement Restriction on Securities on a specific Securities Account.	semt.013	semt.014	Processing Sta- tus=<Rjctd >	OTHR	The sender of the Settlement Restriction on Securities is not authorised to send a Settlement Restriction on Securities on the Securities Account.

2 **3.2.1.6.9 Scenario 9: Business validation applicable to both BAH and a specific payload**  
3 **message**

4 When receiving a specific payload message T2S verifies the content of the BAH as well as a message ele-  
5 ment within the payload according to defined validations.

6 Cf. for instance to business rule MVDC003:

7 *"The combination of the Instruction Reference and the Instructing Party of a Settlement Restriction must not*  
8 *be the same as any of the non-cancelled and non-revoked unsettled Settlement Restrictions already present*  
9 *in the system."*

10 For example, a T2S Actor sends a message camt.066 for settlement restriction purposes to T2S including an  
11 instruction reference already present within the system as "unsettled" and not "revoked". T2S informs the  
12 T2S Actor – after the negative check of BAH and payload filling - about this violation by sending a message  
13 camt.067.

14 In this case, the information about the business rule is presented as follows into the appendix (no explicit  
15 reference is made to the BAH):  
16

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
MVDC003	The combination of the Instruction Reference and the Instructing Party of a Settlement Restriction must not be the same as any of the non-cancelled and non-revoked unsettled Settlement Re-	camt.066	camt.067	Processing Sta- tus=<Rjctd >	REFE	An unsettled Settlement Restriction exists in T2S for the same T2S Party and the same instruction reference.

BUSINESS RULE ID	BUSINESS RULE DESCRIPTION	INBOUND MESSAGE	OUTBOUND MESSAGE	STATUS	REASON CODE	ERROR INFORMATION
	restrictions already present in the system.					

### 1 3.2.1.7 Use of Additional Information provided in Settlement Instruction

2 T2S actors may make use of certain fields in the incoming messages which are not relevant for the core  
3 settlement process but do provide additional settlement related information, for instance to satisfy legal  
4 requirements.

5 For this reason (only reporting), some fields in outgoing messages have been kept and are mapped to "addi-  
6 tional information" within the Data Model.

7 If these elements are provided in the incoming message, they will be filled with the same respective infor-  
8 mation within the outgoing message.

9 The list of outgoing messages which may contain this "additional information" covers the following messag-  
10 es:

- 11 | [Semt.017 - SecuritiesTransactionPostingReportV03](#) [▶ 1542];
- 12 | [Semt.018 - SecuritiesTransactionPendingReportV03](#) [▶ 1545];
- 13 | [Semt.019 - SecuritiesSettlementTransactionAllegementReportV03](#) [▶ 1548];
- 14 | [Semt.027 - SecuritiesSettlementTransactionQueryResponseV01](#) [▶ 1563];
- 15 | [Semt.031 - SecuritiesSettlementConditionsModificationRequestReportV01](#) [▶ 1574];
- 16 | [Semt.033 - SecuritiesTransactionCancellationRequestReportV01](#) [▶ 1584];
- 17 | [Sese.024 - SecuritiesSettlementTransactionStatusAdviceV03](#) [▶ 1659];
- 18 | [Sese.025 - SecuritiesSettlementTransactionConfirmationV03](#) [▶ 1731];
- 19 | [Sese.027 - SecuritiesTransactionCancellationRequestStatusAdviceV03](#) [▶ 1743];
- 20 | [Sese.028 - SecuritiesSettlementTransactionAllegementNotificationV03](#) [▶ 1749];
- 21 | [Sese.029 - SecuritiesSettlementAllegementRemovalAdviceV03](#) [▶ 1750].

## 22 3.2.2 Communication infrastructure

### 23 3.2.2.1 Envelope messages

#### 24 3.2.2.1.1 Application Header

25 Regardless of any (ongoing) standardisation discussions at ISO level an Application Header is defined in  
26 general for all messages which are used in T2S.

27 The BAH is not applicable when:

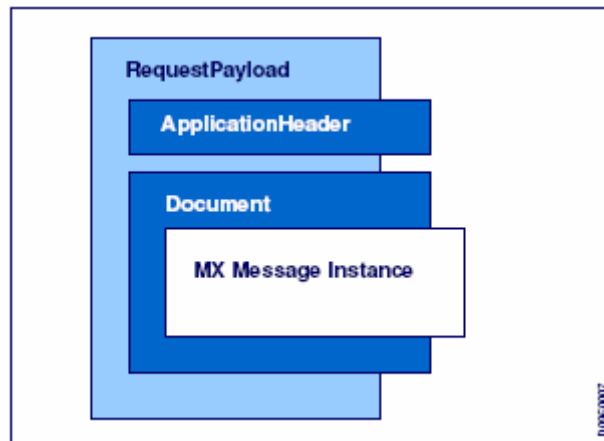

- 28 | Referring to the acknowledgement of the receipt of a message within T2S;

1 | I Technical validation errors identified during the "A2A File Validation and Splitting process" are answered  
2 | from T2S by a ReceiptAcknowledgement ([ReceiptAcknowledgementV01 \(admi.007.001.01\)](#) [▶ 1126]).

3 | Technically speaking, the Application Header is a separate XML document standing apart from the XML doc-  
4 | uments which represent the message instance itself.

5 | **DIAGRAM 199 - APPLICATION HEADER**

6 |  
7 | The Application Header facilitates the message processing as it stores the information necessary for the  
8 | processing at one central place. Without Application Header this information would be either inside the mes-  
9 | sage instance or in the RequestHeader of the ISO 20022 message. A uniform appearance (structure) of rele-  
10 | vant information in the Application Header improves the routing of the message once it arrives at the ad-  
11 | dressee's interface.

12 | The "Request Payload" stands for the whole communication data which is exchanged between and with T2S.  
13 | BAH and Business message (XML message instance) are part of this payload.

14 | For example, the message element contained in the Application Header allows identifying immediately  
15 | whether a sent message is a copy of a previously sent message.

16 | A short extract from an xsd schema file <sup>483</sup> for exemplary purposes:

1

2 The aforementioned example for the Application Header in combination with camt.003 contains two distinct  
3 references related to the sender of the concerned message:

4 | <BizMsgIdr> in the Application Header;

5 | <MsgId> in the camt.003 payload.

6 Due to the fact that the Application Header has not become mandatory across all ISO business areas, the  
7 payload message usually duplicates the sender message reference also contained in the Application Header.  
8 In T2S, only the message sender reference as contained in the Application Header (<BizMsgIdr>) is pro-

1 cessed. The respective reference in the payload message is neither validated nor processed nor stored. Nei-  
2 ther is there any kind of consistency validation between the references contained in the Application Header  
3 and the payload message.

4 In messages sent by T2S, the Priority <Prty> element provides a sequence number which informs the recip-  
5 ient of the message about the business order of settlement status/notification messages of an individual T2S  
6 instruction (i.e. Settlement Instruction, Cancellation Instruction, Amendment Instruction, Hold & Release  
7 Instruction, Settlement Restriction on securities and Settlement Restriction on cash) received from T2S. This  
8 number is an independent counter defined for each Party technical address. It allows T2S Actors to process  
9 messages delivered by T2S in the correct order from business perspective, in case they would be received in  
10 wrong order. In case the sequencing chain is interrupted and a T2S outbound message is missing the T2S  
11 Actor can use this information to initiate a respective message re-sending (recurring to the message ad-  
12 mi.006 to flag the need for such a re-sending). <sup>484</sup>

13 Additionally to the T2S instructions listed above, the sequencing number is also built for Settlement Al-  
14 legements (i.e. for the different Allegement messages that a Settlement Instruction may create). This se-  
15 quence number is independent from the sequence number applicable for the related Settlement Instructions.  
16 As a consequence, the sequence number is provided according to the business logic.

17 The exhaustive list of messages which are subject to sequencing to indicate a business order between them  
18 is the following:

- 19 | sese.032, sese.024 <sup>485</sup> and sese.025 (related to a given Settlement Instruction)
- 20 | sese.027 (related to a given Cancellation Instruction on securities)
- 21 | sese.031 (related to a given Amendment Instruction on Securities or a given Hold & Release Instruction)
- 22 | camt.067 and camt.068 (related to a given Settlement Restriction on cash)
- 23 | semt.014 and semt.015 (related to a given Settlement Restriction on securities)
- 24 | sese.028, sese.029, semt.020 and sese.024 "Cancellation requested" (related to a given Allegement)
- 25 | camt.054 (related to a given Settlement Instruction)
- 26 | camt.075 (related to a given Cancellation Instructions on cash)
- 27 | camt.073 (related to a given Amendment Instruction on cash)

28 The <Prty> element is ignored by T2S in inbound messages.

29 The Business Application Header includes a dedicated block for inbound copy specific information. BAH in-  
30 cludes the BAH, which was sent in the initial A2A requests, within tag "Related". The tag "Related" is only  
31 filled for initiation in A2A and for U2A requests concerning settlement instructions and is empty for U2A re-  
32 quests concerning liquidity transfers. The <Related> message block contains the Copy of the relevant Mes-

---

484 In case of Recovery After Disaster (RAD), T2S will send out T2S outbound messages after the recovery with minimum sequence numbers of 50.000.000, to clearly differentiate them from pre-RAD messages, and to avoid any duplicate sequence number during the RAD process.

485 The "Cancellation requested" message usage of the sese.024 related to a Settlement Instruction (see section [SecuritiesSettlementTransactionStatusAdviceV10 \(sese.024.001.10\)](#) [p. 1659]) is from a business perspective considered by T2S as an Allegement (Cancellation Allegement) instead of as a Status Advice message. Therefore, this outbound notification follows the related Settlement Allegement (if any) sequencing and does not predicate a business order with the Status Advices messages related to the lifecycle of a Settlement Instruction.

1 sageElements of the BusinessApplicationHeader of the original BusinessMessage. In case of LCMM U2A re-  
 2 quests the business message identifier tag is filled with "NONREF" as the user is not able to send a sender  
 3 message reference.

4 **3.2.2.1.2 File Header**

5 Besides the sending of single messages T2S supports the exchange of message batches. Therefore, it is  
 6 possible for the T2S Actor to send and receive a file composed of several messages. T2S uses a File Header  
 7 to assure the appropriate processing of such message batch. The File structure within T2S is compliant to  
 8 the requirement of the Giovannini Protocol: File Transfer Rulebook (May 2007).

9 The file header contains information about the sender, the creation date of the file and the included number  
 10 of messages. It therefore differs from the Application Header which is only used to contain additional infor-  
 11 mation regarding one message (i.e. the following message).

12 The number of messages and the business areas of the single messages within such a batch are per se not  
 13 subject to restrictions within T2S. In case that messages exceeds the maximum size of 32 MB the detailed  
 14 information for handling of these are provided under Chapter 3.2.2.3 Outbound traffic exceeding given size  
 15 limitations. Additionally, acknowledgment messages cannot be transmitted within a file.

16 Equivalent to all incoming single messages, A2A files arriving at the T2S Interface entail a receipt confirma-  
 17 tion from T2S. After the successful authentication check T2S divides the file into single messages. Every  
 18 message undergoes a separate validation (schema validation). T2S reports errors on message level either by  
 19 the corresponding response message or by a status message.

20 To communicate a user or an application can send single messages at a different time or a file containing  
 21 several messages. Both the message and the file are sent within an envelope which can be compared to a  
 22 cover page as it contains information about the content.

23 **DIAGRAM 200 - BUSINESS FILE STRUCTURE**

24  
 25 File/Message format (with Business File structure):

```
<TechnicalEnvelope>
  Technical header (Sender, Receiver, Service Name,....)
</TechnicalEnvelope>
<BusinessEnvelope>
  <BusinessFileHeader> [optional usage only for incoming communication with T2S]
    <BusinessApplicationHeader>
      BAH data
    </BusinessApplicationHeader >
    <BusinessMessage>
      Message payload
    </BusinessMessage >
  </BusinessFileHeader>
</BusinessEnvelope >
```

1

2 File/Message format (without Business File structure):

```
<TechnicalEnvelope>
  Technical header (Sender, Receiver, Service Name,....)
</TechnicalEnvelope>
<BusinessEnvelope>
  <BusinessApplicationHeader>
    BAH data
  </BusinessApplicationHeader >
  < BusinessMessage>
    Message payload
  </ BusinessMessage >
</BusinessEnvelope >
```

### 2 3.2.2.1.3 Digital Signature managed within the Business Layer

3 487

4 The purpose of this signature is to authenticate the business sender and guarantee the integrity of the busi-  
 5 ness payload. This business signature should be compliant with the W3C XAdES <sup>488</sup> standard.

487 It should be noted that Digital Signature on Business Layer is not yet implemented on the T2S platform for receipt acknowledgement, reports and query response messages. This should be treated as known limitation until the feature will be eventually deployed in one of the next T2S Releases.

1 The (NRO) <sup>489</sup> signature is stored in the BAH in case of individual messages or in the file header in case of  
2 messages grouped into a file. In case messages grouped into a file, the BAH of the included individual mes-  
3 sages does not include a signature.

4 File (meaning multi-message):

5 The signature is part of the file header. It is over the list of BAH's and ISO 20022 messages and covers the  
6 whole <XChg> element of the Business File (head.002), except for the signature itself.

7 Single message:

8 The signature is over the ISO 20022 message and takes into account the business processing relevant in-  
9 formation specified within the BAH (e. g. pair of BICs for definition of the instructing party), except for the  
10 signature itself. The digital signature grouped in the BAH itself is not part of this signature calculation.

11 Further details referring the Digital Signature construction on Business Layer can be retrieved from Annex  
12 Digital Signature on Business Layer.

### 13 3.2.2.2 Time zones

14 Messages exchanged between T2S and its users consist of the Application Header and the message payload.  
15 Both parts of the message contain time indications.

16 The relevant reference for all inbound and outbound communication in T2S is Central European Time (CET)  
17 or Central European Summer Time (CEST). All indications contained in the payload of T2S messages (based  
18 on given timestamps e.g.) refer to CET/CEST. The attribution of timestamps in the T2S interface solely oc-  
19 curs on CET/CEST basis. All possible information related to time within the payload of messages sent to T2S  
20 must refer to CET/CEST. The T2S calendar as the relevant framework for all operational issues of T2S con-  
21 tains CET/CEST only.

22 Due to the ISO definition of the Application Header the time indications within the Application Header refer  
23 to Zulu time. T2S users must take into account the difference between the two time formats when exchang-  
24 ing messages with T2S.

#### 25 *Example*

26 A message sent to T2S on 17 December 2015 at 10:30:47 CET/CEST would need to contain the following  
27 field in the Application Header ("ZULU time"):

**<CreDt>2015-12-17T09:30:47Z</CreDt>**

28

29 In case the same message contains within the payload an additional reference to the creation date of the  
30 message, it would need to contain the following information within the payload ("CET/CEST time"):

---

488 The XML Advanced Electronic Signatures is a W3C note which extends the [XMLDSIG] specification into the domain of non-repudiation by defining XML formats for advanced electronic signatures that remain valid over long periods and are compliant with the European "Directive 1999/93/EC of the European Parliament.

489 Non-repudiation of origin is intended to protect against the originator's false denial of having sent the message.

## <CreDtTm>2015-12-17T10:30:47<CreDtTm>

1

2 During the period of CEST the gap between the indication as contained in the Application Header and the  
3 indication as contained in the payload is two hours.

### 4 3.2.2.3 Outbound traffic exceeding given size limitations

5 Traffic sent to or from T2S is subject to a size limitation deriving from transport layer restrictions. The cur-  
6 rent message limit is foreseen at a size of 32 KB both for inbound and outbound traffic. In case of messages  
7 exceeding the maximum foreseen size technical solutions within T2S allow for adequate processing of the  
8 messages and the contained information. The solution envisaged differs according to T2S inbound and out-  
9 bound traffic.

10 For T2S inbound traffic there is no need for the T2S Actor to send information in one shot by making use of  
11 repetitive fields of a single message. Exceeding the maximum size of 32 KB will thus not happen. Instead of  
12 conveying the information in one (big) message the T2S Actor can send two single (small) messages. In  
13 contrast to outgoing messages there is no need to see them as "one unit".

14 For T2S outbound traffic the size limitation of 32 KB could lead to messages not being transmitted as their  
15 content unavoidably exceeds the maximum size. This is particularly the case for query responses and reports  
16 where a considerable amount of information referring to the same business case needs to be transported.

17 When the size of an outbound message exceeds the aforementioned size of 32 KB, T2S automatically  
18 switches from a message-based network service to a file-based network service allowing for a maximum file  
19 size transmission of 32 MB. By doing so, splitting of the message into different messages below the 32 KB  
20 maximum limit can be avoided.

21 For query requests received via a message-based network service, the network service has to be switched if  
22 the query response exceeds the 32 KB (size restriction for message-based network service). T2S then sends  
23 an error response via the channel in which the request was received and additionally "pushes" the query  
24 response details via the default routing for file-based communication.

25 In case the maximum size of 32 MB is exceeded by a T2S outbound file, a technical solution is implemented  
26 to split this file technically in several parts.

27 In case the size of a T2S outbound file is below 32 KB, the message-based network service is used for deliv-  
28 ering it to its receiver.

29 In case a report exceeds the maximum size of 32 MB, the T2S outbound message may split in several parts.  
30 This is the case for the following exhaustive list of messages:

31 | [semt.017](#) [▶ 1542] (Statement of Transactions);

32 | [semt.018](#) [▶ 1545] (Statement of Pending Instructions);

33 | [semt.002](#) [▶ 1510] (Statement of Holdings);

34 | [semt.044](#) [▶ 1594] (Securities Transaction Penalties Report)

35 | [camt.053](#) [▶ 1220] (Statement of Accounts).

1 | I [reda.009](#) [▶ 1401] (Statement of Static Data for Securities)

2 | I [reda.012](#) [▶ 1409] (SecurityReport)

3 | I [reda.021](#) [▶ 1444] (SecuritiesAccountReport)

4 | I [reda.035](#) [▶ 1476] (Statement of Static Data for Securities Accounts)

5 | In order to indicate that a report was split, the message elements foreseen to indicate "pagination" is used  
6 | (<Pgntn> ... </Pgntn>) or for camt.053 <MsgPgntn>...</MsgPgntn>. Excepting the camt.053 and re-  
7 | da.012 and semt.017 messages are split at the first level of repetitive elements.

8 | The splitting for reda.009 is done on element SctyActvtyAdvcsctyActvtyChng.

9 | The splitting for reda.021 is done on element SctiesAcctRptRptOrErrSctiesAcctRpt.

10 | The splitting for reda.035 is done on element SctiesAcctActvtyAdvcsctiesAcctActvtyChng.

11 | The splitting for semt.002 is done on element SctiesBalCtdyRptBalForAcct.

12 | The splitting for semt.018 is done on element SctiesTxPdgRptTx.

13 | For semt.017 a specific procedure for splitting has been implemented. In order to avoid message parts ex-  
14 | ceeding 32 MB, the semt.017 is split at element SctiesTxPstngRptFinInstrmDtlsTx.

15 | For semt.044 a specific procedure for splitting has been implemented. In order to avoid message parts ex-  
16 | ceeding 32 MB, the semt.044 will be split on element SctiesTxPnltyRptPnltyPnltyPerCtrPty and if required  
17 | also on element SctiesTxPnltyRptPnltyPnltyPerCtrPtyPnltyDtls if for the current splitting on element Scti-  
18 | esTxPnltyRptPnltyPnltyPerCtrPty the size of any page exceeds the limit of 32 MB.

19 | For reda.012 a specific procedure for splitting has been implemented. In order to avoid message parts ex-  
20 | ceeding 32 MB, the reda.012 will be split at two different elements. The first level of splitting will be done  
21 | within element SctyRptSctyRptOrErrSctyRptOrBizErrSctyRpt. A second level of splitting will be done, if  
22 | required, at element SctyRptSplmtryDataEnvlpFinInstrmMktSpfcAttr" within the Supplementary Data of  
23 | the reda.012 message. In any way, the reporting of MSAs within the reda.012 will always start on a new  
24 | page. In case the second level of splitting within the SupplementaryData will apply, a dummy value within  
25 | the operational error will be included to fulfil the schema requirements (of mandatory fields). This dummy  
26 | value will be "MSA" and will be included in SctyRptOrErrOprlErrErrPrtry.

27 | For camt.053 a specific procedure for splitting is implemented. In order to avoid message parts exceeding  
28 | 32 MB, the camt.053 is split at element BkToCstmrStmtStmtNtry.

29 | In case splitting is applied, the following page starts with the same information within the <Stmt> block as  
30 | the last entry of the previous page (listing the same DCA number and the relating balances) and continues  
31 | in the <Ntry> block by listing all instructions that do not fit into the previous page.

32 | The application takes care that the fixed elements plus the repetitive elements do not exceed 32 MB. Data  
33 | compression is not taken into account when deciding on the need to split a message. The uncompressed  
34 | data volume is the basis for the calculation.

35 | In case an outgoing file exceeds 32 MB (I.e. during night time settlement) then T2S generates two or more  
36 | files so that the single file is below the allowed maximum size. Consequently the respective T2S Actor re-  
37 | ceives several files. Information about the correct sequencing of settlement related messages contained in  
38 | the files is available at the level of each single message.

### 1 3.2.2.4 Re-sending of messages

2 For some of the T2S messages, the schema documentation at the document level contains an ISO-derived  
3 section referring to the possibility to re-send the concerned message:

#### 4 Usage:

5 The message may be used to:

- 6 | re-send a message previously sent (the sub-function of the message is "Duplicate")
- 7 | re-send to a third party a copy of a message for information (the sub-function of the message is  
8 "CopyDuplicate").

9 This section is by default added to the schemas for some T2S messages during the process of enrichment  
10 and cannot be removed. It is thus not in line with the functionality of re-sending messages as outlined in  
11 Chapter 2 of the UDFS. The list provided in Chapter 2 of this document is the relevant reference for the re-  
12 sending functionality in T2S.

## 13 3.3 List of Messages

## 1 **3.3.1 Account Management (acmt)**

### 2 ~~3.3.1.1 AccountOpeningRequestV01 (acmt.007.001.02)~~

#### 3 ~~3.3.1.1.1 Overview and scope of the message~~

4 ~~This chapter illustrates the AccountOpeningRequestV01 message.~~

5 ~~The AccountOpeningRequestV01 message is sent by CBs or any party authorised by them to~~  
6 ~~CRDM. It is used for instructing the opening of a Cash Account by providing details about the~~  
7 ~~Cash Account to be opened.~~

8 ~~In response, CRDM sends acmt.010.001.02 and acmt.011.001.02 messages respectively when~~  
9 ~~the opening of the Cash Account has been successfully processed or queued and when the~~  
10 ~~opening has been rejected. (Split book approach)~~

#### 11 ~~3.3.1.1.2 The CoCo-specific schema~~

12 ~~Outline of the schema~~

- 1 ~~The AccountOpeningRequestV01 message is composed of the following message building~~  
2 ~~blocks:~~
- 3 ~~References~~
- 4 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
5 ~~by the sending party to uniquely and unambiguously identify the message.~~
- 6 ~~Account~~
- 7 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
8 ~~the open dedicated cash account message. It includes the following elements:~~
- 9 | ~~Cash Account number;~~
  - 10 | ~~Closing date;~~
  - 11 | ~~Type of the account;~~
  - 12 | ~~Floor and ceiling notification amounts;~~
  - 13 | ~~Currency code;~~
  - 14 | ~~Restriction information.~~
- 15 ~~To apply an immediate restriction, the value "1000-01-01T00:01:00" shall be used as the Valid~~  
16 ~~From value for the restriction.~~
- 17 ~~To remove immediately a restriction, the value "9999-12-31T23:59:00" shall be used as the~~  
18 ~~Valid To value for the restriction.~~
- 19 ~~ContractDates~~
- 20 ~~This building block is optional and non-repetitive. It contains detailed information related to the~~  
21 ~~opening date for the account.~~
- 22 ~~AccountServicerIdentification~~
- 23 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
24 ~~the Central Bank responsible for the party operating the account.~~
- 25 ~~Organisation~~
- 26 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
27 ~~the party operating the account.~~
- 28 ~~ReferenceAccount~~
- 29 ~~This building block is mandatory and non-repetitive. It contains detailed information related~~  
30 ~~either to the external RTGS account or the cash account to be linked.~~
- 31 ~~References/Links~~
- 32 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
33 ~~amples are provided outside of this document under the following link:~~
- 34 ~~[http://www.swift.com/mystandards/T2S/acmt.007.001.02\\_CoCo](http://www.swift.com/mystandards/T2S/acmt.007.001.02_CoCo)~~
- 35 ~~Business rules applicable to the schema~~

1 {Split book approach}

2 *3.3.1.1.3 The message in business context*

3 **Message example: CreateCashAccount\_example.xml**

4 **In this example a CB participating in T2S and associated to party code "BITAITRRXXX" re-**  
5 **quests the creation of a T2S-Dedicated Cash Account for a payment bank associated to party**  
6 **code "UNCRITMMXXX".**

7 **The T2S-Dedicated Cash Account to be created is identified with number "CASHACCOUNT1", is**  
8 **issued in EUR currency with a Floor Notification Amount of 1.000 and a Ceiling Notification**  
9 **Amount of 1.000.000.**

10 **Account should be active starting from 2011-01-01 and must be linked to the Cash Account**  
11 **with reference "PAYBXXRTGSACCOUNT".**

1 ~~A "BLOC" restriction is applied on the account starting from 2018-02-01 till 2018-02-28.~~ (Split  
2 book approach)

3 ~~3.3.1.2 AccountRequestAcknowledgementV01 (acmt.010.001.02)~~

4 ~~3.3.1.2.1 Overview and scope of the message~~

5 ~~This chapter illustrates the AccountRequestAcknowledgementV01 message.~~

6 ~~The AccountRequestAcknowledgementV01 is sent by CRDM to inform the CB or any party au-~~  
7 ~~thorised by them about the status of a Cash Account maintenance request.~~

8 ~~This message is sent by CRDM in the following message usages:~~

9 | ~~Queued;~~

10 | ~~Completed.~~

11 ~~These message usages are described in the section "The message in business context".~~ (Split  
12 book approach)

13 ~~3.3.1.2.2 The CoCo-specific schema~~

14 ~~Outline of the schema~~

15 ~~The AccountRequestAcknowledgementV01 message is composed of the following message~~  
16 ~~building blocks:~~

17 ~~References~~

18 ~~This building block is mandatory and non-repetitive. It contains information on the identifica-~~  
19 ~~tion assigned by the sending party to uniquely and unambiguously identify the message, the~~  
20 ~~identification of the original message and the status of the original request.~~

21 ~~Account Identification~~

22 ~~This building block is optional and non-repetitive. It is present only if the original request has~~  
23 ~~been successfully processed. It contains the identification of the account.~~

24 ~~References/Links~~

25 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
26 ~~amples are provided outside of this document under the following link:~~

27 ~~[http://www.swift.com/mystandards/T2S/acmt.010.001.02\\_CoCo](http://www.swift.com/mystandards/T2S/acmt.010.001.02_CoCo)~~

28 ~~Business rules applicable to the schema~~

29 ~~Not applicable (CRDM outgoing message).~~ (Split book approach)

30 ~~3.3.1.2.3 The message in business context~~

31 ~~Message usage: Queued~~

32 ~~This message usage describes an account request acknowledgement message sent by CRDM~~  
33 ~~when a cash account maintenance request has been queued.~~

1 **Specific message requirements**

2 **Field for Status is filled with rejection code "QUED".**

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
Status Document/AcctReqAck/Refs/Sts	FAR- GET_Exact4AlphaNumericText_CompletionCode	Fixed value "QUED"

4 **Message usage example: AccountQueued\_example.xml**

5 **In this example processing for an account opening request sent with reference "SAMPLEO-**  
 6 **PEACC" has been queued. Thus the sender originating the request is notified with the request**  
 7 **acknowledgement.**

8 **Message usage: Completed**

9 **This message usage describes an account request acknowledgement message sent by CRDM**  
 10 **when a cash account maintenance request has been successfully processed.**

11 **Specific message requirements**

12 **Field for Status is filled with rejection code "COMP".**

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
Status Document/AcctReqAck/Refs/Sts	FAR- GET_Exact4AlphaNumericText_CompletionCode	Fixed value "COMP"
Identification Docu- ment/AcctReqAck/AcctId/Id/Othr/Id	TARGET_RestrictedFINXMax34Text	Cash account identifier
Currency Document/AcctReqAck/AcctId/Ccy	ActiveCurrencyCode	Currency for the cash account identifier

14 **Message usage example: AccountCompleted\_example.xml**

15 **In this example processing for an account opening request sent with reference "SAMPLEO-**  
 16 **PEACC" has been successfully processed. Thus the sender originating the request is notified**  
 17 **with the request acknowledgement containing the identification and currency of the account.**  
 18 **{Split book approach}**

19 **3.3.1.3 AccountRequestRejectionV01 (acmt.011.001.02)**

20 **3.3.1.3.1 Overview and scope of the message**

21 **This chapter illustrates the AccountRequestRejectionV01 message.**

1 ~~The AccountRequestRejectionV01 is sent by CRDM to inform the CB or any party authorised by~~  
2 ~~them about the rejection of a Cash Account maintenance request. (Split book approach)~~

### 3 ~~3.3.1.3.2 The CoCo-specific schema~~

#### 4 ~~Outline of the schema~~

5 ~~The AccountRequestRejectionV01 message is composed of the following message building~~  
6 ~~blocks:~~

#### 7 ~~References~~

8 ~~This building block is mandatory and non-repetitive. It contains information on the identifica-~~  
9 ~~tion assigned by the sending party to uniquely and unambiguously identify the message, the~~  
10 ~~identification of the original message and the reason why it has been rejected.~~

#### 11 ~~References/Links~~

12 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
13 ~~amples are provided outside of this document under the following link:~~

14 ~~[http://www.swift.com/mystandards/T2S/acmt.011.001.02\\_CoCo](http://www.swift.com/mystandards/T2S/acmt.011.001.02_CoCo)~~

#### 15 ~~Business rules applicable to the schema~~

16 ~~Not applicable (CRDM outgoing message). (Split book approach)~~

### 17 ~~3.3.1.3.3 The message in business context~~

#### 18 ~~Message example AccountRejected\_example.xml~~

19 ~~In this example processing for an account opening request sent with reference "SAMPLEO-~~  
20 ~~PEACC" has been rejected. Thus the sender originating the request is notified with the request~~  
21 ~~rejection. (Split book approach)~~

### 22 ~~3.3.1.4 AccountExcludedMandateMaintenanceRequestV01 (acmt.015.001.02)~~

#### 23 ~~3.3.1.4.1 Overview and scope of the message~~

24 ~~This chapter illustrates the AccountExcludedMandateMaintenanceRequestV01 message.~~

25 ~~The AccountExcludedMandateMaintenanceRequestV01 is sent by CBs or any party authorised~~  
26 ~~by them to CRDM.~~

27 ~~It is used for instructing the update of a Cash Account, by providing details about the Cash Ac-~~  
28 ~~count to be updated. Several attributes for the same account can be updated with a single mes-~~  
29 ~~sage.~~

30 ~~In response, CRDM sends acmt.010.001.02 and acmt.011.001.02 messages respectively when~~  
31 ~~the update of the Cash Account has been successfully processed or queued and when the up-~~  
32 ~~date has been rejected. (Split book approach)~~

1 ~~3.3.1.4.2 The CoCo-specific schema~~

2 ~~Outline of the schema~~

3 ~~The AccountExcludedMandateMaintenanceRequestV01 message is composed of the following~~  
4 ~~message building blocks:~~

5 ~~References~~

6 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
7 ~~by the sending party to uniquely and unambiguously identify the message.~~

8 ~~Account~~

9 ~~This building block is mandatory and non-repetitive. It must contain a reference to the related~~  
10 ~~Dedicated Cash Account to be updated as well as a set of updates to be executed.~~

11 ~~The updates to be executed might be: the lower threshold for notifying the cash manager, the~~  
12 ~~upper threshold for notifying the cash manager, a code defined by the CB to identify a re-~~  
13 ~~striction to be applied to the cash account, date and time from which restriction is valid and~~  
14 ~~date and time until restriction is valid.~~

15 ~~To apply an immediate restriction, the value "1000-01-01T00:01:00" shall be used as the Valid~~  
16 ~~From value for the restriction.~~

17 ~~To remove immediately a restriction, the value "9999-12-31T23:59:00" shall be used as the~~  
18 ~~Valid To value for the restriction.~~

19 ~~AccountServicerIdentification~~

20 ~~This building block is mandatory and not repetitive. It must contain the identification of the CB~~  
21 ~~responsible for the account owner.~~

22 ~~Organisation~~

23 ~~This building block is mandatory and not repetitive. It must contain the identification of the~~  
24 ~~account owner.~~

25 ~~References/Links~~

26 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
27 ~~amples are provided outside of this document under the following link:~~

28 ~~[http://www.swift.com/mystandards/T2S/acmt.015.001.02\\_CoCo](http://www.swift.com/mystandards/T2S/acmt.015.001.02_CoCo)~~

1 {Split book approach}

2 ~~3.3.1.4.3 The message in business context~~

3 ~~Message example UpdateCashAccount.xml~~

4 ~~In this example a CB participating in T2S and associated to party code "BITAITRRXXX" re-~~  
5 ~~quests the UPDATE of the T2S Dedicated Cash Account identified with "123456" previously cre-~~  
6 ~~ated and linked to payment bank identified with party code "UNCRITMMXXX".~~

7 ~~CB requests to apply a "BLOK" restriction on the account valid from 00:00:01 on 2018-09-25~~  
8 ~~till 23:59:59 on the same day. {Split book approach}~~

9 ~~3.3.1.5 AccountClosingRequestV01 (acmt.019.001.02)~~

10 ~~3.3.1.5.1 Overview and scope of the message~~

11 ~~This chapter illustrates the AccountClosingRequestV01 message.~~

12 ~~The AccountClosingRequestV01 is sent by a CB or any party authorised by them to CRDM.~~

13 ~~It is used for instructing the deletion of a Cash Account by providing details about the Cash~~  
14 ~~Account to be deleted.~~

1 ~~In the response, CRDM sends acmt.010.001.02 message when the deletion of the Cash Account~~  
 2 ~~has been successfully either queued or processed or acmt.011.001.02 message if it has been~~  
 3 ~~rejected. (Split book approach)~~

4 ~~3.3.1.5.2 The CoCo-specific schema~~

5 ~~Outline of the schema~~

6 ~~The AccountClosingRequestV01 message is composed of the following message building~~  
 7 ~~blocks:~~

8 ~~References~~

9 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
 10 ~~by the sending party to uniquely and unambiguously identify the message:~~

11 ~~AccountIdentification~~

12 ~~This building block is mandatory and non-repetitive. It must contain the identification of the~~  
 13 ~~cash account to be deleted.~~

14 ~~Contract Details~~

15 ~~This building block is mandatory and non-repetitive. It must contain the indicator for the dele-~~  
 16 ~~tion of the cash account.~~

17 ~~References/Links~~

18 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
 19 ~~amples are provided outside of this document under the following link:~~

## 8 3.3.2 Administration (admi)

### 9 3.3.2.1 ReportQueryRequestV01 (admi.005.001.01)

#### 10 3.3.2.1.1 Overview and scope of the message

11 This chapter illustrates the *ReportQueryRequestV01* message.

12 The *ReportQueryRequestV01* message is sent by a CB, CSD or any party authorised by them to use the re-  
13 port query.

14 It aims at querying the latest available report data of a specific report type. This message enables the send-  
15 er to request a report (available and/or already sent) according to his access rights. Sender instructs T2S to  
16 send the latest available Report and uses the possible selection parameters to specify the report further.

17 The query supports the following selection parameters:

- 18 | Business event <sup>490</sup>;
- 19 | Report name (e.g. delta or complete reports, statement of Holdings, Statement of Transactions, State-  
20 ment of Pending Instructions, Statement of Settlement Allegements, Statement of Accounts at End-of-  
21 Day, etc.);

490 If the Business event specified is a currency specific event, all reports generated for that event are returned (regardless whether also a currency was specified or not).

- 1 | I Report owning T2S Party BIC (e. g. Settlement bank, payment bank);
- 2 | I T2S parent party BIC (e. g. CB);
- 3 | I Date (Creation date of the report);
- 4 | I Time (Scheduled time of the business event which triggered the report);
- 5 | I System Entity wide reporting flag.

6 | If none or not all of these selection parameters are specified, T2S returns all reports available consistent  
7 | with the access rights.

8 | In response to the *ReportQueryRequestV01* message, T2S sends the report that matches the specified selec-  
9 | tion parameters. In case if an error occurs resulting from the processing of the *ReportQueryRequestV01*  
10 | error information is sent via the [admi.007.001.01](#) [▶ 1126] message.

### 11 | **3.3.2.1.2 The T2S-specific schema**

#### 12 | Outline of the schema

13 | The *ReportQueryV01* message is composed of the following building blocks.

#### 14 | **MessageIdentification**

15 | This building block is mandatory and provides a set of elements to identify the report query request mes-  
16 | sage.

#### 17 | **ReportQueryCriteria**

18 | This building block is mandatory and defines the report query criteria. ReportQueryCriteria is a repetitive  
19 | building block.

#### 20 | References/Links

21 | The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
22 | vided outside of this document under the following link:

23 | [http://www.swift.com/mystandards/T2S/admi.005.001.01\\_T2S](http://www.swift.com/mystandards/T2S/admi.005.001.01_T2S)

#### 24 | Business rules applicable to the schema

1

Message Item	Data Type/ Code	Business Rules

Docu- ment/RptQryReq/RptQryCrit/SchCrit/SchldTm /FrDtTm		QMPC016

### 2 **3.3.2.1.3 The message in business context**

3 Query type example: *admi.005.001.01 T2S ReportDetailQuery Example.xml*

4 In this example a "Complete Statement of pending Amendment Instructions for Intra-Position Movements  
5 and Settlement Instruction report" identified via code "CPAP" dated 2014-08-13 is requested from Party  
6 "ACCTOWNRXXX" belonging to Parent BIC "ACCTSVCRXXX".

### 7 **3.3.2.2 ResendRequestV01 (admi.006.001.01)**

#### 8 **3.3.2.2.1 Overview and scope of the message**

9 This chapter illustrates the *ResendRequestV01* message.

10 The *ResendRequestV01* message enables directly connected CSDs, CBs or any parties authorised by them to  
11 request the resending of a message or a file (duplicate of the original message/file) supported by T2S. To  
12 instruct T2S for the resend of a message the technical address of the receiving party has to be specified.

13 The following field has to be filled (mandatory) within the request:

14 | Party Technical Address.

15 The T2S Business Date (optional field), Sequence number or Original Message Reference can be used to  
16 further specify the request: If no Business Date is specified the current Business Date is assumed.

1 In response to the *ResendRequestV01* message, T2S sends first an [admi.007.001.01](#) [▶ 1126] message as a  
 2 positive “Validation Result Resend” after the successful permission check. In parallel, the duplicate of the  
 3 original message is sent.

4 If an error occurs resulting from the processing of the *ResendRequestV01* error information is sent via the  
 5 [admi.007.001.01](#) [▶ 1126] message.

6 **3.3.2.2.2 The T2S-specific schema**

7 Outline of the schema

8 The ResendRequestV01 message is composed of the following building blocks:

9 **Message Header**

10 This building block is mandatory and provides set of elements to uniquely identify the resend request mes-  
 11 sage.

12 **ResendSearchCriteria**

13 This building block is mandatory and defines the criteria to unambiguously identify the information to be  
 14 resent.

15 References/Links

16 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
 17 vided outside of this document under the following link:

18 [http://www.swift.com/mystandards/T2S/admi.006.001.01\\_T2S](http://www.swift.com/mystandards/T2S/admi.006.001.01_T2S)

### 1 **3.3.2.2.3 The message in business context**

2 Message example: *admi.006.001.01 T2S ResendRequest Example.xml*

3 In this example a ResendRequest for the message RESENDREQUEST01 with the sequence number  
4 1234567890111213 and the business date 2014.11.11 is sent to T2S.

### 5 3.3.2.3 ReceiptAcknowledgementV01 (admi.007.001.01)

#### 6 **3.3.2.3.1 Overview and scope of the message**

7 This chapter illustrates the ReceiptAcknowledgementV01 message.

8 The ReceiptAcknowledgementV01 message is sent by T2S and to a directly connected Participant to reject  
9 the reception of an A2A-message.

10 Within T2S this message can be also sent as an error reporting response to a report query or resend request  
11 and as a validation result notification to a resend request.

12 ~~The ReceiptAcknowledgementV01 message is also sent by the ESMIG component to the busi-  
13 ness sender of a previously sent message/file for rejection due to invalid digital signature,  
14 timeout management and oversized data management usage cases and by the common com-  
15 ponents business interface (CRDM, BILL, BDM) after a negative validation process or to inform  
16 about the queuing of a query during an active maintenance window. {Split book approach}~~

17 This message is sent by T2S in the following message usages:

- 18 | Inbound Processing Rejections;
- 19 | RejectionResend;
- 20 | Validation Result Resend.
- 21 | Report Detail Query Response
- 22 | Query Queuing Information

1 ~~This message is sent by ESMIG in the following message usages:~~

2 | ~~Missing Authentication; (without BAH);~~

3 | ~~Oversize and timeout.~~

4 ~~This message is sent by the common components business interface (CRDM, BILL, BDM) in the~~  
5 ~~following message usages:~~

6 | ~~Negative Receipt Acknowledgement (file or message);~~

7 | ~~Query Queuing Information. (Split book approach)~~

8 These message usages and cases are described in the chapter "The message in business context".

9 The ReceiptAcknowledgement is in general sent by T2S without BAH. Only in case it is sent as response to  
10 the ReportDetailQueryRequest (admi.005) the BAH is attached.

### 11 **3.3.2.3.2 Schema**

12 Outline of the schema

13 The ReceiptAcknowledgementV01 message is composed of the following message building blocks:

#### 14 **MessageIdentification**

15 This building block is mandatory and provides a set of elements to uniquely identify the receipt acknowl-  
16 edgement message.

#### 17 **Report**

18 This building block is mandatory and is composed of the individual RelatedReference and RequestHandling  
19 blocks.

20 References/Links

27 Business rules applicable to the schema

28 Not applicable

### 29 **3.3.2.3.3 The message in business context**

30 Message usage: Missing Authentication

31 The System-Acknowledgement message is used in this usage to report that ESMIG is not able to process  
32 incoming message because of failed authentication of the sending party (Sender Authentication NOK or De-  
33 cryption NOK).

34 Specific message requirements

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Reference Document/RctAck/Rpt/RltdRef/Ref	TARGET_RestrictedFINXMax35Text	MsgId of the incoming message this ReceiptAcknowledgement is sent for
StatusCode Document/RctAck/Rpt/ReqHdlg/Stscd	Max4AlphaNumericText	Status Code indicating the error which occurred during the technical validation. Used in case of BR short names: ICSA002; ICSA003; ICSA004; ICSA005; ICSA010
Description Document/RctAck/Rpt/ReqHdlg/Desc	TARGET_RestrictedFINXMax140Text	Textual description of the technical validation error specified in the status code field. Used in case of BR short names: ICSA002; ICSA003; ICSA004; ICSA005; ICSA010

2 In this example a ReceiptAcknowledgement referring to an incoming message with the ID INCOMINGMSG02  
3 with "Invalid Digital Signature" is sent to the corresponding party.

4 Message usage: Inbound Processing Rejections

5 The ReceiptAcknowledgement is used in this usage by T2S to inform T2S Actor (Sender), that an incoming  
6 message has caused an error during its processing. It reports the error which occurred in an error code and,  
7 if available, in a textual description.

8 Specific message requirements

9

Message Item	Data Type/ Code	Utilisation
Reference Document/RctAck/Rpt/RltdRef/Ref	RestrictedFINXMax16Text	MsgId of the incoming message this ReceiptAcknowledgement is sent for
StatusCode Document/RctAck/Rpt/ReqHdlg/Stscd	Max4AlphaNumericText	Status Code indicating the error which occurred during the technical validation
Description Document/RctAck/Rpt/ReqHdlg/Desc	RestrictedFINXMax140Text	Textual description of the technical validation error specified in the status code field

10 Message usage example: admi.007.001.01\_T2S\_InboundProcessingRejections\_Example.xml

1 In this example a ReceiptAcknowledgement "Inbound Processing Rejection" referring to an incoming mes-  
2 s-  
3 s-  
4 s-  
5 s-  
6 s-  
7 s-  
8 s-

4 Message usage: RejectionResend

5 The ReceiptAcknowledgement message is used in this usage to inform the T2S Actor (Sender) about the  
6 Rejection (Check Permission resend NOK) of an incoming message.

7 Specific message requirements

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Reference Document/RctAck/Rpt/RltdRef/Ref	RestrictedFINXMax16Text	MsgId of the incoming ResendRequest message this ReceiptAcknowledgement is sent for
StatusCode Document/RctAck/Rpt/ReqHdlg/StsCd	Max4AlphaNumericText	Status Code specifiing the missing permission error
Description Document/RctAck/Rpt/ReqHdlg/Desc	RestrictedFINXMax140Text	Permission Denied

9 Message usage example: admi.007.001.01\_T2S\_RejectionResend\_Example.xml

10 In this example a ReceiptAcknowledgement "Inbound Processing Rejection" referring to an incoming mes-  
11 s-  
12 s-  
13 s-

13 Message usage: Validation Result-Resend

14 The ReceiptAcknowledgement Validation Result Resend message is used in this usage to inform the sender  
15 of a message that his request for resending a message could be successfully processed by T2S. It reports  
16 the positive status in a code.

17 Specific message requirements

18

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Reference Document/RctAck/Rpt/RltdRef/Ref	RestrictedFINXMax16Text	MsgId of the incoming ResendRequest message this ReceiptAcknowledgement is sent for
StatusCode Document/RctAck/Rpt/ReqHdlg/StsCd	Max4AlphaNumericText	Status code "OK"

19 Message usage example: admi.007.001.01\_T2S\_ValidationResultResend\_Example.xml

1 In this example a ReceiptAcknowledgement "Validation Result Resend" referring to an incoming message  
2 with the ID RESENDREQOK01 with status code "OK" is sent to the corresponding party.

3 Message usage: Oversize and timeout

4 The ReceiptAcknowledgement message is used in to inform the Actor (Sender) about an oversize and timeout  
5 scenario. The related reference indicates "NONREF". The correlation to the query has to be identified on  
6 network layer. <sup>491</sup>

7 Specific message requirements  
8

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Reference Document/RctAck/Rpt/RltdRef/Ref	TARGET_RestrictedFINXMax35Text	Always populated with NON-REF
StatusCode Document/RctAck/Rpt/ReqHdlg/StsCd	Max4AlphaNumericText	Status Code indicating the error which occurred during the technical validation. Used in case of BR short names: ICAA001; ICAA002; ICAA003
Description Document/RctAck/Rpt/ReqHdlg/Desc	TARGET_RestrictedFINXMax140Text	Textual description of the technical validation error specified in the status code field. Used in case of BR short names: ICAA001; ICAA002; ICAA003

9 Message usage example: admi007OversizeAndTimeout\_example.xml

10 ~~In this example a ReceiptAcknowledgement "Oversize and Timeout" message to the corre-~~  
11 ~~sponding party is sent, because ESMIG is not able to respond to the query request as the query~~  
12 ~~response exceeds the file store and forward network service size limit. (Split book approach)~~

13 Message usage: Report Detail Query Response

14 The ReceiptAcknowledgement "Report Detail Query Response" message is used to inform the T2S Actor  
15 (Sender) about an error during the validation or processing status resulting from an incoming ReportDe-  
16 tailQueryRequest (admi.005).

17 Specific message requirements

491 The correlation can be derived from the "T2S Connectivity Guide", in combination with the "Dedicated Link Connectivity Specification V.1.0" where the DEP protocol is defined.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Reference Document/RctAck/Rpt/RltdRef/Ref	RestrictedFINXMax16Text	MsgId of the incoming message this ReceiptAcknowledgement is sent for
StatusCode Document/RctAck/Rpt/ReqHdlg/StsCd	Max4AlphaNumericText	Status Code indicating the error which occurred during the technical validation or other processing information e. g. "DEFA". Used in case of BR short names: QMPC016; QMPC032; QMPC048; QMPC055;QMPC084
Description Document/RctAck/Rpt/ReqHdlg/Desc	RestrictedFINXMax140Text	Textual description of the technical validation error specified in the status code field or other processing information. Used in case of BR short names: QMPC016; QMPC032; QMPC048; QMPC055; QMPC084

2 Message usage example: `admi.007.001.01_T2S_ReportDetailsQueryResponse_Example.xml`

3 In this example a ReceiptAcknowledgement "Report Detail Query Response" message to the corresponding  
4 party is sent, because in T2S is the BIC of a party is not known in T2S.

5 **Message usage: Negative Receipt Acknowledgement (file or message)**

6 **~~In this usage case, the recipient is being informed that a message previously received by a~~**  
7 **~~Common Component does not comply with the message technical rules and is not processable~~**  
8 **~~in the specific Common Component.~~**

9 **Specific message requirements**

1

Message Item	Data Type/ Code	Utilisation
Reference Docu- ment/RctAck/Rpt/RltdRef/Ref	TAR- GET_RestrictedFINXMax35Text	Copy of BAH BizMsgIdr of incom- ing message. If the BAH BizMsgIdr of the incoming message cannot be identified, this field will contain "NONREF".
StatusCode Docu- ment/RctAck/Rpt/ReqHdlg/Stscd	Max4AlphaNumericText	Status Code specifying the error.
Description Docu- ment/RctAck/Rpt/ReqHdlg/Desc	TAR- GET_RestrictedFINXMax140Text	Description of the status

2 **Message usage example: adm\_i\_007SchemaValidationExample\_example.xml**

3 **This example describes a rejection due to the fact that the format of one field of the input**  
4 **message does not comply with the XSD schema. {Split book approach}**

5 Message usage: Query Queuing Information

6 The ReceiptAcknowledgement message is used to inform the Actor (Sender) about the queuing of a query  
7 due to night-time settlement or maintenance window.

8 Specific message requirements (message sent by T2S)

9

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Reference Document/RctAck/Rpt/RltdRef/Ref	RestrictedFINXMax16Text	MsgId of the incoming mes- sage this ReceiptAcknowl- edgement is sent for
StatusCode Document/RctAck/Rpt/ReqHdlg/Stscd	Max4AlphaNumericText	Status code "I001"
Description Document/RctAck/Rpt/ReqHdlg/Desc	RestrictedFINXMax140Text	Textual description of the error specified in the status code field

10 **Specific message requirements (message sent by Common Components)**

1

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
<b>Reference</b> <b>Document/RetAck/Rpt/RltdRef/Ref</b>	<b>TARGET_RestrictedFINXMax35Text</b>	<b>MsgId of the incoming message this ReceiptAcknowledgement is sent for</b>
<b>StatusCode</b> <b>Document/RetAck/Rpt/ReqHdlg/StsCd</b>	<b>Max4AlphaNumericText</b>	<b>Status code "I001"</b>
<b>Description</b> <b>Document/RetAck/Rpt/ReqHdlg/Dese</b>	<b>TARGET_RestrictedFINXMax140Text</b>	<b>Textual description of the error specified in the status code field</b>

2 ~~Message usage example: [admi\\_007QueryQueuing\\_example.xml](#)~~

3 ~~In this example a Receipt Acknowledgement "Query Queuing Information" message to the cor-~~  
4 ~~responding party is sent, because the Common Component is in night-time settlement and the~~  
5 ~~query has to be queued. {Split book approach}~~

### 6 3.3.3 Cash Management (camt)

#### 7 3.3.3.1 GetAccountV07 (camt.003.001.07)

##### 8 3.3.3.1.1 Overview and scope of the message

9 This chapter illustrates the GetAccountV07 message.

10 The GetAccountV07 message is sent by a CB, CB Participant or directly connected T2S Party to T2S. This  
11 message is used to request information on balances on the T2S Dedicated Cash Account.

12 This message is sent to T2S to make the following types of queries:

- 13 | T2S Dedicated Cash Account Balance Query;
- 14 | Cash Forecast Query;
- 15 | Outstanding Auto Collateralisation Credit Query;
- 16 | T2S Overall Liquidity Query;
- 17 | Liquidity Information Query.

18 These types of queries are described in the section "The message in business context".

19 In response, T2S sends a [camt.004.001.08](#) [▶ 1141] message containing information on requested items or  
20 a business error.

##### 21 3.3.3.1.2 The T2S-specific schema

###### 22 Outline of the schema

23 The GetAccountV07 message is composed of the following message building blocks:

1 **MessageIdentification**

2 This building block is mandatory. It is used to identify the message.

3 **RequestType**

4 This building block is mandatory. It is used to further specify the request.

5 **AccountQueryDefinition**

6 This building block is optional. It contains the SearchCriteria elements.

7 References/Links

8 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are provided outside of this document under the following link:

1 **3.3.3.1.3 The message in business context**

2 Query Type: T2S Dedicated Cash Account Balance Query

3 This query type enables the sender to request information on the current balance of one or more T2S Dedi-  
4 cated Cash Accounts.

5 The following attributes can be used to restrict the query. If a field is not specified the user query returns all  
6 information consistent with the access rights:

- 7 | T2S Dedicated Cash Account Number;
- 8 | T2S Settlement Currency;
- 9 | BIC of the party;
- 10 | BIC of CB.

11 Specific message requirements

12 To query T2S for a T2S Dedicated Cash Account Balance Query, the field RequestType must be filled as  
13 described in the table. If the optional search criteria block is used, the occurrence of the below listed fields  
14 has to be fulfilled.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/GetAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_1	CASB
Identification Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctId/EQ/Othr/Id	RestrictedFINX2Max34Text	T2S Dedicated Cash Account Number
Currency Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/Ccy	ActiveOrHistoricCurrencyCode	Settlement Currency
AnyBIC Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctOwnr/Id/OrgId/AnyBIC	AnyBICIdentifier	BIC of the Party
BICFI Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctSvcr/FinInstnId/BICFI	BICFIIdentifier	BIC of NCB

2 Variants of restriction and the effect of these restrictions regarding the cash balance query:

- 3 | If the query specifies a T2S party and no T2S Dedicated Cash Account, then the query result includes
- 4 | the balances of all T2S Dedicated Cash Accounts of the party;
- 5 | If the query specifies a T2S party and a T2S settlement currency without a T2S Dedicated Cash Account,
- 6 | then the query result includes the balances of all T2S Dedicated Cash Accounts of the party in the speci-
- 7 | fied currency;
- 8 | If the query specifies a T2S Dedicated Cash Account, then the query result is the cash balance of the
- 9 | specified T2S Dedicated Cash Account;
- 10 | If the query specifies a T2S party that is a CB, and the CB has specified in the query parameter that it is
- 11 | querying in its role as a CB, then the query result provides the balances of all T2S Dedicated Cash Ac-
- 12 | counts of the T2S parties, which hold accounts with it.

13 Query type example: camt.003.001.07 T2S DedicatedCashAccountBalanceQuery Example.xml

14 In this example a T2SDedicatedCashAccountBalanceQuery with search criteria BIC of CB, BIC of the Party,  
15 T2S Dedicated Cash Account number and T2S Settlement currency is sent to T2S.

16 Query Type: Cash Forecast Query

1 This query type enables the sender to request information on projected cash needs for the current or follow-  
2 ing settlement day.

3 The Cash Forecast Query for the current settlement day returns information about cash needs for transac-  
4 tions pending to settle during the current settlement day. The Cash Forecast Query for the following settle-  
5 ment day considers transactions which expect settlement at the following settlement day.

6 In addition to the T2S Party which can be used for selection, the result reflects cash needs and proceeds  
7 expected from the settlement of corporate actions and trading related transactions (eligible for settlement)  
8 for the current or the following settlement day, as well as the amount of outstanding intraday credit from  
9 auto-collateralisation.

10 The following fields can be used as selection criteria for this user query:

- 11 | T2S Party BIC, Parent BIC of the Party (mandatory);
- 12 | Settlement currency (optional);
- 13 | Intended Settlement Date. Current Settlement date is a default value.

14 The query is available throughout the real-time settlement period.

15 Specific message requirements

16 To query T2S for information about cash forecast the field RequestType must be filled as described in the  
17 table. If the optional search criteria block is used, the occurrence of the below listed fields has to be fulfilled.  
18

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/GetAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_1	CASF
Currency Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/Ccy	ActiveOrHistoricCurrencyCode	Currency
EqualDate Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/Bal/ValDt/DtSch/EQDt	ISODate	Intended Settlement Date
AnyBIC Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctOwnr/Id/OrgId/AnyBIC	AnyBICIdentifier	BIC of the Party
BICFI Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc	BICFIIdentifier	Parent BIC of the Party

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
hCrit/AcctSvcr/FinInstnId/BICFI		

1 Query type example: camt.003.001.07 T2S CashForecastQuery Example.xml

2 In this example a CashForecastQuery with search criteria Intended Settlement Date, Currency, BIC of the  
3 Party, and Parent BIC of the Party is sent to T2S.

4 Query Type: T2S Overall Liquidity Query

5 This query type enables the sender to request information about the amount of the overall liquidity availa-  
6 ble.

7 This query shall enable T2S System users of CBs, settlement banks and payment banks to receive overall  
8 liquidity information. The use of this query is to provide users granted with adequate privileges an overview  
9 of the liquidity available for the respective party.

10 The following field can be used to restrict the query:

- 11 | T2S party (Party BIC and Parent BIC of a settlement bank, payment bank).

12 If this field is not specified the user query returns all information consistent with the access rights.

13 Specific message requirements

14 To query T2S for information about the T2S overall liquidity query the field RequestType must be filled as  
15 described in the table. If the optional search criteria block is used, the occurrence of the below listed fields  
16 has to be fulfilled.  
17

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/GetAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_1	OVAL
AnyBIC Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctOwnr/Id/OrgId/AnyBIC	AnyBICIdentifier	BIC of the Party
BICFI Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctSvcr/FinInstnId/BICFI	BICFIIdentifier	Parent BIC of the Party

18 Notes:

19 The query response must provide the credit limits and the cash balances in the same currency (it can be in  
20 any T2S currency).

21 If the query is initiated by a CB, then the query shall output the response for a list of T2S parties, so that the  
22 CB gets an overview for its sphere of responsibility.

1 When the query initiator is a CB:

2 | If the query input has a T2S party (Party BIC and Parent BIC), then the response shall be limited to the  
3 T2S Party;

4 | If the query input does not have a T2S Party (Party BIC and Parent BIC), then the response shall include  
5 every T2S Party under the sphere of responsibility of the CB.

6 The query response shall be limited by controlled access to the data, as setup for CB/ settlement bank/  
7 payment bank.

8 Query type example: camt.003.001.07 T2S OverallLiquidityQuery Example.xml

9 In this example a T2SOverallLiquidityQuery with search criteria BIC of the Party ACCTOWNRXXX and Parent  
10 BIC of the Party ACCTSVCRXXX is sent to T2S.

11 Query Type: Outstanding Auto Collateralisation Credit Query

12 This query type enables the sender (CB, PB, CSD or CSDP) to request information about the amount of out-  
13 standing credit stemming from auto-collateralisation that is available. Here, the outstanding intraday credit  
14 means the difference between the credit utilised and the credit reimbursed.

15 The following field can be used to restrict the query. If this field is not specified the user query returns all  
16 information consistent with the access rights:

17 | T2S Party (Party BIC and Parent BIC of a Settlement bank, payment bank);

18 | T2S Dedicated Cash Account Number.

19 Specific message requirements

20 To query T2S for information about the Outstanding Auto Collateralisation Credit the field RequestType must  
21 be filled as described in the table. If the optional search criteria block is used, the occurrence of the below  
22 listed fields has to be fulfilled.  
23

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/GetAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_1	OACC
Identification Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctId/EQ/Othr/Id	RestrictedFINX2Max34Text	T2S Dedicated Cash Account Number
AnyBIC Docu- ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctOwnr/Id/OrgId/AnyBIC	AnyBICIdentifier	Party BIC of the Credit Con- sumer
BICFI Docu-	BICFIIdentifier	Parent BIC of the Credit Consumer

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
ment/GetAcct/AcctQryDef/AcctCrit/NewCrit/Sc hCrit/AcctSvcr/FinInstnId/BICFI		

- 1 The query response provides the credit limits and the outstanding limits in the same currency (it can be in  
2 any ISO currency).
- 3 Only if the limit set by a CB (3) is available, then the outstanding credit (5) is provided, else it is shown as 0.
- 4 When the query initiator is a CB,
- 5 | If the query input has a T2S Party (Party BIC and Parent BIC), then the response is limited to the T2S  
6 Party;
  - 7 | If the query input does not have a T2S Party (Party BIC and Parent BIC), then the response includes  
8 every T2S Party under the sphere of responsibility of the CB.
- 9 When the query initiator is a settlement bank/ payment bank, the query input is defaulted to the settlement  
10 bank/ payment bank.
- 11 The query response is limited by controlled access to the data, as setup for CB/ settlement bank/payment  
12 bank
- 13 Query type example: camt.003.001.07 T2S OutstandingAutoCollateralisationCreditQuery Example.xml
- 14 In this example an OutstandingAutoCollateralisationCreditQuery with search criteria Party BIC of the Credit  
15 Consumer, Parent BIC of the Credit Consumer is sent to T2S.
- 16 Query Type: Liquidity Information Query
- 17 This query type enables the sender (only CLM) to request information about the available liquidity of one or  
18 more T2S Dedicated Cash Accounts.
- 19 The following attributes can be used to restrict the query. If a field is not specified the user query returns all  
20 information consistent with the access rights:
- 21 | T2S Dedicated Cash Account Number;
  - 22 | T2S Settlement Currency.
- 23 Specific message requirements
- 24 To query T2S for information about the available liquidity the field RequestType must be filled as described  
25 in the table. If the optional search criteria block is used, the occurrence of the below listed fields has to be  
26 fulfilled.

3 In this example a Liquidity Information Query with search criteria T2S Dedicated Cash Account Number and  
4 Currency is sent to T2S.

5 3.3.3.2 ReturnAccountV08 (camt.004.001.08)

### 6 **3.3.3.2.1 Overview and scope of the message**

7 This chapter illustrates the ReturnAccountV08 message.

8 The ReturnAccountV08 message is sent by T2S to a CB (and parties authorised by them) .This message is  
9 sent to inform about balances on the T2S Dedicated Cash Account.

10 The request to the ReturnAccountV08 message is the [camt.003.001.07](#) [▶ 1133] message which is sent to  
11 T2S containing search criteria to restrict the query result.

12 This message is sent by T2S in the following message usages:

- 13 | T2S Dedicated Cash Account Balance Query Response;
- 14 | Cash Forecast Query Response;
- 15 | Outstanding Auto-Collateralisation Credit Query Response;
- 16 | T2S Overall Liquidity Query Response;
- 17 | Liquidity Information Query Response;
- 18 | Information to T2S Actor – Floor notification;
- 19 | Information to T2S Actor – Ceiling notification.

20 These message usages are described in the section "The message in business context".

### 1 **3.3.3.2.2 The T2S-specific schema**

#### 2 Outline of the schema

3 The ReturnAccountV08 message is composed of the following message building blocks:

#### 4 **MessageIdentification**

5 This building block is mandatory. It is used to identify the message and gives information in coded form e.g.  
6 in case of Information to T2S Actor, why the message was generated.

#### 7 **RequestType**

8 This building block is mandatory. It is used to further specify whether the request is an enquiry or a pay-  
9 ment control.

#### 10 **BusinessQueryReference**

11 This building block is mandatory. It contains the messageID of the related query message if available.

#### 12 **Report**

13 This building block is mandatory. It contains information related to the balance on the T2S Dedicated Cash  
14 Account and information about the floor and ceiling threshold amount.

#### 15 **OperationalError**

16 This building block is mandatory when selected in the choice. It contains the information related to the op-  
17 erational error in coded form and with a textual description.

#### 18 References/Links

19 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
20 vided outside of this document under the following link:

21 <http://www.swift.com/mystandards/T2S/camt.004.001.08> T2S

#### 22 Business rules applicable to the schema

23 Not applicable (T2S outgoing message).

### 24 **3.3.3.2.3 The message in business context**

#### 25 Message usage: T2S Dedicated Cash Account Balance Query Response

26 This message usage informs the sender on the current balance of one or more T2S Dedicated Cash Ac-  
27 counts.

28 The response is sent in real time, based on the latest cash balance available of one or more T2S Dedicated  
29 Cash Accounts.

30 This query returns the current cash balances of those T2S Dedicated Accounts that match the specified se-  
31 lection parameter. Therefore the following information is extracted:

32 | CB (BIC) (account operating party);

33 | Party (BIC) of the T2S Dedicated Cash Account (account owning party);

34 | T2S Dedicated Cash Account number;

- 1 | Debit/credit indicator;
- 2 | Currency;
- 3 | Available balance per T2S Dedicated Cash Account;
- 4 | Sum of blocked balances per T2S Dedicated Cash Account;
- 5 | Sum of reserved balances per T2S Dedicated Cash Account;
- 6 | Current balance per T2S Dedicated Cash Account (available balance + sum of blocked balances + sum of reserved balances);
- 7
- 8 | Date and timestamp of the current balance.

9 Specific message requirements

10 When T2S sends a T2S Dedicated Cash Account Balance Query Response message, the field RequestType is  
11 filled with "CASB" code. The returned business data is listed below.  
12

MESSAGE ITEM	DATA TYPE/CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	CASB
Identification Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctId/Othr/Id	RestrictedFINX2Max34Text	T2S dedicated cash account number

BICFI Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct/Svcr/FinInstnId/BICFI	BICFIIdentifier	NCB BIC
Amount Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct/MulBal/Amt	T2S_Max18_Max2DecimalAmountImpliedCurrency	Amount of the balance type specified in the Tp/Prtry tag

MESSAGE ITEM	DATA TYPE/CODE	UTILISATION
CreditDebitIndicator Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/CdtDbtInd	CreditDebitCode	Debit/credit Indicator
Proprietary Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/Tp/Prtry	T2SCashBalanceCodes_T2S_1	Balance type code specifying the nature of the balance: ACCA, RSTR, SBCB, SRCB, TCCA
DateTime Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/ValDt/DtTm	RestrictedISODateTime	Date and time of the current balance

1 When T2S sends a T2S Dedicated Cash Account Balance Query Response message (error response), the  
2 field RequestType is filled with "CASB" code. The returned business data is listed below.  
3

MESSAGE ITEM	DATA TYPE/CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	CASB
Proprietary Document/RtrAcct/RptOrErr/OprlErr/Err/Prtry	Max4AlphaNumericText	T2S specific error code as specified in the error code table
Description Document/RtrAcct/RptOrErr/OprlErr/Desc	RestrictedFINXMax140Text	Textual description in addi- tion to the reported T2S specific error code

4 Message usage example: camt.004.001.08\_T2S\_DedicatedCashAccountBalanceQueryResponse\_Example.xml

5 In this example a T2S Dedicated Cash Account Balance returning information on available balances per T2S  
6 dedicated cash account. ACCTOWNRXXX as participant of ACCTSVCRXXX has requested the CASB for its  
7 account T2SDEDICATEDCASHACCOUNT1, T2S sends the following message as response to the query con-  
8 taining the balance(s) in the specified DCA. (in this case, no cash is restricted and the participant has an  
9 available balance of cash of 5,000,000 EUR)

10 Message usage example: camt.004.001.  
11 08T2S\_ErrorResponseToT2SDedicatedCashAccountBalanceQuery\_Example.xml

12 In this example a T2S Dedicated Cash Account Balance Query Response returns an error response because  
13 of wrong specified currency.

14 Message usage: Cash Forecast Query Response

1 This message usage informs the sender about projected cash needs for the current or following cash settle-  
2 ment day.

3 This query returns cash information on T2S Dedicated Cash Accounts that match the specified selection pa-  
4 rameters. The following information is delivered:

- 5 | Party (Party BIC and Parent BIC of the Party and Party short name) of the T2S Dedicated Cash Account;
- 6 | T2S Dedicated Cash Account number;
- 7 | Currency;
- 8 | Date of the forecasted cash information.

9 For each T2S Dedicated Cash Account information on cash balance, on the T2S Dedicated Cash Account:

- 10 | Actual Cash balance on the T2S Dedicated Cash Account;
- 11 | Debiting Liquidity transfer orders as well as debiting and crediting Settlement Instructions eligible for  
12 cash forecast on that day <sup>492</sup>, which would be effective on the cash balance on the T2S Dedicated Cash  
13 Account;
- 14 | Projected cash balance <sup>493</sup> on the T2S Dedicated Cash Account, i.e.: cash balance + credit Settlement  
15 Instructions – debit liquidity transfer orders – debit Settlement Instructions;
- 16 | Amount of outstanding intraday credit from auto-collateralisation for the T2S Dedicated Cash Account;
- 17 | Sum of projected cash balance + amount of outstanding intraday credit from auto-collateralisation.

18 Specific message requirements

19 When T2S sends a Cash Forecast Query Response message, the field RequestType is filled with "CASF"  
20 code. The returned business data is listed below:  
21

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	CASF
Identification Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctId/Othr/Id	RestrictedFINX2Max34Text	T2S dedicated cash account number
Currency Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /Ccy	ActiveOrHistoricCurrencyCode	Currency

492 Eligible for cash forecast refers to settlement instructions that are accepted, matched, not cancelled and not finally settled. This definition includes instructions on hold or under intraday restriction.

493 In T2S UDFS and MyStandards, "projected balance" means the sum of cash balance and pending LTs and SIs (outstanding intraday credit from auto-collateralisation is not part of the calculation, i.e. is not subtracted). In UHB and T2S GUI, "projected balance" means the sum of cash balance and pending LTs and SIs and outstanding intraday credit from auto-collateralisation.

- 1 When T2S sends a Cash Forecast Query Response message (error response), the field RequestType is filled
- 2 with "CASF" code by T2S. The returned business data is listed below.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	CASF
Proprietary Document/RtrAcct/RptOrErr/OprlErr/Err/Prtry	Max4AlphaNumericText	T2S specific error code as specified in the error code table
Description Document/RtrAcct/RptOrErr/OprlErr/Desc	RestrictedFINXMax140Text	Textual description in addition to the reported T2S specific error code

2 Message usage example: camt.004.001.08\_T2S\_CashForecastQueryResponse\_Example.xml

3 This example illustrates a Cash Forecast Query Response which reports actual cash balance on the DCA,  
4 pending liquidity transfers, settlement instructions and outstanding intraday credit from auto-collateralisation  
5 with the following values:

- 6 | TCCA (actual balance): 6.000.000 (Credit)
- 7 | LTCA (sum of all debiting liquidity transfer orders): 20.000.000
- 8 | SIDA (sum of all **pending** debiting settlement instructions): 10.000.000
- 9 | DNCR (Debiting Settlement instructions, thereof non CORP released): 3.000.000
- 10 | DCOR (Debiting Settlement instructions, thereof CORP released): 1.000.000
- 11 | DNCH (Debiting Settlement instructions, thereof non CORP on hold): 2.000.000
- 12 | DCOH (Debiting Settlement instructions, thereof CORP on hold): 4.000.000
- 13 | SICA (sum of all **pending** crediting settlement instructions): 30.000.000{CR-808}
- 14 | CNCR (Crediting Settlement instructions, thereof non CORP released): 10.000.000
- 15 | CCOR (Crediting Settlement instructions, thereof CORP released): 8.000.000
- 16 | CNCH (Crediting Settlement instructions, thereof non CORP on hold): 4.000.000
- 17 | CCOH (Crediting Settlement instructions, thereof CORP on hold): 8.000.000
- 18 | PCCA (projected balance <sup>494</sup>): TCCA+SICA-LTCA-SIDA: 6.000.000 (Credit)
- 19 | CRAC (outstanding credit): 70.000.000 (Debit)
- 20 | SUPA (Sum of projected balance + amount of outstanding intraday credit from auto-collateralisation):  
21 | 64.000.000 (Debit)

22 Message usage: T2S Overall Liquidity Query Response

494 In T2S UDFS and MyStandards, "projected balance" means the sum of cash balance and pending LTs and SIs (outstanding intraday credit from auto-collateralisation is not part of the calculation, i.e. is not subtracted). In UHB and T2S GUI, "projected balance" means the sum of cash balance and pending LTs and SIs and outstanding intraday credit from auto-collateralisation.

- 1 This message usage informs the sender on the information about the amount of the overall liquidity availa-  
 2 ble. It allows informing on reserved liquidity, blocked liquidity and liquidity available for normal operations.  
 3 This query returns overall liquidity information for one or all T2S Parties that match the specified selection  
 4 parameter and provides thus the following information:
- 5 | Party (Party BIC and Parent BIC and Party short name);
  - 6 | Currency;
  - 7 | Sum of Auto-collateralisation limits;
  - 8 | Sum of Outstanding credit (i.e. the Limit Utilisation) of Auto-collateralisation limits;
  - 9 | Collateral value of eligible securities on stock in T2S eligible for auto-collateralisation purposes;
  - 10 | Sum of available cash balances of all T2S Dedicated Cash Accounts;
  - 11 | Aggregated balances per Market-specific Restriction Processing Type of all T2S Dedicated Cash Accounts  
 12 with their:
    - 13 – Sum of restricted balances with the same Market-specific Restriction Processing Type,
    - 14 – Market-specific Restriction Processing Type,
    - 15 – Sum of liquidity available, i.e.: sum of liquidity available = The smaller value of either "Sum of Auto-  
 16 Collateralisation Limits minus Sum of Auto-Coll. Limits Utilisation" or "Total collateral value of eligible  
 17 securities on stock" + sum of available cash balance + sum of aggregated balances per Market-  
 18 specific Restriction Processing Type.

19 Specific message requirements

20 When T2S sends this message to inform the sender about the T2S overall liquidity query, the field Re-  
 21 questType is filled with the "OVAL" code.  
 22

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

1 When T2S sends this message to inform the sender about the T2S overall liquidity query (error response),  
2 the field RequestType is filled with the "OVAL" code.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	OVAL
Error Document/RtrAcct/RptOrErr/OprlErr/Err	ErrorHandling1Choice	T2S specific error code as specified in the error code table
Description Document/RtrAcct/RptOrErr/OprlErr/Desc	RestrictedFINXMax140Text	Textual description in addi- tion to the reported T2S specific error code

4 Message usage example: camt.004.001.08 T2S OverallLiquidityQueryResponse Example.xml

5 In this example, a T2S Overall Liquidity Query Response returns information about the Auto-collateralisation  
6 limit set by a CB, Auto-collateralisation limit utilisation, collateral value of eligible securities on stock in T2S  
7 eligible for auto-collateralisation purposes, sum of available cash balances of all T2S Dedicated Cash Ac-  
8 counts, blocked cash and reserved cash..

9 Message usage: Outstanding Auto-Collateralisation Credit Query Response

1 This message usage informs the sender about the amount of outstanding credit stemming from auto-  
2 collateralisation that is available. Here, the outstanding intraday credit means the difference between the  
3 credit utilised and the credit reimbursed.

4 This query returns information regarding the auto-collateralisation limit and its utilisation for a party that  
5 matches the specified selection parameter. Therefore the following information is extracted:

- 6 | Credit Consumer (Party BIC and parent BIC and Party short name);
- 7 | T2S Dedicated Cash Account number;
- 8 | Currency.

9 In case the Credit Consumer is a payment/settlement bank:

- 10 | Auto-collateralisation limit set by CB;
- 11 | Outstanding credit (i.e. the Limit Utilisation) of this Auto-collateralisation limit;
- 12 | Sum of Auto-collateralisation limits which apply to this payment/settlement bank across all its T2S Dedi-  
13 cated Cash Accounts;
- 14 | Sum of Outstanding credit (i.e. the Limit Utilisation) of these Auto-collateralisation limits (across all its  
15 T2S Dedicated Cash Accounts).

16 In case the Credit Consumer is a client of a payment/settlement bank:

- 17 | Client-collateralisation limit set by a payment/settlement bank;
- 18 | Outstanding credit (i.e. Limit Utilisation) of the Client-collateralisation limit;
- 19 | Sum of Client-collateralisation limits which apply on this client of a payment/settlement bank;
- 20 | Sum of outstanding credit (i.e. Limit Utilisation) of these Client-collateralisation limits (limits which apply  
21 on this client of a payment/settlement bank).

22 The query response provides the information on the Limit and Limit Utilisation in the same currency.

23 Specific message requirements

24 When T2S sends this message to inform the sender about the Outstanding Auto Collateralisation Credit, the  
25 field RequestType is filled with the "OACC" code.  
26

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

Description Document/RtrAcct/RptOrErr/OprlErr/Desc	RestrictedFINXMax140Text	Textual description in addi- tion to the reported T2S specific error code

- 4 Message usage example: camt.004.001.  
5 08 T2S OutstandingAutocollateralisationCreditQueryResponse Example.xml

1 This example illustrates an Outstanding Auto-Collateralisation Credit Query informing about the Auto-  
2 collateralisation limit set by a CB and Auto-collateralisation limit utilisation for two T2S Dedicated Cash Ac-  
3 counts and the sum positions for all accounts.

4 Message usage: Liquidity Information Query Response

5 This message usage informs the sender on the available liquidity of one or more T2S Dedicated Cash Ac-  
6 counts.

7 This query returns information on T2S Dedicated Cash Accounts that match the specified selection parame-  
8 ters. The following information is delivered:

- 9 | T2S Dedicated Cash Account number;
- 10 | Currency;
- 11 | Cash balance on T2S Dedicated Cash Account;
- 12 | Value of the available collateral in T2S;
- 13 | Value of the outstanding auto-collateralisation amount in T2S per T2S Dedicated Cash Account.

14 Specific message requirements

15 When T2S sends a Liquidity Information Query Response message, the field RequestType is filled with  
16 "LQIN" code. The returned business data is listed below:  
17

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Docu- ment/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	LQIN

1 When T2S sends a Liquidity Information Query Response message (error response), the field RequestType is  
2 filled with "LQIN" code by T2S. The returned business data is listed below.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Docu- ment/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	LQIN
Proprietary Docu- ment/RtrAcct/RptOrErr/OprlErr/Err/Prtr y	Max4AlphaNumericText	T2S specific error code as specified in the error code table
Description Docu- ment/RtrAcct/RptOrErr/OprlErr/Desc	RestrictedFINXMax140Text	Textual description in addition to the reported T2S specific error code

4 Message usage example: camt.004.001.08 T2S LiquidityInformationQueryResponse Example.xml

5 This example illustrates a Liquidity Information Query Response informing about the balances on the T2S  
6 Dedicated Cash Accounts, the value of the available collateral in T2S and the value of the outstanding auto-  
7 collateralisation amount in T2S.

8 Message usage: Information to T2S Actor – Floor Notification

9 T2S sends an information to T2S Actor message to a CB or directly connected T2S party (i.e. a CSD partici-  
10 pant granted direct access, like a bank, CCP, etc.) to inform the account holder or account operator that  
11 liquidity fell under the defined minimum amount (i.e. floor) on a T2S Dedicated Cash Account.

12 Specific message requirements

1 When T2S sends this message to inform about the FLOOR Amount, the field RequestType is filled with the  
2 "FLAM" code by T2S.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	FLAM
MessageIdentification Document/RtrAcct/MsgHdr/OrgnlBizQry/MsgId	RestrictedFINXMax16Text	NONREF

Proprietary Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/Tp/Prtry	T2SCashBalanceCodes_T2S_1	Balance type code specifying the nature of the balance: FLOR, ACCA
DateTime Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/ValDt/DtTm	RestrictedISODatetime	Date and time of the current balance

4 Message usage example: camt.004.001.08 T2S InformationToT2SActor Floor Example.xml

5 In this example an InformationToT2SActor-Floor reporting information about Floor Amount and Available  
6 Liquidity is sent by T2S.

7 Message usage: Information to T2S Actor – Ceiling Notification

8 T2S sends an information to T2S Actor message to a CB or directly connected T2S party (i.e. a CSD partici-  
9 pant granted direct access, like a bank, CCP, etc.) to inform the account holder or account operator that  
10 liquidity exceeded the defined maximum amount (i.e. ceiling) for a T2S Dedicated Cash Account

11 Specific message requirements

12 When T2S sends this message to inform about the CEILING Amount, the field RequestType is filled with the  
13 "CEAM" code by T2S.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/RtrAcct/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_2	CEAM
MessageIdentification Document/RtrAcct/MsgHdr/OrgnlBizQry/MsgId	RestrictedFINXMax16Text	NONREF

Proprietary Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/Tp/Prtry	T2SCashBalanceCodes_T2S_1	Balance type code specifying the nature of the balance: CEIL, ACCA
DateTime Docu- ment/RtrAcct/RptOrErr/AcctRpt/AcctOrErr/Acct /MulBal/ValDt/DtTm	RestrictedISODatetime	Date and time of the current balance

2 Message usage example: camt.004.001.08 T2S InformationToT2SActor Ceiling Example.xml

3 In this example an InformationToT2Sactor-Ceiling reporting information about Ceiling Amount and Available  
4 Liquidity is sent from T2S.

5 3.3.3.3 GetTransactionV08 (camt.005.001.08)

6 **3.3.3.3.1 Overview and scope of the message**

7 This chapter illustrates the *GetTransactionV08* message.

8 The *GetTransactionV08* message is sent by a CB or a directly connected T2S participant (e. g. payment  
9 bank/settlement bank) to T2S. This message is used to request information on Immediate Liquidity Trans-  
10 fers or on postings on the T2S Dedicated Cash Account.

11 This message is sent to T2S to make the following types of queries:

- 12 | Immediate Liquidity Transfer Order Detail Query;
- 13 | Immediate Liquidity Transfer Order List Query;
- 14 | T2S Dedicated Cash Account Posting Query.

1 These types of queries are described in the section "The message in business context".

2 In response to the *GetTransactionV08* message, T2S sends a [camt.006.001.08](#) [▶ 1162] message containing  
3 information on requested items or a business error.

#### 4 **3.3.3.3.2 The T2S-specific schema**

##### 5 Outline of the schema

6 The *GetTransactionV08* message is composed of the following message building blocks:

##### 7 **MessageIdentification**

8 This building block is mandatory. It is used to identify the message.

##### 9 **RequestType**

10 This building block is mandatory. It is used to further specify the request.

##### 11 **TransactionQueryDefinition**

12 This building block is optional. It contains elements such as Search Criteria.

##### 13 References/Links

14 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
15 vided outside of this document under the following link:

16 <http://www.swift.com/mystandards/T2S/camt.005.001.08> T2S

##### 17 Business rules applicable to the schema

1 **3.3.3.3.3 The message in business context**

2 Query Type: Immediate Liquidity Transfer Order Detail Query

3 This query type enables the sender to request information on the details of a specific liquidity transfer (gen-  
4 erated by T2S or T2S Actor).

1 The following fields have to be used to restrict the query. The user query returns all information consistent  
2 with the access rights:

- 3 | Unique immediate liquidity transfer order identifier

#### 4 Specific message requirements

5 To query T2S for an immediate liquidity transfer order detail information, the field RequestType must be  
6 filled with the "ILDQ" code. All possible search criteria are listed.

7

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/GetTx/MsgHdr/ReqTp/Prtry/Id	QueryType2Code_T2S_3	ILDQ
ProprietaryIdentification Docu- ment/GetTx/TxQryDef/TxCrit/NewCrit/SchCrit/ PmtSch/PmtId/PrtryId	RestrictedFINXMax16Text	Unique immediate liquidity transfer order identifier

8 Examples and further descriptions regarding the liquidity transfer order detail query:

- 9 | If the query specifies a unique immediate liquidity transfer order identifier, then the query result shall  
10 include the information regarding this specified immediate liquidity transfer;

11 Query type example: camt.005.001.08\_T2S\_ImmediateLiquidityTransferOrderDetailQuery\_Example.xml

12 In this example an ImmediateLiquidityTransferOrderDetailQuery with search criteria unique immediate li-  
13 quidity transfer order identifier is sent to T2S.

#### 14 Query Type: Immediate Liquidity Transfer Order List Query

15 This query type enables the sender to request information about a list of immediate liquidity transfer orders  
16 for a specific T2S Dedicated Cash Account or T2S party.

17 The Immediate Liquidity Transfer Order List Query returns information about all immediate liquidity transfer  
18 (generated by T2S or T2S Actor) that match the search criteria in a listed form.

19 The following fields can be used to restrict the query. If a field is not specified the user query returns all  
20 information consistent with the access rights:

- 21 | Specific BIC of the T2S Party;
- 22 | Specific parent BIC of the T2S Party;
- 23 | Specific T2S Dedicated Cash Account number;
- 24 | T2S settlement currency;
- 25 | Either Settlement date and time or only date (Time range).
- 26 | Value Date.

#### 27 Specific message requirements

1 To query T2S for a list of immediate liquidity transfer orders, the field RequestType must be filled with the  
2 "ILLQ" code. All possible search criteria are listed.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
ToDate Docu- ment/GetTx/TxQryDef/TxCrit/NewCrit/SchCrit/ AcctNtrySch/NtryDt/DtSch/FrToDt/ToDt	RestrictedISODate	used to define a end date
BICFI Docu- ment/GetTx/TxQryDef/TxCrit/NewCrit/SchCrit/ AcctNtrySch/AcctOwnr/FinInstnId/BICFI	BICFIIdentifier	BIC of the Party
BICFI Docu- ment/GetTx/TxQryDef/TxCrit/NewCrit/SchCrit/ AcctNtrySch/AcctSvcr/FinInstnId/BICFI	BICFIIdentifier	Parent BIC of the Party

1 Examples and further descriptions regarding the liquidity transfer order list query:

2 | If the query parameter specifies T2S Party (Party BIC and Parent BIC), then the query result set includes  
3 all liquidity transfer orders, defined for the Party's T2S Dedicated Cash Accounts.

4 | If the query parameter specifies a T2S Dedicated Cash Account, then the query result includes all liquidi-  
5 ty transfer orders, defined for the specified T2S Dedicated Cash Account.

6 Query type example: camt.005.001.08 T2S ImmediateLiquidityTransferOrderListQuery Example.xml

7 In this example an ImmediateLiquidityTransferOrderListQuery with search criteria BIC of the Party, Parent  
8 BIC of the Party, T2S Dedicated Cash Account number and T2S settlement currency is sent to T2S.

9 Query Type: T2S Dedicated Cash Account Posting Query

10 This query type enables the sender to request information about cash postings on one or more T2S Dedicat-  
11 ed Cash Accounts.

12 This query shall enable T2S System users of CBs, settlement banks and payment banks to receive infor-  
13 mation on postings on one or more T2S Dedicated Cash Accounts.

14 The following fields can be used to restrict the query. If a field is not specified the user query returns all  
15 information consistent with the access rights:

16 | BIC of the T2S Party;

17 | Parent BIC of the T2S Party;

18 | T2S Dedicated Cash Account number;

19 | T2S settlement currency;

20 | Either Settlement date and time or only date (Time range);

21 | Value Date.

1 If no search criterion is specified, the user query returns all information consistent with the access rights.

2 Specific message requirements

3 To query T2S for information about the Postings on T2S Dedicated Cash Accounts, field RequestType must  
4 be filled with the "CASP" code. All possible search criteria are listed.  
5

- 1 Examples and further descriptions regarding the T2S Dedicated Cash Account Posting Query:
- 2 | If the query parameters do not include a date, then the query assumes the current day.
- 3 | If the query parameters specify a time, then the query provides all postings made as of and after the
- 4 specified time. If the time is not specified, then the query shall assume 00:00 as the default. When spec-
- 5 ifying a time, the participant has to specify a date along with it.
- 6 | If the query specifies a T2S Actor and neither a T2S Dedicated Cash Account nor T2S settlement curren-
- 7 cy, then the query provides the postings on all of the Actor's T2S Dedicated Cash Accounts.
- 8 | If the query specifies a T2S Actor and a T2S settlement currency, then the query provides the postings
- 9 on all of the Actor's T2S Dedicated Cash Accounts operated in the specified currency.
- 10 | If the query specifies a T2S Dedicated Cash Account, then the query returns all postings on the specified
- 11 Dedicated Cash Account only.

12 Query type example: camt.005.001.08\_T2S\_DedicatedCashAccountPostingQuery\_Example.xml

13 In this example a T2SDedicatedCashAccountPostingQuery with search criteria BIC of the Party, Parent BIC of

14 the Party, T2S Dedicated Cash Account Number, Currency, and Starting Date/Time is sent to T2S.

#### 15 3.3.3.4 ReturnTransactionV08 (camt.006.001.08)

16

##### 17 **3.3.3.4.1 Overview and scope of the message**

18 This chapter illustrates the *ReturnTransactionV08* message.

19 *ReturnTransactionV08* message is sent by T2S to a CB or a directly connected T2S participant (e. g. pay-  
20 ment bank/settlement bank). This message is used to inform on Immediate Liquidity Transfers or on post-  
21 ings on the T2S Dedicated Cash Account.

1 To request the *ReturnTransactionV08* message, the sender sends a [camt.005.001.08](#) [▶ 1155] message  
2 containing search criteria to restrict the query.

3 This message is sent by T2S in the following message usages:

4 | Immediate Liquidity Transfer Order Detail Query Response;

5 | Immediate Liquidity Transfer Order List Query Response;

6 | T2S Dedicated Cash Account Posting Query Response.

7 These message usages are described in the section "The message in business context".

### 8 **3.3.3.4.2 The T2S-specific schema**

#### 9 Outline of the schema

10 The *ReturnTransactionV08* message is composed of the following message building blocks:

#### 11 **MessageIdentification**

12 This building block is mandatory.

#### 13 **RequestType**

14 This building block is mandatory. It is used to further specify the request.

#### 15 **BusinessQueryReference**

16 This building block is mandatory.

#### 17 **BusinessReport**

18 This building block is mandatory when selected in the choice. It contains the information related to the  
19 transaction.

#### 20 **OperationalError**

21 This building block is mandatory when selected in the choice. It contains the information related to the op-  
22 erational error

#### 23 References/Links

24 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
25 vided outside of this document under the following link:

26 <http://www.swift.com/mystandards/T2S/camt.006.001.08> T2S

#### 27 Business rules applicable to the schema

28 Not applicable (T2S outgoing message)

### 29 **3.3.3.4.3 The message in business context**

#### 30 Message usage: Immediate Liquidity Transfer Order Detail Query Response

31 This message usage informs the sender on the details of a specific liquidity transfer.

32 It is used for listing detailed information about the underlying transfer type of a liquidity transfer, i.e. if it is  
33 either a standing a predefined or an immediate liquidity transfer order.

- 1 This query returns detailed information on the specified liquidity transfer. Therefore the following infor-  
 2 mation is extracted:
- 3 | CB (BIC) (account operating party);
  - 4 | Party (Party BIC and Party short name) of either the debited or credited T2S Dedicated Cash Account  
 5 (account owning party);
  - 6 | Currency;
  - 7 | Debit cash account number (T2S Dedicated Cash Account number or RTGS account number);
  - 8 | Credit cash account number (T2S Dedicated Cash Account number or RTGS account number);
  - 9 | Credit/Debit Indicator (from perspective of T2S Dedicated Cash Account mentioned under Account En-  
 10 try);
  - 11 | Actual Amount;
  - 12 | Transfer Amount;
  - 13 | Immediate liquidity transfer order identifier;
  - 14 | Immediate liquidity transfer order reference;
  - 15 | Settlement Status;
  - 16 | RTGS status;
  - 17 | T2S generated order (yes/ no)
    - 18 – If “yes”: Predefined liquidity transfer order reference/ Standing liquidity transfer order reference
  - 19 | Value Date
  - 20 | Settlement Timestamp.

21 Specific message requirements

22 This message usage informs about immediate liquidity transfer order detail information, the field Re-  
 23 questType is filled with the “ILDQ” code by T2S.  
 24

2 Message usage example 1:3 camt.006.001.08 T2S DedicatedCashAccountPostingQueryResponse Example.xml4 In this example a T2S Dedicated Cash Account Posting Query Response with ID T2SReference1 returns in-  
5 formation on cash postings of a T2S Dedicated Cash Account (ID T2SDEDICATEDCASHACCOUNT1).6 Message usage example 2: camt.006.001.7 08 T2S ErrorResponseToT2SDedicatedCashAccountPostingQuery Example.xml8 In this example a T2S Dedicated Cash Account Posting Query Response is sent and returns error response to  
9 T2S Dedicated Cash Account Posting Query with wrong specified T2S Dedicated Cash Account.

10 3.3.3.5 GetLimitV07 (camt.009.001.07)

11 **3.3.3.5.1 Overview and scope of the message**

12 This chapter illustrates the GetLimitV07 message.

13 The GetLimitV07 message is sent by CBs, payment banks or any party authorised by them.

14 This message is used to query on limits and limit utilisations.

15 This message is sent ~~to CRDM to make the Limit Query, while it is sent to~~ T2S to make the Limit Utili-  
16 sation Query. **{Split book approach}**

17 These query types are described in the section "The message in business context".

18 In response to the GetLimitV07, a camt.010.001.08 containing the requested information is returned.

19 **3.3.3.5.2 Schema**

20 Outline of the schema

21 The GetLimitV07 message is composed of the following message building blocks:

22 MessageHeader

23 This building block is mandatory and non repetitive. It must contain an identification assigned by the send-  
24 ing party to uniquely and unambiguously identify the message and the type of the query requested.

25 LimitQueryDefinition

1 This building block is mandatory. It contains detailed information related to the business query about limit  
2 message. It includes sections related to limit type, the credit consumer identifier, the currency code, the limit  
3 amount, an attribute to specify a search criteria "=" against the date from which the credit limit is valid.

1 **Query type example 1: CRDMLimitQuery\_example.xml**

2 **In this example a CB ("BITAITRRXXX") queries Auto-collateralisation limits for payment bank**  
3 **"UNCRITMMXXX" valid from 2021-01-01.**

4 **Query type example 2: CRDMLimitQuery\_PaymentBank\_example.xml**

5 **In this additional example a payment bank queries for unsecured credit limit set for its client**  
6 **with BIC "CLIEXXYYAAA" valid from 2010-01-01.**

7 **Query Type: Limit Utilisation Query**

8 **This query type requests usage information about limits and their utilisation.** (Split book ap-  
9 **proach}**

10 Specific message requirements

11 To query T2S for the utilisation of limits the field RequestType must be filled with "UTIL" and at least one of  
12 the following search criteria must be provided.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification		Fixed value "UTIL"
Document/GetLmt/MsgHdr/ReqTp/Prtry/Id	Exact4AlphaNumericText_T2S	
BICFI	BICFIDec2014Identifier	Credit consumer
Docu- ment/GetLmt/LmtQryDef/LmtCrit/NewCrit/Sch Crit/BilLmtCtrPtyId/FinInstnId/BICFI		
Code	LimitType3Code	Limit type
Docu- ment/GetLmt/LmtQryDef/LmtCrit/NewCrit/Sch Crit/CurLmtTp/Cd		
UsedAmount	ActiveAmountRange3Choice_1	Limit utilisation amount range.  Comparison operators (>, <, >=, <= etc...) satisfied thru "From" "To" Message ele- ments.
Docu- ment/GetLmt/LmtQryDef/LmtCrit/NewCrit/Sch Crit/UsdAmt		
UsedPercentage	PercentageRange1Choice	Limit utilisation percentage range.  Comparison operators (>, <, >=, <= etc...) satisfied thru "From" "To" Message ele- ments.
Docu- ment/GetLmt/LmtQryDef/LmtCrit/NewCrit/Sch Crit/UsdPctg		
LimitCurrency	ActiveCurrencyCode	Limit currency
Docu- ment/GetLmt/LmtQryDef/LmtCrit/NewCrit/Sch Crit/LmtCcy		

2 Query type example: camt.009.001.07\_T2S\_LimitUtilisation\_Example.xml

3 In this example a CB participating in T2S and associated to party code "NCBAXXYAAA" queries the Autocol-  
4 lateralisation limit utilisations of the payment bank "PAYBXXYYAAA" where the limit utilisation exceeds 75%.

5 3.3.3.6 ReturnLimitV08 (camt.010.001.08)

6 **3.3.3.6.1 Overview and scope of the message**

7 This chapter illustrates the ReturnLimitV08 message.

1 The ReturnLimitV08 message is sent to a CB or directly connected party to respond to a limit or a limit utili-  
2 sation query. It can be sent either as a limit query response, containing registered limit information or as a  
3 limit utilisation query response containing the utilisation of limits that have been defined by a T2S party.

4 This message is sent ~~by CRDM for the message usage Limit Query Response and~~ by T2S for the  
5 message usage Limit Utilisation Query Response. **{Split book approach}**

6 These message usages are described in the section "The message in business context".

### 7 **3.3.3.6.2 Schema**

8 Outline of the schema

9 The ReturnLimitV08 message is composed of the following message building blocks:

10 MessageHeader

11 This building block is mandatory and non repetitive. It contains an identification assigned by the sending  
12 party to uniquely and unambiguously identify the message (~~"NONREF" value can be used for messages  
13 sent by CRDM, since it is already contained in the business application header~~) and the original  
14 business query identification. **{Split book approach}**

15 ReportOrError

16 This building block is mandatory and non repetitive. It contains either the information matching the search  
17 criteria of the related business query about limit message or an error indication.

18 It includes sections such as limit type, the credit consumer identifier, the currency code, the limit amount,  
19 the date from which the credit limit is valid.

20 References/Links

27 Business rules applicable to the schema

28 Not applicable (T2S outgoing message)

### 29 **3.3.3.6.3 The message in business context**

30 Message usage: Limit Query Response

31 This message usage provides the requestor with information about the limits in accordance with the search  
32 criteria used within the query.

33 Specific message requirements

34 A Limit Query Response contains information on the limit, cash account and institutions involved.

1

8 3.3.3.9 GetBusinessDayInformationV05 (camt.018.001.05)

9

### 10 **3.3.3.9.1 Overview and scope of the message**

11 This chapter illustrates the *GetBusinessDayInformationV05* message.

12 The *GetBusinessDayInformationV05* is sent by all directly connected T2S Actors to BDM. It is sent to request  
13 calendar-related information.

14 This message is sent to BDM to make the following types of queries:

- 15 | BDM Calendar query;
- 16 | BDM Diary query;
- 17 | Status of the BDM Settlement day query.

18 These query types are described in the section "The message in business context".

19 In response to the *GetBusinessDayInformationV05*, T2S sends a [camt.019.001.07](#) [▶ 1189] message con-  
20 taining information on requested items or a business error.

### 21 **3.3.3.9.2 The Coco-specific schema**

#### 22 Outline of the schema

23 The *GetBusinessDayInformationV05* message is composed of the following message building blocks:

#### 24 **MessageHeader**

25 This building block is mandatory and non repetitive. It must contain the message identification ("NONREF"  
26 value can be used) and the type of query requested.

#### 27 **BusinessDayInformationQueryDefinition**

1 This building block is mandatory and non repetitive. It contains detailed information related to the calendar  
2 or diary entities to be queried such as service, date, currency, event type and closure period.

3 References/Links

4 The CoCo-specific schema and documentation in HTML/PDF format as well as the message examples are  
5 provided outside of this document under the following link:

9 **3.3.3.9.3 The message in business context**

10 Query Type: Calendar Query

11 This query type enables the sender to request information about a specific calendar day for a specific cur-  
12 rency.

13 Specific message requirements

1 To query BDM for Service T2S for a calendar day, the field RequestType must be filled with "CALE" and  
 2 search criteria can be provided according to following table.  
 3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Docu- ment/GetBizDayInf/MsgHdr/ReqTp/Prtry/Id	TAR- GET_Exact4AlphaNumericText_REQT_BD M	Fixed value "CALE"
Service Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysId/MktInfrstrctrId/Prtry	TAR- GET_Exact4AlphaNumericText_REQT_BD M	Service for which the query is requested. Value "T2S" for T2S.
SystemCurrency Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysCcy	ActiveCurrencyCode	Currency
FromDateTime Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/ClsrPrd/DtTmRg/FrDtTm	RestrictedISODateTime	Start date for the closure period
ToDateTime Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/ClsrPrd/DtTmRg/ToDtTm	RestrictedISODateTime	End date for the closure period

4 Query type example: CalendarQuery Example.xml

5 In this example a CB participating in T2S and associated to party code "NCBAXXYAAA" requests the calen-  
 6 dar information for closure period for T2S starting from 2020-10-01 and ending on 2020-11-01 concerning  
 7 EUR currency.

8 Query Type: Diary Query

9 This query type enables the sender to request information about the events for a business day.

10 Specific message requirements

11 To query BDM for information about events, the field RequestType must be filled with "DIAR" and search  
 12 criteria can be provided according to following table.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Docu- ment/GetBizDayInf/MsgHdr/ReqTp/Prtry/Id	TAR- GET_Exact4AlphaNumericText_REQT_BD M	Fixed value "DIAR"
SystemDate Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysDt	RestrictedISODate	Business date
Service Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysId/MktInfrstrctrId/Prtry	TAR- GET_Exact4AlphaNumericText_REQT_BD M	Service for which the query is requested. Value "T2S" for T2S.
SystemCurrency Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysCcy	ActiveCurrencyCode	Currency
Identification Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/EvtTp/Prtry/Id	Exact4AlphaNumericText	Event code

2 Query type example: DiaryQuery Example.xml

3 In this example a CB participating in T2S and associated to party code "NCBAXXYAAA" requests information  
4 about all of the events for business day 2020-10-01 for T2S service.

5 Query Type: Status of the Settlement day query

6 This query type enables the sender to request current status of settlement day for a specific service.

7 Specific message requirements

8 To query BDM for information about the current status of the Settlement day for T2S service, field Re-  
9 questType must be filled with "STAT" and SysDt must be current business date.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Docu- ment/GetBizDayInf/MsgHdr/ReqTp/Prtry/Id	TAR- GET_Exact4AlphaNumericText_REQT_BD M	Fixed value "STAT"
SystemDate Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysDt	RestrictedISODate	Must match current business date
Service Docu- ment/GetBizDayInf/BizDayInfQryDef/Crit/New Crit/SchCrit/SysId/MktInfrstrctrId/Prtry	TAR- GET_Exact4AlphaNumericText_REQT_BD M	Service for which the query is requested. Value "T2S" for T2S.

#### 2 Query type example: StatusoftheSettlementdayQuery\_example.xml

3 In this example, assuming current business date is 2020-01-01, a CB participating in T2S and associated to  
4 party code "NCBAXXYAAA" requests information about the current system status for T2S service.

#### 5 3.3.3.10 ReturnBusinessDayInformationV07 (camt.019.001.07)

##### 6 **3.3.3.10.1 Overview and scope of the message**

7 This chapter illustrates the *ReturnBusinessDayInformationV07* message.

8 The *ReturnBusinessDayInformationV07* is sent by T2S and by BDM to all directly connected Actors to provide  
9 with requested calendar information.

10 This message is sent by BDM in the following message usages as response to [camt.018.001.05](#) [▶ 1185]:

- 11 | Calendar Response;
- 12 | Diary Response;
- 13 | Status of the Settlement Day Response.

14 This message is sent by T2S in the following message usages:

- 15 | Status of the T2S Settlement Day Notification;
- 16 | Final NTS Message;
- 17 | Currency Related Event Notification.

18 These message usages are described in the section "The message in business context".

##### 19 **3.3.3.10.2 Schema**

##### 20 Outline of the schema

21 The *ReturnBusinessDayInformationV07* message is composed of the following message building blocks:

## 1 **MessageHeader**

2 This building block is mandatory and non repetitive. It contains an the message identification ("NONREF"  
3 value can be used).

## 4 **ReportOrError**

5 This building block is mandatory and non repetitive. It contains either the information matching the search  
6 criteria of the related query or an error indication.

7 It includes sections such as service, business date and for each event scheduled time of the event, updated  
8 scheduled time of the event, actual start time of the event, actual end time of the event, description of the  
9 event type and the event type code according to the query performed.

### 17 Business rules applicable to the schema

18 Not applicable ( outgoing message)

## 19 **3.3.3.10.3 The message in business context**

### 20 Message usage: Calendar Response

21 This message usage provides the sender with requested information about a specific calendar day for a spe-  
22 cific currency.

### 23 Specific message requirements

24 A Calendar Response contains information on the system date, currency and closure information.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Service /Document/RtrBizDayInf/RptOrErr/BizRpt/SysId/MktInfrstrctrId/Prtry	TARGET_ServicesType_BDM	Service for which the query is requested
SystemDate Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysDt	RestrictedISODate	Business date queried
SystemCurrency Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/SysCcy	ActiveCurrencyCode	Currency for which the calendar information is queried
Code Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/ClsrInf/Rsn/Cd	SystemClosureReason1Code	Reason why the system is closed for the specified currency.

2 The returned business data in case of an error response is listed below:

3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Proprietary Docu- ment/RtrBizDayInf/RptOrErr/OprlErr/Err/Prtry	Max4AlphaNumericText	specific error code as specified in the error code table
Description Document/RtrBizDayInf/RptOrErr/OprlErr/Desc	TARGET_RestrictedFINXMax140Text	Textual description in addition to the reported T2S specific error code

#### 4 Message usage example: CalendarResponse Example.xml

5 In this example a CB participating in T2S and associated to party code "NCBAXXYAAA" receives the closure  
6 information for 2020-10-01 and EUR currency.

7 System has been closed due to a Bank Holiday.

#### 8 Message usage: Diary Response

9 This message usage provides the sender with information about the events for a business day.

#### 10 Specific message requirements

11 A Diary Response contains information on the system date, event type, scheduled and effective timing.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Service /Document/RtrBizDayInf/RptOrErr/BizRpt/SysId/MktInfrstrctrId/Prtry	TARGET_ServicesType_BDM	Service for which the query is requested
SystemDate Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysDt	RestrictedISODate	Business date
SystemCurrency Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/SysCcy	ActiveCurrencyCode	Currency
Identification Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/Evt/Tp/Prtry/Id	Exact4AlphaNumericText	Code identifying the event described
ScheduledTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/Evt/SchldIdTm	RestrictedISODateTime	Scheduled time for the event
EffectiveTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/Evt/FctvTm	RestrictedISODateTime	Effective time for the event
StartTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/Evt/StartTm	RestrictedISODateTime	Actual start time for the event
EndTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysInfPerCcy/Evt/EndTm	RestrictedISODateTime	Actual end time for the event

2 The returned business data in case of an error response is listed below:

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Proprietary Docu- ment/RtrBizDayInf/RptOrErr/OprlErr/Err/Prtry	Max4AlphaNumericText	T2S specific error code as specified in the error code table
Description Document/RtrBizDayInf/RptOrErr/OprlErr/Desc	TARGET_RestrictedFINXMax140Text	Textual description in addition to the reported T2S specific error code

2 Message usage example: DiaryResponse Example.xml

3 In this example a CB participating in T2S and associated to party code "NCBAXXYAAA" receives information  
4 about the events occurred for business day 2020-01-01 linked to EUR currency.

5 The Start-of-Day was scheduled at 7:00 but started 5 minutes later and lasted 6 seconds.

6 The End-of-Day, initially foreseen at 18:00, was delayed at 18:15 but started at 18:20 lasting one minute.

7 Message usage: Status of the Settlement Day Response

8 This message usage provides the sender with the current status of the settlement day for a specific service.

9 Specific message requirements

10 A Status of the Settlement Day response contains information on the current status of the system and the  
11 time in which this became effective.  
12

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Service /Document/RtrBizDayInf/RptOrErr/BizRpt/SysId/MktInfrstrctrId/Prtry	TARGET_ServicesType_BDM	Service for which the query is requested
SystemDate Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysDt	RestrictedISODate	Business date for the status reported
Identification Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysSts/Sts/Prtry/Id	TAR- GET_Exact4AlphaNumericText_STAT_BDM	Status of the system
ValidityTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrErr/BizDayInf/SysSts/VldtyTm	DateTimePeriod1Choice_1	Time in which the current status became effective

13 The returned business data in case of an error response is listed below:

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Proprietary Docu- ment/RtrBizDayInf/RptOrErr/OprlErr/Err/Prtry	Max4AlphaNumericText	Specific error code as specified in the error code table
Description Document/RtrBizDayInf/RptOrErr/OprlErr/Desc	TARGET_RestrictedFINXMax140Text	Textual description in addition to the reported T2S specific error code

2 Message usage example: StatusoftheSettlementdayResponse example.xml

3 In this example, assuming current business date is 2020-01-01, a CB participating in T2S and associated to  
4 party code "NCBAXXYAAAA" is reported that the current status of T2S is "RTMS" (Real-time settlement)  
5 starting from 7:05.

6 Message usage: Status of the T2S Settlement Day Notification

7 This message usage provides the party which opted for receiving this message with the status of the T2S  
8 settlement day as it changes. Message is pushed to the subscriber.

9 Specific message requirements

10 A Status of the T2S Settlement day notification contains information on the new status of the system and  
11 the time in which this became effective.  
12

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
SystemDate Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrE rr/BizDayInf/SysDt	RestrictedISODate	Business date for the status reported
Identification Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrE rr/BizDayInf/SysSts/Sts/Prtry/Id	TAR- GET_Exact4AlphaNumericText_STAT_BDM	Status of the system
ValidityTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/BizDayOrE rr/BizDayInf/SysSts/VldtyTm	DateTimePeriod1Choice_1	Time in which the current status became effective

13 Message usage example: camt.019.001.07 T2S StatusNotification Example.xml

14 In this example, assuming current business date is 2010-01-01, a CB participating in T2S and associated to  
15 party code "NCBAXXYAAAA" is notified about status of T2S has become "RTMP" (Real-time processing) start-  
16 ing from 7:05.

17 Message usage: Final NTS Message

1 This message usage notifies the receiver that the night-time settlement cycle file bundling has been done  
2 and provides with the count of files produced during that phase.

3 Specific Message requirements

4 A Final NTS Message notification contains information on the end of night-time settlement cycle file bundling  
5 and the count of files produced during that phase.

6 If no night-time settlement activity is performed for a recipient, a Final NTS Message notification is sent to  
7 report that no files have been created.

8 The message will include a single "0" in the field used for providing the count of files.  
9

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
SystemDate Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/Biz DayOrErr/BizDayInf/SysDt	RestrictedISODate	Business date for the night-time set- tlement phase
Identification Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/Biz DayOrErr/BizDayInf/SysSts/Sts/Prtry/Id	TAR- GET_Exact4AlphaNumericText_STAT_B DM	Fixed value "FNTS"
ValidityTime Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/Biz DayOrErr/BizDayInf/SysSts/VldtyTm	DateTimePeriod1Choice_1	Time in which the current status be- came effective
Proprietary Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/Biz DayOr- Err/BizDayInf/SysInfPerCcy/ClsrInf/Rsn /Prtry	Max35Text	Count of night-time settlement files produced for the recipient

10 Message usage example: camt.019.001.07 FNTS status notification.xml

11 In this example, assuming current business date is 2010-01-01, the recipient is informed that the night-time  
12 settlement cycle file bundling has been done and that 100 files have been produced.

13 Message usage: Currency Related Event Notification

14 Message usage example: camt.019.001.07 Currency related event notification.xml

15 This message usage notifies the receiver that a business event linked to a currency has been executed.

16 Specific Message requirements

1 A Currency Related Event notification contains information on the execution of the business event linked to a  
 2 specific currency.  
 3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
SystemDate Docu- ment/RtrBizDayInf/RptOrErr/BizRpt/Biz DayOrErr/BizDayInf/SysDt	RestrictedISODate	Business date for the reported business event

- 14 | **camt.024.001.06\_T2S\_ModificationOfAEventBasedStandingOrderT2SDedicatedCashAccountRTGSaccount\_Example.xml**
- 15 | ~~In this example a Maintenance of Liquidity Transfer Order is used to modify a standing order~~
- 16 | ~~from T2S Dedicated Cash Account to an RTGS account, based on business event "Start of cycle~~
- 17 | ~~1 / preparation of sequence 1". (Split book approach)~~

### 18 | 3.3.3.12 ReceiptV05 (camt.025.001.05)

#### 19 | **3.3.3.12.1 Overview and scope of the message**

20 | This chapter illustrates the ReceiptV05 message.

21 | The ReceiptV05 message is sent by T2S to a CB or directly connected T2S Party or an RTGS system (e.g. TARGET2) to confirm/reject the execution of a liquidity transfers from a T2S Dedicated Cash Account to a cash account in an RTGS system and vice versa, ~~and it is sent by CRDM to inform about limit maintenance status / limit maintenance confirmation and standing / predefined order maintenance status and confirmation.~~ (Split book approach) It is also used to inform an RTGS system that all liquidity transfers in T2S are final. <sup>495</sup>

27 | This message is sent by T2S in the following message usages:

- 28 | | T2S Rejection;
- 29 | | Accepted Liquidity Transfer;
- 30 | | Information to T2S Actor – Liquidity transfer Status;
- 31 | | Information to T2S Actor (CB Info RTGS rejection/Invalid RTGS answer);
- 32 | | Information to RTGS system;

---

495 | Please note that the described functionality won't be available before CSLD go-live.

1 | Liquidity transfers completed. <sup>496</sup>

2 This message is received by T2S in the following case:

3 | RTGS Answer.

4 ~~This message is sent by CRDM in the following message usages:~~

5 | ~~CRDM Rejection;~~

6 | ~~Information to T2S Actor—Liquidity transfer Status;~~

7 | ~~Limit maintenance status and Limit maintenance confirmation;~~

8 ~~These message usages and case are described in the section “The message in business con-~~  
9 ~~text”.~~ {Split book approach}

### 10 3.3.3.12.2 Schema

11 Outline of the schema

12 The ReceiptV05 message is composed of the following message building blocks:

#### 13 MessageHeader

14 This building block is mandatory and provides set of elements to uniquely identify the receipt message. It  
15 includes a RequestType block which provides information on the reported status.

#### 16 RequestType

17 This building block is optional and provides information on the reported status.

#### 18 ReceiptDetails

19 This building block is mandatory and is composed of the individual RelatedReference and RequestHandling  
20 (multiple) blocks.

StatusCode Document/Rct/RctDtIs/ReqHdlg/StsCd	Max4AlphaNumericText	Error code based on the Business Rule list
Description Document/Rct/RctDtIs/ReqHdlg/Desc	RestrictedFINXMax140Text	Error description based on the Business Rule list

9 Message usage example: camt.025.001.05\_T2S\_Rejection\_Example.xml

10 In this example a Receipt ("Rejection") is sent to the corresponding party because of using a not existing  
11 debit account within immediate liquidity transfer order message.

12 **Message usage: CRDM Rejection**

13 **Error or status message in case of failed business validation checks of the incoming original**  
14 **message (camt.071 and camt.024)**

15 **Specific message requirements**

1

Message Item	Data Type/ Code	Utilisation
MessageIdentification Docu- ment/Rct/RctDtls/OrgnlMsgId/MsgId	TARGET_RestrictedFINXMax35Text	Copy of BAH MsgId of incoming message.
Status Document/Rct/RctDtls/ReqHdlg/StsCd	Max4AlphaNumericText	Status code {Split book approach}

2 Message usage: Accepted Liquidity Transfer

3 Status message in case of positive business validation checks

4 Specific message requirements

5 T2S sends an "Accepted Liquidity transfer" to T2SActor (Instructing party) of the Liquidity Transfer

6

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/Rct/MsgHdr/ReqTp/Prtry/Id	RequestTypeGenericIdentifica- tion1Code_T2S_1	VSTS: Receipt conveys a validation status
MessageIdentification Document/Rct/RctDtls/OrgnlMsgId/MsgId	RestrictedFINXMax35Text	BizMsgIdr stemming from the BAH of the underlying Liquidity Credit Transfer or the User Reference in case of a U2A Liquidity Credit Transfer
StatusCode Document/Rct/RctDtls/ReqHdlg/StsCd	Max4AlphaNumericText	APPR Liquidity Transfer was approved

7 Message usage example: camt.025.001.05\_T2S\_AcceptedLiquidityTransfe\_Example.xml

8 In this example a Receipt with settlement status APPR ("Accepted Immediate Liquidity Transfer") after suc-  
9 cessful performing of the validation checks is sent to the corresponding party.

10 Message usage: Information to T2S Actor – Liquidity transfer Status

11 The Liquidity Transfer status message is sent to the CBs or any parties authorised by them to inform them  
12 accordingly about the settlement status. This message is generated in case:

- 13 | A liquidity transfer was successful settled ("partially settled" or "settled") - message sent by T2S;
- 14 | A liquidity transfer is not settled for example due to insufficient liquidity or intraday Restrictions - mes-  
15 s-  
16 | ~~Standing/predefined order maintenance status and confirmation – message sent by CRDM.~~  
17 | **{Split book approach}**

18 Specific message requirements

1 In case the settlement process was successful the settlement status ("partially settled" or "settled") of the  
2 Liquidity Transfer is sent from T2S to the T2S Actor.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/Rct/MsgHdr/ReqTp/Prtry/Id	RequestTypeGenericIdentifica- tion1Code_T2S_1	SSTS: Receipt conveys a settlement status
MessageIdentification Document/Rct/RctDtIs/OrgnlMsgId/MsgId	RestrictedFINXMax35Text	BizMsgIdr stemming from the BAH of the underlying Liquidity Credit Transfer or the User Reference in case of a U2A Liquidity Credit Trans- fer
StatusCode Document/Rct/RctDtIs/ReqHdlg/StcCd	Max4AlphaNumericText	SPAS Partially settled, SSET settled or SUNS unsettled

4 Message usage example:

5 camt.025.001.05\_T2S\_InformationToT2SActor\_LiquidityTransferStatus\_Example.xml

6 In this example a Receipt ("Settlement status of the Liquidity Transfer is set to settled SSET") is sent to the  
7 corresponding party to inform about the successful settlement of a liquidity transfer.

8 ~~Specific message requirements (Standing/predefined order maintenance status and con-  
9 firmation):~~

10 ~~CRDM sends the status of the reference data updated requested by an original message  
11 camt.024 or camt.071.~~  
12

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
<del>MessageIdentification Docu- ment/Rct/RctDtIs/OrgnlMsgId/MsgId</del>	<del>RestrictedFINXMax35Text</del>	<del>MsgId of the underlying StandingOrder request</del>

StatusCode Document/Rct/RctDtls/ReqHdlg/StsCd	Max4AlphaNumericText	In case of a valid RTGS answer: "RREJ" (RTGS rejection)  In case of an invalid RTGS answer: ISO Error Code
StatusCode Document/Rct/RctDtls/ReqHdlg/Desc	RestrictedFINXMax140Text	In case of a valid RTGS answer: Original Error Text from incoming message.  In case of an invalid RTGS answer: T2S reason code and description

1 Message usage example: camt.

2 camt.025.001.05\_T2S\_InformationToT2SActor\_NCBInfoRTGSRejection\_Example.xml

3 In this example, a Receipt with "CB Info RTGS Rejection" (in this case implying that the liquidity transfer was  
4 not processed within the RTGS system) is sent to the corresponding CB.

5 Message case: RTGS Answer

6 Specific message requirements

7 T2S receives an RTGS answer from the corresponding RTGS system:  
8

Message Item	Data Type/ Code	Utilisation
Identification Document/Rct/MsgHdr/ReqTp/Prtry/Id	RequestTypeGenericIdentifica- tion1Code_T2S_1	RSTS: Receipt conveys a RTGS status
StatusCode Document/Rct/RctDtls/ReqHdlg/StsCd	Max4AlphaNumericText	RTGS Rejection or RTGS Confirmation

9 Message usage example: camt.025.001.05\_T2S\_RTGSAnswer\_Example.xml

10 In this example an RTGS answer with an RTGS status (RSTS) RCON (confirmation of settled liquidity transfer  
11 within T2S) is sent to the corresponding party.

12 Message usage: Information to RTGS system

13 Specific message requirements

14 T2S sends an answer to the sending RTGS system for inbound liquidity transfers. This answer contains the  
15 same formatted information as described in the message usage RTGS Answer  
16

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/Rct/MsgHdr/ReqTp/Prtry/Id	RequestTypeGenericIdentifica- tion1Code_T2S_1	SSTS: Receipt conveys a settlement status

StatusCode Document/Rct/RctDtIs/ReqHdlg/StcCd	Max4AlphaNumericText	CMPT

11 Message usage example: camt.025.001.05\_T2S\_LiquidityTransfersCompleted\_Example.xml

12 In this example a Receipt with the code "CMPT" (Completed) is sent to the corresponding RTGS system. <sup>497</sup>

497 Please note that the described functionality won't be available before CSLD go-live.

### 1 3.3.3.13 LiquidityCreditTransferV05 (camt.050.001.05)

#### 2 **3.3.3.13.1 Overview and scope of the message**

3 This chapter illustrates the *LiquidityCreditTransferV05* message.

4 The *LiquidityCreditTransferV05* message is sent by a CB or directly connected T2S party (to T2S. It is used  
5 to instruct the transfer of a cash amount from a T2S Dedicated Cash Account to another T2S Dedicated Cash  
6 account.

7 The *LiquidityCreditTransferV05* message is also sent by T2S to an RTGS system (e.g. TARGET2) to arrange  
8 liquidity transfers from a T2S Dedicated Cash Account to a cash account in an RTGS system and as well sent  
9 by an RTGS system to T2S to arrange a liquidity transfer from a cash account in an RTGS system to a T2S  
10 dedicated cash account.

11 This message is sent to T2S to make the following types of instructions:

- 12 | Internal Liquidity Transfer;
- 13 | Inbound Liquidity Transfer;
- 14 | Outbound Liquidity Transfer.

15 Alternatively, this message is sent by T2S in the following message usage:

- 16 | Outbound Liquidity Transfer.

17 These instruction types and the message usage are described in the section "The message in business con-  
18 text".

19 In response to the *LiquidityCreditTransferV05*, T2S sends a [camt.025.001.05](#) [▶ 1200] to return a response  
20 to the T2S Party or the RTGS System. In case an error occurs resulting from the processing of the request  
21 the relevant error information is sent.

#### 22 **3.3.3.13.2 The T2S-specific schema**

##### 23 Outline of the schema

24 The *LiquidityCreditTransferV05* message is composed of the following message building blocks:

##### 25 **MessageIdentification**

26 This building block is mandatory.

##### 27 **LiquidityTransferIdentification**

28 This building block is mandatory. It is a reference given by the corresponding system Used to uniquely iden-  
29 tify the liquidity transfer

##### 30 **CreditorAccountOwner**

31 This building block is optional. If the CreditorAccount is not present then the CreditorAccountOwner must be  
32 present. (Not used within T2S)

##### 33 **CreditorAccount**

34 This building block is mandatory.

1 **TransferredAmount**

2 This building block is mandatory.

3 **DebtorAccount**

4 This building block is mandatory.

5 **DebtorAccountOwner**

6 This building block is optional. (Not used within T2S)

7 **SettlementDate**

8 Value Date when the settlement was attempted in T2S. Mandatory if T2S sends an outbound liquidity transfer to an RTGS system.

### 1 **3.3.3.13.3 The message in business context**

#### 2 Message Usage: Outbound Liquidity Transfer

3 This message usage enables the sender to instruct the transfer of a cash amount from the T2S Dedicated  
4 Cash Account to an RTGS account

5 The term "liquidity transfer" covers all liquidity adjustments on T2S Dedicated Cash Accounts allowed ac-  
6 cording to the conditions listed below:

- 7 | Credited RTGS account and debited T2S Dedicated Cash Accounts must be denominated in the same  
8 currency;
- 9 | Liquidity Transfers are possible from a T2S Dedicated Cash Account to an RTGS account (via Outbound  
10 Liquidity Transfer) provided this is allowed by the relevant CB(s);
- 11 | In case the Liquidity Transfer is sent from T2S to the RTGS system (Outbound Liquidity Transfer) it is  
12 necessary that the receiving RTGS account is set up in CRDM.

#### 13 Specific message requirements

1  
2

To instruct the transfer of a cash amount from the T2S Dedicated Cash Account to another RTGS account.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
LiquidityCreditTransferV05 Document/LqdyCdtTrf	LiquidityCreditTransferV05	Outbound Liquidity transfer: Liquidity Credit Transfer is sent to the RTGS for processing (only in case of outbound liquidity transfer)

1 Message usage example: camt.050.001.05 T2S OutboundLiquidityCreditTransfer Example.xml

2 In this example an Immediate Outbound Liquidity Transfer is sent from T2S to RTGS for further processing.

3 Instruction type: Internal Liquidity Transfer

4 This instruction type enables the sender to instruct the transfer of a cash amount to the T2S Dedicated Cash  
5 Account from another DCA.

6 The term "liquidity transfer" covers all liquidity adjustments on T2S Dedicated Cash Accounts allowed ac-  
7 cording to the condition below:

- 8 | Credited and debited T2S Dedicated Cash Accounts must be denominated in the same currency.

9 Specific message requirements

10 To instruct the transfer of a cash amount from a T2S Dedicated Cash Account to another T2S Dedicated  
11 Cash Account.  
12

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

1 Instruction type example: camt.050.001.05\_T2S\_InternalLiquidityTransfer\_Example.xml

2 In this example an Internal Liquidity Transfer from one T2S Dedicated Cash Account to another T2S Dedi-  
3 cated Cash Account is fulfilled.

4 Instruction type: Inbound Liquidity Transfer

5 In case of debiting an RTGS account in the RTGS system, this instruction type enables the RTGS system to  
6 send a liquidity credit transfer to credit the T2S Dedicated Cash Account.

7 Specific message requirements

8 To transfer liquidity from a RTGS account to a T2S Dedicated Cash Account.  
9

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
LiquidityCreditTransferV05 Document/LqdtYCdTTrf	LiquidityCreditTransferV05	Processing of an inbound Liquidity Transfer received in T2S via the inbound message LiquidityCreditTransfer. 1 Instruction type example: camt.050.001.05 T2S InboundLiquidityCreditTransfer Example.xml

2 In this example the T2S Actor wants to transfer liquidity from an RTGS account to a T2S Dedicated Cash  
3 Account.

4 3.3.3.14 LiquidityDebitTransferV05 (camt.051.001.05)

### 5 **3.3.3.14.1 Overview and scope of the message**

6 This chapter illustrates the *LiquidityDebitTransferV05* message.

7 The *LiquidityDebitTransferV05* message is sent by T2S to an RTGS System.

8 This message is sent by T2S in the following message usage:

9 | Outbound Liquidity Transfer.

10 In response to the *LiquidityDebitTransferV05*, T2S receives a [camt.025.001.05](#) [▶ 1200] message from the  
11 RTGS System.

### 1 **3.3.3.14.2 The T2S-specific schema**

#### 2 Outline of the schema

3 The *LiquidityDebitTransferV05* message is composed of the following message building blocks:

#### 4 **MessageIdentification**

5 This building block is mandatory.

#### 6 **LiquidityTransferIdentification**

7 This building block is mandatory. It is a reference given by the corresponding system used to uniquely identify the liquidity transfer.

#### 9 **Creditor**

10 This building block is optional. If the CreditorAccount is not present then the CreditorAccountOwner must be present. (Not used within T2S)

#### 12 **CreditorAccount**

13 This building block is mandatory.

#### 14 **TransferredAmount**

15 This building block is mandatory.

#### 16 **DebtAccount**

17 This building block is mandatory.

#### 18 **Debtor**

19 This building block is optional. (Not used within T2S)

#### 20 **SettlementDate**

21 Value Date when the settlement was attempted in T2S. Mandatory if T2S sends an outbound liquidity transfer to an RTGS system.

#### 23 References/Links

24 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are provided outside of this document under the following link:

26 [http://www.swift.com/mystandards/T2S/camt.051.001.05\\_T2S](http://www.swift.com/mystandards/T2S/camt.051.001.05_T2S)

#### 27 Business rules applicable to the schema

28 Not applicable (T2S outgoing message)

### 29 **3.3.3.14.3 The message in business context**

#### 30 Message usage: Outbound Liquidity Transfer

31 The message is sent at end of day to debit the needed liquidity from the external RTGS account if there is a negative balance on the T2S dedicated cash account.

33 Message example: camt.051.001.05\_T2S\_DirectDebitEoDProcessing\_Example.xml

1 In this example the LiquidityDebitTransfer is sent from T2S to direct debit the external RTGS account in the  
2 framework of the End-of-Day processing.

### 3 3.3.3.15 BankToCustomerAccountReportV08 (camt.052.001.08)

#### 4 **3.3.3.15.1 Overview and scope of the message**

5 This chapter illustrates the *BankToCustomerAccountReportV08* message.

6 The *BankToCustomerAccountReportV08* message is sent from T2S to CBs or Payment banks.

7 The creation of these messages is based on an event or a fixed time (e. g. the end of a night-time cycle or a  
8 specific moment during the settlement day).

9 This message is sent by T2S in the following message usages:

- 10 | Current Settlement Day Cash Information Report;
- 11 | Following Settlement Day Cash Forecast Report.

12 These message usages are described in the section "The message in business context".

#### 13 **3.3.3.15.2 The T2S-specific schema**

##### 14 Outline of the schema

15 The *BankToCustomerAccountReportV08* message is composed of the following message building blocks:

##### 16 **Group Header**

17 This building block is mandatory and present once. It contains elements such as Message Identification and  
18 Creation Date Time.

##### 19 **Report**

20 This building block is mandatory and repetitive. It should be repeated for each account on which a report is  
21 provided. The report contains components such as Balance and Entry information.

##### 22 References/Links

23 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
24 vided outside of this document under the following link:

25 [http://www.swift.com/mystandards/T2S/camt.052.001.08\\_T2S](http://www.swift.com/mystandards/T2S/camt.052.001.08_T2S)

##### 26 Business rules applicable to the schema

27 Not applicable (T2S outgoing message)

#### 28 **3.3.3.15.3 The message in business context**

##### 29 Message usage: Current Settlement Day Cash Information Report

30 T2S sends a current settlement day cash information report message to a CB or Payment Bank to give the  
31 account holder a cash forecast reflecting pending liquidity transfers and settlement instructions eligible for  
32 cash forecast on that day, as well as the amount of outstanding intraday credit from autocollateralisation.

1 The forecast is calculated based on the instructions/LTO for which the intended settlement date is the cur-  
2 rent date or earlier.

3 The following fields can be provided by the Current Settlement Day Cash Information Report:

4 | Party (Party identifier and BIC and Party short name) of the T2S Dedicated Cash Account;

5 | T2S Dedicated Cash Account number;

6 | Currency;

7 | Date of the forecasted cash information;

8 | Information on cash balance on the T2S Dedicated Cash Account:

9 – Actual cash balance on the T2S Dedicated Cash Account,

10 – Debiting Liquidity transfer orders as well as pending debiting and crediting Settlement Instructions,  
11 which are eligible for cash forecast on the current settlement day,

12 – Projected cash balance <sup>498</sup> on the T2S Dedicated Cash Account, i.e.: cash balance + credit Settlement  
13 Instructions – debit liquidity transfer orders – debit Settlement Instructions;

14 | Amount of outstanding intraday credit from auto-collateralisation for the T2S Dedicated Cash Account;

15 | Sum of projected cash balance + amount of outstanding intraday credit from auto-collateralisation.

#### 16 Specific message requirements

17 T2S sends the Current Settlement Day Cash Information Report in push mode to a CB or Payment bank.  
18

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Date	RestrictedISODate	current settlement date
Document/BkToCstmrAcctRpt/Rpt/Bal/Dt/Dt		

19 The generation of the Current Day Cash Information Report is triggered e.g. by the End of night-time cycle  
20 event but can also be generated at certain fixed times throughout the business day.

21 Message usage example: camt.052.001.08 T2S CurrentSettlementDayCashInformationReport Example.xml

22 In this example a Current Settlement Day Cash Information Report is sent to a CB (NCBBICTS) or Payment  
23 bank (TSSPARTYA20). The T2S Dedicated Cash Account (T2S30000099) is nominated in EUR, the current  
24 settlement day is: 2013-10-13.

25 | CASH (actual cash balance): 1.000.000 (Credit)

26 | AVLVD (available liquidity transfers): 400.000 (Debit)

27 | AVSD (available settlement instructions debiting): 750.000

28 | DNCR (Debiting Settlement instructions, thereof non CORP released): 300.000

29 | DCOR (Debiting Settlement instructions, thereof CORP released): 250.000

---

498 In T2S UDFS and MyStandards, "projected balance" means the sum of cash balance and pending LTs and SIs (outstanding intraday credit from auto-collateralisation is not part of the calculation, i.e. is not subtracted). In UHB and T2S GUI, "projected balance" means the sum of cash balance and pending LTs and SIs and outstanding intraday credit from auto-collateralisation.

- 
- 1 | DNCH (Debiting Settlement instructions, thereof non CORP on hold): 110.000
  - 2 | DCOH (Debiting Settlement instructions, thereof CORP on hold): 90.000
  - 3 | AVSC (available settlement instructions crediting): 250.000
  - 4 | CNCR (Crediting Settlement instructions, thereof non CORP released): 100.000
  - 5 | CCOR (Crediting Settlement instructions, thereof CORP released): 30.000
  - 6 | CNCH (Crediting Settlement instructions, thereof non CORP on hold): 80.000
  - 7 | CCOH (Crediting Settlement instructions, thereof CORP on hold): 40.000
  - 8 | PCAS (projected cash balance): 100.000 (Credit)
  - 9 | AOIC (amount of outstanding intraday credit from auto-collateralisation): 300.000 (Debit)
  - 10 | SPCA (total sum projected cash balance and outstanding intraday credit from auto-collateralisation):
  - 11 | 200.000 (Debit)

12 | *Message usage: Following Settlement Day Cash Forecast Report*

13 | T2S sends a following settlement day cash forecast report message to a CB or Payment bank (to give the  
14 | account holder a cash forecast reflecting cash needs and proceeds expected from the settlement in future  
15 | cash settlement days (e.g. because of corporate actions or trading related transactions), as well as the  
16 | amount of outstanding intraday credit from auto-collateralisation. The cash forecasts can be enriched con-  
17 | tinuously during the day by additional incoming information on new transactions for the following cash set-  
18 | tlement day.

19 | The following fields can be provided by the Following Settlement Day Cash Forecast Report:

- 20 | | Party (Party identifier and BIC and Party short name) of the T2S Dedicated Cash Account;
- 21 | | T2S Dedicated Cash Account number;
- 22 | | Currency;
- 23 | | Date of the forecasted cash information;
- 24 | | Information on cash balance on the T2S Dedicated Cash Account:
  - 25 | – Cash balance on the T2S Dedicated Cash Account [current cash balance for a camt.052 generated up-
  - 26 | on event EESR; 0 otherwise],
  - 27 | – Debiting Liquidity transfer orders as well as debiting and crediting Settlement Instructions which are
  - 28 | eligible for cash forecast and which would be effective on the cash balance on the T2S Dedicated Cash
  - 29 | Account on the following cash settlement day,
  - 30 | – Projected cash balance <sup>499</sup> on the T2S Dedicated Cash Account, i.e.: cash balance + credit Settlement
  - 31 | Instructions – debit liquidity transfer orders – debit Settlement Instructions,
  - 32 | – Amount of outstanding intraday credit from auto-collateralisation for the T2S Dedicated Cash Account
  - 33 | (Value for following cash settlement day: 0,00 Euro),

---

499 | In T2S UDFS and MyStandards, "projected balance" means the sum of cash balance and pending LTs and SIs (outstanding intraday credit from auto-collateralisation is not part of the calculation, i.e. is not subtracted). In UHB and T2S GUI, "projected balance" means the sum of cash balance and pending LTs and SIs and outstanding intraday credit from auto-collateralisation.

1 – Sum of projected cash balance.

2 Specific message requirements

3 T2S sends the Following Settlement Day Cash Forecast Report in push mode to a CB or Payment Bank.

4

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Date	RestrictedISODate	Following cash settlement
Document/BkToCstmrAcctRpt/Rpt/Bal/Dt/Dt		day

5 Message usage example: camt.

6 052.001.08 T2S FollowingSettlementDayCashInformationReport Example.xml

7 In this example a Following Settlement Day Cash Forecast Report is sent to a CB (NCBBICTS) or Payment  
8 Bank (TSSPARTYA20). The T2S Dedicated Cash Account (T2S30000099) is nominated in EUR, the current  
9 settlement day is: 2013-10-14.

10 | CASH (cash balance): 1.000.000 (Credit)

11 | AVL D (available liquidity transfers): 400.000 (Debit)

12 | AVSD (available settlement instructions debiting): 750.000

13 | DNCR (Debiting Settlement instructions, thereof non CORP released): 300.000

14 | DCOR (Debiting Settlement instructions, thereof CORP released): 250.000

15 | DNCH (Debiting Settlement instructions, thereof non CORP on hold): 110.000

16 | DCOH (Debiting Settlement instructions, thereof CORP on hold): 90.000

17 | AVSC (available settlement instructions crediting): 250.000

18 | CNCR (Crediting Settlement instructions, thereof non CORP released): 100.000

19 | CCOR (Crediting Settlement instructions, thereof CORP released): 30.000

20 | CNCH (Crediting Settlement instructions, thereof non CORP on hold): 80.000

21 | CCOH (Crediting Settlement instructions, thereof CORP on hold): 40.000

22 | PCAS (projected cash balance<sup>500</sup>): 100.000 (Credit)

23 | AOIC (amount of outstanding intraday credit from auto-collateralisation): 0,00

24 | SPCA (total sum projected cash balance and outstanding intraday credit from auto-collateralisation):  
25 100.000 (Credit)

---

500 In T2S UDFS and MyStandards, "projected balance" means the sum of cash balance and pending LTs and SIs (outstanding intraday credit from auto-collateralisation is not part of the calculation, i.e. is not subtracted). In UHB and T2S GUI, "projected balance" means the sum of cash balance and pending LTs and SIs and outstanding intraday credit from auto-collateralisation.

---

### 1 3.3.3.16 BankToCustomerStatementV08 (camt.053.001.08)

#### 2 **3.3.3.16.1 Overview and scope of the message**

3 This chapter illustrates the *BankToCustomerStatementV08* message.

4 The *BankToCustomerStatementV08* message is sent by T2S to CBs or any parties authorised by them.

5 A statement of accounts is triggered by a business or time event and sent by T2S to transmit information on  
6 the cash balance of a CB or any of their participants.

7 *BankToCustomerStatement* includes the start-of-day balance, the end-of-day balance and as well cash  
8 movements which provide the identification of the underlying transactions. It contains information about the  
9 cash available on the different T2S dedicated cash accounts of NCB or payment bank.

10 The message is also used to send a General Ledger file containing a snapshot of the balances held in T2S  
11 DCAs at the EoD to an RTGS system.

12 In case the size of the message to be sent exceeds the maximum size of 32 MB the message will be split  
13 into several messages (Please see section [Outbound traffic exceeding given size limitations](#) [▶ 1096]).

14 This message is sent by T2S in the following message usages:

15 | Statement of accounts

16 | General Ledger file

17 These message usages are described in the section "The message in business context".<sup>501</sup>

#### 18 **3.3.3.16.2 The T2S-specific schema**

##### 19 Outline of the schema

20 The *BankToCustomerStatementV08* message is composed of the following message building blocks:

##### 21 **Group Header**

22 This building block is mandatory and present once. It contains elements such as Message Identification and  
23 Creation Date Time.

##### 24 **Statement**

25 This building block is mandatory and repetitive. It should be repeated for each account on which a state-  
26 ment is provided.

27 The report contains components such as Balance and Entry information.

##### 28 References/Links

29 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
30 vided outside of this document under the following link:

31 [http://www.swift.com/mystandards/T2S/camt.053.001.08\\_T2S](http://www.swift.com/mystandards/T2S/camt.053.001.08_T2S)

##### 32 Business rules applicable to the schema

---

501 Please note that the described functionality won't be available before CSLD go-live.

1 Not applicable (T2S outgoing message)

### 2 **3.3.3.16.3 The message in business context**

#### 3 Message usage: Statement of accounts

4 Message example: camt.053.001.08 T2S StatementOfAccounts Example.xml

5 In this example Statement of Accounts is sent to a CB "NCBAAA20" for the T2S dedicated cash account  
6 "T2SDEDICATEDCASHACCOUNT3", Account owning party BIC is "PARTYA20". The Balance Date is: 2015-10-  
7 13, the opening balance is: zero, Closing balance: 5000000.00 EUR

#### 8 Message usage: General Ledger file

##### 9 Specific message requirements

10 T2S sends the General Ledger file to an RTGS system after receiving a camt.019 with the code "CHBD"  
11 (Change Business Day).

12 **The generation of a GL file and its distribution to T2 shall be a parameter set at currency level**  
13 **in T2S.{CR-782}**

14 Message example: camt.053.001.06\_T2S\_GeneralLedgerFile\_Example.xml

15 In this example a General Ledger file is sent to the corresponding RTGS system. <sup>502</sup>

### 16 3.3.3.17 BankToCustomerDebitCreditNotificationV08 (camt.054.001.08)

#### 17 **3.3.3.17.1 Overview and scope of the message**

18 This chapter illustrates the *BankToCustomerDebitCreditNotificationV08* message.

19 This message is sent by T2S to CBs, Payment Banks or any parties authorised by them. It is used to confirm  
20 the credit or the debit of a certain amount on one of their T2S Dedicated Cash Accounts (including RTGS  
21 dedicated transit accounts).

22 It is sent in response to a [camt.051.001.05](#) [▶ 1214] or [camt.050.001.05](#) [▶ 1208] message for debit or  
23 credit movement on one of their T2S Dedicated Cash Account for partially or fully settled Liquidity Transfers.

24 It is also sent in case the cash posting results from an underlying settlement instruction.

25 This message is sent by T2S in the following message usages:

- 26 | Information to T2S Actor - Credit Notification;
- 27 | Information to T2S Actor - Debit Notification.
- 28 | Cash Posting Notification

29 These message usages are described in the section "The message in business context".

#### 30 **3.3.3.17.2 The T2S-specific schema**

##### 31 Outline of the schema

---

502 Please note that the described functionality won't be available before CSLD go-live.

1 The *BankToCustomerDebitCreditNotificationV08* message is composed of the following message building  
2 blocks:

### 3 **Group Header**

4 This building block is mandatory and present once. It contains elements such as Message Identification and  
5 Creation Date Time.

### 6 **Notification**

7 This building block is mandatory and repetitive. It should be repeated for each account on which a notifica-  
8 tion is provided.

9 The notification contains information on booked debit and/or credit entries.

### 10 References/Links

11 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
12 vided outside of this document under the following link:

13 [http://www.swift.com/mystandards/T2S/camt.054.001.08\\_T2S](http://www.swift.com/mystandards/T2S/camt.054.001.08_T2S)

### 14 Business rules applicable to the schema

15 Not applicable (T2S outgoing message)

## 16 **3.3.3.17.3 The message in business context**

### 17 Message usage: Information to T2S Actor - Credit Notification

18 This message usage enables T2S to send a confirmation of credit to a CB or payment bank if the respective  
19 T2S Dedicated Cash Account was credited in case of Liquidity Transfers between T2S Dedicated Cash Ac-  
20 counts or Liquidity Transfers from an RTGS system to T2S. It can also be for a credit notification on the  
21 RTGS transit account.

### 22 Specific message requirements

23 In the Rules and further descriptions, the confirmation contains always the exact amount and the reason for  
24 the credit. In case of a credit on the RTGS dedicated Transit account, the credit notification is sent to the  
25 Central Bank. The following requirements apply:

26 | Regarding an Internal and immediate outbound Liquidity Transfer:

27

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

1 Message usage example: camt.054.001.08\_T2S ConfirmationOfCredit Example.xml

2 In this example a confirmation of credit on the T2SCREDCASH1 resulting from an inbound liquidity credit  
3 transfer initiated from an RTGS system is sent to the corresponding party.

4 Message usage: Information to T2S Actor - Debit Notification

5 This message usage enables T2S to send a confirmation of debit to a CSD, CB or directly connected T2S  
6 party (i.e. a CSD participant granted direct access, like a bank, CCP etc) if the respective T2S Dedicated  
7 Cash Account was debited in case of Liquidity Credit Transfers from T2S to RTGS systems.

8 Specific message requirements

9 In the Rules and further descriptions regarding the Immediate Liquidity Transfer Debit Notification, the con-  
10 firmation contains the exact amount and the reason for the debit:

11 | Regarding internal and immediate outbound liquidity transfers:

12

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

2 In this example a Confirmation of credit: based on a settled settlement instruction is sent by T2S:

3 | Credited T2S Dedicated Cash Account: T2SCREDCASH1

4 | Booked Amount: 3000000.00 EUR

5 | Account Owner Reference of the Settlement Instruction: CCPTxRef1

6 | Account Servicer Reference of the Settlement Instruction: NONREF

7 | T2S Settlement Instruction Reference: CCPRef2

### 3.3.3.18 LimitUtilisationJournalQueryV01 (camt.064.001.01)

#### 3.3.3.18.1 Overview and scope of the message

This chapter illustrates the *LimitUtilisationJournalQueryV01* message.

The *LimitUtilisationJournalQueryV01* message is sent by CBs, payment/settlement banks and clients of payment/settlement banks (I.e. CSD Participants) to T2S. It is used to request information regarding the limits (including limit amounts, utilisation and journal of transactions impacting the utilisation of limits) as managed by the credit provider and corresponding to the criteria as defined within the message.

In response to the limit utilisation journal query T2S sends a [camt.065.001.01](#) [▶ 1233] message with the corresponding limit amounts, utilisations and journal activity matching the criteria as defined within the query.

#### 3.3.3.18.2 The T2S-specific schema

##### Outline of the schema

The *LimitUtilisationJournalQueryV01* message is composed of the following message building blocks:

##### **Message Header**

This building block is mandatory and must contain common information on the header of the message including an identification assigned by the sending party to uniquely and unambiguously identify the message.

##### **Search Criteria**

This building block is mandatory and is used to provide criteria in the form of business attributes to define the result set. The criteria include attributes related to limit type, credit consumer and account identification.

##### References/Links

The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are provided outside of this document under the following link:

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
ment/LmtUtilstnJrnlQry/SchCrit/BilLmtCtrPtyId/RspnsblPtyId		

1 *Message example: camt.064.001.01 T2S Example.xml*

2 In this example the *LimitUtilisationJournalQuery* is used by a CB A "CBAABIC1XXX", participating in T2S, to  
3 query the journal utilisation of Auto-collateralisation limits for the payment bank "PAYBKBICXXX" on the 9th  
4 of January 2015.

5 3.3.3.19 *LimitUtilisationJournalReportV01* (camt.065.001.01)

### 6 **3.3.3.19.1 Overview and scope of the message**

7 This chapter illustrates the *LimitUtilisationJournalReportV01* message.

8 The *LimitUtilisationJournalReportV01* message is sent by T2S to CBs, payment/settlement banks and clients  
9 of payment/settlement banks (I.e. CSD Participants). It is used to provide information regarding the limits  
10 (including limit amounts, utilisation and journal of transactions impacting the utilisation of limits) as man-  
11 aged by the credit provider and corresponding to the criteria received within the incoming query message  
12 [camt.064.001.01](#) [▶ 1231].

### 13 **3.3.3.19.2 The T2S-specific schema**

#### 14 Outline of the schema

15 The *LimitUtilisationJournalReportV01* is composed of the following message building blocks:

#### 16 **Message Header**

17 This building block is mandatory and non repetitive. It must contain common information on the header of  
18 the message including an identification assigned by the sending party to uniquely and unambiguously identi-  
19 fy the message.

#### 20 **Pagination**

21 This building block is mandatory and non repetitive. It gives the page number of the message (within a  
22 statement) and continuation indicator to indicate that the statement is to continue or that the message is  
23 the last page of the statement.

#### 24 **Business Query Reference**

25 This building block is optional and non repetitive. Unique identification to unambiguously identify the refer-  
26 ence of the query

#### 27 **Report or Error**

28 This building block is mandatory and non repetitive. It provides information on the report or error resulting  
29 from the originating query message.

#### 30 References/Links

1 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
2 vided outside of this document under the following link:

3 <http://www.swift.com/mystandards/T2S/camt.065.001.01> T2S

4 *Business rules applicable to the schema*

5 Not applicable (T2S outgoing message).

### 6 **3.3.3.19.3 The message in business context**

7 *Message example: camt.065.001.01 Report.xml*

8 In this example a CB A "CBAABIC1XXX", participating in T2S, had queried the journal utilisation of Auto-  
9 collateralisation limits for the payment bank "PAYBKBICXXX" on the 9th of January 2015. The result of the  
10 query is sent using LimitUtilisationJournalReport containing the Auto-collateralisation limit, associated limit  
11 information and corresponding journal transaction activity of the utilisation of the limit for the bank linked to  
12 the Dedicated Cash Account identified by "9000000123".

13 In this example the following limit information is returned:

- 14 | Limit Amount: 100000 Euros;
- 15 | Utilisation: 40000 Euros;
- 16 | Journal Activity;
  - 17 – 15000 Euros Debit for Entry Reference T2SREF1234,
  - 18 – 12000 Euros Debit for Entry Reference T2SREF2345,
  - 19 – 13000 Euros Debit for Entry Reference T2SREF3456,
  - 20 – Available: 60000 Euros.

### 21 **3.3.3.20 IntraBalanceMovementInstructionV01 (camt.066.001.01)**

#### 22 **3.3.3.20.1 Overview and scope of the message**

23 This chapter illustrates the *IntraBalanceMovementInstructionV01* message.

24 The *IntraBalanceMovementInstructionV01* is used to block or reserve cash sub-balances. It can also be used  
25 to increase or decrease the cash in an existing restricted cash sub-balance. Also referred to as a Settlement  
26 Restriction on Cash Balance Instruction within T2S, it is sent by a CB, CB Participant or directly connected  
27 T2S Party to T2S.

28 This message is sent to T2S for the following types of instructions:

- 29 | Cash Blocking;
- 30 | Cash Reservation.

31 These instruction types are described in the section "The message in business context".

#### 32 **3.3.3.20.2 The T2S-specific schema**

33 *Outline of the schema*

1 The *IntraBalanceMovementInstructionV01* is composed of the following message building blocks:

2 **Identification**

3 This building block is mandatory and non repetitive. It must contain an identification assigned by the send-  
4 ing party to uniquely and unambiguously identify the message.

5 **Corporate Action Event Identification**

6 This optional non repetitive block is used to unambiguously identify a corporate action event.

7 **Number Counts**

8 This building block is optional and non repetitive. It contains the number of linked transactions.

9 **Linkages**

10 This block is optional and repetitive. It is used to link instructions and specify settlement sequences (e.g.  
11 after/before/with etc.).

12 **CashAccount**

13 This building block is mandatory and non repetitive. It must contain the identification of the account to or  
14 from which an entry is made and the identification of its owner.

15 **IntraBalance**

16 This building block is mandatory and non repetitive. It includes the details of the movement of cash between  
17 balances.

18 References/Links

1 **3.3.3.20.3 The message in business context**

2 Instruction type: Cash Blocking

3 This instruction type enables the sender to instruct a cash blocking instruction to T2S to block a cash bal-  
4 ance. The purpose of such cash blocking is usually to ensure the successful settlement of a future Settle-  
5 ment Instruction. A securities instruction may then contain a reference to the restriction representing this  
6 blocked balance.

7 Specific message requirements

8 To be submitted as a cash blocking instruction, the IntraBalanceMovementInstructionV01 includes the fol-  
9 lowing information:

- 10 | Balance From/Type/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Re-  
11 striction Type' that is a 'cash balance' and a 'Restriction Processing Type' that is 'Deliverable';
- 12 | A Balance To/Type/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Re-  
13 striction Type' that is a 'cash balance' and a 'Restriction Processing Type' that is 'Blocking'.  
14

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Docu- ment/IntraBalMvmntInstr/IntraBal/BalFr/Tp/Pr try/Id	Exact4AlphaNumericText	'DLVR' - Must be a Re- striction Type having a Re- striction Processing Type corresponding to 'Delivera- ble'.
Issuer Docu- ment/IntraBalMvmntInstr/IntraBal/BalFr/Tp/Pr try/Issr	Max4AlphaNumericText	Constant: 'T2S', representing the Issuer within T2S.
SchemeName Docu- ment/IntraBalMvmntInstr/IntraBal/BalFr/Tp/Pr try/SchmeNm	Max4AlphaNumericText	Constant: 'RT', representing the Schema Name for 'Re- striction Type' within T2S.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Issuer Docu- ment/IntraBalMvmntInstr/IntraBal/BalTo/Tp/P rtry/Issr	Max4AlphaNumericText	Constant: 'T2S', representing the Issuer within T2S.
SchemeName Docu- ment/IntraBalMvmntInstr/IntraBal/BalTo/Tp/P rtry/SchmeNm	Max4AlphaNumericText	Constant: 'RT', representing the Schema Name for 'Re- striction Type' within T2S.
Identification Docu- ment/IntraBalMvmntInstr/IntraBal/CshSubBalI d/Id	RestrictedFINXMax16Text_T2S_1	Must be empty for restriction setups and present on relat- ed increases or decreases.

#### 1 Instruction type example: camt.066.001.01 T2S Blocking Example.xml

2 In this example a T2S Party, Party A "PRTYABICXXX", has requested, using a transaction id 'REF0123', the  
3 blocking of 50000 EUR, within a pool with reference 'POOL1234', with a normal priority for the restriction  
4 type 'BLKA', on the 9th of January 2015 within its account '9000000123'.

#### 5 Instruction type example: camt.066.001.01 T2S Blocking Decrease Example.xml

6 In this example a T2S Party, Party A "PRTYABICXXX", decreases with a high priority, the existing blocked  
7 cash balance within its account '9000000123', identified by restriction type 'BLKA', by 10000 EUR on the 10th  
8 of January 2015. It includes the Restriction Reference 'T2SCSHRR002' provided by T2S during the initial  
9 setup of the balance.

#### 10 Instruction type: Cash Reservation

11 This instruction type enables the sender to instruct a reservation instruction to T2S to reserve a cash balance  
12 (i.e. prevent the transfer of that cash balance except for the purpose of the reservation). The settlement of  
13 the underlying Settlement Instruction results in the actual transfer of the reserved holdings to another cash  
14 account.

#### 15 Specific message requirements

16 To be submitted as a cash reservation instruction, the *IntraBalanceMovementInstructionV01* includes the  
17 following information:

- 18 | A Balance From/Type/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Re-  
19 striction Type' that is a 'cash balance' and a 'Restriction Processing Type' that is 'Deliverable';
- 20 | A Balance To/Type/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Re-  
21 striction Type' that is a 'cash balance' and a 'Restriction Processing Type' that is 'Reservation'.

1

SchemeName Docu- ment/IntraBalMvmntInstr/IntraBal/BalTo/Tp/P rtry/SchmeNm	Max4AlphaNumericText	Constant: 'RT', representing the Schema Name for 'Restriction Type' within T2S.
Identification Docu- ment/IntraBalMvmntInstr/IntraBal/CshSubBalI d/Id	RestrictedFINXMax16Text_T2S_1	Must be empty for restriction setups and present on related increases or decreases.

2 Instruction type example: camt.066.001.01\_T2S\_Reservation\_Increase\_Example.xml

3 In this example a T2S Party, Party B "PRTYBBICXXX", increases the existing reserved cash balance within its  
4 account '9000000456', identified by restriction type 'RSVA', by 18500 EUR on the 9th of January 2015. It  
5 includes the Restriction Reference 'T2SCSHRR003' provided by T2S during the initial setup of the balance  
6 and links the increase with another cash reservation identified by the T2S Internal Reference 'T2SIREF6578'.

### 3.3.3.21 IntraBalanceMovementStatusAdviceV01 (camt.067.001.01)

#### 3.3.3.21.1 Overview and scope of the message

This chapter illustrates the *IntraBalanceMovementStatusAdviceV01* message.

The *IntraBalanceMovementStatusAdviceV01* message, also known as Settlement Restriction on Cash Balance Status Advice, is sent by T2S to inform about the status of a Settlement Restriction on Cash Balance ([camt.066.001.01](#) [▶ 1234]). It informs the CB, CB Participant or directly connected T2S Party about the actual status of this Settlement Restriction on Cash Balance.

This message is sent by T2S in the following message usages:

- 9 | Rejected;
- 10 | Accepted
- 11 | Cancelled;
- 12 | Eligibility Failure;
- 13 | Under intraday restriction;
- 14 | Provision check failure;
- 15 | Partial Settlement (unsettled part);

16 These message usages are described in the chapter "The message in the business context".

#### 3.3.3.21.2 The T2S-specific schema

##### Outline of the schema

19 The *IntraBalanceMovementStatusAdviceV01* is composed of the following message building blocks:

##### **Identification**

21 This building block is mandatory and non repetitive. It must contain the information that identifies unambiguously the message.

##### **TransactionIdentification**

24 This is a mandatory and non repetitive block. It provides the unambiguous identification of the transaction as known per the account owner (or the Instructing party managing the account).

##### **ProcessingStatus**

27 This is an optional non repetitive building block. It provides details on the processing status of the transaction. Possible statuses are rejected, acknowledged or cancelled.

##### **SettlementStatus**

30 This is an optional non repetitive building block. It provides details on the settlement status of the transaction. The only possible status is pending.

##### **CashAccount**

33 This building block is mandatory and non repetitive. It must contain the identification of the account to or from which an entry is made and the identification of its owner.

## 1 **UnderlyingIntraBalance**

2 This is an optional non repetitive building block which identifies the high-level details of the intra-balance  
3 movement transaction.

### 4 **Supplementary Data**

5 This building block is optional and repetitive. It allows to provide, in the form of a schema, additional infor-  
6 mation that cannot be captured in the structured elements and/or any other specific block.

#### 7 References/Links

8 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
9 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
10 under the following link.

11 [http://www.swift.com/mystandards/T2S/camt.067.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.067.001.01_T2S)

#### 12 Business rules applicable to the schema

13 Not applicable (T2S outgoing message)

### 14 **3.3.3.21.3 The message in business context**

#### 15 Message usage: Rejected

16 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
17 Restriction on Cash Balance is rejected. A Settlement Restriction on Cash Balance is rejected if it does not  
18 pass the business validation or it fulfils a positive rejection restriction rule set by the NCB.

#### 19 Specific message requirements

20 To inform about a rejection status, the *IntraBalanceMovementStatusAdviceV01* includes the following infor-  
21 mation:

- 22 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons of the  
23 rejection;
- 24 | Code – ISO code specifying the reason of the rejection;
- 25 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
26 and a short description of the error. T2S also informs of the rule ID of a positive rejection restriction rule  
27 fulfilled, if any.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/IntraBalMvmntStsAdvc/PrcgSts/Rjctd/Rsn/Cd/Cd	RejectionReason33Code	ISO reason code of the rejection. The only possible values are:  CASH DDAT INVB INVL INVN MONY NCRR OTHR REFE VALR
AdditionalReasonInformation Docu- ment/IntraBalMvmntStsAdvc/PrcgSts/Rjctd/Rsn/AddtlRsnInf	RestrictedFINXMax210Text	Business rule, error description and rule ID of a positive rejection restriction (if any)

2 Message usage example: camt.067.001.01 T2S Rejected Example.xml

3 In this example T2S sends a rejection status advice as response to the setting-up of a Settlement Restriction  
4 on Cash Balance requested by T2S Party, Party A, (PBPTYBICXXX). Party A requested the blocking of 50000  
5 EUR, using the restriction type 'BLKA', within its account '9000000123'. The blocking is rejected because the  
6 cash account specified does not exist in T2S.

7 Message usage: Accepted

8 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
9 Restriction on Cash Balance is valid. A Settlement Restriction on Cash Balance is valid and accepted by T2S if  
10 it successfully passes the business validation and does not fulfil any rule of a positive rejection restriction

11 Specific message requirements

12 To inform about an accepted status, the *IntraBalanceMovementStatusAdviceV01* includes the following in-  
13 formation:

- 14 | AcknowledgedAccepted – status that corresponds to 'Accepted';
- 15 | Code – 'OTHR' ISO code when the Settlement Restriction is accepted fulfilling a rule of a negative rejection  
16 restriction ;
- 17 | AdditionalReasonInformation – rule ID identifying the rule of a negative rejection restriction fulfilled;

- 1 | I NoSpecifiedReason – 'NORE' ISO code when the Settlement Restriction is accepted not fulfilling any rule
- 2 | of a negative rejection restriction;
- 3 | I Pending/Failing – status indicating that the Settlement Restriction is not settled. Depending on whether
- 4 | the Settlement Restriction can settle on its ISD or not, the Settlement Restriction is informed either with
- 5 | status Pending or Failing respectively;
- 6 | I Code – 'FUTU' ISO code for Pending and 'CYCL' ISO code for Failing;
- 7 | I MarketInfrastructureTransactionIdentification – T2S identification of the accepted Settlement Restriction.
- 8 |

- 9 |
- 10 | Message usage example: camt.067.001.01 T2S AcceptedPending Example.xml

1 In this example, T2S sends an accepted status as a response to the setting-up of a Settlement Restriction on  
 2 Cash Balance requested by T2S Party, Party A, (PBPTYBICXXX). Party A requested the blocking of 50000  
 3 EUR, using the restriction type 'BLKA', within its account '9000000123'. The Intended Settlement Date for  
 4 the restriction is on the 9th of January 2015 (current business day) and the Settlement Restriction was re-  
 5 ceived before the last cut-off of the settlement day, hence it is not identified as failing in the validation pro-  
 6 cess.

7 Message usage example 2: camt.067.001.01\_T2S\_AcceptedFailing\_Example.xml

8 In this example, T2S sends an accepted status as a response to the setting-up of a Settlement Restriction on  
 9 Cash Balance requested by T2S Party, Party A, (PBPTYBICXXX). Party A requested the blocking of 10000  
 10 EUR, using the restriction type 'BLKA', within its account '9000000123'. The Intended Settlement Date for  
 11 the restriction is on the 9th of January 2015 (current business day) but the Settlement Restriction was re-  
 12 ceived during the End of Day, hence settlement is no longer possible on its ISD and it is identified as failing  
 13 directly in the validation process.

14 Message usage: Cancelled

15 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
 16 Restriction on Cash Balance is cancelled during its processing.

17 Specific message requirements

18 To inform about a cancelled status, the *IntraBalanceMovementStatusAdviceV01* includes the following infor-  
 19 mation:

- 20 | Cancelled – status that corresponds to successfully cancellation of the Settlement Restriction on Cash  
 21 Balance with one reason code;
- 22 | Code – ISO code specifying the reason of the cancellation. No additional reason information is needed in  
 23 such a case;
- 24 | AdditionalReasonInformation – in case the instruction was cancelled after the revalidation process, text  
 25 comprising a combination of the associated business rule not fulfilled, a short description of the error  
 26 and the rule ID of a positive restriction rule fulfilled, if any.  
 27

1 Message usage example: camt.067.001.01 T2S Cancelled Example.xml

2 In this example, T2S informs that the blocking of 50000 EUR, using the restriction type 'BLKA', set-up by  
3 Party A, "PBPTYBICXXX", has been cancelled. The restriction is cancelled following the request of PartyA.

4 Message usage: Eligibility Failure

5 This message usage relates to the usage of status advice message, sent by T2S, when at least one eligibility  
6 criterion is not fulfilled by the Settlement Restriction on Cash Balance.

7 Specific message requirements

8 To inform about a pending/failing status due to an eligibility failure, the *IntraBalanceMovementStatusAd-*  
9 *viceV01* includes the following information:

- 10 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
11 Restriction can settle on its ISD or not) with one reason code to inform about the eligibility criterion not  
12 fulfilled;
- 13 | Code – ISO code specifying the reason of the eligibility failure;
- 14 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
15 and a short description of the error;
- 16 | Supplementary Data – providing the reference of the related business instruction that debits the Dedi-  
17 cated Cash Account where the CoSD blocking occurs.

2 Message usage example 1: camt.067.001.01 T2S PendingEligibilityFailure Example.xml

3 In this example, T2S sends an eligibility failure, via a pending status, related to a blocking set-up by Party A  
4 (PBPTYBICXXX). Party A requested the blocking of 50000 EUR, using the restriction type 'BLKA' within its  
5 account '9000000123'. This blocking is pending of settlement since that restriction has a link AFTE with a  
6 Settlement Instruction or a Settlement Restriction on Cash Balance for which the cut off is reached.

7 Message usage example 2: camt.067.001.01 T2S FailingEligibilityFailure Example2.xml

8 In this example, T2S sends an eligibility failure, via a failing status, due to the failure in a CoSD blocking. In  
9 addition to the reason of the failure and the details of the Settlement Restriction, the message also informs  
10 the T2S reference of the business instruction that debits the Dedicated Cash Account where the CoSD block-  
11 ing occurs.

12 Message usage: Intraday restriction

13 This message usage relates to the usage of status advice message, sent by T2S, when at least one intraday  
14 restriction is detected on a resource required by the Settlement Restriction on Cash Balance. The following  
15 message usage informs about a pending/failing status due an intraday restriction detected either on the  
16 involved T2S Dedicated Cash Account or parties which owns the T2S Dedicated Cash Account of the Settle-  
17 ment Restriction on Cash Balance.

18 Specific message requirements

19 To inform about a pending status due to an intraday restriction, the *IntraBalanceMovementStatusAdviceV01*  
20 includes the following information:

- 1 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
2 | Restriction can settle on its ISD or not) with one reason code to inform about intraday restriction;
- 3 | Code – ISO code specifying the reason of the intraday restriction;
- 4 | AdditionalReasonInformation – text comprising of a combination of the associated business rule not ful-  
5 | filled and a short description of the error;
- 6 | Supplementary Data – providing the reference of the related business instruction that debits the Dedi-  
7 | cated Cash Account where the CoSD blocking occurs.  
8

9 | Message usage example 1: camt.067.001.01 T2S PendingIntradayFailure Example.xml

10 | In this example, T2S informs about an intraday restriction, via a pending status, related to a reservation set-  
11 | up by Party A (PBPTYBICXXX). Party A requested the reservation of 50000 EUR, using the restriction type  
12 | 'RSV1', within its account '9000000123'. The reservation is pending of settlement due to an intraday re-  
13 | striction detected on the T2S Dedicated Cash Account.

14 | Message usage example 2: camt.067.001.01 T2S FailingIntradayFailure Example2.xml

1 In this example, T2S informs about an intraday restriction, via a failing status, due to the failure in a CoSD  
 2 blocking. In addition to the reason of the failure and the details of the Settlement Restriction, the message  
 3 also informs the T2S reference of the business instruction that debits the Dedicated Cash Account where the  
 4 CoSD blocking occurs.

5 *Message usage: Provision check failure*

6 This message usage relates to the usage of status advice message, sent by T2S, when within the settlement  
 7 process, the resources or headroom available on the cash balance is not sufficient for settling the Settlement  
 8 Restriction on Cash Balance.

9 Specific message requirements

10 To inform about a pending/failing status, the *IntraBalanceMovementStatusAdviceV01* includes the following  
 11 information:

- 12 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the instruction  
 13 can settle on its ISD or not) with one or more reason codes to inform about the unsuccessful provision-  
 14 ing check;
- 15 | Code – ISO code specifying the reason of the provisioning check;
- 16 | AdditionalReasonInformation – text comprising of a combination of the associated business rule not ful-  
 17 filled and a short description of the error;
- 18 | Supplementary Data – providing the reference of the related business instruction that debits the Dedi-  
 19 cated Cash Account where the CoSD blocking occurs.

1

2 Message usage example 1: camt.067.001.01 T2S PendingProvisionFailure Example.xml

3 In this example, T2S informs about a provision check failure, via a pending status (Settlement Restriction  
4 can still settle on its ISD), related to a blocking set-up by Party A (PBPTYBICXXX). Party A requested the  
5 blocking of 50000 EUR, using the restriction type 'BLKA', within its account '9000000123'. The reservation  
6 failed in the provision check because the requested amount is higher than the amount present in its cash  
7 account '9000000123'.

8 Message usage example 2: camt.067.001.01 T2S FailingProvisionFailure Example2.xml

9 In this example, T2S informs about a provision check failure, via a failing status (Settlement Restriction can  
10 no longer settle on its ISD), due to the failure in a CoSD blocking. In addition to the reason of the failure  
11 and the details of the Settlement Restriction, the message also informs the T2S reference of the business  
12 instruction that debits the Dedicated Cash Account where the CoSD blocking occurs.

13 Message usage: Partial Settlement (unsettled part)

14 This message usage relates to the usage of a status advice message, sent by T2S, and advices about the  
15 unsettled part of the Settlement Restriction on Cash Balance related to a reservation restriction processing  
16 type that has been partially filled. This message usage informs the pending/failing status of the setting-up of  
17 a reservation due to a partial settlement.

18 Specific message requirements

19 To inform about the unsettled part of a partial filling reservation, the *IntraBalanceMovementStatusAdviceV01*  
20 includes the following information:

- 21 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
22 Restriction was partially settled on its ISD or not) with one reason code to inform about the partial set-  
23 tlement;

- 1 | Code – 'PART' ISO code indicating the partial settlement of the transaction;
- 2 | SettlementAmount– Amount of money remaining to be settled;
- 3 | Balance From/Type/Proprietary ID that, within the reference data of T2S, corresponds to an "Object Re-
- 4 | striction Type" that is a "cash balance" and a "Restriction Processing Type" that is "Deliverable".
- 5 | Balance To/Type/Proprietary ID that, within the reference data of T2S, corresponds to an "Object Re-
- 6 | striction Type" that is a "cash balance" and a "Restriction Processing Type" that is "Reservation".
- 7

1

2 Message usage example: [camt.067.001.01 T2S PendingPartialSettlement Example.xml](#)

3 In this example, T2S informs that the reservation of 50000 EUR, using the restriction type 'RSV1', requested  
4 by Party A, "PBPTYBICXXX" has been partially settled on its ISD due to a lack of cash. T2S has settled 30000  
5 EUR within its cash account '9000000123', so the Status Advice informs about the unsettled part that is  
6 20000.

7 **3.3.3.22 IntraBalanceMovementConfirmationV01 (camt.068.001.01)**8 **3.3.3.22.1 Overview and scope of the message**9 This chapter illustrates the *IntraBalanceMovementConfirmationV01* message.

10 The *IntraBalanceMovementConfirmationV01* message, also known as Settlement Restriction on Cash Balance  
11 Confirmation, is sent by T2S, to confirm the successful processing of a Settlement Restriction on Cash Bal-  
12 ance ([camt.066.001.01](#) [▶ 1234]).

13 This message is sent by T2S in the following message usages:

- 14 | Full Settlement;
- 15 | Partial Settlement (settled part);
- 16 | Last Partial Settlement;

17 These message usages are described in the chapter "The message in business context".

18 **3.3.3.22.2 The T2S-specific schema**19 Outline of the schema20 The *IntraBalanceMovementConfirmationV01* is composed of the following message building blocks:

## 1 **Identification**

2 This is a mandatory and non repetitive building block. It provides information that unambiguously identifies  
3 a Settlement Restriction on Cash Balance confirmation message.

## 4 **AdditionalParameters**

5 This is an optional non repetitive building block. It provides information such as other identifications or par-  
6 tial settlement information.

## 7 **CashAccount**

8 This building block is mandatory and non repetitive. It is used to provide the details on the account to or  
9 from which an entry is made.

## 10 **IntraBalance**

11 This building block is mandatory and non repetitive. It provides the intra-balance movement transaction  
12 details such as the balance from/to which the cash is moving and the settled amount.

## 13 **Supplementary Data**

14 This building block is optional and repetitive. It allows to provide, in the form of a schema, additional infor-  
15 mation that cannot be captured in the structured elements and/or any other specific block.

### 16 References/Links

17 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
18 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
19 under the following link.

20 [http://www.swift.com/mystandards/T2S/camt.068.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.068.001.01_T2S)

### 21 Business rules applicable to the schema

22 Not applicable (T2S outgoing message)

## 23 **3.3.3.22.3 The message in business context**

### 24 Message usage: Full Settlement

25 This message usage relates to the usage of a confirmation message, sent by T2S, when the Settlement Re-  
26 striction on Cash Balance is fully settled in one time regardless of its related restriction processing type.

### 27 Specific message requirements

28 To confirm a fully settled Settlement Restriction on Cash Balance, the *IntraBalanceMovementConfirma-*  
29 *tionV01* includes the following information:

- 30 | SettledAmount – amount of money effectively settled with no remaining amount to be settled;
- 31 | A Balance From –proprietary ID to indicate the actual type of sub-balance from which the cash is mov-  
32 | ing;
- 33 | A Balance To - proprietary ID to indicate the actual type of sub-balance to which the cash is moving;
- 34 | CashSubBalanceId - unique reference number assigned by T2S that identifies the restriction.

- 1 | I Supplementary Data – providing the reference of the related business instruction that debits the Dedi-  
2 | cated Cash Account where the CoSD blocking occurs.  
3 |

1 Message usage example 1: camt.068.001.01 T2S FullSettlement Example.xml

2 In this example, T2S confirms the full settlement of the blocking set-up by Party A, (PBPTYBICXXX). Party A  
3 requested the blocking of 50000 EUR, using the restriction type 'BLKA', within its account '9000000123'. T2S  
4 confirms the blocking and assigns it the reference T222.

5 Message usage example 2: camt.068.001.01 T2S FullSettlement Example2.xml

6 In this example, T2S confirms the full settlement on the 2nd of January 2015 of a CoSD blocking within the  
7 Dedicated Cash Account "9000000123". The confirmation provides the T2S reference of the business instruc-  
8 tion that debits the Dedicated Cash Account where the CoSD blocking occurs.

9 Message usage: Partial Settlement (settled part)

10 This message usage relates to the usage of a confirmation message, sent by the T2S, when the Settlement  
11 Restriction on Cash Balance related to a reservation restriction processing type is partially filled and there is  
12 still a remaining part. This message usage confirms the settled part of the reservation which still has a re-  
13 maining part to be filled.

14 Specific message requirements

15 To confirm a partial settlement of a reservation of Cash, the *IntraBalanceMovementConfirmationV01* includes  
16 the following information:

- 17 | PartialSettlement – 'PAIN' ISO code specifying that there is a part of the reservation that remains unset-  
18 | tled;
- 19 | SettledAmount – amount of money effectively settled during this settlement;
- 20 | PreviouslySettledAmount – amount of money all the previous partial settlements, if any;
- 21 | RemainingToBeSettledAmount – amount of money remaining to be settled;

- 1 | A Balance From – proprietary Id to indicate the actual type of sub-balance from which the cash is moving;
- 2 |
- 3 | A Balance To - proprietary Id to indicate the actual type of sub-balance to which the cash is moving;
- 4 | CashSubBalanceId - Restriction Reference as assigned by T2S during the setup of a restriction.

1 Message usage example: camt.068.001.01 T2S PartialSettlement Example.xml

2 In this example, T2S confirms the partial settlement of a reservation (with reference T222) set-up by Party  
3 A, (PBPTYBICXXX). Party A requested the reservation, using the restriction type 'RSV1' of 50000 EUR within  
4 its account '9000000123'. Of the 50000 EUR reserved by the Party A, T2S has settled 30000 EUR on the 9th  
5 of January 2015, and 20000 EUR remain to be settled.

6 Message usage: Last Partial Settlement

7 This message usage relates to the usage of a confirmation message, sent by the T2S, when the Settlement  
8 Restriction on Cash Balance related to a reservation restriction processing type was partially filled and it  
9 advices about the settlement of the last part. This message usage confirms the settlement of the last settled  
10 part of the reservation; therefore the reservation is fully settled after this last part settlement.

11 Specific message requirements

12 To confirm a last partial settlement of a reservation of Cash, the *IntraBalanceMovementConfirmationV01*  
13 includes the following information:

- 14 | PartialSettlement – 'PARC' ISO code to confirm the settlement of the remaining part of the reservation  
15 | that was previously partially confirmed;
- 16 | SettledAmount – amount of money effectively settled during this settlement;
- 17 | PreviouslySettledAmount – amount of money in all previous settlement(s);
- 18 | A Balance From – proprietary Id to indicate the actual type of sub-balance from which the cash is mov-  
19 | ing;
- 20 | A Balance To - proprietary Id to indicate the actual type of sub-balance to which the cash is moving;
- 21 | CashSubBalanceId - Restriction Reference as assigned by T2S during the setup of a restriction.

1 Message usage example: camt.068.001.01 T2S LastPartialSettlement Example.xml

2 In this example, T2S confirms the last partial settlement of a reservation set-up by Party A (PBPTYBICXXX)  
3 with reference T222. Party A requested the reservation, using the restriction type 'RSV1', of 50000 EUR with-  
4 in its account '9000000123'. Of the 50000 EUR reserved, T2S has settled the remaining 20000 EUR on the  
5 10th of January 2015. T2S also informs the amount of money settled in the previous attempt, that is 30000  
6 EUR.

7 3.3.3.23 GetStandingOrderV03 (camt.069.001.03)

### 8 **3.3.3.23.1 Overview and scope of the message**

9 This chapter illustrates the GetStandingOrderV03 message.

10 The GetStandingOrderV03 message is sent by a CB or a payment bank or any party authorised by them. It is  
11 used to request a list of information on standing and predefined orders.

12 **~~This message is sent to CRDM to make the following types of queries:~~**

13 | ~~Liquidity Transfer Order Detail Query;~~

14 | ~~Liquidity Transfer Order of a Liquidity Transfer Order Link Set Query;~~

15 | ~~Liquidity Transfer Order Link Set Query;~~

16 | ~~Liquidity Transfer Order List Query.~~{Split book approach}

17 This message is sent to T2S to make the following query:

18 | Total Amount of Predefined and Standing Liquidity Transfer Orders Query.

19 These query types are described in the section "The message in business context".

20 In response to the GetStandingOrderV03 message, ~~CRDM~~/T2S sends a camt.070.001.04 message contain-  
21 ing information on requested items or a business error. **{Split book approach}**

1 **3.3.3.23.2 Schema**

2 Outline of the schema

3 The GetStandingOrderV03 message is composed of the following message building blocks:

4 MessageHeader

5 This building block is mandatory and contains common business identification for the message.

6 StandingOrderQueryDefinition

7 This building block is mandatory and defines the standing order query search criteria.

8 References/Links

1 **Query type example: camt.069.001.03 T2S\_LiquidityTransferOrderListQuery\_Example.xml**

2 **In this example a Liquidity Transfer Order List Query with search criteria T2S Dedicated Cash**  
3 **Account, KeyAttributesIndicator, Party and Parent BIC is sent to CRDM. (Split book approach)**

4 Query Type: Total Amount of Predefined and Standing Liquidity Transfer Orders Query

5 This message enables the sender to request querying information about the total amount of predefined and  
6 standing liquidity transfer orders of a specific T2S party. Requesting T2S System users receive only infor-  
7 mation on liquidity transfer orders according to their access rights. The result provides information regarding  
8 the current settlement day.

9 The following field can be used to restrict the query further. If it is not specified, T2S returns liquidity trans-  
10 fer order information consistent with the access rights:

- 11 | Party BIC (settlement bank, payment bank)
- 12 | Parent BIC of the Party

13 Specific message requirements

14 To query T2S for information about the Total Amount of Predefined and Standing Liquidity Transfer Orders,  
15 the field RequestType must be filled with the "TALT" code. All possible search criteria are listed.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Proprietary Document/GetStgOrder/MsgHdr/ReqTp/Prtry	QueryTypeIdentification_T2S_4	Total amount of standing and predefined order query (TALT)
BICFI Docu- ment/GetStgOrder/StgOrderQryDef/StgOrderCrit/ NewCrit/SchCrit/SysMmb/FinInstnId/BICFI	BICFIIdentifier	BIC of the Party
BICFI Docu- ment/GetStgOrder/StgOrderQryDef/StgOrderCrit/ NewCrit/SchCrit/RspnsblPty/FinInstnId/BICFI	BICFIIdentifier	Parent BIC of the Party

2 Query Rules:

- 3 | The query shall respond with a list of the above amounts in each currency as defined by the settle-  
4 | ment/payment bank;
- 5 | The total amount in the response means, the sum of all the individual order amounts;
- 6 | If the query input has a T2S Party, then the response shall be limited to the T2S Party;
- 7 | If the query initiator is a CB, if the query input does not have a T2S Party, then the response shall in-  
8 | clude every T2S Party under its sphere of responsibility;
- 9 | If the query initiator is a settlement bank/payment bank, if the query input does not have a T2S Party,  
10 | then the response shall include details pertaining only to the query initiator;
- 11 | The query response shall be limited by controlled access to the data, as setup for CB/ settlement bank/  
12 | payment bank.

13 Query type example: camt.069.001.03\_T2S\_TotalAmountStandingAndPredefinedOrderQuery\_Example.xml.

14 In this example a Total Amount of Predefined and Standing Liquidity Transfer Orders Query with search  
15 criteria BIC of the party and parent BIC of the party is sent to T2S

16 3.3.3.24 ReturnStandingOrderV04 (camt.070.001.04)

17 **3.3.3.24.1 Overview and scope of the message**

18 This chapter illustrates the ReturnStandingOrderV04 message.

19 The ReturnStandingOrderV04 message is sent to a CB or a directly connected T2S party (i.e., a CSD partici-  
20 | pant granted direct access, like a bank, CCP, etc.). It is used to respond on requests on information on  
21 | standing and predefined orders.22 The ReturnStandingOrderV04 message is sent in response to the camt.069.001.03 message, containing in-  
23 | formation on requested items or a business error.

1 ~~This message is sent by CRDM in the following message usages:~~

2 | ~~Liquidity Transfer Order Detail Query Response;~~

3 | ~~Liquidity Transfer Order of a Liquidity Transfer Order Link Set Query Response;~~

4 | ~~Liquidity Transfer Order Link Set Query Response;~~

5 | ~~Liquidity Transfer Order List Query Response.~~ {Split book approach}

6 This message is sent by T2S in the following message usage:

7 | Total Amount of Predefined and Standing Liquidity Transfer Orders Query Response.

8 These message usages are described in the section "The message in business context".

### 9 **3.3.3.24.2 Schema**

10 Outline of the schema

11 The ReturnStandingOrderV04 message is composed of the following message building blocks:

#### 12 **MessageHeader**

13 This building block is mandatory and contains common business identification for the message.

#### 14 **ReportOnError**

15 This building block is mandatory and defines reports on standing orders. Reports either on the account in-  
16 formation or indicates that an operational error has been issued during the processing of the related re-  
17 quest.

18 References/Links

19 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
20 vided outside of this document under the following link:

25 Business rules applicable to the schema

26 Not applicable (T2S outgoing message)

### 27 **3.3.3.24.3 The message in business context**

28 ~~Message usage: Liquidity Transfer Order Detail Query Response~~

29 ~~This message usage returns the Liquidity Transfer Order Details which matches the specified  
30 selection parameter and provides thus either the key fields of the respective liquidity transfer  
31 order or the key fields and some additional information of the respective liquidity transfer or-  
32 der.~~

33 ~~In case the requesting System user does not choose the key field option, CRDM returns the fol-  
34 lowing information:~~

- 1 | ~~Parent BIC (account operating CB of the T2S Dedicated Cash Account to which the respective liquidity transfer order is linked); (key field)~~
- 2 |
- 3 | ~~Party BIC (account owning party of the T2S Dedicated Cash Account, to which the respective liquidity transfer order is linked); (key field)~~
- 4 |
- 5 | ~~Party Short Name (key field)~~
- 6 | ~~Currency; (key field)~~
- 7 | ~~Liquidity Transfer Order Identifier; (key field)~~
- 8 | ~~[Liquidity Transfer Order Reference]; (No key field)~~
- 9 | ~~Debit cash account number (T2S Dedicated Cash Account number); (key field)~~
- 10 | ~~Credit cash account number (External RTGS account number); (key field)~~
- 11 | ~~Amount; (key field)~~
- 12 | ~~All cash; (key field)~~
- 13 | ~~Execution type; (key field)~~
- 14 | ~~Execution type description; (key field)~~
- 15 | ~~Valid from date; (key field)~~
- 16 | ~~Valid to date; (key field)~~
- 17 | ~~Transfer Order Type [Code for standing order predefined LTO]; (key field)~~

18 ~~In case the requesting System user chooses the "key field" option, CRDM does not return the~~  
 19 ~~attributes set in brackets.~~

1

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
Identification Docu- ment/RtrStgOrdR/MsgHdr/ReqTp/Prtry/ Id	TARGET_QueryTypeIdentification1	LDEQ
Proprietary Docu- ment/RtrStgOrdR/RptOrErr/OprlErr/Err/ Prtry	Max4AlphaNumericText	Specific error code as specified in the error code table
Description Docu- ment/RtrStgOrdR/RptOrErr/OprlErr/Des c	TARGET_RestrictedFINXMax140Text	Textual description in addition to the reported specific error code

2 ~~Message usage example in case of error response: camt.070.001-~~

3 ~~04\_T2S\_\_ErroneousMessageLiquidityTransferOrderDetailQueryResponse\_\_Example.xml~~

4 ~~In this example a Liquidity Transfer Order Detail Response with an erroneous message refer-~~  
5 ~~ring to Liquidity Transfer order detail query, the specified Liquidity Transfer Order Identifier is~~  
6 ~~not known by CRDM is sent to the corresponding party:~~

7 ~~| (ISO) error code;~~

8 ~~| Error information including error text and the wrong Liquidity Order Identifier: OR-~~  
9 ~~DERID123456789.~~

10 ~~Message usage: Liquidity Transfer Order of a Liquidity Transfer Order Link Set Response~~

11 ~~This message usage enables the sender to receive information according to their access rights.~~  
12 ~~CBs, settlement banks and payment banks have the possibility to receive all liquidity transfer~~  
13 ~~orders of a liquidity transfer order link set.~~

14 ~~In case the requesting System user chooses the key field option, CRDM returns the Liquidity~~  
15 ~~Transfer Order Link information that matches the specified selection parameter and provides all~~  
16 ~~attributes identifying a standing liquidity transfer order in a link set, i. e. Liquidity Transfer Or-~~  
17 ~~der Link Identifier, Liquidity Transfer Order Identifier and Transfer Order Sequence.~~

18 ~~In case the requesting System user does not choose the key field option, CRDM returns the Li-~~  
19 ~~quidity Transfer Order Link information that matches the specified selection parameter and~~  
20 ~~provides:~~

21 ~~| All attributes identifying a standing liquidity transfer order in a link set, i. e. Liquidity Trans-~~  
22 ~~fer Order Link Identifier, Liquidity Transfer Order Identifier and Transfer Order Sequence;~~

23 ~~| All attributes of the standing liquidity transfer order, i. e.:~~

24 ~~- CB (BIC) (account operating CB),~~

- 1 – ~~Party (BIC) of the T2S Dedicated Cash Account to which the queried Liquidity transfer Order link set refers,~~
- 2
- 3 – ~~Party Short Name~~
- 4 – ~~Currency,~~
- 5 – ~~Liquidity transfer order identifier,~~
- 6 – ~~Liquidity transfer order reference,~~
- 7 – ~~Transfer Order Sequence~~
- 8 – ~~Debit cash account number (T2S Dedicated Cash Account number),~~
- 9 – ~~Credit cash account number (External RTGS account number),~~
- 10 – ~~Valid from date,~~
- 11 – ~~Valid to date,~~

## 2 Message usage: Liquidity Transfer Order List Query Response

3 This query returns those Liquidity Transfer Orders that match the specified selection parameter  
4 and provide thus either the key fields of the respective liquidity transfer orders or the key fields  
5 and some additional information of the respective liquidity transfer orders.

6 In case the requesting System user does not choose the key field option, CRDM returns the  
7 complete set of data as stated in the following list. If the key field option is selected, only de-  
8 tails categorised as key field are provided.

- 9 | CB (BIC) (account operating party of the T2S Dedicated Cash Account to which the respec-  
10 | tive liquidity transfer order is linked) (key field);
- 11 | Party (Party identifier and BIC and Party short name) (account owning party of the T2S  
12 | Dedicated Cash Account, to which the respective liquidity transfer order is linked) (key-  
13 | field);
- 14 | Currency (key field);
- 15 | Liquidity transfer order identifier (key field);
- 16 | Debit cash account number (T2S Dedicated Cash Account number) (key field);
- 17 | Credit cash account number (External RTGS account number) (key field);
- 18 | Amount (key field);
- 19 | All cash (key field);
- 20 | Execution type (key field);
- 21 | Execution type description;
- 22 | Valid from date (key field);
- 23 | Valid to date (key field).

7 Message usage: Total Amount of Predefined and Standing Liquidity Transfer Orders Query Response

8 It returns the following information regarding the execution of standing and predefined liquidity transfer  
 9 orders:

- 10 | Party (Party identifier and BIC and Party short name) of those T2S Dedicated Cash Accounts to which
- 11 | the respective liquidity transfer orders refer to);
- 12 | Currency;
- 13 | Sum of defined predefined liquidity transfer orders;
- 14 | Sum of not yet executed predefined liquidity transfer orders;
- 15 | Sum of defined standing liquidity transfer orders;
- 16 | Sum of not yet executed standing liquidity transfer orders.

17 Liquidity Transfer Orders flagged with "all cash indicator" are considered with an amount of 0.

18 Specific message requirements in case of business data response

19 The Total Amount of Predefined and Standing Liquidity Transfer Orders Response contain business data.

1 Message usage example in case of business data response: camt.070.001.

2 04\_T2S\_TotalAmountStandingAndPredefinedOrderQueryResponse\_Example.xml

3 In this example a Total Amount of Predefined and Standing Liquidity Transfer Orders Response with data for  
4 party (AAAAAA20) with parent BIC (CBAAA20) is sent to the corresponding party, EUR is the denominated  
5 currency for the T2S party:

6 | Total defined amount of predefined liquidity transfer orders: 2000000.00 EUR

7 | Total amount of not yet executed predefined liquidity transfer orders: 3000000.00 EUR

8 | Total defined amount of standing liquidity transfer orders: 5000000.00 EUR

9 | Total defined amount of standing liquidity transfer orders: 6000000.00 EUR

10 Example and further descriptions regarding the response rules:

11 The response shall contain the list of the above amounts in each currency as defined by the settlement/  
12 payment bank

13 The total amount in the response means the sum of all the individual order amounts

14 If the query input has a T2S Party, then the response shall be limited to the T2S Party.

15 When the query initiator is a CB, if the query input does not have a T2S Party, then the response shall in-  
16 clude every T2S Party under its sphere of responsibility;

17 When the query initiator is a settlement bank/ payment bank, If the query input does not have a T2S Party,  
18 then the response shall include details pertaining only to the query initiator;

19 The response shall be limited by controlled access to the data, as setup for CB/ settlement bank/ payment  
20 bank.

23 ~~3.3.3.25 DeleteStandingOrderV03 (camt.071.001.03)~~

24 **3.3.3.25.1 Overview and scope of the message**

25 **This chapter illustrates the DeleteStandingOrderV03 message.**

1 ~~The DeleteStandingOrderV03 message is sent by Payment Banks, CBs or any parties authorised~~  
2 ~~by them to CRDM to delete standing or predefined liquidity transfer orders.~~

3 ~~The DeleteStandingOrderV03 message is replied by a camt.025.001.05 to return a positive~~  
4 ~~technical response to the initiating T2S Party or to provide detailed information in case of an~~  
5 ~~error.~~ {Split book approach}

### 6 ~~3.3.3.25.2 The CoCo-specific schema~~

#### 7 ~~Outline of the schema~~

8 ~~The DeleteStandingOrderV03 message is composed of the following message building blocks:~~

#### 9 ~~MessageHeader~~

10 ~~This building block is mandatory and not repetitive. It contains the message ID to uniquely iden-~~  
11 ~~tify the message.~~

#### 12 ~~StandingOrderDetails~~

13 ~~This building block is mandatory and not repetitive. It contains information about the ID and~~  
14 ~~the related cash account of the standing order which should be deleted.~~

#### 15 ~~References/Links~~

16 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
17 ~~amples are provided outside of this document under the following link:~~

18 ~~[http://www.swift.com/mystandards/T2S/camt.071.001.03\\_CoCo](http://www.swift.com/mystandards/T2S/camt.071.001.03_CoCo)~~

### 22 ~~3.3.3.25.3 The message in business context~~

#### 23 ~~Specific message requirements~~

24 ~~Sender instructs CRDM for the deletion of Liquidity Transfer Order. Only one standing order per~~  
25 ~~message can be selected for deletion.~~

26 ~~The following parameters have to be specified:~~

27 | ~~Standing Order ID;~~

28 | ~~T2S dedicated cash account.~~

29 ~~Message example: DeleteStandingOrder\_example.xml~~

30 ~~In this example it is requested the deletion of the Liquidity transfer Order with Identification~~  
31 ~~"STDID001" for the account identified with "ACC001".~~ {Split book approach}

### 1 3.3.3.26 IntraBalanceMovementModificationRequestV01 (camt.072.001.01)

#### 2 **3.3.3.26.1 Overview and scope of the message**

3 This chapter illustrates the *IntraBalanceMovementModificationRequestV01* message.

4 The *IntraBalanceMovementModificationRequestV01* message, also known as an Amendment Instruction of a  
5 Settlement Restriction on Cash, is sent by a CB, CB Participant or directly connected T2S party (T2S Actor)  
6 to T2S. The Amendment Instruction of a Settlement Restriction on Cash is used to amend process indicators,  
7 for instance the priority or linkages, of Settlement Restrictions on Cash which have been sent to T2S. T2S  
8 only allows the amendment of a single type of process indicator for any given intra-balance movement per  
9 Amendment Instruction. The original instruction to be amended can be:

- 10 | A Blocking Settlement Restriction on Cash;
- 11 | A Reservation Settlement Restriction on Cash.

#### 12 **3.3.3.26.2 The T2S-specific schema**

##### 13 Outline of the schema

14 The *IntraBalanceMovementModificationRequestV01* is composed of the following message building blocks:

##### 15 **Identification**

16 This building block is mandatory and non repetitive. It must contain the information that identifies unambig-  
17 uously the message.

##### 18 **CashAccount**

19 This building block is mandatory and non repetitive. It must contain the identification of the account to or  
20 from which an entry is made and the identification of its owner.

##### 21 **RequestDetails**

22 This building block is mandatory and non repetitive. It provides the details of the modification requested.

##### 23 **OriginalIntraBalance**

24 This is an optional non repetitive building block which identifies the high-level details of the original intra-  
25 balance movement transaction.

##### 26 References/Links

27 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
28 vided outside of this document under the following link:

29 [http://www.swift.com/mystandards/T2S/camt.072.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.072.001.01_T2S)

### 1 **3.3.3.26.3 The message in business context**

2 Message example: camt.072.001.01 T2S Modify Priority Example.xml

3 In this example a T2S party, Party A (PRTYABICXXX), has requested the amendment of the priority, to  
4 'High', on an existing cash Settlement Restriction with an account owner transaction id, 'REF0123'. The orig-  
5 inal cash Settlement Restriction requested the 'Normal' priority blocking of 50000 EUR for the sub balance,  
6 'BLKA', of the cash account, '1000000123', settling on the 9th of January 2015.

7 Message example: camt.072.001.01 T2S Add Link Example.xml

8 In this example a T2S party, Party B (PRTYBBICXXX), has requested to link (type 'BEFO') a cash settlement  
9 restriction, identified by the T2S internal reference 'T2SIREF00023', with another instruction, identified by  
10 the T2S internal reference 'T2SIREF01001'. The original cash Settlement Restriction requested the 'Normal'  
11 priority blocking of 50000 EUR for the sub balance, 'BLKA', of the cash account, '1000000123', settling on  
12 the 9th of January 2015.

13 Message example: camt.072.001.01 T2S Remove Pool Example.xml

14 In this example a T2S party, Party C (PRTYCBICXXX), has requested to remove a cash settlement restriction,  
15 identified by the T2S internal reference 'T2SIREF00054', from a pool with the pool reference  
16 'T2SPOOLREF001'. The original cash Settlement Restriction requested the 'HIGH' priority blocking of 100000  
17 EUR for the sub balance, 'RSVX', of the cash account, '1000000123', settling on the 15 of January 2015.

18 **3.3.3.27 IntraBalanceMovementModificationRequestStatusAdviceV01 (camt.073.001.01)**

### 19 **3.3.3.27.1 Overview and scope of the message**

20 This chapter illustrates the *IntraBalanceMovementModificationRequestStatusAdviceV01* message. The *Intra-*  
21 *BalanceMovementModificationRequestStatusAdviceV01* message, also known as an Amendment Instruction  
22 of a Settlement Restriction on Cash Status Advice, is sent by T2S to a CB, CB Participant or directly connect-

1 ed T2S party to inform about the actual status of an Amendment Instruction of a Settlement Restriction on  
2 Cash ([camt.072.001.01](#) [▶ 1288]) which has been previously sent to T2S. The Amendment Instruction of a  
3 Settlement Restriction on Cash Status Advice informs about the actual status of the Amendment Instruction  
4 of a Settlement Restriction on Cash. When the Amendment Instruction of a Settlement Restriction on Cash is  
5 invalid, the Amendment Instruction of a Settlement Restriction on Cash Status Advice also specifies the rea-  
6 son why it could not be processed.

7 This message is sent by T2S in the following message usages:

- 8 | Rejected;
- 9 | Accepted;
- 10 | Denied;
- 11 | Executed.

12 These message usages are described in the section "The message in business context".

### 13 **3.3.3.27.2 The T2S-specific schema**

#### 14 Outline of the schema

15 The *IntraBalanceMovementModificationRequestStatusAdviceV01* is composed of the following message  
16 building blocks:

#### 17 **Identification**

18 This building block is mandatory and non repetitive. It must contain the information that identifies unambig-  
19 uously the message.

#### 20 **RequestReference**

21 This building block is mandatory and non repetitive. It contains the reference to the unambiguous identifica-  
22 tion of the modification request.

#### 23 **CashAccount**

24 This building block is mandatory and non repetitive. It must contain the identification of the account to or  
25 from which an entry is made and the identification of its owner.

#### 26 **RequestDetails**

27 This building block is optional and non repetitive. It provides the details of the modification requested.

#### 28 **ProcessingStatus**

29 This block is mandatory and non repetitive. It provides the details on the processing status of the request,  
30 for example, if the modification is the denial, completion, rejection or acknowledgment of the request.

#### 31 **UnderlyingIntraBalance**

32 This is an optional non repetitive building block which identifies the high-level details of the intra-balance  
33 movement transaction.

#### 34 References/Links

1 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
2 vided outside of this document under the following link:

3 [http://www.swift.com/mystandards/T2S/camt.073.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.073.001.01_T2S)

4 *Business rules applicable to the schema*

5 Not applicable (T2S outgoing message)

### 6 **3.3.3.27.3 The message in business context**

7 *Message usage: Rejected*

8 This message usage relates to the usage of a status advice message, sent by T2S, when the Amendment  
9 Instruction of a Settlement Restriction on Cash is rejected. An Amendment Instruction of a Settlement Re-  
10 striction on Cash is rejected if it does not successfully pass the business validation process.

11 Specific message requirements

12 To inform about a rejection status, the *IntraBalanceMovementModificationRequestStatusAdviceV01* includes  
13 the following information:

- 14 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons for  
15 the rejection;
- 16 | Code – ISO code specifying the reason of the rejection;
- 17 | AdditionalReasonInformation – text comprising a combination of the associated business rule and a short  
18 description of the error.  
19

Message Item	Data Type/ Code	Utilisation
Code Docu- ment/IntraBalMvmntModReqStsAdv/PrctgSts/ Rjctd/Rsn/Cd/Cd	RejectionReason35Code	ISO reason code of the rejec- tion
AdditionalReasonInformation Docu- ment/IntraBalMvmntModReqStsAdv/PrctgSts/ Rjctd/Rsn/AddtlRsnInf	RestrictedFINXMax210Text	Business rule and error de- scription

20 Message usage example: camt.073.001.01 T2S Rejected Example.xml

21 Firstly Party A (PRTYABICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
22 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
23 Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S refer-  
24 ence 'T1390'.

25 Secondly, Party A (PRTYABICXXX) sent an Amendment Instruction of a Settlement Restriction on Cash, with  
26 identification 'DOC1234', to amend its Settlement Restriction identified by the reference 'REF0124'.

1 In this example, T2S sends a rejection status advice as a response to the Amendment Instruction sent by  
2 Party A. The Amendment Instruction is rejected since the reference given for the Settlement Restriction on  
3 Cash (REF0124) is unknown to T2S.

#### 4 Message usage: Accepted

5 This message usage relates to the usage of a status advice message, sent by T2S, when the Amendment  
6 Instruction of a Settlement Restriction on Cash is valid. An Amendment Instruction of a Settlement Re-  
7 striction on Cash is valid and accepted by T2S if it passes the business validation process.

#### 8 Specific message requirements

9 To inform about an accepted status, the *IntraBalanceMovementModificationRequestStatusAdviceV01* in-  
10 cludes the following information:

- 11 | AcknowledgedAccepted – status that corresponds to 'Accepted' with no reason code;
- 12 | NoSpecifiedReason – 'NORE' ISO code specifying that there is no reason available.

13

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
NoSpecifiedReason Docu- ment/IntraBalMvmntModReqStsAdv/PrctgSts/ AckdAcptd/NoSpctdRsn	NoReasonCode	Code: 'NORE'

#### 14 Message usage example: camt.073.001.01 T2S Accepted Example.xml

15 Firstly Party A (PRTYABICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
16 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
17 Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S refer-  
18 ence 'T1390'.

19 Secondly, Party A (PRTYABICXXX) sent an Amendment Instruction of a Settlement Restriction on Cash, with  
20 identification 'DOC1234, to amend its Settlement Restriction identified by the reference 'REF0123'.

21 In this example, T2S sends an accepted status advice as a response to the Amendment Instruction of a Set-  
22 tlement Restriction on Cash sent by Party A. The message usage example is provided in XML format outside  
23 of this document:

#### 24 Message usage: Denied

25 This message usage relates to the usage of a status advice message, sent by T2S, when the amendment  
26 requested was not executed.

#### 27 Specific message requirements

28 To inform about a denied status, the *IntraBalanceMovementModificationRequestStatusAdviceV01* includes  
29 the following information:

- 30 | Denied – status that corresponds to 'Denied' with one reason code listing the reason of denial;
- 31 | Code – ISO code specifying the reason of the denial;

- 1 | AdditionalReasonInformation – text comprising a combination of the associated business rule and a short  
2 | description of the error.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/IntraBalMvmntModReqStsAdv/PrcgSts/ Dnd/Rsn/Cd/Cd	DeniedReason6Code	ISO reason code for the denial
AdditionalReasonInformation Docu- ment/IntraBalMvmntModReqStsAdv/PrcgSts/ Dnd/Rsn/AddtlRsnInf	RestrictedFINXMax210Text	Business rule and error de- scription

4 | Message usage example: camt.073.001.01 T2S Denied Example.xml

5 | Firstly Party A (PRTYABICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
6 | the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
7 | Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S refer-  
8 | ence 'T1390'.

9 | Secondly, Party A (PRTYABICXXX) sent an Amendment Instruction of a Settlement Restriction on Cash, with  
10 | identification 'DOC1234, to amend its Settlement Restriction identified by the reference 'REF0123'.

11 | In this example, T2S sends a denied status advice as a response to the Amendment Instruction sent by Par-  
12 | ty A. The Amendment Instruction is denied since the referenced Settlement Restriction on Cash Balance to  
13 | be amended is already cancelled.

14 | Message usage: Executed

15 | This message usage relates to the usage of a status advice message, sent by T2S, when the Amendment  
16 | Instruction of a Settlement Restriction on Cash is executed.

17 | Specific message requirements

18 | To inform about the execution of the amendment, the *IntraBalanceMovementModificationRequestStatusAd-*  
19 | *viceV01* includes the following information:

- 20 | | Completed – status that corresponds to the successful execution of the amendment with one reason  
21 | code;  
22

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
NoSpecifiedReason Docu- ment/IntraBalMvmntModReqStsAdv/PrcgSts/ Cmpltd	ProprietaryReason4	Empty element as Processing Status is 'Completed' with no reason or additional reason information.

23 | Message usage example: camt.073.001.01 T2S Executed Example.xml

1 Firstly Party A (PRTYABICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
2 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
3 Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S refer-  
4 ence 'T1390'.

5 Secondly, Party A (PRTYABICXXX) sent an Amendment Instruction of a Settlement Restriction on Cash, with  
6 identification 'DOC1234, to amend its Settlement Restriction identified by the reference 'REF0123'.

7 In this example, T2S sends an executed status advice as a response to the Amendment Instruction sent by  
8 Party A.

### 9 3.3.3.28 IntraBalanceMovementCancellationRequestV01 (camt.074.001.01)

#### 10 **3.3.3.28.1 Overview and scope of the message**

11 This chapter illustrates the *IntraBalanceMovementCancellationRequestV01* message.

12 The *IntraBalanceMovementCancellationRequestV01* message, also known as Cancellation Instruction of a  
13 Settlement Restriction on Cash, is sent by a CB, CB Participant or directly connected T2S party (T2S Actor)  
14 to T2S. The Cancellation Instruction of a Settlement Restriction on Cash is used to cancel Settlement Re-  
15 strictions on Cash which have been sent to T2S but have not been fully settled. To identify the instruction to  
16 be cancelled, the T2S Actor can either provide its reference or the T2S reference (providing the two being a  
17 possibility). In case the T2S Actor provides the two references, both must refer to the same instruction. The  
18 ability to cancel the original instruction depends on its status. The original instruction to be cancelled can be:

- 19 | A Blocking Settlement Restriction on Cash;
- 20 | A Reservation Settlement Restriction on Cash.

21 In response, T2S sends [camt.075.001.01](#) [▶ 1299] to inform about the actual status of the Cancellation Re-  
22 quest of a Settlement Restriction on Cash.

#### 23 **3.3.3.28.2 The T2S-specific schema**

##### 24 Outline of the schema

25 The *IntraBalanceMovementCancellationRequestV01* is composed of the following message building blocks:

##### 26 **Identification**

27 This building block is mandatory and non repetitive. It must contain the information that identifies unambig-  
28 uously the message.

##### 29 **TransactionIdentification**

30 This building block is mandatory and non repetitive. It provides the details of the transaction.

##### 31 **CashAccount**

32 This building block is mandatory and non repetitive. It must contain the identification of the account to or  
33 from which an entry is made and the identification of its owner.

##### 34 **UnderlyingIntraBalance**

1 This is an optional non repetitive building block which identifies the high-level details of the original intra-  
2 balance movement transaction.

3 References/Links

4 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
5 vided outside of this document under the following link:

### 1 **3.3.3.28.3 The message in business context**

2 Message example: camt.074.001.01 T2S SendCancellation Example.xml

3 In this example the T2S party, Party A (PBPTYBICXXX), has requested the cancellation of the Cash Settle-  
4 ment Restriction with an account owner transaction id, 'REF0123'. The T2S reference of the to be cancelled  
5 Cash Settlement Restriction is 'T1390' and refers to a Cash Blocking Settlement Restriction for 50000 EUR,  
6 using the restriction type "BLKA" sent by the Party A within its account '1000000123' and Intended Settle-  
7 ment Date on the 9th of January 2015.

8 In this example, Party A specifies both references (AcctOwnrTxId and MktInfrstrctrTxId) to refer the Settle-  
9 ment Restriction willing to cancel.

### 10 **3.3.3.29 IntraBalanceMovementCancellationRequestStatusAdviceV01 (camt.075.001.01)**

#### 11 **3.3.3.29.1 Overview and scope of the message**

12 This chapter illustrates the *IntraBalanceMovementCancellationRequestStatusAdviceV01* message.

13 The *IntraBalanceMovementCancellationRequestStatusAdviceV01* message, also known as Cancellation In-  
14 struction of a Settlement Restriction on Cash Status Advice, is sent by T2S to a CB, CB Participant or directly  
15 connected T2S party to inform about the actual status of a Cancellation Instruction of a Settlement Re-  
16 striction on Cash ([camt.074.001.01](#) [▶ 1297]) which has been previously sent to T2S. The Cancellation In-  
17 struction of a Settlement Restriction on Cash Status Advice informs about the actual status of the Cancell-  
18 ation Instruction of a Settlement Restriction on Cash. When the Cancellation Instruction of a Settlement Re-  
19 striction on Cash is invalid, the Cancellation Instruction of a Settlement Restriction on Cash Status Advice  
20 also specifies the reason why it could not be processed.

21 This message is sent by T2S in the following message usages:

22 | Rejected;

1 | Accepted;

2 | Denied;

3 | Executed.

4 | These message usages are described in the section "The message in business context".

### 5 | **3.3.3.29.2 The T2S-specific schema**

#### 6 | Outline of the schema

7 | The *IntraBalanceMovementCancellationRequestStatusAdviceV01* is composed of the following message  
8 | building blocks:

#### 9 | **Identification**

10 | This building block is mandatory and non repetitive. It must contain the information that identifies unambig-  
11 | uously the message.

#### 12 | **RequestReference**

13 | This building block is mandatory and non repetitive. It contains the reference to the unambiguous identifica-  
14 | tion of the cancellation request.

#### 15 | **TransactionIdentification**

16 | This building block is mandatory and non repetitive. It provides the unambiguous identification of the trans-  
17 | action as known by the account owner (or the Instructing party managing the account).

#### 18 | **ProcessingStatus**

19 | This block is mandatory and non repetitive. It provides the details on the processing status of the request,  
20 | for example, if the cancellation is a denial, completion, rejection or acknowledgment of the request.

#### 21 | **CashAccount**

22 | This building block is mandatory and non repetitive. It must contain the identification of the account to or  
23 | from which an entry is made and the identification of its owner.

#### 24 | **UnderlyingIntraBalance**

25 | This is an optional non repetitive building block which identifies the high-level details of the intra-balance  
26 | movement transaction.

#### 27 | References/Links

28 | The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
29 | vided outside of this document under the following link:

30 | [http://www.swift.com/mystandards/T2S/camt.075.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.075.001.01_T2S)

#### 31 | Business rules applicable to the schema

32 | Not applicable (T2S outgoing message)

### 33 | **3.3.3.29.3 The message in business context**

#### 34 | Message usage: Rejected

1 This message usage relates to the usage of a status advice message, sent by T2S, when the Cancellation  
2 Instruction of a Settlement Restriction on Cash is rejected. A Cancellation Instruction of a Settlement Re-  
3 striction on Cash is rejected if it does not successfully pass the business validation process.

#### 4 Specific message requirements

5 To inform about a rejection status, the *IntraBalanceMovementCancellationRequestStatusAdviceV01* includes  
6 the following information:

- 7 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons of the  
8 rejection;
- 9 | Code – ISO code specifying the reason of the rejection;
- 10 | AdditionalReasonInformation – text comprising a combination of the associated business rule and a short  
11 description for the error.  
12

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

#### 13 Message usage example: camt.075.001.01 T2S Rejected Example.xml

14 Firstly Party A (PBPTYBICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
15 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
16 Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S refer-  
17 ence 'T1390'.

18 Secondly, Party A (PBPTYBICXXX) sent a Cancellation Instruction of a Settlement Restriction on Cash, with  
19 identification 'MSG410', to cancel its Settlement Restriction within its account '1000000999'.

20 In this example, T2S sends a rejection status advice as response to the cancellation request sent by Party A.  
21 The cancellation request is rejected since the Cash Account (1000000999) does not exist in T2S.

#### 22 Message usage: Accepted

23 This message usage relates to the usage of a status advice message, sent by T2S, when the Cancellation  
24 Instruction of a Settlement Restriction on Cash is valid. A Cancellation Instruction of a Settlement Restriction  
25 on Cash is valid and accepted by T2S if it passes the business validation process.

### 1 Specific message requirements

2 To inform about an accepted status, the *IntraBalanceMovementCancellationRequestStatusAdviceV01* in-  
3 cludes the following information:

- 4 | AcknowledgedAccepted – status that corresponds to 'Accepted' with no reason code;
- 5 | NoSpecifiedReason – 'NORE' ISO code specifying that there is no reason available.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
NoSpecifiedReason Docu- ment/IntraBalMvmntCxlReqStsAdvC/PrcgSts/Ac kdAccptd/NoSpdfdRsn	NoReasonCode	The only possible value is NORE

### 7 Message usage example: camt.075.001.01 T2S Accepted Example.xml

8 Firstly Party A (PBPTYBICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
9 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
10 the Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S  
11 reference 'T1390'. Secondly, Party A (PBPTYBICXXX) sent a Cancellation Instruction of a Settlement Re-  
12 striction on Cash, with identification 'MSG410', to cancel its Settlement Restriction identified by the reference  
13 'REF0123'.

14 In this example, T2S sends an accepted status advice as a response to the Cancellation Instruction of a Set-  
15 tlement Restriction on Cash sent by Party A.

### 16 Message usage: Denied

17 This message usage relates to the usage of a status advice message, sent by T2S, when the cancellation  
18 requested is denied.

### 19 Specific message requirements

20 To inform about a denied status, the *IntraBalanceMovementCancellationRequestStatusAdviceV01* includes  
21 the following information:

- 22 | Denied – status that corresponds to 'Denied' with one reason code listing the reason of denial;
- 23 | Code – ISO code specifying the reason of the denial;
- 24 | AdditionalReasonInformation – text comprising a combination of the associated business rule and a short  
25 description of the error.

2 Message usage example: camt.075.001.01 T2S Denied Example.xml

3 Firstly Party A (PBPTYBICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
4 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
5 the Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S  
6 reference 'T1390'.

7 Secondly, Party A (PBPTYBICXXX) sent a Cancellation Instruction of a Settlement Restriction on Cash, with  
8 identification 'MSG410', to cancel its Settlement Restriction identified by the reference 'REF0123'.

9 In this example, T2S sends a denied status advice as a response to the cancellation request sent by Party A.  
10 The cancellation request is denied since the referenced Settlement Restriction on Cash to be cancelled is  
11 already cancelled.

12 Message usage: Executed

13 This message usage relates to the usage of a status advice message, sent by T2S, when the Cancellation  
14 Instruction of a Settlement Restriction on Cash is executed.

15 Specific message requirements

16 To inform about the execution of the cancellation, the *IntraBalanceMovementCancellationRequestStatusAd-*  
17 *viceV01* includes the following information:

- 18 | Cancelled – status that corresponds to successful execution of the cancellation with one reason code;
- 19 | Code – ISO code specifying the reason of the execution of the cancellation.

20

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/IntraBalMvmntCxlReqStsAdv/PrcgSts/C anc/Rsn/Cd/Cd	CancelledStatusReason5Code	ISO reason code for the successful execution. The only possible values are:  CANI OTHR

#### 1 Message usage example: camt.075.001.01 T2S Executed Example.xml

2 Firstly Party A (PBPTYBICXXX) has instructed the blocking of 50000 EUR within its account '1000000123' on  
3 the 9/1/2015, using the restriction type "BLKA". The instructed Blocking Settlement Restriction is known by  
4 the Party A with the reference 'REF0123'. This Settlement Restriction is also known by T2S with the T2S  
5 reference 'T1390'.

6 Secondly, Party A (PBPTYBICXXX) sent a Cancellation Instruction of a Settlement Restriction on Cash, with  
7 identification 'MSG410', to cancel its Settlement Restriction identified by the reference 'REF0123'.

8 In this example, T2S sends an executed status advice as response to the cancellation request sent by Party.

#### 9 3.3.3.30 BillingReportRequestV01 (camt.076.001.01)

##### 10 **3.3.3.30.1 Overview and scope of the message**

11 This chapter illustrates the *BillingReportRequestV01* message.

12 The *BillingReportRequestV01* message is sent by a NCB or CSD to Billing Common Component (BILL). It  
13 aims at querying the available billing data:

- 14 | Cumulative Billing Data which consists of the aggregated information on the level of a CSD or NCB for a  
15 | specified period for each service item;
- 16 | Itemised Billing Data which consists of the aggregated information on the level of a single security, dedi-  
17 | cated cash account or party within a given period for each service item.

18 This message is sent to BILL to make the following types of queries:

- 19 | Cumulative Billing Data Query;
- 20 | Itemised Billing Data Query.

21 These query types are described in the section "The message in business context"

22 In response to the *BillingReportRequestV01* message, BILL sends a [camt.077.001.01](#) [[▶ 1308](#)] message con-  
23 taining information on requested items or business error report.

##### 24 **3.3.3.30.2 The CoCo-specific schema**

###### 25 Outline of the schema

26 The *BillingReportRequestV01* message is composed of the following building blocks:

###### 27 **MessageHeader**

28 This building block is mandatory. It contains the message identification ("NONREF" value can be used, since  
29 it is already contained in the business application header) as well as the kind of billing data to be returned.

###### 30 **SearchCriteria**

31 This building block is mandatory. It contains the Search Criteria used to define the criteria to extract the  
32 billing data. All selected search criteria are applied simultaneously.

33 The maximum number of SearchCriteria blocks allowed is 30.

###### 34 References/Links

6 **3.3.3.30.3 The message in business context**

7 *Query Type: Cumulative Billing Data Query*

1 This query type enables the sender to request the billing data of an invoice, which consists of the aggregated  
2 information for a specified period for each service item, according to the access rights.

3 The query result represents only the cumulative business data and not an official invoice.

4 The following fields can be used to restrict the query further:

- 5 | Billing ID (Invoice Identifier) (optional)
- 6 | Billing Period (optional)
- 7 | Responsible Party BIC (BIC of the CSD or BIC of the CB) (optional);
- 8 | **Participant BIC (optional);**

9 If no search criteria are selected then BILL returns the available information according to the requestor's  
10 data scope.

11 Specific message requirements

12 To query BILL for cumulative billing data, the field RequestType must be filled with the "CUMU" code. All  
13 possible search criteria are listed.  
14

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/BllgRptReq/MsgHdr/ReqTp/Prtry/Id	TARGET_QueryType2Code_BILL	"CUMU"
BillingIdentification Document/BllgRptReq/SchCrit/BllgId/BllgId	TARGET_RestrictedFINXMax35Text	Billing Identifier of a related invoice
Service Docu- ment/BllgRptReq/SchCrit/Svc/SysId/MktInfrstr ctrId/Prtry	TARGET_ServicesType_BILL	Service for which the invoice is requested.
FromDate Document/BllgRptReq/SchCrit/BllgPrd/FrDt	RestrictedISODate	Start date of the billing period
ToDate Document/BllgRptReq/SchCrit/BllgPrd/ToDt	RestrictedISODate	End date of the billing period
Responsible Party Identification Docu- ment/BllgRptReq/SchCrit/RspnsblPtyId/Id/Any BIC	AnyBICDec2014Identifier	If used, Billed CSD /CB BIC

15 Query type example: camt 076 001 01 CumulativeBillingDataQuery Example.xml

16 In this example a CB ( BITAITRRXXX) sends a CumulativeBillingDataQuery (CUMU), using the Billing invoice  
17 identifier BILLINGIDABC00001 and billing period 2019-01-01 to 2019-01-31 as search criteria.

1 Query Type: Itemised Billing Data Query  
 2 This query type enables the sender to request itemised billing data information on account or party level  
 3 according to the access rights.

4 The following fields can be used to restrict the query further:

- 5 | Billing Invoice Identifier (optional)
- 6 | Billing Period (optional)
- 7 | Responsible Party BIC (BIC of the CSD or BIC of the CB) (optional);
- 8 | Participant BIC (optional)
- 9 | Cash account number/ securities account number (optional)

10 If none of these search criteria is selected then the available information according to the requestor's data  
 11 scope are returned. If the Billing period is not stated the billing data for the last months is made available,  
 12 based on the BILL retention period.

13 Specific message requirements

14 To query BILL for itemised billing data, the field RequestType must be filled with the "ITEM" code. All possi-  
 15 ble search criteria are listed.  
 16

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Identification Document/BllgRptReq/MsgHdr/ReqTp/Prtry/Id	TARGET_QueryType2Code_BILL	"ITEM"
BillingIdentification Document/BllgRptReq/SchCrit/BllgId/BllgId	TARGET_RestrictedFINXMax35Text	Billing Identifier of a related invoice
Service Docu- ment/BllgRptReq/SchCrit/Svc/SysId/MktInfrstr ctrId/Prtry	TARGET_ServicesType_BILL	Service for which the invoice is requested.
FromDate Document/BllgRptReq/SchCrit/BllgPrd/FrDt	RestrictedISODate	Start date of the billing period
ToDate Document/BllgRptReq/SchCrit/BllgPrd/ToDt	RestrictedISODate	End date of the billing period
Responsible Party Identification Docu- ment/BllgRptReq/SchCrit/RspnsblPtyId/Id/Any BIC	AnyBICDec2014Identifier	If used, Billed CSD/CB BIC

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Party Identification Docu- ment/BllgRptReq/SchCrit/PtyId/Id/AnyBIC	AnyBICDec2014Identifier	If used, BIC of the Participant
Identification Docu- ment/BllgRptReq/SchCrit/AcctId/SctiesAcctId/Id	TARGET_RestrictedFINXMax35Text	If used, Securities Account Number  (Can be a T2S Securities Account or an External Securities Account of an External CSD)
Identification Docu- ment/BllgRptReq/SchCrit/AcctId/CshAcctId/Other/Id	TARGET_RestrictedFINXMax34Text	If used Cash Account Number

#### 1 Query type example: camt 076 001 01 ItemisedBillingDataQuery Example.xml

2 In this example a CB (BITAITRRXXX) sends an ItemisedBillingDataQuery (ITEM) using the billing ID BILLIN-  
3 GID000001, billing period 2019-01-01 to 2019-01-31 as search criteria.

#### 4 3.3.3.31 BillingReportV01 (camt.077.001.01)

##### 5 **3.3.3.31.1 Overview and scope of the message**

6 This chapter illustrates the *BillingReportV01* message.

7 The BillingReportV01 is sent by BILL as the official invoice, as information about the cancellation of the actual  
8 last valid invoice, as response to a user query containing information backing the actual valid invoice or as  
9 a consumption message for CBs.

10 BILL sends the BillingReportV01 message in push mode (consumption message, invoice and invoice cancel-  
11 lation) or as response to the [camt.076.001.01](#) [► 1304] message, containing information on requested items  
12 (cumulative or itemised billing data) or business error reports. All generated invoice data (monthly or intra-  
13 month) are available for query purposes.

14 This message is sent in the following message usages:

- 15 | Cumulative Billing Data Query Response
- 16 | Itemised Billing Data Query Response
- 17 | Invoice
- 18 | Invoice Cancellation
- 19 | Consumption Data

20 These message usages are described in the chapter "The specific usage of the message".

1 **3.3.3.31.2 The CoCo-specific schema**

2 Outline of the schema

3 The *BillingReportV01* message is composed of the following building blocks:

4 **MessageHeader**

5 This building block is mandatory. It contains a set of elements to identify the billing report message ("NON-  
6 REF" value can be used, since it is already contained in the business application header) and in case of que-  
7 ry response or error response the Message ID of the [camt.076.001.01](#) [▶ 1304] the BillingReportV01 is relat-  
8 ed to.

9 **BillingReportOrErrorChoice**

10 This building block is mandatory. It contains either the Invoice or the billing information related to the re-  
11 quested data (cumulative or itemised) or the cancellation report of an invoice or the information related to  
12 the operational error.

13 References/Links

14 The CoCo-specific schema and documentation in HTML/PDF format as well as the message examples and  
15 the exhaustive list of service items and codes (ServiceItemList\_ExternalCodes.xls) are provided outside of  
16 this document under the following link:

17 [http://www.swift.com/mystandards/T2S/camt.077.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/camt.077.001.01_CoCo)

18 Business rules applicable to the schema

19 Not applicable.

20 **3.3.3.31.3 The message in business context**

21 Message Usage: Cumulative Billing Data Query Response

22 This message usage returns the cumulative billing data which matches the specified selection parameter of  
23 the query message on the level of the requesting CSD/CB or returns the error code and error information in  
24 the case the query request failed.

25 Specific message requirements in case of business data

1 [Message usage example: camt.077.001.01\\_ConsumptionData\\_Example.xml](#)

2 In this example the Consumption Data with ID AGGCONSDATAID00001 is sent to the CB BITAITRXXX.

3 3.3.3.32 IntraBalanceMovementQueryV01 (camt.078.001.01)

#### 4 **3.3.3.32.1 Overview and scope of the message**

5 This chapter illustrates the IntraBalanceMovementQueryV01 message.

6 The IntraBalanceMovementQueryV01 message is sent by a CB, CB Participant (e. g. payment  
7 bank/settlement bank) to T2S. This message is used to request information on Intra-Balance Movements.

8 In response to the IntraBalanceMovementQueryV01 message, T2S sends a [camt.079.001.01](#) [▶ 1338] mes-  
9 sage with the corresponding requested intra-balance movements or a business error.

#### 10 **3.3.3.32.2 The T2S-specific schema**

##### 11 Outline of the schema

12 The IntraBalanceMovementQueryV01 is composed of the following message building blocks:

##### 13 **Identification**

14 This building block is mandatory and must contain an identification assigned by the sending party to unique-  
15 ly and unambiguously identify the message.

##### 16 **Query Definition**

1 This building block is mandatory and non repetitive. It contains the definition of the intra-balance query cri-  
2 teria.

### 1 **3.3.3.32.3 The message in business context**

2 Message example: [camt.078.001.01 T2S Example.xml](#)

3 In this example a T2S actor has sent to T2S a Intra-Balance Movement Query requesting the full details of  
4 all movements for the dedicated cash account '9000000123' where the Restriction Reference is equal to  
5 '567459'.

### 6 **3.3.3.33 IntraBalanceMovementQueryResponseV01 (camt.079.001.01)**

#### 7 **3.3.3.33.1 Overview and scope of the message**

8 This chapter illustrates the *IntraBalanceMovementQueryResponseV01* message.

9 The *IntraBalanceMovementQueryResponseV01* message is sent by T2S to CB, CB Participant (e. g. payment  
10 bank/settlement bank). This message is used to provide information on Intra-Balance Movements.

11 To request the *IntraBalanceMovementQueryResponseV01* message, the sender sends a [camt.078.001.01](#)  
12 [▶ 1334] message containing search criteria to restrict the query.

#### 13 **3.3.3.33.2 The T2S-specific schema**

##### 14 Outline of the schema

15 The *IntraBalanceMovementQueryResponseV01* is composed of the following message building blocks:

##### 16 **Identification**

17 This building block is mandatory and must contain an identification assigned by the sending party to unique-  
18 ly and unambiguously identify the message.

##### 19 **Pagination**

20 This building block is mandatory and non repetitive. It contains information about pagination of the report.

## 1 **ReportGeneralDetails**

2 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
3 information.

## 4 **ReportOnError**

5 This building block is optional and non repetitive. It contains either error information or movements corre-  
6 sponding to the criteria of the query.

### 7 References/Links

8 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
9 vided outside of this document under the following link:

10 <http://www.swift.com/mystandards/T2S/camt.079.001.01> T2S

### 11 **3.3.3.33.3 The message in business context**

12 Message example: camt.079.001.01 T2S Example.xml

13 In this example T2S sends an Intra-Balance Movement Query Response containing 4 instructions matching  
14 the query criteria corresponding to query reference 'ID0Q0F001122'. This message is sent as a response to  
15 an Intra-Balance Movement Query requesting all movements where the dedicated cash account is  
16 '9000000123' and the Restriction Reference is '567459'.

17 3.3.3.34 IntraBalanceMovementModificationQueryV01 (camt.080.001.01)

### 18 **3.3.3.34.1 Overview and scope of the message**

19 This chapter illustrates the *IntraBalanceMovementModificationQueryV01* message.

20 The *IntraBalanceMovementModificationQueryV01*, also known as an Amendment Instruction Query for In-  
21 trabalance Movements, is sent by a CB, CB Participant (e. g. payment bank/settlement bank) or other direct-  
22 ly connected T2S party (T2S Actor) to T2S. It aims at querying either the full details or the current status of  
23 Amendment Instruction(s) of Settlement Restriction(s) on Cash based on a set of search criteria or business  
24 attributes.

25 In response to the *IntraBalanceMovementModificationQueryV01* message, T2S sends a [camt.081.001.01](#)  
26 [► 1341] with the corresponding Amendment Instructions for the Intrabalance Movements or a business  
27 error.

### 28 **3.3.3.34.2 The T2S-specific schema**

#### 29 Outline of the schema

30 The *IntraBalanceMovementModificationQueryV01* is composed of the following message building blocks:

#### 31 **Identification**

32 This building block is mandatory and non repetitive. It must contain the information that unambiguously  
33 identifies the message.

#### 34 **Query Definition**

1 This building block is mandatory and non repetitive. It defines the criteria to extract the Amendment Instruc-  
2 tion information of a Settlement Restriction on Cash. It defines as well whether the query response provides  
3 full details about the instructions or only their current status values.

### 1 **3.3.3.34.3 The message in business context**

#### 2 Message example 1: camt.080.001.01 T2S Query Example.xml

3 In this example Party A (PBPTYBICXXX) requests a full details list of Amendment Instruction on Intrabalance  
4 Movements by using an IntraBalanceMovementModificationQuery with the following search criteria:

- 5 | T2S Dedicated Cash Account number: "9000000123";
- 6 | Creation Date of the Amendment Instructions: January 9th 2015.

#### 7 Message example 2: camt.080.001.01 T2S QueryStatus Example.xml

8 In this example Party A (PBPTYBICXXX) requests a list of Amendment Instruction on Intrabalance Move-  
9 ments by using an IntraBalanceMovementModificationQuery with the following search criteria:

- 10 | T2S Dedicated Cash Account number: "9000000123";
- 11 | Creation Date of the Amendment Instructions: January 9th 2015;
- 12 | Only Status query.

### 13 3.3.3.35 IntraBalanceMovementModificationReportV01 (camt.081.001.01)

#### 14 **3.3.3.35.1 Overview and scope of the message**

15 This chapter illustrates the *IntraBalanceMovementModificationReportV01* message.

16 The *IntraBalanceMovementModificationReportV01* message is sent by T2S to a CB, CB Participant (e. g.  
17 payment bank/settlement bank) or directly connected T2S party (T2S Actor). This message is used to pro-  
18 vide information on Amendment Instructions for the Intrabalance Movements either providing full details or  
19 only their current status values.

20 T2S sends the *IntraBalanceMovementModificationReportV01* message as response to the [camt.080.001.01](#)  
21 [▶ 1339] message, containing information on requested items or business error reports in the following mes-  
22 sage usage:

- 23 | Amendment Instruction Query Response for Intra-Balance Movements.

24 The message is also sent as a report triggered by defined business and time events in the following message  
25 usages:

- 26 | Statement of executed amendment instructions for Intra-Balance Movements;
- 27 | Statement of pending amendment instructions for Intra-Balance Movements.

28 These message usages are described in the section "The message in business context".

#### 29 **3.3.3.35.2 The T2S-specific schema**

##### 30 Outline of the schema

31 The *IntraBalanceMovementModificationReportV01* is composed of the following message building blocks:

##### 32 **Identification**

33 This building block is mandatory and non repetitive. It must contain the information that unambiguously  
34 identifies the message.

1 **Pagination**

2 This building block is mandatory and non repetitive. It defines the pagination of the message.

3 **Report General Details**

4 This building block is mandatory and non repetitive. It provides general characteristics related to the report.

5 **Report or Error**

6 This building block is optional and non repetitive. It contains either error information or movements corre-  
7 sponding to the criteria of the query.

8 References/Links

9 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
10 vided outside of this document under the following link:

11 [http://www.swift.com/mystandards/T2S/camt.081.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.081.001.01_T2S)

12 Business rules applicable to the schema

13 Not applicable (Outbound message).

14 **3.3.3.35.3 The message in business context**

15 Message usage: Amendment Instruction Query Response for Intra-Balance Movements

16 This message usage provides the sender with the requested information about Intra-Balance Movements.

17 Specific message requirements

18 An Amendment Instruction Query Response for Intra-Balance Movements contains the following set of in-  
19 formation on queried criterias.

- 20 | QueryReference - Identification of the query message sent to request this response;
- 21 | Query Type – defines the type of query requested either reporting the full details of the movements or  
22 only their current status values;
- 23 | Frequency – ISO code for the ad-hoc frequency;
- 24 | Update type – ISO code indicating the completeness of the query response;
- 25 | Activity Indicator – True when the report contains data; false otherwise;
- 26 | Modifications – repetitive block containing the Intra-Balance Movements information if no error exists;
- 27 | OperationalError – Provides information on operational errors.

1 Message usage example 1: camt.081.001.01 T2S Response Example.xml

2 In this example T2S sends an Intra-Balance Movement Modification Query Response containing 4 instruc-  
3 tions matching the query criteria corresponding to query reference 'ID0Q0F001133' (full query type). This  
4 message is sent as a response to an Intra-Balance Movement Modification Query requesting all Amendment  
5 Instructions with dedicated cash account is '9000000123' and Creation Date is January 9th 2015.

6 Message usage example 2: camt.081.001.01 T2S ResponseStatus Example.xml

7 In this example T2S sends an Intra-Balance Movement Modification Query Response containing 4 instruc-  
8 tions matching the query criteria corresponding to query reference 'ID0Q0F001135' (status query type). This  
9 message is sent as a response to an Intra-Balance Movement Modification Query requesting all Amendment  
10 Instructions with dedicated cash account is '9000000123' and Creation Date January 9th 2015.

11 Message usage: Statement of executed amendment instructions for Intra-Balance Movements

12 This report returns those Modification Instructions which act on Intra-Balance Movements that reached the  
13 executed status on a particular settlement day. The report provides the full details of the instructions report-  
14 ed.

15 Specific message requirements

16 The statement of executed amendment instructions for Intra-Balance Movements contains the following set  
17 of information:

- 18 | Report Identification - Identification of the report sent by T2S;
- 19 | From Date Time - Point in time when the queried report period starts;

- 1 | To Date Time - Point in time when the queried report period ends;
- 2 | Frequency – ISO code for the daily frequency;
- 3 | Update type – ISO code indicating the completeness of the query response;
- 4 | Activity Indicator – True when the report contains data; false otherwise;
- 5 | Modifications – repetitive block containing the Intra-Balance Movement information grouped Dedicated
- 6 | Cash Account. Every entry in the report contains:
- 7 | – Account Owner - BIC of the account owner party;
- 8 | – Dedicated Cash Account –Dedicated Cash Account number;
- 9 | – Completed status with no reason code or additional reason information;
- 10 | – Request Reference – reference of the Modification request;
- 11 | – Status Date – date and time at which the modification was executed;
- 12 | – Request Details block containing the details of the modification request;
- 13 | – Underlying block containing the details of the Intra-Balance Movement modified.
- 14

1 [Message usage example: camt.081.001.01 T2S ReportExecuted Example.xml](#)

1 In this example T2S sends a Statement of executed amendment instructions for all the Intra-Balance Move-  
2 ments executed on the 3rd of February 2015 within the Dedicated Cash Account '9000000123'.

3 Message usage: Statement of pending amendment instructions for Intra-Balance Movements

4 This report returns those Modification Instructions which act on Intra-Balance Movements that do not have a  
5 final status at the time of the report generation. The report provides the full details of the instructions re-  
6 ported.

7 Specific message requirements

8 The statement of pending amendment instructions for Intra-Balance Movements contains the following set  
9 of information:

- 10 | Report Identification - Identification of the report sent by T2S;
- 11 | From Date Time - Point in time when the queried report period starts;
- 12 | To Date Time - Point in time when the queried report period ends;
- 13 | Frequency – ISO code for the daily frequency;
- 14 | Update type – ISO code indicating the completeness of the query response;
- 15 | Activity Indicator – True when the report contains data; false otherwise;

1 [Message usage example: camt.081.001.01 T2S ReportPending Example.xml](#)

2 In this example T2S sends a Statement of pending amendment instructions for all the Intra-Balance Move-  
3 ments executed on the 3rd of February 2015 within the Dedicated Cash Account '9000000123'.

4 3.3.3.36 IntraBalanceMovementCancellationQueryV01 (camt.082.001.01)

### 5 **3.3.3.36.1 Overview and scope of the message**

6 This chapter illustrates the *IntraBalanceMovementCancellationQueryV01* message.

7 The *IntraBalanceMovementCancellationQueryV01*, also known as Cancellation Instruction Query for Intra  
8 Balance Movements, is sent by a CB, CB Participant (e. g. payment bank/settlement bank) or directly con-  
9 nected T2S party (T2S Actor) to T2S. It aims at querying either the full details or current status of Cancell-  
10 ation Instruction(s) of Settlement Restriction(s) on Cash based on a set of search criteria or business attrib-  
11 utes.

12 In response to the *IntraBalanceMovementCancellationQueryV01* message, T2S sends a [camt.083.001.01](#)  
13 [► 1350] with the corresponding Cancellation Instructions for the Intra Balance Movements or a business  
14 error.

### 15 **3.3.3.36.2 The T2S-specific schema**

#### 16 Outline of the schema

17 The *IntraBalanceMovementCancellationQueryV01* is composed of the following message building blocks:

#### 18 **Identification**

19 This building block is mandatory and non repetitive. It must contain the information that unambiguously  
20 identifies the message.

#### 21 **Query Definition**

1 This building block is mandatory and non repetitive. It defines the criteria to extract the Cancellation Instruc-  
2 tion information of a Settlement Restriction on Cash. It defines as well whether the query response outputs  
3 full details or only its current status values.

### 1 **3.3.3.36.3 The message in business context**

#### 2 Message example 1: camt.082.001.01 T2S Query Example.xml

3 In this example Party A (PBPTYBICXXX) requests a list of Cancellation Instructions on Intrabalance Move-  
4 ments by using an `IntraBalanceMovementCancellationQuery` with the following search criteria:

- 5 | T2S Dedicated Cash Account number: "9000000123";
- 6 | Creation Date of the Cancellation Instructions: January 9th 2015;
- 7 | Cancellation Instruction(s) in Denied status;
- 8 | Response should include FULL details on the reported movements.

#### 9 Message example 2: camt.082.001.01 T2S QueryStatus Example.xml

10 In this example Party A (PBPTYBICXXX) requests a list of Cancellation Instructions on Intrabalance Move-  
11 ments by using an `IntraBalanceMovementCancellationQuery` with the following search criteria:

- 12 | T2S Dedicated Cash Account number: "9000000123";
- 13 | Creation Date of the Cancellation Instructions: January 9th 2015;
- 14 | Cancellation Instruction(s) in Denied status;
- 15 | Response should include limited details including the status on the movements reported.

### 16 3.3.3.37 `IntraBalanceMovementCancellationReportV01` (camt.083.001.01)

#### 17 **3.3.3.37.1 Overview and scope of the message**

18 This chapter illustrates the `IntraBalanceMovementCancellationReportV01` message.

19 The `IntraBalanceMovementCancellationReportV01` message is sent by T2S to a CB, CB Participant (e. g.  
20 payment bank/settlement bank) or directly connected T2S party (T2S Actor). This message is used to pro-  
21 vide information on Cancellation Instruction(s) for Intrabalance Movements either providing full details or  
22 only their current status values.

23 T2S sends the `IntraBalanceMovementCancellationReportV01` message as response to the [camt.082.001.01](#)  
24 [► 1348] message, containing information on requested items or business error reports in the following mes-  
25 sage usage:

- 26 | Cancellation Instruction Query Response for Intra-Balance Movements.

27 The message is also sent as a report triggered by defined business and time events in the following message  
28 usages:

- 29 | Statement of executed cancellation instructions for Intra-Balance Movements;
- 30 | Statement of pending cancellation instructions for Intra-Balance Movements.

31 These message usages are described in the section "The message in business context".

#### 32 **3.3.3.37.2 The T2S-specific schema**

##### 33 Outline of the schema

1 The *IntraBalanceMovementCancellationReportV01* is composed of the following message building blocks:

2 **Identification**

3 This building block is mandatory and non repetitive. It must contain the information that unambiguously  
4 identifies the message.

5 **Pagination**

6 This building block is mandatory and non repetitive. It defines the pagination of the message.

7 **Report General Details**

8 This building block is mandatory and non repetitive. It provides general characteristics related to the report.

9 **Report or Error**

10 This building block is optional and non repetitive. It contains either error information or movements corre-  
11 sponding to the criteria of the query.

12 References/Links

13 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
14 vided outside of this document under the following link:

15 [http://www.swift.com/mystandards/T2S/camt.083.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.083.001.01_T2S)

16 Business rules applicable to the schema

17 Not applicable (Outbound message)

18 **3.3.3.37.3 The message in business context**

19 Message usage: Cancellation Instruction Query Response for Intra-Balance Movements

20 This message usage provides the sender with the requested information about Intra-Balance Movements.

21 Specific message requirements

22 A Cancellation Instruction Query Response for Intra-Balance Movements contains the following set of infor-  
23 mation on queried criteria.

- 24 | QueryReference - Identification of the query message sent to request this response;
- 25 | Query Type – defines the type of query requested either reporting the full details of the movements or  
26 only their current status values;
- 27 | Frequency – ISO code for the ad-hoc frequency;
- 28 | Update type – ISO code indicating the completeness of the query response;
- 29 | Activity Indicator – True when the report contains data; false otherwise;
- 30 | Modifications – repetitive block containing the Intra-Balance Movements information;
- 31 | OperationalError – Provides information on operational errors.

1

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
QueryReference Docu- ment/IntraBalMvmntCxlRpt/RptGnlDtls/QryRef	RestrictedFINXMax16Text	Reference of the query message
QueryType Docu- ment/IntraBalMvmntCxlRpt/RptGnlDtls/QryTp	MovementResponseType1Code	Defines the type of query requested. The only possible values are:  - FULL - STTS
Code Docu- ment/IntraBalMvmntCxlRpt/RptGnlDtls/Frqcy/ Cd	EventFrequency7Code	The only possible value is ADHO
Code Document/IntraBalMvmntCxlRpt/RptGnlDtls/U pdTp/Cd	StatementUpdateType1Code	The only possible value is COMP
ActivityIndicator Docu- ment/IntraBalMvmntCxlRpt/RptGnlDtls/ActvtyI nd	YesNoIndicator	TRUE if the report contains information updated. FALSE otherwise

2 Message usage example 1: camt.083.001.01 T2S Response Example.xml

3 In this example T2S sends an Intra-Balance Movement Cancellation Query Response containing 3 instruc-  
4 tions matching the query criteria corresponding to query reference 'ID0Q0F001144' (full query type). This  
5 message is sent as a response to an Intra-Balance Movement Cancellation Query requesting all Cancellation  
6 Instructions where the dedicated cash account is '9000000123' and the Creation Date is January 9th 2015.  
7 T2S reports three Cancellation Instructions in Denied status (cancellation reference DOC856, MSG410 and  
8 MSG320). The first two are denied because the referenced Settlement Restriction is already cancelled. The  
9 last is denied because the referenced Settlement Restriction is already settled.

10 Message usage example 2: camt.083.001.01 T2S ResponseStatus Example.xml

11 In this example T2S sends an Intra-Balance Movement Cancellation Query Response containing 3 instruc-  
12 tions matching the query criteria corresponding to query reference 'ID0Q0F001145' (status query type). This  
13 message is sent as a response to an Intra-Balance Movement Cancellation Query requesting all Cancellation  
14 Instructions where the dedicated cash account is '9000000123' and the Creation Date is January 9th 2015.  
15 T2S reports three Cancellation Instructions in Denied status (cancellation reference DOC856, MSG410 and  
16 MSG320). The first two are denied because the referenced Settlement Restriction is already cancelled. The  
17 last is denied because the referenced Settlement Restriction is already settled.

1 Message usage: Statement of executed cancellation instructions for Intra-Balance Movements

2 This report returns those Cancellation Instructions which act on Intra-Balance Movements that reached the  
3 executed status on a particular settlement day. The report provides the full details of the instructions report-  
4 ed.

5 Specific message requirements

6 The statement of executed cancellation instructions for Intra-Balance Movements contains the following set  
7 of information.

- 8 | Report Identification - Identification of the report sent by T2S;
- 9 | From Date Time - Point in time when the queried report period starts;
- 10 | To Date Time - Point in time when the queried report period ends;
- 11 | Frequency – ISO code for the daily frequency;
- 12 | Update type – ISO code indicating the completeness of the query response;
- 13 | Activity Indicator – True when the report contains data; false otherwise;
- 14 | Cancellations – repetitive block containing the Intra-Balance movement information grouped Dedicated  
15 Cash Account. Every entry in the report contains:
  - 16 – Account Owner - BIC of the account owner party;
  - 17 – Dedicated Cash Account –Dedicated Cash Account number;
  - 18 – Completed status with no reason code or additional reason information;
  - 19 – Request reference – reference of the cancellation request;
  - 20 – StatusDate – date and time at which the cancellation was executed;
  - 21 – TransactionIdentification – identification of the instruction cancelled;
  - 22 – Underlying block containing the details of the Intra-Balance Movement cancelled.

1 Message usage example: camt.083.001.01 T2S ReportExecuted Example.xml

2 In this example T2S sends a Statement of executed cancellation instructions for all the Intra-Balance Move-  
3 ments that were cancelled on the 3rd of February 2015 within the dedicated cash account '9000000123'.

4 Message usage: Statement of pending cancellation instructions for Intra-Balance Movements

5 This report returns those Cancellation Instructions which act on Intra-Balance Movements that do not have a  
6 final status at the time of the report generation. The report provides the full details of the instructions re-  
7 ported.

8 Specific message requirements

9 The statement of pending cancellation instructions for Intra-Balance Movements contains the following set of  
10 information:

- 11 | Report Identification - Identification of the report sent by T2S;
- 12 | From Date Time - Point in time when the queried report period starts;
- 13 | To Date Time - Point in time when the queried report period ends;
- 14 | Frequency – ISO code for the daily frequency;
- 15 | Update type – ISO code indicating the completeness of the query response;
- 16 | Activity Indicator –True when the report contains data; false otherwise;
- 17 | Cancellations – repetitive block containing the Intra-Balance Movement information grouped Dedicated  
18 Cash Account. Every entry in the report contains:
  - 19 – Account Owner - BIC of the account owner party;
  - 20 – Dedicated Cash Account –Dedicated Cash Account number;
  - 21 – AcknowledgedAccepted status with no reason code;
  - 22 – Request reference – reference of the cancellation request;

- 1 – StatusDate – date and time at which the cancellation was executed;
- 2 – TransactionIdentification – identification of the instruction cancelled;
- 3 – Underlying block containing the details of the Intra-Balance Movement cancelled.
- 4

1 [Message usage example: camt.083.001.01 T2S ReportPending Example.xml](#)

2 In this example T2S sends a Statement of pending cancellation instructions for all the Intra-Balance Move-  
3 ments that still have an accepted status at the generation of the report (the 3rd of February 2015 at  
4 06:21:10) within the dedicated cash account '9000000123'.

5 3.3.3.38 IntraBalanceMovementPostingReportV01 (camt.084.001.01)

### 6 **3.3.3.38.1 Overview and scope of the message**

7 This chapter illustrates the *IntraBalanceMovementPostingReportV01* message.

8 The *IntraBalanceMovementPostingReportV01* message is sent by T2S to a CB, CB Participant (e. g. payment  
9 bank/settlement bank). This message is used to provide information on intra-balance movements settled in  
10 T2S for a particular settlement day. This report is triggered by defined business and time events.

### 1 **3.3.3.38.2 The T2S-specific schema**

#### 2 Outline of the schema

3 The IntraBalanceMovementPostingReportV01 is composed of the following message building blocks:

#### 4 **Identification**

5 This building block is mandatory and must contain an identification assigned by the sending party to unique-  
6 ly and unambiguously identify the message.

#### 7 **Pagination**

8 This building block is mandatory and non repetitive. It contains information about pagination of the report.

#### 9 **ReportGeneralDetails**

10 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
11 information.

#### 12 **CashAccountOwner**

13 This building block is optional and non repetitive. It must contain the identification of the party that owns  
14 the account to or from which an entry is made.

#### 15 **CashAccount**

16 This building block is mandatory and non repetitive. It must contain the identification of the account to or  
17 from which an entry is made.

#### 18 **SubBalance**

19 This building block is optional and repetitive. It provides the details of the movements reported, grouped by  
20 balance type.

#### 21 References/Links

22 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
23 vided outside of this document under the following link:

24 [http://www.swift.com/mystandards/T2S/camt.084.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.084.001.01_T2S)

### 25 **3.3.3.38.3 The message in business context**

#### 26 Message example: camt.084.001.01 T2S Example.xml

27 In this example T2S sends an Intra-Balance Movement Posting Report for the dedicated cash account  
28 '9000000456' as defined within static data (a complete daily report in this case). The report contains 3  
29 movements settled on the current business day, the 15th of January 2015.

### 30 **3.3.3.39 IntraBalanceMovementPendingReportV01 (camt.085.001.01)**

#### 31 **3.3.3.39.1 Overview and scope of the message**

32 This chapter illustrates the *IntraBalanceMovementPendingReportV01* message.

1 The *IntraBalanceMovementPendingReportV01* message is sent by T2S to a CB, CB Participant (e. g. payment  
2 bank/settlement bank). This message is used to provide information on pending intra-balance movements.  
3 This report is triggered by defined business and time events.

#### 4 **3.3.3.39.2 The T2S-specific schema**

##### 5 Outline of the schema

6 The *IntraBalanceMovementPendingReportV01* is composed of the following message building blocks:

##### 7 **Identification**

8 This building block is mandatory and must contain an identification assigned by the sending party to unique-  
9 ly and unambiguously identify the message.

##### 10 **Pagination**

11 This building block is mandatory and non repetitive. It contains information about pagination of the report.

##### 12 **ReportGeneralDetails**

13 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
14 information.

##### 15 **CashAccountOwner**

16 This building block is optional and non repetitive. It must contain the identification of the party that owns  
17 the account to or from which an entry is made.

##### 18 **CashAccount**

19 This building block is mandatory and non repetitive. It must contain the identification of the account to or  
20 from which an entry is made.

##### 21 **Movements**

22 This building block is optional and repetitive. It provides the details of the movements reported.

##### 23 References/Links

24 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
25 vided outside of this document under the following link:

26 [http://www.swift.com/mystandards/T2S/camt.085.001.01\\_T2S](http://www.swift.com/mystandards/T2S/camt.085.001.01_T2S)

#### 27 **3.3.3.39.3 The message in business context**

##### 28 Message example: camt.085.001.01\_T2S Example.xml

29 In this example T2S sends an Intra-Balance Movement Pending Report for the dedicated cash account  
30 '9000000456' as defined within static data (a delta intraday report in this case) . The report contains 4  
31 movements pending as of 15h00 on the current business day, the 15th of January 2015.

## 1 3.3.4 Collateral (colr)

### 2 3.3.4.1 CollateralValueQueryV01 (colr.001.001.01)

#### 3 3.3.4.1.1 Overview and scope of the message

4 This chapter illustrates the *CollateralValueQueryV01* message.

5 The *CollateralValueQueryV01* message is sent by a CB, CSD or a directly connected T2S participant to T2S.  
6 It aims at querying the current available value of securities for auto collateralisation for one specific T2S  
7 Dedicated Cash Account.

8 The query can be sent in three variants which have different detailed information in the response message:

9 This message is sent to T2S in the following query types:

- 10 | Total collateral value per T2S Dedicated Cash Account query;
- 11 | Collateral value per T2S Dedicated Cash Account query;
- 12 | Collateral value of a security query.

13 These query types are described in the chapter "The message in business context".

14 In response to the *CollateralValueQueryV01* message, T2S sends a [colr.002.001.01](#) [▶ 1365] message con-  
15 taining information on requested items or business error report.

#### 16 3.3.4.1.2 The T2S-specific schema

##### 17 Outline of the schema

18 The *CollateralValueQueryV01* message is composed of the following building blocks:

##### 19 **MessageHeader**

20 This building block is mandatory. It is used to identify the message. It contains a RequestType block which is  
21 used to further specify which kind of collateral query are requested.

##### 22 **RequestType**

23 This building block is mandatory. It is used to further specify which kind of collateral query are requested.

##### 24 **CollateralValueQueryDefinition**

25 This building block is optional for "Total collateral value per T2S Dedicated Cash Account query" and "Collat-  
26 eral value per T2S Dedicated Cash Account query", but mandatory for "Collateral value of a security query".  
27 It contains Search Criteria.

##### 28 References/Links

1 **3.3.4.1.3 The message in business context**

2 Query type: Total collateral value per T2S Dedicated Cash Account query

3 This query type enables the sender to request the details of a Total collateral value per T2S Dedicated Cash  
4 Account, according to the access rights.

5 The following fields can be used to restrict the query further:

- 6 | Parent BIC of the T2S Dedicated Cash Account Owner (optional);
- 7 | BIC of the T2S Dedicated Cash Account Owner (optional);
- 8 | Parent BIC of the Securities Account Owner (optional);
- 9 | BIC of the Securities Account Owner (optional);
- 10 | A specific T2S Dedicated Cash Account number (optional);
- 11 | Settlement currency of the (specified) T2S Dedicated Cash Account (optional).

12 Rules for Total current collateral value per T2S Dedicated Cash Account query:

- 13 | If the query specifies a T2S Party and no T2S Dedicated Cash Account, then the query result shall in-  
14 | clude the total collateral value for each of its T2S Dedicated Cash Accounts;
- 15 | If the query specifies a T2S Party and a T2S settlement currency without a T2S Dedicated Cash Account,  
16 | then the query result shall include the collateral value of each of its T2S Dedicated Cash Accounts in the  
17 | specified currency;
- 18 | If the query specifies a T2S Dedicated Cash Account, then the query result shall be the collateral value  
19 | of the specified T2S Dedicated Cash Account.

20 Specific message requirements

21 To query T2S for a Total collateral value per T2S Dedicated Cash Account query, the field RequestType must  
22 be filled with the "TCTC" code. All possible search criteria are listed.  
23

1 Query type example:

2 colr.001.001.01 T2S TotalCollateralValuePerT2SDedicatedCashAccountQuery Example.xml

3 In this example a Customer sends a TotalCollateralValuePerT2SdedicatedCashAccountQuery by using par-  
4 ty/parent BIC of the T2S Dedicated Cash Account Owner, party/parent BIC of the Securities Account Owner  
5 and the T2S Dedicated Cash Account number as search criteria to T2S.

6 | Parent BIC of the T2S Dedicated Cash Account Owner: "CACTSVCRBIC";

7 | BIC of the T2S Dedicated Cash Account Owner: "CACTOWNRBIC";

8 | Parent BIC of the Securities Account Owner: "CACTSVCRBIC";

9 | BIC of the Securities Account Owner: "SACTOWNRBIC";

10 | T2S Dedicated Cash Account number: "T2SDEDICATEDCASHACCOUNT3";

11 | Settlement currency of the T2S Dedicated Cash Account: "EUR".

12 Query type: Collateral value per T2S Dedicated Cash Account query

13 This query type enables the sender to request information on the details of Collateral values on the T2S  
14 Dedicated Cash Account, according to the access rights.

15 The following fields can be used to restrict the query. If the fields are not specified the User Query returns  
16 all information consistent with the access rights:

17 | Parent BIC of the Securities Account Owner (optional);

18 | BIC of the Securities Account Owner (optional);

19 | T2S Dedicated Cash Account Number (optional).

1 Specific message requirements

2 To query T2S for a Collateral value per T2S Dedicated Cash Account query, the field RequestType must be  
3 filled with the "CVCQ" code. All possible search criteria are listed.

BICOrBEI Docu- ment/CollValQry/CollValQryDef/NewCrit/SchCri t/SctiesAcctSvcr/BICOrBEI	AnyBICIdentifier	Parent BIC of the Securities Account Owner

5 Query type example: colr.001.001.01 T2S CollateralValuePerT2SDedicatedCashAccountQuery Example.xml

6 In this example Customer ACCTOWNRBIC sends a CollateralValuePerT2SDedicatedCashAccountQuery for  
7 T2SDEDICATEDCASHACCOUNT2 to T2S.

8 Query type: Collateral value of a security query

9 This query type enables the sender to request information on the details of Collateral values on different  
10 securities account according to the access rights. The query foresees the specification of a T2S Dedicated  
11 Cash Account identifier and ISIN as mandatory selection parameters. It considers securities on stock only:  
12 Securities on flow are not to be taken into consideration.

13 The following fields must be specified within the query:

- 14 | T2S Dedicated Cash Account Number (mandatory);
- 15 | ISIN (mandatory).

16 The following fields can be used to restrict the query:

- 17 | Parent BIC of the Securities Account Owner (optional);
- 18 | BIC of the Securities Account Owner (optional).

19 Specific message requirements

20 To query T2S for a C Collateral value of a security query, the field RequestType must be filled with the  
21 "CVSQ" code. All possible search criteria are listed.

1

2 Query type example: colr.001.001.01 T2S CollateralValueOfASecurityQuery Example.xml

3 In this example Customer ACCTOWNRBIC sends a CollateralValueOfASecurityQuery for  
4 T2SDEDICATEDCASHACCOUNT1 and ISIN XY0123456789 to T2S.

5 3.3.4.2 CollateralValueReportV01 (colr.002.001.01)

### 6 **3.3.4.2.1 Overview and scope of the message**

7 This chapter illustrates the *CollateralValueReportV01* message.

8 The *CollateralValueReportV01* message is sent by T2S to a CSD or a directly connected T2S Party (e.g. Pay-  
9 ment Bank / Settlement Bank) to respond on requests on information on current available value of securities  
10 for auto collateralisation for one specific or several T2S Dedicated Cash Accounts.

11 This message is sent to T2S in the following message usages:

- 12 | Total collateral value per T2S Dedicated Cash Account query response;
- 13 | Collateral Value per T2S Dedicated Cash Account query response;
- 14 | Collateral Value of a Security query response.

15 These message usages are described in the chapter "The message in business context".

1 T2S sends the *CollateralValueReportV01* message in response to the [colr.001.001.01](#) [▶ 1360] message,  
2 containing information on requested items or business error reports.

### 3 **3.3.4.2.2 The T2S-specific schema**

#### 4 Outline of the schema

5 The *CollateralValueReportV01* message is composed of the following building blocks:

#### 6 **MessageHeader**

7 This building block is mandatory. It contains a set of elements to identify the collateral value report mes-  
8 sage.

#### 9 **ReportOrError**

10 This building block is mandatory. It contains the collateral value information related to the requested data or  
11 contains the information related to the operational error.

#### 12 References/Links

13 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
14 vided outside of this document under the following link:

15 <http://www.swift.com/mystandards/T2S/colr.002.001.01> T2S

#### 16 Business rules applicable to the schema

17 Not applicable (T2S outgoing message)

### 18 **3.3.4.2.3 The message in business context**

#### 19 Message usage: Total collateral value per T2S Dedicated Cash Account query response

20 This message usage returns the Total collateral value per T2S Dedicated Cash Account information which  
21 matches the specified selection parameter of the query message.

22 This message contains the total collateral value of securities on stock which are eligible for auto-  
23 collateralisation/client collateralisation for those T2S Dedicated Cash Accounts that match the specified se-  
24 lection parameters. The following information is extracted:

- 25 | Party (Party BIC and Parent BIC of the Party and Party short name) of the T2S Dedicated Cash Account  
26 | (CB, settlement bank, payment bank);
- 27 | T2S Dedicated Cash Account number;
- 28 | Currency of the (specified) T2S Dedicated Cash Account as well as currency of valuation price and collat-  
29 | eral value;
- 30 | Total collateral value of the securities on stock;
- 31 | Date and time of the data access
- 32 | Parent BIC of the Securities Account Owner
- 33 | BIC of the Securities Account Owner.

34 Specific message requirements in case of message containing business data

1 The Total collateral value per T2S Dedicated Cash Account query response contains the following business  
2 data.  
3

9 Message usage: Collateral Value per T2S Dedicated Cash Account query response

10 This message usage returns the collateral value information per T2S Dedicated Cash Account and security  
11 which match the specified selection parameter of the query message.

12 This query returns the collateral value of securities for the specified T2S Dedicated Cash Account according  
13 to the requestor's access rights. The following information is extracted:

- 1 | T2S Dedicated Cash Account number;
- 2 | Currency of the T2S Dedicated Cash Account as well as currency of valuation price and collateral value;
- 3 | ISIN
- 4 | Securities position summed across all securities accounts;
- 5 | Valuation price;
- 6 | Collateral value of each security (earmarked and available on stock for auto-collateralisation in all securities accounts linked to the specified T2S Dedicated Cash Account);
- 7 | Date and time of the data access
- 8 | Parent BIC of the Securities Account Owner
- 9 | BIC of the Securities Account Owner.

11 Specific message requirements in case of message containing business data

12 The Collateral Value per T2S Dedicated Cash Account query response contains business data.

7 Message usage example: colr.002.001.01 T2S ErrorResponse Example.xml

8 In this example a collateral value of a security query response with error information referring to a collateral  
9 value of a security query is sent to the requesting party.

## 1 **3.3.5 Headers (head)**

### 2 3.3.5.1 BusinessApplicationHeaderV01 (head.001.001.01)

#### 3 **3.3.5.1.1 Overview and scope of the message**

4 This chapter illustrates the BusinessApplicationHeaderV01 message.

5 The Business Application Header is part of each business message exchanged between directly connected  
6 CSDs, CBs or any parties authorised by them and T2S. In case if an error occurs resulting from the pro-  
7 cessing of the business message the relevant error information is sent.

8 The Business Application Header supports the following functions:

- 9 | Document Routing, e.g. Business Sender, Business Receiver, MessageDefinitionIdentifier;
- 10 | Document Identification, e.g. MessageDefinitionIdentifier, CreationDateTime, Business Sender;
- 11 | Document Processing information, e.g. Business Sender, Service, COPY, Possible duplicate, Priority;

12 An ISO 20022 Message together with its Business Application Header forms a Business Message.

13 The ReceiptAcknowledgement is in general sent by T2S without BAH. Only in case it is sent as response to  
14 the ReportDetailQueryRequest (admi.005) the BAH is attached.

#### 15 **3.3.5.1.2 The T2S-specific schema**

##### 16 Outline of the schema

17 The BusinessApplicationHeaderV01 message is composed of the following message building blocks:

##### 18 **From**

19 This building block is mandatory. It contains the sending MessagingEndpoint that has created the Business  
20 Message for the receiving MessagingEndpoint that processes the Business Message.

##### 21 **To**

22 This building block is mandatory. It contains the MessagingEndpoint designated by the sending Mes-  
23 sagingEndpoint to be the recipient who ultimately processes the Business Message.

##### 24 **BusinessMessageIdentifier**

25 This building block is mandatory. It unambiguously identifies the Business Message to the Mes-  
26 sagingEndpoint that has created the Business Message.

##### 27 **MessageDefinitionIdentifier**

28 This building block is mandatory. It contains the MessageIdentifier that defines the BusinessMessage, as  
29 published on the ISO 20022 website.

##### 30 **CreationDate**

31 This building block is mandatory. It contains the date and time when the Business Message (header) was  
32 created.

##### 33 **CopyDuplicate**

1 This building block is optional. It indicates whether the message is a Copy, a Duplicate or a copy of a dupli-  
2 cate of a previously sent ISO 20022 message.

### 3 **PossibleDuplicate**

4 This building block is optional. It indicates if the Business Message exchanged between the Mes-  
5 sagingEndpoints is possibly a duplicate.

### 6 **Priority**

7 This building block is optional. It provides a relative indication of the processing precedence of the message  
8 over a (set of) Business Messages with assigned priorities.

### 9 **Signature**

10 This building block is mandatory. It contains the digital signature of the Business Entity authorised to sign  
11 this Business Message.

### 12 **Related**

13 This building block is optional. It specifies the Business Application Header of the Business Message to which  
14 this Business Message relates <sup>503</sup>.

### 15 References/Links

16 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
17 vided outside of this document under the following link:

### 1 **3.3.5.1.3 The message in business context**

#### 2 IncomingMessageWithinT2S

3 The BAH contains information which is of use to the business application to correctly process the Business  
4 Message payload by means that every business messages exchanged between T2S and the T2S Actors in-  
5 cludes such an information. The relation between BAH and Business message payload is exactly one to one.

6 The Business Application Header includes the following main information:

- 7 | Document Routing (e.g. Business Sender, Business Receiver, Information about the business message  
8 etc.);
- 9 | Document Identification (e.g. Message Definition Identifier, Creation Date Time etc.);
- 10 | Document Processing information (e.g. Business Sender, Service, COPY, Possible duplicate etc.).

#### 11 Message example 1: head.001.001.01 T2S IncomingMessageWithinT2S Example.xml

12 In this example the BusinessApplicationHeader is used for an incoming message within T2S. Message pay-  
13 load is sent from the System Entity CSD (CSDBICIDXXX) and its CSD Participant (CSDPARTCPNT) to T2S.  
14 The BAH includes a System user (SystemUserX1) and the corresponding Digital Signature (user signature1).

#### 15 Message example 2: head.001.001.01 T2S OutgoingMessageBeingSentByT2SAsCopy Example.xml

16 In this example the BusinessApplicationHeader is used for an outgoing message being sent by T2S as a copy  
17 to a party other than the account owner e.g. CSD, for information purposes. Sending and receiving system  
18 entity is the CSD (CSDBICEUXXX) is sent to the corresponding party. The BAH includes Digital Signature  
19 (user signature2).

#### 20 Message example 3: head.001.001.01 T2S OutgoingT2SMessageRequestedViaResendFunction Example.xml

21 In this example the BusinessApplicationHeader is used for an outgoing T2S message requested via resend  
22 function (here current settlement day cash report). Receiver is the Participant (CBPARTCPNT) of CB (CBBI-  
23 CIDXXX). The BAH includes Digital Signature (user signature3).

#### 24 Message example 4: head.001.001.01 T2S CSDsendsToT2SDVPInstruction Example.xml

25 In this example the BusinessApplicationHeader is used as incoming message: CSD (CSDBICIDXXX) as ac-  
26 count servicer sends a settlement instruction to T2S. CSD assigns own transaction ID (SENDERSREFER-  
27 ENCE). The BAH includes a System user (SystemUserX4) and the corresponding Digital Signature (user sig-  
28 nature4).

#### 29 Message example 5: head.001.001.01 T2S StatementOfAccountSentByT2S Example.xml

30 In this example the BusinessApplicationHeader used for a statement of account report sent by T2S to ac-  
31 count owner (TYBICEUXXX) party which is uniquely identified by its own BIC and the BIC of the correspond-  
32 ing NCB (NCBBICEUXXX). Sending and receiving system entity is the NCB (NCBBICEUXXX). The BAH includes  
33 Digital Signature (user signature5).

#### 34 Message example 6: head.001.001.01 T2S OutgoingMessageSentByT2SAsInboundCopy Example.xml

35 In this example the BusinessApplicationHeader used to for an inbound copy of a sese.023 to the Instructing  
36 Party (ABCBANKBIC2) and the corresponding Parent Party BIC (CSDBICEUXXX). The original BAH data is  
37 reflected within the message block (AppHdr/Rltd).

## 1 3.3.5.2 BusinessFileHeaderV01 (head.002.001.01)

### 2 **3.3.5.2.1 Overview and scope of the message**

3 This chapter illustrates the *BusinessFileHeaderV01* message.

4 The Business File Header is used by directly connected CSDs, CBs or any other parties authorised by them to  
5 send several business messages within one file to T2S. In case if an error occurs resulting from the pro-  
6 cessing of the file the relevant error information is sent.

7 The use of files is foreseen in both directions from the customer to T2S and vice versa.

8 T2S uses the Business File Header information for consistency and completeness checks. Every message  
9 within a file has to be an ISO 20022 Message together with its Business Application Header (Business Mes-  
10 sage). A file can contain one or several business messages.

11 The BusinessFileHeader supports the following functions:

- 12 | Sums up different documents (messages) within one envelope;
- 13 | Routes the object exchanged to a destination;
- 14 | Identifies the object exchanged;
- 15 | Describes the type of the object exchanged;
- 16 | Gives processing information to the receiving party;

17 In response to an incoming file, T2S sends an *admi.007.001.01* message containing information on negative  
18 validation.

19 Validation results which are performed on file level, are sent by T2S without BAH information.

### 20 **3.3.5.2.2 The T2S-specific schema**

#### 21 Outline of the schema

22 The *BusinessFileHeaderV01* is composed of the following building blocks:

#### 23 **PayloadDescription**

24 The PayloadDescription is a mandatory block and contains the following information tags:

- 25 | PayloadDetails: with PayloadIdentifier; CreationDateAndTime and PossibleDuplicateFlag
- 26 | ApplicationSpecificInformation: which contains information about the total number of instances (mes-  
27 sages) within the file;
- 28 | PayloadTypeDetails: which declares the payload content (describes the type of business document being  
29 exchanged);
- 30 | ManifestDetails: with information to each DocumentType and the number of instances (messages) for  
31 each declared type.

#### 32 **Payload**

33 The Payload is a mandatory block and contains the set of business messages, each built of an ISO 20022  
34 message together with its Business Application Header.

1 References/Links

2 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
3 vided outside of this document under the following link:

4 [http://www.swift.com/mystandards/T2S/head.002.001.01\\_T2S](http://www.swift.com/mystandards/T2S/head.002.001.01_T2S)

5 The head.003 XSD file is used as a technical wrapper to structure the ExchangePayload1 for head.002: the  
6 T2S-specific schema as XSD file is provided under the same link.

9 **3.3.5.2.3 The message in business context**

10 Message example: head.002.001.01\_T2S\_IncomingMessageFileWithinT2S\_Example.xml

11 In this example the BusinessFileHeader is used for an incoming file within T2S. File payload is sent from the  
12 CSD (CSDBICIDXXX) for its CSD Participant (CSDPARTCPNT) to T2S and contains a GetAccount message  
13 (camt.003) performing a cash balance query. The File envelope includes a System user (SystemUserX1) and  
14 the corresponding Digital Signature (user signature1).

1 Message example: head.002.001.01 T2S OutgoingFileSentfromT2S Example.xml

2 In this example the BusinessFileHeader is used for an outgoing file (night time settlement). The File includes  
3 two sese.025 messages. Message payloads are sent from T2S and CSD (CSDBICIDXXX) to CSD (CSD-  
4 BICIDXXX) and its CSD Participant (CSDPARTCPNT) and contains two securities settlement transaction con-  
5 firmation message (sese.025).

6 One message covers the full settlement and the other a partial settlement of a sese.023 instruction. The File  
7 envelope includes Digital Signature (user signature2).

### 8 **3.3.6 Reference Data (reda)**

#### 9 ~~3.3.6.1 SecurityCreationRequestV01 (reda.006.001.01)~~

##### 10 ~~3.3.6.1.1 Overview and scope of the message~~

11 ~~This chapter illustrates the SecurityCreationRequestV01 message.~~

12 ~~The SecurityCreationRequestV01 is sent by CSDs or any party authorised by them to CRDM.~~

13 ~~It is used for instructing the creation of a security by providing details about the security to be  
14 created.~~

15 ~~In the response, CRDM sends reda.008.001.01 when the creation of the security has been suc-  
16 cessfully processed, queued or has been rejected. (Split book approach)~~

##### 17 ~~3.3.6.1.2 The CoCo-specific schema~~

###### 18 ~~Outline of the schema~~

19 ~~The SecurityCreationRequestV01 message is composed of the following message building  
20 blocks:~~

###### 21 ~~Identification~~

22 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned  
23 by T2S to uniquely and unambiguously identify the message.~~

###### 24 ~~Security~~

25 ~~This building block is mandatory and non-repetitive. It contains detailed information related to  
26 the security creation message. It includes the following elements:~~

27 | ~~Identification;~~

28 | ~~Long and short names with related starting validity date;~~

29 | ~~Denomination currency;~~

30 | ~~Expiration/maturity date;~~

31 | ~~CFI identifier;~~

32 | ~~Restriction information.~~

- 1 ~~To apply an immediate restriction, the value "1000-01-01T00:01:00" shall be used as the Valid~~  
 2 ~~From value for the restriction.~~
- 3 ~~To remove immediately a restriction, the value "9999-12-31T23:59:00" shall be used as the~~  
 4 ~~Valid To value for the restriction.~~
- 5 ~~Issuance~~
- 6 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
 7 ~~the issuance of the security. It includes the following elements:~~
- 8 | ~~Country of issuance;~~
  - 9 | ~~Issue date;~~
  - 10 | ~~Starting validity date for ISIN.~~
- 11 ~~Settlement Information~~
- 12 ~~This building block is mandatory and non-repetitive. It contains detailed settlement information~~  
 13 ~~for the related security. It includes the following elements:~~
- 14 | ~~Security quantity type;~~
  - 15 | ~~Minimum settlement unit;~~
  - 16 | ~~Settlement unit multiple;~~
  - 17 | ~~Deviating settlement unit.~~
- 18 ~~Supplementary Data~~
- 19 ~~This building block is optional and non-repetitive. It contains detailed information on market-~~  
 20 ~~specific attributes for the securities.~~
- 21 ~~References/Links~~
- 22 ~~The CoCo-specific schema, the additional schema required to fill the "Supplementary Data"~~  
 23 ~~block and documentation in HTML/PDF format as well as the message examples are provided~~  
 24 ~~outside of this document under the following link.~~
- 25 ~~[http://www.swift.com/mystandards/T2S/reda.006.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/reda.006.001.01_CoCo)~~

1 {Split book approach}

2 ~~3.3.6.1.3 The message in business context~~

3 ~~Message example: reda.006.001.01\_T2S\_CreateSecurities\_Example.xml~~

4 ~~In this example a CSD participating in CRDM requests the creation of a security in T2S. ISIN for~~  
5 ~~the security is "XXABCDEFGHJIJ" and security names are sample ones. Security is defined as an~~  
6 ~~equity/share, it is issued in Italy in EUR currency and expires on 11-04-2016.~~

7 ~~Settlement occurs in Units with a minimum settlement unit of 50 and multiple 5 or deviating~~  
8 ~~settlement units 73 and 79. {Split book approach}~~

9 ~~3.3.6.2 SecurityMaintenanceRequest V01 (reda.007.001.01)~~

10 ~~3.3.6.2.1 Overview and scope of the message~~

11 ~~This chapter illustrates the SecurityMaintenanceRequestV01 message.~~

12 ~~The SecurityMaintenanceRequestV01 is sent by CSDs or any party authorised by them to CRDM.~~

13 ~~It is used for instructing the update of a security by providing details about the security to be~~  
14 ~~updated. With a SecurityMaintenanceRequestV01, only one modification can be instructed.~~

15 ~~In the response, CRDM sends reda.029.001.01 when the update of the security has been suc-~~  
16 ~~cessfully processed, queued or rejected. {Split book approach}~~

17 ~~3.3.6.2.2 The CoCo-specific schema~~

18 ~~Outline of the schema~~

1 ~~The SecurityMaintenanceRequestV01 message is composed of the following message building~~  
2 ~~blocks:~~

3 ~~Identification~~

4 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
5 ~~by the sending party to uniquely and unambiguously identify the message.~~

6 ~~Update Type~~

7 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
8 ~~the security maintenance message. According to the type of modification requested, it includes~~  
9 ~~one of the modification blocks:~~

10 ~~Add~~

11 ~~This building block is optional and non-repetitive. It contains detailed information related to the~~  
12 ~~attributes to be added to the security. It includes the following elements:~~

- 13 | ~~Long and short names with related starting validity date;~~
- 14 | ~~ISIN with related starting validity date;~~
- 15 | ~~Restriction information;~~
- 16 | ~~Deviating settlement unit;~~
- 17 | ~~Market-specific attribute.~~

18 ~~To apply an immediate restriction, the value "1000-01-01T00:01:00" shall be used as the Valid~~  
19 ~~From value for the restriction.~~

20 ~~Delete~~

21 ~~This building block is optional and non-repetitive. It contains detailed information related to the~~  
22 ~~attributes to be deleted from the security. It includes the following elements:~~

- 23 | ~~Long and short names with related starting validity date;~~
- 24 | ~~ISIN with related starting validity date;~~
- 25 | ~~Restriction information;~~
- 26 | ~~Deviating settlement unit;~~
- 27 | ~~Market-specific attributes.~~

28 ~~Modify~~

29 ~~This building block is optional and non-repetitive. It contains detailed information related to the~~  
30 ~~attributes to be updated for the security. It includes the following elements~~

- 31 | ~~Long and short names with related starting validity date;~~
- 32 | ~~Denomination currency;~~
- 33 | ~~Maturity or expiry date;~~
- 34 | ~~Issue date;~~
- 35 | ~~Restriction information;~~

- 1 | ~~Security quantity type;~~
- 2 | ~~Minimum denomination quantity;~~
- 3 | ~~Minimum multiple quantity;~~
- 4 | ~~Market-specific attributes~~
- 5 | ~~CFI~~
- 6 | ~~Country of Issuance.~~

7 ~~To remove immediately a restriction, the value "9999-12-31T23:59:00" shall be used as the~~  
 8 ~~Valid To value for the restriction.~~

9 **SecurityIdentification**

10 ~~This building block is mandatory and non-repetitive. It contains the identification for the securi-~~  
 11 ~~ty to be modified.~~

12 ~~The CoCo-specific schema, the additional schema required to fill the "Supplementary Data"~~  
 13 ~~block and documentation in HTML/PDF format as well as the message examples are provided~~  
 14 ~~outside of this document under the following link.~~

15 ~~[http://www.swift.com/mystandards/T2S/reda.007.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/reda.007.001.01_CoCo)~~

1 {Split book approach}

2 ~~3.3.6.2.3 The message in business context~~

3 ~~Message example: reda.007.001.01\_T2S\_UpdateSecurity\_Example.xml~~

4 ~~In this example a CSD requests the update of security with ISIN "XXABCDEFGHJIJ". A new deviating settlement unit of 19 is added.~~{Split book approach}

5

### ~~3.3.6.3 SecurityCreationStatusAdviceV01 (reda.008.001.01)~~

#### ~~3.3.6.3.1 Overview and scope of the message~~

~~This chapter illustrates the SecurityCreationStatusAdviceV01 message.~~

~~The SecurityCreationStatusAdviceV01 is sent by CRDM to inform the CSD or any party authorised by them about the status of a security creation request.~~

~~This message is sent by CRDM in the following message usages:~~

~~| Rejected;~~

~~| Queued;~~

~~| Completed.~~

~~These message usages are described in the section "The message in business context". (Split book approach)~~

#### ~~3.3.6.3.2 The CoCo-specific schema~~

##### ~~Outline of the schema~~

~~The SecurityCreationStatusAdviceV01 message is composed of the following message building blocks:~~

##### ~~Identification~~

~~This building block is mandatory and non-repetitive. It contains an identification assigned by CRDM to uniquely and unambiguously identify the message.~~

##### ~~RequestMessageIdentification~~

~~This building block is mandatory and non-repetitive. It contains the identification assigned by the sending party to uniquely and unambiguously identify the original message generating the status advice.~~

##### ~~SecurityIdentification~~

~~This building block is optional and non-repetitive. It contains the identification of the security whether original request has been successfully processed.~~

##### ~~ProcessingStatus~~

~~This building block is mandatory and non-repetitive. It contains detailed information related to the status of the original request. It includes the following elements:~~

~~| Status;~~

~~| Reason;~~

~~| Additional reason information.~~

##### ~~References/Links~~

~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message examples are provided outside of this document under the following link:~~

1 [http://www.swift.com/mystandards/T2S/reda.008.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/reda.008.001.01_CoCo)

21 ~~3.3.6.4.3 The message in business context~~

22 ~~Message example: rede.009.001.01\_T2S\_SecurityStatement\_Example.xml~~

23 ~~In this example a statement is sent to CSD for business date "2011-02-01".~~

24 ~~Security short name changed from "SAMPLE SEC" to "NEW SAMPLE SEC" for security with ISIN "ABCDEFGHIJKL". (Split book approach)~~

### ~~3.3.6.5 SecurityQueryV01 (reda.010.001.01)~~

#### ~~3.3.6.5.1 Overview and scope of the message~~

~~This chapter illustrates the SecurityQueryV01 message.~~

~~The SecurityQueryV01 is sent by any directly connected CRDM Actor to CRDM to query on securities reference data.~~

~~This message is sent to CRDM to make the following type of queries:~~

~~| Securities Reference Data Query;~~

~~| ISIN List Query;~~

~~| Securities CSD Link Query;~~

~~| Securities Deviating Nominal Query.~~

~~These query types are described in the section "The message in business context".~~

~~In response to the SecurityQueryV01, a reda.012.001.01 containing the requested information is returned.~~

~~For Securities Reference Data requests (reda.010 "SECR") the query response (reda.012) could contain an exceptional amount of data. On request to the T2S Service Desk a special procedure can be applied to allow the delivery of the query response (reda.012) for which pagination is applied in any case without any size check. (Split book approach)~~

#### ~~3.3.6.5.2 The CoCo-specific schema~~

##### ~~Outline of the schema~~

~~The SecurityQueryV01 message is composed of the following message building blocks:~~

##### ~~Identification~~

~~This building block is mandatory and non-repetitive. It must contain an identification assigned by the sending party to uniquely and unambiguously identify the message.~~

##### ~~RequestType~~

~~This building block is mandatory and non-repetitive. It must contain type of query requested.~~

##### ~~SearchCriteria~~

~~This building block is mandatory and non-repetitive. It contains detailed information related to the business security query message. It includes the following elements:~~

~~| Identification;~~

~~| CFI;~~

~~| Maturity or expiration date;~~

~~| Issue date;~~

~~| Issue currency;~~

~~| Country of issuance;~~

- 1 |  ~~Maintainer CSD;~~
- 2 |  ~~Investor CSD;~~
- 3 |  ~~Issuer CSD;~~
- 4 |  ~~Technical issuer CSD;~~
- 5 |  ~~Generic CSD of a security, both investor and issuer CSDs.~~

### 16 ~~3.3.6.6.2 The CoCo-specific schema~~

#### 17 ~~Outline of the schema~~

18 ~~The SecurityReportV01 message is composed of the following message building blocks:~~

#### 19 ~~Identification~~

20 ~~This building block is mandatory and non-repetitive. It contains an identification assigned by~~  
21 ~~CRDM to uniquely and unambiguously identify the message.~~

#### 22 ~~RequestMessageIdentification~~

23 ~~This building block is mandatory and non-repetitive. It contains the identification assigned by~~  
24 ~~the sending party to uniquely and unambiguously identify the original message generating the~~  
25 ~~report.~~

#### 26 ~~Pagination~~

27 ~~This building block is mandatory and non-repetitive. It contains the page number of the mes-~~  
28 ~~sage (within a query response) and continuation indicator to indicate that the query response~~  
29 ~~is to continue or that the message is the last page of the statement.~~

#### 30 ~~SecurityReportOrError~~

31 ~~This building block is mandatory and non-repetitive. It contains either the information match-~~  
32 ~~ing the search criteria of the related query or an error indication.~~

#### 33 ~~Security~~

34 ~~This building block is mandatory and contains detailed information related to the reported se-~~  
35 ~~curity. It includes the following elements:~~

- 1 | **Identification;**
- 2 | ~~Long and short names with related starting validity date;~~
- 3 | ~~Denomination currency;~~
- 4 | ~~Expiration/maturity date;~~
- 5 | ~~CFI identifier and restriction information.~~
- 6 | **Issuance**
- 7 | ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~
- 8 | ~~the issuance of the security. It includes the following elements:~~
- 9 | ~~Country of issuance;~~
- 10 | ~~Issue date;~~
- 11 | ~~Starting validity date.~~
- 12 | **SettlementInformation**
- 13 | ~~This building block is mandatory and non-repetitive. It contains detailed settlement information~~
- 14 | ~~for the related security. It includes the following elements:~~
- 15 | ~~Security quantity type;~~
- 16 | ~~Minimum settlement unit;~~
- 17 | ~~Settlement unit multiple;~~
- 18 | ~~Deviating settlement unit.~~
- 19 | **SupplementaryData**
- 20 | ~~This building block is optional and non-repetitive. It is present only if market-specific attributes~~
- 21 | ~~have been set for the reported security. It contains detailed information on market-specific~~
- 22 | ~~attributes for the security.~~
- 23 | **SecurityCSDLink**
- 24 | ~~This building block is optional and present only if CSD links have been configured for the securi-~~
- 25 | ~~ty. It contains detailed information on CSD links for the securities.~~
- 26 | **BusinessError**
- 27 | ~~This building block is optional and non-repetitive. It is present only if the query has not been~~
- 28 | ~~performed. It provides the reason why the requested information cannot be given.~~
- 29 | **References/Links**
- 30 | ~~The CoCo-specific schema, the additional schema required to fill the "Supplementary Data"~~
- 31 | ~~block and documentation in HTML/PDF format as well as the message examples are provided~~
- 32 | ~~outside of this document under the following link.~~
- 33 | ~~[http://www.swift.com/mystandards/T2S/rede.012.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/rede.012.001.01_CoCo)~~
- 34 | ~~Business rules applicable to the schema~~
- 35 | ~~Not applicable (CRDM outgoing message) (Split book approach)~~

~~3 Two deviating nominal are returned with values of 13 and 17 units. (Split book approach)~~

~~4 3.3.6.7 SecurityDeletionRequestV01 (reda.013.001.01)~~

~~5 3.3.6.7.1 Overview and scope of the message~~

~~6 This chapter illustrates the SecurityDeletionRequestV01 message.~~

~~7 The SecurityDeletionRequestV01 is sent by CSDs or any party authorised by them to CRDM.~~

~~8 It is used for instructing the deletion of a security by providing details about the security to be  
9 deleted.~~

~~10 In the response, CRDM sends reda.030.001.01 when the deletion of the security has been suc-  
11 cessfully processed or queued, or has been rejected. (Split book approach)~~

~~12 3.3.6.7.2 The CoCo-specific schema~~

~~13 Outline of the schema~~

~~14 The SecurityDeletionRequestV01 message is composed of the following message building  
15 blocks:~~

~~16 Identification~~

~~17 This building block is mandatory and non-repetitive. It must contain an identification assigned  
18 by the sending party to uniquely and unambiguously identify the message.~~

~~19 SecurityIdentification~~

~~20 This building block is mandatory and non-repetitive. It contains the identification for the securi-  
21 ty to be deleted.~~

~~22 References/Links~~

~~23 The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-  
24 amples are provided outside of this document under the following link:~~

2 ~~3.3.6.8.3 The message in business context~~

3 ~~Message example: CreateParty\_example.xml~~

4 ~~In this example a Central Bank requests the creation of a payment bank in CRDM. The party is~~  
 5 ~~valid starting from 2021-01-01 and identified with BIC "UNCRITMMXXX". Technical address for~~  
 6 ~~party would be "ABCD" while address and names are filled with sample data.~~

7 {Split book approach}

8 ~~3.3.6.9 PartyQueryV01 (reda.015.001.01)~~

9 ~~3.3.6.9.1 Overview and scope of the message~~

10 ~~This chapter illustrates the PartyQueryV01 message.~~

~~1 The PartyQueryV01 is sent by CSDs, CBs, CSD participants, payment banks or any party author-  
2 ised by them to CRDM to query on party reference data.~~

~~3 This message is sent to CRDM to make the following type of queries:~~

~~4 | Party Reference Data Query;~~

~~5 | Party List Query;~~

~~6 | Restricted Party Query.~~

~~7 These query types are described in the section "The message in business context".~~

~~8 In response to the PartyQueryV01, a reda.017.001.01 containing the requested information is  
9 returned. (Split book approach)~~

### ~~10 3.3.6.9.2 The CoCo-specific schema~~

#### ~~11 Outline of the schema~~

~~12 The PartyQueryV01 message is composed of the following message building blocks:~~

#### ~~13 MessageIdentification~~

~~14 This building block is mandatory and non-repetitive. It must contain an identification assigned  
15 by the sending party to uniquely and unambiguously identify the message and the type of que-  
16 ry requested.~~

#### ~~17 SearchCriteria~~

~~18 This building block is mandatory and non-repetitive. It contains detailed information related to  
19 the business party query message. It includes the following elements:~~

~~20 | Identification;~~

~~21 | Opening and closing date;~~

~~22 | Type of the party;~~

~~23 | CSD or CB identification;~~

~~24 | Restriction identification;~~

~~25 | Restriction issue date.~~

#### ~~26 References/Links~~

~~Query type example: RestrictedPartyQuery\_example.xml~~

12

~~In this example, a Central Bank participating in CRDM with BIC "BITAITRRXXX" requests a list of the restricted parties starting from 2021-08-01. (Split book approach)~~

13

1 ~~3.3.6.10 PartyStatusAdviceV01 (reda.016.001.01)~~

2 ~~3.3.6.10.1 Overview and scope of the message~~

3 ~~This chapter illustrates the PartyStatusAdviceV01 message.~~

4 ~~The PartyStatusAdviceV01 is sent by CRDM to inform the CSD, CB, or any party authorised by~~  
5 ~~them about the status of a party maintenance request (creation, update and delete).~~

6 ~~This message is sent by CRDM in the following message usages:~~

7 | ~~Rejected;~~

8 | ~~Queued;~~

9 | ~~Completed.~~

10 ~~These message usages are described in the section “The message in business context”.~~ (Split  
11 ~~book approach)~~

12 ~~3.3.6.10.2 The CoCo-specific schema~~

13 ~~Outline of the schema~~

14 ~~The PartyStatusAdviceV01 message is composed of the following message building blocks:~~

15 ~~MessageHeader~~

16 ~~This building block is mandatory and non-repetitive. It contains the message identification~~  
17 ~~(“NONREF” value can be used, since it is already contained in the business application header)~~  
18 ~~and the identification assigned by the sending party to uniquely and unambiguously identify~~  
19 ~~the original message generating the status advice.~~

20 ~~PartyStatus~~

21 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
22 ~~the status of the original maintenance request. It includes the following elements:~~

23 | ~~Status;~~

24 | ~~Reason;~~

25 | ~~Additional reason information;~~

26 | ~~In case of a completed maintenance request, the party identification.~~

27 ~~References/Links~~

28 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
29 ~~amples are provided outside of this document under the following link:~~

30 ~~[http://www.swift.com/mystandards/T2S/reda.016.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/reda.016.001.01_CoCo)~~

31 ~~Business rules applicable to the schema~~

32 ~~Not applicable (CRDM outgoing message)~~ (Split book approach)

1 ~~3.3.6.10.3 The message in business context~~

2 ~~Message usage: Rejected~~

3 ~~This message usage describes a party status advice message sent by CRDM when a mainte-~~  
 4 ~~nance request has been rejected.~~

5 ~~Specific message requirements~~

6 ~~Field for Status is filled with rejection code "REJT".~~

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
Status Document/PtyStsAdvc/PtySts/Sts	Status6Code	Fixed value "REJT"
StatusReason Document/PtyStsAdvc/PtySts/StsRsn	StatusReasonInformation10	Details for reason

8 ~~Message usage example: PartyStatusRejected\_example.xml~~

9 ~~In this example processing for a party creation request sent with reference "SAMPLEPAR-~~  
 10 ~~TYCRE" has been rejected. Thus the sender originating the maintenance request is notified with~~  
 11 ~~the status advice.~~

12 ~~Message usage: Queued~~

13 ~~This message usage describes a party status advice message sent by CRDM when a mainte-~~  
 14 ~~nance request has been queued.~~

15 ~~Specific message requirements~~

16 ~~Field for Status is filled with rejection code "QUED".~~

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
Status Document/PtyStsAdvc/PtySts/Sts	Status6Code	Fixed value "QUED"
StatusReason Document/PtyStsAdvc/PtySts/StsRsn	StatusReasonInformation10	Details for reason

18 ~~Message usage example: PartyStatusQueued\_example.xml~~

19 ~~In this example processing for a party update request sent with reference "SAMPLEPARTYUPD"~~  
 20 ~~has been queued. Thus the sender originating the maintenance request is notified with the sta-~~  
 21 ~~tus advice.~~

22 ~~Message usage: Completed~~

23 ~~This message usage describes a party status advice message sent by CRDM when a mainte-~~  
 24 ~~nance request has been successfully processed.~~

25 ~~Specific message requirements~~

1 ~~Field for Status is filled with rejection code "COMP".~~

2

MESSAGE ITEM	DATA TYPE / CODE	UTILISATION
Status	Status6Code	Fixed value "COMP"
Document/PtyStsAdvc/PtySts/Sts		
SystemPartyIdentification	SystemPartyIdentification8	Identification of the party involved in the maintenance request
Document/PtyStsAdvc/PtySts/SysPtyId		

3 ~~Message usage example: PartyStatusCompleted\_example.xml~~

4 ~~In this example processing for a party deletion maintenance request sent with reference "SAMPLEPARTYDEL" has been successfully processed. Thus the sender originating the request is notified with the status advice containing the identification of the deleted party with BIC "BITAITRRXXX" belonging to CB with BIC "UNCRITMMXXX". (Split book approach)~~

8 ~~3.3.6.11 PartyReportV01 (reda.017.001.01)~~

9 ~~3.3.6.11.1 Overview and scope of the message~~

10 ~~This chapter illustrates the PartyReportV01 message.~~

11 ~~The PartyReportV01 is sent by CRDM to all directly connected CRDM Actors and is sent to provide with requested party information.~~

13 ~~This message is sent by CRDM in the following message usages:~~

- 14 | ~~Party Reference Data Response;~~
- 15 | ~~Party List Response;~~
- 16 | ~~Restricted Party Response.~~

17 ~~These message usages are described in the section "The message in business context".~~

18 ~~The PartyReportV01 is sent in response to the reda.015.001.01 message. (Split book approach)~~

19 ~~3.3.6.11.2 The CoCo-specific schema~~

20 ~~Outline of the schema~~

21 ~~The PartyReportV01 message is composed of the following message building blocks:~~

22 ~~MessageHeader~~

23 ~~This building block is mandatory and non-repetitive.~~

24 ~~It contains an identification assigned by CRDM to uniquely and unambiguously identify the message and the identification of the original business query generating the report.~~

26 ~~ReportOrError~~

~~This building block is mandatory and non-repetitive. It contains either the information matching the search criteria of the related query or an error indication.~~

### ~~PartyReport~~

~~This building block is optional. It provides requested information on party.~~

~~It includes the following elements:~~

- ~~| Identification;~~
- ~~| Opening and closing date;~~
- ~~| Party type;~~
- ~~| Technical address;~~
- ~~| Market-specific attributes;~~
- ~~| Long and short names;~~
- ~~| Address;~~
- ~~| Restriction information.~~

### ~~OperationalError~~

~~This building block is optional. It provides the reason why the requested information can not be given.~~

### ~~References/Links~~

~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message examples are provided outside of this document under the following link:~~

~~[http://www.swift.com/mystandards/T2S/reda.017.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/reda.017.001.01_CoCo)~~

~~Business rules applicable to the schema~~

~~Not applicable (CRDM outgoing message) (Split book approach)~~

### ~~3.3.6.11.3 The message in business context~~

#### ~~Message usage: Party Reference Data Response~~

~~This message usage provides the sender with requested information about party reference data.~~

#### ~~Specific message requirements~~

~~A Party Reference Data Response contains the following set of information on queried party.~~

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
<del>PartyIdentification</del>	<del>SystemPartyIdentification8</del>	<del>Identification of the party to be reported</del>
<del>Docu- ment/PtyRpt/RptOrErr/PtyRpt/PtyId</del>

3 **stricted parties:**

4 **One party ("UNCRITMMXXX") is returned in the response with a "BLOC" restriction issued on**  
5 **2010-09-01. (Split book approach)**

6 ~~3.3.6.12 SecuritiesAccountCreationRequestV01 (reda.018.001.01)~~

7 ~~**3.3.6.12.1 Overview and scope of the message**~~

8 ~~**This chapter illustrates the SecuritiesAccountCreationRequestV01 message:**~~

9 ~~**The SecuritiesAccountCreationRequestV01 is sent by CSDs or any party authorised by them to**~~  
10 ~~**CRDM.**~~

11 ~~**It is used for instructing the creation of a securities account by providing details about the se-**~~  
12 ~~**curities account to be created.**~~

13 ~~**In the response, CRDM sends reda.020.001.01 when the creation of the Securities Account has**~~  
14 ~~**been successfully processed or has been rejected. (Split book approach)**~~

15 ~~**3.3.6.12.2 The CoCo-specific schema**~~

16 ~~**Outline of the schema**~~

17 ~~**The SecuritiesAccountCreationRequestV01 message is composed of the following message**~~  
18 ~~**building blocks:**~~

19 ~~**MessageIdentification**~~

~~This building block is mandatory and non-repetitive. It must contain an identification assigned by the sending party to uniquely and unambiguously identify the message.~~

**SecuritiesAccount**

~~This building block is mandatory and non-repetitive. It contains detailed information related to the securities account creation message. It includes the following elements:~~

- ~~| Account owner identification;~~
- ~~| Securities account number;~~
- ~~| Type of the account;~~
- ~~| Opening and closing date;~~
- ~~| Hold indicator default value;~~
- ~~| Negative position indicator;~~
- ~~| Market specific attributes;~~
- ~~| Restriction information;~~
- ~~| End investor flag;~~
- ~~| Pricing scheme.~~

~~To apply an immediate restriction, the value "1000-01-01T00:01:00" shall be used as the Valid From value for the restriction.~~

~~To remove immediately a restriction, the value "9999-12-31T23:59:00" shall be used as the Valid To value for the restriction.~~

**References/Links**

2 ~~3.3.6.12.3 The message in business context~~

3 ~~Message example: reda.018.001.01\_T2S\_CreateSecuritiesAccount\_Example.xml~~

4 ~~In this example a CSD participating in CRDM and identified with BIC "CSDAXXYAAA" requests~~  
5 ~~the creation of a securities account in CRDM.~~

6 ~~The account is valid starting from 2011-01-01 and the account owner is a CSD Participant with~~  
7 ~~BIC "CSDPXXYAAA".~~

8 ~~Account is created with a default Hold status and does not hold negative positions.~~{Split book  
9 approach}

10 ~~3.3.6.13 SecuritiesAccountQueryV01 (reda.019.001.01)~~

11 ~~3.3.6.13.1 Overview and scope of the message~~

12 ~~This chapter illustrates the SecuritiesAccountQueryV01 message.~~

13 ~~The SecuritiesAccountQueryV01 is sent by CSDs, CSD participants or any party authorised by~~  
14 ~~them to CRDM to query on securities account reference data.~~

15 ~~This message is sent to CRDM to make the following type of queries:~~

16 | ~~Securities Account Reference Data Query;~~

17 | ~~Securities Account List Query.~~

18 ~~These query types are described in the section "The message in business context".~~{Split book  
19 approach}

20 ~~3.3.6.13.2 The CoCo-specific schema~~

21 ~~Outline of the schema~~

22 ~~The SecuritiesAccountQueryV01 message is composed of the following message building~~  
23 ~~blocks:~~

24 ~~MessageHeader~~

25 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
26 ~~by the sending party to uniquely and unambiguously identify the message and the type of que-~~  
27 ~~ry requested.~~

28 ~~Pagination~~

1 ~~This building block is mandatory and non-repetitive. It contains the page number of the mes-~~  
 2 ~~sage (within a query response) and continuation indicator to indicate that the query response~~  
 3 ~~is to continue or that the message is the last page of the statement.~~

4 **SearchCriteria**

5 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
 6 ~~the securities account query message. It includes the following elements:~~

- 7 | ~~Identification;~~
- 8 | ~~Account servicer;~~
- 9 | ~~Account owner;~~
- 10 | ~~Party type;~~
- 11 | ~~Opening and closing date;~~
- 12 | ~~Account type;~~
- 13 | ~~End investor flag;~~
- 14 | ~~Pricing scheme.~~

StatusReason Docu- ment/SetiesAcctStsAdv/SetiesAcctSts/ StsRsn	StatusReasonInformation10	Details for reason

2 ~~Message usage example: reda.020.001.01\_T2S\_Queued\_Example.xml~~

3 ~~In this example processing for a securities account update request sent with reference "SAM-~~  
4 ~~PLET2SSACUPD" has been queued. Thus the sender originating the request is notified with the~~  
5 ~~status advice.~~

6 ~~Message usage: Completed~~

7 ~~This message usage describes a securities account status advice message sent by CRDM when~~  
8 ~~a maintenance request has been successfully processed.~~

9 ~~Specific message requirements~~

10 ~~Field for Status is filled with rejection code "COMP".~~

11

MESSAGE ITEM	DATA-TYPE/ CODE	UTILISATION
Identification Docu- ment/SetiesAcctStsAdv/SetiesAcctSts/ RltdSetiesAcct/Id	RestrictedFINXMax35Text	Securities account identi- fication
Status Docu- ment/SetiesAcctStsAdv/SetiesAcctSts/ Sts	Status6Code	Fixed value "COMP"

12 ~~Message usage example: reda.020.001.01\_T2S\_Completed\_Example.xml~~

13 ~~In this example processing for a securities account deletion request sent with reference "SAM-~~  
14 ~~PLESACDEL" has been successfully processed. Thus the sender originating the request is noti-~~  
15 ~~fied with the status advice containing the identification of the deleted securities account. (Split~~  
16 ~~book approach)~~

1 ~~3.3.6.15 SecuritiesAccountReportV01 (reda.021.001.01)~~

2 ~~*3.3.6.15.1 Overview and scope of the message*~~

3 ~~This chapter illustrates the SecuritiesAccountReportV01 message.~~

4 ~~The SecuritiesAccountReportV01 is sent by CRDM to all directly connected CRDM Actors and is~~  
5 ~~sent to provide with requested securities account information.~~

6 ~~In case the size of the message to be sent exceeds the maximum size of 32 MB the message~~  
7 ~~will be split into several messages (Please see section Outbound traffic exceeding given size~~  
8 ~~limitations).~~

9 ~~This message is sent by CRDM in the following message usages:~~

10 | ~~Securities Account Reference Data response;~~

11 | ~~Securities Account List response.~~

12 ~~These message usages are described in the section "The message in business context".~~

13 ~~The SecuritiesAccountReportV01 is sent in response to the reda.019.001.01 message. (Split book~~  
14 ~~approach)~~

15 ~~*3.3.6.15.2 The CoCo-specific schema*~~

16 ~~Outline of the schema~~

17 ~~The SecuritiesAccountReportV01 message is composed of the following message building~~  
18 ~~blocks:~~

19 ~~MessageHeader~~

20 ~~This building block is mandatory and non-repetitive. It contains an identification assigned by~~  
21 ~~the sending party to uniquely and unambiguously identify the message and the identification of~~  
22 ~~the original business query generating the report.~~

23 ~~ReportOnError~~

24 ~~This building block is mandatory and non-repetitive. It contains either the information match-~~  
25 ~~ing the search criteria of the related query or an error indication.~~

26 ~~SecuritiesAccountReport~~

27 ~~This building block is optional and present whether records are found processing the originat-~~  
28 ~~ing query. It provides requested information on Securities Account.~~

29 ~~It includes the following elements:~~

30 | ~~Identification;~~

31 | ~~Opening and closing date;~~

32 | ~~Hold indicator default value;~~

33 | ~~Negative position indicator;~~

34 | ~~Account type;~~

1 | ~~Account owner;~~

2 | ~~Party type;~~

3 | ~~Market specific attribute;~~

4 | ~~Restriction;~~

5 | ~~End investor flag;~~

6 | ~~Pricing scheme.~~

7 **OperationalError**

8 ~~This building block is optional and present if a business error occurs when processing the origi-~~  
 9 ~~inating query. It provides the reason why the requested information can not be given.~~

10 **Pagination**

11 ~~This building block is mandatory and non-repetitive. It contains the page number of the mes-~~  
 12 ~~sage (within a query response) and continuation indicator to indicate that the query response~~  
 13 ~~is to continue or that the message is the last page of the statement.~~

14 **References/Links**

15 ~~The CoCo specific schema and documentation in HTML/PDF format as well as the message ex-~~  
 16 ~~amples are provided outside of this document under the following link:~~

17 ~~[http://www.swift.com/mystandards/T2S/reda.021.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/reda.021.001.01_CoCo)~~

18 ~~Business rules applicable to the schema~~

19 ~~Not applicable (CRDM outgoing message) (Split book approach)~~

20 ~~3.3.6.15.3 The message in business context~~

21 ~~Message usage: Securities Account Reference Data Response~~

22 ~~This message usage provides the sender with requested information about securities account~~  
 23 ~~reference data.~~

24 ~~Specific message requirements~~

25 ~~A Securities Account Reference Data Response contains the following set of information for~~  
 26 ~~queried securities accounts.~~

27

6 Message usage example: reda.021.001.001\_T2S\_SecuritiesAccountListResponse.xml

7 In this example a CSD participating in CRDM and with BIC "CSDAXXYAAA" queried CRDM  
 8 about securities accounts list owned by CSD Participants.

1 ~~One securities account identified with "12345" and owned by CSD Participant with BIC "CSD-~~  
2 ~~PAAXYYY" is returned in the response. {Split book approach}~~

3 ~~3.3.6.16 PartyModificationRequestV01 (reda.022.001.01)~~

4 ~~3.3.6.16.1 Overview and scope of the message~~

5 ~~This chapter illustrates the PartyModificationRequestV01 message.~~

6 ~~The PartyModificationRequestV01 is sent by CSDs, CBs or any party authorised by them to~~  
7 ~~CRDM.~~

8 ~~It is used for instructing the update of a party by providing details about the party to be updat-~~  
9 ~~ed.~~

10 ~~With a PartyModificationRequestV01, only one modification can be instructed.~~

11 ~~In the response, CRDM sends reda.016.001.01 when the update of the party has been success-~~  
12 ~~fully processed or queued, or has been rejected. {Split book approach}~~

13 ~~3.3.6.16.2 The CoCo-specific schema~~

14 ~~Outline of the schema~~

15 ~~The PartyModificationRequestV01 message is composed of the following message building~~  
16 ~~blocks:~~

17 ~~MessageHeader~~

18 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
19 ~~by the sending party to uniquely and unambiguously identify the message.~~

20 ~~SystemPartyIdentification~~

21 ~~This building block is mandatory and non-repetitive. It contains the identification of the party~~  
22 ~~to be updated.~~

23 ~~Modification~~

24 ~~This building block is mandatory and contains detailed information related to the party modifi-~~  
25 ~~cation message. It includes the following elements:~~

26 ~~Opening and closing date, party code, address, technical address, market specific attributes,~~  
27 ~~short and long names and restriction information.~~

28 ~~Technical address can be added or deleted only.~~

29 ~~References/Links~~

30 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~  
31 ~~amples are provided outside of this document under the following link:~~

### 1 ~~3.3.6.16.3 The message in business context~~

#### 2 ~~Message example: UpdateParty\_example.xml~~

3 ~~In this example a CB participating in CRDM and with BIC "BITAITRRXXX" requests the update~~  
4 ~~of payment bank with BIC "UNCRITMMXXX".~~

5 ~~New address for the party is provided starting from 2021-02-01. (Split book approach)~~

### 6 ~~3.3.6.17 SecuritiesAccountModificationRequestV01 (reda.023.001.01)~~

#### 7 ~~3.3.6.17.1 Overview and scope of the message~~

8 ~~This chapter illustrates the SecuritiesAccountModificationRequestV01 message.~~

9 ~~The SecuritiesAccountModificationRequestV01 is sent by CSDs or any party authorised by them~~  
10 ~~to CRDM.~~

11 ~~It is used for instructing the update of a securities account by providing details about the secu-~~  
12 ~~rities account to be updated.~~

13 ~~In the response, CRDM sends reda.020.001.01 when the update of the securities account has~~  
14 ~~been successfully processed or queued, or has been rejected. (Split book approach)~~

#### 15 ~~3.3.6.17.2 The CoCo-specific schema~~

##### 16 ~~Outline of the schema~~

17 ~~The SecuritiesAccountModificationRequestV01 message is composed of the following message~~  
18 ~~building blocks:~~

19 ~~MessageIdentification~~

~~This building block is mandatory and non-repetitive. It must contain an identification assigned by the sending party to uniquely and unambiguously identify the message.~~

~~AccountIdentification~~

~~This building block is mandatory and non-repetitive. It contains the identification for the securities account to be modified.~~

~~Modification~~

~~This building block is mandatory and contains detailed information related to the securities account modification message. It includes the following elements:~~

- ~~| Closing date;~~
- ~~| Hold default indicator;~~
- ~~| Negative position indicator;~~
- ~~| Restriction information;~~
- ~~| Market specific attributes;~~
- ~~| End investor flag;~~
- ~~| Pricing scheme~~

~~To apply an immediate restriction, the value "1000-01-01T00:01:00" shall be used as the Valid From value for the restriction.~~

~~To remove immediately a restriction, the value "9999-12-31T23:59:00" shall be used as the Valid To value for the restriction.~~

~~Closing date, hold default indicator, negative position indicator, end investor flag and pricing scheme can only be updated.~~

1 {Split book approach}

2 ~~3.3.6.17.3 The message in business context~~

3 ~~Message example: reda.023.001.01\_T2S\_UpdateSecuritiesAccount\_Example.xml~~

4 ~~In this example, a CSD participating in CRDM and with BIC "CSDAXXYAAA" requests the up-~~  
5 ~~date of securities account with identifier "12345".~~

6 ~~New value for holding negative position in the account is set to "true".(Split book approach)~~

7 ~~3.3.6.18 CollateralValueCreationRequestV01 (reda.024.001.01)~~

8 ~~3.3.6.18.1 Overview and scope of the message~~

9 ~~This chapter illustrates the CollateralValueCreationRequestV01 message.~~

10 ~~The CollateralValueCreationRequestV01 is sent to CRDM by CBs, payment banks, external col-~~  
11 ~~lateral management systems.~~

12 ~~It is used for instructing the creation of a securities valuation by providing details about the~~  
13 ~~securities valuation to be created.~~

14 ~~In the response, CRDM sends reda.028.001.01 when the creation of the securities valuation has~~  
15 ~~been successfully processed, queued or has been rejected.(Split book approach)~~

16 ~~3.3.6.18.2 The CoCo-specific schema~~

17 ~~Outline of the schema~~

18 ~~The CollateralValueCreationRequestV01 message is composed of the following message build-~~  
19 ~~ing blocks:~~

20 ~~MessageHeader~~

21 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
22 ~~by the sending party to uniquely and unambiguously identify the message.~~

23 ~~CollateralValue~~

24 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
25 ~~the collateral value creation message. It includes the following elements: security identifier,~~  
26 ~~valuation date and price for the security, own-use valuation price (in cases where a Close Link~~  
27 ~~exists), related currency.~~

28 ~~NCBorPaymentBank~~

29 ~~This building block is mandatory and non-repetitive. It contains the identification of the Central~~  
30 ~~Bank or Payment Bank providing the collateral value.~~

31 ~~References/Links~~

3 ~~Message example: reda.024.001.01\_T2S\_CollateralValueCreation\_Example.xml~~

4 ~~In this example Central Bank with BIC "NCBAXXYAAA" requests the creation of a securities~~  
5 ~~valuation in CRDM.~~

6 ~~Valuation is provided for security with ISIN "XXABCDEFGHJIJ" and price is 14.65 EUR. It is valid~~  
7 ~~for date "2011-01-01".(Split book approach)~~

8 ~~3.3.6.19 EligibleSecuritiesCreationRequestV01 (reda.025.001.01)~~

9 ~~3.3.6.19.1 Overview and scope of the message~~

10 ~~This chapter illustrates the EligibleSecuritiesCreationRequestV01 message.~~

11 ~~The EligibleSecuritiesCreationRequestV01 is sent by CBs, payment banks or any party author-~~  
12 ~~ised by them to T2S.~~

13 ~~It is used for defining a security as eligible for auto-collateralisation or client-collateralisation~~  
14 ~~by providing details about the security to be defined as eligible.~~

15 ~~In the response, T2S sends reda.028.001.01 when the definition of the securities as eligible has~~  
16 ~~been successfully processed, queued or has been rejected.(Split book approach)~~

17 ~~3.3.6.19.2 The CoCo-specific schema~~

18 ~~Outline of the schema~~

19 ~~The message EligibleSecuritiesCreationRequestV01 is composed of the following message~~  
20 ~~building blocks:~~

**1 MessageIdentification**

~~2 This building block is mandatory and non-repetitive. It must contain an identification assigned  
3 by the sending party to uniquely and unambiguously identify the message.~~

**4 EligibleSecurity**

~~5 This building block is mandatory and non-repetitive. It contains detailed information related to  
6 the eligible securities creation message. It includes the following elements:~~

- ~~7 | Security identifier;~~
- ~~8 | Collateralisation currency;~~
- ~~9 | Identification of the Central Bank or Payment Bank.~~

**10 References/Links**

~~11 The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-  
12 amples are provided outside of this document under the following link:~~

### 19 ~~3.3.6.25.3 The message in business context~~

#### 20 ~~Message example: DeleteParty\_example.xml~~

21 ~~In this example a CB participating in CRDM and with BIC "BITAITRRXXX" requests the deletion~~  
22 ~~of party "UNCRITMMXXX". (Split book approach)~~

**3.3.6.26 ~~SecuritiesAccountDeletionRequestV01 (reda.032.001.01)~~*****3.3.6.26.1 Overview and scope of the message***

~~This chapter illustrates the SecuritiesAccountDeletionRequestV01 message.~~

~~The SecuritiesAccountDeletionRequestV01 is sent by CSDs or any party authorised by them to CRDM.~~

~~It is used for instructing the deletion of a securities account by providing details about the securities account to be deleted.~~

~~In the response, CRDM sends reda.020.001.01 when the deletion of the securities account has been successfully processed, queued or has been rejected. {Split book approach}~~

***3.3.6.26.2 The CoCo-specific schema*****Outline of the schema**

~~The SecuritiesAccountDeletionRequestV01 message is composed of the following message building blocks:~~

**MessageIdentification**

~~This building block is mandatory and non-repetitive. It must contain an identification assigned by the sending party to uniquely and unambiguously identify the message.~~

**AccountIdentification**

~~This building block is mandatory and non-repetitive. It must contain the identification for the securities account to be deleted.~~

8 ~~3.3.6.34.1 Overview and scope of the message~~

9 ~~This chapter illustrates the CashAccountAuditTrailReportV01 message.~~

10 ~~The CashAccountAuditTrailReportV01 is sent by CRDM to CBs, payment banks or any party au-~~  
11 ~~thorised by them and is sent to provide with requested Cash Account audit trail information.~~

12 ~~The CashAccountAuditTrailReportV01 reports changes applied to the Cash Account entity.~~

13 ~~The CashAccountAuditTrailReportV01 is sent in response to the reda.039.001.01 message.~~  
14 ~~{Split book approach}~~

15 ~~3.3.6.34.2 The CoCo-specific schema~~

16 ~~Outline of the schema~~

17 ~~The CashAccountAuditTrailReportV01 message is composed of the following message building~~  
18 ~~blocks:~~

19 ~~MessageIdentification~~

20 ~~This building block is mandatory and contains the message identification ("NONREF" value can~~  
21 ~~be used, since it is already contained in the business application header).~~

22 ~~OriginalMessageIdentification~~

23 ~~This building block is mandatory and non-repetitive. It contains the identification assigned by~~  
24 ~~the sending party to uniquely and unambiguously identify the original message generating the~~  
25 ~~report.~~

26 ~~ReportOnError~~

27 ~~This building block is mandatory and non-repetitive. It contains either the information match-~~  
28 ~~ing the search criteria of the related query or an error indication:~~

29 | ~~CashAccountAuditTrailReport This building block is optional. It provides requested infor-~~  
30 ~~mation on Cash Account audit trail. It includes the following elements:~~

31 - ~~Identification of the Cash Account;~~

- 1     – ~~Name of the field changed;~~
- 2     – ~~Value of the field before the change;~~
- 3     – ~~Value of the field after the change;~~
- 4     – ~~Timestamp of the change;~~
- 5     – ~~Name of the user who instructed the change;~~
- 6     – ~~Name of the user who approved the change in a four eyes scenario.~~
- 7     | ~~BusinessError This building block is optional. It provides the reason why the requested in-~~
- 8       ~~formation can not be given.~~

14    ~~Not applicable (CRDM outgoing message) (Split book approach)~~

### 15    ~~3.3.6.34.3 The message in business context~~

16    ~~Message example: CashAccountAuditTrailReport\_example.xml~~

17    ~~In this example a Central Bank participating in CRDM queried audit trail information for Cash~~  
18    ~~Account identified with "ACC001" during the period from 2018-01-01 to 2018-01-05.~~

19    ~~One occurrence is returned reporting a change for the Cash Account. Ceiling Notification~~  
20    ~~Amount has been set to 1.000.000 instead of 500.000.~~

21    ~~Modification has been instructed by user "USERTWOEYES" on 2018-01-03 at 17:59. (Split book~~  
22    ~~approach)~~

### 23    ~~3.3.6.35 PartyActivityAdviceV01 (reda.041.001.01)~~

#### 24    ~~3.3.6.35.1 Overview and scope of the message~~

25    ~~This chapter illustrates the PartyActivityAdviceV01 message.~~

26    ~~The PartyActivityAdviceV01 is sent by CRDM to CBs, CSDs, CSD participants, payment banks or~~  
27    ~~any party authorised by them and is sent to provide with information on changes occurred for~~  
28    ~~party reference data during the business day.~~

29    ~~The PartyActivityAdviceV01 reports changes applied to the following entities:~~

- 30    | ~~Party;~~
- 31    | ~~Party Name;~~
- 32    | ~~Party Address;~~
- 33    | ~~Party Code;~~

- 1 | ~~Party Restriction;~~
- 2 | ~~Market Specific Attribute;~~
- 3 | ~~Party Technical Address.~~

4 **The following table is an exhaustive description of the returned fields for each entity:**

5

ENTITY	ATTRIBUTE	RETURNED-FIELD-NAME
Party	Party-Opening-Date	Party-OpeningDate
Party	Party-Close-Date	Party-CloseDate
Party	Party-Type	Party.Type
Party-Name	Valid-From	PartyName.ValidFrom
Party-Name	Party-Long-Name	PartyName.LongName
Party-Name	Party-Short-Name	PartyName.ShortName
Party-Address	Valid-From	PartyAddress.ValidFrom
Party-Address	Street	PartyAddress.Street
Party-Address	House-Number	PartyAddress.HouseNumber
Party-Address	City	PartyAddress.City
Party-Address	Postal-Code	PartyAddress.PostalCode
Party-Address	State-or-Province	PartyAddress.StateorProvince
Party-Address	Country-Code	PartyAddress.CountryCode
Party-Code	Valid-From	PartyCode.ValidFrom
Party-Code	Code-Type	PartyCode.CodeType
Party-Code	Party-Mnemonic	PartyCode.PartyMnemonic
Party-Restriction	Restriction-Type	{restriction-type-code}/{valid from}/RTP

ENTITY	ATTRIBUTE	RETURNED-FIELD-NAME
Market-Specific-Party Attribute-Value	Market-Specific-Attribute-Name	PartyMSA.Name
Market-Specific-Party Attribute-Value	Value	<actual value of the Market-Specific Attribute-Name>
Party-Technical-Address	Technical-Address	Party-TechnicalAddress

1 {Split book approach}

2 ~~3.3.6.35.2 The CoCo-specific schema~~

3 ~~Outline of the schema~~

4 ~~The PartyActivityAdviceV01 message is composed of the following message building blocks:~~

5 ~~MessageIdentification~~

6 ~~This building block is mandatory and contains an identification assigned by CRDM to uniquely  
7 and unambiguously identify the message.~~

8 ~~PartyActivity~~

9 ~~This building block is mandatory and non-repetitive. It contains the date to which the state-  
10 ment refers to and the changes occurred.~~

11 ~~References/Links~~

12 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-  
13 amples are provided outside of this document under the following link:~~

14 ~~[http://www.swift.com/mystandards/T2S/rede.041.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/rede.041.001.01_CoCo)~~

15 ~~Business rules applicable to the schema~~

16 ~~Not applicable (CRDM outgoing message). {Split book approach}~~

17 ~~3.3.6.35.3 The message in business context~~

18 ~~Message example: rede.041.001.01\_T2S\_PartyActivityAdvice\_Example.xml~~

19 ~~In this example a statement is sent to Central Bank with BIC "NCBAXXYYAAA" for business  
20 date "2011-02-01".~~

21 ~~Long name for payment bank with BIC "PAYBXYYAAA" has changed from "SAMPLE-NAME" to  
22 "NEW-SAMPLE-NAME" starting from 2011-02-03. {Split book approach}~~

23 ~~3.3.6.36 Party Audit Trail Query V01 (rede.042.001.01)~~

24 ~~3.3.6.36.1 Overview and scope of the message~~

25 ~~This chapter illustrates the PartyAuditTrailQueryV01 message.~~

1 ~~The is sent by CBs, CSDs, CSD participants, payment banks or any party authorised by them to~~  
2 ~~CRDM to query on audit trail for party reference data.~~

3 ~~In response to the PartyAuditTrailQueryV01, a reda.043.001.01 containing the requested in-~~  
4 ~~formation is returned. {Split book approach}~~

5 ~~3.3.6.36.2 The CoCo-specific schema~~

6 ~~Outline of the schema~~

7 ~~The PartyAuditTrailQueryV01 message is composed of the following message building blocks:~~

8 ~~MessageHeader~~

9 ~~This building block is mandatory and non-repetitive. It must contain an identification assigned~~  
10 ~~by the sending party to uniquely and unambiguously identify the message.~~

11 ~~SearchCriteria~~

12 ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
13 ~~the business Party audit trail query message. It includes the following elements:~~

14 | ~~Party identification;~~

15 | ~~Date period.~~

16 ~~References/Links~~

17 ~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~

14 ~~Message example: PartyAuditTrailReport\_example.xml~~

15 ~~In this example a Central Bank participating in CRDM with BIC "BITAITRRXXX" queried audit~~  
16 ~~trail information for payment bank with BIC "UNCRITMMXXX".~~

17 ~~One occurrence is returned reporting a change for the party. Postal Code has been changed~~  
18 ~~from "54321" to "12345".~~

19 ~~Modification has been instructed by user "USER1" and confirmed on 2018-01-03 at 17:59 by~~  
20 ~~user "USER2". (Split book approach)~~

### 21 ~~3.3.6.38 EligibleCounterpartCSDStatusAdviceV01 (reda.044.001.01)~~

#### 22 ~~3.3.6.38.1 Overview and scope of the message~~

23 ~~This chapter illustrates the EligibleCounterpartCSDStatusAdviceV01 message.~~

24 ~~The EligibleCounterpartCSDStatusAdviceV01 is sent by CRDM to inform the sender of the origi-~~  
25 ~~nating request about the status of an eligible counterparty CSD maintenance request.~~

26 ~~This message is sent by CRDM in the following message usages:~~

27 | ~~Rejected;~~

28 | ~~Queued;~~

29 | ~~Completed.~~

30 ~~These message usages are described in the section "The message in business context". (Split~~  
31 ~~book approach)~~

1 **~~3.3.6.38.2 The CoCo-specific schema~~**

2 **~~Outline of the schema~~**

3 **~~The EligibleCounterpartCSDStatusAdviceV01 message is composed of the following message~~**  
 4 **~~building blocks:~~**

5 **~~MessageIdentification~~**

6 **~~This building block is mandatory and non-repetitive. It contains an identification assigned by~~**  
 7 **~~CRDM to uniquely and unambiguously identify the message.~~**

8 **~~OriginalMessageIdentification~~**

9 **~~This building block is mandatory and non-repetitive. It contains the identification assigned by~~**  
 10 **~~the sending party to uniquely and unambiguously identify the original message generating the~~**  
 11 **~~status advice.~~**

12 **~~StatusReason~~**

13 **~~This building block is mandatory and non-repetitive. It contains detailed information related to~~**  
 14 **~~the status of the original request. It includes the following elements:~~**

- 15 | **~~Status;~~**
- 16 | **~~Reason;~~**
- 17 | **~~Additional reason information.~~**

18 **~~References/Links~~**

19 **~~The CoCo-specific schema and documentation in HTML/PDF format as well as the message ex-~~**  
 20 **~~amples are provided outside of this document under the following link:~~**

21 **~~[http://www.swift.com/mystandards/T2S/rede.044.001.01\\_CoCo](http://www.swift.com/mystandards/T2S/rede.044.001.01_CoCo)~~**

11

~~Message usage example: reda.044.001.01\_T2S\_Queued\_Example.xml~~

12 ~~In this example processing for an eligible counterpart CSD creation request sent with reference~~  
 13 ~~"SAMPLET2SELGCSD" has been queued. Thus the sender originating the request is notified with~~  
 14 ~~the status advice.~~

15 ~~Message usage: Completed~~

16 ~~This message usage describes an eligible counterpart CSD status advice message sent by CRDM~~  
 17 ~~when an eligible counterpart CSD maintenance request has been completed.~~

18 ~~Specific message requirements~~

19 ~~Field for Status is filled with rejection code "COMP".~~

20

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Status Docu- ment/ElgblCntrptCSDStsAdvc/StsRsn/St s	Status6Code	Fixed value "COMP"

21

~~Message usage example: reda.044.001.01\_T2S\_Completed\_Example.xml~~

~~In this example processing for an eligible counterpart CSD creation request sent with reference "SAMPLET2SELGCSO" has been successfully processed. Thus the sender originating the request is notified with the status advice. (Split book approach)~~

~~3.3.6.39 SecurityCSDLinkCreationRequestV01 (reda.045.001.01)~~

~~3.3.6.39.1 Overview and scope of the message~~

~~This chapter illustrates the SecurityCSDLinkCreationRequestV01 message.~~

~~The SecurityCSDLinkCreationRequestV01 is sent by CSDs or any party authorised by them to CRDM.~~

~~It is used for instructing the creation of a Security CSD Link by providing details about the Security CSD Link to be created.~~

~~In the response, CRDM sends reda.047.001.01 when the creation of the Security CSD Link has been successfully processed or has been rejected. (Split book approach)~~

~~3.3.6.39.2 The CoCo-specific schema~~

~~Outline of the schema~~

~~The SecurityCSDLinkCreationRequestV01 message is composed of the following message building blocks:~~

~~MessageIdentification~~

~~This building block is mandatory and non-repetitive. It must contain an identification assigned by the sending party to uniquely and unambiguously identify the message.~~

~~SecurityCSDLink~~

~~This building block is mandatory and non-repetitive. It contains detailed information related to the security CSD link creation message. It includes the following elements:~~

~~| Financial instrument identification;~~

~~| Issuer or investor CSD identification;~~

~~| Technical issuer identification;~~

~~| Security maintenance indicator;~~

~~| Issuance account identification;~~

~~| Starting validity date;~~

~~| Ending validity date;~~

6 ~~date of investor security CSD link with validity starting date set to "2015-06-01" for ISIN~~  
7 ~~"XXABCDEFGHIIJ".~~8 ~~New ending validity date is set to "2015-12-31". (Split book approach)~~9 ~~3.3.6.41 SecurityCSDLinkStatusAdviceV01 (reda.047.001.01)~~10 ~~3.3.6.41.1 Overview and scope of the message~~11 ~~This chapter illustrates the SecurityCSDLinkStatusAdviceV01 message.~~12 ~~The SecurityCSDLinkStatusAdviceV01 is sent by CRDM to inform the sender of the originating~~  
13 ~~request about the status of a security CSD link maintenance request.~~14 ~~This message is sent by CRDM in the following message usages:~~

1 | ~~Rejected;~~

2 | ~~Queued;~~

3 | ~~Completed.~~

4 | ~~These message usages are described in the section “The message in business context”. (Split~~  
5 | ~~book approach)~~

6 | ~~3.3.6.41.2 The CoCo-specific schema~~

7 | ~~Outline of the schema~~

8 | ~~The SecurityCSDLinkStatusAdviceV01 message is composed of the following message building~~  
9 | ~~blocks:~~

10 | ~~Identification~~

11 | ~~This building block is mandatory and non-repetitive. It contains an identification assigned by~~  
12 | ~~CRDM to uniquely and unambiguously identify the message.~~

13 | ~~RequestMessageIdentification~~

14 | ~~This building block is mandatory and non-repetitive. It contains the identification assigned by~~  
15 | ~~the sending party to uniquely and unambiguously identify the original message generating the~~  
16 | ~~status advice.~~

17 | ~~SecurityCSDLinkStatus~~

18 | ~~This building block is mandatory and non-repetitive. It contains detailed information related to~~  
19 | ~~the status of the original request. It includes the following elements:~~

20 | ~~Status;~~

21 | ~~Reason;~~

22 | ~~Additional reason information;~~

23 | ~~In case of completed maintenance request, the security CSD link identification.~~

24 | ~~SecurityCSDLinkIdentification~~

25 | ~~This building block is optional and non-repetitive. It contains the identification of the securi-~~  
26 | ~~ty~~

27 | ~~CSD link and is returned upon successful completion of the original request. It includes the fol-~~  
28 | ~~lowing elements:~~

29 | ~~Financial instrument identification;~~

30 | ~~Issuer or investor CSD identification;~~

31 | ~~Starting validity date for the security CSD link.~~

32 | ~~References/Links~~

## 1 **3.3.7 Securities Management (semt)**

### 2 3.3.7.1 SecuritiesBalanceCustodyReportV10 (semt.002.001.10)

#### 3 **3.3.7.1.1 Overview and scope of the message**

4 This chapter illustrates the *SecuritiesBalanceCustodyReportV10* message.

5 The *SecuritiesBalanceCustodyReportV10* message, also known as Statement of Holdings, is sent by T2S to a  
6 CSD or any party authorised by them. The *SecuritiesBalanceCustodyReportV10* provides information about  
7 the different securities positions of a T2S Actor's securities account in T2S. This report is used to inform  
8 about the holding balance at a specified moment in time triggered by a defined business event.

9 In case the size of the message to be sent exceeds the maximum size of 32 MB the message will be split  
10 into several messages (Please see section [Outbound traffic exceeding given size limitations](#) [▶ 1096]).

11 For securities accounts with an exceptional high number of securities positions on request to the T2S Service  
12 Desk a special procedure can be applied to allow the delivery of the semt.002 for which pagination is applied  
13 in any case.

#### 14 **3.3.7.1.2 The T2S-specific schema**

##### 15 Outline of the schema

16 The *SecuritiesBalanceCustodyReportV10* is composed of the following message building blocks:

##### 17 **Pagination**

18 This building block is mandatory and non repetitive. It gives the page number of the message (within a  
19 statement) and continuation indicator to indicate that the statement is to continue or that the message is  
20 the last page of the statement.

##### 21 **StatementGeneralDetails**

22 This building blocks is mandatory and non repetitive. It specifies general information related to report such  
23 as the statement date, the activity, the frequency, or the report base.

##### 24 **AccountOwner**

25 This block is optional and non repetitive. It identifies the party who owns the account.

##### 26 **AccountServicer**

27 This block is optional and identifies the party that manages the account on behalf of the account owner, i.e.  
28 manages the registration and booking of entries on the account, calculates balances on the account and  
29 provides information about the account.

##### 30 **SafekeepingAccount**

31 This block is mandatory and non repetitive. It provides the account to or from which a securities entry is  
32 made.

##### 33 **BalanceForAccount**

1 This building block is optional and repetitive. This block provides the net position of a segregated holding, in  
2 a single security, within the overall position held in a securities account.

### 3 References/Links

4 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
5 vided outside of this document under the following link:

### 7 Business rules applicable to the schema

8 Not applicable (T2S outgoing message)

### 9 **3.3.7.1.3 The message in business context**

#### 10 Message example 1: sem.002.001.10\_T2S\_StatementHoldings\_Example.xml

11 In this example, T2S sends within a daily basis (frequency predefined by the T2S Actor), a complete State-  
12 ment of Holdings for the securities account 1000000123. The securities account 1000000123 has only the  
13 security with ISIN 'ISIN01234567' which movements were the following:

- 14 | Setup a blocking restriction of restriction type 'RT01' for a quantity of 3000 securities with restriction ref-  
15 erence '456321';
- 16 | Setup a blocking restriction of restriction type 'RT01' for a quantity of 5000 securities with restriction ref-  
17 erence '963214';
- 18 | Setup a blocking restriction of restriction type 'RT02' for a quantity of 6000 with restriction reference  
19 '7856321';
- 20 | Decrease of blocking restriction of restriction type 'RT03' to zero with restriction reference '5116301';
- 21 | Setup an earmarking restriction of restriction type 'EA03' for a quantity of 4000.

#### 22 Message example 2: sem.002.001.10\_T2S\_StatementHoldingsDelta\_Example.xml

23 In this example, T2S sends within a daily basis (frequency predefined by the T2S Actor), a delta Statement  
24 of Holdings for the securities account 1000000123. As it is a delta report, the Statement of Holdings only  
25 contains the movements of the securities account 1000000123 which occurred between the generation of  
26 the previous report (either delta or full) and the generation of this delta report. The securities account  
27 1000000123 has only the security with ISIN 'ISIN01234567' which movements were the following:

- 28 | Setup a blocking restriction of restriction type 'RT02' for a quantity of 6000 with restriction reference  
29 '32569';
- 30 | Setup an earmarking restriction of restriction type 'EA03' for a quantity of 4000.

### 31 3.3.7.2 IntraPositionMovementInstructionV04 (sem.013.001.04)

#### 32 **3.3.7.2.1 Overview and scope of the message**

33 This chapter illustrates the *IntraPositionMovementInstructionV04* message.

1 The *IntraPositionMovementInstructionV04* message, also known as a securities Settlement Restriction in-  
2 struction, is sent by a CSD or directly connected T2S party to T2S. The Settlement Restriction instruction is  
3 used to restrict (i.e. block, earmark or reserve), increase or decrease (used to unblock, unreserve and un-  
4 earmark) a securities position, as described in the usages below.

5 This message is sent to T2S to make the following types of instructions:

- 6 | Securities Blocking;
- 7 | Securities Reservation;
- 8 | Securities Earmarking.

9 These instruction types are described in the section "The message in business context".

### 10 **3.3.7.2.2 The T2S-specific schema**

#### 11 Outline of the schema

12 The *IntraPositionMovementInstructionV04* is composed of the following message building blocks:

#### 13 **Transaction Identification**

14 This building block is mandatory and not repetitive. It contains an identification assigned by the instructing  
15 party to uniquely and unambiguously identify the transaction.

#### 16 **Corporate Action Event Identification**

17 This optional non repetitive block is used to unambiguously identify a corporate action event.

#### 18 **Number Counts**

19 This building block is optional and non repetitive. It contains the number of linked transactions.

#### 20 **Linkages**

21 This block is optional and is used to link instructions and specify settlement sequences (e.g. af-  
22 ter/before/with etc.).

#### 23 **Account Owner**

24 This block is optional and is used to identify the party that owns the account.

#### 25 **Safekeeping Account**

26 This building block is mandatory and identifies the account to or from which a securities entry is made.

#### 27 **Safekeeping Place**

28 Not required in T2S.

#### 29 **Financial Instrument Identification**

30 This building block is mandatory and identifies the financial instrument for which a securities entry is made.

#### 31 **Financial Instrument Attributes**

32 Not required in T2S.

#### 33 **IntraPosition Details**

34 This building block is mandatory and includes the details of the movement of securities between positions.

1 **3.3.7.2.3 The message in business context**

2 Instruction type: Securities Blocking

1 This instruction type enables the sender to instruct a position blocking instruction to T2S to block a securities  
2 position. The purpose of such position blocking is usually to ensure the successful settlement of a future  
3 Settlement Instruction. A securities instruction may then contain a reference to the restriction representing  
4 this blocked position.

#### 5 Specific message requirements

6 To be submitted as a securities blocking instruction, the IntraPositionMovementInstructionV04 should have:

- 7 | A Balance From/Tp/Code with the value 'AWAS' which indicates the deliverable position;
- 8 | A Balance To/Tp/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Restriction  
9 Type' that is a 'securities position' and a 'Restriction Processing Type' that is 'Blocking'.

10

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Document/IntraPosMvmntInstr/IntraPosDtls/BalFr/Tp/Cd	SecuritiesBalanceType11Code	Code: 'AWAS', used to indicate deliverable position.
Identification Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/ Tp/Prtry/Id	Exact4AlphaNumericText	Must be a Restriction Type having a Restriction Processing Type corresponding to Blocking.
Issuer Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/ Tp/Prtry/Issr	Max4AlphaNumericText	Constant: 'T2S', representing the Issuer within T2S.
SchemeName Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/ Tp/Prtry/SchmeNm	Max4AlphaNumericText	Constant: 'RT', representing the Schema Name for 'Restriction Type' within T2S.

#### 11 Instruction type example: semt.013.001.04 T2S Blocking Setup Example.xml

12 In this example a T2S party, BANK B, has requested the blocking, using the restriction type 'BLK1', of  
13 100000 securities, ISIN00001234, on the 2nd of January 2015 within its account '1000000123'.

#### 14 Instruction type example: semt.013.001.04 T2S Blocking Increase Example.xml

15 In this example a T2S party, BANK B, increases the existing blocked position of the securities,  
16 ISIN00001234, within its account '1000000123' identified by restriction type 'BLK1' by an additional 50000  
17 securities on the 3rd of January 2015. It includes the Restriction Reference 'T2SRR00001' provided by T2S  
18 during the initial setup of the position and links the increase with another instruction identified by the T2S  
19 Internal Reference 'T2SIREF07291'.

#### 20 Instruction type: Securities Reservation

1 This instruction type enables the sender to instruct a reservation instruction to T2S to reserve a securities  
2 position (i.e. prevent the transfer of that securities position except for the purpose of the reservation).

### 3 Specific message requirements

4 To be submitted as a reservation instruction, the IntraPositionMovementInstructionV04 should have:

- 5 | A Balance From/Tp/Code with the value 'AWAS' which indicates the deliverable position;
- 6 | A Balance To/Tp/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Restriction  
7 Type' that is a 'securities position' and a 'Restriction Processing Type' that is 'Reservation'.  
8

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Document/IntraPosMvmntInstr/IntraPosDtls/BalFr/Tp/Cd	SecuritiesBalanceType11Code	Code: 'AWAS', used to indicate deliverable position.
Identification Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/ Tp/Prtry/Id	Exact4AlphaNumericText	Must be a Restriction Type having a Restriction Processing Type corresponding to Reservation.
Issuer Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/ Tp/Prtry/Issr	Max4AlphaNumericText	Constant: 'T2S', representing the Issuer within T2S.
SchemeName Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/ Tp/Prtry/SchmeNm	Max4AlphaNumericText	Constant: 'RT', representing the Schema Name for 'Restriction Type' within T2S.

### 9 Instruction type example: semt.013.001.04 T2S Reservation Setup Example.xml

10 In this example a T2S party, Bank B, has requested the reservation, using the restriction type 'RES1', of  
11 100000 securities, ISIN00001234, on the 2nd of January 2015 within its account '1000000123'.

### 12 Instruction type example: semt.013.001.04 T2S Reservation Decrease Example.xml

13 In this example a T2S party, BANK B, decreases with a high priority, an existing reservation, identified by  
14 restriction type 'RES1', by 20000 securities, ISIN00001234, within its account '1000000123', on the 13rd of  
15 January 2015. It includes the Restriction Reference 'T2SRR000045' provided by T2S during the initial setup  
16 of the position.

### 17 Instruction type: Securities Earmarking

18 This instruction type enables the sender to instruct an earmarking instruction to T2S to earmark a securities  
19 position. The purpose of such earmarking is usually to specify that a position is only eligible for use in specif-  
20 ic types of transactions or processes (e.g. collateral management).

1 Specific message requirements2 To be submitted as an Earmarking instruction, the *IntraPositionMovementInstructionV04* should have:

- 3 | A Balance From/Tp/Code with the value 'AWAS' which indicates the deliverable position;
- 4 | A Balance To/Tp/Proprietary ID that, within the static data of T2S, corresponds to an 'Object Restriction Type' that is a 'securities position' and a 'Restriction Processing Type' that is 'Earmarking' or 'Earmarking for auto-collateralisation'.

6  
7

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Document/IntraPosMvmntInstr/IntraPosDtls/BalFr/Tp/Cd	SecuritiesBalanceType11Code	Code: 'AWAS', used to indicate deliverable position.
Identification Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/Tp/Prtry/Id	Exact4AlphaNumericText	Must be a Restriction Type having a Restriction Processing Type corresponding to Earmarking or Earmarking for auto-collateralisation.
Issuer Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/Tp/Prtry/Issr	Max4AlphaNumericText	Constant: 'T2S', representing the Issuer within T2S.
SchemeName Docu- ment/IntraPosMvmntInstr/IntraPosDtls/BalTo/Tp/Prtry/SchmeNm	Max4AlphaNumericText	Constant: 'RT', representing the Schema Name for 'Restriction Type' within T2S.

8 Instruction type example: semt.013.001.04\_T2S\_Earmarking\_Example.xml9 In this example a T2S party, Bank B, has requested the earmarking, using the restriction type 'EAR1', of  
10 100000 securities, ISIN00001234, on the 2nd of January 2015 within its account '100000123'.11 3.3.7.3 *IntraPositionMovementStatusAdviceV06* (semt.014.001.06)12 **3.3.7.3.1 Overview and scope of the message**13 This chapter illustrates the *IntraPositionMovementStatusAdviceV06* message.

14 The *IntraPositionMovementStatusAdviceV06* message, also known as a Securities Settlement Restriction  
15 Status Advice, is sent by T2S to a CSD or other directly connected T2S party to inform about the actual sta-  
16 tus of the to-be restricted amount (specified in the message) of Securities Settlement Restriction instruction  
17 [semt.013.001.04](#) [▶ 1511] which has been previously sent to T2S (i.e. a (un)blocking, (un)earmarking, or  
18 (un)reserve instruction).

1 This message is sent by T2S in the following message usages:

2 | Rejected;

3 | Accepted;

4 | Cancelled;

5 | Eligibility failure;

6 | Under intraday restriction;

7 | Provision check failure;

8 | Partial settlement (unsettled part);

9 These message usages are described in the section "The message in business context".

### 10 **3.3.7.3.2 The T2S-specific schema**

#### 11 Outline of the schema

12 The *IntraPositionMovementStatusAdviceV06* is composed of the following message building blocks:

#### 13 **TransactionIdentification**

14 This is a mandatory and non repetitive. It provides the unambiguous identification of a transaction as per  
15 the account owner, or the Instructing party managing the account and/or T2S.

#### 16 **ProcessingStatus**

17 This is an optional non repetitive building block. It provides details on the processing status of the transac-  
18 tion. Possible statuses are rejected, acknowledged or cancelled.

#### 19 **SettlementStatus**

20 This is an optional non repetitive building block. It provides details on the settlement status of the transac-  
21 tion. The only possible status is pending.

#### 22 **TransactionDetails**

23 This is an optional non repetitive building block which identifies the high-level details of the intra-position  
24 movement transaction.

#### 25 **Supplementary Data**

26 This building block is optional and repetitive. It allows to provide, in the form of a schema, additional infor-  
27 mation that cannot be captured in the structured elements and/or any other specific block.

#### 28 References/Links

29 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
30 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
31 under the following link.

32 [http://www.swift.com/mystandards/T2S/sem014.001.06\\_T2S](http://www.swift.com/mystandards/T2S/sem014.001.06_T2S)

#### 33 Business rules applicable to the schema

34 Not applicable (T2S outgoing message)

1 **3.3.7.3.3 The message in business context**

2 Message usage: Rejected

3 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
4 Restriction on Securities is rejected. A Settlement Restriction on securities is rejected if it does not pass the  
5 business validations or it fulfils a rule of a positive rejection restriction set by the CSD.

6 Specific message requirements

7 To inform about a rejection status, the *IntraPositionMovementStatusAdviceV06* includes the following infor-  
8 mation:

- 9 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons of the  
10 rejection;
- 11 | Code – ISO code specifying the reason of the rejection;
- 12 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
13 and a short description of the error. T2S also informs of the rule ID of a positive rejection restriction rule  
14 fulfilled, if any.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/IntraPosMvmntStsAdv/PrcgSts/Rjctd/Rsn/Cd/Cd	RejectionReason29Code	ISO reason code of the rejection. The only possible values are:    DDAT   DQUA   DSEC   INVB   INVN   INVL   MINO   MUNO   OTHR   REFE   SAFE   VALR
AdditionalReasonInformation Docu- ment/IntraPosMvmntStsAdv/PrcgSts/Rjctd/Rsn/AddtlRsnInf	RestrictedFINXMax210Text	Bussines rule, error description and rule ID of a positive rejection restriction fulfilled (if any)

16 Message usage example: semt.014.001.06 T2S Rejected Example.xml

1 In this example, T2S sends a rejection status advice as a response to the setting-up of a Settlement Re-  
2 striction on securities requested by T2S party, BANK A (BNKAFRPPXXX). BANK A requested the blocking,  
3 using the restriction type 'BLK1', of 100000.02 units of the securities 'ISIN01234567' within its account  
4 '1000000123'. The blocking is rejected because the Intended Settlement Date specified in the instruction,  
5 that is 1st of January 2015, is not a T2S Business Date and because the quantity requested is not multiple of  
6 Settlement Unit Multiple nor a Deviating Settlement Unit.

7 Message usage: Accepted

8 This message usage relates to the usage of a status advice message, sent by T2S, when the Securities Set-  
9 tlement Restriction is valid. A Settlement Restriction on securities is valid and accepted by T2S if it success-  
10 fully passes the business validation and does not fulfill any rule of a positive rejection restriction set by the  
11 CSD.

12 Specific message requirements

13 To inform about an accepted status, the *IntraPositionMovementStatusAdviceV06* includes the following in-  
14 formation:

- 15 | AcknowledgedAccepted – status that corresponds to 'Accepted';
- 16 | Code – 'OTHR' ISO code when the Settlement Restriction is accepted fulfilling a rule of a negative rejec-  
17 tion restriction;
- 18 | AdditionalReasonInformation – rule ID identifying the rule of a negative rejection restriction fulfilled;
- 19 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Restriction is accepted not fulfilling any rule  
20 of a negative rejection restriction;
- 21 | Pending/Failing – status indicating that the Settlement Restriction is not settled. Depending on whether  
22 the Settlement Restriction can settle on its ISD or not, the Settlement Restriction is informed either with  
23 status Pending or Failing respectively;
- 24 | Code – 'FUTU' ISO code for Pending and 'CYCL' ISO code for Failing;
- 25 | MarketInfrastructureTransactionIdentification – T2S identification of the accepted Settlement Restriction.
- 26 | AcknowledgedStatusTimeStamp – Time stamp on when the Securities Settlement Restriction is accepted.  
27

1 Message usage example: semt.014.001. 06 T2S AcceptedPending Example.xml

2 In this example, T2S sends an accepted status as a response to the setting-up of a Settlement Restriction on  
3 securities requested by T2S party, BANK A (BNKAFRPPXXX). BANK A requested the blocking, using the re-  
4 striction type 'BLK1', of 100000 units of the securities 'ISIN01234567' within its account '100000123'. The  
5 Intended Settlement Date for the restriction is on the 2nd of January 2015 (current business day) and the  
6 Settlement Restriction was received before the last cut-off of the settlement day, hence it is not identified as  
7 failing in the validation process. T2S assigns the identification 'T1234' to the accepted Settlement Restriction  
8 and informs about the time at which the Securities Settlement Restriction was accepted in T2S.

9 Message usage example 2: semt.014.001. 06 T2S AcceptedFailing Example.xml

10 In this example, T2S sends an accepted status as a response to the setting-up of a Settlement Restriction on  
11 securities requested by T2S party, BANK A (BNKAFRPPXXX). BANK A requested the blocking, using the re-  
12 striction type 'BLK2', of 500000 units of the securities 'ISIN01234555' within its account '100000222'. The  
13 Intended Settlement Date for the restriction is on the 2nd of January 2015 (current business day) but the  
14 Settlement Restriction was received during the End of Day, hence settlement is no longer possible on its ISD  
15 and it is identified as failing directly in the validation process. T2S assigns the identification 'T1234' to the  
16 accepted Settlement Restriction.

17 Message usage: Cancelled

1 This message usage relates to the usage of a status advice message, sent by T2S, when the Securities Set-  
2 tlement Restriction is cancelled during its processing.

3 Specific message requirements

4 To inform about a cancelled status, the *IntraPositionMovementStatusAdviceV06* includes the following infor-  
5 mation:

- 6 | Cancelled – status that corresponds to successfully cancellation of the Securities Settlement Restriction  
7 with one reason code;
- 8 | Code – ISO code specifying the reason of the cancellation;
- 9 | AdditionalReasonInformation – in case the instruction was cancelled after the revalidation process, text  
10 comprising a combination of the associated business rule not fulfilled, a short description of the error  
11 and the rule ID of a positive restriction rule fulfilled, if any.

12

13 Message usage example: semt.014.001.06 T2S Cancelled Example.xml

14 In this example, T2S informs that the blocking set-up by BANK A, using the restriction type 'BLK1', of  
15 100000 units of the securities 'ISIN01234567' has been cancelled. The restriction is cancelled following the  
16 request of BANK A (BNKAFRPPXXX).

17 Message usage: Eligibility failure

1 This message usage relates to the usage of status advice message, sent by T2S, when at least one eligibility  
2 criterion is not fulfilled by the Securities Settlement Restriction.

3 Specific message requirements

4 To inform about a pending/failing status due to an eligibility failure, the *IntraPositionMovementStatusAd-*  
5 *viceV06* includes the following information:

- 6 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
7 Restriction can settle on its ISD or not) with one reason code to inform about the eligibility criterion not  
8 fulfilled;
- 9 | Code – ISO code specifying the reason for the eligibility failure;
- 10 | AdditionalReasonInformation – text comprising of a combination of the associated business rule not ful-  
11 filled and a short description of the error;
- 12 | SettlementQuantity – the quantity of financial instrument remaining to be settled.
- 13 | Supplementary Data – providing the reference of the related DELI business instruction where the CoSD  
14 blocking occurs.

1 Message usage example 1: semt.014.001. 06 T2S PendingEligibilityFailure Example.xml

2 In this example, T2S sends an eligibility failure, via a pending status, related to a reservation set-up by  
3 BANK A (BNKAFRPPXXX). BANK A requested the reservation, using the restriction type 'RSV1', of 100000  
4 units of securities 'ISIN01234567' within its securities account '1000000123". This reservation is not execut-  
5 ed since that reservation has a link AFTE with a Settlement Instruction or with a Settlement Restriction on  
6 Securities for which the cut off is reached.

7 Message usage example 2: semt.014.001. 06 T2S FailingEligibilityFailure Example2.xml

8 In this example, T2S informs about a eligibility failure, via a failing status, due to the failure in a CoSD block-  
9 ing. In addition to the reason of the failure and the details of the Settlement Restriction, the message also  
10 informs the T2S reference of the related DELI business instruction where the CoSD blocking occurs.

11 Message usage: Intraday restriction

12 This message usage relates to the usage of status advice message, sent by T2S, when at least one intraday  
13 restriction is detected on an object required by the Securities Settlement Restriction. The following message  
14 usage informs about a pending/failing status due an intraday restriction detected either on the securities, on  
15 the involved securities account or on the involved T2S Party of the Settlement Restriction.

16 Specific message requirements

17 To inform about a pending/failing status due to an intraday restriction, the *IntraPositionMovementStatusAd-*  
18 *viceV06* includes the following information:

- 19 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
20 Restriction can settle on its ISD or not) with one or more reason codes to inform about the intraday re-  
21 striction detected;
- 22 | Code – ISO code specifying the reason for the intraday restriction;
- 23 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
24 and a short description of the error;

- 1 | SettlementQuantity – the quantity of financial instrument remaining to be settled.
- 2 | Supplementary Data – providing the reference of the related DELI business instruction where the CoSD
- 3 | blocking occurs.
- 4

5 [Message usage example 1: semt.014.001. 06 T2S PendingIntradayFailure Example.xml](#)

1 In this example, T2S informs about an intraday restriction, via a pending status, related to a reservation set-  
2 up by BANK A (BNKAFRPPXXX). BANK A requested the reservation, using the restriction type 'RSV1', of  
3 100000 units of securities 'ISIN01234567' within its securities account '1000000123'. This reservation is  
4 pending (it can still settle on its ISD) of settlement due to an intraday restriction detected on the ISIN of the  
5 Settlement Restriction.

6 Message usage example 2: semt.014.001. 06 T2S FailingIntradayFailure Example2.xml

7 In this example, T2S informs about an intraday restriction, via a failing status (Settlement Restriction can no  
8 longer settle on its ISD), due to the failure in a CoSD blocking. In addition to the reason of the failure and  
9 the details of the Settlement Restriction, the message also informs the T2S reference of the related DELI  
10 business instruction where the CoSD blocking occurs.

11 Message usage: Provision check failure

12 This message usage relates to the usage of status advice message sent by T2S, when within the settlement  
13 process, the resources available on the securities positions are not sufficient for settling the Securities Set-  
14 tlement Restriction.

15 Specific message requirements

16 To inform about a pending/failing status, the *IntraPositionMovementStatusAdviceV06* includes the following  
17 information:

- 18 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
19 Restriction was partially settled on its ISD or not) with one or more reason codes to inform about the  
20 unsuccessful provisioning check;
- 21 | Code – ISO code specifying the reason of the pending due to the provisioning check;
- 22 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
23 and a short description of the error;
- 24 | Supplementary Data – providing the reference of the related DELI business instruction where the CoSD  
25 blocking occurs.
- 26 | SettlementQuantity – the quantity of financial instrument to be settled equals to the original quantity.

1 Message usage example 1: semt.014.001. 06 T2S PendingProvisionFailure Example.xml

2 In this example, T2S informs about a provision check failure, via a pending status (Settlement Restriction  
3 can still settle on its ISD), related to a reservation set-up by BANK A (BNKAFRPPXXX). BANK A requested the  
4 reservation, using the restriction type "RSV1", of 100000 units of securities "ISIN01234567" within its securi-  
5 ties account "1000000123". This reservation is pending of settlement due to a lack of securities in Bank A's  
6 position.

7 Message usage example 2: semt.014.001. 06 T2S FailingProvisionFailure Example2.xml

8 In this example, T2S informs about a provision check failure, via a failing status (Settlement Restriction can  
9 no longer settle on its ISD), due to the failure in a CoSD blocking. In addition to the reason of the failure  
10 and the details of the Settlement Restriction, the message also informs the T2S reference of the related  
11 DELI business instruction where the CoSD blocking occurs.

12 Message usage: Partial settlement (unsettled part)

13 This message usage relates to the usage of a status advice message, sent by T2S, and advices about the  
14 unsettled part of a Securities Settlement Restriction related to a reservation restriction processing type that  
15 has been partially filled. This message usage informs the pending/failing status of the setting-up of a reser-  
16 vation due to a partial settlement.

17 Specific message requirements

18 To inform about the unsettled part of a partial filling reservation, the *IntraPositionMovementStatusAdviceV06*  
19 includes the following information:

- 20 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the Settlement  
21 Restriction was partially settled on its ISD or not) with one reason code to inform about the partial set-  
22 tlement;
- 23 | Code – 'PART' ISO code indicating the partial settlement of the transaction;
- 24 | SettlementQuantity – quantity of financial instrument remaining to be settled;
- 25 | Balance From/Code with the value "AWAS" which indicates the deliverable position;
- 26 | Balance To/Proprietary ID that, within the reference data of T2S, corresponds to an "Object Restriction  
27 Type" that is a "securities position" and a "Restriction Processing Type" that is "Reservation".  
28

1 Message usage example 1: semt.014.001.06 T2S PendingPartialSettlement Example.xml

2 In this example, T2S informs that the setting-up of the reservation, using the restriction type 'RSV1', re-  
3 quired by BANK A (BNKAFRPPXXX) has been partially settled on its ISD due to lack of securities. The quan-  
4 tity remaining to be settled is 50000 units of securities 'ISIN01234567' within the securities account  
5 '1000000123'.

6 Message usage example 2: semt.014.001.06 T2S FailingPartialSettlement Example.xml

7 On 2nd of January 2015, the setting-up of a reservation was partially settled (example 1). On the next busi-  
8 ness day, the setting-up of the reservation, using the restriction type 'RSV1', is again partially settled due to  
9 lack of securities. The quantity remaining to be settled is 25000 units of securities 'ISIN01234567' within the  
10 securities account '1000000123'. This is informed with a status advice with a failing status.

11 3.3.7.4 IntraPositionMovementConfirmationV07 (semt.015.001.07)

12 **3.3.7.4.1 Overview and scope of the message**

13 This chapter illustrates the *IntraPositionMovementConfirmationV07* message.

14 The *IntraPositionMovementConfirmationV07* message, also known as a Securities Settlement Restriction  
15 Confirmation, is sent by T2S to a CSD or other directly connected T2S party to confirm the successful pro-

1 ccessing of a Securities Settlement Restriction instruction sent via a [semt.013.001.04](#) [▶ 1511] message (i.e.,  
2 a (un)blocking, (un)earmarking or (un)reserve instruction).

3 When the Securities Settlement Restriction related to a reservation restriction processing type has been par-  
4 tially filled, T2S sends in addition to the confirmation a [semt.014.001.0](#) [▶ 1521]6 to inform about the actual  
5 status of the Securities Settlement Restriction instruction sent via a [semt.013.001.04](#) [▶ 1511] message,  
6 waiting to complete the reservation.

7 In case of dynamic reimbursement, or in case of an automated substitution achieved with the collateralisa-  
8 tion operation, T2S sends an *IntraPositionMovementConfirmationV07* to confirm the full settlement of the  
9 blocking of the collateral or the settlement of the released reverse collateral Settlement Restriction.

10 This message is sent by T2S in the following message usages:

- 11 | Full settlement;
- 12 | Partial settlement (settled part);
- 13 | Last Partial settlement;
- 14 | Partial execution.

15 These message usages are described in the section "The message in business context".

### 16 **3.3.7.4.2 The T2S-specific schema**

#### 17 Outline of the schema

18 The *IntraPositionMovementConfirmationV07* is composed of the following message building blocks:

#### 19 **AdditionalParameters**

20 This is an optional non repetitive building block. It provides information such as other identifications or par-  
21 tial settlement information.

#### 22 **AccountOwner**

23 This building block is optional and non repetitive. It is used to provide the details on the party that legally  
24 owns the account.

#### 25 **SafekeepingAccount**

26 This building block is mandatory and non repetitive. It provides the account to or from which a securities  
27 entry is made.

#### 28 **FinancialInstrumentIdentification**

29 This building block is mandatory and non repetitive. It provides information that identifies the financial in-  
30 strument representing a sum of rights of the investor vis-à-vis the issuer.

#### 31 **IntraPositionDetails**

32 This building block is mandatory and non repetitive. It provides the intra-position movement transaction  
33 details such as the balance from/to which the securities are moving, the security identification and the set-  
34 tled quantity.

#### 35 **Supplementary Data**

1 This building block is optional and repetitive. It allows to provide, in the form of a schema, additional infor-  
2 mation that cannot be captured in the structured elements and/or any other specific block.

3 References/Links

4 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
5 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
6 under the following link.

7 <http://www.swift.com/mystandards/T2S/sem.015.001.07> T2S

8 Business rules applicable to the schema

9 Not applicable (T2S outgoing message)

10 **3.3.7.4.3 The message in business context**

11 Message usage: Full settlement

12 This message usage relates to the usage of a confirmation message, sent by T2S when the Securities Set-  
13 tlement Restriction is fully settled in one time regardless of its related restriction processing type.

14 Specific message requirements

15 To confirm a fully settled Securities Settlement Restriction, the *IntraPositionMovementConfirmationV07* in-  
16 cludes the following information:

- 17 | SettledQuantity - quantity of financial instrument effectively settled with no remaining quantity to be set-  
18 tled;
- 19 | Balance From – Actual type of sub-balance used for settlement from which the securities are moving;
- 20 | Balance To - Actual type of sub-balance used for settlement to which the securities are moving;
- 21 | Restriction Reference - unique reference number assigned by T2S that identifies the restriction;
- 22 | Supplementary Data – providing the reference of the related DELI business instruction where the CoSD  
23 blocking occurs.  
24

1 Message usage example 1: semt.015.001.07 T2S FullSettlement Example.xml

2 In this example, T2S confirms the full settlement on the 2nd of January 2015 of a blocking set-up by BANK A  
3 (BNKAFRPPXXX). BANK A requested the blocking, using the restriction type 'BLK1', of 100000 units of securi-  
4 ties 'ISIN01234567' within its account '1000000123'.

5 Message usage example 2: semt.015.001.07 T2S FullSettlement Example2.xml

6 In this example, T2S confirms the full settlement on the 2nd of January 2015 of a CoSD blocking within the  
7 account "1000000123". The confirmation provides the T2S reference of the DELI business instruction where  
8 the CoSD blocking occurs.

9 Message usage: Partial settlement (settled part)

10 This message usage relates to the usage of a confirmation message, sent by T2S when a Securities Settle-  
11 ment Restriction related to a reservation restriction processing type is partially filled and there is still a re-  
12 maining part. Therefore the reservation needs several attempts to be fully settled.

13 Specific message requirements

14 To confirm a partial filling of a reservation, the *IntraPositionMovementConfirmationV07* includes the follow-  
15 ing information:

- 16 | PartialSettlement – 'PAIN' ISO code specifying that there is a part of the reservation that remains unset-  
17 tled;
- 18 | SettledQuantity – quantity of financial instrument effectively settled during this settlement;

- 1 | PreviouslySettledQuantity – quantity of financial instrument settled in all the previous partial settle-
- 2 | ment(s), if any;
- 3 | RemainingToBeSettledQuantity – quantity remaining to be settled;
- 4 | Balance From – Actual type of sub-balance used for settlement from which the securities are moving;
- 5 | Balance To - Actual type of sub-balance used for settlement to which the securities are moving;
- 6 | Restriction Reference - reference number assigned by T2S that identifies the restriction.
- 7

1 Message usage example: semt.015.001. 07 T2S PartialSettlement Example.xml

2 In this example, T2S confirms the partial settlement of a reservation set-up by BANK A (BNKAFRPPXXX).  
3 BANK A requested the reservation, using the restriction type 'RSV1', of 100000 units of securities  
4 'ISIN01234567' within its account '1000000123'. Of the 100000 securities reserved, T2S has settled 20000  
5 securities on the 2nd of January 2015, 10000 securities were previously settled and 50000 securities remain  
6 to be settled.

7 Message usage: Last Partial settlement

8 This message usage relates to the usage of a confirmation message, sent by T2S to the T2S Actor, when a  
9 Securities Settlement Restriction related to a reservation restriction processing type was partially filled and it  
10 advises about the settlement of the last part. This message usage confirms the last settled part of the reser-  
11 vation; therefore the reservation is fully settled after this last part settlement.

12 Specific message requirements

13 To confirm a last partial settlement of a reservation, the *IntraPositionMovementConfirmationV07* includes the  
14 following information:

- 15 | PartialSettlement – 'PARC' ISO code to confirm the settlement of the remaining part of the reservation  
16 that was previously partially confirmed;
- 17 | SettledQuantity – quantity of financial instrument effectively settled in this last partial settlement, with  
18 no remaining quantity to be settled;
- 19 | PreviouslySettledQuantity – quantity of financial instrument settled in all the previous partial settle-  
20 ment(s);
- 21 | Balance From – Actual type of sub-balance used for settlement from which the securities are moving;
- 22 | Balance To - Actual type of sub-balance used for settlement to which the securities are moving;
- 23 | Restriction Reference - reference number assigned by T2S that identifies the restriction.

1 Message usage example: semt.015.001. 07 T2S LastPartialSettlement Example.xml

2 In this example, T2S confirms the last partial settlement of a reservation set-up by BANK A (BNKAFRPPXXX).  
3 BANK A requested the reservation, using the restriction type 'RSV1', of 100000 units of securities  
4 'ISIN01234567' within its account '1000000123'. Of the 100000 securities reserved, T2S has settled the re-  
5 maining 50000 securities on the 3rd of January 2015. T2S also informs the quantity of securities settled in  
6 the previous attempt that is 20000.

7 Message usage: Partial execution

8 This message usage relates to the usage of a confirmation message, sent by T2S, when a Securities Settle-  
9 ment Restriction related to an earmarking restriction processing type is partially executed. This message  
10 usage confirms the quantity actually settled and the remaining quantity equals to 0.

11 Specific message requirements

1 To confirm a partial execution of earmarking restriction processing type, the *IntraPositionMovementConfirmationV07* includes the following information:

- 3 | PartialSettlement – ‘PARC’ ISO code to confirm the settlement of a partial execution with no additional
- 4 | settlement attempt;
- 5 | SettledQuantity – quantity of financial instrument effectively settled;
- 6 | RemainingToBeSettledQuantity – quantity remaining to be settled equals to 0;
- 7 | Balance From – Actual type of sub-balance used for settlement from which the securities are moving;
- 8 | Balance To - Actual type of sub-balance used for settlement to which the securities are moving;
- 9

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
PartialSettlement Docu- ment/IntraPosMvmntConf/AddtlParams/PrtlSttl m	PartialSettlement2Code	The only possible value is PARC

RestrictedFINDecimalNumber Docu- ment/IntraPosMvmntConf/IntraPosDtls/RmngT oBeSttldQty/Unit	RestrictedFINDecimalNumber	Quantity remaining to be settled equals to 0
BalanceFrom Docu- ment/IntraPosMvmntConf/IntraPosDtls/BalFr	SecuritiesSubBalanceTypeAndQuanti- tyBreakdown3	Actual Type of sub-balance used for settlement from which the securities are moved.  Proprietary choice used in all cases other than deliverable position (i.e. "AWAS")
BalanceTo Docu- ment/IntraPosMvmntConf/IntraPosDtls/BalTo	SecuritiesSubBalanceTypeAndQuanti- tyBreakdown3	Actual Type of sub-balance used for settlement to which the securities are moved.  Proprietary choice used in all cases other than deliverable position (i.e. "AWAS")

10 Message usage example: semt.015.001.07 T2S PartialExecution Example.xml

1 In this example, T2S confirms the partial execution of an earmarking set-up by BANK A (BNKAFRPPXXX).  
2 BANK A requested the earmarking, using the restriction type 'EAR1', of 100000 units of securi-  
3 ties 'ISIN01234567' within its account 1000000123'. T2S has settled 80000 securities and informs that there  
4 are no remaining securities to be settled.

### 5 3.3.7.5 IntraPositionMovementPostingReportV07 (semt.016.001.07)

#### 6 **3.3.7.5.1 Overview and scope of the message**

7 This chapter illustrates the *IntraPositionMovementPostingReportV07* message.

8 The *IntraPositionMovementPostingReportV07* message is sent by T2S to a CSD or a directly connected T2S  
9 participant. This message is used to provide information on intra-position movements settled in T2S for a  
10 particular settlement day. This report is triggered by defined business and time events.

#### 11 **3.3.7.5.2 The T2S-specific schema**

##### 12 Outline of the schema

13 The *IntraPositionMovementPostingReportV07* is composed of the following message building blocks:

##### 14 **Pagination**

15 This building block is mandatory and non repetitive. It contains information about pagination of the report.

##### 16 **Statement General Details**

17 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
18 information.

##### 19 **Account Owner**

20 This building block is optional and non repetitive. It must contain the identification of the party that owns  
21 the account to or from which an entry is made.

##### 22 **Safekeeping Account**

23 This building block is mandatory and non repetitive. It identifies the account to or from which a securities  
24 entry is made.

##### 25 **Financial Instrument**

26 This building block is optional and repetitive. It provides the details of the movements reported, grouped by  
27 balance type.

##### 28 References/Links

29 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
30 vided outside of this document under the following link:

31 <http://www.swift.com/mystandards/T2S/semt.016.001.07> T2S

#### 32 **3.3.7.5.3 The message in business context**

33 Message example: semt.016.001.07 T2S Example.xml

1 In this example T2S sends an Intra-Position Movement Posting Report for the securities account  
2 '1000000792' as defined within static data (a complete daily report in this case). The report contains 4  
3 movements settled on the current business day, the 19th of August 2015.

#### 4 3.3.7.6 SecuritiesTransactionPostingReportV09 (semt.017.001.09)

##### 5 **3.3.7.6.1 Overview and scope of the message**

6 This chapter illustrates the *SecuritiesTransactionPostingReportV09* message.

7 The *SecuritiesTransactionPostingReportV09* message, also known as Statement of Transactions, is sent by  
8 T2S to a CSD or other directly connected T2S party authorised by them. It is used to give information about  
9 the transactions of the respective CSD or other directly connected T2S party, settled in T2S for a particular  
10 settlement day. This report is triggered by a defined business and time events.

11 In case the size of the message to be sent exceeds the maximum size of 32 MB the message will be split  
12 into several messages (Please see section [Outbound traffic exceeding given size limitations](#) [▶ 1096]).

13 For securities accounts with an exceptional high number of (partially) settled Settlement Instructions on  
14 request to the T2S Service Desk a special procedure can be applied to either allow the delivery of the  
15 semt.017 for which pagination is applied in any case or prevent the creation of the semt.017 for a specific  
16 account.

##### 17 **3.3.7.6.2 The T2S-specific schema**

###### 18 Outline of the schema

19 The *SecuritiesTransactionPostingReportV09* is composed of the following message building blocks:

###### 20 **Pagination**

21 This building block is mandatory and non repetitive. It gives the page number of the message (within a  
22 statement) and continuation indicator to indicate that the statement is to continue or that the message is  
23 the last page of the statement.

###### 24 **StatementGeneralDetails**

25 This building blocks is mandatory and non repetitive. It specifies general information related to report such  
26 as the statement date, the activity, the frequency, or the report base.

###### 27 **AccountOwner**

28 This block is optional and non repetitive. It identifies the party who owns the account.

###### 29 **SafekeepingAccount**

30 This block is mandatory and non repetitive. It provides the account to or from which a securities entry is  
31 made.

###### 32 **FinancialInstrumentDetails**

33 This building block is optional and repetitive. It reports the details of every financial instrument reported.

- 1 Regarding the "Transaction Activity Code" field, its codes are reported based on the following relationship  
 2 with the chosen Transaction Code:  
 3

Transaction Activity	Code	Settlement Transaction Type	Code
Borrowing Lending Activity	BOLE	Borrowing Reallocation	SBRE
		Securities Borrowing	SECB
		Securities Lending	SECL

#### 1 References/Links

2 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are provided outside of this document under the following link:

3 [http://www.swift.com/mystandards/T2S/semf.017.001.09\\_T2S](http://www.swift.com/mystandards/T2S/semf.017.001.09_T2S)

#### 4 Business rules applicable to the schema

5 Not applicable (T2S outgoing message)

#### 6 **3.3.7.6.3 The message in business context**

7 Message example: semf.017.001.09 T2S StatementTransactions Example.xml

8 In this example, T2S sends a complete Statement of Transactions requested by the T2S Actor (as defined within reference data) for the securities account 1000000123. That securities account has only two securities which ISINs are 'ISIN01234567' and 'ISIN89012345'. The report contains those Settlement Instructions that were fully settled or partially settled in the current business date, that is, January 5th 2015.

### 1 3.3.7.7 SecuritiesTransactionPendingReportV10 (semt.018.001.10)

#### 2 **3.3.7.7.1 Overview and scope of the message**

3 This chapter illustrates the *SecuritiesTransactionPendingReport10* message.

4 The *SecuritiesTransactionPendingReport10* message, also known as Statement of Pending Instructions, is  
5 sent by T2S to a CSD or other directly connected T2S party authorised by them. It is used to provide status  
6 and detailed information regarding instructions which do not have a final status (e.g. matched, unmatched,  
7 partially settled) within T2S. This report is sent on each settlement day, if subscribed by the participant, and  
8 is event (e.g. end-of-day or end of night-time cycle) or time driven. In case the size of the message to be  
9 sent exceeds the maximum size of 32 MB the message will be split into several messages (Please see section  
10 [Outbound traffic exceeding given size limitations](#) [▶ 1096]). The delta version returns new pending Settle-  
11 ment Instructions or pending Settlement Instructions which were modified or cancelled.

#### 12 **3.3.7.7.2 The T2S-specific schema**

##### 13 Outline of the schema

14 The *SecuritiesTransactionPendingReport10* message is composed of the following message building blocks:

##### 15 **Pagination**

16 This building block is mandatory and non repetitive. It gives the page number of the message (within a  
17 statement) and continuation indicator to indicate that the statement is to continue or that the message is  
18 the last page of the statement.

##### 19 **Statement General Details**

20 This building block is mandatory and non repetitive. It allows the account servicer to specify general infor-  
21 mation related to report such as the statement date, the activity, the frequency, or the report structure.

##### 22 **Account Owner**

23 This building block is optional and non repetitive. It is used to provide the details on the party that legally  
24 owns the account.

##### 25 **Safekeeping Account**

26 This building block is mandatory and non repetitive. It provides the account to or from which a securities  
27 entry is made.

##### 28 **Transactions**

29 This building block is optional and repetitive. It provides per transaction, the status and the reason. The  
30 account servicer can also include all the trade details.

31 Regarding the "Transaction Activity Code" field, its codes are reported based on the following relationship  
32 with the chosen Transaction Code:

1

Transaction Activity	Code	Settlement Transaction Type	Code
Borrowing Lending Activity	BOLE	Borrowing Reallocation	SBRE
		Securities Borrowing	SECB
		Securities Lending	SECL

2 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
3 vided outside of this document under the following link:

4 [http://www.swift.com/mystandards/T2S/semf.018.001.10\\_T2S](http://www.swift.com/mystandards/T2S/semf.018.001.10_T2S)

5 Business rules applicable to the schema

6 Not applicable (T2S outgoing message)

7 **3.3.7.7.3 The message in business context**

8 Message example: semf.018.001.10\_T2S\_Example.xml

9 In this example T2S, sends a statement of pending instructions, subsequent to an event within the end of  
10 day cycle, for a securities account '1000000123' held by Party1 (BIC: PRTYBIC1). This is a complete daily  
11 statement generated on the 6/1/2015 with new activity comprising of 3 pending instructions with a status of  
12 accepted.

### 1 3.3.7.8 SecuritiesSettlementTransactionAllegementReportV08 (semt.019.001.08)

#### 2 **3.3.7.8.1 Overview and scope of the message**

3 This chapter illustrates the *SecuritiesSettlementTransactionAllegementReportV08* message.

4 The *SecuritiesSettlementTransactionAllegementReportV08* message, also known as Statement of Settlement  
5 Allegement, is sent by T2S to a CSD or any party authorised by them. It is used to provide information about  
6 the list of all securities Settlement Instructions as received from other T2S Actors which are missing their  
7 corresponding securities Settlement Instruction from the T2S Actor this report is addressed to. The complete  
8 report does not report those Settlement Instructions which were formerly alleged but which are no longer  
9 outstanding whereas the delta report also shows those newly cancelled or newly removed. The report is  
10 triggered by a defined business event or time event.

#### 11 **3.3.7.8.2 The T2S-specific schema**

##### 12 Outline of the schema

13 The *SecuritiesSettlementTransactionAllegementReportV08* is composed of the following message building  
14 blocks:

##### 15 **Pagination**

16 This building block is mandatory and non repetitive. It gives the page number of the message (within a  
17 statement) and continuation indicator to indicate that the statement is to continue or that the message is  
18 the last page of the statement.

##### 19 **StatementGeneralDetails**

20 This building block is mandatory and non repetitive. It allows the account servicer to specify general infor-  
21 mation related to report such as the statement date, the activity, the frequency, or the report base.

##### 22 **Account Owner**

23 This block is optional and non repetitive. It identifies the party who owns the account.

##### 24 **SafekeepingAccount**

25 This block is mandatory and non repetitive. Since the report can provide information of several securities  
26 accounts, it is not possible to provide a unique Identifier. This block is set to a Fixed value "NONREF".

##### 27 **AllegementDetails**

28 This building block is optional and repetitive. It provides the details of all the allegements reported.

##### 29 References/Links

30 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
31 vided outside of this document under the following link:

32 <http://www.swift.com/mystandards/T2S/semt.019.001.08> T2S

##### 33 Business rules applicable to the schema

34 Not applicable (T2S outgoing message)

### 1 **3.3.7.8.3 The message in business context**

#### 2 Message example 1: semt.019.001.08 T2S StatementAllegements Example.xml

3 In this example, T2S sends a complete Statement of Settlement Allegement requested by the T2S Actor (as  
4 defined within reference data) for its securities accounts. The report contains the details of those Settlement  
5 Instructions for which the alleged T2S Party, CSD Participant B (CSDPBICXXX), has not sent its part of the  
6 instruction. The report contains two allegements:

7 Allegement with T2S reference T1290 alleging the delivering Settlement Instruction REFABCD.

8 Allegement with T2S reference T1305 alleging the delivering Settlement Instruction REF123.

#### 9 Message example 2: semt.019.001.08 T2S DeltaStatementAllegements Example.xml

10 In this example, T2S sends a delta Statement of Settlement Allegement requested by the T2S Actor (as de-  
11 fined within reference data) for its securities accounts. The report contains the details of those newly alleged  
12 Settlement Instructions for which the alleged T2S Party, CSD Participant B (CSDPBICXXX), has not sent its  
13 part of the instruction. It also contains the list of Settlement Instructions which were formerly alleged but  
14 are now cancelled or removed. This example contains one newly alleged Settlement Instructions (allegement  
15 with T2S reference T1300), one allegement removal (with T2S reference T1290) and one cancelled al-  
16 legement (T2S reference T1305).

### 17 **3.3.7.9 SecuritiesMessageCancellationAdviceV05 (semt.020.001.05)**

#### 18 **3.3.7.9.1 Overview and scope of the message**

19 This chapter illustrates the *SecuritiesMessageCancellationAdviceV05* message.

20 The *SecuritiesMessageCancellationAdviceV05* message, also known as an Allegement Cancellation, is sent by  
21 T2S to a CSD or any party authorised by them. It is used to inform that the previously sent allegement is  
22 cancelled due to the cancellation of the Settlement Instruction that originated the Allegement sending.

#### 23 **3.3.7.9.2 The T2S-specific schema**

##### 24 Outline of the schema

25 The *SecuritiesMessageCancellationAdviceV05* is composed of the following message building blocks:

##### 26 **Reference**

27 This block is mandatory. It specifies the reference of the message advised to be cancelled.

##### 28 **AccountOwner**

29 This block is optional and non repetitive. It identifies the party who owns the account.

##### 30 **SafekeepingAccount**

31 This block is mandatory and non repetitive. It provides the account to or from which a securities entry is  
32 made.

##### 33 References/Links

1 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
2 vided outside of this document under the following link:

3 <http://www.swift.com/mystandards/T2S/semf.020.001.05> T2S

4 *Business rules applicable to the schema*

5 Not applicable (T2S outgoing message)

### 6 **3.3.7.9.3 The message in business context**

7 *Message example: semf.020.001.05 T2S AllegementCancellation Example.xml*

8 In this example, T2S informs the CSD Participant B, CSDPBICXXX, about the cancellation of the previous  
9 Allegement sent with T2S reference 'T1300'.

## 10 3.3.7.10 SecuritiesSettlementTransactionAuditTrailReportV04 (semf.022.001.04)

### 11 **3.3.7.10.1 Overview and scope of the message**

12 This chapter illustrates the *SecuritiesSettlementTransactionAuditTrailReportV04* message.

13 The *SecuritiesSettlementTransactionAuditTrailReportV04* message is sent by T2S to a CSD or a directly con-  
14 nected T2S Party. The report provides historical data on all changes and amendments, including statuses, to  
15 a single security Settlement Instruction as identified within the query criteria (either by the party's instruc-  
16 tion reference or the T2S technical identifier) of the received [sese.021.001.05](#) [▶ 1632].

### 17 **3.3.7.10.2 The T2S-specific schema**

18 *Outline of the schema*

19 The *SecuritiesSettlementTransactionAuditTrailReportV04* is composed of the following message building  
20 blocks:

#### 21 **Pagination**

22 This building block is mandatory and non repetitive. It gives the page number of the message (within a  
23 statement) and continuation indicator to indicate that the statement is to continue or that the message is  
24 the last page of the statement.

#### 25 **Query Reference:**

26 This building block is mandatory and non repetitive. It contains a unique identification to unambiguously  
27 identify the reference of the query.

#### 28 **Transaction Identification**

29 This building block is mandatory and non repetitive. It provides transaction identification information to un-  
30 ambiguously identify the transaction.

#### 31 **Safekeeping Account**

32 This building block is mandatory and identifies the account to or from which a securities entry is made.

#### 33 **Status Trail**

1 This building block is mandatory and repetitive and provides the history of statuses and reasons for a trans-  
2 action including transaction snapshots containing all the transaction details.

### 3 References/Links

4 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
5 vided outside of this document under the following link:

6 <http://www.swift.com/mystandards/T2S/sem.022.001.04> T2S

### 7 Business rules applicable to the schema

8 Not applicable (T2S outgoing message)

### 9 **3.3.7.10.3 The message in business context**

10 Message example: sem.022.001.04 T2S Example.xml

11 In this example T2S sends a SecuritiesSettlementTransactionAuditTrailReportV03 as requested by the T2S  
12 Party using the message *SecuritiesTransactionStatusQueryV04* regarding a Settlement Instruction with an  
13 account owner transaction id with a value of '123456'. The transaction as reported has been acknowledged  
14 and matched.

15 3.3.7.11 SecuritiesAccountPositionQueryV01 (sem.025.001.01)

### 16 **3.3.7.11.1 Overview and scope of the message**

17 This chapter illustrates the *SecuritiesAccountPositionQueryV01* message.

18 The *SecuritiesAccountPositionQueryV01* message, also known as Securities Account Position (History) Query,  
19 is sent by a CSD or a directly connected T2S Party to T2S.

20 The *SecuritiesAccountPositionQueryV01* message returns the latest securities position at the given time of  
21 the day that the query has been requested for the specified securities accounts. In case the T2S Actor re-  
22 quests for a Securities Account Position History Query, he should indicate either the securities account or the  
23 account owner as search criteria. In a Securities Account Position History Query, T2S returns all closing se-  
24 curities positions on the dates within the specified time period for the specified securities accounts. In re-  
25 sponse to the *SecuritiesAccountPositionQueryV01* message, T2S sends a [sem.040.001.001](#) [▶ 1592] mes-  
26 sage with the list of the different securities positions of a T2S Actor's securities accounts or a  
27 [sese.022.001.05](#) [▶ 1633] message in case of error.

### 28 **3.3.7.11.2 The T2S-specific schema**

#### 29 Outline of the schema

30 The *SecuritiesAccountPositionQueryV01* is composed of the following message building blocks:

#### 31 **Statement**

32 This building block is mandatory and defines the criteria used to report on the securities account position.

#### 33 **SearchCriteria**

34 This building block is mandatory and provides the criteria to extract the securities account position result set.

### 1 **3.3.7.11.3 The message in business context**

2 Message example 1: semt.025.001.01 T2S QueryPositionCurrentDay Example.xml

3 In this example a T2S Actor has sent to T2S a Securities Account Position Query requesting the current day  
4 positions related to the Restriction Type "BLK1" within its securities account "1000000123".

5 Message example 2: semt.025.001.01 T2S QueryPositionPeriodDates Example.xml

6 In this example a T2S Party has sent to T2S a Securities Account Position Query requesting the closing posi-  
7 tions (including the zero positions) for its securities accounts "1000000123" and "1000000124" for the spe-  
8 cific ISIN "ISIN00000002" within the time period from the 9th of January 2015 until the 10th of January  
9 2015.

10 3.3.7.12 SecuritiesSettlementTransactionQueryV01 (semt.026.001.01)

### 11 **3.3.7.12.1 Overview and scope of the message**

12 This chapter illustrates the SecuritiesSettlementTransactionQueryV01 message.

13 The *SecuritiesSettlementTransactionQueryV01* message is sent by a CB, CSD or a directly connected T2S  
14 participant (e. g. payment bank/settlement bank) to T2S. This message is used to request information on  
15 Settlement Instructions.

16 This message is sent to T2S for the following query types:

- 1 | Settlement Instruction Query;
- 2 | Settlement Instruction Current Status Query;
- 3 | Settlement Instruction Status Audit Trail Query.

4 In response to the *SecuritiesSettlementTransactionQueryV01* message, T2S sends a [semt.027.001.01](#)  
 5 [▶ 1563] message with the corresponding requested settlement instructions or a [sese.022.001.05](#) [▶ 1633]  
 6 message in the case of a business error.

7 These types of queries are described in the section "The message in business context".

### 8 **3.3.7.12.2 The T2S-specific schema**

#### 9 Outline of the schema

10 The *SecuritiesSettlementTransactionQueryV01* is composed of the following message building block:

#### 11 **Query Definition**

12 This building block is mandatory and non repetitive. It contains the definition of the securities settlement  
 13 instruction query criteria.

#### 14 References/Links

15 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
 16 vided outside of this document under the following link:

17 [http://www.swift.com/mystandards/T2S/semt.026.001.01\\_T2S](http://www.swift.com/mystandards/T2S/semt.026.001.01_T2S)

1 **3.3.7.12.3 The message in business context**

2 Query Type: Settlement Instruction Query

3 This query type enables the sender to request information on the details of specific settlement instructions  
4 by specifying the pertinent criteria.

1 At least one of the following criteria must be present <sup>504</sup>:

- 2 | Account Servicer Reference;
- 3 | Account Owner Reference;
- 4 | T2S Settlement Instruction Reference;
- 5 | Securities Account Number;
- 6 | T2S Dedicated Cash Account Number;
- 7 | Instructing Party;
- 8 | Sending Party;
- 9 | Counterparty;
- 10 | ISIN.

11 If a field is not specified the user query returns all information consistent with the access rights.

12 Specific message requirements

13 To query T2S for settlement instruction information, the field QueryType must be filled with the "INST"  
14 code.

15

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

AnyBIC Docu- ment/SciesSttlmTxQry/QryDef/SchCrit/Cntrpt SttlmPties/Dpstry/Id/AnyBIC	AnyBICIdentifier	Criteria of which at least one must be present.

1 The status period criteria must not be present for this query type.

2 Query type example: semt.026.001.01 T2S SettlementInstructionQuery Example.xml

3 In this example a T2S Actor has sent to T2S a Settlement Instruction Query requesting all settlement in-  
4 structions where the securities account is '100000123' and the settlement quantity is greater than or equal  
5 to 50000 units and less than or equal to 60000 units.

6 Query Type: Settlement Instruction Current Status Query

1 This query type enables the sender to request information on the details of specific settlement instructions  
 2 satisfying specific statuses. The status must be amongst the criteria present within the query. All instructions  
 3 satisfying the provided criteria and with a current status matching the status criteria provided are returned.

4 If a field is not specified the user query returns all information consistent with the access rights.

5 Specific message requirements

6 To request a settlement instruction current status query the field QueryType must be filled with the "STTS"  
 7 code.  
 8

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
QueryType Document/SctiesSttlmTxQry/QryDef/QryTp	SettlementQueryType1Code	Code: 'STTS', representing a Settlement Instruction Current Status Query within T2S.

9 The status period criteria must not be present for this query type.

10 Query type example: semt.026.001.01 T2S SettlementInstructionCurrentStatusQuery Example.xml

11 In this example a T2S actor has sent to T2S a Settlement Instruction Current Status Query requesting all  
 12 high priority settlement instructions for securities account '1000000123' where the settlement status is pend-  
 13 ing.

14 Query Type: Settlement Instruction Status Audit Trail Query

15 This query type enables the sender to request information on the details of specific settlement instructions  
 16 satisfying specific statuses for a given period. The status and status period must be amongst the criteria  
 17 present within the query. All instructions satisfying the provided criteria and with the status matching the  
 18 status criteria during the specified period provided are returned.

19 If a field is not specified the user query returns all information consistent with the access rights.

20 Specific message requirements

21 To request a settlement instruction status audit trail query the field QueryType must be filled with the  
 22 "STPD" code and the status and status period criteria must be present.  
 23

6 3.3.7.13 SecuritiesSettlementTransactionQueryResponseV01 (semt.027.001.01)

### 7 **3.3.7.13.1 Overview and scope of the message**

8 This chapter illustrates the SecuritiesSettlementTransactionQueryResponseV01 message.

9 The SecuritiesSettlementTransactionQueryResponseV01 message is sent by T2S to a CB, CSD or a directly  
10 connected T2S participant (e. g. payment bank/settlement bank). This message is used to provide infor-  
11 mation on Settlement Instructions.

12 To request the SecuritiesSettlementTransactionQueryResponseV01 message, the sender sends a  
13 [semt.026.001.01](#) [▶ 1553] message containing search criteria to restrict the query.

14 This message is sent by T2S in the following message usages:

- 15 | Settlement Instruction Query Response;
- 16 | Settlement Instruction Current Status Query Response;
- 17 | Settlement Instruction Status Audit Trail Query Response.

18 These message usages are described in the section "The message in business context".

### 19 **3.3.7.13.2 The T2S-specific schema**

#### 20 Outline of the schema

21 The SecuritiesSettlementTransactionQueryResponseV01 is composed of the following message building  
22 blocks:

#### 23 **Pagination**

24 This building block is mandatory and non repetitive. It contains information about pagination of the report.

#### 25 **ReportGeneralDetails**

26 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
27 information.

#### 28 **Transactions**

29 This building block is optional and repetitive. It contains the transactions corresponding to the criteria of the  
30 query.

1 References/Links

2 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
3 vided outside of this document under the following link:

4 [http://www.swift.com/mystandards/T2S/semr.027.001.01\\_T2S](http://www.swift.com/mystandards/T2S/semr.027.001.01_T2S)

5 **3.3.7.13.3 The message in business context**6 Message Usage: Settlement Instruction Query Response

7 This message usage provides details regarding the settlement instructions satisfying the query criteria of the  
8 corresponding settlement instruction query message. The settlement instructions within the response are  
9 provided with their current details and status.

10 Specific message requirements

11 To indicate a settlement instruction query response the field QueryType is filled with the "INST" code. The  
12 StatusAndReason element within the Transactions block must not be present for this query type. The an-  
13 swers are grouped by the Transactions/AccountOwner or Transactions/SafekeepingAccount respectively  
14 when these criteria have been provided within the original query.  
15

ment/SciesSttlmTxQryRspn/Txs/Tx/StsAndRs n		

1 Transaction/StatusAndReason is present for all individual transactions reported.

2 Message usage example: semt.027.001.01 T2S QueryResponse Example.xml

3 In this example T2S sends a Settlement Instruction Query Response containing **3 one** instructions matching  
 4 the query criteria corresponding to query reference 'QRYREF0001'. This message is sent as a response to a  
 5 Settlement Instruction Query requesting all settlement instructions where the securities account is  
 6 '1000000123' and the settlement quantity is greater than or equal to 50000 units and less than or equal to  
 7 60000 units. **{CR-808}**

8 Message Usage: Settlement Instruction Current Status Query Response

9 This message usage provides details regarding the settlement instructions satisfying the query criteria of the  
 10 corresponding settlement instruction current status query message. The statuses provided as criteria are  
 11 current statuses and the settlement instructions within the response are provided with their current details  
 12 and statuses.

13 Specific message requirements

14 To indicate a settlement instruction current status query response the field QueryType is filled with the  
 15 "STTS" code. The answers are grouped by the StatusAndReason element within the Transactions block for  
 16 this query type.  
 17

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

StatusAndReason Docu- ment/SctiesSttlmTxQryRspn/Txs/Tx/StsAndRsn	StatusAndReason38_1	StatusAndReason always present for all individual transactions reported.

1 Transaction/StatusAndReason is present for all individual transactions reported.

2 Message usage example: semt.027.001.01 T2S StatusQueryResponse Example.xml

3 In this example T2S sends a Settlement Instruction Current Status Query Response containing **2 one** instructions matching the query criteria corresponding to query reference 'QRYREF0045'. This message is sent as a response to a Settlement Instruction Current Status Query requesting all pending settlement instructions with a high priority where the securities account is '100000123'. **{CR-808}**

7 Message Usage: Settlement Instruction Status Audit Trail Query Response

8 This message usage provides details regarding the settlement instructions satisfying the query criteria of the corresponding settlement instruction status audit trail query message. The statuses provided as criteria are those for the period indicated but the settlement instructions within the response are provided with their current details and statuses.

12 Specific message requirements

13 To indicate a settlement instruction status audit trail query response the field QueryType is filled with the "STPD" code. The answers are grouped by the StatusAndReason element within the Transactions block for this query type.

1 Transaction/StatusAndReason is present for all individual transactions reported.

2 Message usage example: semt.027.001.01 T2S AuditTrailQueryResponse Example.xml

3 In this example T2S sends a Settlement Instruction Status Audit Trail Query Response containing **2 two**  
4 instructions matching the query criteria corresponding to query reference **'QRYREF0541'**  
5 **'FFD06123B3390732'**. This message is sent as a response to a Settlement Instruction Status Audit Trail  
6 Query requesting all settlement instructions that were matched on or **after the 13th of January 2015**  
7 **and where the settlement currency is 'EUR before the 20th of June 2023.'**{CR-808}

8 3.3.7.14 IntraPositionMovementQueryV01 (semt.028.001.01)

### 9 **3.3.7.14.1 Overview and scope of the message**

10 This chapter illustrates the *IntraPositionMovementQueryV01* message.

11 The *IntraPositionMovementQueryV01* message is sent by a CSD or other directly connected T2S party to  
12 T2S. This message is used to request information on Intra-Position Movements.

13 In response to the *IntraPositionMovementQueryV01* message, T2S sends a [semt.029.001.01](#) [▶ 1572] mes-  
14 sage with the corresponding requested intra-position movements or a [sese.022.001.05](#) [▶ 1633] message in  
15 the case of a business error.

1 **3.3.7.14.2 The T2S-specific schema**2 Outline of the schema3 The *IntraPositionMovementQueryV01* is composed of the following message building blocks:4 **Query Definition**5 This building block is mandatory and non repetitive. It defines the criteria for extracting intra-position  
6 movement information. It defines as well whether the query requests full details on the movements to be  
7 reported or only limited details including the status of the movements to be reported8 References/Links9 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-

1 **3.3.7.14.3 The message in business context**

2 Message example: semt.028.001.01 T2S Example.xml

3 In this example a T2S actor has sent to T2S a Intra-Position Movement Query requesting the full details of  
4 all movements from the deliverable position to a reserved position 'RSV8' relating to securities with the ISIN  
5 'DE0000000999'.

### 1 3.3.7.15 IntraPositionMovementQueryResponseV01 (semt.029.001.01)

#### 2 **3.3.7.15.1 Overview and scope of the message**

3 This chapter illustrates the *IntraPositionMovementQueryResponseV01* message.

4 The *IntraPositionMovementQueryResponseV01* message is sent by T2S to CSD or other directly connected  
5 T2S party. This message is used to provide information on Intra-Position Movements.

6 The *IntraPositionMovementQueryResponseV01* is sent in response to a [semt.028.001.01](#) [▶ 1567] message.

#### 7 **3.3.7.15.2 The T2S-specific schema**

##### 8 Outline of the schema

9 The *IntraPositionMovementQueryResponseV01* is composed of the following message building blocks:

##### 10 **Pagination**

11 This building block is mandatory and non repetitive. It contains information about pagination of the report.

##### 12 **Report General Details**

13 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
14 information.

##### 15 **Movements**

16 This building block is optional and repetitive. It contains information relating to the movements correspond-  
17 ing to the criteria of the query.

##### 18 References/Links

19 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
20 vided outside of this document under the following link:

21 [http://www.swift.com/mystandards/T2S/semt.029.001.01\\_T2S](http://www.swift.com/mystandards/T2S/semt.029.001.01_T2S)

#### 22 **3.3.7.15.3 The message in business context**

23 Message example: semt.029.001.01 T2S Example.xml

24 In this example T2S sends an Intra-Position Movement Query Response containing 5 instructions matching  
25 the query criteria specified in the query with reference 'ID0Q0F003452', which is requesting the full details  
26 of movements where securities with an ISIN 'DE0000000999' are moved from the deliverable position to a  
27 reserved position 'RSV8'.

### 28 3.3.7.16 SecuritiesSettlementConditionsModificationRequestQueryV01 (semt.030.001.01)

#### 29 **3.3.7.16.1 Overview and scope of the message**

30 This chapter illustrates the *SecuritiesSettlementConditionsModificationRequestQueryV01* message.

31 The *SecuritiesSettlementConditionsModificationRequestQueryV01*, also known as an Amendment Instruction  
32 Query for Intra Position Movements and Settlement Instructions, is sent by a CSD or a directly connected  
33 T2S party (T2S Actor) to T2S. It aims at querying either the full details or current status of Amendment In-

1 instruction(s) of Settlement Instruction(s) and Settlement Restriction(s) on Securities Position based on a set  
2 of search criteria or business attributes.

3 In response to the *SecuritiesSettlementConditionsModificationRequestQueryV01* message, T2S sends a  
4 [semt.031.001.01](#) [▶ 1574] with the corresponding Amendment Instructions. In case an error occurs, T2S  
5 sends a [sese.022.001.05](#) [▶ 1633].

### 6 **3.3.7.16.2 The T2S-specific schema**

#### 7 Outline of the schema

8 The *SecuritiesSettlementConditionsModificationRequestQueryV01* is composed of the following message  
9 building block:

#### 10 **Query Definition**

11 This building block is mandatory and non repetitive. It defines the criteria to extract the Amendment Instruc-  
12 tion information for Settlement Instructions or Settlement Restrictions on Securities Position. It defines as  
13 well whether the query response outputs full details or only its current status values.

#### 14 References/Links

15 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
16 vided outside of this document under the following link:

### 1 **3.3.7.16.3 The message in business context**

#### 2 Message example 1: semt.030.001.01 T2S Query Example.xml

3 In this example Party A (BNKAFRPPXXX), requests a full details list of Amendment Instructions on Settle-  
4 ment Instructions and Settlement Restrictions on Securities Position by using an *SecuritiesSettlementCondi-*  
5 *tionsModificationRequestQuery* with the following search criteria:

- 6 | Securities Account number: "1000000123";
- 7 | Creation Date of the Amendment Instructions: February 1st 2015.

#### 8 Message example 2: semt.030.001.01 T2S QueryStatus Example.xml

9 In this example Party A (BNKAFRPPXXX), requests a full details list of Amendment Instructions on Settle-  
10 ment Instructions and Settlement Restrictions on Securities Position by using an *SecuritiesSettlementCondi-*  
11 *tionsModificationRequestQuery* with the following search criteria:

- 12 | Securities Account number: "1000000123";
- 13 | Creation Date of the Amendment Instructions: February 1st 2015;
- 14 | Status query type.

### 15 3.3.7.17 SecuritiesSettlementConditionsModificationRequestReportV01 (semt.031.001.01)

#### 16 **3.3.7.17.1 Overview and scope of the message**

17 This chapter illustrates the *SecuritiesSettlementConditionsModificationRequestReportV01* message.

18 The *SecuritiesSettlementConditionsModificationRequestReportV01* message is sent by T2S to a CSD or any  
19 T2S party (T2S Actor). This message is used to provide information on Amendment Instructions for Settle-  
20 ment Instructions and Settlement Restrictions on Securities Positions.

1 Where used in response to a semt.030 request, the content will cover the requested scope. Where used in  
2 response to a configured report, the content will cover all Securities Accounts under the Reporting Party's  
3 scope.

4 T2S sends the *SecuritiesSettlementConditionsModificationRequestReportV01* message as response to the  
5 [semt.030.001.01](#) [▶ 1572] message, containing information on requested items in the following message  
6 usage:

7 | Amendment Instruction Query Response for Intra-Position Movements and Settlement Instructions;  
8 The message is also sent as a report triggered by defined business and time events in the following message  
9 usages:

10 | Statement of executed amendment instructions for Intra-Position Movements and Settlement Instruc-  
11 tions;

12 | Statement of pending amendment instructions for Intra-Position Movements and Settlement Instructions.

13 These message usages are described in the section "The message in business context".

### 14 **3.3.7.17.2 The T2S-specific schema**

#### 15 Outline of the schema

16 The *SecuritiesSettlementConditionsModificationRequestReportV01* is composed of the following message  
17 building blocks:

#### 18 **Pagination**

19 This building block is mandatory and non repetitive. It defines the pagination of the message.

#### 20 **Report General Details**

21 This building block is mandatory and non repetitive. It provides general characteristics related to the report.

#### 22 **Modifications**

23 This building block is optional and repetitive. It contains details on the condition modification requests corre-  
24 sponding to the criteria of the query.

#### 25 References/Links

26 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
27 vided outside of this document under the following link:

28 [http://www.swift.com/mystandards/T2S/semt.031.001.01\\_T2S](http://www.swift.com/mystandards/T2S/semt.031.001.01_T2S)

#### 29 Business rules applicable to the schema

30 Not applicable (Outbound message).

### 31 **3.3.7.17.3 The message in business context**

32 Message usage: Amendment Instruction Query Response for Intra-Position Movements and Settlement In-  
33 structions

1 This message usage provides the sender with the requested information about Intra-Position Movements  
2 and Settlement Instructions.

3 Specific message requirements

4 An Amendment Instruction Query Response for Intra-Position Movements and Settlement Instructions con-  
5 tains the following set of information on queried criterias:

- 6 | QueryReference - Identification of the query message sent to request this response;
- 7 | Query Type – defines the type of query requested either reporting the full details of the movements or  
8 only their current status values;
- 9 | Frequency – ISO code for the ad-hoc frequency;
- 10 | Update type – ISO code indicating the completeness of the query response;
- 11 | Activity Indicator – indicates whether the response contains information or not;
- 12 | Modifications – repetitive block containing the Intra-Position and Settlement Instruction movement in-  
13 formation.  
14

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

1 Message usage example 1: semt.031.001.01 T2S Response Example.xml

2 In this example T2S sends an Amendment Instruction Query Response containing 4 instructions matching  
3 the criteria specified in the query with reference 'ID0Q0F002244' (full query type), which is requesting all  
4 Amendment Instructions where the securities account is '1000000123' and the Creation Date is February 1st  
5 2015.

6 Message usage example 2: semt.031.001.01 T2S ResponseStatus Example.xml

7 In this example T2S sends an Amendment Instruction Query Response containing 4 instructions matching  
8 the criteria specified in the query with reference 'ID0Q0F002245' (status query type), which is requesting all  
9 Amendment Instructions where the securities account is '1000000123' and the Creation Date is February 1st  
10 2015.

11 Message usage: Statement of executed amendment instructions for Intra-Position Movements and Settle-  
12 ment Instructions

13 This report returns those Modification Instructions which act on Settlement Instructions and Intra-Position  
14 Movements that reached the executed status on a particular settlement day. The report provides the full  
15 details of the instructions reported.

16 Specific message requirements

17 The statement of executed amendment instructions for Intra-Position Movements and Settlement Instruc-  
18 tions contains the following set of information:

- 19 | Report Identification - Identification of the report sent by T2S;
- 20 | From Date Time - Point in time when the queried report period starts;
- 21 | To Date Time - Point in time when the queried report period ends;
- 22 | Frequency – ISO code for the daily frequency;
- 23 | Update type – ISO code indicating the completeness of the query response;
- 24 | Activity Indicator – indicates whether the response contains information or not;
- 25 | Modifications – repetitive block containing the Intra-Position and Settlement Instruction movement in-  
26 formation grouped Securities Account. Every entry in the report contains:
  - 27 – Account Owner - BIC of the account owner party;
  - 28 – Safekeeping Account – Securities Account number;
  - 29 – Completed status with no reason code or additional reason information;
  - 30 – Request Details block containing the details of the modification request;
  - 31 – Underlying block containing the details of the Settlement Instruction or Intra-Position Movement modi-  
32 fied.

1 Message usage example: semt.031.001.01 T2S StatementExecuted Example.xml

2 In this example T2S sends a Statement of executed amendment instructions for all the Intra-Position Move-  
3 ments and Settlement Instructions executed on the 3rd of February 2015 within the securities account  
4 '1000000123'and '1000000124'.

5 As this report is generated at party level, it also indicates that the securities accounts '1000000123' and  
6 '1000000124' are the only SACs in the Party scope which has amendments to be reported.

7 Message usage: Statement of pending amendment instructions for Intra-Position Movements and Settlement  
8 Instructions

9 This report returns those Modification Instructions which act on Settlement Instructions and Intra-Position  
10 Movements that do not have a final status at the time of the report generation. The report provides the full  
11 details of the instructions reported.

12 Specific message requirements

13 The statement of pending amendment instructions for Intra-Position Movements and Settlement Instructions  
14 contains the following set of information:

- 15 | Report Identification - Identification of the report sent by T2S;
- 16 | From Date Time - Point in time when the queried report period starts;
- 17 | To Date Time - Point in time when the queried report period ends;
- 18 | Frequency – ISO code for the daily frequency;

1 Message usage example: semt.031.001.01 T2S StatementPending Example.xml

2 In this example T2S sends a Statement of pending amendment instructions for all the Intra-Position Move-  
3 ments and Settlement Instructions that still have an accepted status at the generation of the report (the 3rd  
4 of February 2015 at 06:03:24) within the securities account '1000000123'and '1000000124'.

5 As this report is generated at party level, it also indicates that the securities accounts '1000000123' and  
6 '1000000124' are the only SACs in the Party scope which has amendments to be reported.

## 1 3.3.7.18 SecuritiesTransactionCancellationRequestQueryV01 (semt.032.001.01)

2 **3.3.7.18.1 Overview and scope of the message**3 This chapter illustrates the *SecuritiesTransactionCancellationRequestQueryV01* message.4 The *SecuritiesTransactionCancellationRequestQueryV01*, also known as Cancellation Instruction Query for  
5 Intra-Position Movements and Settlement Instructions, is sent by a CSD or other directly connected T2S  
6 party (T2S Actor) to T2S. It aims at querying either the full details or current status of Cancellation Instruc-  
7 tion(s) of Settlement Instruction(s) and Settlement Restriction(s) on Securities Position based on a set of  
8 search criteria or business attributes.9 In response to the *SecuritiesTransactionCancellationRequestQueryV01* message, T2S sends a  
10 [semt.033.001.01](#) [▶ 1584] with the corresponding Cancellation Instructions. In case an error occurs, T2S  
11 sends a [sese.022.001.05](#) [▶ 1633].12 **3.3.7.18.2 The T2S-specific schema**13 Outline of the schema14 The *SecuritiesTransactionCancellationRequestQueryV01* is composed of the following message building  
15 blocks:16 **Query Definition**17 This building block is mandatory and non repetitive. It defines the criteria to extract the Cancellation Instruc-  
18 tion information for Settlement Instructions or Settlement Restrictions on Securities Position. It defines as  
19 well whether the query response outputs full details or only its current status values.20 References/Links21 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-

### 1 **3.3.7.18.3 The message in business context**

#### 2 Message example 1: semt.032.001.01 T2S Query Example.xml

3 In this example Party A (BNKAFRPPXXX) requests a list of Cancellation Instructions on Settlement Instruc-  
4 tions by using a SecuritiesTransactionCancellationRequestQuery with the following search criteria:

- 5 | Securities Account number: "1000000123";
- 6 | Creation Date of the Amendment Instructions: February 1st 2015;
- 7 | Cancellation Instruction in Pending Cancellation status;
- 8 | Response should include FULL details on the reported movements.

#### 9 Message example 2: semt.032.001.01 T2S QueryStatus Example.xml

10 In this example Party A (BNKAFRPPXXX) requests a list of Cancellation Instructions on Settlement Instruc-  
11 tions by using a SecuritiesTransactionCancellationRequestQuery with the following search criteria:

- 12 | Securities Account number: "1000000123";
- 13 | Creation Date of the Amendment Instructions: February 1st 2015;
- 14 | Cancellation Instruction in Pending Cancellation status;
- 15 | Response should include limited details including only the status on the movements reported.

### 1 3.3.7.19 SecuritiesTransactionCancellationRequestReportV01 (semt.033.001.01)

#### 2 **3.3.7.19.1 Overview and scope of the message**

3 This chapter illustrates the *SecuritiesTransactionCancellationRequestReportV01* message.

4 The *SecuritiesTransactionCancellationRequestReportV01* message is sent by T2S to a CSD or any T2S party  
5 (T2S Actor). This message is used to provide information on Cancellation Instruction(s) for Settlement In-  
6 structions and Settlement Restrictions on Securities Position.

7 Where used in response to a semt.032 request, the content will cover the requested scope. Where used in  
8 response to a configured report, the content will cover all Securities Accounts under the Reporting Party's  
9 scope.

10 T2S sends the *SecuritiesTransactionCancellationRequestReportV01* message as response to a

11 [semt.032.001.01](#) [▶ 1582], containing information on requested items in the following message usage:

12 | Cancellation Instruction Query Response for Intra-Position Movements and Settlement Instructions;

13 The message is also sent as a report triggered by defined business and time events in the following message  
14 usages:

15 | Statement of executed cancellation instructions for Intra-Position Movements and Settlement Instruc-  
16 tions;

17 | Statement of pending cancellation instructions for Intra-Position Movements and Settlement Instructions.

18 These message usages are described in the section "The message in business context".

#### 19 **3.3.7.19.2 The T2S-specific schema**

##### 20 Outline of the schema

21 The *SecuritiesTransactionCancellationRequestReportV01* is composed of the following message building  
22 blocks:

##### 23 **Pagination**

24 This building block is mandatory and non repetitive. It defines the pagination of the message.

##### 25 **Report General Details**

26 This building block is mandatory and non repetitive. It provides general characteristics related to the report.

##### 27 **Cancellations**

28 This building block is optional and repetitive. It contains details on the cancellation requests corresponding  
29 to the criteria of the query.

##### 30 References/Links

31 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
32 vided outside of this document under the following link:

1 Not applicable (Outbound message).

### 2 **3.3.7.19.3 The message in business context**

#### 3 Message usage: Cancellation Instruction Query Response for Intra-Position Movements and Settlement In- 4 structions

5 This message usage provides the sender with the requested information about Intra-Position Movements  
6 and Settlement Instructions.

#### 7 Specific message requirements

8 A Cancellation Instruction Query Response for Intra-Position Movements and Settlement Instructions con-  
9 tains the following set of information on queried criterias:

- 10 | QueryReference - Identification of the query message sent to request this response;
- 11 | Query Type – defines the type of query requested either reporting the full details of the movements or  
12 only their current status values;
- 13 | Frequency – ISO code for the ad-hoc frequency;
- 14 | Update type – ISO code indicating the completeness of the query response;
- 15 | Activity Indicator – True when the report contains data; false otherwise;
- 16 | Modifications – repetitive block containing the Intra-Position and Settlement Instruction movement in-  
17 formation.  
18

1 Message usage example 1: semt.033.001.01 T2S Response Example.xml

2 In this example T2S sends a Cancellation Query Response containing 3 instructions matching the query cri-  
3 teria specified into the query with reference 'ID0Q0F002255' (full query type), which is requesting all Cancel-  
4 lation Instructions for Settlement Instructions where the securities account is '1000000123' and the Creation  
5 Date is February 1st 2015. T2S reports for Cancellation Instructions which are waiting the bilateral confirma-  
6 tion for the cancellation (references MSG12347, REF8765 and DOC9087).

7 Message usage example 2: semt.033.001.01 T2S ResponseStatus Example.xml

8 In this example T2S sends a Cancellation Query Response containing 3 instructions matching the query cri-  
9 teria specified into the query with reference 'ID0Q0F002256' (status query type), which is requesting all  
10 Cancellation Instructions for Settlement Instructions where the securities account is '1000000123' and the  
11 Creation Date is February 1st 2015. T2S reports for Cancellation Instructions which are waiting the bilateral  
12 confirmation for the cancellation (references MSG12347, REF8765 and DOC9087).

13 Message usage: Statement of executed cancellation instructions for Intra-Position Movements and Settle-  
14 ment Instructions

15 This report returns those Cancellation Instructions which act on Settlement Instructions and Intra-Position  
16 Movements that reached the executed status on a particular settlement day. The report provides the full  
17 details of the instructions reported.

18 Specific message requirements

19 The statement of executed cancellation instructions for Intra-Position Movements and Settlement Instruc-  
20 tions contains the following set of information.

- 21 | Report Identification - Identification of the report sent by T2S;
- 22 | From Date Time - Point in time when the queried report period starts;
- 23 | To Date Time - Point in time when the queried report period ends;
- 24 | Frequency – ISO code for the daily frequency;
- 25 | Update type – ISO code indicating the completeness of the query response;
- 26 | Activity Indicator – True when the report contains data; false otherwise;
- 27 | Cancellations – repetitive block containing the Intra-Position and Settlement Instruction movement in-  
28 formation grouped Securities Account. Every entry in the report contains:
  - 29 – Account Owner - BIC of the account owner party;
  - 30 – Safekeeping Account – Securities Account number;
  - 31 – Completed status with no reason code or additional reason information;
  - 32 – TransactionIdentification – identification of the instruction cancelled;

- 1 – Underlying block containing the details of the Settlement Instruction or Intra-Position Movement cancelled.  
2

1 Message usage example: semt.033.001.01 T2S ReportExecuted Example.xml

2 In this example T2S sends a Statement of executed cancellation instructions for all the Intra-Position Move-  
3 ments and Settlement Instructions that were cancelled on the 3rd of February 2015 within the securities  
4 account '1000000123' and '1000000124'.

5 As this report is generated at party level, it also indicates that the securities accounts '1000000123' and  
6 '1000000124' are the only SACs in the Party scope which has cancellations to be reported.

7 Message usage: Statement of pending cancellation instructions for Intra-Position Movements and Settlement  
8 Instructions

9 This report returns those Cancellation Instructions which act on Settlement Instructions and Intra-Position  
10 Movements that do not have a final status at the time of the report generation. The report provides the full  
11 details of the instructions reported.

12 Specific message requirements

13 The statement of pending cancellation instructions for Intra-Position Movements and Settlement Instructions  
14 contains the following set of information:

- 15 | Report Identification - Identification of the report sent by T2S;
- 16 | From Date Time - Point in time when the queried report period starts;
- 17 | To Date Time - Point in time when the queried report period ends;
- 18 | Frequency – ISO code for the daily frequency;

- 1 | Update type – ISO code indicating the completeness of the query response;
- 2 | Activity Indicator – True when the report contains data; false otherwise;
- 3 | Cancellations – repetitive block containing the Intra-Position and Settlement Instruction movement in-
- 4 | formation grouped Securities Account. Every entry in the report contains:
  - 5 | – Account Owner - BIC of the account owner party;
  - 6 | – Safekeeping Account – Securities Account number;
  - 7 | – AcknowledgedAccepted status with no reason code if the status of the cancellation request at the time
  - 8 | of generation of the report is accepted;
  - 9 | – PendingCancellation status if the cancellation request is pending until its counterparty sends the cor-
  - 10 | responding Cancellation Instruction;
  - 11 | – TransactionIdentification – identification of the instruction requested in the cancellation;
  - 12 | – Underlying block containing the details of the Settlement Instruction or Intra-Position Movement to be
  - 13 | cancelled.

1 Message usage example: semt.033.001.01 T2S ReportPending Example.xml

2 In this example T2S sends a Statement of pending cancellation instructions for all the Intra-Position Move-  
3 ments and Settlement Instructions that still have an accepted status or a pending status at the generation of  
4 the report (the 3rd of February 2015 at 06:05:24) within the securities account '1000000123'and  
5 '1000000124'.

6 As this report is generated at party level, it also indicates that the securities accounts '1000000123' and  
7 '1000000124' are the only SACs in the Party scope which has cancellations to be reported.

## 1 3.3.7.20 IntraPositionMovementPendingReportV01 (semt.034.001.01)

### 2 **3.3.7.20.1 Overview and scope of the message**

3 This chapter illustrates the *IntraPositionMovementPendingReportV01* message.

4 The *IntraPositionMovementPendingReportV01* message is sent by T2S to a CSD or a directly connected T2S  
5 participant. This message is used to provide information on pending intra-position movements. This report is  
6 triggered by defined business and time events. The delta version returns new pending intra-position move-  
7 ments or pending intra position movements which were modified or cancelled.

### 8 **3.3.7.20.2 The T2S-specific schema**

#### 9 Outline of the schema

10 The *IntraPositionMovementPendingReportV01* is composed of the following message building blocks:

#### 11 **Pagination**

12 This building block is mandatory and non repetitive. It contains information about pagination of the report.

#### 13 **Report General Details**

14 This building block is mandatory and non repetitive. It contains general characteristics related to the report  
15 information.

#### 16 **Account Owner**

17 This building block is optional and non repetitive. It must contain the identification of the party that owns  
18 the account to or from which an entry is made.

#### 19 **Safekeeping Account**

20 This building block is mandatory and non repetitive. It identifies the account to or from which a securities  
21 entry is made.

#### 22 **Movements**

23 This building block is optional and repetitive. It provides the details of the movements reported.

#### 24 References/Links

25 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
26 vided outside of this document under the following link:

27 [http://www.swift.com/mystandards/T2S/semt.034.001.01\\_T2S](http://www.swift.com/mystandards/T2S/semt.034.001.01_T2S)

### 28 **3.3.7.20.3 The message in business context**

29 Message example: semt.034.001.01 T2S Example.xml

30 In this example T2S sends an Intra-Position Movement Pending Report for the securities account  
31 '1000000792' as defined within static data (an intraday report in this case) . The report contains 3 move-  
32 ments pending as of 16h00 on the current business day, the 18th of August 2015.

### 1 3.3.7.21 SecuritiesAccountPositionResponseV01 (semt.040.001.01)

#### 2 **3.3.7.21.1 Overview and scope of the message**

3 This chapter illustrates the *SecuritiesAccountPositionResponseV01* message.

4 The *SecuritiesAccountPositionResponseV01* message is sent by T2S to a CSD or any party authorised by  
5 them as response for the [semt.025.001.01](#) [▶ 1551] message. The *SecuritiesAccountPositionResponseV01*  
6 provides information about the different securities positions of a T2S Actor's securities account(s) in T2S.

7 Depending on the search criteria of the Securities Account Position Query and the Securities Account Position  
8 History Query, the response provides:

- 9 | The current position;
- 10 | Position at a specific time of current day;
- 11 | EOD position for specific day in the past;
- 12 | EOD positions for period of days in the past.

#### 13 **3.3.7.21.2 The T2S-specific schema**

##### 14 Outline of the schema

15 The *SecuritiesAccountPositionResponseV01* is composed of the following message building blocks:

##### 16 **Pagination**

17 This building block is mandatory and non repetitive. It defines the pagination of the message.

##### 18 **ReportGeneralDetails**

19 This building blocks is mandatory and non repetitive. It specifies general information related to response  
20 such as the query reference, the activity or whether the data is either historical or current.

##### 21 **AccountOwner**

22 This block is optional and non repetitive. It identifies the party who owns the account.

##### 23 **AccountServicer**

24 This block is optional and identifies the party that manages the account on behalf of the account owner, i.e.  
25 manages the registration and booking of entries on the account, calculates balances on the account and  
26 provides information about the account.

##### 27 **Balance**

28 This building block is optional and repetitive. This block provides the net position of a segregated holding, in  
29 a single security, within the overall position held in a set of securities accounts.

##### 30 References/Links

31 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
32 vided outside of this document under the following link:

33 <http://www.swift.com/mystandards/T2S/semt.040.001.01> T2S

34 Business rules applicable to the schema

1 Not applicable (T2S outgoing message)

### 2 **3.3.7.21.3 The message in business context**

#### 3 Message example 1: semt.040.001.01 T2S ResponsePositionCurrentDay Example.xml

4 In this example T2S sends a Securities Account Position Response containing 3 restriction references match-  
5 ing the query criteria corresponding to query reference "MSG700". This message is sent as a response to a  
6 Securities Account Position Query requesting the current day positions related to the Restriction Type "BLK1"  
7 within securities account "1000000123". The securities positions returned in the response are the current  
8 day positions at 09:30:47 with the following breakdown:

- 9 | Securities account "1000000123" with 4000 "ISIN00000002" blocked (not available)
- 10 – 1000 units with restriction reference 98586776475;
- 11 – 1000 units with restriction reference 98745787450;
- 12 – 2000 units with restriction reference 1234767634.

#### 13 Message example 2: semt.040.001.01 T2S ResponsePositionPeriodDates Example.xml

14 In this example T2S sends a Securities Account Position Response containing the End Of Day positions (in-  
15 cluding the zero positions) for the ISIN "ISIN00000002" within its securities accounts "1000000123" and  
16 "1000000124". These securities accounts have the following securities positions breakdown within the time  
17 period from the 9th of January 2015 until the 10th of January 2015:

- 18 | Securities account "1000000123" where 100 are available and 1020 are not available at EOD the 9th of  
19 January 2015:
  - 20 – 100 units in Deliverable,
  - 21 – 200 units in RES1 restriction type,
  - 22 – 210 units in RES2 restriction type,
  - 23 – 300 units in BLK1 restriction type,
  - 24 – 310 units in BLK2 restriction type.
- 25 | Securities account "1000000123" where 900 are available and 100 are not available at EOD the 10th of  
26 January 2015:
  - 27 – 900 units in Deliverable,
  - 28 – 100 units in BLK1 restriction type.
- 29 | Securities account "1000000124" where 850 are available and 460 are not available at EOD the 9th of  
30 January 2015:
  - 31 – 500 units in Deliverable,
  - 32 – 250 units in RES3 restriction type,
  - 33 – 210 units in RES4 restriction type,
  - 34 – 150 units in EAR1 restriction type,
  - 35 – 200 units in EAR2 restriction type.

- 1 | I Securities account "1000000124" with a position of 1350 being all of them available at EOD the 10th of  
2 | January 2015:
- 3 | – 1000 units in Deliverable,
  - 4 | – 150 units in EAR1 restriction type,
  - 5 | – 200 units in EAR2 restriction type.

### 6 | 3.3.7.22 SecuritiesTransactionPenaltiesReportV01 (semt.044.001.01)

#### 7 | **3.3.7.22.1 Overview and scope of the message**

8 | This chapter illustrates the SecuritiesTransactionPenaltiesReportV01 message.

9 | The SecuritiesTransactionPenaltiesReportV01 message, is sent by T2S to T2S Actors, i.e. CSDs or CSD par-  
10 | ticipants, to provide them with the Daily Penalty List, the List of Modified Penalties and the Monthly Aggre-  
11 | gated Amounts of penalties for the previous month.

12 | T2S shall allow the relevant T2S Actor to receive penalties information under its default data scope:

- 13 | I In case of a CSD, the information shall include the penalties that are either imposed or credited to all the  
14 | parties belonging to the CSD data scope
- 15 | I In case of a CSD participant (or an External CSD), the information shall include the penalties that are  
16 | either imposed or credited to the CSD participant (or the External CSD).

17 | In case the size of the message to be sent exceeds the maximum size of 32 MB the message will be split  
18 | into several messages (Please see section [Outbound traffic exceeding given size limitations](#) [▶ 1096]).

#### 19 | **3.3.7.22.2 The T2S-specific schema**

##### 20 | Outline of the schema

21 | The SecuritiesTransactionPenaltiesReportV01 is composed of different building blocks. Not all of them are  
22 | included in the different Penalty Lists, as shown in the following table for the main building blocks:

##### 23 | **Pagination**

24 | This building block is mandatory (the pagination of the report is only allowed when agreed between the  
25 | parties) and non-repetitive. It contains information about pagination of the report: Page number and Last  
26 | Page Indicator.

##### 27 | **ReportGeneralDetails**

28 | This building block is mandatory and non-repetitive. It contains general characteristics related to the report  
29 | information.

##### 30 | **AccountServicer**

31 | This block is mandatory and non-repetitive. It identifies the party that manages the account on behalf of the  
32 | account owner, i.e. manages the registration and booking of entries on the account, calculates balances on  
33 | the account and provides information about the account.

##### 34 | **Penalty**

1 This block is optional (provided Activity Indicator is TRUE) and repetitive. It contains detailed information  
2 related to the computed penalties.

### 3 References/Links

4 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
5 vided outside of this document under the following link.

6 [http://www.swift.com/mystandards/T2S/sem044.001.01\\_T2S](http://www.swift.com/mystandards/T2S/sem044.001.01_T2S)

### 7 Business rules applicable to the schema

8 Not applicable (T2S outgoing message)

### 9 **3.3.7.22.3 The message in business context**

10 Message usage: Daily Penalty List

11 The Daily Penalty List is sent on each settlement day and informs about the newly computed penalties for  
12 the previous settlement day.

13 The Daily Penalty List reports the aggregated net amount (sum of all penalties a party is entitled to receive  
14 minus sum of all penalties a party is imposed with) of penalties per currency, party and counterparty. The  
15 aggregated net amount of penalties will be provided in the Daily Penalty List even if the result of this bilat-  
16 eral net is zero.

17 In case for a given day there are no penalties calculated for any given currency, party and counterparty, the  
18 report will show "False" in the Activity indicator.

19 Specific message requirements

20 The message must be informed with:

21 | "ReportPeriod" as a "Date" informing the Detection Date of the Penalties being reported <sup>505</sup>;

22 | "Frequency" = "DAIL" (Daily); and

23 | "PenaltyListType" = "FWIS" (ForwardInitialSubmission).

24 Message usage example 1: sem044.001.01\_Daily Penalty List (for a CSD)

25 In this example, T2S sends a Daily Penalty List to the CSD A (CSDABIC1XXX) to inform about all the penal-  
26 ties that were computed for the previous business date, June 21st 2019 (Detection Date), and for which any  
27 participant of CSD A or the CSD A itself is either imposed with or entitled to receive the penalty.

28 This Daily Penalty List is generated on June 24th 2019 and includes information about 4 penalties within the  
29 scope of CSD A.

30 More precisely CSD A is reported that:

31 Participant A (PRTAFRPPXXX) has been computed with:

32 | A SEFP, Penalty 1, to be paid to Participant B (PRTBFRPPXXX).

33 | A SEFP, Penalty 2, to be received from Participant B (PRTBFRPPXXX).

---

505 It is the business day before the calculation process and creation of its Daily Penalty List report by T2S

- 1 | A SEFP, Penalty 3, to be paid to Participant Z (PRTZESMMXXX) of CSD Z (CSDZBIC1XXX).
- 2 Participant B (PRTBFRPPXXX) has been computed with:
- 3 | A SEFP, Penalty 1, to be received from Participant A (PRTAFRPPXXX).
- 4 | A SEFP, Penalty 2, to be paid to Participant A (PARTAFRPPXXX).
- 5 | A SEFP, Penalty 4, to be received from Participant Y (PRTYDEFFXXX) of CSD Y (CSDYBIC1XXX).
- 6 Detail description of the Penalties:
- 7 Penalty 1 (Common Penalty Id: 201906210000001) is a SEFP that is imposed to Participant A and entitled to
- 8 Participant B, both of CSD A, hence both sides are informed in the report of the example. More in details,
- 9 the penalty is:
- 10 | Imposed to Participant A (Individual Penalty Identification: F201906210000001) because its DVP instruc-
- 11 tion failed to settle in T2S because of being on Party Hold. Concretely:
- 12 – Settlement Instruction with T2S reference T2S1000000000001 instructed by Participant A
- 13 (PRTAFRPPXXX) with Securities Account (from now on, SAC) "1000000123" and a Dedicated Cash Ac-
- 14 count (from now on, DCA) "2000000123", for the delivery of 100,000 securities ISIN00000001 to its
- 15 counterparty Participant B (PRTBFRPPXXX) versus a payment of 750,000 Euros, for settlement on
- 16 June 21st 2019. The instruction failed and did not settle on the 21st because Participant A had it on
- 17 hold (reason for failure at end of its cut-off: EDVP-Time 16:01).
- 18 – Additional instruction details:
- 19 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-A001
- 20 Place of Trade (MIC): ABCD
- 21 | Entitled to Participant B (Individual Penalty Identification: N201906210000001) because its RVP instruc-
- 22 tion failed to settle in T2S because its counterparty had its instruction on hold (i.e. DVP above de-
- 23 scribed). Concretely:
- 24 – Settlement Instruction with T2S reference T2S2000000000001 instructed by Participant B
- 25 (PRTBFRPPXXX) with SAC "1000000789" and DCA "2000000789", for the receipt of 100,000 securities
- 26 ISIN00000001 from its counterparty Participant A (PRTAFRPPXXX) versus a payment of 750,000 Eu-
- 27 ros, for settlement on June 21st 2019. The instruction failed and did not settle on the 21st because
- 28 the counterpart instruction was on hold.
- 29 – Additional instruction details:
- 30 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-B001
- 31 Place of Trade (MIC): ABCD
- 32 | Data considered for the calculation of the penalty:
- 33 – Calculation Method: SECU (because the instruction causing the penalty is the DVP)
- 34 – The Financial Instrument (ISIN000000001) is a security subject to penalties on June 21st 2019, defined
- 35 as shares (Financial Instrument Type: SHRS) and illiquid
- 36 – Given that both instructions informed the same MIC ("ABCD") as Place of Trade, the common MIC is
- 37 "ABCD", which is defined as a SME Growth Market

- 1 – Security Penalty Rate for shares (liquid or illiquid) traded on SME Growth Market = 0.0025% (0.25bp)
- 2 – Reference Price June 21st 2019=10 Euros
- 3 – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euros. Given the price is also
- 4 in Euros, no exchange rate is needed.
- 5 – SEFP=Security Penalty Rate\*Reference Price\*Quantity
- 6  $0.000025*10*100,000=25$  Euros
- 7 Penalty 2 (Common Penalty Id: 201906210000002) is a SEFP that is imposed to Participant B and entitled to
- 8 Participant A, both of CSD A, hence both sides are informed in the report of the example. More in details,
- 9 the penalty is:
- 10 | Imposed to Participant B (Individual Penalty Identification: F201906210000002) because its DVP instruc-
- 11 tion failed to settle in T2S because of lack of securities. Concretely:
- 12 – Settlement Instruction with T2S reference T2S1000000000002 instructed by Participant B
- 13 (PRTBFRPPXXX) with SAC "1000000789" and DCA "2000000789", for the delivery of 100,000 securi-
- 14 ties ISIN00000001 to its counterparty Participant A (PRTAFRPPXXX) versus a payment of 800,000 Eu-
- 15 ros, for settlement on June 21st 2019. The instruction failed on the 21st because Participant B had in-
- 16 sufficient securities to settle the Settlement Instruction (reason for failure at end of its cut-off: EDVP-
- 17 Time 16:01).
- 18 – Additional instruction details:
- 19 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-B002
- 20 Place of Trade (MIC): ABCD
- 21 | Entitled to Participant A (Individual Penalty Identification: N201906210000002) because its RVP instruc-
- 22 tion failed to settle in T2S because its counterparty's lack of securities (i.e. DVP above described). Con-
- 23 cretely:
- 24 – Settlement instruction with T2S reference T2S2000000000002 instructed by Participant A
- 25 (PRTAFRPPXXX) with SAC "1000000123" and DCA "2000000123", for the receipt of 100,000 securities
- 26 ISIN00000001 from its counterparty Participant B (PRTBFRPPXXX) versus a payment of 800,000 Eu-
- 27 ros, for settlement on June 21st 2019. The instruction failed on the 21st because the counterparty de-
- 28 livering the securities (Participant B) had insufficient securities to settle the Settlement Instruction.
- 29 – Additional instruction details:
- 30 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-A002
- 31 Place of Trade (MIC): ABCD
- 32 | Data considered for the calculation of the penalty:
- 33 – Calculation Method: SECU (because the instruction causing the penalty is a DVP)
- 34 – The Financial Instrument (ISIN00000001) is a security subject to penalties on June 21st 2019, defined
- 35 as shares (Financial Instrument Type: SHRS) and illiquid
- 36 – Given that both instructions informed the same MIC ("ABCD") as Place of Trade, the common MIC is
- 37 "ABCD", which is defined as a SME Growth Market

- 
- 1 – Security Penalty Rate for shares (liquid or illiquid) traded on SME Growth Market =0.0025% (0.25bp)
- 2 – Reference Price June 21st 2019=10 Euros
- 3 – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euros. Given the price is also
- 4 in Euros, no exchange rate is needed.
- 5 – SEFP=Security Penalty Rate\*Reference Price\*Quantity
- 6 = 0.000025\*10\*100,000=25 Euros
- 7 Penalty 3 (Common Penalty Id: 201906210000003) is a SEFP that is imposed to Participant A, of CSD A, and
- 8 entitled to Participant Z, of CSD Z, hence only the failing side is informed in the report of the example. More
- 9 in details, the penalty is:
- 10 | Imposed to Participant A (Individual Penalty Identification: F201906210000003) because its PFOD-Debit
- 11 failed to settle in T2S because of lack of cash. Concretely:
- 12 – Settlement instruction with T2S reference T2S1000000000003 instructed by Participant A
- 13 (PRTAFRPPXXX) with SAC "1000000123" and DCA "2000000123", for the payment of 900,000 Euros
- 14 to its counterparty Participant Z (PRTZESMMXXX) of CSD Z (CSDZBIC1XXX) related to the security
- 15 ISIN000000009, for settlement on June 21st 2019. The instruction failed on the 21st because the Par-
- 16 ticipant A had insufficient cash to settle the Settlement Instruction (reason for failure at end of its cut-
- 17 off: EDVP-Time 16:01).
- 18 – Additional instruction details:
- 19 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-A003
- 20 Place Trace (MIC) was not informed
- 21 Securities Movement Type is "RECE"<sup>506</sup>
- 22 | Entitled to Participant Z (Individual Penalty Identification: N201906210000003) because its PFOD-Credit
- 23 instruction failed to settle in T2S because counterparty's lack of cash (i.e. PFOD-Dedit above described).
- 24 Concretely:
- 25 – Settlement instruction with T2S reference T2S2000000000003 instructed by Participant Z (PRTZ-
- 26 ESMMXXX) of CSD Z (CSDZBIC1XXX) with SAC "1000000456" and DCA "2000000456", for the receipt
- 27 of 900,000 Euros from its counterparty Participant A (PRTAFRPPXXX) related to the security
- 28 ISIN000000009, for settlement on June 21st 2019. The instruction failed on the 21st because the coun-
- 29 terparty (Participant A) had insufficient cash to settle the Settlement Instruction.
- 30 – Additional instruction details:
- 31 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-Z003
- 32 Place Trace (MIC) was not informed
- 33 Securities Movement Type is "DELI"<sup>507</sup>

---

506 Securities Movement Type is a mandatory field in the Daily Penalty List Report, regardless of the Transaction Type (i.e. also in case of a PFOD)

507 Securities Movement Type is a mandatory field in the Daily Penalty List Report, regardless of the Transaction Type (i.e. also in case of a PFOD)

- 1 | I Data considered for the calculation of the penalty:
- 2 | – Calculation Method: CASH (because the instruction causing the penalty is the PFOD-Debit)
- 3 | – The Financial Instrument (ISIN000000009) is a security subject to penalties on June 21st 2019, defined
- 4 | as shares (Financial Instrument Type: SHRS) and illiquid <sup>508</sup>
- 5 | – Euro Discount Rate (daily) for June 21st 2019 = 0.00069444% (Marginal Lending Facility expressed as
- 6 | a daily rate <sup>509</sup>)
- 7 | – Currency of the Penalty is Euro because it is over a PFOD with cash leg in Euros
- 8 | – SEFP=Cash Discount Penalty Rate\*Amount
- 9 | = 0.0000069444\*900,000=6.25 Euros
- 10 | Penalty 4 (Common Penalty Id: 201906210000004) is a SEFP that is imposed to Participant Y, of CSD Y, and
- 11 | entitled to Participant B, of CSD A, hence only the non-failing side is informed in the report of the example.
- 12 | More in details, the penalty is:
- 13 | I Imposed to Participant Y (Individual Penalty Identification: F201906210000004) because its RVP instruc-
- 14 | tion failed to settle in T2S due to its lack of cash. Concretely:
- 15 | – Settlement instruction with T2S reference T2S2000000000004 instructed by Participant Y
- 16 | (PRTYDEFFXXX) of CSD Y (CSDYBIC1XXX) with SAC "1000000321" and DCA "2000000321", for the
- 17 | receipt of 3,000 securities ISIN000000004 from its counterparty Participant B (PRTBFRPPXXX) of CSD A
- 18 | versus a payment of 51,000 Euros, for settlement on June 21st 2019. The instruction failed because
- 19 | Participant Y had a lack of cash (reason for failure at end of its cut-off: EDVP-Time 16:01).
- 20 | – Additional instruction details:
- 21 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-Y004
- 22 | Place Trace (MIC): ABCD
- 23 | I Entitled to Participant B (Individual Penalty Identification: N201906210000004) because its DVP instruc-
- 24 | tion failed to settle in T2S because its counterparty's lack of cash. Concretely:
- 25 | – Settlement Instruction with T2S reference T2S1000000000004 instructed by Participant B
- 26 | (PRTBFRPPXXX) with SAC "1000000789" and DCA "2000000789", for the delivery of 3,000 securities
- 27 | ISIN000000004 to its counterparty Participant Y (PRTYDEFFXXX) of CSD Y (CSDYBIC1XXX) versus a
- 28 | payment of 51,000 Euros, for settlement on June 21st 2019. The instruction failed because the coun-
- 29 | terparty (Participant Y) had a lack of cash (reason for failure at end of its cut-off: EDVP-Time 16:01).
- 30 | – Additional instruction details:
- 31 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-B004
- 32 | Place Trace (MIC): ABCD

---

508 Although the underlying instrument is "SHRS" and is subject to penalties, the Liquidity flag is not indicated in the report as the Calculation Method code is "CASH" (and not "SECU" or "BOTH")

509 The Euro Cash Discount Penalty Rate stored in Reference Data is 0.0000069444 ("BaseOneRate"), hence the 0.00069444 (%) reported in the semt.044. This value is obtained from an ECB's Marginal Lending Facility of 0.25% per annum, which is converted to a daily rate (dividing by 360)

- 1 | I Data considered for the calculation of the penalty:
- 2 | – Calculation Method: MIXE (because the instruction causing the penalty is an RVP)
- 3 | – The Financial Instrument (ISIN000000004) is a security subject to penalties on June 21st 2019, defined
- 4 | as shares (Financial Instrument Type: SHRS) and liquid <sup>510</sup>
- 5 | – Reference Price June 21st 2019=18 Euros
- 6 | – Euro Discount Rate (daily) for June 21st 2019 =0.00069444% (Marginal Lending Facility expressed as
- 7 | a daily rate <sup>511</sup>
- 8 | – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euros
- 9 | – SEFP=Cash Discount Penalty Rate\*Reference Price\*Quantity
- 10 | = 0.0000069444\*18\*3,000=0.38 Euros
- 11 | Message usage example 2: semt.044.001.01\_Daily Penalty List (for a CSD participant)
- 12 | In this second example, on June 24th 2019, T2S sends the Daily Penalty List to the directly connected party,
- 13 | Participant A (PRTAFRPPXXX) of CSD A (CSDABIC1XXX), to inform it about all the penalties computed for the
- 14 | previous business date, June 21st 2019 (Detection Date), for which this participant is either imposed with or
- 15 | entitled to.
- 16 | This Daily Penalty List is generated on June 24th 2019 and informs Participant A about 3 penalties within the
- 17 | scope of CSD A:
- 18 | I A SEFP, Penalty 1, to be paid to Participant B (PRTBFRPPXXX).
- 19 | I A SEFP, Penalty 2, to be received from Participant B (PRTBFRPPXXX).
- 20 | I A SEFP, Penalty 3, to be paid to Participant Z (PRTZESMMXXX) of CSD Z (CSDZBIC1XXX).
- 21 | For the detail description of the Penalties please refer to previous message usage example (example 1)
- 22 | Note that it is not possible for a CSD Participant to receive from T2S a single report containing the penalties
- 23 | (imposed with or entitled to) within the scope of several CSDs. Accordingly, if Participant A were also active
- 24 | in other CSDs, on the same day, Participant A will receive a Daily Penalty List for the other CSDs where it is
- 25 | defined as a participant (and also directly connected party subscribed to receive the Daily Penalty List), for
- 26 | instance, if Participant A is also a participant of CSD H and CSD I, then it will receive for example:
- 27 | I For CSD H, a Daily Penalty List with Activity indicator "false" if no penalty was computed for June 21st
- 28 | 2019 for Participant A (as participant of CSD H);
- 29 | I For CSD I, a Daily Penalty List with Activity indicator "true" if there were penalties computed for 21st
- 30 | 2019 and the details of the penalties computed for Participant A (as participant of CSD I).
- 31 | Message usage example 3: semt.044.001.01\_Daily Penalty List (more for a CSD)

510 Although the underlying instrument is "SHRS" and is subject to penalties, the Liquidity flag and the SME Growth Market Indicator are not indicated as the Calculation Method code is "MIXE" (and not "SECU" or "BOTH").

511 The Euro Cash Discount Penalty Rate stored in Reference Data is 0.0000069444 ("BaseOneRate"), hence the 0.00069444 (%) reported in the semt.044. This value is obtained from an ECB's Marginal Lending Facility of 0.25% per annum, which is converted to a daily rate (dividing by 360)

1 In this third example, T2S sends a Daily Penalty List to the CSD A (CSDABIC1XXX) to inform about all the  
2 penalties that were computed for the previous business date, June 26th 2019 (Detection Date), and for  
3 which any participant of CSD A, or the CSD A itself, is either imposed with or entitled to receive.

4 This Daily Penalty List is generated on June 27th 2019 and includes information about 4 penalties within the  
5 scope of CSD A.

6 More precisely CSD A is reported that:

7 Participant C (PRTCFRPPXXX) has been computed with:

- 8 | A LMFP, Penalty 5, to be paid to Participant D (PRTDFRPPXXX).
- 9 | A SEFP, Penalty 6, to be received from Participant D (PRTDFRPPXXX).

10 Participant D (PRTDFRPPXXX) has been computed with:

- 11 | A LMFP, Penalty 5, to be received from Participant C (PRTCFRPPXXX).
- 12 | A SEFP, Penalty 6, to be paid to Participant C (PRTCFRPPXXX).
- 13 | A SEFP, Penalty 7, to be paid to Participant W of external CSD E (ECSDBIC1XXX).

14 CSD A (CSDABIC1XXX) has been simultaneously:

- 15 | Imposed to pay a LMFP, Penalty 8;
- 16 | Entitled to receive a LMFP, Penalty 8.

17 Detail description of the Penalties:

18 Penalty 5 (Common Penalty Identification: 201906260000005) is a LMFP that is imposed to Participant C and  
19 entitled to Participant D, both of CSD A, hence both sides are informed in the report of the example. More in  
20 details, the penalty is:

- 21 | Imposed to Participant C (Individual Penalty Identification: F201906260000005) because it was the last  
22 participant to enter its settlement instruction of a transaction that matched late, i.e. its DVP had a latter  
23 acceptance timestamp than the RVP or its counterparty. Concretely:
  - 24 – Settlement Instruction with T2S reference T2S2000000000005 instructed by Participant C  
25 (PRTCFRPPXXX) with SAC "1000000144" and DCA "2000000144", for the delivery of 100,000 securi-  
26 ties ISIN00000001 to its counterparty Participant D (PRTDFRPPXXX) also of CSD A versus a payment  
27 of 750,000 Euros, for settlement on June 21st 2019. The instruction failed and did not settle on the  
28 21st because Participant C did not send its settlement instruction to T2S until the 26th (before the  
29 DVP cut-off allowing it to be settled on this business day). The instruction was matched and settled on  
30 June 26th 2019, thus 3 business days after its ISD.
  - 31 – Additional instruction details:
    - 32 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-C005
    - 33 Place of Trade (MIC): QRST
- 34 | Entitled to Participant D (Individual Penalty Identification: N201906260000005) because its instruction  
35 did not settle because its counterparty sent its instruction late (i.e. counterparty's DVP above de-  
36 scribed). Concretely:

- 1 – Settlement Instruction with T2S reference T2S1000000000005 instructed by Participant D  
2 (PRTDFRPPXXX) with SAC "1000000567" and DCA "2000000567", for the receipt of 100,000 securities  
3 ISIN000000001 from its counterparty Participant C (PRTCFRPPXXX) versus a payment of 750,000 Eu-  
4 ros, for settlement on June 21st 2019. The instruction failed and did not settle on the 21st because  
5 Participant C did not send the relevant settlement instruction to T2S until the 26th. The instruction  
6 was matched and settled on June 26th 2019, thus 3 days after its ISD.
- 7 – Additional instruction details:  
8 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-D005  
9 Place of Trade (MIC): QRST
- 10 | Data considered for the calculation data of the penalty:
- 11 – Calculation Method: SECU (because the instruction causing the penalty is the DVP)  
12 – The Financial Instrument (ISIN000000001) is a security subject to penalties on June 21st 2019, defined  
13 as shares (Financial Instrument Type: SHRS) and illiquid  
14 – Given that both instructions informed the same MIC ("QRST") as Place of Trade, the common MIC is  
15 "QRST", which is defined as a SME Growth Market  
16 – Security Penalty Rate for shares (liquid or illiquid) traded on SME Growth Market =0.0025% (0.25bp)  
17 – Reference Price June 21st 2019 (ISD)=10 Euros  
18 – Reference Price June 24th 2019 (ISD +1)=11 Euros  
19 – Reference Price June 25th 2019 (ISD +2)=12 Euros  
20 – Reference Price June 26th 2019 (ISD +3)=13 Euros  
21 – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euros. Given the price is also  
22 in Euros, no exchange rate is needed  
23 –  $LMFP = \sum(\text{Security Penalty Rate day} \times \text{Reference Price day} \times \text{Quantity})$   
24  $= (0.000025 \times 10 \times 100,000) + (0.000025 \times 11 \times 100,000) + (0.000025 \times 12 \times 100,000) = 82.5 \text{ Euros}$
- 25 | Penalty 6 (Common Penalty Identification: 201906260000006) is a SEFP that is imposed to Participant D  
26 and entitled to Participant C, both of CSD A, hence both sides are informed in the report of the example.  
27 More in details, the penalty is:
- 28 – Imposed to Participant D (Individual Penalty Identification: F201906260000006) because its DWP in-  
29 struction failed to settle in T2S because of lack of securities. Concretely:  
30 – Settlement Instruction with T2S reference T2S1000000000006 instructed by Participant D  
31 (PRTDFRPPXXX) with SAC "1000000567" and DCA "2000000567", for the delivery of 100,000 securi-  
32 ties ISIN000000003 to its counterparty Participant C (PRTCPPXXX) with a payment of 50,000 Euros, for  
33 settlement on June 26th 2019. The instruction failed because Participant D had insufficient securities  
34 to settle the Settlement Instruction (reason for failure at end of its cut-off: EDVP-Time 16:02).  
35 – Additional transaction details:  
36 Account Owner Transaction Identification: PARTICIPANT-D006

- 1 Place of Trade (MIC): ABCD
- 2 | Entitled to Participant C (Individual Penalty Identification: N201906260000006) because its RWP instruc-  
3 tion failed to settle in T2S because its counterparty's lack of securities (i.e. DWP above described). Con-  
4 cretely:
- 5 – Settlement Instruction with T2S reference T2S2000000000006 instructed by Participant C  
6 (PRTCFRPPXXX) with SAC "1000000144" and DCA "2000000144", for the receipt of 100,000 securities  
7 ISIN000000003 from its counterparty Participant D (PRTDFRPPXXX) with a payment of 50,000 Euros,  
8 for settlement on June 26th 2019. The instruction failed on the 26th because the counterpart had in-  
9 sufficient securities to settle the Settlement Instruction.
  - 10 – Additional transaction details:  
11 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-C006  
12 Place of Trade (MIC): Not informed
- 13 | Data considered for the calculation of the penalty:
- 14 – Calculation Method: BOTH (because the instruction causing the penalty is the DWP)
  - 15 – The Financial Instrument (ISIN000000003) is a security subject to penalties on June 26th 2019, defined  
16 as securities (Financial Instrument Type: SECU)
  - 17 – Given that both instructions did not inform the same MIC (one have "ABCD" and the other did not in-  
18 form any MIC) as Place of Trade, there is no common MIC, hence not a SME Growth Market
  - 19 – Security Penalty Rate for other financial instruments (securities not traded on SME Growth Market)  
20 =0.005% (0.50bp)
  - 21 – Reference Price June 26th 2019=15 Euros
  - 22 – Currency of the Penalty is Euro because it is over a DWP with cash leg in Euros. Given the price is also  
23 in Euros, no exchange rate is needed
  - 24 – Euro Discount Rate (daily) for June 26th 2019= 0.00069444% (Marginal Lending Facility expressed as  
25 a daily rate <sup>512</sup>)
  - 26 – SEFP= (Security Penalty Rate\*Reference Price\*Quantity)+ (Cash Discount Penalty Rate\*Amount)  
27 = (0.000050\*15\*100,000)+(0.0000069444\*50,000)=75.35 Euros
- 28 Penalty 7 (Common Penalty Identification: 201906260000007) is a SEFP that is imposed to Participant D of  
29 CSD A and entitled to External CSD E defined by CSD A (its parent CSD), hence both sides are informed in  
30 the report of the example. More in details, the penalty is:
- 31 | Imposed to Participant D (Individual Penalty Identification: F201906260000007) because its DFOP in-  
32 struction failed to settle in T2S because of being on CoSD Hold. Concretely:
- 33 – Settlement Instruction with T2S reference T2S1000000000007 instructed by Participant D  
34 (PRTDFRPPXXX) with SAC "1000000567", for the delivery of 80,000 securities ISIN000000004 to Partic-

512 The Euro Cash Discount Penalty Rate stored in Reference Data is 0.0000069444 ("BaseOneRate"), hence the 0.00069444 (%) reported in the semt.044. This value is obtained from an ECB's Marginal Lending Facility of 0.25% per annum, which is converted to a daily rate (dividing by 360)

- 1 participant W (PRTWDEFFXXX), participant of external CSD E (ECSDBIC1XXX)<sup>513</sup>, for settlement on June  
2 26th 2019. The delivery is conditioned to the reception of a payment of 500,000 Euros outside T2S  
3 (CoSD) from this external participant. The instruction failed and did not settle on the 26th because  
4 Participant D had the instruction on CoSD hold, awaiting for the reception of the payment from the  
5 counterpart (Participant W) outside T2S as the CoSD rule applies (reason for failure at end of its cut-  
6 off: EFOP-Time 18:01).
- 7 – Additional instruction details:
- 8 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-D007
- 9 Place of Trade (MIC) was not informed
- 10 | Entitled to External CSD E (Individual Penalty Identification: N201906260000007) because its RFOP in-  
11 struction failed to settle in T2S because its counterparty had its instruction on CoSD hold (i.e. DFOP  
12 above described). Concretely:
- 13 – Settlement Instruction with T2S reference T2S2000000000007 instructed by the external CSD E  
14 (ECSDBIC1XXX) for its Participant W (PRTWDEFFXXX) with SAC "1000000244" outside T2S<sup>514</sup>, for the  
15 receipt of 80,000 securities ISIN000000004 from counterparty Participant D (PRTDFRPPXXX) of CSD A  
16 in T2S, and for settlement on June 26th 2019. The securities delivery is conditioned to the payment of  
17 500,000 Euros outside T2S (CoSD). Given that the Participant W is not known in T2S, the external  
18 CSD E is considered the securities account owner, therefore, its role is similar to a CSD participant un-  
19 der the scope of CSD A (CSDABIC1XXX). The instruction failed and did not settle on the 26th because  
20 the counterpart instruction was on CoSD Hold (reason for failure at end of its cut-off: EFOP-Time  
21 18:01).
- 22 – Additional instruction details:
- 23 Account Owner Transaction Identification: EXTERNAL-D007
- 24 Place of Trade (MIC) was not informed
- 25 Note that in this case, T2S considers the External CSD as a participant of internal CSD A in T2S and as  
26 the account owner.
- 27 | Data considered for the calculation of the penalty:
- 28 – Calculation Method: SECU (because the instruction causing the penalty is the DFOP)
- 29 – The Financial Instrument (ISIN000000004) is a security subject to penalties on June 26th 2019, defined  
30 as shares (Financial Instrument Type: SHRS) and liquid
- 31 – Both instructions did not inform a MIC as Place of Trade, so there is no common MIC and hence the  
32 transaction was not traded on a SME Growth Market
- 33 – Security Penalty Rate for liquid shares not traded on a SME Growth Market=0.01% (1.00bp)
- 34 – Reference Price June 26th 2019=7 Euros

---

513 External settlement scenario (Receiving Depository is an External CSD and the receiving CSD participant, Participant W, is unknown in T2S)

514 External settlement scenario (Receiving Depository is an External CSD and the receiving CSD participant, Participant W, is unknown in T2S)

- 1 – Currency of the Penalty is Euro because it is the currency of the price of the security (penalty over a  
2 FOP whose ISIN is defined in Units). No exchange rate is needed
- 3 –  $SEFP = \text{Security Penalty Rate} * \text{Reference Price} * \text{Quantity}$   
4  $= 0.0001 * 7 * 80,000 = 56 \text{ Euros}$
- 5 Penalty 8 (Common Penalty Id: 201906260000008) is a LMFP over an already matched that is imposed and  
6 entitled to CSD A, hence both sides are informed in the report of the example. More in details, the penalty  
7 is:
- 8 | Imposed to CSD A (Individual Penalty Identification: F201906260000008) and also entitled to CSD A  
9 (Individual Penalty Identification: N201906260000008) because it instructed late an already matched  
10 FOP instruction. Concretely:
    - 11 – Settlement Instruction instructed as already matched by CSD A (CSDABIC1XXX) for the delivery on  
12 June 26th 2019 of a nominal amount of 50,000 Euros of ISIN00000002 from Participant R  
13 (PRTRFRPPXXX) with SAC "1000000333" and DCA "2000000333" to its counterparty Participant K  
14 (PRTKDEFFXXX) with SAC "1000000444" and DCA "2000000444" conditioned to the reception of a  
15 payment of 60,000 Euros outside T2S. The settlement instruction failed on June 26th because it was  
16 sent (and accepted in T2S) at a point in time when it was no longer possible to settle on the ISD i.e.  
17 after the EFOP cut-off. Given that the settlement instruction was sent to T2S as already matched, the  
18 accepted timestamp is the same for both legs, and the information for identifying the last participant  
19 to enter the instruction is not available in T2S. Therefore, T2S assigns the penalty to the Instructing  
20 Party, CSD A, as both the failing and the non-failing leg.
    - 21 – Additional transaction details:
      - 22 T2S Actor reference (Account Servicer Transaction Identification): CSD-A00000000008
      - 23 T2S reference of DFOP created from the already matched: T2S10000000000008
      - 24 T2S reference of RFOP created from the already matched: T2S20000000000008
      - 25 Place of Trade (MIC): TREZ
  - 26 | CSD A being simultaneously assigned as the failing and the non-failing leg, it is simultaneously imposed  
27 and entitled to receive Penalty 8.
  - 28 | CSD A can later on request T2S to reallocate Penalty 8 to the delivering party and receiving party of the  
29 instruction (see example 1 of Message Usage: List of Modified Penalties).
  - 30 | Data considered for the calculation of the penalty:
    - 31 – Calculation Method: SECU (because the instruction causing the penalty is the DFOP)
    - 32 – The Financial Instrument (ISIN00000002) is a security subject to penalties on June 26th 2019, defined  
33 as debt (Financial Instrument Type: DEBT)
    - 34 – Given that the already matched instruction informed the MIC "TREZ" as Place of Trade, it is the com-  
35 mon MIC, which is not defined as a SME Growth Market.
    - 36 – Security Penalty Rate for debt not traded on a SME Growth Market = 0.002% (0.20bp)
    - 37 – Reference Price June 26th 2019 = 0.90 (90%)

- 1 – Currency of the Penalty is Euro because it is the currency in which the security is denominated (penal-  
2 ty over a FOP whose ISIN is defined in FAMT). Given the currency of the ISIN is also in Euros, no ex-  
3 change rate is needed
- 4 –  $LMFP = \text{Security Penalty Rate} * \text{Reference Price} * \text{Quantity}$   
5  $= 0.000020 * 0.09 * 50,000 = 0.90$  Euros
- 6 Message usage example 4: semt.044.001.01\_Daily Penalty List\_(for a CSD with DKK\_& Currency Conver-  
7 sions)
- 8 In this example, T2S sends a Daily Penalty List to the CSD A (CSDABIC1XXX) to inform about all the penal-  
9 ties that were computed for the previous business date, June 27th 2019 (Detection Date), and for which any  
10 participant of CSD A, or the CSD A itself, is either imposed with or entitled to receive.
- 11 This Daily Penalty List is generated on June 28th 2019 and includes information about 3 penalties within the  
12 scope of CSD A.
- 13 More precisely CSD A is reported that:
- 14 Participant A (PRTAFRPPXXX) has been computed with:
- 15 | A SEFP, Penalty 9, to be received from Participant C (PRTCFRPPXXX).
  - 16 | A LMFP, Penalty 11, to be paid to Participant E (PRTEKKKXXX).
- 17 Participant B (PRTBFRPPXXX) has been computed with:
- 18 | A SEFP, Penalty 10, to be paid to Participant D (PRTDFRPPXXX).
- 19 Participant C (PRTCFRPPXXX) has been computed with:
- 20 | A SEFP, Penalty 9, to be paid to Participant A (PRTAFRPPXXX).
- 21 Participant D (PRTBFRPPXXX) has been computed with:
- 22 | A SEFP, Penalty 10, to be received from Participant B (PRTBFRPPXXX).
- 23 Participant E (PRTEKXXX) has been computed with:
- 24 | A LMFP, Penalty 11, to be received from Participant A (PRTAFRPPXXX).
- 25 Detail description of the Penalties:
- 26 Penalty 9 (Common Penalty Id: 201906270000009) is a SEFP that is imposed to Participant C and entitled to  
27 Participant A, both of CSD A, hence both sides are informed in the report of the example. More in details,  
28 the penalty is:
- 29 | Imposed to Participant C (Individual Penalty Identification: F201906270000009) because its RVP instruc-  
30 tion failed to settle in T2S because its lack of cash. Concretely:
    - 31 – Settlement instruction with T2S reference T2S2000000000009 instructed by Participant C  
32 (PRTCFRPPXXX) with SAC "3000000144" and DCA "4000000144", for the receipt of 3,000 securities  
33 ISIN00000005 from its counterparty Participant A (PRTAFRPPXXX) versus a payment of 38,000 Danish  
34 Kroner, for settlement on the 27th. The instruction failed because Participant C had a lack of cash  
35 (reason for failure at end of its cut-off: EDVP-Time 16:01).
  - 36 – Additional instruction details:

- 1 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-C009
- 2 Place Trace (MIC): Not informed
- 3 | Entitled to Participant A (Individual Penalty Identification: N201906270000009) because its DVP instruc-
- 4 tion failed to settle in T2S because of its counterparty's lack of cash. Concretely:
- 5 – Settlement Instruction with T2S reference T2S1000000000009 instructed by Participant A
- 6 (PRTAFRPPXXX) with SAC "3000000123" and DCA "4000000123", for the delivery of 3,000 securities
- 7 ISIN00000005 to its counterparty Participant C (PRTCFRPPXXX) versus a payment of 38,000 Danish
- 8 Kroner, for settlement on June 27th. The instruction failed because the counterparty (Participant C)
- 9 had a lack of cash (reason for failure at end of its cut-off: EDVP-Time 16:01).
- 10 – Additional instruction details:
- 11 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-A009
- 12 Place Trace (MIC): Not informed
- 13 | Data considered for the calculation of the penalty:
- 14 – Calculation Method: MIXE (because the instruction causing the penalty is an RVP)
- 15 – The Financial Instrument (ISIN00000005) is a security subject to penalties on June 27th 2019, defined
- 16 as shares (Financial Instrument Type: SHRS) and liquid <sup>515</sup>
- 17 – Reference Price June 27th 2019=135 Danish Kroner
- 18 – Danish Krone Discount Rate (daily) for June 27th 2019 =0.00013889% (Lending Rate expressed as a
- 19 daily rate <sup>516</sup>)
- 20 – Currency of the Penalty is Danish Kroner because it is over a DVP with cash leg in Danish Kroner. Giv-
- 21 en the price of the security is also in Danish Krone, no exchange rate is needed
- 22 – SEFP=Cash Discount Penalty Rate\*Reference Price\*Quantity
- 23 = 0.0000013889\*135\*3,000=0.56 Danish Kroner
- 24 Penalty 10 (Common Penalty Id: 201906270000010) is a SEFP that is imposed to Participant B and entitled
- 25 to Participant D, both of CSD A, hence both sides are informed in the report of the example. More in details,
- 26 the penalty is:
- 27 | Imposed to Participant B (Individual Penalty Identification: F201906270000010) because its RVP instruc-
- 28 tion failed to settle in T2S because its lack of cash. Concretely:
- 29 – Settlement instruction with T2S reference T2S2000000000010 instructed by Participant B
- 30 (PRTBFRPPXXX) with SAC "1000000789" and DCA "2000000789", for the receipt of 5,000 securities
- 31 ISIN00000006 from its counterparty Participant D (PRTDFRPPXXX) versus a payment of 50,000 Euros,

---

515 Although the underlying instrument is "SHRS" and is subject to penalties, the Liquidity flag and the SME Growth Market Indicator are not indicated in the report as the Calculation Method code is "MIXE" (and not "SECU" or "BOTH").

516 The Danish Krone Cash Discount Penalty Rate stored in Static Data is 0.0000013889 ("BaseOneRate"), hence the 0.00013889 (%) reported in the semt.044. This value is obtained considering a Danmarks Nationalbank's Lending Rate of 0.05% per annum, which is converted to a daily rate (dividing by 360).

- 1 for settlement on June 27th 2019. The instruction failed because Participant B had a lack of cash (rea-  
2 son for failure at end of its cut-off: EDVP-Time 16:01).
- 3 – Additional instruction details:
- 4 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-B010
- 5 Place Trace (MIC): TREZ
- 6 | Entitled to Participant D (Individual Penalty Identification: N201906270000010) because its DVP instruc-  
7 tion failed to settle in T2S because its counterparty's lack of cash. Concretely:
- 8 – Settlement instruction with T2S reference T2S1000000000010 instructed by Participant D  
9 (PRTDFRPPXXX) with SAC "1000000567" and DCA "2000000567", for the delivery of 5,000 securities  
10 ISIN00000006 to its counterparty Participant B (PRTBFRPPXXX) also of CSD A versus a payment of  
11 50,000 Euros, for settlement on June 27th 2019. The instruction failed because the counterparty (Par-  
12 ticipant B) had lack of cash (reason for failure at end of its cut-off: EDVP-Time 16:01).
- 13 – Additional transaction details:
- 14 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-D010
- 15 Place Trace (MIC): TREZ
- 16 | Data considered for the calculation of the penalty:
- 17 – Calculation Method: MIXE (because the instruction causing the penalty is the RVP)
- 18 – The Financial Instrument (ISIN00000006) is a security subject to penalties on June 27th 2019, defined  
19 as shares (Financial Instrument Type: SHRS) and liquid <sup>517</sup>
- 20 – Reference Price June 27th 2019=15 United States Dollars
- 21 – Euro Discount Rate (daily) for June 27th 2019=0.00069444% (Marginal Lending Facility expressed as  
22 a daily rate <sup>518</sup>)
- 23 – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euros. Given the price of the  
24 security is in USD, exchange rate is needed
- 25 – EUR/USD exchange rate June 27th 2019=0.8853
- 26 – SEFP=Cash Discount Penalty Rate\* Reference Price\* Quantity \*EUR/USD
- 27 = 0.0000069444\*15\*5,000\*(1/0.8853)=0.59 Euros
- 28 Penalty 11 (Common Penalty Id: 201906270000011) is a LMFP that is imposed to Participant A and entitled  
29 to Participant E, both of CSD A, hence both sides are informed in the report of the example. More in details,  
30 the penalty is:

---

517 Although the underlying instrument is "SHRS" and it is subject to penalties, the Liquidity flag and the SME Growth Market Indicator are not indicated as the Calculation Method code is "MIXE" (and not "SECU" or "BOTH").

518 The Euro Cash Discount Penalty Rate stored in Reference Data is 0.0000069444 ("BaseOneRate"), hence the 0.00069444 (%) reported in the sent.044. This value is obtained from the ECB's Marginal Lending Facility of 0.25% per annum, which is converted to a daily rate (dividing by 360)

- 1 | I Imposed to Participant A (Individual Penalty Identification: F201906270000011) because it was the last  
2 | participant to enter its settlement instruction in a transaction that matched late, i.e. its DVP had a latter  
3 | acceptance timestamp than the RVP or its counterparty. Concretely:
- 4 | – Settlement Instruction with T2S reference T2S1000000000011 instructed by Participant A  
5 | (PRTAFRPPXXX) with SAC "3000000123" and DCA "4000000123", for the delivery of 100,000 securi-  
6 | ties ISIN00000006 to its counterparty Participant E (PRTEKKKKXXX) also of CSD A versus a payment  
7 | of 1,000,000 Danish Kroner for settlement on June 21st 2019. The instruction failed and did not settle  
8 | on the 21st because Participant A did not send the relevant settlement instruction to T2S until the  
9 | 27th (after the DVP cut-off, not allowing it to be settled on this business day).
  - 10 | – Additional instruction details:  
11 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-A011  
12 | Place of Trade (MIC): QRST
- 13 | I Entitled to Participant E (Individual Penalty Identification: N201906270000011) because its instruction  
14 | did not settle because its counterparty sent its instruction late (i.e. counterparty's DVP above de-  
15 | scribed). Concretely:
- 16 | – Settlement instruction with T2S reference T2S2000000000011 instructed by Participant E  
17 | (PRTEKKKKXXX) with SAC "3000000888" and DCA "4000000888", for the receipt of 100,000 securities  
18 | ISIN00000006 from its counterparty Participant A (PRTAFRPPXXX) versus a payment of 1,000,000  
19 | Danish Kroner on Participant A's Danish Krone's account, for settlement on June 21st 2019. The in-  
20 | struction failed and did not settle on the 21st because Participant A did not send the relevant settle-  
21 | ment instruction to T2S until the 27th.
  - 22 | – Additional instruction details:  
23 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-E011  
24 | Place of Trade (MIC) was not informed
- 25 | I Data considered for the calculation of the penalty:
- 26 | – Calculation Method: SECU (because the instruction causing the penalty is the DVP)
  - 27 | – The Financial Instrument (ISIN00000006) is a security subject to penalties on June 21st -27th 2019,  
28 | defined as shares (Financial Instrument Type: SHRS) and liquid
  - 29 | – One of the instructions did not inform a MIC as Place of Trade, so there is no common MIC and hence  
30 | the transaction was not traded on a SME Growth Market
  - 31 | – Security Penalty Rate for liquid shares=0.01% (1.00bp)
  - 32 | – Reference Price June 21st 2019 (ISD)=9 United States Dollars
  - 33 | – Reference Price June 24th 2019 (ISD +1)=10 United States Dollars
  - 34 | – Reference Price June 25th 2019 (ISD +2)=9.5 United States Dollars
  - 35 | – Reference Price June 26th 2019 (ISD +3)=9 United States Dollars
  - 36 | – Reference Price June 27th 2019 (ISD +4)=10 United States Dollars

- 1 – Currency of the Penalty is Danish Kroner because it is over a DVP with cash leg in Danish Kroner. Given  
2 the price is USD two exchange rates are needed (EUR/USD and EUR/DKK)
- 3 – EUR/USD exchange rate June 21st 2019=0.8774
- 4 – EUR/USD exchange rate June 24th 2019=0.8785
- 5 – EUR/USD exchange rate June 25th 2019=0.8772
- 6 – EUR/USD exchange rate June 26th 2019=0.8769
- 7 – EUR/USD exchange rate June 27th 2019=0.8853
- 8 – EUR/DKK exchange rate June 21st 2019=0.1339
- 9 – EUR/DKK exchange rate June 24th 2019=0.1343
- 10 – EUR/DKK exchange rate June 25th 2019=0.1339
- 11 – EUR/DKK exchange rate June 26th 2019=0.1340
- 12 – EUR/DKK exchange rate June 27th 2019=0.1340
- 13 –  $LMFP = \sum(\text{Security Penalty Rate day } x * \text{Reference Price day } x * \text{Quantity} * \text{EUR/USD day } x * \text{EUR/DKK}$   
14  $\text{day } x)$
- 15 –  $= (0.0001 * 9 * 100,000 * (1/0.8774) * 0.1339) + (0.0001 * 10 * 100,000 * (1/0.8785) * 0.1343)$   
16  $+ (0.0001 * 9.5 * 100,000 * (1/0.8772) * 0.1339) + (0.0001 * 9 * 100,000 * (1/0.8769) * 0.1340)$   
17  $+ (0.0001 * 10 * 100,000 * (1/0.8853) * 0.1340) = 72.41 \text{ Danish Kroner}$

18 Message usage example 5: semt.044.001.01\_Daily Penalty List\_(security not subject to penalties)

19 In this example, T2S sends a Daily Penalty List to the CSD G (CSDGBIC1XXX) to inform about all the penal-  
20 ties that were computed for the previous business date, June 27th 2019 (Detection Date), and for which any  
21 participant of CSD G, or the CSD G itself, is either imposed with or entitled to receive.

22 This Daily Penalty List is generated on June 28th 2019 and includes information about 1 penalty within the  
23 scope of CSD G.

24 More precisely CSD G is reported that:

25 Participant G (PRTGDEDDXXX) has been computed with:

26 | A LMFP, Penalty 14, to be received from Participant H (PRTHDEDDXXX).

27 Participant H (PRTHDEDDXXX) has been computed with:

28 | A LMFP, Penalty 14, to be paid to Participant G (PRTGDEDDXXX).

29 Note that penalty 12 (SEFP) and penalty 13 (LMFP) (see details below) were generated but not comput-  
30 ed (i.e. with Status code "NCOM") and consequently were not reported in the Daily Penalty List generat-  
31 ed on June 28th, due to the fact that their underlying security (ISIN00000010) was not subject to penal-  
32 ties in any of their applicable business days (i.e. on June 26th and June 27th).

33 Penalty 12 – not reported as it is not computed because the security is not subject to penalties- (Common  
34 Penalty Id: 201906270000012) is a SEFP that would be imposed to Participant V and entitled to Participant I,  
35 both of CSD G, hence both sides would be informed in the report of the example if the security was subject  
36 to penalties. More in details, the penalty would be:

- 1 | I Imposed to Participant V (Individual Penalty Identification: F201906270000012) because its DVP instruc-  
2 | tion failed to settle in T2S because of being on Party Hold. Concretely:
- 3 | – Settlement instruction with T2S reference T2S1000000000012 instructed by Participant V  
4 | (PRTVFRPPXXX) with SAC "1000000639" and a DCA "2000000639", for the delivery of 200,000 securi-  
5 | ties ISIN00000010 to its counterparty Participant I (PRTIFRPPXXX) versus a payment of 5,000,000 Eu-  
6 | ros, for settlement on June 27th 2019. The instruction failed and did not settle on the June 27th be-  
7 | cause Participant V had it on hold (reason for failure at end of its cut-off: EDVP-Time 16:01).
  - 8 | – Additional instruction details:  
9 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-V012  
10 | Place of Trade (MIC): not informed
- 11 | I Entitled to Participant I (Individual Penalty Identification: N201906270000012) because its RVP instruc-  
12 | tion failed to settle in T2S because its counterparty had its instruction on hold (i.e. DVP above de-  
13 | scribed). Concretely:
- 14 | – Settlement instruction with T2S reference T2S2000000000012 instructed by Participant I  
15 | (PRTIFRPPXXX) with SAC "1000000987" and DCA "2000000987", for the receipt of 200,000 securities  
16 | ISIN00000010 from its counterparty Participant V (PRTVFRPPXXX) versus a payment of 5,000,000 Eu-  
17 | ros, for settlement on June 27th 2019. The instruction failed and did not settle on the 27th because  
18 | the counterpart instruction was on hold.
  - 19 | – Additional instruction details:  
20 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-I012  
21 | Place of Trade (MIC): ABCD
- 22 | I Data considered for the calculation of the penalty:
- 23 | – Calculation Method: SECU (because the instruction causing the penalty is the DVP)
  - 24 | – The Financial Instrument (ISIN00000010) is a security not subject to penalties on June 27th 2019, de-  
25 | fined as shares (Financial Instrument Type: SHRS) and illiquid.
  - 26 | – Penalty status: NCOM
- 27 | Penalty 13 – not reported as it is not computed because the security is not subject to penalties- (Common  
28 | Penalty Id: 201906270000013) is a LMFP that would be imposed to Participant U and entitled to Participant  
29 | X, both of CSD G, hence both sides would be informed in the report of the example if the security was sub-  
30 | ject to penalties. More in details, the penalty would be:
- 31 | I Imposed to Participant U (Individual Penalty Identification: F201906270000013) because it was the last  
32 | participant to enter its settlement instruction in a transaction that matched late, i.e. its DVP had a latter  
33 | acceptance timestamp than the RVP or its counterparty. Concretely:
- 34 | – Settlement instruction with T2S reference T2S1000000000013 instructed by Participant U (PRTU-  
35 | BEBBXXX) with SAC "1000000852" and DCA "2000000852", for the delivery of 100,000 securities  
36 | ISIN00000010 to its counterparty Participant X (PRTXITMMXXX) versus a payment of 2,300,000 Eu-  
37 | ros, for settlement on June 26th 2019. The instruction failed and did not settle on the 26th because  
38 | Participant U did not send its settlement instruction to T2S until the 27th (before the DVP cut-off, al-

- 1       lowing it to be settled on this business day). The instruction was matched and settled on June 27th  
2       2019, thus 1 business day after its ISD.
- 3       – Additional instruction details:
- 4       T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-U013
- 5       Place of Trade (MIC): QRST
- 6       | Entitled to Participant X (Individual Penalty Identification: N201906270000013) because its instruction  
7       did not settle because its counterparty sent its instruction late (i.e. counterparty's DVP above de-  
8       scribed). Concretely:
- 9       – Settlement instruction with T2S reference T2S2000000000013 instructed by Participant X (PRTX-  
10       ITMMXXX) with SAC "1000000739" and DCA "2000000739", for the receipt of 100,000 securities  
11       ISIN00000010 from its counterparty Participant U (PRTUBEBBXXX) versus a payment of 2,300,000 Eu-  
12       ros, for settlement on June 26th 2019. The instruction failed and did not settle on the 26th because  
13       Participant U did not send its settlement instruction to T2S until the 27th. The instruction was  
14       matched and settled on June 27th 2019, thus 1 day after its ISD.
- 15       – Additional instruction details:
- 16       T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-X013
- 17       Place of Trade (MIC): ABCD
- 18       | Data considered for the calculation of the penalty:
- 19       – Calculation Method: SECU (because the instruction causing the penalty is the DVP)
- 20       – The Financial Instrument (ISIN00000010) is a security not subject to penalties on June 26th 2019, de-  
21       fined as shares (Financial Instrument Type: SHRS) and illiquid.
- 22       – Penalty status: NCOM
- 23       Penalty 14 (Common Penalty Id: 201906270000014) is a LMFP that is imposed to Participant H and entitled  
24       to Participant G, both of CSD G, hence both sides are informed in the report of the example. More in details,  
25       the penalty is:
- 26       | Imposed to Participant H (Individual Penalty Identification: F201906270000014) because it was the last  
27       participant to enter its settlement instruction in a transaction that matched late, i.e. its DVP had a latter  
28       acceptance timestamp than the RVP or its counterparty. Concretely:
- 29       – Settlement instruction with T2S reference T2S1000000000014 instructed by Participant H  
30       (PRTHDEDDXXX) with SAC "1000000555" and DCA "2000000555", for the delivery of 200,000 securi-  
31       ties ISIN00000011 to its counterparty Participant G (PRTGDEDDXXX) versus a payment of 1,000,000  
32       Euros for settlement on June 24th 2019. The instruction failed and did not settle on the 24th because  
33       Participant H did not send its settlement instruction to T2S until the 27th (after the DVP cut-off, not  
34       allowing it to be settled on this business day).
- 35       – Additional instruction details:
- 36       T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-H014
- 37       Place of Trade (MIC): QRST

- 1 | I Entitled to Participant G (Individual Penalty Identification: N201906270000014) because its instruction  
2 | did not settle because its counterparty sent its instruction late (i.e. counterparty's DVP above de-  
3 | scribed). Concretely:
- 4 | – Settlement instruction with T2S reference T2S2000000000014 instructed by Participant G (PRT-  
5 | GDEDDXXX) with SAC "1000000666" and DCA "2000000666", for the receipt of 200,000 securities  
6 | ISIN00000011 from its counterparty Participant H (PRTHDEDDXXX) versus a payment of 1,000,000  
7 | Euros for settlement on June 24th 2019. The instruction failed and did not settle on the 24th because  
8 | Participant H did not send its settlement instruction to T2S until the 27th.
  - 9 | – Additional instruction details:  
10 | T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-G014  
11 | Place of Trade (MIC): ABCD
- 12 | I Data considered for the calculation of the penalty:
- 13 | – Calculation Method: SECU (because the instruction causing the penalty is the DVP)
  - 14 | – The Financial Instrument (ISIN00000011) is a security not subject to penalties on 24th and 25th, but  
15 | it is on June 26 and 27th 2019, defined as shares (Financial Instrument Type: SHRS) and liquid
  - 16 | – The instructions did not inform the same MIC as Place of Trade, so there is no common MIC and  
17 | hence the transaction was not traded on a SME Growth Market
  - 18 | – Security Penalty Rate for liquid shares =0.01% (1.00bp)
  - 19 | – Reference Price June 26th 2019 (ISD +2)=6 Euros
  - 20 | – Reference Price June 27th 2019 (ISD +3)=6.5 Euros
  - 21 | – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euro. Given the price of the  
22 | security is also in Euro, no exchange rate is needed
  - 23 | –  $LMFP = \sum(\text{Security Penalty Rate day } x * \text{Reference Price day } x * \text{Quantity})$   
24 |  $= (0.0001 * 6 * 200,000) + (0.0001 * 6.5 * 200,000) = 250 \text{ Euros}$
- 25 | Note that the underlying security ISIN00000011 has only been subject to penalties since June 26th  
26 | 2019. Therefore, the penalty amount only takes into account the calculations for the two last Business  
27 | days, June 26th and June 27th 2019. When reporting Penalty 14, the Calculation Data block is re-  
28 | peated 4 times (one block for each applicable day of the LMFP) indicating in blocks 1 and 2, respec-  
29 | tively with reference to June 24th and 25th, the Sub Amount Penalty Breakdown as 0 Euro and the  
30 | Subject To Penalties indicator as "FALSE" within the Financial Instrument Attributes (no additional cal-  
31 | culation data is reported). Calculation Data blocks 3 and 4, respectively with reference to June 26th  
32 | and 27th will indicate a Sub Amount Penalty Breakdown of 120 Euros and 130 Euros, including the  
33 | calculation data for each business day.
- 34 | Message usage example 6: semt.044.001.01\_Daily Penalty List (missing reference data)
- 35 | In this example, T2S sends a Daily Penalty List to the CSD N (CSDNBIC1XXX) to inform about all the penal-  
36 | ties that were computed for the previous business date, June 27th 2019 (Detection Date), and for which any  
37 | participant of CSD N or the CSD N itself is either imposed with or entitled to receive.

- 1 This Daily Penalty List is generated on June 28th 2019 and includes information about 3 penalties within the  
2 scope of CSD N.
- 3 More precisely CSD N is reported that:
- 4 Participant N (PRTNDEDDXXX) has been computed with:
- 5 | A SEFP, Penalty 15, to be received from Participant S (PRTSDEDDXXX).
  - 6 | A LMFP, Penalty 16, to be paid to Participant S (PRTSDEDDXXX).
  - 7 | A LMFP, Penalty 17, to be paid to Participant S (PRTSDEDDXXX).
- 8 Participant S (PRTSDEDDXXX) has been computed with:
- 9 | A SEFP, Penalty 15, to be paid to Participant N (PRTNDEDDXXX).
  - 10 | A LMFP, Penalty 16, to be received from Participant N (PRTNDEDDXXX).
  - 11 | A LMFP, Penalty 17, to be received from Participant N (PRTNDEDDXXX).
- 12 Detail description of the Penalties:
- 13 Penalty 15 (Common Penalty Id: 201906270000015) is a SEFP that is imposed to Participant S and entitled  
14 to Participant N, both of CSD N, hence both sides are informed in the report of the example. More in details,  
15 the penalty is:
- 16 | Imposed to Participant S (Individual Penalty Identification: F201906270000015) because its DVP instruc-  
17 tion failed to settle in T2S because of lack of securities. Concretely:
    - 18 – Settlement Instruction with T2S reference T2S1000000000015 instructed by Participant S  
19 (PRTSDEDDXXX) with SAC "1000000404" and a DCA "2000000404", for the delivery of 200,000 secu-  
20 rities ISIN00000012 to its counterparty Participant N (PRTNDEDDXXX) versus a payment of 400,000  
21 Euros, for settlement on June 27th 2019. The instruction failed on the June 27th because Participant S  
22 had insufficient securities to settle the Settlement Instruction (reason for failure at end of its cut-off:  
23 EDVP-Time 16:02).
    - 24 – Additional instruction details:  
25 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-S015  
26 Place of Trade (MIC): LITR
  - 27 | Entitled to Participant N (Individual Penalty Identification: N201906270000015) because its RVP instruc-  
28 tion failed to settle in T2S because its counterparty's lack of securities (i.e. DVP above described). Con-  
29 cretely:
    - 30 – Settlement Instruction with T2S reference T2S2000000000015 instructed by Participant N  
31 (PRTNDEDDXXX) with SAC "1000000505" and DCA "2000000505", for the receipt of 200,000 securi-  
32 ties ISIN00000012 from its counterparty Participant S (PRTSDEDDXXX) versus a payment of 400,000  
33 Euros, for settlement on June 27th 2019. The instruction failed on the 27th because the counterparty  
34 (Participant S) had insufficient securities to settle the Settlement Instruction.
    - 35 – Additional instruction details:  
36 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-N015

- 1 Place of Trade (MIC): LITR
- 2 | Data considered for the calculation of the penalty:
- 3 – Calculation Method: SECU (because the instruction causing the penalty is a DVP)
- 4 – The Financial Instrument (ISIN00000012) is a security subject to penalties on June 27th 2019, defined
- 5 as shares (Financial Instrument Type: SHRS) and illiquid
- 6 – Given that both instructions informed the same MIC ("LITR") as Place of Trade, the common MIC is
- 7 "LITR", which is not defined as a SME Growth Market
- 8 – Security Penalty Rate for shares illiquid not traded on SME Growth Market =0.005% (0.50bp)
- 9 – Reference Price June 27th 2019=Missing
- 10 – Missing Reference Data indicator: TRUE
- 11 – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euro.
- 12 – SEFP=Security Penalty Rate\*Reference Price\*Quantity
- 13 = 0.000050\*0\*200,000=0 Euro
- 14 Note that the penalty amount cannot be calculated for June 27th as the Reference Price for
- 15 ISIN00000012 is not available in Reference Data. Therefore, when reporting Penalty 15, the Calcula-
- 16 tion Data block will indicate the Sub Amount Penalty Breakdown as 0 Euro and the Missing Reference
- 17 indicator as "TRUE".
- 18 Penalty 16 (Common Penalty Identification: 201906270000016) is a LMFP that is imposed to Participant N
- 19 and entitled to Participant S, both of CSD N, hence both sides are informed in the report of the example.
- 20 More in details, the penalty is:
- 21 | Imposed to Participant N (Individual Penalty Identification: F201906270000016) because it was the last
- 22 participant to enter its settlement instruction in a transaction that matched late, i.e. its DWP had a latter
- 23 acceptance timestamp than the RWP or its counterparty. Concretely:
- 24 – Settlement instruction with T2S reference T2S1000000000016 instructed by Participant N
- 25 (PRTNDEDDXXX) with SAC "1000000505" and DCA "2000000505", for the delivery of 100,000 securi-
- 26 ties ISIN00000013 to its counterparty Participant S (PRTSDEDDXXX) with a payment of 50,000 Euros,
- 27 for settlement on June 26th 2019. The instruction failed and did not settle on the 26th because Partic-
- 28 ipant N did not send its settlement instruction to T2S until the 27th (before the DVP cut-off, allowing it
- 29 to be settled on this business day). The instruction was matched and settled on June 27th 2019, thus
- 30 1 business day after its ISD.
- 31 – Additional instruction details:
- 32 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-N016
- 33 Place of Trade (MIC) was not informed
- 34 | Entitled to Participant S (Individual Penalty Identification: N201906270000016) because its instruction
- 35 did not settle because its counterparty sent its instruction late (i.e. counterparty's DWP above de-
- 36 scribed). Concretely:

- 1 – Settlement instruction with T2S reference T2S200000000016 instructed by Participant S  
2 (PRTSEDDXXX) with SAC "100000404" and a DCA "200000404", for the receipt of 100,000 securi-  
3 ties ISIN00000013 from its counterparty Participant N (PRTNDEDDXXX) with a payment of 50,000 Eu-  
4 ros, for settlement on June 26th 2019. The instruction failed and did not settle on the 26th because  
5 Participant N did not send its settlement instruction to T2S until the 27th.
- 6 – Additional instruction details:
- 7 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-S016  
8 Place of Trade (MIC) was not informed
- 9 | Data considered for the calculation of the penalty:
- 10 – Calculation Method: BOTH
- 11 – The Financial Instrument (ISIN00000013), defined as security (Financial Instrument Type: ETFs)
- 12 – The instructions did not inform the MIC as Place of Trade, so there is no common MIC and hence the  
13 transaction was not traded on a SME Growth Market
- 14 – Security Penalty Rate for other financial instruments not traded on SME Growth Market =0.005%  
15 (0.50bp)
- 16 – Reference Price June 26th 2019 (ISD)=Missing
- 17 – Missing Reference Data indicator: TRUE
- 18 – Currency of the Penalty is Euro because it is over a DWP with cash leg in Euro.
- 19 – Euro Discount Rate (daily) for June 26th 2019 = 0.00069444% (Marginal Lending Facility expressed  
20 as a daily rate <sup>519</sup>)
- 21 – LMFP=(Security Penalty Rate \*Reference Price \*Quantity) + (Cash Discount Penalty Rate \*Amount)  
22 = (0.000050\*0\*100,000)+( 0.0000069444\*50,000)=0.35 Euro
- 23 Note that the full penalty amount cannot be calculated for June 26th as the Reference Price for  
24 ISIN00000013 is not available in ReferenceData. Therefore, when reporting Penalty 16, the Missing  
25 Reference indicator is reported as "TRUE" in the Calculation Data block. As the Calculation Method  
26 Code is "BOTH", the Sub Amount Penalty Breakdown block will be repeated twice: once for the  
27 "CASH" leg indicating an amount of 0.35 Euro, and once for the "SECU" leg, indicating an amount of 0  
28 Euro.
- 29 Penalty 17 (Common Penalty Id: 201906270000017) is a LMFP that is imposed to Participant N and entitled  
30 to Participant S, both of CSD N, hence both sides are informed in the report of the example. More in details,  
31 the penalty is:
- 32 | Imposed to Participant N (Individual Penalty Identification: F201906270000017) because it was the last  
33 participant to enter its settlement instruction in a transaction that matched late, i.e. its DVP had a latter  
34 acceptance timestamp than the RVP or its counterparty. Concretely:

---

519 The Euro Cash Discount Penalty Rate stored in Reference Data is 0.0000069444 ("BaseOneRate"), hence the 0.00069444 (%) reported in the semt.044. This value is obtained from an ECB's Marginal Lending Facility of 0.25% per annum, which is converted to a daily rate (dividing by 360)

- 1 – Settlement instruction with T2S reference T2S100000000017 instructed by Participant N  
2 (PRTNDEDDXXX) with SAC "100000505" and DCA "200000505", for the delivery of 200,000 securi-  
3 ties ISIN00000014 to its counterparty Participant S (PRTSDEDDXXX) versus a payment of 3,000,000  
4 Euros for settlement on June 24th 2019. The instruction failed and did not settle on the 24th because  
5 Participant N did not send its settlement instruction to T2S until the 27th (after the DVP cut-off, allow-  
6 ing it to be settled on the next business day). The instruction was matched on June 27th 2019, and  
7 settled on June 28th 2019, thus 4 days after its ISD.
- 8 – Additional instruction details:  
9 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-N017  
10 Place of Trade (MIC) not informed
- 11 | Entitled to Participant S (Individual Penalty Identification: N201906270000017) because its instruction  
12 did not settle because its counterparty sent its instruction late (i.e. counterparty's DVP above de-  
13 scribed). Concretely:
- 14 – Settlement instruction with T2S reference T2S200000000017 instructed by Participant S  
15 (PRTSDEDDXXX) with SAC "100000404" and a DCA "200000404", for the receipt of 200,000 securi-  
16 ties ISIN00000014 from its counterparty Participant N (PRTNDEDDXXX) versus a payment of  
17 3,000,000 Euros for settlement on June 24th 2019. The instruction failed and did not settle on the  
18 24th because Participant N did not send its settlement instruction to T2S until the 27th.
- 19 – Additional instruction details:  
20 T2S Actor reference (Account Owner Transaction Identification): PARTICIPANT-S017  
21 Place of Trade (MIC) not informed
- 22 | Data considered for the calculation of the penalty:
- 23 – Calculation Method: SECU
- 24 – The Financial Instrument (ISIN00000014), defined as security (Financial Instrument Type: ETFs)
- 25 – The instructions did not inform the MIC as Place of Trade, so there is no common MIC and hence the  
26 transaction was not traded on a SME Growth Market
- 27 – Security Penalty Rate for other financial instruments not traded on SME Growth Market =0.005%  
28 (0.50bp)
- 29 – Reference Price June 24th 2019 (ISD)=Missing
- 30 – Reference Price June 25th 2019 (ISD +1)=Missing
- 31 – Reference Price June 26th 2019 (ISD +2)=15 Euros
- 32 – Reference Price June 27th 2019 (ISD +3)=15.5 Euros
- 33 – Missing Reference Data indicator: TRUE for 24th and 25th
- 34 – Currency of the Penalty is Euro because it is over a DVP with cash leg in Euro. Given the price of the  
35 security is also in Euro, no exchange rate is needed
- 36 –  $LMFP = \sum(\text{Security Penalty Rate day } x * \text{Reference Price day } x * \text{Quantity})$

1 = (0.00005\*0\*200,000) + (0.00004\*0\*200,000) + (0.000050\*15\*200,000)  
2 +(0.000050\*15.5\*200,000)=305 Euros

3 Note that June 27th is an applicable day for the penalty as the instruction was not matched before its  
4 relevant cut-off, meaning the instruction can only be settled as of the next business day, June 28th.  
5 Note that a SEFP would need to be computed on June 28th in case the instruction did not settle be-  
6 fore the EDVP cut-off end.

7 Note that the full penalty amount cannot be calculated as the Reference Price for ISIN00000014 is  
8 not available in ReferenceData for June 24th and June 25th 2019. When reporting Penalty 17, the  
9 Calculation Data block is repeated 4 times (one block for each applicable day for the LMFP), indicating  
10 in blocks 1 and 2, respectively with reference to June 24th and 25th, the Sub Amount Penalty Break-  
11 down as 0 Euro, and the Missing Reference indicator as "TRUE". Blocks 3 and 4, respectively with ref-  
12 erence to June 26th and 27th will indicate a Sub Amount Penalty Breakdown of 150 Euros and 155  
13 Euros.

14 Message usage: List of Modified Penalties

15 The List of Modified Penalties is sent every settlement day and is used to inform about the modifications that  
16 occurred in existing penalties since the previous reporting, i.e. penalties that have been removed, re-  
17 included, re-allocated, switched by a CSD or automatically updated after the recalculation of the penalty  
18 triggered by a change in the relevant reference data.

19 Contrarily to the Daily Penalty List, the List of Modified Penalties provides information that may relate to  
20 several business days, i.e. about penalties with different original Detection Dates. For each business day  
21 (original Detection Date) having a modified Penalty reported, the List of Modified Penalties reports the new  
22 aggregated net amount of penalties per currency, party and counterparty (sum of all penalties a party is  
23 entitled to receive minus sum of all penalties a party is imposed with) considering the modification of the  
24 Penalty that is being reported.

25 In case on a given business day there are no penalties that have been updated or modified since the report-  
26 ing of the previous business day, the report will show "False" in the Activity indicator.

27 Specific message requirements

28 The message must be informed with:

- 29 | "ReportPeriod" as a "FromDateToDate" informing the period in which the Detection Date of the modified  
30 Penalties reported must be included <sup>520</sup>;
- 31 | "Frequency" = "DAIL" (Daily); and
- 32 | "PenaltyListType"= "FWAM" (ForwardAmend).

33 In this message usage the "RelatedTransaction" block will only inform the "TransactionDetails" block for  
34 penalties with Reason code "NEWP - new penalty"; otherwise, the "TransactionDetails" will not be informed.

---

520 Depending on whether the appeal period of penalties of last month has finished or not, the "FromDate" can be:

- | Either the first business day of previous month (in case the appeal period for previous month has not finished yet);
- | Or the first business day of the current month (in case the appeal period for previous month has finished).

The "ToDate" is always two business days before the recalculation process and creation of its List of Modified Penalties report by T2S.

- 1 Message usage example 1: semt.044.001.01\_List of Modified Penalties\_(Removal,\_Re-allocation &\_Switch)
- 2 In this example, T2S sends on July 3rd a List of Modified Penalties to the CSD A (CSDABIC1XXX) to inform  
3 about all the penalties that were modified (e.g. removed, re-allocated or switched) since the reporting of the  
4 previous business day. The report informs also the new daily aggregated amounts (debit and credit) per  
5 currency, party and counterparty for which there are penalties that have been modified.
- 6 This List of Modified Penalties is generated on July 3rd 2019 and includes information about the modification  
7 of 3 penalties within the scope of CSD A:
- 8 | The removal of Penalty 9 (SEFP with Detection Date June 27th 2019).
  - 9 | The re-allocation of Penalty 8 (LMFP with Detection Date June 26th 2019), identifying Participant R as  
10 the new failing party and Participant K as the new non-failing party.
  - 11 | The switch of Penalty 7(SEFP with Detection Date June 26th 2019), changing the failing party from par-  
12 ticipant D to participant W.
- 13 Detail description of the Penalties that have been modified:
- 14 Penalty 9 (Common Penalty Id: 201906270000009), described in Daily Penalty List message usage example  
15 4, has been removed. After the removal of the penalty, T2S reports it within the List of Modified Penalties by  
16 indicating:
- 17 | Status "REMO";
  - 18 | The standard code and additional information of the reason why the removal is performed by the CSD :  
19 "OTHR" - Removed Penalty due to a non-standard reason by the CSD.
  - 20 | Amount of the penalty reduced to zero;
  - 21 | Block "Calculation Data" is not informed for penalties with status REMO.
- 22 Penalty 8 (Common Penalty Id: 201906260000008), described in Daily Penalty List message usage example  
23 3, has been re-allocated and the delivering party of the Settlement Instruction (Participant R) is the new  
24 failing party, whereas the receiving party (Participant K) is the new non-failing party. The Calculation Method  
25 code "SECU" does not change within the context of the re-allocation of Penalty 8, because the instruction  
26 causing the penalty is a FOP.
- 27 After the re-allocation of the penalty, T2S reports it within the List of Modified Penalties by indicating:
- 28 | The removal of the original Penalty 8 (Common Penalty Id: 201906260000008 imposed and entitled to  
29 CSD A) i.e.: its status is "REMO", reason code "RALO"; and the reference to the new re-allocated penalty  
30 is informed (Reallocation Market Infrastructure Identification 201907030000008);
  - 31 | The new re-allocated penalty (Common Penalty Id: 201907030000008) with status "ACTV", reason code  
32 "RALO", and making reference to the original penalty from which it has been re-allocated (Reallocation  
33 Market Infrastructure Identification: 201906260000008). This Penalty is:
    - 34 – Imposed to Participant R (PRTRFRPPXXX) (Individual Penalty Identification: F201906260000008);
    - 35 – Entitled to Participant K (PRTKFRPPXXX) (Individual Penalty Identification: N201906260000008).
- 36 Note that the data considered for the calculation of the new re-allocated penalty has not changed  
37 compared with the data that was used to calculate the original penalty.

1 Penalty 7 (Common Penalty Id: 201906260000007) described in Daily Penalty List message usage example  
2 3, has been switched (the failing and the non-failing parties have been swapped).

3 Participant D (PRTDFRPPXXX) is now the Party entitled to receive the Penalty (Individual Penalty Identifica-  
4 tion remains as originally informed: F201906260000008) and External CSD E (ECSDBIC1XXX) is now the  
5 Party imposed with the Penalty (Individual Penalty Identification remains as originally informed:  
6 N201906260000008).

7 Note that the data considered for the calculation has not changed with the switch. In particular, the Calcula-  
8 tion Method code "SECU" does not change with the switch of Penalty 7 because the instruction causing the  
9 penalty is a FOP.

10 | After the switch of the penalty, T2S reports it within the List of Modified Penalties by indicating:

11 – Status "ACTV", reason code "SWIC" and additional information of the reason why the switch was per-  
12 formed by the CSD: Penalty switched, fail is on the other party.

13 Message usage example 2: semt.044.001.01\_List of Modified Penalties\_(Switch, automatic recalculation\_ &  
14 Re-inclusion)

15 In this example, T2S sends on July 5th a List of Modified Penalties to the CSD A (CSDABIC1XXX) to inform  
16 about all the penalties that were modified (i.e. switched, automatically recalculated or re-included) since the  
17 reporting of the previous business day. The report informs also the new daily aggregated amounts (debit  
18 and credit) per currency, party and counterparty for which there are penalties that have been modified.

19 This List of Modified Penalties is generated on July 5th 2019 and includes information about the modification  
20 of 3 penalties within the scope of CSD A:

21 | The switch of Penalty 2(SEFP with Detection Date June 21st 2019), changing the failing party from par-  
22 ticipant B to Participant A.

23 | The automatic recalculation due to an update of T2S Reference Data of Penalty 6 (SEFP with Detection  
24 Date June 26th 2019).

25 | The re-inclusion of Penalty 9 (SEFP with Detection Date June 27th 2019).

26 Detail description of the Penalties that have been modified:

27 | Penalty 2 (Common Penalty Id: 201906210000002), described in Daily Penalty List message usage ex-  
28 ample 1, has been switched (the failing and the non-failing parties have been swapped).

29 Participant A (PRTAFRPPXXX) is now the Party imposed with the Penalty (Individual Penalty Identifica-  
30 tion remains as originally informed: N201906210000002) and Participant B (PRTBFRPPXXX) is now the  
31 Party entitled to receive the Penalty (Individual Penalty Identification remains as originally informed:  
32 F201906210000002).

33 Note that the data considered for the calculation has changed with the switch. In particular, the Calcula-  
34 tion Method code used for this modified Penalty 2 is "MIXE" (before the switch it was "SECU"), because  
35 the instruction causing the penalty is now the RVP (instead of the DVP). Hence, the switch of Penalty 2  
36 will generate the recalculation of its amount.

37 – Calculation Method: MIXE

- 1 – Euro Discount Rate (daily) for June 21st 2019=0.00069444% (Marginal Lending Facility expressed as  
2 a daily rate <sup>521</sup>)
- 3 – SEFP=Cash Discount Penalty Rate\* Reference Price\* Quantity  
4 = 0.0000069444\*10\*100,000=6.94 Euros
- 5 | After the switch of the penalty, T2S reports it within the List of Modified Penalties by indicating:  
6 – Status "ACTV", reason code "SWIC" and additional information of the reason why the switched was  
7 performed by the CSD: Penalty switched, fail is on the other party.
- 8 Penalty 6 (Common Penalty Id: 201906260000006), described in Daily Penalty List message usage example  
9 2, has been recalculated due to an update of the Price of the ISIN.
- 10 Penalty 6 is impacted by the update on ISIN000000003 reference price for June 26th 2019, which increases  
11 from 15 Euros to 16 Euros.
- 12 | After the recalculation of the penalty, T2S reports it within the List of Modified Penalties by indicating the  
13 reason as "UPDT", and by including the new updated amount and values:  
14 – Status "ACTV", Reason "UPDT";  
15 – Reference Price June 26th 2019=16 Euro  
16 – The rest of the data considered for the calculation has not changed, hence:  
17 – SEFP=(Security Penalty Rate\*Reference Price)\*(Quantity +Cash Discount Penalty Rate\*Amount)  
18 = (0.00005\*16\*100,000)+(0.0000069444\*100,000)=80.35 Euros
- 19 Penalty 9 (Common Penalty Id: 201906270000009), described in Daily Penalty List message usage example  
20 3 and List of Modified Penalties message usage example 1, has been reincluded:
- 21 | After its re-inclusion, the penalty was recalculated by T2S and the ISIN's reference price has changed for  
22 June 27th, decreasing from 135 Danish Kroner to 133 Danish Kroner. Therefore, the penalty amount is  
23 now:  
24 – Updated Reference Price June 27th 2019=133 Danish Kroner  
25 – The rest of the data considered for the calculation has not changed, hence:  
26 – SEFP=Cash Discount Penalty Rate\*Reference Price\*Quantity  
27 = 0.0000013889\*133\*3,000=0.55 Danish Kroner
- 28 | After the re-inclusion of Penalty 9, T2S reports it within the List of Modified Penalties by indicating:  
29 – Status "ACTV";  
30 – Reason code "UPDT".
- 31 Message usage example 3: semt.044.001.01\_List of Modified Penalties\_(automatic recalculation for securi-  
32 ties subject to penalties)

---

521 The Euro Cash Discount Penalty Rate stored in Reference Data is 0.0000069444 ("BaseOneRate"), hence the 0.00069444 (%) reported in the semt.044. This value is obtained from an ECB's Marginal Lending Facility of 0.25% per annum, which is converted to a daily rate (dividing by 360)

1 In this example, T2S sends on July 5th a List of Modified Penalties to the CSD G (CSDGBIC1XXX) to inform  
2 about all the penalties that were modified (i.e. automatically recalculated) since the reporting of the previous  
3 business day. The report informs also the new daily aggregated amounts (debit and credit) per currency,  
4 party and counterparty for which there are penalties that have been modified.

5 This List of Modified Penalties is generated on July 5th 2019 and includes information about the modification  
6 of 2 penalties within the scope of CSD G:

7 | The automatic recalculation due to an update of T2S Reference Data of Penalty 12 (SEFP with Detection  
8 Date June 27th 2019).

9 | The automatic recalculation due to an update of T2S Reference Data of Penalty 13 (LMFP with Detection  
10 Date June 27th 2019).

11 Detail description of the Penalties that have been modified:

12 | Penalty 12 (Common Penalty Id: 201906270000012) described in Daily Penalty List message usage ex-  
13 ample 5, has been impacted by the update on ISIN00000010, which becomes subject to penalties from  
14 June 24th onwards (making the penalty to become Active).

15 | After the recalculation of the penalty, T2S reports it within the List of Modified Penalties by indicating:

16 – Status "ACTV", reason "NEWP"

17 – Security subject to penalties: TRUE

18 – SME Growth Market Indicator · No, as MIC was informed differently

19 – Security Penalty Rate for illiquid shares not negotiated in a SME market=0.005% (0.5bp)

20 – Reference Price June 27th 2019=25 Euros

21 – SEFP=Security Penalty Rate\*Reference Price\*Quantity

22 = 0.00005\*25\*200,000=250 Euros

23 – Block "Transaction Details" is informed for this penalty, as its reason is "NEWP"

24 | Penalty 13 (Common Penalty Id: 201906270000013) described in Daily Penalty List message usage ex-  
25 ample 5, has been impacted by the update on ISIN00000010, which becomes subject to penalties from  
26 June 24th onwards (making the penalty to become Active).

27 | After the recalculation of the penalty, T2S reports it within the List of Modified Penalties by indicating:

28 – Status "ACTV", reason "NEWP"

29 – Security subject to penalties: TRUE

30 – SME Growth Market Indicator · No, as MIC was informed differently

31 – Security Penalty Rate=0.005% (0.5bp)

32 – Reference Price June 26th 2019 (ISD)=23 Euros

33 – LMFP=(Security Penalty Rate day x\*Reference Price day x\*Quantity)

34 = (0.00005\*23\*100,000)=115 Euros

35 – Block "Transaction Details" is informed for this penalty, as its reason is "NEWP"

- 1 Message usage example 4: semt.044.001.01\_List of Modified Penalties\_(Automatic recalculation for price  
2 changes)
- 3 In this example, T2S sends on July 5th a List of Modified Penalties to the CSD N (CSDNBIC1XXX) to inform  
4 about all the penalties that were modified (i.e. automatically recalculated) since the reporting of the previous  
5 business day. The reports informs also the new daily aggregated amounts (debit and credit) per currency,  
6 party and counterparty for which there are penalties that have been modified.
- 7 This List of Modified Penalties is generated on July 5th 2019 and includes information about the modification  
8 of 3 penalties within the scope of CSD N:
- 9 | The automatic update due to an update of T2S Reference Data of Penalty 15 (SEFP with Detection Date  
10 June 27th 2019).
  - 11 | The automatic update due to an update of T2S Reference Data of Penalty 16 (LMFP with Detection Date  
12 June 27th 2019).
  - 13 | The automatic update due to an update of T2S Reference Data of Penalty 17 (LMFP with Detection Date  
14 June 27th 2019).
- 15 Detail description of the Penalties that have been modified:
- 16 | Penalty 15 (Common Penalty Id: 201906270000015), described in Daily Penalty List message usage ex-  
17 ample 6, has been recalculated due to an update of the Price of the ISIN:
  - 18 | Penalty 15 is impacted by the update on ISIN00000012 reference price for June 27th 2019, which was  
19 not available but is now 2 Euros.
  - 20 | After the recalculation of the penalty, T2S reports it within the List of Modified Penalties by indicating the  
21 reason as "UPDT", and by including the new updated amount and values.
    - 22 – Status "ACTV", reason "UPDT";
    - 23 – Reference Price June 27th 2019=2 Euros
    - 24 – Missing Reference Data indicator is no longer informed
    - 25 – The rest of the data considered for the calculation has not changed, hence:
      - 26 – SEFP=Security Penalty Rate\*Reference Price\*Quantity
      - 27 = 0.00005\*2\*200,000=20 Euros
  - 28 | Penalty 16 (Common Penalty Id: 201906270000016) described in Daily Penalty List message usage ex-  
29 ample 6, has been recalculated due to an update of the Price of the ISIN:
  - 30 | Penalty 16 is impacted by the update on ISIN00000013 reference price for June 27th 2019, which was  
31 not available but is now 5 Euros. The rest of the data considered for the calculation has not changed.
  - 32 | After the recalculation of the penalty, T2S reports it within the List of Modified Penalties by indicating the  
33 reason as "UPDT", and by including the new updated amount and values.
    - 34 – Status "ACTV", reason "UPDT"
    - 35 – Reference Price June 26th 2019=5 Euros
    - 36 – The rest of the data considered for the calculation has not changed, hence:

- 1 –  $LMFP = (\text{Security Penalty Rate} * \text{Reference Price}) + (\text{Quantity} * \text{Cash Discount Penalty Rate} * \text{Amount})$   
2 =  $(0.00005 * 5 * 100,000) + (0.0000069444 * 50,000) = 25.35$  Euro
- 3 | Penalty 17 (Common Penalty Id: 201906270000017) described in Daily Penalty List message usage ex-  
4 ample 6, has been recalculated due to an update of the Price of the ISIN:
- 5 | Penalty 17 is impacted by the update on ISIN00000014 reference price for June 25th 2019, which was  
6 not available but is now 16 Euros.
- 7 | After the recalculation of the penalty, T2S reports it within the List of Modified Penalties by indicating the  
8 reason as "UPDT", and by including the new updated amount and values.
- 9 – Status "ACTV", reason "UPDT";
- 10 – Reference Price June 25th 2019 (ISD +1)=16 Euros
- 11 – The rest of the data considered for the calculation has not changed, hence:
- 12 – Missing Reference Data indicator: True for the 24th (because this price is still missing), but no longer  
13 True for the 25th
- 14 –  $LMFP = \sum (\text{Security Penalty Rate day } x * \text{Reference Price day } x * \text{Quantity})$   
15 =  $(0.00005 * 0 * 200,000) + (0.00005 * 16 * 200,000) + (0.00005 * 15 * 200,000)$   
16 +  $(0.00005 * 15.5 * 200,000) = 465$  Euros
- 17 Message usage: Monthly Aggregated Amounts
- 18 The Monthly Aggregated Amounts of penalties is sent once a month, on the Monthly Reporting Day (the  
19 14th business day of the month), and informs about the aggregated amounts of penalties computed per  
20 currency, party and counterparty for the business days of a given period, i.e. the previous month.
- 21 The Monthly Aggregated Amounts reports the aggregated net amount of the penalties of the previous month  
22 (sum of all penalties a party is entitled to receive minus sum of all penalties a party is imposed with) per  
23 currency, party and counterparty. The aggregated net amount of penalties will be provided in the Monthly  
24 Aggregated Amounts even if the result of this bilateral net is zero.
- 25 In case that for a given month there are no penalties calculated for any given currency, party and counter-  
26 party, the report will show "false" in the Activity indicator.
- 27 Specific message requirements
- 28 The message must be informed with:
- 29 | "ReportPeriod" as a "DateMonth" informing the month whose penalties are reported i.e. month to whom  
30 the Detection Date of the Penalties being reported belong; and
- 31 | "Frequency" = "MNTH" (Monthly).
- 32 In this message usage, "PenaltyListType" is not informed and the "PenaltyDetails" block will not inform nei-  
33 ther the "PenaltyStatus", nor the "CalculationData" nor the "RelatedTransaction" blocks.
- 34 Message usage example 1: semt.044.001.01\_Monthly Aggregated Amounts

1 In this example T2S sends a Monthly Penalty List to the CSD A (CSDABIC1XXX) to inform about all the pen-  
2 alties that were computed for the previous month, June 2019, and for which any participant of CSD A is  
3 either imposed with or entitled to receive.

4 This Monthly Penalty List is generated on July 18th 2019 and includes all the active penalties, with a Detec-  
5 tion date in June 2019, for all the participants of CSD A (or the CSD A itself), taking into account the modifi-  
6 cations performed during their appeal period (i.e. the Penalties described in the Daily Penalty List message  
7 usage examples and updates as of the List of Modified Penalties message usage examples). I.e.:

8 External CSD E (ECSDBIC1XXX) has been computed with:

9 | A SEFP, Penalty 7, to be paid to Participant D (PRTDFRPPXXX), initially it was to be received from but  
10 changed due to a switch, of an amount of 56 Euros.

11 Participant A (PRTAFRPPXXX) has been computed with:

12 | A SEFP, Penalty 1, to be paid to Participant B (PRTBFRPPXXX), of an amount of 25 Euros.

13 | A SEFP, Penalty 2, to be paid to Participant B (PRTBFRPPXXX), initially it was to be received from but  
14 changed due to a switch, of an amount of 6.94 Euros.

15 | A SEFP, Penalty 3, to be paid to Participant Z (PRTZESMMXXX) of CSD Z (CSDZBIC1XXX), of an amount  
16 of 6.25 Euros.

17 | A SEFP, Penalty 9, recalculated after its re-inclusion due to a SD Update, to be received from Participant  
18 C (PRTCFRPPXXX), of an amount of 0.55 Danish Kroner.

19 | A LMFP, Penalty 11, to be paid to Participant E (PRTEKKKXXX), of an amount of 72.41 Danish Kroner.

20 Participant B (PRTBFRPPXXX) has been computed with:

21 | A SEFP, Penalty 1, to be received from Participant A (PRTAFRPPXXX), of an amount of 25 Euros.

22 | A SEFP, Penalty 2, to be received from Participant A (PRTAFRPPXXX), initially it was to be paid to but  
23 changed due to a switch, of an amount of 6.94 Euros.

24 | A SEFP, Penalty 4, to be received from Participant Y (PRTYDEFFXXX) of CSD Y (CSDYBIC1XXX), of an  
25 amount of 0.38 Euros.

26 | A SEFP, Penalty 10, to be paid to Participant D (PRTAFRPPXXX), of an amount of 0.59 Euros.

27 Participant C (PRTCFRPPXXX) has been computed with:

28 | A LMFP, Penalty 5, to be paid to Participant D (PRTDFRPPXXX), of an amount of 82.50 Euros.

29 | A SEFP, Penalty 6, recalculated due to a SD Update, to be received from Participant D (PRTDFRPPXXX),  
30 of an amount of 80.35 Euros.

31 | A SEFP, Penalty 9, recalculated after its re-inclusion due to a SD Update, to be paid to Participant A  
32 (PRTAFRPPXXX), of an amount of 0.55 Danish Kroner.

33 Participant D (PRTDFRPPXXX) has been computed with:

34 | A LMFP, Penalty 5, to be received from Participant C (PRTCFRPPXXX), of an amount of 82.50 Euros.

35 | A SEFP, Penalty 6, recalculated due to a SD Update, to be paid to Participant C (PRTCFRPPXXX), of an  
36 amount of 80.35 Euros.

- 1 | A SEFP, Penalty 7, to be received from external CSD E (ECSDBIC1XXX), initially it was to be paid to but  
2 | changed due to a switch, of an amount of 56 Euros.
- 3 | A SEFP, Penalty 10, to be received from Participant B (PRTBFRPPXXX), of an amount of 0.59 Euros.  
4 | Participant E (PRTEKKKKXXX) has been computed with:
- 5 | A LMFP, Penalty 11, to be received from Participant A (PRTAFRPPXXX), of an amount of 72.41 Danish  
6 | Kroner.
- 7 | Participant R (PRTRFRPPXXX) has been computed with:
- 8 | A LMFP, Penalty 8, to be paid to participant K (PRTKFRPPXXX) after its re-allocation (it was initially im-  
9 | posed to CSD A), of an amount of 0.90 Euros.
- 10 | Participant K (PRTKFRPPXXX) has been computed with:
- 11 | A LMFP, Penalty 8, to be received from participant R (PRTRFRPPXXX) after its re-allocation (it was initial-  
12 | ly imposed to CSD A), of an amount of 0.90 Euros.

### 13 | **3.3.8 Securities Settlement (sese)**

#### 14 | 3.3.8.1 SecuritiesTransactionCancellationRequestV06 (sese.020.001.06)

##### 15 | **3.3.8.1.1 Overview and scope of the message**

16 | This chapter illustrates the SecuritiesTransactionCancellationRequestV06 message.

17 | The SecuritiesTransactionCancellationRequestV06 message, also known as a Cancellation Instruction, is sent  
18 | by a CSD or other directly connected T2S party to T2S. The Cancellation Instruction is used to cancel in-  
19 | structions which have been sent to T2S but have not been fully settled. To identify the instruction to cancel,  
20 | the T2S Actor can either provide its reference or the T2S reference (providing the two being a possibility). In  
21 | case the T2S Actor provides the two references, both must refer to the same instruction. The ability to can-  
22 | cel the original instruction depends on its status. The original instruction to be cancelled can be:

- 23 | | A Settlement Instruction;
- 24 | | A Settlement Restriction on Securities.

25 | In response, T2S sends [sese.027.001.05](#) [▶ 1743] message to inform about the actual status of the Cancel-  
26 | lation request.

##### 27 | **3.3.8.1.2 The T2S-specific schema**

###### 28 | Outline of the schema

29 | The *SecuritiesTransactionCancellationRequestV06* is composed of the following message building blocks:

###### 30 | **AccountOwnerTransactionIdentification**

31 | This building block is mandatory and non repetitive. It unambiguously identifies the transaction as known by  
32 | the account owner or the instructing party managing the account.

###### 33 | **AccountServicerTransactionIdentification**

1 This building block is optional and non repetitive. It unambiguously identifies the transaction as known by  
2 the account servicer.

3 **MarketInfrastructureTransactionIdentification**

4 This building block is optional and non repetitive. It unambiguously identifies the transaction as known by  
5 T2S.

6 **ProcessorTransactionIdentification**

7 This building block is optional and non repetitive. It unambiguously identifies the transaction as known by a  
8 Third Party.

9 **AccountOwner**

10 This block is optional and non repetitive. It identifies the party who owns the account.

11 **SafekeepingAccount**

12 This block is mandatory and non repetitive. It provides the account to or from which a securities entry is  
13 made.

14 **TransactionDetails**

15 This building block is optional and non repetitive. It provides the details of the transaction.

16 **CancellationReason**

17 This building block is optional and non-repetitive. It provides the reason of the cancellation.

1 **3.3.8.1.3 The message in business context**

2 Message example 1: sese.020.001.06\_T2S\_SendCancellation\_Example.xml

3 In this example the T2S party, CSD Participant A (PRTAFRPPXXX), requests the cancellation of the Securities  
4 Settlement Instruction known by it with the reference 'REFABCD'. This Securities Settlement Instruction is

1 also known by T2S with the 'T1290' reference that refers to a Settlement Instruction of 100000 securities  
2 'ISIN00000001' sent by the CSD Participant A within its securities account '100000123' and Intended Set-  
3 tlement Date on the 3rd of January 2015.

4 Message example 2: sese.020.001. 06\_T2S\_CancellationAlreadyMatched\_Example.xml

5 In this example the T2S party, CSD Participant A (PRTAFRPPXXX) requests the cancellation of a Securities  
6 Settlement Instruction sent to T2S as an already matched. That Securities Settlement Instruction requested  
7 the delivery of 50000 securities, ISIN00000001, to the securities account 2 "100000234" held by counter-  
8 party CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX) versus a payment of 234056  
9 Euros for settlement on the 3/1/2015.

10 For cancelling both legs of the Settlement Instruction, CSD Participant A refers to the Securities Settlement  
11 Instruction with its own reference " REFEFGH".

12 Message example 3: sese.020.001. 06\_T2S\_CancellationIntraPosition\_Example.xml

13 In this example the T2S party, Bank B (BNKBXXYYXXX) requests the cancellation of a Restriction on Securi-  
14 ties Position which requested the reservation, using the restriction type "RES1", of 100000 securities,  
15 ISIN00001234, on the 2nd of January 2015 within its account "100000123".

16 For cancelling such Restriction on Securities Position, Bank B refers to it using its own reference "REFCDE".

17 3.3.8.2 SecuritiesTransactionStatusQueryV05 (sese.021.001.05)

### 18 **3.3.8.2.1 Overview and scope of the message**

19 This chapter illustrates the SecuritiesTransactionStatusQueryV05 message.

20 The SecuritiesTransactionStatusQueryV05message, also known as the securities Settlement Instruction audit  
21 trail query is sent by a CSD or a directly connected T2S party to T2S. The query Securities Settlement In-  
22 struction Audit Trail requests all data, including changes and amendments for a single security Settlement  
23 Instruction as identified either by the party's instruction reference or the T2S technical identifier.

24 In response to the securities instruction audit trail query, T2S sends a [SecuritiesSettlementTransactionAudit-  
25 TrailReportV04 \(semt.022.001.04\)](#) [▶ 1550] message with the historical data on all the changes applied to  
26 the instruction that matches the reference as defined within the query criteria, whether settled or otherwise  
27 or a [sese.022.001.05](#) [▶ 1633] message in the case of a business error.

### 28 **3.3.8.2.2 The T2S-specific schema**

#### 29 Outline of the schema

30 The SecuritiesTransactionStatusQueryV05 is composed of the following message building blocks:

#### 31 **Status Advice Requested**

32 This building block is mandatory and non repetitive. It is used to identify the securities transaction.

#### 33 **Account Owner**

34 This building block is optional and non repetitive. It identifies the party that owns the account.

#### 35 **Safekeeping Account**

1 This building block is mandatory and non repetitive. It identifies the account to or from which a securities  
2 entry is made.

### 3 References/Links

4 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
5 vided outside of this document under the following link:

6 [https://www2.swift.com/mystandards/T2S/sese.021.001.05\\_T2S](https://www2.swift.com/mystandards/T2S/sese.021.001.05_T2S)

### 9 **3.3.8.2.3 The message in business context**

10 Message example: sese.021.001.05\_T2S\_Example.xml

11 In this example a T2S party has requested an audit trail report for a Settlement Instruction using their ac-  
12 count owner transaction id with a value of '123456'.

### 13 3.3.8.3 SecuritiesStatusOrStatementQueryStatusAdviceV05 (sese.022.001.05)

#### 14 **3.3.8.3.1 Overview and scope of the message**

15 This chapter illustrates the SecuritiesStatusOrStatementQueryStatusAdviceV05 message.

16 The SecuritiesStatusOrStatementQueryStatusAdviceV05 is sent by T2S to a CB, CSD or a directly connected  
17 T2S participant as a response to a query message when an operational error has occurred and the response  
18 message can not be generated. This message is sent as an operational error response for the following que-  
19 ry types:

- 1 | Settlement Instruction Query (SecuritiesSettlementTransactionQuery, [semt.026.001.01](#) [▶ 1553]);
- 2 | Settlement Instruction Current Status Query (SecuritiesSettlementTransactionQuery, [semt.026.001.01](#)
- 3 | [▶ 1553]);
- 4 | Settlement Instruction Status Audit Trail Query (SecuritiesSettlementTransactionQuery, [semt.026.001.01](#)
- 5 | [▶ 1553]);
- 6 | Settlement Instruction Audit Trail Query (SecuritiesTransactionStatusQuery, [sese.021.001.05](#) [▶ 1632]);
- 7 | Securities Account Position History Query (SecuritiesAccountPositionQuery, [semt.025.001.09](#) [▶ 1551]);
- 8 | Intra-position Movements Query (IntraPositionMovementQuery, [semt.028.001.08](#) [▶ 1567]);
- 9 | Amendment Instruction Query for Intra-Position Movements and Settlement Instructions (Securities-
- 10 | SettlementConditionsModificationRequestQuery, [semt.030.001.08](#) [▶ 1572]);
- 11 | Cancellation Instruction Query for Intra-Position Movements and Settlement Instructions (Securi-
- 12 | tiesTransactionCancellationRequestQuery, [semt.032.001.09](#) [▶ 1582]).

### 13 | **3.3.8.3.2 The T2S-specific schema**

#### 14 | Outline of the schema

15 | The SecuritiesStatusOrStatementQueryStatusAdviceV05 is composed of the following message building

16 | blocks:

#### 17 | **QueryReference**

18 | This building block is mandatory and non repetitive. It contains unambiguous identification of the query as

19 | per the account owner.

#### 20 | **ProcessingStatus**

21 | This building block is mandatory and non repetitive. It provides details on the processing status of the re-

22 | quest.

#### 23 | References/Links

24 | The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-

25 | vided outside of this document under the following link:

26 | [http://www.swift.com/mystandards/T2S/sese.022.001.05\\_T2S](http://www.swift.com/mystandards/T2S/sese.022.001.05_T2S)

### 27 | **3.3.8.3.3 The message in business context**

28 | Message example: [sese.022.001.05\\_T2S\\_Example.xml](#)

29 | In this example the *SecuritiesStatusOrStatementQueryStatusAdvice* is sent by T2S as an error response to a

30 | Settlement Instruction Query with a query reference 'QR0001234'. A *SecuritiesSettlementTransaction-*

31 | *QueryResponse* could not be sent as the securities account number specified as a criterion within the query

32 | is not known in T2S.

## 1 3.3.8.4 SecuritiesSettlementTransactionInstructionV09 (sese.023.001.09)

### 2 **3.3.8.4.1 Overview and scope of the message**

3 This chapter illustrates the SecuritiesSettlementTransactionInstructionV09 message.

4 The SecuritiesSettlementTransactionInstructionV09message, also known as a Settlement Instruction within  
5 T2S is sent by a CSD or a directly connected T2S party to T2S. The Settlement Instruction allows the In-  
6 structing party to request a transfer of securities, relating to a securities transaction (e.g. an OTC trade, a  
7 corporate action, a repo), with or without a cash payment.

8 In response to the Settlement Instruction, T2S sends a [sese.024.001.10](#) [▶ 1659] when validation, matching  
9 and settlement are carried out and a [sese.025.001.0](#) [▶ 1731]9 when settlement is successful.

### 10 **3.3.8.4.2 The T2S-specific schema**

#### 11 Outline of the schema

12 The SecuritiesSettlementTransactionInstructionV09 message is composed of the following message building  
13 blocks:

#### 14 **Transaction Identification**

15 This building block is mandatory and not repetitive. It contains an identification assigned by the instructing  
16 party to uniquely and unambiguously identify the transaction.

#### 17 **SettlementTypeAndAdditionalParameters**

18 This building block is mandatory and non repetitive. It contains settlement type and identification infor-  
19 mation.

#### 20 **NumberCounts**

21 This building block is optional and non repetitive. It contains the number of transactions linked.

#### 22 **Linkages**

23 This building block is optional and repetitive. It is used to link instructions and specify settlement sequences  
24 (e.g. after/before/with etc.).

#### 25 **TradeDetails**

26 This building block is mandatory and non repetitive. It contains detailed information related to the Settle-  
27 ment Instruction.

#### 28 **FinancialInstrumentIdentification**

29 This building block is mandatory and non repetitive. It identifies the financial instrument for which the trans-  
30 action is being settled.

#### 31 **FinancialInstrumentAttributes**

32 It contains elements characterising the financial instrument for which the transaction is being settled. It is  
33 not required in T2S.

#### 34 **QuantityAndAccountDetails**

1 This building block is mandatory and non repetitive. It contains the details related to the account and quanti-  
2 ty involved in the transaction.

### 3 **SettlementParameters**

4 This building block is mandatory and non repetitive. It contains parameters which explicitly state the condi-  
5 tions that must be fulfilled before a particular transaction of a financial instrument can be settled. These  
6 parameters are defined by the Instructing party in compliance with settlement rules in the market the trans-  
7 action settles in.

### 8 **DeliveringSettlementParties**

9 This building block is optional and non repetitive. It contains the chain of delivering settlement parties.

### 10 **ReceivingSettlementParties**

11 This building block is optional and non repetitive. It contains the chain of receiving settlement parties.

### 12 **CashParties**

13 This building block is optional and non repetitive. It contains the cash parties involved in the transaction if  
14 different for the securities settlement parties.

### 15 **SettlementAmount**

16 This building block is optional and non repetitive. It contains the total amount of money to be paid or re-  
17 ceived in exchange for the securities.

### 18 **OtherAmounts**

19 This building block contains other amounts than the settlement amount. It is not required in T2S.

### 20 **OtherBusinessParties**

21 This building block contains other business parties relevant to the transaction. It is not required in T2S.

### 22 **AdditionalPhysicalOrRegistrationDetails**

23 This building block contains information required for the registration or physical settlement. It is not required  
24 in T2S.

### 25 References/Links

26 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
27 vided outside of this document under the following link:

### 1 **3.3.8.4.3 The message in business context**

#### 2 Message example: sese.023.001.09 T2S DVP Example.xml

3 In this example the Settlement Instruction requests a debit of securities versus a credit of cash. The T2S  
4 party, CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed , with  
5 'High' priority, the delivery of 100000 securities, ISIN00000001, to its counterparty CSD Participant B  
6 (CSDPBBICXXX) and its CSD B (CSDBBIC1XXX) versus a payment of 575000 Euros for settlement on the  
7 3/1/2015. Instructing party information is provided within the BAH which is not provided in the example.

#### 8 Message example: sese.023.001.09 T2S AlreadyMatched-BATM Example.xml

9 In this example a Bilaterally agreed treasury management settlement instruction that has already been  
10 matched is sent requesting a debit of securities versus a credit of cash.

11 The T2S party, CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has in-  
12 structed, with 'High' priority, the delivery of 50000 securities, ISIN00000001, from the restricted position  
13 "RES1", to the securities account '100000234', held by counterparty CSD Participant B (PRTBBIC1XXX) be-  
14 longing to CSD C (CSDCBIC1XXX) versus a payment of 234056 Euros for settlement on the 3/1/2015. CSD  
15 Participant A's dedicated cash account is '900000123' while CSD Participant B's is '900000234'. Two sub-  
16 positions are identified using the Restriction References 'T2SIREFORR087' and 'T2SIREFORR094'.

17 Instructing party information is provided within the BAH which is not provided in the example.

#### 18 Message example: sese.023.001.09 T2S AlreadyMatched-Cross CSD Example.xml

19 In this example, a settlement instruction cross CSD that has already been matched is sent requesting a debit  
20 of securities versus a credit of cash.

21 The T2S party, CSD Participant A (PRTAFRPPXXX) belonging to the CSD C (CSDCBIC1XXX) with a securities  
22 account '100000123' in T2S has instructed, with 'normal' priority, the delivery of 100000 securities,  
23 ISIN00000001, to the securities account '100000234', held by counterparty Participant B (PRTBBIC1XXX)  
24 belonging to CSD D (CSDDBIC1XXX) versus a payment of 234056 Euros for settlement on the 3/9/2021.  
25 CSD C Participant A's dedicated cash account is '900000123' while CSD D Participant B's is '900000234'.

26 Instructing party information is provided within the BAH which is not provided in the example.

#### 27 Message example: sese.023.001. 09 T2S PFOD-CA Example.xml

28 In this example the Settlement Instruction requests a payment without the delivery of securities represent-  
29 ing a Corporate Action. The T2S party, CSD Participant A (PRTAFRPPXXX) with a securities account  
30 '100000123' in T2S has instructed, with 'Normal' priority, to receive a payment of 100000 Euros, for settle-  
31 ment on the 21/1/2015, from their counterparty CSD Participant B (CSDPBBICXXX) and its CSD B  
32 (CSDBBIC1XXX), with no corresponding delivery of the securities, ISIN00000002 . This instruction is part of  
33 a pool where the pool id is the corporate action reference 'CA002RF0076'). Instructing party information is  
34 provided within the BAH which is not provided in the example.

#### 35 Message example: sese.023.001. 09 T2S FOP-Indirect-Debit Example.xml

36 In this example the Settlement Instruction delivers securities without receiving any cash in exchange. The  
37 T2S party, CSD Participant C (PRTCITRRXXX) with a securities account '100000789' in T2S has instructed,  
38 with 'High' priority, the delivery of 35000 securities, ISIN00000053, for settlement on the 22/1/2015, to a

1 counterparty CSD Participant X (CSDPX BICXXX) and its CSD X (CSDXBIC2XXX), with no corresponding pay-  
2 ment. The deliverable position is complemented using a restricted position, of the type 'blocking' as defined  
3 within static data, identified by 'T2SIREF00763'. Instructing party information is provided within the BAH  
4 which is not provided in the example.

5 Message example: sese.023.001. 09 T2S DWP Example.xml

6 In this example the Settlement Instruction delivers securities along with a cash payment. The T2S party,  
7 CSD Participant Z (PRTZESMMXXX) with a securities account '1000005432' in T2S has instructed , with 'High'  
8 priority, the delivery of 57000 securities, ISIN00000456, accompanied by a cash payment of 40000 Euros, to  
9 a counterparty CSD Participant D (CSDPDBICXXX) and its CSD D (CSDD BIC5XXX) for settlement on the  
10 23/1/2015. Instructing party information is provided within the BAH which is not provided in the example.

11 Message example: sese.023.001. 09 T2S PartyHold Example.xml

12 In this example the Settlement Instruction requests a debit of securities versus a credit of cash but has been  
13 placed on hold by the CSD Participant A. The T2S party, CSD Participant C (PRTC FRPPXXX) with a securities  
14 account '1000000111' in T2S has instructed , with 'Normal' priority, the delivery of 250000 securities,  
15 ISIN00000099, to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD B (CSDBBIC1XXX) versus a  
16 payment of 125000 Euros for settlement on the 8/1/2015. Instructing party information is provided within  
17 the BAH which is not provided in the example.

18 Message example: sese.023.001. 09 T2S FOP-with-Earmarking Example.xml

19 In this example the Settlement Instruction receives securities without payment. The T2S party, CSD Parti-  
20 cipant C (PRTCITRXXX) with a securities account '1000000789' in T2S has instructed the receipt of 15000  
21 securities, ISIN00000099, within an earmarked position 'EAR9', for settlement on the 15/3/2016, from a  
22 counterparty CSD Participant X (CSDPX BICXXX) and its CSD X (CSDXBIC2XXX), with no corresponding pay-  
23 ment and with the possibility of partial settlement. This instruction includes a link 'before' to an intra-position  
24 movement instruction (Market Infrastructure Tx Id: 'T2SIREF004928'). Instructing party information is pro-  
25 vided within the BAH which is not provided in the example.

26 3.3.8.5 SecuritiesSettlementTransactionStatusAdviceV10 (sese.024.001.10)

### 27 **3.3.8.5.1 Overview and scope of the message**

28 This chapter illustrates the *SecuritiesSettlementTransactionStatusAdviceV10* message. The *SecuritiesSettle-*  
29 *mentTransactionStatusAdviceV08* message, also known as Settlement Instruction Status Advice, is sent by  
30 T2S to a CSD or other directly connected T2S party. It is used to inform about the current status of a Set-  
31 tlement Instruction (sese.023.001.09) which has been previously sent to T2S. The status may be a pro-  
32 cessing, matching, or settlement status.

33 This message is sent by T2S in the following message usages:

- 34 | Rejected;
- 35 | Accepted;

- 
- 1 | I Accepted with Hold; <sup>522</sup>
  - 2 | I Party Hold; <sup>523</sup>
  - 3 | I CSD Hold; <sup>524</sup>
  - 4 | I Accepted with CSD Validation Hold; <sup>525</sup>
  - 5 | I CoSD Hold;
  - 6 | I CoSD awaiting from Administering Party;
  - 7 | I Counterparty's Settlement Instruction on Hold <sup>526, 527</sup>;
  - 8 | I No Hold remain; <sup>528</sup>
- 

522 The rule R7 (SettlementStatusAndMatchedRule) defined by ISO for the sese.024 states that if settlement status/reason is used alone, then it means that the transaction is matched. Currently there are four exceptions to this rule in T2S as the sese.024 status advice message may report a settlement/reason status of an unmatched instruction in the following scenarios:

- | Put on party hold (PREA),
- | Put on CSD hold (CSDH),
- | Put on CSD validation hold (CVAL)
- | No hold exists or last applicable hold indicator is released (FUTU/CYCL depending whether the instruction is pending or failing).

523 The rule R7 (SettlementStatusAndMatchedRule) defined by ISO for the sese.024 states that if settlement status/reason is used alone, then it means that the transaction is matched. Currently there are four exceptions to this rule in T2S as the sese.024 status advice message may report a settlement/reason status of an unmatched instruction in the following scenarios:

- | Put on party hold (PREA),
- | Put on CSD hold (CSDH),
- | Put on CSD validation hold (CVAL)
- | No hold exists or last applicable hold indicator is released (FUTU/CYCL depending whether the instruction is pending or failing).

524 The rule R7 (SettlementStatusAndMatchedRule) defined by ISO for the sese.024 states that if settlement status/reason is used alone, then it means that the transaction is matched. Currently there are four exceptions to this rule in T2S as the sese.024 status advice message may report a settlement/reason status of an unmatched instruction in the following scenarios:

- | Put on party hold (PREA),
- | Put on CSD hold (CSDH),
- | Put on CSD validation hold (CVAL)
- | No hold exists or last applicable hold indicator is released (FUTU/CYCL depending whether the instruction is pending or failing).

525 The rule R7 (SettlementStatusAndMatchedRule) defined by ISO for the sese.024 states that if settlement status/reason is used alone, then it means that the transaction is matched. Currently there are four exceptions to this rule in T2S as the sese.024 status advice message may report a settlement/reason status of an unmatched instruction in the following scenarios:

- | Put on party hold (PREA),
- | Put on CSD hold (CSDH),
- | Put on CSD validation hold (CVAL)
- | No hold exists or last applicable hold indicator is released (FUTU/CYCL depending whether the instruction is pending or failing).

526 When the settlement instruction on hold is a business instruction and its counterparty's instruction is a realignment instruction, no hold status advice will be sent to the counterparty. The realignment instruction will be informed about the hold status of the business instruction via LINK

527 When the settlement instruction on hold is a realignment instruction and its counterparty's instruction is a business instruction, no hold status advice will be sent to the counterparty. The business instruction will be informed about the hold status of the realignment instruction via LINK

528 The rule R7 (SettlementStatusAndMatchedRule) defined by ISO for the sese.024 states that if settlement status/reason is used alone, then it means that the transaction is matched. Currently there are four exceptions to this rule in T2S as the sese.024 status advice message may report a settlement/reason status of an unmatched instruction in the following scenarios:

- | Put on party hold (PREA),
- | Put on CSD hold (CSDH),
- | Put on CSD validation hold (CVAL)
- | No hold exists or last applicable hold indicator is released (FUTU/CYCL depending whether the instruction is pending or failing).

- 
- 1 | I Other Hold remain(s); <sup>529</sup>
  - 2 | I CoSD Rule Release, Other rule(s) remain(s);
  - 3 | I Counterparty's Settlement Instruction is released <sup>530, 531</sup>;
  - 4 | I Matched;

  - 10 | I Partial Settlement (unsettled part);
  - 11 | I Execution of a Partial release;
  - 12 | I Partial Settlement (unsettled part) of a settlement instruction partially released;
  - 13 | I Settlement of a Partial release;
  - 14 | I Cancellation of a Partial release;
  - 15 | These message usages are described in the section "The message in business context".

### 16 | **3.3.8.5.2 The T2S-specific schema**

#### 17 | Outline of the schema

18 | The *SecuritiesSettlementTransactionStatusAdviceV10* is composed of the following message building blocks:

#### 19 | **TransactionIdentification**

20 | This block is mandatory and it provides the transaction type and identification information.

#### 21 | **Linkages**

- 
- 529 | The rule R7 (SettlementStatusAndMatchedRule) defined by ISO for the sese.024 states that if settlement status/reason is used alone, then it means that the transaction is matched. Currently there are four exceptions to this rule in T2S as the sese.024 status advice message may report a settlement/reason status of an unmatched instruction in the following scenarios:
- | Put on party hold (PREA),
  - | Put on CSD hold (CSDH),
  - | Put on CSD validation hold (CVAL)
  - | No hold exists or last applicable hold indicator is released (FUTU/CYCL depending whether the instruction is pending or failing).
- 530 | When the settlement instruction that has been released is a business instruction and its counterparty's instruction is a realignment instruction, no release status advice will be sent to the counterparty.
- 531 | When the settlement instruction that has been released is a realignment instruction and its counterparty's instruction is a business instruction, no release status advice will be sent to the counterparty.
- 532 | When the settlement instruction that is under intraday restriction is a realignment instruction and its counterparty's instruction is a business instruction, the status advice sent to the counterparty will include a LINK reason code and neither a BLOC nor a SBLO.
- 533 | When the settlement instruction that is in lack of securities is a realignment instruction and its counterparty's instruction is a business instruction, the status advice sent to the counterparty will include a LINK reason code and not a CLAC.

1 This building block is optional and non-repetitive. It provides information about an existing link to another  
2 transaction. <sup>534</sup>

### 3 **ProcessingStatus**

4 This building block is optional and it provides details on the processing status of the transaction.

### 5 **MatchingStatus**

6 This building block is optional and it provides the matching status of the instruction.

### 7 **SettlementStatus**

8 This building block is optional it provides the status of settlement of a transaction.

### 9 **TransactionDetails**

10 This block is optional and it identifies the details of the transaction.

### 11 **Supplementary Data**

12 This building block is optional and repetitive. It allows to provide, in the form of a schema, additional infor-  
13 mation that cannot be captured in the structured elements and/or any other specific block.

#### 14 References/Links

15 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
16 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
17 under the following link.

18 [http://www.swift.com/mystandards/T2S/sese.024.001.10\\_T2S](http://www.swift.com/mystandards/T2S/sese.024.001.10_T2S)

#### 19 Business rules applicable to the schema

20 Not applicable (T2S outgoing message).

### 21 **3.3.8.5.3 The message in business context**

#### 22 Message usage: Rejected

23 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
24 Instruction is rejected. A Settlement Instruction is rejected whether it does not pass the business validations  
25 or it fulfils a rule of a positive rejection restriction set by the CSD.

---

534 This block will be present only for INFO linkages and it will be reported only in sese.024 of acceptance. If the instruction is sent as Already Matched and more than one link INFO are informed:

- | If the Already Matched instruction is instructed as a 'DELI', the first link 'INFO' will be assigned to the 'DELI' leg of the transaction and the second to the counterparty (i.e. RECE leg).
- | If the Already Matched instruction is instructed as a 'RECE', the first link "INFO" will be assigned to the "RECE" leg of the transaction and the second to the counterparty (i.e. DELI leg).

As this is a non-repetitive block, when reporting the INFO links of a settlement instruction only one Link will be reported and the type of reference to be informed in the linkage block will be the existing T2S reference of the linked instruction. If the reference provided in the settlement instruction to set the link INFO is a T2S Actor Reference, the following scenarios may occur when reporting the Market Infrastructure reference associated to a T2S Actor Instruction Reference:

- | The Market Infrastructure reference does not exist. In this case, the acceptance sese.024 will not populate the INFO linkage block.
- | One Market Infrastructure reference exists for the T2S Actor Instruction Reference informed. In this case, this Market Infrastructure reference will be populated in the acceptance sese.024.
- | There are more than one Market Infrastructure references associated to the T2S Actor Instruction Reference. In this case, as the number of references that can be populated in the linkage sequence of the sese.024 is limited to one, the sese.024 will report the lower MITI reference in the linkage sequence.

1 Specific message requirements

2 To inform about a rejection status, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the follow-  
3 ing information:

- 4 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons of the  
5 rejection;
- 6 | Code – ISO code specifying the reason of the rejection;
- 7 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
8 and a short description of the error. T2S also informs of the rule ID of a positive rejection restriction rule  
9 fulfilled, if any.

10

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Docu- ment/SciesSttlmTxStsAdvC/PrCgSts/Rjctd/Rsn/ AddtlRsnInf		tion and rule id of a positive rejection restriction rule fulfilled (if any)

1 Message usage example 1: sese.024.001.10 T2S Rejected Example.xml

2 In this example, firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has  
3 instructed the delivery of 100000 securities ISIN000002 to its counterparty CSD Participant B  
4 (CSDPBBICXXX) and its CSD B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the  
5 3/1/2015. T2S sends a rejection status because the Settlement Instruction has the following business errors:

- 6 | The financial instrument is not active at the Intended Settlement Date;
- 7 | The cash account to be credited does not exist in T2S.

8 Message usage example 2: sese.024.001. 10 T2S RejectedPositiveRejectionRestriction Example.xml

9 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
10 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
11 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015.

12 In this example, T2S sends a rejected status advice as response to the instructed Settlement Instruction  
13 because the Settlement Instruction fulfils the rule of a positive rejection restriction 'RT02384' set by the CSD.

14 Message usage: Accepted

15 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
16 valid. A Settlement Instruction is valid and accepted by T2S if it passes all business validations and does not  
17 fulfil any rule of a positive rejection restriction set by the CSD.

18 Specific message requirements

19 To inform about an accepted status, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the fol-  
20 lowing information:

- 21 | AcknowledgedAccepted – status that corresponds to 'Accepted';
- 22 | Code – 'OTHR' ISO code when the Settlement Instruction is accepted fulfilling a rule of a negative re-  
23 striction (rejection and/or CSD Validation Hold);
- 24 | AdditionalReasonInformation – rule ID identifying a negative restriction fulfilled (rejection and/or CSD  
25 Validation Hold);
- 26 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction is accepted not fulfilling any rule  
27 of a negative restriction (rejection and/or CSD Validation Hold);
- 28 | MarketInfrastructureTransactionIdentification – T2S identification of the accepted Settlement Instruction;
- 29 | Unmatched – status indicating that the instruction is not matched;
- 30 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;

- 1 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-
- 2 | tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-
- 3 | tively;
- 4 | Code – 'FUTU' ISO code for Pending and 'CYCL' ISO code for Failing;
- 5 | AcknowledgedStatusTimeStamp – Time stamp on when the Settlement Instruction is accepted;
- 6 | MatchedStatusTimeStamp – In case the Settlement Instruction is sent Already Matched, time stamp on
- 7 | when the Settlement Instruction is matched;
- 8 | ReceivingSettlementParties – In case the Settlement Instruction is sent Already Matched, the Account
- 9 | Owner reference and T2S reference of the counterparty if the securities movement type is DELI.
- 10 | DeliveringSettlementParties – In case the Settlement Instruction is sent Already Matched, the Account
- 11 | Owner reference and T2S reference of the counterparty if the securities movement type is RECE
- 12 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.
- 13 |

1 Message usage example 1: sese.024.001.10 T2S AcceptedPending Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account "1000000123" in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000 Euros for settlement on the 3/1/2015 (date in the future).  
5 The instruction is sent as unmatched. In this example, T2S sends an accepted status advice as response to  
6 the instructed Settlement Instruction indicating the time at what the Settlement Instruction was accepted in  
7 T2S informing the accepted, the unmatched and the pending status.

8 Message usage example 2: sese.024.001.10 T2S AcceptedAlreadyMatchedPending Example.xml

9 Firstly, CSD Participant A (PRTAFRPPXXX) with a securities account "1000000123" in T2S has instructed,  
10 with "High" priority, the delivery of 50000 securities, ISIN00000001, to the securities account  
11 "1000000234" held by counterparty CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX)

1 versus a payment of 234056 Euros for settlement on the 3/1/2015 (date in the future). The instruction is  
2 sent as already matched.

3 In this example, T2S sends an accepted status advice as response to the instructed Settlement Instruction  
4 indicating the time at what the Settlement Instruction was accepted in T2S. The status advice informs the  
5 accepted, matched and pending status. The status advice informs the references of the counterparty's in-  
6 struction (T2S reference and the Account owner reference) and the T2S Matching Reference (Supplementary  
7 Data) on the same message.

#### 8 Message usage example 3: sese.024.001.10 T2S AcceptedFailing Example.xml

9 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account "1000000222" in T2S has instructed the  
10 delivery of 100000 securities ISIN000011 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
11 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2013 (date in the past).  
12 The instruction is sent as unmatched. In this example, T2S sends an accepted status advice as response to  
13 the instructed Settlement Instruction informing the accepted, the unmatched and the failing status.

#### 14 Message usage example 4: sese.024.001.10 T2S AcceptedAlreadyMatchedFailing Example.xml

15 Firstly, CSD Participant A (PRTAFRPPXXX) with a securities account "1000000222" in T2S has instructed,  
16 with "High" priority, the delivery of 50000 securities, ISIN00000011, to the securities account "1000000234"  
17 held by counterparty CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX) versus a pay-  
18 ment of 234056 Euros for settlement on the 3/1/2013 (date in the past). The instruction is sent as already  
19 matched.

20 In this example, T2S sends an accepted status advice as response to the instructed Settlement Instruction.  
21 The status advice informs the accepted, matched and pending status. The status advice informs the refer-  
22 ences of the counterparty's instruction (T2S reference and the Account owner reference) and the T2S  
23 Matching Reference (Supplementary Data) on the same message.

#### 24 Message usage: Accepted with Hold

25 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
26 accepted and put on Hold at its validation. A Settlement Instruction is put on Accepted with Hold if the T2S  
27 Actor sends initially the Settlement Instruction with the Party Hold status set to "Yes" or the CSD Hold set to  
28 "Yes" and it is valid and accepted by T2S, or if the relevant T2S Actor instructs the Settlement Instruction  
29 without the Party Hold status being informed and the "Hold Release default" value of the Securities Account  
30 included in the Instruction is set to "Yes".

#### 31 Specific message requirements

32 To inform about an Accepted with Hold, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the  
33 following information:

- 34 | AcknowledgedAccepted – status that corresponds to 'Accepted';
- 35 | Code – "OTHR" ISO code when the Settlement Instruction is accepted fulfilling a rule of a negative re-  
36 striction (rejection and/or CSD Validation Hold);
- 37 | AdditionalReasonInformation – rule ID identifying a negative restriction fulfilled (rejection and/or CSD  
38 Validation Hold);

- 1 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction is accepted not fulfilling any rule
- 2 | of a negative restriction (rejection and/or CSD Validation Hold);
- 3 | MarketInfrastructureTransactionIdentification – T2S identification of the accepted Settlement Instruction;
- 4 | Unmatched – status indicating that the instruction is not matched;
- 5 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;
- 6 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-
- 7 | tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-
- 8 | tively;
- 9 | Code – ISO Code that indicates that the instruction is either on Party Hold or in CSD Hold;
- 10 | HoldIndicator – set to "True";
- 11 | HoldIndicator/Code – ISO code specifying that the Hold type is either Party or CSD Hold.
- 12 | AcknowledgedStatusTimeStamp – Time stamp on when the Settlement Instruction is accepted;
- 13 | MatchedStatusTimeStamp – In case the Settlement Instruction is sent Already Matched, time stamp on
- 14 | when the Settlement Instruction is matched;
- 15 | ReceivingSettlementParties – In case the Settlement Instruction is sent Already Matched, Account Owner
- 16 | reference and T2S reference of the counterparty if the securities movement type is DELI

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
		ported in this field

1 Message usage example 1: sese.024.001.10 T2S AcceptedPendingWithHold Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015 (date in the future).  
5 The securities account '1000000123' has the "Hold Release default" value set to "Yes", and the Settlement  
6 Instruction is submitted without the Hold Indicator being informed. The instruction is sent as unmatched. In  
7 this example, T2S sends an accepted, an unmatched and a pending status in the same status advice to in-  
8 form Participant A that its Settlement Instruction has been accepted and put on hold at its acceptance. The  
9 status advice informs also about the time at which the Settlement Instruction was accepted in T2S.

10 Message usage example 2: sese.024.001. 10 T2S AcceptedFailingWithHold Example.xml

11 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000222' in T2S has instructed the  
12 delivery of 100000 securities ISIN000011 to its counterparty CSD Participant B (CSDPBICXXX) and its CSD  
13 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2013 (date in the past).  
14 The securities account '1000000222' has the "Hold Release default" value set to "Yes". The instruction is  
15 sent as already matched. In this example, T2S sends an accepted, a matched and a failing status in the  
16 same status advice to inform Participant A that its Settlement Instruction has been accepted and put on hold  
17 at its acceptance. The status advice informs the references of the counterparty's instruction (T2S reference  
18 and the Account owner reference) and the T2S Matching Reference (Supplementary Data) on the same  
19 message.

20 Message usage example 3: sese.024.001.10 T2S AcceptedAlreadyMatchedWithPTYHFailing Example.xml

21 Firstly, CSD Participant A (PRTAFRPPXXX) with a securities account "1000000123" in T2S has instructed the  
22 delivery of 50000 securities, ISIN00000001, to the securities account "1000000234" held by counterparty  
23 CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX) versus a payment of 234056 Euros  
24 for settlement on the 3/1/2015 (date in the past).The instruction is sent as already matched with the Party  
25 hold reason set to PTYH. In this example, T2S sends an accepted status advice as response to the instructed  
26 Settlement Instruction indicating the time at what the Settlement Instruction was accepted in T2S. The sta-  
27 tus advice also informs the accepted, matched and failing status and the references of the counterparty's  
28 instruction (T2S reference and the Account owner reference) and T2S Matching reference (Supplementary  
29 Data) in the same status advice to inform that the Settlement Instruction has been accepted and put on hold  
30 at its acceptance.

31 The receiving leg of the transaction will receive a status advice informing the accepted, matched and failing  
32 status in the same status advice. Subsequently, T2S sends a status advice to inform that the counterparty  
33 instruction is on hold.

34 Message usage example 4: sese.024.001.10 T2S AcceptedAlreadyMatchedWithBOTH Failing Example.xml

35 Firstly, CSD Participant A (PRTAFRPPXXX) with a securities account "1000000345" in T2S has instructed the  
36 delivery of 50000 securities, ISIN00000001, to the securities account "1000000456" held by counterparty  
37 CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX) versus a payment of 234056 Euros

1 for settlement on the 3/1/2015 (date in the past).The instruction is sent as already matched with the Party  
2 hold reason set to BOTH. In this example, T2S sends an accepted status advice as response to the instruct-  
3 ed Settlement Instruction indicating the time at what the Settlement Instruction was accepted in T2S. The  
4 status advice also informs the accepted, matched and failing status and the references of the counterparty's  
5 instruction (T2S reference and the Account owner reference) and T2S Matching reference (Supplementary  
6 Data) in the same status advice to inform that the Settlement Instruction has been accepted and put on hold  
7 at its acceptance.

8 The receiving leg of the transaction will receive a status advice informing that its Settlement Instruction has  
9 been accepted and put on hold at its acceptance. Subsequently, T2S sends a status advice to both legs of  
10 the transaction to inform that the counterparty instruction is on hold.

11 Message usage example 5: sese.024.001.10\_T2S\_AcceptedAlreadyMatchedWithPRCY\_Failing\_Example.xml

12 Firstly, CSD Participant A (PRTAFRPPXXX) with a securities account "1000000678" in T2S has instructed the  
13 delivery of 50000 securities, ISIN000000001, to the securities account "1000000789" held by counterparty  
14 CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX) versus a payment of 234056 Euros  
15 for settlement on the 3/1/2015 (date in the past).The instruction is sent as already matched with the Party  
16 hold reason set to PRCY.

17 In this example, T2S sends an accepted status advice as response to the instructed Settlement Instruction  
18 indicating the time at what the Settlement Instruction was accepted in T2S. The status advice also informs  
19 the accepted, matched and failing status and the references of the counterparty's instruction (T2S reference  
20 and the Account owner reference) and T2S Matching reference (Supplementary Data) in the same status  
21 advice. Subsequently, T2S sends a status advice to the delivering leg of the transaction to inform that the  
22 counterparty instruction is on hold.

23 The receiving leg of the transaction will receive a status advice informing that its Settlement Instruction has  
24 been accepted and put on hold at its acceptance.

25 Message usage example 6: sese.024.001.10\_T2S\_AcceptedAlreadyMatchedWithCSDHFailing\_Example.xml

26 Firstly, CSD Participant A (PRTAFRPPXXX) with a securities account "2000000123" in T2S has instructed the  
27 delivery of 50000 securities, ISIN000000001, to the securities account "2000000234" held by counterparty  
28 CSD Participant B (PRTBBIC1XXX) belonging to CSD C (CSDCBIC1XXX) versus a payment of 234056 Euros  
29 for settlement on the 3/1/2015 (date in the past).The instruction is sent as already matched with the CSD  
30 hold reason set to CSDH.

31 In this example, T2S sends an accepted status advice as response to the instructed Settlement Instruction  
32 indicating the time at what the Settlement Instruction was accepted in T2S. The status advice also informs  
33 the accepted, matched and failing status and the references of the counterparty's instruction (T2S reference  
34 and the Account owner reference) and T2S Matching reference (Supplementary Data) in the same status  
35 advice to inform that the Settlement Instruction has been accepted and put on hold at its acceptance.

36 The receiving leg of the transaction will receive a status advice informing the accepted, matched and failing  
37 status in the same status advice. Subsequently, T2S sends a status advice to inform that the counterparty  
38 instruction is on hold.

39 Message usage: Party Hold

1 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
2 put on Party Hold. A Settlement Instruction is put on Party Hold if its Party Hold status is set to "Yes" by a  
3 CSD or a directly connected T2S party through the sending of a Hold instruction.

4 Specific message requirements

5 To inform about a Party Hold, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the following  
6 information:

- 7 | Unmatched – status indicating that the instruction is not matched;
- 8 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;
- 9 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
10 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
11 tively;
- 12 | Code – "PREA" ISO Code that indicates that the instruction is on Hold;
- 13 | HoldIndicator – set to "True";
- 14 | HoldIndicator/Code – "PTYH" ISO code specifying that the Hold type is Party Hold.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

16 Message usage example: [sese.024.001.10\\_T2S\\_PendingPartyHold\\_Example.xml](#)

1 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
 2 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
 3 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015 (date in the future).  
 4 The instruction is unmatched. In this example, T2S sends an unmatched and a pending status advice to  
 5 inform Participant A that its Settlement Instruction has been put on hold.

6 Message usage: CSD Hold

7 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
 8 put on CSD Hold. A Settlement Instruction is put on CSD Hold if its CSD Hold status is set to "Yes" by a CSD.

9 Specific message requirements

10 To inform about a CSD Hold, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the following  
 11 information:

- 12 | Unmatched – status indicating that the instruction is not matched;
- 13 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;
- 14 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
 15 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
 16 tively;
- 17 | Code – "CSDH" ISO Code that indicates that the instruction is on CSD Hold;
- 18 | HoldIndicator – set to "True";
- 19 | HoldIndicator/Code – A "CSDH" ISO reason code, specifying that the Hold type is CSD Hold.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

1 Message usage example: sese.024.001.10 T2S FailingCSDHold Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000 Euros for settlement on the 3/1/2013(date in the past). T2S  
5 checks whether the Settlement Instruction fulfils any rule set by a CSD. Secondly, CSD A (CSDABIC1XXX)  
6 holds the instruction by putting the CSD Hold indicator of the Hold/Release Instruction to "Yes". The instruc-  
7 tion is matched.

8 In response, T2S sends a failing status advice to inform CSD A that its Settlement Instruction has been put  
9 on hold. The status advice informs the references of the counterparty's instruction (T2S reference and the  
10 Account owner reference) and the T2S Matching Reference (Supplementary Data) on the same message.

11 Message usage: Accepted with CSD Validation Hold

12 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
13 put on CSD Validation Hold at its acceptance in T2S. A Settlement Instruction is put on CSD Validation Hold  
14 if it fulfils any rule of a positive CSD Validation Hold restriction previously set by the CSD in T2S.

15 The SecuritiesSettlementTransactionStatusAdviceV03 informs the Accepted status and the Pending or Failing  
16 status (due to the CSD Validation Hold) in the same message. Additionally, if the Settlement Instruction has  
17 been sent with the Party or CSD Hold status set to "Yes" or the Settlement Instruction was submitted with-  
18 out Hold Indicator being informed and the securities account stated in the instruction has the Hold Release  
19 Default set to "Yes", T2S also informs of the different hold types that apply to the Settlement Instruction.

20 Specific message requirements

21 To inform about an Accepted with CSD Validation Hold status, the *SecuritiesSettlementTransactionStatusAd-*  
22 *viceV10* includes the following information:

- 23 | AcknowledgedAccepted – status that corresponds to 'Accepted';

- 1 | Code – ‘OTHR’ ISO code when the Settlement Instruction is accepted fulfilling a rule of a negative rejection restriction;
- 2 |
- 3 | AdditionalReasonInformation – rule ID identifying a negative rejection restriction fulfilled;
- 4 | NoSpecifiedReason – ‘NORE’ ISO code when the Settlement Instruction is accepted not fulfilling any rule of a negative rejection restriction;
- 5 |
- 6 | MarketInfrastructureTransactionIdentification – T2S identification of the accepted Settlement Instruction.
- 7 | Unmatched – status indicating that the instruction is not matched;
- 8 | NoSpecifiedReason – ‘NORE’ ISO code when the Settlement Instruction accepted is unmatched;
- 9 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruction can settle on its ISD or not, the instruction is informed either with status Pending or Failing respectively;
- 10 |
- 11 |
- 12 | Code – ISO Code that indicates that the instruction is on CSD Validation Hold (“CVAL”). Additionally the message includes the ISO code “CSDH” for CSD Hold or/and “PREA” for Party Hold if applicable;
- 13 |
- 14 | AdditionalReasonInformation – text comprising a combination of the relevant Business Rule name and the rule ID of a positive CSD Validation Hold restriction fulfilled;
- 15 |
- 16 | HoldIndicator – set to “True”;
- 17 | HoldIndicator/Code – ISO Code that indicates that the instruction is on CSD Validation Hold (“CVAL”). Additionally the message includes the ISO code “CSDH” for CSD Hold or/and PTYH for Party Hold if applicable.
- 18 |
- 19 |
- 20 | AdditionalInformation – Rule Id of a positive CSD Validation Hold restriction fulfilled (“CVAL”).
- 21 | AcknowledgedStatusTimeStamp – Time stamp on when the Settlement Instruction is accepted;
- 22 | MatchedStatusTimeStamp – In case the Settlement Instruction is sent Already Matched, time stamp on when the Settlement Instruction is matched;
- 23 |
- 24 | ReceivingSettlementParties – In case the Settlement Instruction is sent Already Matched, the Account Owner reference and T2S reference of the counterparty if the securities movement type is DELI.
- 25 |
- 26 | DeliveringSettlementParties – In case the Settlement Instruction is sent Already Matched, the Account Owner reference and T2S reference of the counterparty if the securities movement type is RECE

1 [Message usage example: sese.024.001.10 T2S AcceptedPendingwithCSDValidationHold Example.xml](#)

1 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed the  
2 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
3 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015(date in the future).  
4 The instruction is sent as unmatched. In this case, the instruction fulfils a negative rejection restriction rule  
5 and a CSD Validation Hold rule.

6 In response, T2S sends an accepted, unmatched and a pending status in the same status advice to inform  
7 Participant A that its Settlement Instruction has been accepted with a negative restriction rule and has been  
8 put on CSD Validation Hold at its acceptance. The message informs the time at which the Settlement In-  
9 struction was accepted in T2S and the relevant rule ID that has been fulfilled.

10 Message usage: CSD Validation Hold

11 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
12 put on CSD Validation Hold during its lifecycle in T2S. A Settlement Instruction is put on CSD Validation Hold  
13 if it fulfils any rule of a positive CSD Validation Hold restriction previously set by the CSD in T2S.

14 The SecuritiesSettlementTransactionStatusAdviceV03 informs the Pending or Failing status (due to the CSD  
15 Validation Hold) in the same message.

16 Specific message requirements

17 To inform about a CSD Validation Hold, the *SecuritiesSettlementTransactionStatusAdviceV10* should have:

- 18 | Unmatched status indicating that the instruction is not matched;
- 19 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;
- 20 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
21 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
22 tively;
- 23 | Code – ISO Code that indicates that the instruction is on CSD Validation Hold ("CVAL").
- 24 | AdditionalReasonInformation – text comprising a combination of the relevant Business Rule name and  
25 the rule ID of a positive CSD Validation Hold restriction fulfilled;
- 26 | HoldIndicator – set to "True";
- 27 | HoldIndicator/Code – ISO Code that indicates that the instruction is on CSD Validation Hold ("CVAL").  
28 Additionally the message includes the ISO code "CSDH" for CSD Hold.
- 29 | AdditionalInformation – Rule Id of a positive CSD Validation Hold restriction fulfilled ("CVAL").  
30

- 1 Message usage example: sese.024.001.10\_T2S\_FailingCSDValidationHold\_Example.xml
- 2 A CSD Participant A (PRTAFRPPXXX) instructed the delivery of 100000 securities of ISIN000001 from a securities account to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD B (CSDBBIC1XXX) versus a
- 3 payment of 575000, Euros for settlement on the 3/1/2015.
- 4

1 In this example, the Settlement instruction remains unmatched at the end its Intended Settlement Date and  
2 on CSD Validation Hold, and therefore T2S informs that the Settlement Instruction has been identified as  
3 "Failing".

4 Message usage: CoSD Hold

5 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
6 Instruction is put on CoSD Hold. A Settlement Instruction is put on CoSD Hold if it fulfils one or more CoSD  
7 rules. The status advice message provides a list of as many Pending Statuses as CoSD rules have been de-  
8 tected for the instruction.

9 Specific message requirements

10 To inform about a CoSD Hold, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the following  
11 information:

- 12 | For each CoSD rule:
- 13 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
14 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
15 tively;
- 16 | Code – "PRSY" ISO Code that indicates that the instruction is on CoSD Hold;
- 17 | AdditionalReasonInformation – CoSD rule fulfilled;
- 18 | HoldIndicator – set to "True";
- 19 | HoldIndicator Code – "CDEL" ISO reason code, specifying that the Hold type is CoSD Hold;
- 20 | AdditionalInformation – CoSD rule fulfilled;
- 21 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
22 curities movement type is DELI.
- 23 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
24 curities movement type is RECE
- 25 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.

RelatedTransactionIdentification Docu- ment/SctiesSttImTxStsAdvc/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

- 1 Message usage example: sese.024.001.10 T2S PendingCoSDWaitingFromAP Example.xml
- 2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed the
- 3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD
- 4 B (CSDBBIC1XXX) versus a payment of 575000 Euros for settlement on the 3/1/2015 (date in the future).
- 5 On the Intended Settlement Date before its corresponding cut-off, T2S detects that the Settlement Instruc-
- 6 tion fulfils three CoSD rules. Once the booking of securities CoSD blocking is fully settled, T2S sends a pend-
- 7 ing status advice related to the Settlement Instruction on which applied the CoSD rules to inform about the
- 8 readiness of the instruction to be released by the Administering Party providing the references of the coun-
- 9 terparty's instruction (T2S reference and the Account owner reference) and the corresponding T2S Matching
- 10 Reference (Supplementary Data).
- 11 Message usage: Counterparty's Settlement Instruction on Hold

1 This message usage relates to the usage of a status advice message, sent by T2S, when the Counterparty's  
2 Settlement Instruction is on Hold. The following message usage informs to a Counterparty in T2S that its  
3 Counterparty's Settlement Instruction is on Hold.

#### 4 Specific message requirements

5 To inform about the Counterparty's Settlement Instruction on Hold, the *SecuritiesSettlementTransactionSta-*  
6 *tusAdviceV10* includes the following information:

- 7 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
8 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
9 tively;
- 10 | Code – "PRCY" ISO Code that indicates that the Counterparty's Settlement Instruction is on Hold;
- 11 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
12 curities movement type is DELI.
- 13 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
14 curities movement type is RECE
- 15 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.  
16

RelatedTransactionIdentification Document/SctiesSttImTxStsAdv/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example: sese.024.001.10 T2S PendingCounterpartyOnHold Example.xml

2 Firstly CSD A (CSDAFRPPXXX) requests the holding of its CSD Participant A's instruction (with T2S reference  
3 'T1290') setting the CSD Hold indicator to 'true'. In this example T2S informs CSD Participant A's counterparty  
4 (CSDPBBICXXX) that its Settlement Instruction 'T1490' (not on hold) is pending because its Counterparty's  
5 Settlement Instruction is on Hold providing the references of the counterparty's instruction (T2S refer-

1 ence and the Account owner reference) and the corresponding T2S Matching Reference (Supplementary  
2 Data).

3 Message usage: No Hold remain(s)

4 This message usage relates to the usage of a status advice message, sent by T2S, when the Settlement  
5 Instruction is totally released and no other Hold remains.

6 Specific message requirements

7 To inform about a No Hold Remain, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the follow-  
8 ing information:

- 9 | Unmatched – status indicating that the instruction is not matched;
- 10 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;
- 11 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
12 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
13 tively;
- 14 | Code – "FUTU" ISO Code for Pending and 'CYCL' ISO code for Failing, which indicates that the instruc-  
15 tion is no longer on Hold.
- 16 | Additional information – text comprising a combination of the business rule and a short description to  
17 inform that the last hold of a transaction was released. Only informed if the instruction is matched.  
18

AdditionalReasonInformation Docu- ment/SctiesSttlmTxStsAdvC/SttlmSts/Pdg/Rsn/ AddtlRsnInf	RestrictedFINXMax210Text	Business rule and error description.  Only present if the settlement instruction is matched and no other hold remains neither on the instruction released nor on its counterparty.
AdditionalReasonInformation Docu- ment/SctiesSttlmTxStsAdvC/SttlmSts/Fng/Rsn/ AddtlRsnInf	RestrictedFINXMax210Text	Business rule and error description.  Only present if the settlement instruction is matched and no other hold remains neither on the instruction released nor on its counterparty.

1 Message usage example: sese.024.001.10\_T2S PendingUnmatchedNoHoldRemains\_Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) requested the release of its instruction 'T1290' setting remaining  
3 Hold indicator to 'false'. The instruction is unmatched. In this example T2S informs that the Settlement In-  
4 struction is totally released and no other hold remains.

5 Message usage example 2: sese.024.001.10\_T2S FailingUnmatchedNoHoldRemains\_Example.xml

6 A CSD Participant A (PRTAFRPPXXX) instructed the release of its instruction 'T1290' setting remaining Hold  
7 indicator to 'false' on its Intended Settlement Date. T2S informs that the Settlement instruction is totally  
8 released and no other hold remains.

9 In this example, the Settlement instruction remains unmatched at the end its Intended Settlement Date, and  
10 therefore T2S informs that the Settlement Instruction has been identified as "Failing".

11 Message usage example 3: sese.024.001.10\_T2S Pending MatchedNoHoldRemains\_Example.xml

12 A CSD Participant A (PRTAFRPPXXX) requested the release of its instruction 'T1290' setting remaining Hold  
13 indicator to 'false'. The instruction is matched. In this example T2S informs that the Settlement Instruction is  
14 totally released and that no other hold remains neither on the Settlement instruction released nor on its  
15 counterparty.

16 Message usage example 4: sese.024.001.10\_T2S Failing MatchedNoHoldRemains\_Example.xml

1 A CSD Participant A (PRTAFRPPXXX) instructed the release of its instruction 'T1290' setting remaining Hold  
2 indicator to 'false'. In this example, the Settlement instruction is matched and failed to settle at the end of  
3 its Intended Settlement Date. T2S informs that the Settlement Instruction has been released and that no  
4 other hold remains neither on the Settlement instruction released nor on its counterparty.

5 Message usage: Other Hold remain(s)

6 This message usage relates to the usage of a status advice message, sent by T2S, when one of the holds on  
7 the Settlement Instruction is released but other(s) Hold type remain(s). This status advice contains a list of  
8 pending/failing statuses for the holds to be released.

9 Specific message requirements

10 To inform about an Other Hold remains(s), the *SecuritiesSettlementTransactionStatusAdviceV10* includes the  
11 following information:

- 12 | Unmatched – status indicating that the instruction is not matched;
- 13 | NoSpecifiedReason – 'NORE' ISO code when the Settlement Instruction accepted is unmatched;
- 14 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
15 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
16 tively;
- 17 | Code – ISO code corresponding to the remaining Hold type.
- 18 | AdditionalReasonInformation – Rule ID of a rule of a positive restriction for a "CSD Validation Hold" or  
19 CoSD rule fulfilled for a "CoSD Hold".
- 20 | HoldIndicator – set to "True";
- 21 | HoldIndicator Code - ISO code indicating the relevant Hold type remaining.
- 22 | AdditionalInformation – text comprising a combination of a short description of the error and the CSD  
23 Validation Hold rule fulfilled for a "CVAL" ISO Code or CoSD rule for a "CDEL" ISO Code.  
24

1 Message usage example: sese.024.001.10 T2S PendingOtherHoldRemain Example.xml

2 Originally CSD Participant A's instruction with T2S reference 'T1290' was on Hold with two different types of  
3 holds: Party hold and CSD Hold. Then CSD 'CSDBBIC1XXX' sent a Release Instruction for releasing the CSD  
4 Hold. The instruction is matched. In this example, T2S informs CSD Participant A' that its Settlement Instruc-  
5 tion is still on Hold because of a Party Hold on its instruction remains. The status advice informs the refer-  
6 ences of the counterparty's instruction (T2S reference and the Account owner reference) and the T2S  
7 Matching Reference (Supplementary Data) on the same message.

8 Message usage: CoSD Rule Release, Other rule(s) remain(s)

9 This message usage relates to the usage of a status advice message, sent by T2S, when an Administering  
10 Party releases its CoSD rule but other rule(s) for that CoSD Settlement Instruction remain(s). This status  
11 advice contains a list of pending statuses for the CoSD rules to be released.

12 Specific message requirements

- 1 To inform about a CoSD Rule Release with other rule(s) remaining, the *SecuritiesSettlementTransactionSta-*  
 2 *tusAdviceV10* includes the following information. For each CoSD rule pending to be released:
- 3 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
 4 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
 5 tively;
  - 6 | Code – “PRSY” ISO Code that indicates that the instruction is on CoSD Hold;
  - 7 | AdditionalReasonInformation – CoSD rule fulfilled;
  - 8 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
 9 curities movement type is DELI.
  - 10 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
 11 curities movement type is RECE
  - 12 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.

RelatedTransactionIdentification Document/SctiesSttImTxStsAdvc/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example: sese.024.001.10 T2S PendingCoSDRuleReleaseOtherRemain Example.xml

2 Firstly the Administering Party A released the CoSD rule named 'rule01'. Initially T2S detected three CoSD  
3 rules ('rule01', 'rule02' and 'rule03') for the Settlement Instruction 'T1290'. After the release of the CoSD rule  
4 'rule01', the Settlement Instruction remains on the pending status because of the CoSD rules 'rule02' and  
5 'rule03'. In this example T2S sends, via a pending status, the list of all CoSD rules to be released providing  
6 the references of the counterparty's instruction (T2S reference and the Account owner reference) and the  
7 corresponding T2S Matching Reference (Supplementary Data).

8 *Message usage: Counterparty's Settlement Instruction is released*

9 This message usage relates to the usage of a status advice message, sent by T2S, when the Counterparty's  
10 Settlement Instruction on Hold is released and no other Hold remains. The following message usage informs  
11 to a Counterparty in T2S that its Counterparty's Settlement Instruction is released for further processing.

12 Specific message requirements

- 1 To inform about the release of a Counterparty’s Settlement Instruction, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the following information:
- 2
- 3 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruction can settle on its ISD or not, the instruction is informed either with status Pending or Failing respectively;
  - 4 | Code – “FUTU” ISO Code for Pending and ‘CYCL’ ISO code for Failing, which indicates that the counterparty’s Settlement Instruction is no longer on Hold;
  - 5 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the securities movement type is DELI.
  - 6 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the securities movement type is RECE
  - 7 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.

RelatedTransactionIdentification Document/SctiesSttImTxStsAdvc/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example: sese.024.001.10 T2S PendingCounterpartyReleased Example.xml

2 Firstly CSD Participant A's counterparty (CSDPBBICXXX) was informed that its Settlement Instruction was  
3 pending because its Counterparty's Settlement Instruction was on Hold.

4 In this example T2S informs CSD Participant A's counterparty (CSDPBBICXXX) that its Counterparty's Settle-  
5 ment Instruction is totally released and no other hold remain providing the references of the counterparty's  
6 instruction (T2S reference and the Account owner reference) and the corresponding T2S Matching Reference  
7 (Supplementary Data).

1 Message usage: Matched

2 This message usage relates to the usage of a status advice message, sent by T2S, when the instruction is  
3 matched by T2S.

4 Specific message requirements

5 To inform about a matched status, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the follow-  
6 ing information:

- 7 | Matched – status that corresponds to 'Matched', with no reason code or additional information;
- 8 | Pending/Failing – status indicating that the instruction is not settled. Depending on whether the instruc-  
9 tion can settle on its ISD or not, the instruction is informed either with status Pending or Failing respec-  
10 tively;
- 11 | Code – ISO Code that indicates that the instruction is either on hold (on Party Hold 'PREA', on CSD Hold  
12 'CSDH' and/or on CSD Validation Hold 'CVAL'), or that no hold exists ('FUTU' for Pending and 'CYCL' for  
13 Failing);
- 14 | AdditionalReasonInformation – in case the Code is CVAL, text comprising the relevant Business Rule  
15 name and the rule ID of a positive CSD Validation Hold restriction fulfilled
- 16 | AcknowledgedStatusTimeStamp – In case the Settlement Instruction is sent Already Matched, time  
17 stamp on when the Settlement Instruction is accepted;
- 18 | MatchedStatusTimeStamp – Time stamp on when the Settlement Instruction is matched;
- 19 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
20 curities movement type is DELI;
- 21 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
22 curities movement type is RECE;
- 23 | Supplementary Data – providing the T2S Matching Reference assigned by T2S to both Settlement In-  
24 structions that have been matched by T2S.

1 [Message usage example: sese.024.001.10 T2S PendingMatched Example.xml](#)

1 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed the  
2 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
3 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015 (date in the future).  
4 In this example, T2S advises to the T2S party, CSD Participant A, that its Settlement Instruction, with T2S  
5 reference 'T1290', has been matched in T2S providing the corresponding T2S Matching Reference (Supple-  
6 mentary Data) and the time at which the Settlement Instruction was matched in T2S. In the same status  
7 advice, the pending status is informed.

8 Message usage example 2: sese.024.001.10 T2S FailingMatched Example.xml Firstly CSD Participant A  
9 (PRTAFRPPXXX) with a securities account '100000222' in T2S has instructed the delivery of 100000 securi-  
10 ties ISIN000011 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD B (CSDBBIC1XXX) versus  
11 a payment of 575000, Euros for settlement on the 3/1/2013 (date in the past). In this example, T2S advises  
12 to the T2S party, CSD Participant A, that its Settlement Instruction, with T2S reference 'T1291', has been  
13 matched in T2S providing the corresponding T2S Matching Reference (Supplementary Data). In the same  
14 status advice, the failing status is informed.

15 Message usage: Cancelled

16 This message usage relates to the usage of a status advice message, sent by T2S, to advise about the can-  
17 cellation of the Settlement Instruction during its processing.

18 Specific message requirements

19 To inform about a cancelled status, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the follow-  
20 ing information:

- 21 | Cancelled – status that corresponds to successfully cancellation of the Settlement Instruction with one  
22 | reason code;
- 23 | Code – ISO code specifying the reason of the cancellation.
- 24 | AdditionalReasonInformation – in case the instruction was cancelled after the revalidation process, text  
25 | comprising a combination of the associated business rule not fulfilled, a short description of the error  
26 | and the rule ID of a positive rejection restriction fulfilled, if any;

2 Message usage example: sese.024.001.10 T2S Cancelled Example.xml

3 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
4 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
5 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. In this example and  
6 after an unsuccessful revalidation, T2S advises to the T2S party, CSD Participant A, that its Settlement In-  
7 struction, with T2S reference 'T1290', has been cancelled.

8 Message usage: Eligibility Failure

9 This message usage relates to the usage of status advice message, sent by T2S, when at least one eligibility  
10 criterion is not fulfilled.

11 Specific message requirements

12 To inform about a pending status due to an eligibility failure, the *SecuritiesSettlementTransactionStatusAd-*  
13 *viceV10* includes the following information:

- 14 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the instruction  
15 can settle on its ISD or not) with one or more reason codes to inform about the eligibility criterion not  
16 fulfilled;
- 17 | Code – ISO code specifying the reason for the eligibility failure;

- 1 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled
- 2 | and a short description of the error;
- 3 | SettlementQuantity – the quantity of financial instrument remaining to be settled;
- 4 | SettlementAmount – the quantity of money remaining to be credited/debited;
- 5 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-
- 6 | curities movement type is DELI;
- 7 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-
- 8 | curities movement type is RECE;
- 9 | Supplementary Data – providing the T2S Matching Reference assigned by T2S to both Settlement In-
- 10 | structions that have been matched by T2S.
- 11

RelatedTransactionIdentification Document/SctiesSttImTxStsAdvc/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example: sese.024.001.10 T2S PendingEligibilityFailure Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. In this example, T2S  
5 advices about the eligibility failure via a pending status (the instruction can still settle on its ISD) because  
6 the Settlement Instruction, with T2S reference 'T1290', has a link AFTE with a Settlement Instruction or  
7 Settlement Restriction for which the cut off is reached. T2S also provides in the status advice the references  
8 of the counterparty's instruction (T2S reference and the Account owner reference) and the corresponding  
9 T2S Matching Reference (Supplementary Data) of the settlement Instruction.

10 Message usage example 2: sese.024.001.10 T2S FailingEligibilityFailure Example.xml

11 Considering the same instruction as in the previous message usage example 1, in this example, T2S advices  
12 about the eligibility failure on the 4/1/2015 (one day after the ISD of the instruction) via a failing status be-  
13 cause the Settlement Instruction, with T2S reference 'T1290', has a link AFTE with an unsettled Settlement  
14 Instruction or Settlement Restriction. T2S also provides in the status advice the references of the counter-

1 party's instruction (T2S reference and the Account owner reference) and the corresponding T2S Matching  
2 Reference (Supplementary Data) of the Settlement Instruction.

3 Message usage: Intraday Restriction

4 This message usage relates to the usage of status advice message, sent by T2S, when at least one intraday  
5 restriction is detected. The following message usage informs about a pending status due an intraday re-  
6 striction detected either

- 7 | On securities;
- 8 | On the involved securities account;
- 9 | On the involved T2S Party of the Settlement Instruction.

10 Specific message requirements

11 To inform about a pending status due to an intraday restriction, the *SecuritiesSettlementTransactionSta-*  
12 *tusAdviceV10* includes the following information:

- 13 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the instruction  
14 can settle on its ISD or not) with one or more reason codes to inform about the intraday restriction de-  
15 tected;
- 16 | Code – ISO code specifying the reason for the intraday restriction;
- 17 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
18 and a short description of the error;
- 19 | Settlement Quantity – the quantity of financial instrument remaining to be settled;
- 20 | SettlementAmount – the quantity of money remaining to be credited/debited;
- 21 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
22 curities movement type is DELI;
- 23 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
24 curities movement type is RECE;
- 25 | Supplementary Data – providing the T2S Matching Reference assigned by T2S to both Settlement In-  
26 structions that have been matched by T2S.

RelatedTransactionIdentification Document/SctiesSttlmTxStsAdvc/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example 1:

2 [sese.024.001.10 T2S PendingProvisionFailureDueToALackOfSecuritiesWithLackOfCash Example1.xml](#)

3 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account "1000000123" in T2S has instructed the  
4 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) with cash  
5 account "2000000456", and its CSD B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on  
6 the 3/1/2015. In this example, T2S informs a failure in the provisioning check via a pending status (the SI  
7 can still settle on is ISD) providing the references of the counterparty's instruction (T2S reference and the  
8 Account owner reference) and the corresponding T2S Matching Reference (Supplementary Data). The T2S  
9 party delivering the securities, CSD Participant A, has insufficient securities to settle the Settlement Instruc-  
10 tion. As the provision check for the securities side is negative, a sese.024 is sent to CSD Participant A with  
11 ISO reason code LACK, and no further provision check is performed on the cash side.

12 Message usage example 2:

13 [sese.024.001.10 T2S PendingProvisionFailureDueToALackOfSecuritiesWithLackOfCash Example2.xml](#)

14 Following Example1, CSD Participant A sends enough securities for the correct settlement of the transaction  
15 to securities account 1000000123. Then, the provision check is executed again. As no lack of securities is  
16 identified, T2S checks now the cash side provision, which has a negative result due to the insufficient exter-

1 nal guarantee headroom on the CMB. A pending sese.024 is sent to CSD Participant A with ISO reason code  
2 CMON (The SI can still settle on its ISD).

3 Note that the "Message usage: Cancellation Requested" is not affected by this CR because according to the  
4 message requirements for this usage, only the Processing Status with Pending Cancellation is provided by  
5 T2S (i.e. neither the Matching Status nor the Settlement Status are provided in the relevant sese.024- Secu-  
6 ritiesSettlementTransactionStatusAdviceV03 for the Cancellation Requested usage).

7 Message usage: Cancellation Requested

8 This message usage relates to the usage of a status advice message, sent by T2S, to advise the T2S Actor  
9 that its counterparty has requested the cancellation of its Settlement Instruction. The message usage in-  
10 forms the T2S Actor in order to perform a bilateral cancellation.

11 Specific message requirements

12 To inform about a pending status due to a cancellation requested, the *SecuritiesSettlementTransactionSta-*  
13 *tusAdviceV10* includes the following information:

- 14 | CancellationRequested – status to indicate that a request from your counterparty is pending waiting for  
15 cancellation request from your side with one reason code or additional reason information;
- 16 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
17 curities movement type is DELI;
- 18 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
19 curities movement type is RECE;
- 20 | Supplementary Data – providing the T2S Matching Reference assigned by T2S to both Settlement In-  
21 structions that have been matched by T2S.  
22

1 Message usage example: sese.024.001.10 T2S CancellationRequested Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. After being the Set-  
5 tlement Instruction matched, CSD Participant B has requested the cancellation of its leg on the Settlement  
6 Instruction. In this example, T2S informs CSD Participant A that its counterparty, CSD Participant B, has  
7 requested the cancellation on its Settlement Instruction providing the references of the counterparty's in-  
8 struction (T2S reference and the Account owner reference) and the corresponding T2S Matching Reference  
9 (Supplementary Data).

1 Message usage: Partial Settlement (unsettled part)

2 This message usage relates to the usage of a status advice message, sent by T2S, when advising about the  
3 unsettled part of a Settlement Instruction that has been partially settled. This message usage informs about  
4 a pending/failing status due to a partial settlement.

5 Specific message requirements

6 To inform about the unsettled part of a partial filling, the *SecuritiesSettlementTransactionStatusAdviceV10*  
7 includes the following information:

- 8 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the instruction  
9 was partially settled on its ISD or not) with one reason code to inform about the partial settlement;
- 10 | Code – 'PART' ISO code indicating the partial settlement of the transaction;
- 11 | SettlementQuantity – the unsettled part of the financial instrument;
- 12 | SettlementAmount – the quantity of money remaining to be credited/debited;
- 13 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
14 curities movement type is DELI
- 15 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
16 curities movement type is RECE
- 17 | Supplementary Data – providing the T2S Matching Reference assigned by T2S to both Settlement In-  
18 structions that have been matched by T2S.

1 Message usage example1: sese.024.001.10 T2S PendingPartialSettlement Example.xml

2 T2S PartialSettlement Example.xml

3 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
4 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
5 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. On 3/1/2015 (ISD of  
6 the instruction) during the settlement process the Settlement Instruction is partially settled due to a lack of  
7 securities. In this example T2S informs about the current status of the Settlement Instruction, with T2S ref-  
8 erence 'T1290', and the remaining part to be settled providing the references of the counterparty's instruc-  
9 tion (T2S reference and the Account owner reference) and the corresponding T2S Matching Reference (Sup-  
10 plementary Data). The Settlement Instruction has 40000 securities unsettled with a remaining part of  
11 230000 euros to be credited to its cash account.

12 Message usage example2: sese.024.001.10 T2S FailingPartialSettlement Example.xml

13 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
14 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
15 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015.

16 On 3/1/2015 the instruction was partially settled (example 1). Next business day, during the settlement pro-  
17 cess the Settlement Instruction is again partially settled due to a lack of securities. In this example T2S in-  
18 forms about the failing status of the Settlement Instruction, with T2S reference 'T1290', and the remaining  
19 part to be settled providing the references of the counterparty's instruction (T2S reference and the Account  
20 owner reference) and the corresponding T2S Matching Reference (Supplementary Data). The Settlement  
21 Instruction has 40000 securities unsettled with a remaining part of 230000 euros to be credited to its cash  
22 account.

23 Message usage: Partial Settlement (unsettled part) of a settlement instruction partially released

24 This message usage relates to the usage of a status advice message, sent by T2S, when advising about the  
25 unsettled part of a Settlement Instruction that has been partially settled. This message usage informs about  
26 a pending status due to a partial settlement.

27 Specific message requirements

28 To inform about the unsettled part of a partial filling, the *SecuritiesSettlementTransactionStatusAdviceV10*  
29 includes the following information:

- 30 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the partial re-  
31 lease was partially settled on its ISD or not) with one reason code to inform about the partial settlement;
- 32 | Code – 'PART' ISO code indicating the partial settlement of the transaction;
- 33 | HoldIndicator – set to "True" if the securities movement type of the settlement instruction is 'DELI'.
- 34 | Hold Indicator/Code – 'PTYH' ISO Code that indicates that the instruction is on Party Hold only if the se-  
35 curities movement type of the settlement instruction is 'DELI'.

- 1 | SettlementQuantity – the unsettled part of the financial instrument;
- 2 | SettlementAmount – the quantity of money remaining to be credited/debited;
- 3 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the securities movement type is DELI;
- 4 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the securities movement type is RECE;
- 5 | SettlementInstructionProcessingAdditionalDetails – quantity released and the quantity remaining on hold. Only present if the instruction is under partial release process.
- 6 | Supplementary Data – providing the T2S Matching Reference assigned by T2S to both Settlement Instructions that have been matched by T2S.

- 2

1 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed the  
2 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
3 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instruction is  
4 matched and on party hold. On the Intended Settlement Date, CSD Participant A requests a partial release  
5 of 20000 securities of its instruction 'T1290'. During the settlement process the Settlement Instruction is  
6 partially settled due to a lack of securities. In this example T2S informs Participant A about the current pend-  
7 ing status of the Settlement Instruction, of its instruction with T2S reference 'T1290', informing the remain-  
8 ing part to be settled, the remaining released quantity, the remaining on hold quantity (Settlement Instruc-  
9 tion Processing Additional Details) and providing the references of the counterparty's instruction (T2S refer-  
10 ence and the Account owner reference) and the corresponding T2S Matching Reference (Supplementary  
11 Data). The Settlement Instruction has 5000 securities remaining released, 80000 securities remaining on  
12 hold and 85.000 securities unsettled with a remaining part of 488750 euros to be credited to its cash ac-  
13 count.

14 Message usage example: sese.024.001.10 T2S PartialSettlement of partially released quantity Exam-  
15 ple02.xml

16 Firstly CSD Participant B (CSDPBBICXXX) with a securities account '1000000456' in T2S has instructed the  
17 reception of 100000 securities ISIN000001 from its counterparty CSD Participant A (PRTAFRPPXXX) and its  
18 CSD A (CSDABIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instruction  
19 is matched. On the Intended Settlement Date, CSD Participant A requests a partial release of 20000 securi-  
20 ties of its instruction 'T1290'. During the settlement process, the Settlement Instruction is partially settled  
21 due to a lack of securities. In this example T2S informs Participant B about the current pending status of its  
22 Settlement Instruction, with T2S reference 'T1291', informing the remaining part to be settled, the remaining  
23 released quantity, the remaining on hold quantity (Settlement Instruction Processing Additional Details) and  
24 providing the references of the counterparty's instruction (T2S reference and the Account owner reference)  
25 and the corresponding T2S Matching Reference (Supplementary Data). The Settlement Instruction has 5000  
26 securities remaining released, 80000 securities remaining on hold and 85.000 securities unsettled with a  
27 remaining part of 488750 euros to be debited to its cash account.

28 Message usage: Execution of a partial release

29 This message usage relates to the usage of a status advice message, sent by T2S, when a settlement in-  
30 struction is partially released. A settlement instruction is partially released if a release instruction indicating a  
31 quantity lower than the quantity stated in the referenced Settlement Instruction is executed.

32 Specific message requirements.

33 To inform about the execution of a partial release, the *SecuritiesSettlementTransactionStatusAdviceV10* in-  
34 cludes the following information:

- 35 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the partial re-  
36 lease was executed on its ISD or not) with one reason code to inform about the partial settlement;
- 37 | 'FUTU' ISO code for Pending and 'CYCL' ISO code for Failing, which indicates that the instruction is no  
38 longer on Hold just for the quantity partially released.
- 39 | HoldIndicator – set to "True" if the securities movement type of the settlement instruction is 'DELI'

- 1 | HoldIndicator/Code – ‘PTYH’ ISO Code that indicates that the instruction is on Party Hold only if the se-
- 2 | curities movement type of the settlement instruction is ‘DELI’.
- 3 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-
- 4 | curities movement type is DELI;
- 5 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-
- 6 | curities movement type is RECE;
- 7 | SettlementInstructionProcessingAdditionalDetails – quantity released and the quantity remaining on hold.
- 8 | Only present if the instruction is under partial release process.
- 9

1 Message usage example: sese.024.001. 10 T2S PendingPartialRelease execution Example01.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instruction is  
5 matched and on party hold. On the Intended Settlement Date, CSD Participant A requests a partial release  
6 of 20000 securities of its instruction 'T1290'. T2S sends a pending status advice related to the Settlement  
7 Instruction informing the released quantity and the remaining quantity on hold providing the references of  
8 the counterparty's instruction (T2S reference and the Account owner reference) and the corresponding T2S  
9 Matching Reference (Supplementary Data).

10 Message usage example: sese.024.001.10 T2S PendingPartialRelease execution Example02.xml

11 Firstly CSD Participant B (CSDPBICXXX) with a securities account '1000000456' in T2S has instructed the  
12 reception of 100000 securities ISIN000001 from its counterparty CSD Participant A (PRTAFRPPXXX) and its  
13 CSD A (CSDABIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instruction  
14 is matched. On the Intended Settlement Date, CSD Participant A requests a partial release of 20000 securi-  
15 ties of its instruction 'T1290'. T2S sends a pending status advice to the counterpart Settlement Instruction  
16 with T2S reference 'T1291' informing the released quantity and the remaining quantity on hold providing the  
17 references of the counterparty's instruction (T2S reference and the Account owner reference) and the corre-  
18 sponding T2S Matching Reference (Supplementary Data).

19 Message usage: Settlement of a partial release

20 This message usage relates to the usage of a status advice message, sent by T2S, when a partially released  
21 quantity is fully settled.

22 Specific message requirements

23 To inform about the settlement of a partial release, the *SecuritiesSettlementTransactionStatusAdviceV10*  
24 includes the following information for the delivering side of the transaction:

- 25 | Pending/Failing – status that corresponds to 'Pending' or 'Failing' (depending on whether the partial re-  
26 lease was settled on its ISD or not) with one reason code to inform about the settlement of the partial  
27 release;
- 28 | Code – 'PREA' ISO code that indicates that the instruction is on Party Hold if the securities movement  
29 type of the settlement instruction is 'DELI'. 'PRCY' ISO code that indicates that the counterparty is on  
30 hold i if the securities movement type of the settlement instruction is 'RECE'.
- 31 | Additional Information: Business rule, error description informing that the instruction is on hold due to  
32 the settlement of a partially released quantity'

- 1 | SettlementQuantity– Quantity remaining to be settled
- 2 | HoldIndicator – set to “True”
- 3 | HoldIndicator/Code – ‘PTYH’ ISO Code that indicates that the instruction is on Party Hold (“PTYH”) only

3 Firstly CSD Participant A requested a partial release of 20000 securities of its instruction 'T1290'. During the  
4 settlement process the partially released quantity is fully settled. In this example T2S informs Participant A  
5 about the current pending status of the Settlement Instruction, with T2S reference 'T1290', and the remain-

ing part to be settled providing the references of the counterparty’s instruction (T2S reference and the Account owner reference) and the corresponding T2S Matching Reference (Supplementary Data).

Message usage example: [sese.024.001.10 T2S PartialRelease settlement Example02.xml](#)

Firstly CSD Participant A requested a partial release of 20000 securities of its instruction ‘T1290’. During the settlement process the partially released quantity is fully settled. In this example T2S informs Participant B about the current pending status of its settlement instruction with T2S reference ‘T1291’, and the remaining part to be settled providing the references of the counterparty’s instruction (T2S reference and the Account owner reference) and the corresponding T2S Matching Reference (Supplementary Data).

Message usage: [Cancellation of a partial release](#)

This message usage relates to the usage of a status advice message, sent by T2S, when a partial released process is cancelled.

Specific message requirements

To inform about the cancellation of a partial release, the *SecuritiesSettlementTransactionStatusAdviceV10* includes the following information for the delivering side of the transaction:

- | Pending/Failing – status that corresponds to ‘Pending’ or ‘Failing’ (depending on whether the partial release was cancelled on its ISD or not) with one reason code to inform about the settlement of the partial release;
- | Code – ‘PREA’ ISO code that indicates that the instruction is on Party Hold.
- | Additional Information: Business rule, error description informing the reason why the partial release process has been cancelled
- | SettlementQuantity– Quantity remaining to be settled
- | HoldIndicator – set to “True”
- | HoldIndicator/Code – ISO Code that indicates that the instruction is on Party Hold (“PTYH”).
- | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the securities movement type is DELI
- | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the securities movement type is RECE

2 Message usage example: sese.024.001.10 T2S PartialRelease cancellation Example01.xml

3 Firstly CSD Participant A requested a partial release of 20000 securities of its instruction 'T1290'. When the  
4 relevant cut-off is reached the partially released quantity remains unsettled, therefore the partial release  
5 process is automatically cancelled by T2S. In this example T2S informs Participant A about the current pending  
6 status of the Settlement Instruction, with T2S reference 'T1290', informing the remaining part to be set-

1 tled and providing the references of the counterparty's instruction (T2S reference and the Account owner  
2 reference) and the corresponding T2S Matching Reference (Supplementary Data).

3 Message usage example: sese.024.001. 10 T2S PartialRelease cancellation Example02.xml

4 Firstly CSD Participant A requested a partial release of 20000 securities of its instruction 'T1290'. When the  
5 relevant cut-off is reached the partially released quantity remains unsettled, therefore the partial release  
6 process is automatically cancelled by T2S. In this example T2S informs its counterpart (Participant B) about  
7 the current pending status of its Settlement Instruction, with T2S reference 'T1291', and the remaining part  
8 to be settled providing the references of the counterparty's instruction (T2S reference and the Account own-  
9 er reference) and the corresponding T2S Matching Reference (Supplementary Data).

10 3.3.8.6 SecuritiesSettlementTransactionConfirmationV09 (sese.025.001.09)

### 11 **3.3.8.6.1 Overview and scope of the message**

12 This chapter illustrates the *SecuritiesSettlementTransactionConfirmationV09* message.

13 The *SecuritiesSettlementTransactionConfirmationV09* message, also known as a Securities Settlement Con-  
14 firmation, is sent by T2S to inform about the partial or full successful completion of settlement.

15 This message is sent by T2S in the following message usages:

- 16 | Full Settlement;
- 17 | Partial Settlement (settled part);
- 18 | Last Partial Settlement.

19 These message usages are described in the section "The message in business context".

### 20 **3.3.8.6.2 The T2S-specific schema**

#### 21 Outline of the schema

22 The *SecuritiesSettlementTransactionConfirmationV09* is composed of the following message building blocks:

#### 23 **TransactionIdentificationDetails**

24 This building block is mandatory and it provides transaction type and identification information.

#### 25 **Linkages**

26 This building block is optional and non-repetitive. It provides information about an existing link to another  
27 transaction. <sup>535</sup>

---

**1 AdditionalParameters**

2 This building block is optional and non repetitive. It provides information of additional parameters to the  
3 transaction for example, partial settlement information.

**4 TradeDetails**

5 This building block is mandatory and non repetitive. It specifies the details of the trade.

**6 FinancialInstrumentIdentification**

7 This building block is mandatory and non repetitive. It provides the details on a financial instrument.

**8 QuantityAndAccountDetails**

9 This building block is mandatory and non repetitive. It must contain the details related to the account and  
10 quantity involved in the transaction.

**11 SettlementParameters**

12 This building block is mandatory and non repetitive. It provides the parameters which explicitly state the  
13 conditions that must be fulfilled before a particular transaction of a financial instrument can be settled.

**14 DeliveringSettlementParties**

15 This building block is optional and non repetitive. It identifies the chain of delivering settlement parties.

**16 ReceivingSettlementParties**

17 This building block is optional and non repetitive. It identifies the chain of receiving settlement parties.

**18 CashParties**

19 This building block is optional and non repetitive. It identifies the cash parties involved in the transaction if  
20 different from the securities settlement parties.

**21 SettledAmount**

22 This building block is optional and non repetitive. It provides details on the total amount effectively settled  
23 and credited to/debited from the account owner's cash account. It may differ from the instructed settlement  
24 amount based on tolerance level.

**25 Supplementary Data**

---

535 This block will be present only for link INFO. If the instruction was sent as Already Matched and more than one link INFO were informed:

1. If the Already Matched instruction was instructed as a 'DELI', the first link 'INFO' will be assigned to the 'DELI' leg of the transaction and the second to the counterparty (i.e. RECE leg).
2. If the Already Matched instruction was instructed as a 'RECE', the first link "INFO" will be assigned to the "RECE" leg of the transaction and the second to the counterparty (i.e. DELI leg).

As this is a non-repetitive block, when reporting the INFO links of a settlement instruction only one Link will be reported and the type of reference to be informed in the linkage block will be the existing T2S reference of the linked instruction. If the reference provided in the settlement instruction to set the link INFO is a T2S Actor Reference, the following scenarios may occur when reporting the Market Infrastructure reference associated to a T2S Actor Instruction Reference:

- | The Market Infrastructure reference does not exist. In this case, the acceptance sese.025 will not populate the INFO linkage block.
- | One Market Infrastructure reference exists for the T2S Actor Instruction Reference informed. In this case, this Market Infrastructure reference will be populated in the acceptance sese.025.
- | There are more than one Market Infrastructure references associated to the T2S Actor Instruction Reference. In this case, as the number of references that can be populated in the linkage sequence of the sese.025 is limited to one, the sese.025 will report the lower MITI reference in the linkage sequence.

1 This building block is optional and repetitive. It allows to provide, in the form of a schema, additional infor-  
2 mation that cannot be captured in the structured elements and/or any other specific block.

3 References/Links

4 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
5 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
6 under the following link.

7 <http://www.swift.com/mystandards/T2S/sese.025.001.09> T2S

8 Business rules applicable to the schema

9 Not applicable (T2S outgoing message).

10 **3.3.8.6.3 The message in business context**

11 Message usage: Full Settlement

12 This message usage relates to the usage of a confirmation message, sent by T2S, when the Settlement In-  
13 struction is fully settled in one time.

14 Specific message requirements

15 To confirm a fully settled Settlement Instruction, the *SecuritiesSettlementTransactionConfirmationV09* in-  
16 cludes the following information:

- 17 | SettledQuantity - quantity of financial instrument effectively settled with no remaining quantity to be set-  
18 tled;
- 19 | SecuritiesSubBalanceType – the type of securities balance actually used for the settlement of the Settle-  
20 ment instruction;
- 21 | CashSubBalanceType – the type of cash balance actually used for the settlement of the Settlement in-  
22 struction;
- 23 | SettledAmount – effectively settled amount of money;
- 24 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.
- 25 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
26 curities movement type is DELI
- 27 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
28 curities movement type is RECE

RelatedTransactionIdentification Document/SctiesSttlmTxConf/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example 1: sese.025.001.09 T2S FullSettlement Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account "100000123" in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. In this example, T2S  
5 confirms the settlement of 100000 units of securities 'ISIN00000001' and the crediting of 575000 euros to its  
6 cash account '9000000123' providing the references of the counterparty's instruction (T2S reference and the  
7 Account owner reference) and the corresponding T2S Matching Reference (Supplementary Data).

8 Message usage example 2: sese.025.001.09 T2S FullSettlement SAC earmarked at account level Exam-  
9 ple.xml

10 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account "100000124" in T2S has instructed the  
11 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD

1 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. As the CSD Parti-  
2 pant A did not refer to any Securities SubBalance type in the Settlement Instruction in order to deliver the  
3 securities from that balance and as the securities account "1000000124" is earmarked at account level, the  
4 default position to be impacted will be "EEUR". In this example, T2S confirms the settlement of 100000 units  
5 of securities 'ISIN00000001' from the Securities SubBalance type "EEUR" and the crediting of 575000 euros  
6 to its cash account '9000000123' providing the references of the counterparty's instruction (T2S reference  
7 and the Account owner reference) and the corresponding T2S Matching Reference (Supplementary Data).

8 *Message usage: Partial Settlement (settled part)*

9 This message usage relates to the usage of a confirmation message, sent by T2S, when a Settlement In-  
10 struction is partially settled and there is still a remaining part. This message usage confirms the settled part  
11 of the Settlement Instruction and which still has a remaining part to be settled.

12 Specific message requirements

13 To confirm a partial settlement of a Settlement Instruction, the *SecuritiesSettlementTransactionConfirma-*  
14 *tionV09* includes the following information:

- 15 | PartialSettlement – 'PAIN' ISO code specifying that there is a part of the Settlement Instruction that re-  
16 mains unsettled;
- 17 | SettledQuantity – quantity of financial instrument effectively settled;
- 18 | PreviouslySettledQuantity – quantity of financial instrument settled in all the previous partial settle-  
19 ment(s), if any;
- 20 | RemainingToBeSettledQuantity – quantity remaining to be settled;
- 21 | PreviouslySettledAmount – quantity of money previously settled in all the previous partial settlement(s), if  
22 any;
- 23 | RemainingToBeSettledAmount – amount of money remaining to be settled;
- 24 | PartialSettlementIndicator - specifies whether partial settlement is allowed and/or the threshold type;
- 25 | SecuritiesSubBalanceType – the type of securities balance actually used for the settlement of the Settle-  
26 ment instruction;
- 27 | CashSubBalanceType – the type of cash balance actually used for the settlement of the Settlement in-  
28 struction;
- 29 | Amount – amount of money effectively settled;
- 30 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
31 curities movement type is DELI
- 32 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-  
33 curities movement type is RECE
- 34 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.

1 Message usage example: sese.025.001. 09 T2S PartialSettlement Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123 in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. In this example, T2S  
5 confirms the first settlement part of 60000 securities with ISIN 'ISIN00000001' and the crediting of 345000  
6 Euros to its cash account '9000000123" providing the references of the counterparty's instruction (T2S ref-  
7 erence and the Account owner reference) and the corresponding T2S Matching Reference (Supplementary  
8 Data). As the Settlement Instruction is partially settled, there is still a remaining part of 40000 securities to  
9 be settled.

10 Message usage: Last Partial Settlement

11 This message usage relates to the usage of a confirmation message, sent by T2S, when a Settlement In-  
12 struction was partially settled. This message usage confirms the last settled part of a Settlement Instruction.

13 Specific message requirements

14 To confirm a last partial settlement of a Settlement Instruction, the *SecuritiesSettlementTransactionConfir-*  
15 *mationV09* includes the following information:

- 1 | PartialSettlement – ‘PARC’ ISO code to confirm the settlement of the remaining part of the Settlement
- 2 | Instruction that was previously partially confirmed;
- 3 | SettledQuantity – quantity of financial instrument effectively settled with no remaining quantity to be
- 4 | settled;
- 5 | PreviouslySettledQuantity –quantity of financial instrument settled in all the previous partial settle-
- 6 | ment(s);
- 7 | PreviouslySettledAmount –quantity of money settled in all the previous partial settlement(s) with no re-
- 8 | maining amount to be settled;
- 9 | PartialSettlementIndicator - specifies whether partial settlement is allowed and/or the threshold type;
- 10 | SecuritiesSubBalanceType – the type of securities balance actually used for the settlement of the Settle-
- 11 | ment instruction;
- 12 | CashSubBalanceType – the type of cash balance actually used for the settlement of the Settlement in-
- 13 | struction;
- 14 | Amount – amount of money effectively settled;
- 15 | ReceivingSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-
- 16 | curities movement type is DELI
- 17 | DeliveringSettlementParties – Account Owner reference and T2S reference of the counterparty if the se-
- 18 | curities movement type is RECE
- 19 | Supplementary Data – the T2S Matching Reference assigned by T2S to both Settlement Instructions.

RelatedTransactionIdentification Document/SctiesSttlmTxConf/SplmtryData/Envlp/RltdTxId	SupplementaryData1	T2S Matching Reference assigned by T2S to both Settlement Instructions

1 Message usage example: sese.025.001. 09 T2S LastPartialSettlement Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. In this example, T2S  
5 confirms the last settlement part of 40000 securities with ISIN 'ISIN00000001' and the crediting of 230000  
6 Euros to its cash account '9000000123" providing the counterparty's instruction (T2S reference and the Ac-  
7 count owner reference) and the corresponding T2S Matching Reference (Supplementary Data). That trans-  
8 action was partially settled in a previous settlement with the 'MSG245' reference.

### 1 3.3.8.7 SecuritiesTransactionCancellationRequestStatusAdviceV05 (sese.027.001.05)

#### 2 **3.3.8.7.1 Overview and scope of the message**

3 This chapter illustrates the *SecuritiesTransactionCancellationRequestStatusAdviceV05* message. The *Securi-*  
4 *tiesTransactionCancellationRequestStatusAdviceV05* message, also known as Cancellation Status Advice, is  
5 sent by T2S to a CSD or any party authorised by them to inform about the actual status of a Cancellation  
6 Instruction which has been previously sent to T2S.

7 The Cancellation Status Advice refers to the original Cancellation Instruction [sese.020.001.05](#) [▶ 1626] and  
8 informs about the actual status of the Cancellation. When the Cancellation Instruction is invalid, the Cancel-  
9 lation Status Advice also specifies the reason why it could not be processed.

10 This message is sent by T2S in the following message usages:

- 11 | Rejected;
- 12 | Accepted;
- 13 | Denied;
- 14 | Cancellation pending from Administering Party;
- 15 | Pending Cancellation, awaiting confirmation from the Counterparty;
- 16 | Executed.

17 These message usages are described in the section "The message in business context".

#### 18 **3.3.8.7.2 The T2S-specific schema**

##### 19 Outline of the schema

20 The *SecuritiesTransactionCancellationRequestStatusAdviceV05* is composed of the following message build-  
21 ing blocks:

##### 22 **CancellationRequestReference**

23 This building block is mandatory and non repetitive. It contains the reference to the unambiguous identifica-  
24 tion of the cancellation request as known by the account owner.

##### 25 **TransactionIdentification**

26 This block is optional and it provides the unambiguous identification of the transaction as known by the ac-  
27 count servicer.

##### 28 **ProcessingStatus**

29 This block is mandatory and non repetitive. It provides the status details on the processing status of the  
30 request, for example, if the cancellation is pending or completed or rejected or acknowledged of an instruc-  
31 tion.

##### 32 **TransactionDetails**

33 This block is optional and it identifies the details of the transaction.

##### 34 References/Links

1 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
2 vided outside of this document under the following link:

3 <http://www.swift.com/mystandards/T2S/sese.027.001.05> T2S

4 *Business rules applicable to the schema*

5 Not applicable (T2S outgoing message).

### 6 **3.3.8.7.3 The message in business context**

7 *Message usage: Rejected*

8 This message usage relates to the usage of a status advice message, sent by T2S, when the cancellation is  
9 rejected. A Cancellation Instruction is rejected if it does not pass one or more business validations.

#### 10 Specific message requirements

11 To inform about a rejection status, the *SecuritiesTransactionCancellationRequestStatusAdviceV05* includes  
12 the following information:

- 13 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons of the  
14 rejection;
- 15 | Code – ISO code specifying the reason of the rejection;
- 16 | AdditionalReasonInformation – text comprising a combination of the associated business rule not passed  
17 and a short description of the error.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION

19 Message usage example: sese.027.001.05 T2S Rejected Example.xml

20 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
21 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
22 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instructed Set-

1 tlement Instruction is known by the CSD Participant A with the reference 'REFABCD'. This instruction is also  
2 known by T2S with the T2S reference 'T1290'.

3 Secondly, CSD Participant A (PRTAFRPPXXX) sent a Cancellation Instruction, with identification 'MSG300', to  
4 cancel its Settlement Instruction being identified with the reference 'REFABCDE'.

5 In this example, T2S sends a rejection status advice as response to the cancellation request sent by the CSD  
6 Participant A. The cancellation request is rejected since the reference given for the Settlement Instruction is  
7 unknown for T2S.

#### 8 Message usage: Accepted

9 This message usage relates to the usage of a status advice message, sent by T2S, when the Cancellation  
10 Instruction is valid. A Cancellation Instruction is valid and accepted by T2S if it passes all business valida-  
11 tions.

#### 12 Specific message requirements

13 To inform about an accepted status, the *SecuritiesTransactionCancellationRequestStatusAdviceV05* includes  
14 the following information:

- 15 | AcknowledgedAccepted – status that corresponds to 'Accepted' with no reason code;
- 16 | NoSpecifiedReason – 'NORE' ISO code specifying that there is no reason available.

17

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
NoSpecifiedReason Docu- ment/SctiesTxCxlReqStsAdvC/PrcgSts/AckdAcc ptd/NoSpfcdRsn	NoReasonCode	The only possible value is NORE

#### 18 Message usage example: sese.027.001.05 T2S Accepted Example.xml

19 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
20 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
21 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instructed Set-  
22 tlement Instruction is known by the CSD Participant A with the reference 'REFABCD'. This instruction is also  
23 known by T2S with the T2S reference 'T1290'.

24 Secondly, CSD Participant A (PRTAFRPPXXX) sent a Cancellation Instruction, with identification 'MSG300', to  
25 cancel its Settlement Instruction being identified with the reference 'REFABCD'. In the cancellation request,  
26 CSD Participant A also specified the T2S Reference, 'T1290', of the Settlement Instruction to cancel.

27 In this example T2S sends an accepted status as response to the cancellation request sent by the T2S party,  
28 CSD Participant A.

#### 29 Message usage: Denied

30 This message usage relates to the usage of a status advice message, sent by T2S, when the cancellation  
31 requested cannot be executed.

#### 32 Specific message requirements

1 To inform about a denied status, the *SecuritiesTransactionCancellationRequestStatusAdviceV05* includes the  
2 following information:

- 3 | Denied – status that corresponds to 'Denied' with one reason code listing the reason of the denial;
- 4 | Code – ISO code specifying the reason of the denial;
- 5 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled  
6 and a short description of the error.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/SctiesTxCxlReqStsAdvc/PrcgSts/Dnd/Rsn /Cd/Cd	DeniedReason6Code	ISO reason code for the denial. The only possible values are: <ul style="list-style-type: none"><li>  DCAN</li><li>  DSET</li><li>  OTHR</li></ul>

8 Message usage example: sese.027.001.05\_T2S\_Denied\_Example.xml

9 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123 in T2S has instructed the  
10 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
11 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instructed Set-  
12 tlement Instruction is known by the CSD Participant A with the reference 'REFABCD'. This instruction is also  
13 known by T2S with the T2S reference 'T1290'.

14 Secondly, CSD Participant A (PRTAFRPPXXX) sent a Cancellation Instruction, with identification 'MSG300', to  
15 cancel its Settlement Instruction being identified with the reference 'REFABCD'. In the cancellation request,  
16 CSD Participant A also specified the T2S Reference, 'T1290', of the Settlement Instruction to cancel.

17 In this example T2S sends a denied status related to the cancellation request sent by the T2S party, CSD  
18 Participant A. T2S denies the cancellation of the referred Settlement Instruction because it is already settled.

19 Message usage: Cancellation pending from Administering Party

20 This message usage relates to the usage of a status advice message, sent by T2S, to inform the T2S Actor  
21 (CoSD Administering Party) that the CoSD Cancellation is still pending because at least one CoSD Adminis-  
22 tering Party for that Settlement Instruction has not sent yet its CoSD Cancellation Instruction.

23 Specific message requirements

24 To inform about a Cancellation pending from Administering Party to the Administering Party, *Securi-*  
25 *tiesTransactionCancellationRequestStatusAdviceV05* includes the following information:

- 26 | PendingCancellation – status that corresponds to 'Pending' with one reason code;

- 1 | Code – 'CDAC' ISO Code that corresponds to 'Awaiting cancellation of one of the party'. No additional  
2 | reason information is needed in such a case.  
3

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/SctiesTxCxlReqStsAdv/PrcgSts/PdgCxl/ Rsn/Cd/Cd	PendingReason9Code	The only possible value is CDAC

4 Message usage example: sese.027.001.05 T2S CancellationWaitingfromAP Example.xml

5 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '100000123' in T2S has instructed the  
6 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBICXXX) and its CSD  
7 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instructed Set-  
8 tlement Instruction is known by the CSD Participant A with the reference 'REFABCD'. This instruction is also  
9 known by T2S with the T2S reference 'T1290'. On the Intended Settlement Date, this instruction was identi-  
10 fied by T2S as CoSD.

11 Secondly, CSD Participant A (PRTAFRPPXXX) sent a CoSD Cancellation Instruction, with identification  
12 'MSG307', to cancel its Settlement Instruction being identified with the reference 'REFABCD'. In the CoSD  
13 Cancellation request, CSD Participant A also specified the T2S Reference, 'T1290', of the Settlement Instruc-  
14 tion to cancel.

15 In this example T2S sends a pending status to CSD Participant A because at least one T2S Actor (CoSD Ad-  
16 ministering Party) has not sent yet its CoSD Cancellation Instruction; so the CoSD Cancellation cannot be  
17 executed.

18 Message usage: Pending Cancellation, awaiting confirmation from the Counterparty

19 This message usage relates to the usage of a status advice message, sent by T2S, when the counterparty's  
20 Cancellation Instruction has not been received in T2S. T2S sends a pending status to the T2S Actor who  
21 instructed the Cancellation Instruction to inform that the cancellation request is pending until its counterpar-  
22 ty sends the corresponding Cancellation Instruction.

23 Specific message requirements

24 To inform about a pending cancellation, awaiting confirmation from the Counterparty, the *SecuritiesTransac-*  
25 *tionCancellationRequestStatusAdviceV05* includes the following information:

- 26 | PendingCancellation – status that corresponds to 'Pending' with one reason code;  
27 | Code – 'CONF' ISO code that corresponds to 'Awaiting confirmation from the counterparty'. No additional  
28 | reason information is needed in such a case.  
29

MESSAGE ITEM	DATA TYPE/CODE	UTILISATION
Rsn/Cd/Cd		

1 Message usage example: sese.027.001.05 T2S Waiting Example.xml

2 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
3 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
4 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instructed Set-  
5 tlement Instruction is known by the CSD Participant A with the reference 'REFABCD'. This instruction is also  
6 known by T2S with the T2S reference 'T1290'.

7 Secondly, CSD Participant A (PRTAFRPPXXX) sent a Cancellation Instruction, with identification 'MSG300', to  
8 cancel its Settlement Instruction being identified with the reference 'REFABCD'. In the cancellation request,  
9 CSD Participant A also specified the T2S Reference, 'T1290', of the Settlement Instruction to cancel.

10 In this example T2S sends a pending status related to the cancellation request sent by T2S party, CSD Par-  
11 ticipant A. T2S informs in this status advice that the cancellation request is pending until the reception of the  
12 Counterparty's Cancellation Instruction.

13 Message usage: Executed

14 This message usage relates to the usage of a status advice message, sent by T2S, when the cancellation is  
15 executed.

16 Specific message requirements

17 To inform about the execution of the cancellation, the SecuritiesTransactionCancellationRequestStatusAd-  
18 viceV05 includes the following information:

19 | Cancelled – status that corresponds to successful execution of the cancellation with one reason code;

20 | Code – ISO code specifying the reason of the execution of the cancellation.

21

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/SctiesTxCxlReqStsAdvC/PrcgSts/Canc/Rs n/Cd/Cd	CancelledStatusReason5Code	ISO reason code for the successful execution. The only possible values are:   CANI   OTHR

22 Message usage example: sese.027.001.05 T2S Executed Example.xml

23 Firstly CSD Participant A (PRTAFRPPXXX) with a securities account '1000000123' in T2S has instructed the  
24 delivery of 100000 securities ISIN000001 to its counterparty CSD Participant B (CSDPBBICXXX) and its CSD  
25 B (CSDBBIC1XXX) versus a payment of 575000, Euros for settlement on the 3/1/2015. The instructed Set-  
26 tlement Instruction is known by the CSD Participant A with the reference 'REFABCD'. This instruction is also  
27 known by T2S with the T2S reference 'T1290'.

1 Secondly, CSD Participant A (PRTAFRPPXXX) sent a Cancellation Instruction, with identification 'MSG300', to  
2 cancel its Settlement Instruction being identified with the reference 'REFABCD'. In the cancellation request,  
3 CSD Participant A also specified the T2S Reference, 'T1290', of the Settlement Instruction to cancel.

4 In this example T2S informs about the complete execution of the cancellation request sent by T2S party,  
5 CSD Participant A. T2S has cancelled the Settlement Instruction with T2S reference 'T1290' as requested by  
6 the CSD Participant A.

### 7 3.3.8.8 SecuritiesSettlementTransactionAllegementNotificationV08 (sese.028.001.08)

#### 8 **3.3.8.8.1 Overview and scope of the message**

9 This chapter illustrates the *SecuritiesSettlementTransactionAllegementNotificationV08* message.

10 The *SecuritiesSettlementTransactionAllegementNotificationV08* message, also known as an Allegement, is  
11 sent by T2S to a CSD or any party authorised by them. It is used when an instruction which has been sent  
12 by a counterparty is still (after an unsuccessful matching attempt) waiting for the missing Settlement In-  
13 struction.

#### 14 **3.3.8.8.2 The T2S-specific schema**

##### 15 Outline of the schema

16 The *SecuritiesSettlementTransactionAllegementNotificationV08* is composed of the following message build-  
17 ing blocks:

##### 18 **TransactionIdentification**

19 This block is mandatory and non repetitive. It contains the allegement identification.

##### 20 **SettlementTypeAndAdditionalParameters**

21 This block is mandatory and non repetitive. It provides some additional information regarding the transaction  
22 settlement type and identification.

##### 23 **MarketInfrastructureTransactionIdentification**

24 This building block is optional and non repetitive. It identifies the Settlement Instruction as per T2S.

##### 25 **TradeDetails**

26 This block is mandatory and non repetitive. It provides the details of the trade.

##### 27 **FinancialInstrumentIdentification**

28 This block is mandatory and non repetitive. It provides the details on a financial instrument representing a  
29 sum of rights of the investor vis-à-vis the issuer.

##### 30 **QuantityAndAccountDetails**

31 This building block is mandatory and non repetitive. It specifies the details related to the account and quan-  
32 tity involved in the transaction.

##### 33 **SettlementParameters**

1 This block is mandatory and non repetitive. It provides information of the parameters which explicitly state  
2 the conditions that must be fulfilled before a particular transaction of a financial instrument can be set-  
3 tled. These parameters are defined by the Instructing party in compliance with settlement rules in the market  
4 the transaction settles in.

#### 5 **DeliveringSettlementParties**

6 This block is optional and non repetitive. It identifies the chain of delivering settlement parties.

#### 7 **ReceivingSettlementParties**

8 This block is optional and non repetitive. It identifies the chain of receiving settlement parties.

#### 9 **SettlementAmount**

10 This block is optional and non repetitive. It provides the total amount of money to be paid or received in  
11 exchange for the securities.

#### 12 References/Links

13 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
14 vided outside of this document under the following link:

15 [http://www.swift.com/mystandards/T2S/sese.028.001.08\\_T2S](http://www.swift.com/mystandards/T2S/sese.028.001.08_T2S)

#### 16 Business rules applicable to the schema

17 Not applicable (T2S outgoing message).

### 18 **3.3.8.8.3 The message in business context**

#### 19 Message usage example: sese.028.001.08\_T2S Allegement Example.xml

20 In this example, T2S informs CSD Participant B, CSDPBBICXXX, that CSD Participant A, PRTAFRPPXXX, has  
21 instructed a DVP Settlement Instruction with reference REFABCD, where it appears as counterparty. The  
22 allegement (with T2S reference T1290) contains the relevant information received in the Settlement Instruc-  
23 tion instructed by the T2S Actor, CSD Participant A.

### 24 **3.3.8.9 SecuritiesSettlementAllegementRemovalAdviceV04 (sese.029.001.04)**

#### 25 **3.3.8.9.1 Overview and scope of the message**

26 This chapter illustrates the *SecuritiesSettlementAllegementRemovalAdviceV04* message.

27 The *SecuritiesSettlementAllegementRemovalAdviceV04* message, also known as an Allegement Removal, is  
28 sent by T2S to a CSD or any party authorised by them. It is used to inform that the previously sent al-  
29 legement is no longer valid, because the alleged party has in the meantime sent its instruction.

#### 30 **3.3.8.9.2 The T2S-specific schema**

##### 31 Outline of the schema

32 The *SecuritiesSettlementAllegementRemovalAdviceV04* is composed of the following message building  
33 blocks:

## 1 **AccountServicerTransactionIdentification**

2 This building block is mandatory and non repetitive. It specifies the transaction identification as known by  
3 the Account Servicer.

## 4 **MarketInfrastructureTransactionIdentification**

5 This building block is mandatory and non repetitive. It specifies the allegation identification.

## 6 **AccountOwner**

7 This building block is optional and non repetitive. It identifies the party who owns the account.

## 8 **SafekeepingAccount**

9 This block is mandatory and non repetitive. It provides the account to or from which a securities entry is  
10 made.

## 11 **TransactionDetails**

12 This building block is mandatory and non repetitive. It specifies the details of the transaction.

### 13 References/Links

14 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
15 vided outside of this document under the following link:

16 [http://www.swift.com/mystandards/T2S/sese.029.001.04\\_T2S](http://www.swift.com/mystandards/T2S/sese.029.001.04_T2S)

### 17 Business rules applicable to the schema

18 Not applicable (T2S outgoing message)

## 19 **3.3.8.9.3 The message in business context**

20 Message usage example: sese.029.001.04\_T2S AllegementRemoval Example.xml

21 In this example, T2S informs the previously alleged party, CSD Participant B that the previous Allegement  
22 sent with T2S reference 'T1300' is no longer valid.

## 23 **3.3.8.10 SecuritiesSettlementConditionModificationRequestV08 (sese.030.001.08)**

### 24 **3.3.8.10.1 Overview and scope of the message**

25 This chapter illustrates the *SecuritiesSettlementConditionsModificationRequestV08* message.

26 The *SecuritiesSettlementConditionsModificationRequestV08* message, also known as an Amendment Instruc-  
27 tion or Hold/Release Instruction within T2S, is sent by a CSD or a directly connected T2S party to T2S. The  
28 Amendment Instruction allows the Instructing party to modify a single process indicator on either a Settle-  
29 ment Instruction or Settlement Restriction on securities position. The attributes that can be modified using  
30 this message include the priority, partial settlement indicator, hold indicator and linkages. This message is  
31 used to hold or release securities settlement transaction instructions using the hold indicator.

32 Only one attribute on one existing instruction can be modified by a given modification request.

### 1 **3.3.8.10.2 The T2S-specific schema**

#### 2 Outline of the schema

3 The *SecuritiesSettlementConditionsModificationRequestV08* is composed of the following message building  
4 blocks:

#### 5 **Account Owner**

6 This building block is optional and non repetitive. It identifies the party that owns the account.

#### 7 **Safekeeping Account**

8 This building block is mandatory and non repetitive. It identifies the account to or from which a securities  
9 entry is made.

#### 10 **Request Details**

11 This building block is mandatory and non repetitive. It contains detailed information regarding the modifica-  
12 tion request such as:

- 13 | References of the transaction for which the securities settlement condition modification is requested;
- 14 | Type of linkage requested;
- 15 | Priority of the instruction;
- 16 | Indicator specifying whether partial settlement is allowed;
- 17 | Hold indicator specified for the Instruction
- 18 | Information regarding the linkage requested.

#### 19 **Additional Information**

20 This building block is optional and non repetitive. It contains additional information that cannot be captured  
21 in the structured elements and/or any other specific block such as:

- 22 | The identification of the transaction as known by the account owner;
- 23 | The type of the instrument involved in the transactions on which the modification request should apply;
- 24 | The account to or from which a securities entry is made;
- 25 | The identification of the financial instrument involved in the transactions on which the modification re-  
26 quest should apply;
- 27 | The quantity of financial instrument concerned by the settlement condition modification request. A set-  
28 tlement condition modification request of type release is considered a partial release when this quantity  
29 is lower than the remaining to be settled quantity;
- 30 | The party, either an individual or organisation, whose assets are being invested;
- 31 | The delivering party that, in a settlement chain interacts with the depository;
- 32 | The receiving party that, in a settlement chain interacts with the depository.

1 **3.3.8.10.3 The message in business context**

2 Message example: sese.030.001.08 T2S Partial Settlement Indicator Example.xml

3 In this example a T2S party, BANK 1 (BANKFRPPXXX) having a securities account '1000000123' in T2S has  
4 requested the modification of the partial settlement indicator, to allow partial settlement, on an existing Set-  
5 tlement Instruction using their account owner transaction id 'REF456'. Instructing party information is pro-  
6 vided within the BAH which is not provided in the example.

7 Message example: sese.030.001. 08 T2S Priority Example.xml

8 In this example a T2S party, Party A "PRTYABICXXX" having a securities account '1000000999' in T2S has  
9 requested to modify the current priority, on an existing Settlement Instruction, to 'Reserved' using the mar-  
10 ket infrastructure transaction id 'T2SREF000123'. Instructing party information is provided within the BAH  
11 which is not provided in the example.

12 Message example: sese.030.001. 08 T2S Hold Example.xml

13 In this example a T2S party, Party B "PRTYBBICXXX" having a securities account '2000000876' in T2S has  
14 requested to place a party hold, on an existing Settlement Instruction using the market infrastructure trans-  
15 action id 'T2SREF000456. Instructing party information is provided within the BAH which is not provided in  
16 the example.

17 Message example: sese.030.001. 08 T2S Release Example.xml

18 In this example a T2S party, Party C "PRTYCBICXXX" has requested to release a system hold, relating to  
19 CoSD, placed on an instruction by T2S. The instruction is identified using the market infrastructure transac-  
20 tion id 'T2SREF007328' and the securities account '3000001429'. Instructing party information is provided  
21 within the BAH which is not provided in the example.

22 Message example: sese.030.001. 08 T2S Link Example.xml

23 In this example a T2S party, Party D (PRTYDBICXXX), has requested to link (type 'WITH') a settlement in-  
24 struction, identified by the market infrastructure transaction id 'T2SREF000456' and the securities account  
25 '4000000602', with a securities settlement restriction, identified by the intra-position movement id  
26 'REF0000123'. Instructing party information is provided within the BAH which is not provided in the example.

27 Message example: sese.030.001. 08 T2S Unlink Example.xml

28 In this example a T2S party, Party E "PRTYEBICXXX" has requested to unlink an instruction with a Securities  
29 Settlement Transaction Identification 'REF0000123' from settlement instruction identified by the market in-  
30 frastructure transaction id 'T2SREF005081' and the securities account '1200008102'. Instructing party infor-  
31 mation is provided within the BAH which is not provided in the example.

#### 1 Message example: sese.030.001.08 T2S Partial Release Example.xml

2 In this example a T2S party, Party A "PRTYABICXXX" has requested to partially release 20000 securities. The  
3 original instruction was for 100000 securities and is currently on Party Hold. The instruction is identified us-  
4 ing the market infrastructure transaction id 'T2SREF009876' and the securities account '1000005566'. In-  
5 structing party information is provided within the BAH which is not provided in the example.

#### 6 3.3.8.11 SecuritiesSettlementConditionModificationStatusAdviceV08 (sese.031.001.08)

##### 7 **3.3.8.11.1 Overview and scope of the message**

8 This chapter illustrates the *SecuritiesSettlementConditionModificationStatusAdviceV08* message.

9 The *SecuritiesSettlementConditionModificationStatusAdviceV08* message, also known as an Amendment  
10 Instruction status advice or Hold/Release status advice is sent by T2S to a CSD or other directly connected  
11 T2S party to inform about the actual status of a [SecuritiesSettlementConditionModificationStatusAdviceV08](#)  
12 ([sese.030.001.08](#)) [▶ 1751].

13 The Amendment Instruction status advice informs about the actual status of a modification on a single pro-  
14 cess indicator that is allowed to be modified in a Settlement Instruction or Settlement Restriction.

15 The Hold/Release status advice informs about the actual status of the hold or release of a Settlement In-  
16 struction.

17 This message is sent by T2S in the following message usages:

- 18 | Rejected;
- 19 | Accepted;
- 20 | Denied;
- 21 | Executed.

22 These message usages are described in the section "The message in business context".

##### 23 **3.3.8.11.2 The T2S-specific schema**

###### 24 Outline of the schema

25 The *SecuritiesSettlementConditionModificationStatusAdviceV08* is composed of the following message build-  
26 ing blocks:

###### 27 **RequestReference**

28 This block is mandatory and it provides identification of the modification request.

###### 29 **AccountOwner**

30 This block is optional and identifies the party that legally owns the account.

###### 31 **SafekeepingAccount**

32 This block is optional and identifies the account to or from which a securities entry is made.

###### 33 **RequestDetails**

1 This block is optional and provides the details of the request.

## 2 **ProcessingStatus**

3 This block is mandatory and it provides the status of an instruction.

### 4 References/Links

5 The T2S-specific schema and documentation in HTML/PDF format as well as the message examples are pro-  
6 vided outside of this document under the following link:

7 [http://www.swift.com/mystandards/T2S/sese.031.001.08\\_T2S](http://www.swift.com/mystandards/T2S/sese.031.001.08_T2S)

### 8 Business rules applicable to the schema

9 Not applicable (T2S outgoing message).

## 10 **3.3.8.11.3 The message in business context**

### 11 Message usage: Rejected

12 This message usage relates to the usage of a status advice message, sent by T2S, when the Amendment or  
13 the Hold/Release Instruction is rejected. An Amendment or a Hold/Release Instruction is rejected if it does  
14 not pass one or more business validations.

### 15 Specific message requirements

16 To inform about a rejection status, the *SecuritiesSettlementConditionModificationStatusAdviceV08* includes  
17 the following information:

- 18 | Rejected – status that corresponds to 'Rejected' with one or more reason codes listing the reasons of the  
19 rejection;
- 20 | Code – ISO code specifying the reason of the rejection;
- 21 | AdditionalReasonInformation – text comprising a combination of the associated business rule not passed  
22 and a short description of the error.

23

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
ment/SciesSttlmCondModStsAdv/PrcgSts/Rjctd/Rsn/AddtlRsnInf		

1 Message usage example: sese.031.001.08 T2S Rejected Example.xml

2 In this example T2S Party, BANK A (BNKAFRPPXXX), firstly sent a Settlement Instruction, known by it with  
3 the reference 'REF456', involving the securities account '1000000123'. In order to link that Settlement In-  
4 struction with another instruction (with the reference 'T567'), BANK A sent an Amendment Instruction. T2S  
5 sends a rejection status advice as a response to the Amendment Instruction. The Amendment Instruction is  
6 rejected because the Settlement Instruction with reference 'REF456' was already linked to 'REF567'.

7 Message usage: Accepted

8 This message usage relates to the usage of a status advice message, sent by T2S, when the Amendment or  
9 the Hold/Release Instruction is valid. An Amendment or Hold/Release Instruction is valid and accepted by  
10 T2S if it passes all business validations.

11 Specific message requirements

12 To inform about an accepted status, the *SecuritiesSettlementConditionModificationStatusAdviceV08* the fol-  
13 lowing information:

- 14 | AcknowledgedAccepted – status that corresponds to 'Accepted' with no reason code;
- 15 | NoSpecifiedReason – 'NORE' ISO code specifying that there is no reason available.

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
NoSpecifiedReason Docu- ment/SciesSttlmCondModStsAdv/PrcgSts/Ack dAccptd/NoSpofdRsn	NoReasonCode	The only possible value is NORE

17 Message usage example: sese.031.001. 08 T2S Accepted Example.xml

18 In this example, T2S party, BANK A (BNKAFRPPXXX), firstly sent a Settlement Instruction, known by it with  
19 the reference 'REF456', involving the securities account '1000000123. In order to allow the partial settlement  
20 of the Settlement Instruction, which was set to 'false' in the original instruction, BANK A requested the modi-  
21 fication of the partial settlement indicator. T2S accepts the Amendment Instruction and sends an accepted  
22 status advice.

23 Message usage: Denied

24 This message usage relates to the usage of a status advice message, sent by T2S, when the amendment  
25 requested or Hold/Release Instruction is not executed.

26 Specific message requirements

27 To inform about a denied status, the *SecuritiesSettlementConditionModificationStatusAdviceV08* includes the  
28 following information:

- 1 | Denied – status that corresponds to 'Denied' with one reason code listing the reasons of the non execu-
- 2 | tion;
- 3 | Code – ISO code specifying the reason of the denial;
- 4 | AdditionalReasonInformation – text comprising a combination of the associated business rule not fulfilled
- 5 | and a short description of the error.
- 6

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
Code Docu- ment/SciesSttlmCondModStsAdvc/PrcgSts/Dn d/Rsn/Cd/Cd	DeniedReason6Code	ISO Code of denial. The only possible values are:  - OTHR - DCAN - DSET
AdditionalReasonInformation Docu- ment/SciesSttlmCondModStsAdvc/PrcgSts/Dn d/Rsn/AddtlRsnInf	RestrictedFINXMax210Text	Business rule and error de- scription

7 Message usage example: sese.031.001. 08 T2S Denied Example.xml

8 In this example T2S party, BANK A (BNKAFRPPXXX) sent a Settlement Instruction, known by it with the ref-  
9 erence 'REF456', involving the securities account '1000000123'. In order to allow the partial settlement of  
10 the Settlement Instruction, which was set to 'false' in the original instruction, BANK A requested the modifi-  
11 cation of the partial settlement indicator. The amendment is denied because the referred Settlement Instruc-  
12 tion is already settled.

13 Message usage: Executed

14 This message usage relates to the usage of a status advice message, sent by T2S, when the Amendment or  
15 the Hold/Release Instruction is executed.

16 Specific message requirements

17 To inform about the completion of the Amendment or Hold/Release, the *SecuritiesSettlementConditionModi-*  
18 *ficationStatusAdviceV08* includes the following information:

19 RequestDetails - Details of the request included in the inbound message:

- 20 | Completed – status that corresponds to the successful execution of the modification request with no rea-
- 21 | son code or additional reason information;
- 22

MESSAGE ITEM	DATA TYPE/ CODE	UTILISATION
CompletedDocu- ment/SciesSttlmCondModStsAdvc/PrcgSts/Cm pltd	ProprietaryReason4	Empty element as Processing Status is 'Completed' with no reason code or additional reason information

#### 1 Message example: sese.031.001.08 T2S Executed Example.xml

2 In this example a T2S party, BANK A (BNKAFRPPXXX), firstly sent a Settlement Instruction, known by it with  
3 the reference 'REF456', involving the securities account '1000000123'. In order to allow the partial settle-  
4 ment of the Settlement Instruction, which was set to 'false' in the original instruction, BANK A requested the  
5 modification of the partial settlement indicator. T2S sends a completed status to inform about the successful  
6 execution of the amendment.

#### 7 3.3.8.12 SecuritiesSettlementTransactionGenerationNotificationV09 (sese.032.001.09)

##### 8 **3.3.8.12.1 Overview and scope of the message**

9 This chapter illustrates the *SecuritiesSettlementTransactionGenerationNotificationV09* message.

10 The *SecuritiesSettlementTransactionGenerationNotificationV09* message is sent by T2S to CSDs, CBs or  
11 CMSs. It is sent to notify parties of instructions generated within T2S associated with realignment or auto-  
12 collateralisation or COSD with use of restrictions in direct debit.

13 A *SecuritiesSettlementTransactionGenerationNotificationV09* is sent by T2S in the following message usages:

- 14 | Realignment;
- 15 | Collateral;
- 16 | Hold Reverse Collateral
- 17 | COSD with use of restrictions in direct debit.

18 These message usages are described in the chapter "The message in business context".

##### 19 **3.3.8.12.2 The T2S-specific schema**

###### 20 Outline of the schema

21 The *SecuritiesSettlementTransactionGenerationNotificationV09* message is composed of the following mes-  
22 sages building blocks:

###### 23 **TransactionIdentificationDetails**

24 This building block is mandatory and non repetitive. It provides transaction type and identification infor-  
25 mation.

###### 26 **NumberCounts**

27 This building block is optional and non repetitive. It contains the number of transactions linked.

###### 28 **Linkages**

29 This building block is optional and repetitive. It is used to link instructions and specify settlement sequences  
30 (e.g. after/before/with etc.).

###### 31 **TradeDetails**

32 This building block is mandatory and non repetitive. It contains detailed information related to the Settle-  
33 ment Instruction.

###### 34 **FinancialInstrumentIdentification**

1 This building block is mandatory and non repetitive. It identifies the financial instrument for which the trans-  
2 action is being settled.

### 3 **QuantityAndAccountDetails**

4 This building block is mandatory and repetitive. It contains the details related to the account and quantity  
5 involved in the transaction.

### 6 **SettlementParameters**

7 This building block is mandatory and non repetitive. It contains parameters which explicitly state the condi-  
8 tions that must be fulfilled before a particular transaction of a financial instrument can be settled. These  
9 parameters are defined by the Instructing party in compliance with settlement rules in the market the trans-  
10 action settles in.

### 11 **DeliveringSettlementParties**

12 This building block is optional and non repetitive. It contains the chain of delivering settlement parties.

### 13 **ReceivingSettlementParties**

14 This building block is optional and non repetitive. It contains the chain of receiving settlement parties.

### 15 **SettlementAmount**

16 This building block is optional and non repetitive. It contains the total amount of money to be paid or re-  
17 ceived in exchange for the securities.

### 18 **GeneratedReason**

19 This building block is optional and repetitive. It contains the reason why the transaction was generated.

### 20 **StatusAndReason**

21 This building block is optional and non repetitive. It contains the status and reason of the transaction.

### 22 **Supplementary Data**

23 This building block is mandatory and repetitive. It allows to provide, in the form of a schema, additional  
24 information that cannot be captured in the structured elements and/or any other specific block.

### 25 References/Links

26 The T2S-specific schema, the additional schema required to fill the "Supplementary Data" block and docu-  
27 mentation in HTML/PDF format as well as the message examples are provided outside of this document  
28 under the following link.

29 [http://www.swift.com/mystandards/T2S/sese.032.001.09\\_T2S](http://www.swift.com/mystandards/T2S/sese.032.001.09_T2S)

30 *Business rules applicable to the schema*

31 Not applicable (T2S outgoing message).

### 32 **3.3.8.12.3 The message in business context**

33 *Message usage: Realignment*

1 This message usage relates to T2S generated settlement instructions, sent by T2S, in the context of Cross-  
2 CSD settlement for the purpose of realignment. These instructions are linked by T2S to the Settlement In-  
3 structions originally instructed by the T2S parties and which lead to their creation.

4 Specific message requirements

5 For realignment purposes the *SecuritiesSettlementTransactionGenerationNotificationV09* should have:

- 6 | Payment – free of payment as only securities are concerned;
- 7 | Links – that correspond to the original instructions sent by the T2S instructing parties;
- 8 | Trade Details -Matching Status – Matched as instruction is already matched within T2S;
- 9 | Hold Indicator – ISO code for CSD Validation Hold when applicable;
- 10 | Additional Information – indicating the rule id associated with a CSD Validation Hold when applicable;
- 11 | Priority – all realignment instructions have a normal (0004) priority;
- 12 | Securities Transaction Type;
- 13 | ISO code identifying the instruction as a realignment;
- 14 | Partial Settlement Indicator - specifies whether partial settlement is allowed and/or the threshold type;
- 15 | Status Accepted - status that corresponds to 'Accepted' the initial state of all generated instructions;
- 16 | Accepted Reason Code – 'OTHR' ISO code when accepted fulfilling a rule of a negative rejection re-  
17 striction;
- 18 | Additional Reason Information – rule Id identifying a negative rejection restriction when applicable;
- 19 | Status Pending – the status that corresponds to 'Pending' with the corresponding reason code when ap-  
20 plicable;
- 21 | Reason code – 'CVAL' ISO code when specifying that the instruction is pending because it is on hold;
- 22 | Additional Reason Information – indicating the rule id associated with a CSD Validation Hold when appli-  
23 cable;
- 24 | Generated Reason Code and information – Specifying that the instruction was generated for realignment  
25 purposes;
- 26 | Supplementary Data – containing the T2S Matching Reference of the corresponding cross-border busi-  
27 ness transaction.  
28

1 Message example: sese.032.001.09 T2S Realignment IntCSDandIssr Example.xml

2 In this example, T2S sends a T2S generated settlement instruction, one of several, resulting from a cross  
3 CSD, where a CSD Participant A (PRTAFRPPXXX) of investor CSD A (CSDABIC1XXX) with a securities account  
4 '100000123' in T2S delivers 500000 securities ISIN00000001 to CSD Participant B (PRTBFRPPXXX) of inves-  
5 tor CSD B (CSDBBIC1XXX) versus a payment of 890000 Euros for settlement on the 3/1/2015, where CSD A  
6 and CSD B have a relationship to Issuer CSD I (CSDIBIC1XXX). The investor and issuer CSDs are all internal  
7 to T2S. This instruction debits the Omnibus account of CSD A '500000234' within the Issuer CSD I, credit-  
8 ing the Omnibus account of CSD B '610000546'. Two 'INFO' links are present to the related incoming set-  
9 tlement instructions, securities transaction ids 'REF00001' and 'REF00005', market infrastructure ids  
10 'T2SREF00001' and 'T2SREF00005' together with the corresponding T2S Matching Reference (Supplemen-  
11 tary Data). Instructing party information is provided within the BAH which is not provided in the example.

12 Message example: sese.032.001. 09 T2S Realignment IntCSDandExtIssr Example.xml

13 In this example, T2S sends a T2S generated settlement instruction, one of several, resulting from a cross  
14 CSD, where a CSD Participant A (PRTAFRPPXXX) of investor CSD A (CSDABIC1XXX) with a securities account  
15 '100002561' in T2S delivers 32000 securities ISIN00005005 to CSD Participant B (PRTBFRPPXXX) of inves-  
16 tor CSD B (CSDBBIC1XXX) for settlement on the 29/3/2016, where CSD A and CSD B have a relationship to  
17 Issuer CSD I (CSDIBIC1XXX). The investor CSDs are internal to T2S while the issuer CSD is external. This  
18 instruction debits the Inter CSD account B/I '800000231' within CSD B, crediting Participant B's account  
19 '4730000321'. Two 'INFO' links are present to the related incoming settlement instructions, securities trans-  
20 action ids 'REF0089012' and 'REF0156782', market infrastructure ids 'T2SREF0089012' and 'T2SREF0156782'  
21 together with the corresponding T2S Matching Reference (Supplementary Data). Instructing party infor-  
22 mation is provided within the BAH which is not provided in the example.

23 Message example: sese.032.001. 09 T2S Realignment ExtCSD 2TechIssrCSDs Example.xml

24 In this example, T2S sends a T2S generated settlement instruction, one of several, resulting from a cross  
25 CSD where the ISIN is issued outside of T2S and the investor CSD are using separate technical issuer CSDs.

1 This instruction details the delivery of 45000 securities ISIN00000999 from Participant A (PRTAFRPPXXX)  
2 securities account '1000000719' at investor CSD A (CSDABIC1XXX) thru its technical issuer CSD C  
3 (CSDCBIC1XXX) to CSD Participant B (PRTBFRPPXXX) of investor CSD B (CSDBBIC1XXX) thru its technical  
4 issuer CSD D (CSDDBIC1XXX) for settlement on the 2/9/2015, where CSD C and CSD D have a relationship  
5 to Issuer CSD I (CSDIBIC1XXX). This instruction debits the Omnibus account of CSD A '5000000723' within  
6 CSD C, crediting the Inter CSD account C/I '8800042876'. Two 'INFO' links are present to the related incom-  
7 ing settlement instructions, securities transaction ids 'REF0055667' and 'REF0076542', market infrastructure  
8 ids 'T2SREF0055667' and 'T2SREF0076542' together with the corresponding T2S Matching Reference (Sup-  
9 plementary Data). Instructing party information is provided within the BAH which is not provided in the ex-  
10 ample.

11 Message example: sese.032.001. 09 T2S Realignment NoIssrCSDinT2S Example.xml

12 In this example, T2S sends a T2S generated settlement instruction, one of several, resulting from a cross  
13 CSD where no issuer CSD is declared within T2S and the investor CSD are using separate external technical  
14 issuer CSDs. This instruction details the receipt of 17500 securities ISIN00005923 from Participant A  
15 (PRTAFRPPXXX) securities account '1000008027' at investor CSD A (CSDABIC1XXX) thru its technical issuer  
16 CSD C (CSDCBIC1XXX) from CSD Participant B (PRTBFRPPXXX) of investor CSD B (CSDBBIC1XXX) thru its  
17 technical issuer CSD D (CSDDBIC1XXX) for settlement on the 29/3/2016, where CSD C and CSD D are ex-  
18 ternal to T2S. This instruction credits the Inter-CSD A/C account of '8000045872' within CSD A, debiting  
19 Participant A's account '7234000412'. Two 'INFO' links are present to the related incoming settlement in-  
20 structions, securities transaction ids 'REF00SI191' and 'REF00SI567', market infrastructure ids  
21 'T2SREF00SI191' and 'T2SREF00SI567' together with the corresponding T2S Matching Reference (Supple-  
22 mentary Data). Instructing party information is provided within the BAH which is not provided in the exam-  
23 ple.

24 Message example: sese.032.001. 09 T2S Realignment SameCSDandIntIssr Example.xml

25 In this example, T2S sends a T2S generated settlement instruction, one of several, resulting from a cross  
26 CSD, where a CSD Participant A (PRTAFRPPXXX) of investor CSD A (CSDABIC1XXX) with a securities account  
27 '1000004151' in T2S delivers 9500 securities ISIN00000054 to CSD Participant B (PRTBFRPPXXX) of investor  
28 CSD A (CSDABIC1XXX) for settlement on the 15/3/2016, where CSD A has a relationship to Issuer CSD I  
29 (CSDIBIC1XXX). The investor and issuer CSDs are both internal to T2S. This instruction debits the 2nd mir-  
30 ror account A/I '3000000916' within CSD A, crediting Participant B's account '5557803782'. Two 'INFO' links  
31 are present to the related incoming settlement instructions, securities transaction ids 'REF0073023' and  
32 'REF0064890', market infrastructure ids 'T2SREF0073023' and 'T2SREF0064890' together with the corre-  
33 sponding T2S Matching Reference (Supplementary Data). Instructing party information is provided within  
34 the BAH which is not provided in the example.

35 Message usage: Collateral

36 This message usage relates to T2S generated settlement instructions, sent by T2S, for the purpose of auto-  
37 collateralisation.

38 Specific message requirements

39 For auto-collateralisation purposes the *SecuritiesSettlementTransactionGenerationNotificationV09* should  
40 have:

- 1 | Links – between the related generated instructions for Pledge and Sub Pledge collateral procedures;
- 2 | Trade Details - Matching Status – Matched as instruction is already matched within T2S;
- 3 | Priority – all collateral instructions have a normal (0004) priority;
- 4 | Security Transaction Type – ISO code identifying the instruction as related to collateral management;
- 5 | Partial Settlement Indicator - specifies whether partial settlement is allowed and/or the threshold type;
- 6 | Status Accepted - status that corresponds to 'Accepted' the initial state of all generated instructions;
- 7 | Counterparty DCA - identifies the dedicated cash account of the counterparty of the collateral instruction;
- 8 | Counterparty DCA owner – identifies the account owner of the dedicated cash account of the counterparty of the collateral instruction;
- 9 | Generated Reason Code– specifying that the instruction was generated due to auto-collateralisation;
- 10 | Supplementary Data – containing the T2S Matching Reference relating to the auto-collateralisation transaction.

1 [Message example: sese.032.001. 09 T2S CollateralRepo Example.xml](#)

2 In this repo procedure example, T2S sends several T2S generated settlement instructions resulting from  
3 auto-collateralisation. The message described is an DVP sent to the credit consumer PB B, whereby CB A

1 (CBAABIC1XXX) provides an intraday credit on 2/1/2015 of 90000 Euros from its dedicated cash account to  
2 the dedicated cash account '8000001523' of PB B (CSDPBICXXX) of CSD B (CSDBBIC1XXX) in exchange for  
3 25000 securities ISIN00000001 delivered to CB A's securities account '1000000234'. In this example the  
4 participant and the central bank share the same CSD. The message also informs the corresponding T2S  
5 Matching Reference (Supplementary Data). Instructing party information is provided within the BAH which is  
6 not provided in the example.

7 Instructing party information is provided within the BAH which is not provided in the example.

8 Message example: sese.032.001. 09 T2S CollateralPledge Example.xml

9 In this example of a collateral management procedure of type pledge, as defined within static data, resulting  
10 from auto-collateralisation, T2S sends several T2S generated settlement instructions, whereby the CB A  
11 (CBAABIC1XXX) provides an intraday credit on 22/3/2016 of 55000 Euros to the dedicated cash account held  
12 by Participant B (PARTBBICXXX) of CSD I (CSDIBIC1XXX) in exchange for 10000 securities ISIN00000764  
13 transferred between Participant B's securities accounts '1000000172' and '1000000567'. The message de-  
14 scribed is the FOP sent to the credit consumer Participant B that is delivering the 10000 securities. An 'INFO'  
15 link is present to the PFOOD T2S generated settlement instruction, market infrastructure id 'T2SREF0007567',  
16 crediting the dedicated cash account '8000000917' Participant B together with the corresponding T2S Match-  
17 ing Reference (Supplementary Data). In this example the participant and the central bank share the same  
18 CSD. Instructing party information is provided within the BAH which is not provided in the example.

19 Message usage: Hold Reverse Collateral

20 This message usage relates to T2S generated settlement instructions for the reimbursement of auto-  
21 collateralisation. These are generated on hold.

22 Specific message requirements

23 For the reversal of auto-collateralisation the *SecuritiesSettlementTransactionGenerationNotificationV09*  
24 should have:

- 25 | Links – between the related generated instructions for Pledge and Sub Pledge collateral procedures;
- 26 | Trade Details - Matching Status – Matched as instruction is already matched within T2S;
- 27 | Hold Indicator – dependent on collateral operation;
- 28 | Priority – all collateral instructions have a normal (0004) priority;
- 29 | Security Transaction Type – ISO code identifying the instruction as related to collateral management;
- 30 | Partial Settlement Indicator - specifies whether partial settlement is allowed and/or the threshold type;
- 31 | Status Accepted - status that corresponds to 'Accepted' the initial state of all generated instructions;
- 32 | Status Pending - status that corresponds to 'Pending' with the corresponding reason code;
- 33 | Reason code – 'PREA' ISO code specifying that the instruction is pending because it is on hold;
- 34 | Counterparty DCA - identifies the dedicated cash account of the counterparty of the collateral instruc-  
35 tion;
- 36 | Counterparty DCA owner – identifies the account owner of the dedicated cash account of the counter-  
37 party of the collateral instruction;

- 1 | I Generated Reason Code – specifying that the instruction was generated due a reimbursement of intra-
- 2 | day credit related to auto collateralisation;
- 3 | I Supplementary Data – containing the T2S Matching Reference relating to the auto-collateralisation
- 4 | transaction
- 5

1 Message example: sese.032.001. 09 T2S Hold-Reverse-Collateral Example.xml

2 In this repo procedure example, T2S sends several T2S generated settlement instructions resulting from the  
3 reimbursement of intraday credit related to auto-collateralisation. The message described is an RVP sent to  
4 the credit consumer Participant B (CSDPBICXXX), whereby the Participant B (CSDPBICXXX) of CSD B  
5 (CSDBBIC1XXX) reimburses the intraday credit of 90000 Euros provided on 2/1/2015 from its dedicated cash  
6 account '8000057892' in exchange for 25000 securities ISIN00000001 to the securities account  
7 '100000234' of Participant B. In this example the participant and the central bank share the same CSD. The  
8 message also informs the corresponding T2S Matching Reference (Supplementary Data). Instructing party  
9 information is provided within the BAH which is not provided in the example.

10 Message example: sese.032.001. 09 T2S Hold-Reverse-CollateralPledgeSub Example.xml

11 In this example of a collateral management procedure of type pledge sub, as defined within static data,  
12 resulting from auto-collateralisation, T2S sends several T2S generated settlement instructions. The message  
13 described is a PFOD sent to the credit consumer Participant B (PARTBBICXXX) on hold reversing the intraday  
14 credit provided by CB A (CBAABIC1XXX) on 29/3/2016 for 97000 Euros in exchange for 24000 securities  
15 ISIN00000852 held as a restricted position within Participant B's securities account '1000000901'. This in-  
16 structions debits the dedicated cash account '8000000692' held by Participant B (PARTBBICXXX) of CSD I  
17 (CSDIBIC1XXX). An 'INFO' link is present to the settlement restriction, market infrastructure id  
18 'T2SREF0008490', releasing the restricted position of Participant B securities account '1000000901' together  
19 with the corresponding T2S Matching Reference (Supplementary Data). In this example the participant and  
20 the central bank share the same CSD. Instructing party information is provided within the BAH which is not  
21 provided in the example.

22 Instructing party information is provided within the BAH which is not provided in the example.

23 Message usage: CoSD with use of restrictions in direct debit

24 This message usage relates to T2S generated Settlement Instructions, sent by T2S, in the context of CoSD  
25 activation for Settlement Instructions using restriction references in use for direct debit. When a CoSD is  
26 activated for a Settlement Instruction using securities restriction references, securities must be moved from  
27 the restricted positions of the provided restriction references to the CoSD blocking position. As this transfer  
28 cannot be done directly, T2S generates these Settlement Instructions and implements the CoSD blocking  
29 using the deliverable securities position (or the earmarked position in case of an earmarked account) as a  
30 "pivot" position. These instructions are linked by T2S to the Settlement Restriction generated for CoSD  
31 Blocking.

32 Specific message requirements

33 For CoSD purposes the *SecuritiesSettlementTransactionGenerationNotificationV09* should have:

- 34 | Payment – free of payment as only securities are concerned;
- 35 | Link – that corresponds to the CoSD blocking settlement restriction generated by T2S;
- 36 | Trade Details -Matching Status – Matched as instruction is already matched within T2S;
- 37 | Priority – all collateral instructions have a normal (0004) priority;
- 38 | Securities Transaction Type - ISO code identifying the instruction as an internal account transfer;

- 1 | I Status Accepted - status that corresponds to 'Accepted' the initial state of all generated instructions;
- 2 | I Accepted Reason Code – 'OTHR' ISO code when accepted fulfilling a rule of a negative rejection re-
- 3 | striction;
- 4 | I Additional Reason Information – rule Id identifying a negative rejection restriction when applicable;
- 5 | I Status Pending – the status that corresponds to 'Pending' with the corresponding reason code when ap-
- 6 | plicable;
- 7 | I Generated Reason Code and information – Specifying that the instruction was generated for CoSD acti-
- 8 | vation when settlement instruction uses restriction references in direct debit;
- 9

1 [Message example: sese.032.001. 09 CoSD with Restriction References.xml](#)

2 In this example, T2S sends a T2S generated Settlement Instruction, one of two matched FOPs, resulting  
3 from a CoSD Activation for a Settlement Instruction with use of restriction references in a direct debit sce-  
4 nario. CSD Participant A (PRTAFRPPXXX) of investor CSD A (CSDABIC1XXX) with a securities account  
5 '1000001234' in T2S delivers 100000 securities ISIN00000001 to CSD Participant B (PRTBFRPPXXX) of inves-

1 tor CSD B (CSDBBIC1XXX) versus a payment of 55000 Euros for settlement on the 3/1/2016 using the Re-  
2 striction References 'T2SRR00001' and 'T2SRR00002'. A CoSD rule applies resulting in the blocking of the  
3 securities and the generation the following FOP T2S generated Settlement Instruction. An 'INFO' link relating  
4 to the CoSD blocking Settlement Restriction is present. Instructing party information is provided within the  
5 BAH which is not provided in the example.

## 4.2 Index of Status Values and Codes

### 4.2.1 ISO 20022 Codes

This annex provides an overview of all status values and codes that occur in messages which are used for T2S. Status values and codes are thereby listed in alphabetical order. The rightmost column informs about specific conditions inherent to the usage of these status values and codes in T2S.

#### AcknowledgementReason5Code

CODE	NAME
OTHR	Other

#### AffirmationStatus1Code

CODE	NAME
AFFI	Affirmed
NAFI	Unaffirmed

#### AllegementStatus1Code

## 1 4.2.2 T2S proprietary codes

2 This annex provides an overview of all status values and codes that occur in messages which are used for  
3 T2S. Status values and codes are thereby listed in alphabetical order. The rightmost column informs about  
4 specific conditions inherent to the usage of these status values and codes in T2S.

### 5 BalanceType12Code T2S 1

6

CODE	NAME	DEFINITION
AOIC	Amount of outstanding intraday credit	Amount of outstanding intraday credit from auto-collateralisation for the T2S dedicated cash account.
CASH	Cash balance	Sum of cash balance on the T2S dedicated cash account
PCAS	Projected cash balance	Sum of projected cash balance on the T2S dedicated cash account, i. e. sum of cash balance + credit settlement instructions - debit liquidity transfer orders - debit settlement instructions.
SPCA	Total sum projected cash balance and outstanding intraday credit	Sum of projected cash balance + sum of outstanding intraday credit from auto-collateralisation.

### 7 CreditDebitCode T2S 01

8

CODE	NAME	DEFINITION
CRDT	Credit	Operation is an increase.

### 9 EventTypeCode T2S 1

10

CODE	NAME	DEFINITION
ACCA	Available Cash on Dedicated Cash Account	Available Liquidity on the Dedicated T2S Account in case of FLOR, CEIL and CASF
ACLN	Auto-collateralisation Limit	Auto-collateralisation limit set by NCB
ACLU	Auto-collateralisation Utilisation	Auto-collateralisation limit utilisation
ACLV	Available Collateral Value	Value of the available collateral in T2S
CCLB	Client-collateralisation Limit	Client-collateralisation limit set by a payment/settlement bank
CCLU	Client-collateralisation Limit Utilisation	Outstanding credit (i.e. Limit Utilisation) of the Client-collateralisation limit
CEIL	Ceiling	Maximum (ceiling liquidity) Balance/Amount of T2S dedicated cash account. Ceiling Notification Amount, It specifies the upper threshold for notifying the cash manager

CODE	NAME	DEFINITION
CRAC	Outstanding Intraday Credit	amount of outstanding intraday credit from auto-collateralisation for the T2S dedicated cash account
CVES	Eligible Securities on Stock	collateral value of eligible securities on stock in T2S eligible for auto-collateralisation purposes
FLOR	Floor	Minimum (floor liquidity) Balance of T2S dedicated cash account. Floor Notification Amount, It specifies the lower threshold for notifying the cash manager
LTCA	Sum of all liquidity transfer orders	sum of all liquidity transfer orders
PCCA	Projected Balance	Projected Balance = Total Cash on Cash account + sum of all Settlement Instructions + Sum of all Liquidity transfer orders
RSTR	Restriction Type	Restriction Type field used
SACB	Available Cash Total	Sum of available cash balances of all T2S Dedicated Cash Accounts
SACL	Sum AC Limits	Sum of Auto-collateralisation limits which apply to this payment/settlement bank across all its T2S dedicated cash accounts
SACU	Sum AC Limits Utilisation	Sum of Outstanding credit (i.e. the Limit Utilisation) of these Auto-collateralisation limits (across all its T2S dedicated cash accounts)
SBCB	Sum of blocked cash balances	Sum of all blocked cash balances across all T2S dedicated cash accounts
SCCL	Sum CC Limits	Sum of Client-collateralisation limits which apply on this client of a payment/settlement bank
SCCU	Sum CC Limits Utilisation	Sum of outstanding credit (i.e. Limit Utilisation) of these Client-collateralisation limits (limits which apply on this client of a payment/settlement bank)
SICA	Sum of all <b>pending</b> crediting settlement instructions	Sum of all crediting settlement instructions
SIDA	Sum of all <b>pending</b> debiting settlement instructions{ <b>CR-808</b> }	Sum of all debiting settlement instructions
SRCB	Sum of reserved cash balances	Sum of reserved cash balances across all T2S dedicated cash accounts

CODE	NAME	DEFINITION
SUPA	Sum projected cash balance + amount of outstanding intraday	Sum of projected cash balance + amount of outstanding intraday credit from auto-collateralisation.
TCCA	Total Cash on Cash Account	Total liquidity on Cash Account = Available Cash Balance + Restricted Cash Balances
TSUM	Total sum of liquidity available,	sum of liquidity available = The smaller value of either 'Sum of Auto-Collateralisation Limits minus Sum of Auto-Coll. Limits Utilisation' or 'Total collateral value of eligible securities on stock' + sum of available cash balance + sum of aggregated balances per Market-specific Restriction Processing Type

1 Please note that the described functionality won't be available before CSLD go-live.

### 3 4.3 Index of Instruction References

4 The Index of Instruction References provides the detailed description of the business references relevant for  
5 the processing in T2S of Settlement Instructions (i.e. Securities Settlement Transaction Instruction -  
6 sese.023- ISO message).

#### 7 4.3.1 Business References

8 | T2S Actor Reference: Unambiguous identification of the transaction as known by the Instructing Party.  
9 The T2S Actor Reference is:

- 10 – Mandatory in any incoming Settlement Instruction<sup>556</sup>. It is included in the Transaction Identification  
11 field of the sese.023 message (SctiesStlmTxInstr/TxId).
- 12 – Unique: For each incoming sese.023 message, T2S checks that there is no pending instruction with  
13 the same combination of T2S Actor Reference and Instructing Party (Instructing Party BIC and In-  
14 structing Party Parent BIC). In case a sese.023 message conveys an already matched instruction, both  
15 Settlement Instructions created in T2S (i.e. delivering and receiving) will share the same T2S Actor  
16 Reference.
- 17 – Used for the reporting of status changes of Settlement Instructions (i.e. status advices and confirma-  
18 tions). When an instruction is rejected, the related status advice will report back this reference always  
19 in the Account Owner Transaction Identification, as well as in the field Account Servicer Transaction  
20 Identification. Upon acceptance of a Settlement Instruction, all the related status advices and confir-  
21 mations will include this reference in either the Account Owner Transaction Identification, or in the  
22 Account Servicer Transaction Identification or in the Processor Transaction Identification. The T2S Ac-

---

556 Internally generated Settlement Instructions do not have T2S Actor Reference

- 1 tor Reference is reported back in the Account Owner Transaction Identification, Account Servicer  
2 Transaction Identification or Processor Transaction Identification depending on the Instructing Party  
3 of the instruction (see section [Reporting of the T2S Actor Reference](#) [▶ 2328]).
- 4 – Used for referring to a Settlement Instruction for its maintenance (Cancellation, Hold/Release or  
5 Amendment Instruction) and for linking the Settlement Instruction (i.e. with, after or before) to an-  
6 other instruction. In case a Cancellation, Hold/Release or Amendment Instruction refers to an already  
7 matched instruction by the T2S Actor Reference, then the maintenance will apply to both Settlement  
8 Instructions created in T2S (i.e. delivering and receiving) for this already matched (as they both share  
9 the same T2S Actor Reference).
- 10 | T2S Reference: Identification of a Settlement Instruction assigned by T2S. The T2S Reference is:
- 11 – Provided to all Settlement Instructions created in T2S upon their acceptance (i.e. provided to Settle-  
12 ment Instructions received from a T2S Actor as well as to internally generated by T2S)
- 13 – Unique: For each Settlement Instruction, even in case a sese.023 message conveys an already  
14 matched instruction, each of the Settlement Instructions created in T2S (i.e. delivering and receiving)  
15 will have a different T2S Reference.
- 16 – Used for the reporting of status changes of Settlement Instructions (i.e. status advices and confirma-  
17 tions). Upon acceptance of a Settlement Instruction, all the related status advices and confirmations  
18 will include this reference in the Market Infrastructure identification.
- 19 – Used for referring to a Settlement Instruction for its maintenance (Cancellation, Hold/Release or  
20 Amendment Instruction) and for linking the Settlement Instruction (i.e. with, after or before) to an-  
21 other instruction. In case a Cancellation, Hold/Release or Amendment Instruction refers to the T2S  
22 Reference of one of the Settlement Instructions created in T2S (i.e. delivering and receiving) for an al-  
23 ready matched, then the maintenance will apply only to the referred Settlement Instruction (i.e. the  
24 delivering or the receiving)
- 25 | Common Trade Reference: Unique reference agreed upon by the two trade counterparties to identify the  
26 trade. The Common Trade Reference is:
- 27 – An optional matching field provided by T2S Actors to facilitate matching. When provided, it is included  
28 in the Common Identification field of the sese.023 message (Document/SctiesSttlmTxInstr/ Sttlm-  
29 TpAndAddtlParams/CmonId).
- 30 – T2S does not check the uniqueness of this field.
- 31 | T2S Matching Reference: Unique common reference assigned by T2S to all the Settlement Instructions  
32 comprising a transaction (i.e. to a pair of matched Settlement Instructions and their realignments if any).  
33 The T2S Matching Reference is:
- 34 – Provided by T2S independently on whether the pair of Settlement Instructions was matched in T2S or  
35 whether they were received as already matched.
- 36 – Used by T2S Actors to identify the counterpart instruction of any Settlement Instruction which may be  
37 needed for market claims, value added services, or reconciliation activities.

1 It is worth mentioning that from the above business references only the T2S Actor Reference and the T2S  
2 Reference are relevant for Settlement Restrictions. Given that Settlement Restrictions are unilateral and  
3 therefore do not require matching, neither the Common Trade Reference nor the T2S Matching Reference  
4 apply.

### 5 **4.3.2 Reporting of the T2S Actor Reference**

6 As described in the previous section, the T2S Actor Reference of the Settlement Instruction is reported back  
7 via the Account Owner Transaction Identification, Account Servicer Transaction Identification or Processor  
8 Transaction Identification in the status advice or settlement confirmation messages depending on the In-  
9 structing Party of the instruction.

10 This section describes in detail the reporting of the T2S Actor reference:

- 11 | When the Instructing Party is a CSD, the T2S Actor Reference is reported back in the Account Servicer  
12 Transaction Identification.
- 13 | When the Instructing Party is not a CSD, then:
  - 14 – In case the Instructing Party is a CSD Participant and additionally the owner of the securities account  
15 of the instruction, the T2S Actor Reference is reported back in the Account Owner Transaction Identifi-  
16 cation.
  - 17 – In case the Instructing Party is a CSD Participant and it is not the owner of the securities account of  
18 the instruction, the T2S Actor Reference is reported back in the Processor Transaction Identification.
  - 19 – In case the Instructing Party is an External CSD and additionally the owner of the securities account,  
20 the T2S Actor Reference is reported back in the Account Owner Transaction Identification. An External  
21 CSD is the owner of the securities account: either in intra/cross-CSD settlements where the owner of  
22 the securities account in T2S reference data is the External CSD e.g. an omnibus account held in its  
23 technical issuer CSD (its parent CSD); or in external-CSD settlements where the depository is also the  
24 External CSD (i.e. the securities account is external to T2S).
  - 25 – In case the Instructing Party is an External CSD, and it is not the owner of the securities account of  
26 the instruction, the T2S Actor Reference is reported back in the Processor Transaction Identification.

27 In all the cases when the T2S Actor reference is not reported back in the Account Owner Transaction Identifi-  
28 cation <sup>557</sup>, the T2S Actor may include additionally the reference of the account owner when instructing T2S.  
29 This additional reference is:

- 30 | Only for reconciliation purposes as it is not processed by T2S and cannot be used neither for the mainte-  
31 nance of the Settlement Instruction (i.e. cancellation, hold/release or amendment) nor for linking the  
32 Settlement instruction (i.e. with, after or before) to another instruction.
- 33 | The T2S Actor may include the additional reference of the account owner in the Processing Id of the De-  
34 livering CSD Participant (SctiesSttlmTxInstr/ DlvrSttlmPties/Pty1/PrcgId) in a delivering Settlement In-

---

557 T2S Actor reference is not reported back in the Account Owner Transaction Identification when either a) the Instructing Party is a CSD; or b) the Instructing Party is not a CSD (i.e. it is a CSD Participant or an External CSD) and it is not the owner of the securities account of the instruction.

1 instruction, or in the Processing Id of the Receiving CSD Participant (SctiesSttlmTxIn-  
2 str/RcvgSttlmPties/Pty1/PrcgId) in a receiving Settlement Instruction.

3 | T2S will report back this reference in the Account Owner Transaction Identification only if the T2S Actor  
4 reference is not reported back in the Account Owner Transaction Identification. I.e. in case the Instruct-  
5 ing Party is the Account owner, the Transaction Id (TxId) will be reported back in the Account Owner  
6 Transaction Identification and the Processing Id of the Delivering or the Receiving CSD Participant will  
7 not be taken into account.

8 For a more comprehensive description, the reporting of the T2S Actor reference (and the additional account  
9 owner reference if any) is illustrated hereafter for all the possible scenarios that may occur when a T2S Ac-  
10 tor instructs T2S. Additionally, in order to be as comprehensive as possible, the scenario of a T2S internally  
11 generated Settlement Instruction is also illustrated.

12 For all scenarios described, the following legend applies:

	T2S Actor Reference
	T2S Reference
	Additional Account owner reference

14 4.3.2.1 CSD as Instructing Party

15 In this case the Instructing Party BIC (AppHdr/Fr/FIId/FinInstnId/BICFI) and the Instructing Party Parent  
16 BIC (AppHdr/Fr/FIId/FinInstnId/Othr/Id) identify a Party in T2S with party type CSD (i.e. BIC of the CSD  
17 itself and BIC of the T2S Operator respectively).

18 The T2S Actor reference is reported back in the Account Servicer Transaction Identification

19 Within this case, it might happen that the owner of the securities account is also the CSD (this can only oc-  
20 cur if the securities account is a Mirror, an Inter-CSD or an Issuance Account) but it might also happen that  
21 the CSD is not the owner of the securities account. In either way, as already mentioned, the T2S Actor ref-  
22 erence is reported back in the Account Servicer Transaction Identification because the Instructing Party is a  
23 CSD (i.e. independently on who is the owner of the securities account),

24 The Instructing Party (i.e. the CSD) may include additionally the reference of the account owner.

This example relates to the following business scenario: A CSD, as account servicer, instructs T2S both legs of a transaction on behalf of the two CSD Participants involved i.e. CSD Participant A (CSDP A) and CSD Participant B (CSDP B).

**4.3.2.2 CSD Participant as Instructing Party**

In this case the Instructing Party BIC (AppHdr/Fr/FIId/FinInstnId/BICFI) and the Instructing Party Parent BIC (AppHdr/Fr/FIId/FinInstnId/Othr/Id) identify a Party in T2S with party type CSD Participant (i.e. BIC of the CSD Participant itself and BIC of the CSD respectively).

The T2S Actor reference is reported back either:

- 1 | In the Account Owner Transaction Identification if the Instructing Party is also the owner of the securities account; or
- 2 |
- 3 | In the Processor Transaction Identification if the Instructing Party is not the owner of the securities account.
- 4 |

**EXAMPLE 222 - UNMATCHED SETTLEMENT INSTRUCTION INSTRUCTED BY A CSD PARTICIPANT WHICH IS ALSO THE OWNER OF THE SECURITIES ACCOUNT**

	Unmatched delivering or receiving Securities settlement transaction instruction with Instructing Party = CSDP which is the owner of the securities account	Securities settlement transaction status advice (sent to the CSDP)

12 |

13 | This example relates to the following business scenario: A CSD Participant (CSDP A) instructs T2S on behalf of the owner of the securities account (CSDP B)

14 |

**EXAMPLE 224 - ALREADY MATCHED SETTLEMENT INSTRUCTION INSTRUCTED BY A CSD PARTICIPANT WHICH IS THE OWNER OF ONE OF THE SECURITIES ACCOUNTS (E.G. THE DELIVERING)**

For this example, the Instructing Party might be either the owner of the receiving securities account, or the owner of the delivering securities account. Both possibilities are depicted hereafter:

I Option 1 The CSDP (e.g. a CCP) is the owner of the receiving securities account:

	Already matched Securities settlement transaction <b>instruction</b> with Instructing Party= CSDP (CCP) which is the owner of the receiving securities account	Securities settlement transaction <b>status advice</b> (delivering side) (sent to the CSDP-CCP)	Securities settlement transaction <b>status advice</b> (receiving side) (sent to the CSDP-CCP)

This example relates to the following business scenario: A CSD Participant (e.g. a CCP) instructs T2S both legs of a transaction, i.e. one leg for itself as owner of one of the securities account and another on behalf of its counterpart (owner of the securities account). The first option relates to the situation where after the novation, the CCP has to receive securities from CSDP A; while the second option relates to the situation where after the novation, the CCP has to deliver securities to CSDP B.

1 **EXAMPLE 225 - ALREADY MATCHED SETTLEMENT INSTRUCTION INSTRUCTED BY A CSD PARTICIPANT WHICH IS NOT THE**  
 2 **OWNER OF ANY OF THE SECURITIES ACCOUNTS**

	Already matched Securities settlement transaction <b>instruction</b> with Instructing Party= CSDP C which is not the owner of any of the securities accounts	Securities settlement transaction <b>status advice</b> (delivering side) (sent to the CSDP C)	Securities settlement transaction <b>status advice</b> (receiving side) (sent to the CSDP C)

Processing ID (section 11 or 12) (Party 1 only)	Section 11- Deli: CSDPA-Ref-1 Section 12- Rece: CSDPB-Ref-2	Section 11- Deli: CSDPA-Ref-1 Section 12- Rece: CSDPB-Ref-2	Section 11- Deli: CSDPA-Ref-1 Section 12- Rece: CSDPB-Ref-2

3  
 4 This example relates to the following business scenario: a CSD Participant (e.g. a trading platform-CSDP C)  
 5 instructs T2S both legs of a transaction on behalf of the owners of the securities accounts (CSDP A and  
 6 CSDP B)

7 4.3.2.3 External CSD as Instructing Party

8 In this case the Instructing Party BIC (AppHdr/Fr/FIId/FinInstnId/BICFI) and the Instructing Party Parent  
 9 BIC (AppHdr/Fr/FIId/FinInstnId/Othr/Id) identify a Party in T2S with party type External CSD (i.e. BIC of the  
 10 External CSD itself and BIC of the parent CSD respectively).

11 The T2S Actor reference is reported back either:

- 12 | In the Account Owner Transaction Identification if the External CSD is also the owner of the securities  
 13 account as for example in case of a an external-CSD settlement (i.e. the depository is also the External  
 14 CSD), or for example in case of settlement in an Omnibus account (i.e. the depository is the parent  
 15 CSD); or
- 16 | In the Processor Transaction Identification if the Instructing Party is not the owner of the securities ac-  
 17 count.

**EXAMPLE 226 - UNMATCHED SETTLEMENT INSTRUCTION INSTRUCTED BY AN EXTERNAL CSD WHICH IS THE OWNER OF THE SECURITIES ACCOUNT**

	Unmatched delivering or receiving Securities settlement transaction instruction with Instructing Party= External CSD which is the owner of the securities account	Securities settlement transaction status advice (sent to the ExtCSD)
BAH	head.001.001.01	head.001.001.01

MrktInfraStructTxId	NA	T2S- Ref 1	T2S- Ref 2
Processing ID (section 11 or 12) (Party 1 only)	Section 11- Deli: CSDPA-Ref-1 Section 12- Rece: CSDPB-Ref-2	Section 11- Deli: CSDPA-Ref-1 Section 12- Rece: CSDPB-Ref-2	Section 11- Deli: CSDPA-Ref-1 Section 12- Rece: CSDPB-Ref-2

This example relates to the following business scenarios:

- An External CSD instructs T2S both legs of a transaction in an external CSD settlement (i.e. the receiving and delivering depository is also the External CSD). This scenario is relevant for the case in which the External CSD holds different omnibus accounts in its parent CSD.
- An External CSD instructs T2S both legs of a transaction for the movement of securities between two of its omnibus accounts held in its technical issuer CSD (its parent CSD).

1 4.3.2.4 T2S internally generated Settlement Instruction

2 In this case the Instructing Party is always the owner of the securities account. Upon creation of the instruc-  
3 tion, T2S sends a Securities Settlement Transaction Generation Notification -sese.032- message. Given that  
4 it is an outgoing message, the Instructing Party of the T2S generated Settlement Instruction is reported as a  
5 couple of BICs in the "To" block of the BAH. I.e.: AppHdr/To/FIId/FinInstnId/BICFI (Instructing Party BIC)  
6 and in AppHdr/To/FIId/FinInstnId/Othr/Id (Instructing Party Parent BIC).

7 T2S generated Settlement Instructions do not have T2S Actor Reference and therefore "NONREF" is report-  
8 ed. This "NONREF" value is always reported in the Account Owner Transaction Identification because the  
9 Securities Settlement Transaction Generation Notification -sese.032- ISO message does not have either Ac-  
10 count Servicer Transaction Identification or Processor Transaction Identification.

11 **EXAMPLE 228 - T2S GENERATED SETTLEMENT INSTRUCTION FOR A SECURITIES ACCOUNT OWNED BY A CSD (I.E. THE CSD**  
12 **IS THE INSTRUCTING PARTY)**

## 4.4 Digital Signature on Business Layer

### 4.4.1 Mechanism and Introduction for signature constructions

This Annex outlines how signatures are constructed for the T2S Business messages. The following business message types have been identified:

- I Message Type 1: File with multiple ISO 20022 messages. The structure is described in UDFS section File Header;
- I Message Type 2: Single ISO20022 Business Application Header and message. The structure is described in UDFS section Digital Signature managed within the Business Layer;

The design goal for the proposed construction of signatures in the following sections is that as much as possible is handled by standard XML Digital Signature processing specifications and as little as possible by T2S specific processing. This makes it less likely that errors and/or discrepancies occur in the different implementations, and therefore improve the overall security of the solution.

### 4.4.2 Use of XML and canonicalization algorithm

Exclusive XML canonicalization<sup>559</sup> has to be performed for above mentioned business messages on extracted data. It is important to ensure a context free extraction otherwise the signatures will be broken if either the message or the signature itself is modified due to inherited namespaces.

This implies that the canonicalization algorithm specified in the SignedInfo element and in all the references should be in line with following information:

<http://www.w3.org/2001/10/xml-exc-c14n#>

### 4.4.3 Message Type 1: File with multiple ISO 20022 messages

For message type 1) the requirement in the UDFS section Digital Signature managed within the Business Layer states:

*"The NRO<sup>560</sup> signature is stored in the BAH in case of individual messages or in the file header in case of messages grouped into a file. In case messages grouped into a file, the BAH of the included individual messages does not include a signature.*

*File (meaning multi-message):*

*The signature is part of the file header. It is over the list of BAH's and ISO 20022 messages and covers the whole <XChg> element of the Business File (head.002), except for the signature itself."*

The signature, in particular, covers the whole BusinessFileHeader <XChg> element, except for the signature itself. So consequently the following field will be not taken into account for Signature calculation:

---

559 Exclusive XML Canonicalization <http://www.w3.org/TR/xml-exc-c14n/>

560 Non-repudiation of origin is intended to protect against the originator's false denial of having sent the message.

1 Xchg/PyldDesc/AppIspcfcInf/Sgntr/ds:Signature <sup>561</sup>

2 Hence a signature will then be constructed as follows:

3 | One reference (in blue below) points out the XChg itself. This is done using the same document refer-  
4 | ence URI = "", which means the entire document. To leave the signature element itself out of the digest  
5 | calculation, the transform "#enveloped-signature" is used.

6 | One reference (in yellow below) points to the KeyInfo element of the signature itself. This is a XAdES <sup>562</sup>  
7 | requirement.

8 1. A Message Type 1 <sup>563</sup> signature example is reported in the below picture:

```
<ds:Signature Id="_8aeee938-014d-489e-a385-b72155000474" xmlns:ds="http://www.w3.org/2000/09/xmldsig#">
  <ds:SignedInfo>
    <ds:CanonicalizationMethod Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#" />
    <ds:SignatureMethod Algorithm="http://www.w3.org/2001/04/xmldsig-more#rsa-sha256" />
    <ds:Reference URI="">
      <ds:Transforms>
        <ds:Transform Algorithm="http://www.w3.org/2000/09/xmldsig#enveloped-signature" />

    <ds:Reference URI="#_4eaf74f7-086b-410e-b214-45136a615bac">
      <ds:Transforms>
        <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#" />
      </ds:Transforms>
      <ds:DigestMethod Algorithm="http://www.w3.org/2001/04/xmldsig-more#sha256" />
      <ds:DigestValue>8GepFq00h78WgVHh23B16RFQRWhdFM6AjY+b0texasSk=</ds:DigestValue>
    </ds:Reference>
  </ds:SignedInfo>
  <ds:SignatureValue>QzvbmDLi8Q1PnsfKz...HNgew=</ds:SignatureValue>
  <ds:KeyInfo Id="_4eaf74f7-086b-410e-b214-45136a615bac">
    <ds:X509Data>
      <ds:X509Certificate>MIEXTCCA8ag...IY5uXk03IGZ3XUsw=</ds:X509Certificate>
    </ds:X509Data>
  </ds:KeyInfo>
</ds:Signature>
```

Reference to the whole document, less the signature

Reference to KeyInfo (a XAdES requirement)

9

561 Due to the XAdES requirement the ds:KeyInfo element inside the ds:Signature is covered/protected by the signature.

562 ETSI TS 101 903 V1.4.2 (2010-12) XML Advanced Electronic Signatures

563 T2S is configured to produce and generate rsa-sha256 signatures, and use sha256 digest. T2S can also validate a rsa-sha1 signature if it receives such a signature.

## 1 Reference to the message (head.002):

2

3 2. A Message Type 1 structure example (including signature) is provided in XML format outside of this doc-  
4 ument (s\_head.002.001.01.xml):

5 [http://www.swift.com/mystandards/T2S/head.002.001.01\\_T2S](http://www.swift.com/mystandards/T2S/head.002.001.01_T2S)

6 **4.4.4 Message Type 2: single ISO 20022 message**

7 564

8 For message type 2) the requirement in UDFS section Digital Signature managed within the Business Layer  
9 states:

10 *"Single message: The signature is over the ISO 20022 message and takes into account the business pro-  
11 cessing relevant information specified within the BAH (e. g. pair of BICs for definition of the instructing par-  
12 ty), except for the signature itself. The digital signature grouped in the BAH itself is not part of this signature  
13 calculation."*

14 So consequently the following field will be not taken into account for Signature calculation:

15 AppHdr/Sgntr/ds:Signature <sup>565</sup>

16 In this case the BAH and the ISO 20022 message are considered not to be in the same document.

17 *"Technically speaking, the Application Header is a separate XML document standing apart from the XML  
18 documents which represent the business message instance itself."*

---

564 See also MUG (Message user guide) for BAH; <http://www.iso20022.org/bah.page>

565 Due to the XAdES requirement the ds:KeyInfo element inside the ds:Signature is covered/protected by the signature.

1 Since the documents that are referenced do not carry an ID attribute <sup>566</sup> that could be used for identifying  
2 the specific document, it has been decided to use a T2S specific reference for the business message, T2S  
3 ensures that the BAH and the corresponding ISO message are always stored together.

#### 4 T2S Specific Reference for document signature

5 In the XML Digital Signature standard there is the possibility to use a reference with no URI i.e. omitting the  
6 URI attribute entirely. However there can be at most one such reference in a signature, and handling of it is  
7 T2S specific, and not covered by the XML Digital Signature standard <sup>567</sup>. Hence the reference to the message  
8 must be given by the context and known by the application.

9 The signature will then be constructed as follows:

10 | One reference (in blue below) points out the BAH (AppHdr) itself. This is done using the same document  
11 | reference URI = "", which means the entire document. To leave the signature element itself out of the  
12 | digest calculation, the transform "#enveloped-signature" is used;

13 | One reference (in green below) is application specific and refers to the business message (no URI). The  
14 | application will provide the signature API with the relevant message. The signature API is customized to  
15 | resolve the no URI reference to this message;

16 | One reference (in yellow below) points to the KeyInfo element of the signature itself (XAdes require-  
17 | ments).

18 1. A message type 2 <sup>568</sup> signature example (with application specific reference) is reported in the below  
19 picture:

---

566 ISO20022 do not support and specify an ID attribute, that can be used by T2S to uniquely identify BAH and ISO message.

567 XML Signature Syntax and Processing (Second Edition), W3C Recommendation 10 June 2008, <http://www.w3.org/TR/xmlsig-core/>

568 T2S is configured to produce and generate rsa-sha256 signatures, and use sha256 digest. T2S can also validate a rsa-sha1 signature if it receives such a signature.

```

<ds:Signature Id="_003adca5-654a-473d-b1cf-3e826cd5d3f7" xmlns:ds="http://www.w3.org/2000/09/xmldsig#">

</Document>
```

The application will provide the signature API with the relevant message.

2

3 2. A Message Type 2 structure example (including signature) is provided in XML format outside of this doc-  
4 ument (s\_Semt.01\_.SR.501801a.1\_HDR.xml):

5 [http://www.swift.com/mystandards/T2S/head.001.001.01\\_T2S](http://www.swift.com/mystandards/T2S/head.001.001.01_T2S)

#### 6 4.4.5 T2S usage of ds:Object, Attribute ID of the Signature and KeyInfo, Anchor of 7 trust:

##### 8 Usage of block "Object":

9 In message type 1 and 2 the ds:Object element is not used when constructing the signature. The T2S signa-  
10 ture API (Application Programming Interface) follows standard XML Signature Processing which defines what  
11 happens when a ds:Object element is encountered:

- 12 | If the ds:Object (or its content) is referenced in ds:SignedInfo, then the API will verify this reference as  
13 | part of the signature verification;
- 14 | If the ds:Object is not referenced in ds:SignedInfo, then the API will ignore it, when performing the  
15 | cryptographic check of the signature.

16 However if the ds:Object contains e.g. XAdES Qualifying properties, these will be examined in order to de-  
17 termine the signature format, I.e. is the signature a XAdES-BES or XAdES-T or XAdES-C.

18 *T2S recommendation is to not use in message type 1 and 2 the ds:Object element.*

##### 19 Usage of Attribute ID of the block "Signature":

20 T2S will generate the ID attribute of the Signature element when building a signature to be sent to counter-  
21 parts. The ID attribute is optional for signatures sent to T2S. If present the value of the ID attribute must be  
22 an underscore ("\_") followed by a universally unique identifier (UUID), that is either timebased (UUID ver-  
23 sion 1) or random (UUID version 4). The UUID generating system is responsible for ensuring that all the  
24 UUID's in a single document are unique.

##### 25 Usage of block "KeyInfo":

26 The XAdES standard allows two different methods to comply with the XAdES-BES requirement. In T2S it has  
27 been decided to use the one that includes the signer certificate in the KeyInfo element:

1 | Element KeyInfo must be present and must include the ds:X509Data/ds:X509Certificate containing the  
2 | signing certificate.

3 | The ID attribute on the KeyInfo element is mandatory and the value of the ID attribute must be a un-  
4 | derscore ("\_") followed by a universally unique identifier (UUID), that is either timebased (UUID version  
5 | 1) or random (UUID version 4).

6 | The SignedInfo element must reference the KeyInfo element using the ID attribute.

7 | Usage of the alternative ds: Ob-  
8 | ject/QualifyingProperties/SignedProperties/SignedSignatureProperties/SigningCertificate element is not al-  
9 | lowed.

## 10 | **Anchor of trust**

11 | It is necessary that the parties have enough information to validate the signatures. This is ensured by having  
12 | the same anchor of trust in both ends and providing certificates in KeyInfo. Depending on the Certificate  
13 | Authority (CA) structure and the chosen anchor of trust, the number of certificates included in the KeyInfo  
14 | element may vary:

15 | In case of a root CA that issues intermediate CA certificates that in turn issue the signer certificates, the  
16 | chain in the KeyInfo element depends on the chosen anchor of trust:

17 | – If the anchor of trust is the intermediate CA, then the chain in the KeyInfo element need only to con-  
18 | tain the signer certificate;

19 | – If the anchor of trust is the root CA, the chain in the KeyInfo element must include both the signer  
20 | certificate and the intermediate CA certificate.

21 | In case of a root CA that issues signer certificates directly, the root CA is the anchor of trust: The chain  
22 | in the KeyInfo element needs only to contain the signer certificate.

23 | The parties communicating must use the same certificates as anchor of trust. It is up to T2S for each CA to  
24 | choose the certificate (root or intermediate) that constitutes the anchor of trust.

## 25 | ~~4.5 Securities valuation bulk file format specifications~~

### 26 | ~~4.5.1 Introduction~~

#### 27 | ~~4.5.1.1 Context~~

28 | ~~The Securities Valuation collateral related data (also mentioned as SVA) are communicated by~~  
29 | ~~NCBs and Payment Banks to T2S through CRDM on a daily basis, on time for the start of Night-~~  
30 | ~~time settlement.~~

31 | ~~NCBs and Payment Banks provide SVAs via "flat files", while A2A messages and U2A screens~~  
32 | ~~are used by Payments Banks for "client auto-collateralisation". The U2A channel can also be~~  
33 | ~~used by NCBs and Payment Banks for contingency reasons or maintenance operations concern-~~  
34 | ~~ing a limited number of records. {Split book approach}~~

1 **4.5.1.2 Purpose**

2 ~~This chapter provides a description of the structure of the "flat file" used by NCBs and Payment~~  
 3 ~~Banks to send SVAs to CRDM. The same structure applies to the file (so called "enriched" file)~~  
 4 ~~sent back from CRDM to the original sender and containing status and error information of re-~~  
 5 ~~jected SVAs <sup>569</sup>. (Split book approach)~~

6 **4.5.2 Files technical Specification**

7 ~~The files have a simple XML format (in order to allow the network signature). All the records~~  
 8 ~~are included into a single "store and forward" message conveyed by the VAN provider. No busi-~~  
 9 ~~ness signature of the message is needed.~~

10 ~~Within the message, the whole file is embedded in a single XML tag (<File></EndFile>):~~

11 ~~Between these tags the file has fixed-length records, with no header and footer. Each record~~  
 12 ~~has a length of 251 characters/bytes, the last character is a record separator (LF). (Split book~~  
 13 ~~approach)~~

14 **4.5.2.1 Identification and routing**

15 ~~The messages transporting Securities Valuations files will be identified by a specific Re-~~  
 16 ~~questType <sup>570</sup> set by each VAN provider.~~

17 ~~Only authorized NCBs and Payment Banks included in a "white list" are allowed to send the SVA~~  
 18 ~~files.~~

19 ~~They must be known in advance by the CRDM and, moreover, CRDM must know in advance the~~  
 20 ~~technical addresses, expressed in form of standard "Distinguished Names", used when sending~~  
 21 ~~the messages by each authorized party.~~

22 ~~So, CRDM must have a pre-loaded configuration table, "white list", such as the following:~~  
 23

PARENT-BIC	BIC	SENDING-DN
BIC1	BIC2	DN1
BIC1	BIC3	DN2
BIC1	BIC4	DN3
---	---	---

24 ~~BIC2, BIC3 and BIC4 are the BICs identifying <sup>571</sup> the NCB in T2S and DN1, DN2 and DN3 are the~~  
 25 ~~technical senders that are authorised to send SVA files for the three NCBs. This configuration~~

569 ~~The "enriched" file is sent back to the NCB in any case, even if all the rows have been successfully loaded. (Split book approach)~~

570 ~~This value is assigned to specify the type of message exchanged in the network. For SVA files a new value must be used, to be agreed with VAN providers, dedicated to this message. (Split book approach)~~

571 ~~As the sending parties are only NCBs, BIC1 is always the BIC of T2S Operator. (Split book approach)~~

1 ~~table must include all the parties authorized to send SVA files and, for each party, the DN of the~~  
2 ~~authorised technical sender.~~

3 ~~The SVA file is rejected by CRDM when it refers (in field 1 and 2 of the file, see below) to valua-~~  
4 ~~tions provided by a party not present in the configuration table. It is also rejected if the XML~~  
5 ~~message hasn't been sent using a DN linked, in the same table, to the party providing the valu-~~  
6 ~~ations. (Split book approach)~~

#### 7 4.5.2.2 Structure

8 ~~In order to ensure full compatibility with existing CMS applications, T2S supports two versions~~  
9 ~~of the flat file. Version A will continue being supported until the go-live of ECMS. (Split book~~  
10 ~~approach)~~

#### 11 4.5.2.2.1 Securities Valuations Flat File – Version A

##### 12 XML schema for the request

13 ~~The following is the XML schema used to embed the file into a "store and forward" message:~~

```
14 <?xml version="1.0" ?>  
<xs:schema xmlns="urn:T2S:SecuritiesValuationBulkFile" xmlns:xs="http://www.w3.org/2001/XMLSchema"  
  targetNamespace="urn:T2S:SecuritiesValuationBulkFile"  
  elementFormDefault="qualified">  
  <xs:simpleType name="RestrictedFileType">  
    <xs:restriction base="xs:string">  
      <xs:pattern value="(\{181,181\}n)+"/>  
    </xs:restriction>  
  </xs:simpleType>  
  <xs:element name="File" type="File"/>  
  <xs:complexType name="File">  
    <xs:simpleContent>  
      <xs:extension base="RestrictedFileType">  
        <xs:attribute name="fileId" type="xs:string" default="" />  
      </xs:extension>  
    </xs:simpleContent>  
  </xs:complexType>  
</xs:schema>
```

##### 15 Example of XML request

```
16 <?xml version="1.0" encoding="UTF-8"?>  
<File fileId="T2SSVAFile20150630"  
  xmlns="urn:T2S:SecuritiesValuationBulkFile">Record1  
  Record2  
  ...  
  Recordn  
</File>
```

##### 17 XML schema for the response

1 **In order to ensure the interoperability to the ISO 15022 standard the character set of all fields**  
2 **is restricted to the SWIFT X Character Set (see below):**

3 **Character Set**

4 **All characters belong to the SWIFT X Character Set. The character set is as follows:**

5 **a b c d e f g h i j k l m n o p q r s t u v w x y z**

6 **A B C D E F G H I J K L M N O P Q R S T U V W X Y Z**

7 **0 1 2 3 4 5 6 7 8 9**

8 **/ - ? : ( ) . , ' +**

9 **CR LF Space (Split book approach)**

10 **4.5.2.2 Securities Valuations Flat File - Version B**

11 **XML schema for the request**

12 **The following is the XML schema used to embed the file into a "store and forward" message:**

```
<?xml version="1.0" ?>
<xs:schema xmlns="urn:T2S:SecuritiesValuationBulkFile" xmlns:xs="http://www.w3.org/2001/XMLSchema"
  targetNamespace="urn:T2S:SecuritiesValuationBulkFile"
  elementFormDefault="qualified">
  <xs:simpleType name="RestrictedFileType">
    <xs:restriction base="xs:string">
      <xs:pattern value="{(251,251)\n}+/">
    </xs:restriction>
  </xs:simpleType>
  <xs:element name="File" type="File"/>
  <xs:complexType name="File">
    <xs:simpleContent>
      <xs:extension base="RestrictedFileType">
        <xs:attribute name="fileId" type="xs:string" default="" />
      </xs:extension>
    </xs:simpleContent>
  </xs:complexType>
</xs:schema>
```

13  
14 **Example of XML request**

```
<?xml version="1.0" encoding="UTF-8"?>
<File fileId="T2SSVAFile20150630"
  xmlns="urn:T2S:SecuritiesValuationBulkFile">Record1
Record2
...
Recordn
</File>
```

15

1 **Encoding**

2 ~~The encoding of the flat file is UTF-8 with no Byte Order Mark (BOM).~~

3 **Default Values**

4 ~~Default values are not used because there are no optional fields~~

5 **ISO 15022 Interoperability**

6 ~~In order to ensure the interoperability to the ISO 15022 standard the character set of all fields~~  
 7 ~~is restricted to the SWIFT X Character Set (see below).~~

8 **Character Set**

9 ~~All characters belong to the SWIFT X Character Set. The character set is as follows:~~

10 ~~a b c d e f g h i j k l m n o p q r s t u v w x y z~~

11 ~~A B C D E F G H I J K L M N O P Q R S T U V W X Y Z~~

12 ~~0 1 2 3 4 5 6 7 8 9~~

13 ~~/ - ? : ( ) . , ' +~~

14 ~~CR-LF Space {Split book approach}~~

15 **4.5.3 Format of Structured Files**

16 4.5.3.1 ~~Format types~~

17 ~~The values appear in the format as in the table below:~~

18

FORMAT-TYPE	
DATE	The format is « yyyy-mm-dd » with no timezone indication. Example: "2015-06-30"
CHAR(n)	String with exactly n characters.
NUMERIC(p)	Number with maximum p integer places and no decimal places.

19 {Split book approach}

20 4.5.3.2 ~~Format of records~~

21

FLAT FILE COLUMN	COLUM-NAME	FORMAT	DESCRIPTION	RULES
<b>First row</b>				

FLAT FILE COLUMN	COLUMN-NAME	FORMAT	DESCRIPTION	RULES
1	Tag-of-start-of-file	CHAR(60)	"" or "<File>"	The optional attribute fileId is a file reference that can be assigned by the sender. It is optional and it can be used to link the file returned by CRDM and the file originally sent to CRDM. The length of value assigned to fileId is from 0 to 54 characters.
<b>Rows from #2 on</b>				
1	Parent-BIC	CHAR(11)	Parent BIC of the Party providing the valuations	It must be known in advance by CRDM and included in the configuration table (see above).
2	BIC	CHAR(11)	BIC of the Party providing the valuations	It must be known in advance by CRDM and included in the configuration table (see above).
3	Valuation-Date	DATE	Date of the valuation	
4	ISIN	CHAR(12)	ISIN code of the securities	
5	Currency	CHAR(3)	ISO Currency code for the valuations	
6	Price-coefficient	NUMERIC(31)	Price as coefficient — without any decimal point / comma	Example: If the price is

FLAT FILE COLUMN	COLUMN-NAME	FORMAT	DESCRIPTION	RULES
				<b>123,45 must be: 000...00012345 (number of leading zeroes is 26)</b>
<b>7</b>	<b>Number of decimal digits for price as coefficient</b>	<b>NUMERIC (4)</b>	<b>Price as coefficient (i.e. without currency)—number of fractional digits</b>	<b>Example: If the price is 123,45 must be: 0002</b>
<b>8</b>	<b>Price as amount</b>	<b>NUMERIC (31)</b>	<b>Price as amount (i.e. with currency)—without any decimal point / comma</b>	<b>Example as above</b>

## 2 4.6 Flat file EoD reports format specifications

### 3 4.6.1 Introduction

#### 4 4.6.1.1 Context

5 The following critical EoD reports may be generated as flat files either in full and/or delta versions if opted  
 6 by CSDs or mandatorily in full version for ECMS <sup>576</sup>, following a like-for-like approach to the report content of  
 7 the already available XML versions:

- 8 | semt.002 - Statement of Holdings
- 9 | semt.016 - Statement of Settled Intra-position Movements
- 10 | semt.017 - Statement of Transactions

---

576 The ECMS reporting encompasses only the semt.002, semt.017 and semt.018 flat files.

1 | I semt.018 - Statement of Pending Instructions

2 | I semt.034 - Statement of Pending Intra-position Movements

3 All the reports will contain a signature only at DEP level, except for the ECMS reporting, and will be routed to  
4 a given Party Technical Address previously determined and configured by T2S Service Desk.

#### 5 4.6.1.2 Purpose

6 This chapter provides a description of the structure of the flat file for each of the above-listed critical reports  
7 sent by T2S to the CSDs at EoD.

### 8 **4.6.2 Files Technical Specification**

9 The files have a simple XML format (in order to allow for the network signature). All records are included  
10 into a single "store and forward" message conveyed by the VAN provider to the CSDs. The files sent to  
11 ECMS are sent via the internal channel. No business signature is needed in both cases.

12 Within the message, the whole file is embedded in a single XML tag (<File> </File>).

13 Between these tags the file has fixed-length records, with a header and a footer. This header and footer are  
14 the ones specified within the flat file specifications below, no business header is foreseen. For delta reports  
15 where no activity has occurred the file will be empty between the header and the footer.

#### 16 4.6.2.1 Identification and routing

17 T2S triggers the generation of flat file reports based on a business event, e.g. End of Day. The messages  
18 transporting EOD flat file reports are identified by a specific RequestType. This value is assigned to specify  
19 the type of message exchanged in the network. Depending on the report, the value "semt.xxx.002"  
20 semt.xxx.016" semt.xxx.017" semt.xxx.018" semt.xxx.034" is used. All CSD flat file reports are pushed in  
21 A2A mode and compressed when they exceed the minimum size of 2KB, since compression for these reports  
22 is mandatory. The compression is not applicable to ECMS flat file reports since they are sent via the internal  
23 channel.

24 All information about the necessary attributes in each named category is stored as reference data in T2S and  
25 influences the generation of the report. The privilege to configure these reference data or subscribe to a  
26 certain report is granted solely to the T2S Operator.

27 Each CSD flat file report type provides information on the default data scope of the concerned party (i.e.  
28 CSD). The data scope is indicated by the party for which it is configured and is limited to CSDs, e.g. a  
29 Statement of Transactions reports on all Securities Accounts of the indicated party. Whilst each ECMS flat file  
30 report type provides information on a limited set of securities accounts of the default data scope of the con-  
31 cerned party (i.e. CSD).

32 Flat file reports can only be configured at a system entity level, i.e. reports providing the CSD with infor-  
33 mation relating to all its CSD participants. The concerned party has to be specified, when the flat file report  
34 is configured for the first time.

1 A party configured to receive flat file reports cannot receive the equivalent reports through other channels.  
2 This does not, however, prevent CSD participants from receiving those reports through such channels, even  
3 if their CSD has opted for the flat file.

#### 4 4.6.2.2 Structure

##### 5 **XML Schema for the Request**

6 The following is the XML schema used to embed the file into a "store and forward" message for the different  
7 reports.

```
8 <?xml version="1.0" ?>  
9 <xs:schema xmlns="urn:T2S:???" xmlns:xs="http://www.w3.org/2001/XMLSchema"  
10 targetNamespace="urn:T2S:???"  
11 elementFormDefault="qualified">  
12 <xs:simpleType name="RestrictedFileType">  
13 <xs:restriction base="xs:string">  
14 </xs:restriction>  
15 </xs:simpleType>  
16 <xs:element name="File" type="File"/>  
17 <xs:complexType name="File">  
18 <xs:simpleContent>  
19 <xs:extension base="RestrictedFileType">  
20 <xs:attribute name="fileID" type="xs:string" default="" />  
21 </xs:extension>  
22 </xs:simpleContent>  
23 </xs:complexType>  
24 </xs:schema>
```

8 The ??? in the schema and targetNamespace above are placeholders for the name of the specific flat file  
9 being produced (i.e. StatementOfHoldingFlatFile, StatementOfTransactionsFlatFile, etc.)

##### 11 **Example of XML Request**

```
12 <?xml version="1.0" encoding="UTF-8"?>  
13 <File fileID = "???" xmlns="urn:T2S: StatementOfHoldingFlatFile">  
14 Header  
15 Record1  
16 Record2  
17 ...  
18 Recordn  
19 Footer  
20 </File>
```

13 The ??? in the fileID above are placeholders for the name and date of the specific flat file being produced  
14 (i.e. T2Ssem002FlatFile201600131, T2Ssem016FlatFile20150630, etc.)

##### 15 **Encoding**

16 The encoding of the flat file reports is UTF-8 with no Byte Order Mark (BOM).

##### 17 **Default Values**

18 See Field Types.

##### 19 **ISO 15022 Interoperability**

1 In order to ensure the interoperability to the ISO 15022 standard the character set of all fields is restricted  
2 to the SWIFT X Character Set (see below).

3 **Character Set**

4 All characters belong to the SWIFT X Character Set. The Character set is as follows:

- 5 a b c d e f g h i j k l m n o p q r s t u v w x y z
- 6 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
- 7 0 1 2 3 4 5 6 7 8 9
- 8 / - ? : ( ) . , ' +
- 9 CR LF Space

10 **4.6.3 Format of Structured Files**

11 4.6.3.1 Statement of holdings file format. semt.002

12 The Statement of holdings file follows the format below:

13 A header will contain the following data:  
14

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'H' for Header
2	Page number	NUMERIC(5)	Identifies which page of the report is being reported	
3	Last page indicator	CHAR(5)	Identifies whether file is the last file of report	Values: True (meaning 'Yes, it is the last message') False (meaning 'No, it is not the last message')
4	Statement number	CHAR(16)	Reference common to all pages of a statement	Built like this:   CSD (4 characters)   Report type (4 characters)   Report mode (1 character)   BD (yymmdd, 6

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
				characters)   Frequency (1 character)
5	Report Timestamp	DATETIME	Timestamp reflecting date and time of the creation of the report	YYYY-MM-DD-hh.mm.ss.ssssss
6	Frequency	CHAR(4)	Frequency of the statement	Values are extracted from the Attribute domain depending on the configuration performed by the T2S Operator; ... Proposed values for FULL mode:   DAIL: Daily   WEEK: Weekly   MNTH: Monthly Proposed values for DELTA mode:   DAIL: Daily, if no intraday report is configured.   INDA: Intraday, if intraday report is configured.
7	Update type	CHAR(4)	Indicates whether the report is complete or contains changes only.	Values: COMP: Complete – Statement is complete. DELT: Delta – Statement contains changes only.
8	Statement basis	CHAR(4)	Statement basis expressed as an ISO 20022 code.	Fixed value. Only code "SETT" is used in T2S

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
9	Activity indicator	CHAR(5)	Indicates whether there is activity or information update reported in the statement.	Values: True (meaning 'Yes') False (meaning 'No')
10	Sub account indicator	CHAR(5)	Indicates whether the statement reports holdings at sub-safekeeping account level.	T2S does not provide holdings at sub-safekeeping account level. Fixed value to "false"
11	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

1

2  
3

The report details will contain the following information:

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'B': for Body
2	Account owner BIC	CHAR(11)	Primary BIC of the T2S party owning the securities account.(Party code)	
3	Account servicer BIC	CHAR(11)	BIC of the Party that manages the account on behalf of the account owner.(Party code)	
4	Safekeeping account	CHAR(35)	Securities account number of the T2S party	
5	ISIN	CHAR(12)	Securities code	
6	Row type	CHAR (1)	Indicates if the position displayed is detailed	

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
			(D) or aggregated (A) or further gives information on the restriction type (I)	
7	Aggregation information	CHAR(4)	Indicates if the displayed position is available (AVAI), not available (NAVL) or aggregated (AGGR)	AVAI = restriction types in ('Earmarked', 'Deliverable') NAVL = restriction types in ('Blocking', 'CoSD Blocking' and 'Reservation') AGGR = AVAI+NAVL
8	Restriction processing type	CHAR(4)	Specifies a classification for the type of processing T2S shall apply for the restriction.	Ex: BLCK, RESE, EARM, AWAS, COSD, COLL
9	Restriction type	CHAR(4)	Specifies a code defined by the CSD to identify the restriction.	Ex: RES1, COSP
10	Restriction reference	CHAR(35)	Unique reference assigned by T2S when setting up a blocking, a CoSD blocking or reservation restriction	Present only when row type column is not equal to 'I'. Ex:RRF54321
11	Position	DECIMAL(x,n)	Quantity of securities in the restricted position	Present only when row type column is not equal to 'I'. Formatting info: <ul style="list-style-type: none"> <li>  Left justified</li> <li>  Signed ('+' or '-' )</li> <li>  No leading zeros inserted</li> <li>  Maximum of 9</li> </ul>

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
				decimal digits   '.' will be used as decimal separator   Removal of non-significant decimals e.g. +1000.123456789; +10000000.25; -12345
12	Settlement type	CHAR(4)	Indicates if the securities settle in Units (UNIT) or Nominal (FAMT)	Present only when row type column is not equal to 'I'.
13	Information	CHAR (140)	Provides additional information on the sub-balance (description of the restriction type ID)	Present only when row type column is equal to 'I'. Ex: " Restriction Type 01"
14	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

1

2 A footer will contain the following data:

3

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'F': for Footer
2	NumberOfRecords	NUMERIC(18)	Total number of data records in the file	Number: integer representation, 18 digits long
3	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

4

5 For delta reports where no activity has occurred on any of the accounts the file will be empty.

1 4.6.3.2 Statement of settled intra-position movements. semt.016

2 A header will contain the following data:  
3

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'H': for Header
2	Page Number	NUMERIC(p)	Sequence number of the concerned message within the set of divided messages recurring to pagination	
3	Last Page Indicator	CHAR(5)	Indicator for last message within the set of divided messages recurring to pagination	Values: True (meaning 'Yes, it is the last message') False (meaning 'No, it is not the last message')
4	Statement Identification	CHAR(16)	Reference common to all pages of a statement.	
5	Statement Period From	DATETIME(26)	Statement period start date and time.	
6	Statement Period To	DATETIME(26)	Statement period end date and time.	
7	Statement Frequency	CHAR(4)	Frequency of the statement.	Values are extracted from the Attribute domain depending on the configuration performed by the T2S Operator; ... Proposed values for FULL mode: <ul style="list-style-type: none"> <li>  DAIL: Daily</li> <li>  WEEK: Weekly</li> <li>  MNTH: Monthly</li> </ul>

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
				Proposed values for DELTA mode: <ul style="list-style-type: none"> <li>  DAIL: Daily, if no intraday report is configured.</li> <li>  INDA: Intraday, if intraday report is configured.</li> </ul>
8	Statement Update Type	CHAR(4)	Indicates whether the statement is complete or contains changes only.	Values: COMP: Complete - Statement is complete. DELT: Delta - Statement contains changes only.
9	Statement Activity Indicator	CHAR(5)	Indicates whether there is activity or information update reported in the statement.	Values: True (meaning 'Yes') False (meaning 'No')
10	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

1

2 The report will contain the following information:

3

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'B': for Body
2	Account owner BIC	CHAR(11)	Primary BIC of the T2S party owning the securities account.(Party code)	
3	Safekeeping account	CHAR(35)	Securities account number of the T2S	

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
			party	
4	ISIN	CHAR(12)	Securities code	
5	Balance From	CHAR(4)	Sub-balance from which the securities were moved, expressed as an ISO20022 code (AWAS) or as proprietary code, ID part.	Either the restriction type AWAS (Balance of financial instruments that are freely available with no specific additional status) or a Proprietary Identification code, defined by the CSD: ex RES1
6	Issuer	CHAR(4)	Entity that assigns the identification.	Single value: 'T2S' as the constant representing the Issuer within T2S. This element is mandatory if a Proprietary Code is given.
7	Scheme Name	CHAR(4)	Short textual description of the scheme.	Single value: 'RT' as the constant representing the Schema Name for 'Restriction Type' within T2S. This element is mandatory if a Proprietary Code is given.
8	Market Infrastructure Id	CHAR(16)	Identification of a transaction assigned by a market infrastructure other than a central securities depository, for example, Target2-Securities.	
9	Settled Quantity	NUMERIC(14)	Quantity of financial instrument effectively settled.	Integer part of the Settled Quantity

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
10	Number of decimal digits for Settled Quantity	NUMERIC(2)	Number of decimal digits for the Settled Quantity	
11	Previously Settled Quantity	NUMERIC(14)	Quantity of financial instrument previously settled	Integer part of the Previously Settled Quantity
12	Number of decimal digits for Previously Settled Quantity	NUMERIC(2)	Number of decimal digits for the Settled Quantity	
13	Remaining to be Settled Quantity	NUMERIC(14)	Quantity of financial instrument Remaining to be settled	Integer part of the Previously Settled Quantity
14	Number of decimal digits for remaining to be Settled Quantity	NUMERIC(2)	Number of decimal digits for remaining to settled Quantity	
15	Securities Sub Balance Id	CHAR (30)	Restriction Reference as assigned by T2S during the setup of a restriction	
16	Balance To	CHAR(4)	Balance to which the securities were moved	Either the restriction type AWAS (Balance of financial instruments that are freely available with no specific additional status) or a Proprietary Identification code, defined by the CSD: ex RES1
17	Issuer	CHAR(4)	Entity that assigns the identification.	Single value: 'T2S' as the constant representing the Issuer within T2S. This element is mandatory if a Proprietary Code is given.

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
18	Scheme Name	CHAR(4)	Short textual description of the scheme.	Single value: 'RT' as the constant representing the Schema Name for 'Restriction Type' within T2S. This element is mandatory if a Proprietary Code is given.
19	Settlement Date	DATE(10)	Date at which the securities were moved.	
20	Accepted Timestamp (SF1)	DATETIME(26)	Shows the accepted timestamp of the settlement instruction.	
21	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

1

2 A footer will contain the following data:

3

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'F': for Footer
2	NumberOfRecords	NUMERIC(18)	Total number of data records in the file	Number: integer representation, 18 digits long
3	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

4

5 For delta reports where no activity has occurred on any of the accounts the file will be empty.

6 4.6.3.3 Statement of transactions. semt.017

7 A header will contain the following data:

1

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'H': for Header
2	Page Number	NUMERIC(5)	Sequence number of the concerned message within the set of divided messages recurring to pagination	
3	Last Page Indicator	CHAR(5)	Indicator for last message within the set of divided messages recurring to pagination	Values: True (meaning 'Yes, it is the last message') False (meaning 'No, it is not the last message')
4	Statement Identification	CHAR(16)	Reference common to all pages of a statement	
5	Statement Period from	DATETIME(26)	Statement period start date and time.	
6	Statement Period To	DATETIME(26)	Statement period end date and time.	
7	Statement Frequency	CHAR(4)	Frequency of the statement.	Values are extracted from the Attribute domain depending on the configuration performed by the T2S Operator; ... Proposed values for FULL mode:   DAIL: Daily   WEEK: Weekly   MNTH: Monthly Proposed values for DELTA mode:

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
				- DAIL: Daily, if no intraday report is configured. - INDA: Intraday, if intraday report is configured.
8	Statement Update Type	CHAR(4)	Indicates whether the report is complete or contains changes only.	Values: COMP: Complete - Statement is complete. DELT: Delta - Statement contains changes only.
9	Statement Basis	CHAR(4)	Indicates whether the statement is complete or contains changes only	SETT: Settled - The statement is based on settled date positions to the knowledge of the sender at the time of the statement preparation.
10	Statement Activity Indicator	CHAR(5)	Indicates whether there is activity or information update reported in the statement	Values: True (meaning 'Yes') False (meaning 'No')
11	Sub Account indicator	CHAR(5)	Indicates whether the statement reports holdings at sub safe-keeping account level	Values: True (meaning 'Yes') False (meaning 'No') – default value
12	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

1

2 The report details will contain the following information:

1

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'B': for Body
2	Account Owner BIC	CHAR(11)	Primary BIC of the T2S party owning the securities account.(Party code)	
3	Safekeeping account	CHAR(35)	Securities account number of the T2S party	
4	ISIN	CHAR(12)	Securities code	
5	Account Owner Transaction Identification	CHAR(16)	Unambiguous identification of the transaction as known by the account owner (or the instructing party managing the account).	Reference assigned by the Account Owner if any, otherwise NON-REF
6	Account Servicer Transaction Identification	CHAR(16)	Unambiguous identification of the transaction as known by the account servicer.	The field is optional, depending on the information contained in the instruction
7	Market Infrastructure Transaction Identification	CHAR(16)	Identification of a transaction assigned by a market infrastructure other than a central securities depository, for example, Target2-Securities.	This reference is mandatory
8	Processor Transaction Identification	CHAR(16)	Identification of the transaction assigned by the processor of the instruction other than the account owner the account servicer and the market infrastruc-	The field is optional, depending on the information contained in the instruction

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
			ture.	
9	Pool Identification	CHAR(16)	Collective reference identifying a set of messages.	The field is optional, depending on the information contained in the instruction
10	Common Identification	CHAR(16)	Unique reference agreed upon by the two trade counterparties to identify the trade.	The field is optional, depending on the information contained in the instruction
11	Corporate Action Event Identification	CHAR(16)	Identification assigned by the account servicer to unambiguously identify a corporate action event.	The field is optional, depending on the information contained in the instruction
12	Transaction Activity Code	CHAR(4)	Specifies the type of activity to which this instruction relates.	Possible values: BOLE, CLAI, COLL, CORP, SETT
13	ISO Transaction Code	CHAR(4)	Choice of type for the transaction reported. Identifies the type of securities transaction, as an ISO 20022 code.	This field is optional
14	Securities Movement Type	CHAR(4)	Specifies if the movement on a securities account results from a deliver or a receive instruction.	Values DELI or RECE
15	Payment	CHAR(4)	Specifies how the transaction is to be settled, for example, against payment.	Values: FREE or APMT
16	Settlement Transaction	CHAR(4)	Parameters applied to	This field is optional

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
	Code NOMC		the settlement of a security transfer:  <ul style="list-style-type: none"> <li>Conditions under which the order/trade is to be settled.</li> </ul>	depending on the information contained in the instruction. Only possible values is:  NOMC: enables the counterparties in a transaction to opt-out from any CAs transaction management arrangements.
17	Settlement Transaction Code: BSSP	CHAR(4)	Parameters applied to the settlement of a security transfer:  Conditions under which the order/trade is to be settled.	This field is optional depending on the information contained in the instruction. Only possible values is:  BSSP: enables the counterparties to identify bilaterally settlement instructions resulting from a partially successful buy-in.
18	Beneficial Ownership Indicator	CHAR(1)	Specifies whether there is change of Beneficial Ownership.	This field is optional, depending on the information contained in the instruction.  Possible values: Y or N
19	Partial Settlement Indicator	CHAR(4)	Parameters applied to the settlement of a security transfer:  <ul style="list-style-type: none"> <li>Specifies whether partial settlement is allowed.</li> </ul>	This field is optional, depending on the information contained in the instruction.  Possible values: NPAR, PARC, PARQ, PART

23	Pool Identification	CHAR(16)	Collective reference identifying a set of messages.	The field is optional, depending on the information contained in the instruction
24	Balance From	CHAR(4)	Sub-balance from which the securities were moved, expressed as an ISO20022 code (AWAS) or as proprietary code, ID part.	Either the restriction type AWAS (Balance of financial instruments that are freely available with no specific additional status) or a Proprietary code, defined by the CSD: ex RES1

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
25	Issuer	CHAR(4)	Entity that assigns the identification.	Single value: 'T2S' as the constant representing the Issuer within T2S. This element is mandatory if a Proprietary Code is given.
26	Scheme Name	CHAR(4)	Short textual description of the scheme.	Single value: 'RT' as the constant representing the Schema Name for 'Restriction Type' within T2S. This element is mandatory if a Proprietary Code is given.
27	Balance To	CHAR(4)	Sub-balance from which the securities were moved, expressed as an ISO20022 code (AWAS) or as proprietary code, ID part.	Either the restriction type AWAS (Balance of financial instruments that are freely available with no specific additional status) or a Proprietary code, defined by the CSD: ex RES1
28	Issuer	CHAR(4)	Entity that assigns the identification.	Single value: 'T2S' as the constant representing the Issuer within T2S. This element is mandatory if a Proprietary Code is given.
29	Scheme Name	CHAR(4)	Short textual description of the scheme.	Single value: 'RT' as the constant representing the Schema Name for 'Restriction Type' within T2S. This element is mandatory if a Proprietary Code is

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
				given.
30	ISIN	CHAR(12)	Securities code	
31	Settlement Quantity	NUMERIC(14)	Quantity of financial instrument to be settled.	Integer part of the Settlement Quantity
32	Number of decimal digits For Settlement Quantity	NUMERIC(2)	Number of decimal digits for the Settlement Quantity	
33	Intended Settlement Date	DATE (10)	The date at which the instruction becomes eligible to be submitted to settlement	
34	Status Date	DATETIME (26)	Date and time at which the status was assigned	
35	Accepted Timestamp (SF1)	DATETIME(26)	Shows the accepted timestamp of the settlement instruction.	
36	Securities Sub Balance Id	CHAR (30)	Number identifying a lot constituting the sub-balance.	This field is optional, depends on the value of the instruction

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
37	Priority	CHAR(4)	Specifies whether the transaction is to be executed with a high priority.	This field is optional, depends on the value of the instruction Possible values: <ul style="list-style-type: none"> <li>  '0001' – Reserved</li> <li>  '0002' – Top</li> <li>  '0003' – High</li> <li>  '0004' – Normal</li> </ul>
38	Creation Date and Time	DATETIME (26)	Entry Date and Time of the intra position movement	
39	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

1

2  
3

A footer will contain the following data:

FLAT FILE COLUMN	COLUMN NAME	FORMAT	DESCRIPTION	RULES
1	Record Type	CHAR(1)	Identifies record as Header, Body or Footer	Values: 'F': for Footer
2	NumberOfRecords	NUMERIC(18)	Total number of data records in the file	Number: integer representation, 18 digits long
3	LF	CHAR(1)	Fixed Value: LF	LF = Line Feed (x'0A')

4

5 For delta reports where no activity has occurred on any of the accounts the file will be empty.

## 4.7 ~~Securities Subject to cash penalties bulk file format specifications~~

### 4.7.1 ~~Introduction~~

#### 4.7.1.1 ~~Context~~

~~The Securities Subject to Cash Penalties data (from here on SStCP) is communicated by CSDs to T2S through CRDM on a daily basis, in time for the daily computation of new penalties for the previous business date. In addition, data can be provided for previous business dates if missing.~~

~~CSDs provide SStCP via "flat files" for creation and update operations, while U2A screens are used for the creation, update and deletion of specific individual instances. (Split book approach)~~

#### 4.7.1.2 ~~Purpose~~

~~The document provides a description of the structure of the "flat file" used by CSDs to send SStCP to CRDM. The same structure applies to the file (so called "enriched" file) sent back from CRDM to the original sender and containing status and error information. (Split book approach)~~

### 4.7.2 ~~Files technical Specification~~

~~The file has a simple XML format (in order to allow the network signature). All the records are included into a single "store and forward" message conveyed by the VAN provider. No business signature of the message is needed.~~

~~Within the message, the whole file is embedded in a single XML tag (<File></File>).~~

~~Between these tags the file has fixed length records, with no header and footer. Each record has a length of 135 characters/bytes, plus one last character as record separator (LF). (Split book approach)~~

#### 4.7.2.1 ~~Identification and routing~~

~~The messages transporting SStCP files are identified by a specific RequestType<sup>577</sup>.~~

~~Only authorized CSDs<sup>578</sup> included in a "white list" are allowed to send the SStCP files.~~

~~They must be known in advance by CRDM and, moreover, CRDM must know in advance the technical addresses, expressed in form of standard "Distinguished Names", used when sending the messages by each authorized party.~~

---

577 ~~This value is assigned to specify the type of message exchanged in the network. For SStCP files the new value „re-da.xxx.securitiessubject2pen" must be used. (Split book approach)~~

578 ~~CSDs can only create Securities Subject to cash Penalties referencing Securities they are defined as Securities-Maintaining-Entity (SME) for. An attempt to create an instance the requestor CSD is not defined as SME for will result in the « Requestor not allowed » error listed in section « Status and error supplementary fields ». (Split book approach)~~

1 ~~Therefore CRDM must have a pre-loaded configuration table, a "White list", structured as fol-~~  
2 ~~lows:~~

<del>Parent BIC</del>	<del>BIC</del>	<del>Sending DN</del>
<del>BIC1</del>	<del>BIC2</del>	<del>DN1</del>
<del>BIC1</del>	<del>BIC3</del>	<del>DN2</del>
<del>BIC1</del>	<del>BIC4</del>	<del>DN3</del>
<del>...</del>	<del>...</del>	<del>...</del>

4 ~~BIC2, BIC3 and BIC4 are the BICs identifying <sup>579</sup> the CSD in T2S and DN1, DN2 and DN3 are the~~  
5 ~~technical senders that are authorised to send SStCP files for the three CSDs.~~

6 ~~This configuration table must include all the parties authorized to send SStCP files and, for each~~  
7 ~~party, the DN of the authorised technical sender.~~

8 ~~The SStCP file is rejected by CRDM when it refers (in field 1 and 2 of the file, see below) to data~~  
9 ~~provided by a party not present in the configuration table. It is also rejected if the XML mes-~~  
10 ~~sage hasn't been sent using a DN linked, in the same table, to the party providing the data.~~

11 ~~In addition, CSDs are only allowed to send SStCP for Securities for which they have an active~~  
12 ~~and open Security CSD Link with Maintenance Flag = TRUE.~~

13 ~~Finally, all standard business validations defined in the « Create Securities Subject to Cash~~  
14 ~~Penalties » and « Update Securities Subject to Cash Penalties » IDFS are applied to the individ-~~  
15 ~~ual SStCP creation/update operations.~~

16 ~~For each row included in the file, CRDM performs a Create or Update operation depending on~~  
17 ~~the value specified in the row.~~

18 ~~In case the file format is not aligned to the file specification or its processing is not possible~~  
19 ~~because of an internal T2S technical error, the whole file is rejected and a response message is~~  
20 ~~sent back to the sender. (Split book approach)~~

#### 21 ~~4.7.2.2 Structure~~

#### 22 ~~XML schema for the request~~

23 ~~The following is the XML schema used to embed the file into a "store and forward" message:~~

---

579 ~~As the sending parties are only CSDs, BIC1 is always the BIC of T2S Operator. (Split book approach)~~

```
<?xml version="1.0" ?>
<xs:schema xmlns="urn:T2S:SecuritiesSubjectToCashPenaltiesBulkFile"
xmlns:xs="http://www.w3.org/2001/XMLSchema"

## 2 4.8 Daily prices bulk file format specifications

### 3 4.8.1 Introduction

#### 4 4.8.1.1 Context

5 ~~The Daily Prices data (from here on DP) is communicated by CSDs to T2S through CRDM on a~~  
6 ~~daily basis, in time for the daily computation of new penalties for the previous business date. In~~  
7 ~~addition, data can be provided for previous business dates if missing.~~

8 ~~CSDs provide DPs via "flat files" for creation and update operations, while U2A screens are used~~  
9 ~~for the creation, update and deletion of specific individual instances. (Split book approach)~~

#### 10 4.8.1.2 Purpose

11 ~~The document provides a description of the structure of the "flat file" used by CSDs to send DPs~~  
12 ~~to CRDM. The same structure applies to the file (so called "enriched" file) sent back from CRDM~~  
13 ~~to the original sender and containing status and error information. (Split book approach)~~

### 14 4.8.2 Files technical Specification

15 ~~The file has a simple XML format (in order to allow the network signature). All the records are~~  
16 ~~included into a single "store and forward" message conveyed by the VAN provider. No business~~  
17 ~~signature of the message is needed.~~

18 ~~Within the message, the whole file is embedded in a single XML tag (<File></File>).~~

19 ~~Between these tags the file has fixed length records, with no header and footer. Each record~~  
20 ~~has a length of 197 characters/bytes, plus one last character as record separator (LF). (Split~~  
21 ~~book approach)~~

#### 22 4.8.2.1 Identification and routing

23 ~~The messages transporting DP files are identified by a specific RequestType<sup>580</sup>.~~

580 ~~This value is assigned to specify the type of message exchanged in the network. For DP files the new value „reda.xxx.dailyprice“ must be used. (Split book approach )~~

- 1 ~~Only authorized CSDs<sup>581</sup> included in a "white list" are allowed to send the DP files.~~
- 2 ~~They must be known in advance by CRDM and, moreover, CRDM must know in advance the~~
- 3 ~~technical addresses, expressed in form of standard "Distinguished Names", used when sending~~
- 4 ~~the messages by each authorized party.~~
- 5 ~~Therefore CRDM must have a pre-loaded configuration table, a "White list", structured as fol-~~
- 6 ~~lows:~~
- 7

Parent BIC	BIC	Sending DN
BIC1	BIC2	DN1
BIC1	BIC3	DN2
BIC1	BIC4	DN3
...	...	...

- 8 ~~BIC2, BIC3 and BIC4 are the BICs identifying<sup>582</sup> the CSD in T2S and DN1, DN2 and DN3 are the~~
- 9 ~~technical senders that are authorised to send DP files for the three CSDs.~~
- 10 ~~This configuration table must include all the parties authorized to send DP files and, for each~~
- 11 ~~party, the DN of the authorised technical sender.~~
- 12 ~~The DP file is rejected by CRDM when it refers (in field 1 and 2 of the file, see below) to data~~
- 13 ~~provided by a party not present in the configuration table. It is also rejected if the XML mes-~~
- 14 ~~sage hasn't been sent using a DN linked, in the same table, to the party providing the data.~~
- 15 ~~In addition, CSDs are only allowed to send DPs for Securities for which they have an active and~~
- 16 ~~open Security CSD Link with Maintenance Flag = TRUE.~~
- 17 ~~Finally, all standard business validations defined in the « Create Daily Prices » and « Update~~
- 18 ~~Daily Prices » IDFS are applied to the individual DP creation/update operations.~~
- 19 ~~For each row included in the file, CRDM performs a Create or Update operation depending on~~
- 20 ~~the value specified in the row.~~
- 21 ~~In case the file format is not aligned to the file specification or its processing is not possible~~
- 22 ~~because of an internal T2S technical error, the whole file is rejected and a response message is~~
- 23 ~~sent back to the sender. {Split book approach }~~

#### 24 ~~4.8.2.2 Structure~~

##### 25 ~~XML schema~~

- 26 ~~The following is the XML schema used to embed the file into a "store and forward" message:~~

---

581 ~~CSDs can only create Daily Prices for Securities they are defined as Securities Maintaining Entity (SME) for. An attempt to create an instance the requestor CSD is not defined as SME for will result in the « Requestor not allowed » error listed in section « Status and error supplementary fields ».~~ {Split book approach }

582 ~~As the sending parties are only CSDs, BIC1 is always the BIC of T2S Operator.~~ {Split book approach }

4.8.3.2 Format of records

Flat file column	Column Name	Format	Description	Rules
<b>First row</b>				
1	Tag of start of file	CHAR(60) for the FileId (including tag), plus fixed values	" " or "<File>"	The optional attribute FileId is a file reference that can be assigned by the sender. It is optional and it can be used to link the file returned by CRDM and the file originally sent to CRDM.  The length of value assigned to fileId is from 0 to 54 characters.
<b>Rows from #2 on</b>				
1	Maintenance Type	CHAR(1)	Type of operation to be performed	Possible values: 'C' for Create 'U' for Update
2	Parent BIC	CHAR(11)	Parent BIC of the CSD providing the data	The BIC and Parent BIC must identify a Party defined as Security Maintaining Entity (SME) for the relevant ISIN (see above)
3	BIC	CHAR(11)	BIC of the CSD providing the data	The BIC and Parent BIC must identify a Party defined as Security Maintaining Entity (SME) for the relevant ISIN (see above)
4	ISIN	CHAR(12)	ISIN code of the securities	

Flat file column	Column Name	Format	Description	Rules
5	Currency Code	CHAR(3)	Price currency	<p>If the Price is linked to a Security with Settlement Type "Face Amount", the Currency must correspond to the Security denomination currency.</p> <p>Currency code of the security is relevant only when the related security settlement type is nominal, and the currency code of the price is relevant only when the security settlement type is unit.</p> <p>Currency code of the price is mandatory in case the Price Amount is informed.</p>
6	Price Date	DATE (yyyy-mm-dd)	Validity date for the price	
7	Price as coefficient	NUMERIC(31)	Price as coefficient without any decimal point/comma	<p>Price Coefficient is mandatory for securities with settlement type = Face Amount</p> <p>Currency Code of the security is mandatory in case the Price Coefficient is informed.</p> <p>For securities with settlement type</p>

Flat file column	Column Name	Format	Description	Rules
				<p><b>nominal, price as coefficient should be provided as "BaseOneRate", as per their example, 0.7 to express 70%, indicating also the currency of the security, which is mandatory.</b></p> <p><b>Example:</b></p> <p><b>If the price is 123,45 the following value must be provided:</b></p> <p><b>000...00012345</b> (number of leading zeroes is 26)</p> <p><b>If "Price as amount" is used this field must contain a sequence of zeroes.</b></p> <p><b>By definition, not both prices (i.e. Price Amount and Price coefficient) can be informed.</b></p>
8	Number of decimal digits for price as coefficient	NUMERIC(4)	Number of decimal digits for the price as coefficient (i.e. without currency)	<p><b>Example:</b></p> <p><b>If the price is 123,45 the following value must be provided:</b></p> <p><b>0002</b></p> <p><b>If "Price as amount" is used this field must contain a sequence of zeroes.</b></p>

Flat file column	Column Name	Format	Description	Rules
9	Price-as-amount	NUMERIC(31)	Price-as-amount (i.e. with-currency) without any decimal point/comma	Price-Amount is mandatory for securities with settlement type = Unit. For securities with settlement type Unit, price as an amount, including the price-currency, which is mandatory. Example as above If "Price-as-coefficient" is used this field must contain a sequence of zeroes. By definition, not both prices (i.e. Price-Amount and Price-coefficient) can be informed.
10	Number-of-decimal-digits-for-price-as-amount	NUMERIC(4)	Number-of-decimal-digits-for-the-price-as-amount (i.e. with-currency)	Example as above If "Price-as-coefficient" is used this field must contain a sequence of zeroes.
11	Status	CHAR(4)	Status-of-the-row	It must be blank in the input file. This information is updated by CRDM in the file provided back to the sending GSD
12	Error-description	CHAR(75)	Description-of-the-error-(if-any)-detected-when-the-row-was-processed-by-CRDM	It must be blank in the input file. This information is

Flat file column	Column-Name	Format	Description	Rules
				<b>updated by CRDM in the file provided back to the sending CSD</b>
<b>13</b>	<b>Record separator</b>	<b>CHAR(1)</b>	<b>Fixed value: LF</b>	<b>LF = Line Feed (x'0A')</b>

## 7 4.9 Penalty Modification Request bulk file format

### 8 4.9.1 Introduction

#### 9 4.9.1.1 Context

10 T2S provides the CSDs with the functionality to remove, re-include, re-allocate or switch penalties.

11 In order to do so, there are two different modes for CSDs to send requests for modifying a Penalty:

- 12 | A2A mode: a new communication based on "flat files" is provided (no ISO message exists for this purpose).
- 13

1 I U2A mode: a Graphical User Interface based on a standard browser application is provided.

2 In both cases, a response should be provided by T2S, informing whether each requested modification has  
3 been rejected (including in this case the reason for the rejection) or executed.

#### 4 4.9.1.2 Purpose

5 This document provides a description of the structure of the "flat file" used by the CSDs to send Penalty  
6 Modification Requests to T2S (from here on PMR file). The same structure applies to the file (so called "en-  
7 riched" file) sent back from T2S to the original sender and containing status and error information.

### 8 4.9.2 File Technical Specification

9 The file has a simple XML format (in order to allow for the network signature). All records are included into a  
10 single "store and forward" message conveyed by the VAN provider. No business signature is needed.

11 Within the message, the whole file is embedded in a single XML tag (<File> </File>).

12 Between these tags the file has fixed-length records, with a header and a footer. The header and the footer  
13 are the ones specified within the "Format of the Structured Files" below, no business header is foreseen. The  
14 last character of the header and the footer, as well as of each record, is a record separator (LF).

#### 15 4.9.2.1 Identification and Routing

16 The messages transporting PMR files are identified by a specific RequestType <sup>583</sup>.

17 Only authorized CSDs included in a "white list" are allowed to send the PMR files.

18 They must be known in advance by the T2S system and, moreover, T2S must know in advance the technical  
19 addresses, expressed in form of standard "Distinguished Names", used when sending the messages by each  
20 authorized party.

21 Therefore the T2S system must have a pre-loaded configuration table, a "White list", structured as follows:  
22

Parent BIC	BIC	Sending DN
BIC1	BIC2	DN1
BIC1	BIC3	DN2
BIC1	BIC4	DN3
...	...	...

23 BIC2, BIC3 and BIC4 are the BICs identifying <sup>584</sup> the CSD in T2S and DN1, DN2 and DN3 are the technical  
24 senders that are authorised to send PMR files for the three CSDs.

---

583 This value is assigned to specify the type of message exchanged in the network. For Penalty Modification Requests files the new value "semt.xxx.penaltymodreq" must be used.

584 As the sending/instructing parties are only CSDs, BIC1 is always the BIC of T2S Operator.

1 This configuration table must include all the parties authorized to send PMR files and, for each party, the DN  
2 of the authorised technical sender.

3 The PMR file is rejected by T2S when it refers (in field 2 and 3 of the header of the file, see below) to data  
4 provided by a party not present in the configuration table. It is also rejected if the XML message hasn't been  
5 sent using a DN linked, in the same table, to the party providing the data.

6 In addition, at the level of the records (requests) included in the file, CSDs are only allowed to send Penalty  
7 Modification Requests for Penalties for which they are the CSD of the Failing Party.

8 Finally, all standard business validations defined in the « Penalty Modification » Function are applied to the  
9 individual Penalty Modification Requests.

#### 10 4.9.2.2 Structure

##### 11 **XML schema for the PMR file**

12 The following is the XML schema used to embed the file into a "store and forward" message:

```
<?xml version="1.0" ?>  
<xs:schema xmlns="urn:T2S:PMRBulkFile" xmlns:xs="http://www.w3.org/2001/XMLSchema"  
  targetNamespace="urn:T2S:PMRBulkFile"  
  elementFormDefault="qualified">  
  <xs:simpleType name="RestrictedFileType">  
    <xs:restriction base="xs:string">  
    </xs:restriction>  
  </xs:simpleType>  
  <xs:element name="File" type="File"/>  
  <xs:complexType name="File">  
    <xs:simpleContent>  
      <xs:extension base="RestrictedFileType">  
        <xs:attribute name="fileId" type="xs:string" default="" />  
      </xs:extension>  
    </xs:simpleContent>  
  </xs:complexType>  
</xs:schema>
```

13

14 Example of XML file

```
<?xml version="1.0" encoding="UTF-8"?>  
<File fileId="T2SPMRFile_2020-06-30-11:35:24.123456" xmlns="urn:T2S:PMRBulkFile">  
  Header  
  Record1  
  Record2  
  ...  
  Recordn  
  Footer  
</File>
```

15

## 1 XML schema for the response

2 When the XML is sent back from T2S to the CSD ("enriched" file)<sup>585</sup>, the following is the XML schema used  
3 to embed the file into a "store and forward" message:

```
<?xml version="1.0" ?>
<xs:schema xmlns="urn:T2S:PMRBulkFileResponse"
xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="urn:T2S:PMRBulkFileResponse"
elementFormDefault="qualified">
<xs:simpleType name="RestrictedFileType">
<xs:restriction base="xs:string">
</xs:restriction>
</xs:simpleType>
<xs:element name="File" type="File"/>
<xs:complexType name="File">
<xs:simpleContent>
<xs:extension base="RestrictedFileType">
<xs:attribute name="fileId" type="xs:string" default="" />
</xs:extension>
</xs:simpleContent>
</xs:complexType>
</xs:schema>
```

4

5 If the flat file cannot be processed due to an unauthorised party<sup>586</sup>, an invalid format or due to internal T2S  
6 technical reasons, the response message will have the following formats depending on the underlying rea-  
7 son:

### 8 Example of rejection for unauthorised sender XML response

```
9 <?xml version="1.0"encoding="UTF-8"?>
10 <File fileId="T2SPMRFile_2020-06-30-
11 11:35:24.123456"xmlns="urn:T2S:PMRBulkFileResponse">H00SERRSenderNotAllowed
12 F0000
13 </File>
```

### 14 Example of rejection for invalid file format reason XML response

```
15 <?xml version="1.0"encoding="UTF-8"?>
16 <File fileId="T2SPMRFile_2020-06-30-11:35:24.123456"
17 xmlns="urn:T2S:PMRBulkFileResponse">H00FERRFileWrongFormat587
```

---

585 The messages transporting PMR response files are identified by a specific RequestType. The new value "semt.xxx.penaltymodres" must be used.

586 As the sending/instructing parties are only CSDs, BIC1 is always the BIC of T2S Operator.

1 F0000

2 </File>

3 **Example of rejection for internal T2S technical reason XML response**

4 <?xml version="1.0"encoding="UTF-8"?>

5 <File fileId="T2SPMRFile\_2020-06-30-11:35:24.123456"

6 xmlns="urn:T2S:PMRBulkFileResponse">H00TERRFileTechReason <sup>588</sup>

7 F0000

8 </File>

9 **Encoding**

10 The encoding of the flat file is UTF-8 with no Byte Order Mark (BOM).

11 **Default Values**

12 See Field Types.

13 **Character Set**

14 All characters belong to the SWIFT X Character Set. The character set is as follows:

```

a b c d e f g h i j k l m n o p q r s t u v w x y z
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9
/ - ? : ( ) . , ' + { }
CR LF Space
    
```

15

16 **4.9.3 Format of Structured Files**

17 4.9.3.1 Record Types

18

Record Type	Description	Multiplicity
Header	First row of the file, contains information common to all data records.	1
Body	Data record, each instance constitutes one request.	Many
Footer	Last row of the file. Acts as a trailer, marking the end of main body section.	1
XMLTag	XML element, used to tag the start	1

587 A trailing blank is added at the end of the error text.

588 Two trailing blanks are added at the end of the error text.

Record Type	Description	Multiplicity
	and/or end of the file.	

1 4.9.3.2 Field Types

2

Field Type	Description
O	Optional.
O*	Optional, with restrictions.
M	Mandatory.

3 Whenever an optional field is not present, the position will be filled with spaces (#x20).

4 4.9.3.3 Data Format Types

5 The report data values may appear in one of the formats described in the table below:

6

Data Type	Format	Description
CHAR(n)	Filled with trailing blanks up to the maximum length	Alphanumeric string with exactly n characters.
NUMERIC(p)	Filled with leading zeroes up to the maximum length	Number with maximum p integer places and no decimal places.

1  
2

#### 4.9.3.4 Format of Records

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
XMLTag	1	Tag of start of file	CHAR(n)	60	"<File>"	M	May contain the optional attribute "fiId" to provide additional information such as file reference assigned by the sender (e.g. Name of file including the Timestamp reflecting date and time of the creation of the flat file), up to 54 characters long.
Header							
Header	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer	M	Values: 'H': for Header
Header	2	Parent BIC of the CSD	CHAR(n)	11	Parent BIC of the CSD	M	
Header	3	BIC of the CSD	CHAR(n)	11	BIC of the CSD	M	
Header	4	Record sepa-	CHAR(n)	1	Fixed Value:	M	LF = Line

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
		Record Terminator (LF)			LF		Feed (x'0A').
Body							
Body	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer	M	Values: 'B': for Body.
Body	2	Record Identification	NUMERIC(p)	4	Identifies the modification request in the file (i.e. request number in the file)	M	The Record Identification within a file shall be unique. If there are two records with same Record Identification, the last record validated will be rejected.
Body	3	Request Type	CHAR(n)	4	Type of Penalty Modification Request	M	Values: 'REMO' == Removal 'REIN' == Re-inclusion 'RALO' == Re-allocation 'SWIC' == Switch
Body	4	Individual Penalty Identification	CHAR(n)	16	Unique reference assigned by T2S to the penalty for the relevant	O*	* It must be filled in case the Request Type is 'REMO' (Re-

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
					party (either the failing or the non-failing).		removal), 'REIN' (Re-inclusion) or 'SWIC' (Switch). Otherwise, it must be blank.
Body	5	Market Infrastructure Identification	CHAR(n)	16	Common Reference assigned by T2S for both the failing and the non-failing party.	O*	* It must be filled in case the Request Type is 'RALO' (Re-allocation).
Body	6	Removal Reason Code	CHAR(n)	4	Code for the reason why the cash penalty is requested to be removed	O*	* It must be filled in case the Request Type is 'REMO' (Removal). Values: 'INSO' =- Insolvency 'SEMP' =- Settlement On Multiple Platforms 'SESU' =- Settlement Suspended 'SUSP' =- Trading Status Suspend-

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
							ed  'TECH' ==- Technical Impossibilities  'OTHR' ==- Other  It must be blank in case the Request Type is not 'REMO'.
Body	7	Description text	CHAR(n)	210	Description (free text) for the request for removal or Switch of the penalty.	O*	* It must be filled:  - Either in case the Request Type is 'REMO' (Removal) and Removal Reason Code is 'OTHR' (Other), or  - In case the Request Type is 'SWIC' (Switch).  Otherwise, it must be blank.
Body	8	New failing Party BIC	CHAR(n)	11	BIC of the Party that will become the failing party	O*	* It must be filled in case the Request Type is 'RALO'

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
					of the penalty after the re-allocation.		(Re-allocation). Otherwise, it must be blank. Note: It must be either the delivering or the receiving party of the underlying Settlement Instruction that was sent already matched.
Body	9	New non-failing Party BIC	CHAR(n)	11	BIC of the Party that will become the non-failing party of the penalty after the re-allocation	O*	It must be filled in case the Request Type is 'RALO' (Re-allocation). Otherwise, it must be blank. Note: In case the New failing Party BIC corresponds to the delivering party of the underlying Settlement Instruction,

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
							the New non-failing Party BIC must correspond to the receiving party, and vice versa.
Body	10	T2S reference of the failed Settlement Instruction	CHAR(n)	16	Identifies the failing leg of the already matched settlement instruction i.e. either the delivering or the receiving Settlement Instruction created in T2S.	O*	It must be filled in case the New failing Party BIC is equal to the New non-failing Party BIC. Otherwise, it must be blank.
Body	11	Status	CHAR(n)	4	Status of the row	O*	It must be blank in the input file. This information is updated by T2S in the file provided back to the sending CSD.
Body	12	Error Description	CHAR(n)	210	Description of the error (if any) detected when the request was	O*	It must be blank in the input file. This information is updated by

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
					processed		T2S in the file provided back to the sending CSD.
Body	13	New Market Infrastructure Identification	CHAR(n)	16	Common Reference assigned by T2S to the new re-allocated penalty.	O*	It must be blank in the input file, This information is updated by T2S in the file provided back to the sending CSD.
Body	14	Record separator	CHAR(n)	1	Fixed Value: LF	M	LF = Line Feed (x'0A')
Footer							
Footer	1	RecordType	CHAR(n)	1	Identifies record as Header, Body or Footer	M	Values: 'F': for Footer.
Footer	2	NumberOf-Records	NUMERIC(p)	4	Total number of data records in the file.	M	Number: integer representation, 4 digits long.
Footer	3	Record separator (LF)	CHAR(n)	1	Fixed Value: LF	M	LF = Line Feed (x'0A').
XMLTag	1	Tag of end file	CHAR(n)	7	"</File>"	M	

1 4.9.3.5 Format of “Enriched Files” from T2S to CSDs

- 2 The format of the enriched files is based on the format of the flat files that have been submitted to T2S. The
- 3 submitted data remains unchanged but is supplemented with:

- 1 •"Status"
- 2 •"Error description" if the request is rejected.
- 3 •"New Market Infrastructure Identification" if the request is executed and it was a re-allocation ('RALO').
- 4

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
Body	11	Status	CHAR(n)	4	Status of the row	M	Filled by T2S with values: "EXEC": Executed. "REJT": Rejected
Body	12	Error Description	CHAR(n)	210	Description of the error (if any) detected when the request was processed	O*	It must be filled by T2S in case the Status is 'REJT' (Rejected). Values (see description of the errors in next rows below)
					The individual modification request (body) is invalid		
					The 'Individual Penalty Identification' is not empty for RALO (Reallocation)		
					The 'Individual Penalty Identification' field is empty. The 'Individual Penalty Identification' must be filled in case the Request Type is 'REMO' (Removal), 'REIN' (Re-inclusion) or 'SWIC' (Switch)		
					The Individual Penalty Identification does not exist in T2S		

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
					The removal, re-inclusion or switch does not refer to the individual penalty identification of the failing party		
					The Request Type is 'RALO' and the requestor CSD is not the same as the CSD of the LMFP (CSD of the Instructing Party of the underlying instruction)		
					It is not possible to modify the Penalty as its appeal period has ended		
					Only failing CSD can request to modify a penalty		
					The 'Market Infrastructure Identification' is not empty for 'REMO' (Removal), 'REIN' (Re-inclusion) or 'SWIC' (Switch)		
					The 'Market Infrastructure Identification' field is empty. The Market 'Infrastructure Identification' must be filled in case the Request Type is 'RALO' (Reallocation)		
					The Market Infrastructure Identification does not exist in T2S		
					The field 'Removal Reason Code' is empty for REMO (Removal)		
					The field 'Removal Reason Code' is not empty for REIN (Re-inclusion), RALO (Re-allocation) and SWIC (Switch)		
					The field 'Description text' is empty for Request Type REMO with Removal Reason Code OTHR or for a Request Type SWIC (Switch)		
					The field 'Description text' is not empty for		

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
					REIN (Re-inclusion), RALO (Re-allocation) or REMO without Removal Reason Code OTHR		
					The field 'New failing Party BIC' is empty in a RALO (Re-allocation) modification		
					The new failing Party is neither the delivering nor the receiving party of the underlying Settlement Instruction that was sent already matched		
					The field 'New Non-failing Party BIC' is empty in a RALO (Re-allocation) modification		
					The New failing Party BIC corresponds to the delivering party of the underlying Settlement Instruction but the New non-failing Party BIC is not the receiving party, or vice versa		
					The 'New failing Party BIC' is equal to 'New non-failing Party BIC', but the 'T2S reference of the failed Settlement Instruction' field is empty		
					The 'T2S reference of the failed Settlement Instruction' is neither the delivering nor the receiving Settlement Instruction created in T2S from the already matched		
					'New failing Party BIC' and 'New non-failing Party BIC' are different, but the 'T2S reference of the failed Settlement Instruction' is not empty		
					The 'New failing Party BIC' is filled, but the Request Type is not RALO (Re-allocation)		
					The 'New non-failing Party BIC' is filled, but the Request Type is not RALO (Re-		

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
					allocation)		
					The 'T2S reference of the failed Settlement Instruction' is filled for a Request Type different to RALO (Re-allocation)		
					It is not possible to remove a Penalty that is not active		
					It is not possible to re-include a Penalty that is not removed		
					It is not possible to re-include a Penalty that was removed because of a Reallocation		
					It is not possible to switch a Penalty that is not active		
					It is not possible to reallocate a Penalty that is not active		
					It is not possible to reallocate a Penalty that is not a LMFP		
					It is not possible to reallocate a Penalty already reallocated before		
					The underlying Settlement Instruction of the Penalty was not sent as already matched to T2S		
Body	13	New Market Infrastructure Identification	CHAR(n)	16	Common Reference assigned by T2S to the new (re-allocated) Penalty.	O*	It must be filled by T2S in case the Status is 'EXEC' (Executed) and the Record Type is 'RALO' (Re-

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information (original XML data type, values, rules, etc.)
							allocation).

1 **4.10 Specifications for the flat file for reporting of penalties**

2 **4.10.1 Daily Penalty List - Flat File Format Specifications**

3 4.10.1.1 Introduction

4 **4.10.1.1.1 Context**

5 Every business day, T2S shall perform the reporting of new cash penalties (Daily Cash Penalty List), once  
6 the computation process of new cash penalties detected on the previous business day, has ended.

7 This report is generated as flat file if opted by CSDs, following a like-for-like approach to the report content  
8 of the already available XML versions semt.044 – Securities Transaction Penalties Report, which will contain  
9 a signature only at DEP level and will be routed to a given Party Technical Address previously determined  
10 and configured by T2S Service Desk.

11 **4.10.1.1.2 Purpose**

12 This document provides a description of the structure of the flat file for the semt.044 Securities Transaction  
13 Penalties Report - Daily Penalty List sent by T2S to the CSDs.

14 4.10.1.2 File Technical Specification

15 The file has a simple XML format (in order to allow for the network signature). All records are included into a  
16 single "store and forward" message conveyed by the VAN provider. No business signature is needed.

17 Within the message, the whole file is embedded in a single XML tag (<File> </File>).

18 Between these tags the file has fixed-length records, with a header and a footer. This header and this footer  
19 are the ones specified within the flat file specifications below, no business header is foreseen. If no activity  
20 has occurred (Activity Indicator = NO), the file will be empty between the header and the footer.

21 **4.10.1.2.1 Identification and Routing**

22 T2S triggers the generation of Daily Cash Penalties List flat file reports based on a business event, i.e. DAPL  
23 (Daily Penalty List Report – Reporting of new penalties). The messages transporting Daily Cash Penalties List  
24 flat files are identified by a specific RequestType. This value is assigned to specify the type of message ex-  
25 changed in the network. For Daily Cash Penalties List flat file reports the value "semt.xxx.144" is used. This

- 1 flat file report is pushed in A2A mode and compressed when it exceeds the minimum size of 2KB, since  
2 compression for the reports is mandatory.
- 3 All the information about the necessary attributes in each named category is stored as reference data in T2S  
4 and influences the generation of the report. The privilege to configure these reference data or to subscribe  
5 to this report is granted solely to the T2S Operator.
- 6 Each flat file report type provides information only on the default data scope of the concerned party (i.e.  
7 CSD). The data scope is indicated by the party for which it is configured and is limited to CSDs.
- 8 Flat file reports can only be configured at a system entity level, i.e. reports providing the CSD with infor-  
9 mation relating to all its CSD participants. The concerned party has to be specified, when the flat file report  
10 is configured for the first time.
- 11 A party configured to receive flat file reports cannot receive the equivalent reports through other channels.  
12 This does not, however, prevent CSD participants from receiving those reports through such channels, even  
13 if their CSD has opted for the flat file.

#### 14 **4.10.1.2.2 Structure**

##### 15 **XML Schema for the Request**

- 16 The following is the XML schema used to embed the file into a "store and forward" message:

```
<?xml version="1.0" ?>
<xs:schema xmlns="urn:T2S:DailyPenaltyListFlatFile"
xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="urn:T2S:DailyPenaltyListFlatFile"
elementFormDefault="qualified">
<xs:simpleType name="RestrictedFileType">
<xs:restriction base="xs:string">
<xs:pattern value="{181,181}\n+"/>
</xs:restriction>
</xs:simpleType>
<xs:element name="File" type="File"/>
<xs:complexType name="File">
<xs:simpleContent>
<xs:extension base="RestrictedFileType">
<xs:attribute name="fileId" type="xs:string" default="" />
</xs:extension>
</xs:simpleContent>
</xs:complexType>
</xs:schema>
```

17

##### 18 **Example of XML file**

```
<?xml version="1.0" encoding="UTF-8"?>
<File fileId = "T2Ssemt044FlatFile_2020-06-30-11:35:24.123456" xmlns="urn:T2S:DailyPen-
altyListFlatFile">
Header
Record Body 1
Record Details 1.1
Record Calculation Data 1.1.1
Record Calculation Data 1.1.2
Record Details 1.2
Record Calculation Data 1.2.1
Record Body 2
...
Record Body n
Record Details n.n
Record Calculation Data n.n.n
Footer
</File>
```

- 1
- 2 Encoding
- 3 The encoding of the flat file is UTF-8 with no Byte Order Mark (BOM).

- 4 Default Values
- 5 See [Field Types](#) [▶ 2455].

## 6 **ISO 15022 Interoperability**

- 7 In order to ensure the interoperability to the ISO 15022 standard the character set of all fields is restricted
- 8 to the SWIFT X Character Set (see below).

### 9 **Character Set**

- 10 All characters belong to the SWIFT X Character Set. The character set is as follows:

```
abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ
0123456789
/ - ? : ( ) . , ' + { }
CR LF Space
```

11

12

1 4.10.1.3 Format of Structured Files

2 **4.10.1.3.1 Record Types**

3

Record Type	Description	Multiplicity
Header	First row of the file contains Report general information, common to all data records.	1
Body	Each data record constitutes one instance of report information. I.e. Penalties grouped by Currency, Date, Party and Counterparty (the latter being the pair Counterparty BIC and Counterparty Account Servicer BIC).	Many
Details	Each data record constitutes one instance of the relevant record Body. I.e. each penalty details reported (and its relevant transaction).	Many
Calculation Data	Each data record constitutes one instance of the relevant record Details. I.e. each sub-amount data of each and every penalty reported.	Many
Footer	Last row of the file. Acts as a trailer, marking the end of main body section.	1

4 **4.10.1.3.2 Field Types**

5

Field Type	Description
O	Optional
C	Conditional: Optional that becomes Mandatory depending on other fields of the record
M	Mandatory if the related record (block) is informed

6 Whenever an optional field is not present, the position will be filled with spaces (#x20).

7 **4.10.1.3.3 Data Format Types**

8 The report data values may appear in one of the formats described in the table below:

1

Data Type	Format	Description
DATE	YYYY-MM-DD	
DATETIME	YYYY-MM-DD-hh:mm:ss.ssssss	Timestamp format
CHAR(n)	Filled with trailing blanks up to the maximum length	Alphanumeric string with exactly n characters.
NUMERIC(p)	Filled with leading zeroes up to the maximum length	Number with maximum p integer places and no decimal places.

2 **4.10.1.3.4 Pagination**

3 Pagination will be provided as in the ISO reports, indicating a sequential number and whether the file is the  
4 last one.

5 (Page Number, Last Page Indicator Number).

6 **4.10.1.3.5 Format of Records**

7 A header will contain the following data:  
8

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer.	M	Values: 'H': for Header
Header	2	Page Number	NUMERIC(p)	5	Sequence number of the concerned message within the set of divided messages recurring to pagination.	M	
Header	3	Last Page Indicator	CHAR(n)	5	Indicator for last message within the set of divided messages recurring to pagination.	M	Possible values are: 'True' - Meaning 'Yes, it is the last message'

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							'False' - Meaning 'No'; it is not the last message '
Header	4	Report Identification	CHAR(n)	16	Reference common to all the pages of the report.	M	
Header	5	Report Period Date	DATE	10	Business day for which the penalties reported were computed.	M	
Header	6	Report Frequency	CHAR(n)	4	Frequency of the report.	M	'DAIL' – Daily: the report is generated every business day.
Header	7	Penalty List Type	CHAR(n)	4	It indicates that the penalty list reported is a Daily Cash Penalty List	M	'FWIS' – Forward Initial Submission: To report a daily penalty list created for the first time that contains only newly computed penalties.

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	8	Report Activity Indicator	CHAR(n)	5	It indicates whether the message contains records or not.	M	Possible values are: 'True' - Meaning 'Yes'. 'False' - Meaning 'No'. E.g. if no new penalty is computed for a given day, the CSD will get from T2S a Daily Penalty List message with activity 'False'.
Header	9	Account Servicer BIC	CHAR(n)	11	Primary BIC of the CSD that shall be able to receive the Daily Cash Penalty List of each and every party under its scope.	M	
Header	10	LF	CHAR(n)	1	Fixed Value: LF	M	LF = Line Feed (x'0A')

1 The report details will contain the following information:

2

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Record Type "Body" (Not informed if the if Report Activity Indicator in the Header is 'NO')							
Body	1	Record Type	CHAR(n)	1	Identifies	M	Values:

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
					record as Header, Body or Footer.		'B': for Body
Body	2	Currency	CHAR(n)	3	Currency of the new penalties reported.	M	
Body	3	Date of penalties reported	DATE	10	Detection date of the new penalties reported, identical for all of them.	M	Settlement day for which each penalty reported was computed. I.e. -The date on which the instruction matched for LMFPs. -The date on which an instruction fails to settle in T2S for SEFPs.
Body	4	Party BIC	CHAR(n)	11	BIC of the Party reported as party imposed (failing party) or party credited (non-failing party) with the new penalties reported.	M	For SEFPs: The failing party will be the account owner of the securities account of the underlying settlement instruction for which the SEFP is computed, where-

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							<p>as the non-failing party will be the securities account owner of the counterpart's settlement instruction. In external CSD settlements for which a SEFP is computed, T2S will consider the "External CSD" as the securities account owner of the relevant settlement instruction.</p> <p>For LMFPs: In case of instructions to be matched in T2S, the failing party will be the securities account owner of the underlying settlement instruction for which the penalty is computed,</p>

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							whereas the non-failing party will be the securities account owner of the counterpart's settlement instruction. In case of already matched instructions, the instructing party of the underlying already matched instruction will be both the failing and the non-failing party.
Body	5	Party Type	CHAR(n)	4	It indicates the classification for the failing or the non-failing party of the new penalty (ies) reported.	M	Possible values are: 'NCSD' - Central Depository. 'CCPA' - CCP. 'CSDP' - CSD Participant. 'EXTE' - External Depository.
Body	6	Counterparty Account Servicer BIC	CHAR(n)	11	Primary BIC of the CSD of the counter-	M	

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
					party of the new penalty (ies) reported.		
Body	7	Counterparty BIC	CHAR(n)	11	BIC of the Counterparty of the new penalty(ies) reported	M	
Body	8	Counterparty Type	CHAR(n)	4	It specifies the classification for the failing or the non-failing counterparty of the new penalty.	M	Possible values are: 'NCS D' - Central Depository. 'CCPA' - CCP. 'CSDP' - CSD Participant. 'EXTE' - External Depository.
Body	9	Daily Aggregated Net Amount	NUMERIC(p)	14	Bilateral net aggregated amount between a party and the corresponding counterparty.	M	Daily bilateral net amount between party and counterparty, for the given business day in the related currency.  Each Daily Aggregated Net Amount between a party and a counterparty is composed of all the penalties

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							reported below with the same currency and detection date.
Body	10	Number of decimal digits for the Daily Aggregated Net Amount	NUMERIC(p)	2	Number of decimal digits for the Daily Aggregated Net Amount	M	
Body	11	Currency for the Daily Aggregated Net Amount	CHAR(n)	3	Currency of the Daily Aggregated Net Amount	M	
Body	12	Credit / Debit Indicator for the Daily Aggregated Net Amount	CHAR(n)	4	It indicates whether the party is either imposed with or entitled to receive the Daily Aggregated Net Amount.	O	Possible values are: 'DBIT' - The party is imposed with the Daily Aggregated Net Amount. 'CRDT' - The party is entitled to receive the Daily Aggregated Net Amount. Not informed / Empty if the Daily Aggregated Net Amount is zero.
Body	13	LF	CHAR(n)	1	Fixed Value:	M	LF = Line

2 **4.10.2 List of Modified Penalties - Flat File Format Specifications**

3 4.10.2.1 Introduction

4 **4.10.2.1.1 Context**

5 Every business day, T2S shall perform the reporting of modified penalties (List of Modified Penalties), once  
6 the recalculation process of existing penalties has finished.

7 This report is generated as flat file if opted by CSDs, following a like-for-like approach to the report content  
8 of the already available XML versions semt.044 – Securities Transaction Penalties Report, which will contain  
9 a signature only at DEP level and will be routed to a given Party Technical Address previously determined  
10 and configured by T2S Service Desk.

11 **4.10.2.1.2 Purpose**

12 This document provides a description of the structure of the flat file for the semt.044 Securities Transaction  
13 Penalties Report - List of Modified Penalties sent by T2S to the CSDs.

14 4.10.2.2 File Technical Specification

15 The file has a simple XML format (in order to allow for the network signature). All records are included into a  
16 single "store and forward" message conveyed by the VAN provider. No business signature is needed.

17 Within the message, the whole file is embedded in a single XML tag (<File> </File>).

18 Between these tags the file has fixed-length records, with a header and a footer. This header and this footer  
19 are the ones specified within the flat file specifications below, no business header is foreseen. If no activity  
20 has occurred (Activity Indicator = NO), the file will be empty between the header and the footer.

#### 1 **4.10.2.2.1 Identification and Routing**

2 T2S triggers the generation of List of Modified Penalties flat file reports based on a business event, i.e. MDPL  
3 (Modified Penalties List Report). The messages transporting List of Modified Penalties flat file reports are  
4 identified by a specific RequestType. This value is assigned to specify the type of message exchanged in the  
5 network. For List of Modified Penalties flat file reports the value "semt.xxx.244" is used. This flat file report is  
6 pushed in A2A mode and compressed when it exceeds the minimum size of 2KB, since compression for the  
7 reports is mandatory.

8 All the information about the necessary attributes in each named category is stored as reference data in T2S  
9 and influences the generation of the report. The privilege to configure these reference data or to subscribe  
10 to this report is granted solely to the T2S Operator.

11 Each flat file report type provides information only on the default data scope of the concerned party (i.e.  
12 CSD). The data scope is indicated by the party for which it is configured and is limited to CSDs.

13 Flat file reports can only be configured at a system entity level, i.e. reports providing the CSD with infor-  
14 mation relating to all its CSD participants. The concerned party has to be specified, when the flat file report  
15 is configured for the first time.

16 A party configured to receive flat file reports cannot receive the equivalent reports through other channels.  
17 This does not, however, prevent CSD participants from receiving those reports through such channels, even  
18 if their CSD has opted for the flat file.

#### 19 **4.10.2.2.2 Structure**

##### 20 **XML Schema for the Request**

21 The following is the XML schema used to embed the file into a "store and forward" message:

```
<?xml version="1.0" ?>
<xs:schema xmlns="urn:T2S:ListOfModifiedPenaltiesFlatFile "
xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="urn:T2S:ListOfModifiedPenaltiesFlatFile "
elementFormDefault="qualified">
<xs:simpleType name="RestrictedFileType">
<xs:restriction base="xs:string">
<xs:pattern value="(.{181,181}\n)+"/>
</xs:restriction>
</xs:simpleType>
<xs:element name="File" type="File"/>
<xs:complexType name="File">
<xs:simpleContent>
<xs:extension base="RestrictedFileType">
<xs:attribute name="fileId" type="xs:string" default="" />
</xs:extension>
</xs:simpleContent>
</xs:complexType>
</xs:schema>
```

1

## 2 Example XML file of

```
<?xml version="1.0" encoding="UTF-8"?>
<File fileId = "T2Ssemt044FlatFile_2020-06-30-11:35:24.123456" xmlns="urn:T2S:Listof-
ModifiedPenaltiesFlatFile ">

Record Body 1
Record Details 1.1
Record Calculation Data 1.1.1
Record Calculation Data 1.1.2
Record Details 1.2
Record Calculation Data 1.2.1
Record Body 2
...
Record Body n
Record Details n.n
Record Calculation Data n.n.n
Footer
</File>
```

3

## 4 Encoding

5 The encoding of the flat file is UTF-8 with no Byte Order Mark (BOM).

1 **Default Values**

2 See [Field Types](#). [▶ 2440]

3 **ISO 15022 Interoperability**

4 In order to ensure the interoperability to the ISO 15022 standard the character set of all fields is restricted  
5 to the SWIFT X Character Set (see below).

6 **Character Set**

7 All characters belong to the SWIFT X Character Set. The character set is as follows:

```

a b c d e f g h i j k l m n o p q r s t u v w x y z
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9
/ - ? : ( ) . , ' + { }
CR LF Space
    
```

8

9

10 4.10.2.3 Format of Structured Files

11 **4.10.2.3.1 Record Types**

12

Record Type	Description	Multiplicity
Header	First row of the file contains Report general information, common to all data records.	1
Body	Each data record constitutes one instance of report information. I.e. Penalties grouped by Currency, Date, Party and Counterparty (the latter being the pair Counterparty BIC and Counterparty Account Servicer BIC).	Many
Details	Each data record constitutes one instance of the relevant record Body. I.e. each penalty details reported.	Many
Calculation Data	Each data record constitutes one instance of the relevant record Details. I.e. each sub-amount data of each and every penalty reported.	Many
Footer	Last row of the file. Acts as a trailer, marking the end of main body section.	1

1 **4.10.2.3.2 Field Types**

2

Field Type	Description
O	Optional
C	Conditional: Optional that becomes Mandatory depending on other fields of the record
M	Mandatory if the related record (block) is informed

3 Whenever an optional field is not present, the position will be filled with spaces (#x20).

4 **4.10.2.3.3 Data Format Types**

5 The report data values may appear in one of the formats described in the table below:

6 **TABLE 209 - DATA FORMAT TYPES**

7

Data Type	Format	Description
DATE	YYYY-MM-DD	
DATETIME	YYYY-MM-DD-hh:mm:ss.ssssss	Timestamp format
CHAR(n)	Filled with trailing blanks up to the maximum length	Alphanumeric string with exactly n characters.
NUMERIC(p)	Filled with leading zeroes up to the maximum length	Number with maximum p integer places and no decimal places.

8 **4.10.2.3.4 Pagination**

9 Pagination will be provided as in the ISO reports, indicating a sequential number and whether the file is the  
10 last one.

11 (Page Number, Last Page Indicator Number).

12 **4.10.2.3.5 Format of Records**

13

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer.	M	Values: 'H': for Header
Header	2	Page Number	NUMERIC(p)	5	Sequence number of the concerned	M	

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
					message within the set of divided messages recurring to pagination.		
Header	3	Last Page Indicator	CHAR(n)	5	Indicator for last message within the set of divided messages recurring to pagination.	M	Possible values are: 'True' - Meaning 'Yes, it is the last message ' 'False' - Meaning 'No, it is not the last message '
Header	4	Report Identification	CHAR(n)	16	Reference common to all the pages of the report.	M	
Header	5	Report Period From	DATE	10	First business day of the period that had penalties detected being subject to modifications, i.e. penalties with detection date on business days within this period.	M	Depending on whether the appeal period of penalties of last month has finished or not, it can be:  - Either the first business day of previous month (in case the appeal period for previous month has not finished

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							yet); - Or the first business day of the current month (in case the appeal period for previous month has finished).
Header	6	Report Period To	DATE	10	Last business day of the period that had penalties detected being subject to modifications, i.e. penalties with detection date on business days within this period.	M	Always two business days before the recalculation process and its List of Modified Penalties report is created by T2S.
Header	7	Report Frequency	CHAR(n)	4	Frequency of the report.	M	'DAIL' – Daily: the report is generated every business day.
Header	8	Penalty List Type	CHAR(n)	4	It indicates that the penalty list reported is a Daily Cash Penalty List	M	'FWAM' – Forward Amend: To report a List of Modified Penalties that has been amended (i.e. the penalty list contains

Specifications for the flat file for reporting of penalties

							only updated and/or re-moved penalties previously reported in a FWIS Penalty List).

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	9	Report Activity Indicator	CHAR(n)	5	It indicates whether the message contains records or not.	M	Possible values are: 'True' - Meaning 'Yes'. 'False' - Meaning 'No'. E.g. if no penalty has been modified since the previous recalculation, the CSD will get from T2S a Daily Penalty List message with activity 'False'.
Header	10	Account Servicer BIC	CHAR(n)	11	Primary BIC of the CSD that shall be able to receive the Daily Cash Penalty List of each and every party under its scope.	M	
Header	11	LF	CHAR(n)	1	Fixed Value: LF	M	LF = Line Feed ('x'0A')

- 1 The report details will contain the following information:

Specifications for the flat file for reporting of penalties

1

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Record Type "Body" (Not informed if the if Report Activity Indicator in the Header is 'NO')							
Body	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer.	M	Values: 'B': for Body
Body	2	Currency	CHAR(n)	3	Currency of the modified penalties reported.	M	
Body	3	Date of penalties reported	DATE	10	Detection date of the modified penalties reported, identical for all of them.	M	Settlement day for which each penalty reported was computed. I.e. -The date on which the instruction matched for LMFPs. -The date on which an instruction fails to settle in T2S for SEFPs.
Body	4	Party BIC	CHAR(n)	11	BIC of the Party reported as party imposed (failing party) or party credited (non-failing party) with the modified	M	For SEFPs: The failing party will be the account owner of the securities account of the underlying settlement

### 3 4.10.3 Monthly Aggregated Amounts - Flat File Format Specifications

#### 4 4.10.3.1 Introduction

##### 5 4.10.3.1.1 Context

6 On the fourteenth business day of each month (considering as business days, T2S opening days), T2S shall  
7 perform the reporting of monthly aggregated amounts of penalties, that is, the bilateral net amounts per  
8 currency and per T2S party, for each of the counterparties, of the penalties computed for the business days  
9 of the previous month.

10 This report is generated as flat file if opted by CSDs, following a like-for-like approach to the report content  
11 of the already available XML versions semt.044 – Securities Transaction Penalties Report, which will contain  
12 a signature only at DEP level and will be routed to a given Party Technical Address previously determined  
13 and configured by T2S Service Desk.

14

##### 15 4.10.3.1.2 Purpose

16 This document provides a description of the structure of the flat file for the semt.044 Securities Transaction  
17 Penalties Report - Monthly Aggregated Amounts sent by T2S to the CSDs.

#### 18 4.10.3.2 File Technical Specification

19 The file has a simple XML format (in order to allow for the network signature). All records are included into a  
20 single "store and forward" message conveyed by the VAN provider. No business signature is needed.

21 Within the message, the whole file is embedded in a single XML tag (<File> </File>).

1 Between these tags the file has fixed-length records, with a header and a footer. This header and this footer  
2 are the ones specified within the flat file specifications below, no business header is foreseen. If no activity  
3 has occurred (Activity Indicator = NO), the file will be empty between the header and the footer.

#### 4 **4.10.3.2.1 Identification and Routing**

5 T2S triggers the generation of Monthly Aggregated Amounts flat file reports based on a business event, i.e.  
6 MAGG (Monthly Aggregated Amounts Report). The messages transporting Monthly Aggregated Amounts flat  
7 file reports based are identified by a specific RequestType. This value is assigned to specify the type of mes-  
8 sage exchanged in the network. For Monthly Aggregated Amounts flat file reports the value "semt.xxx.344"  
9 is used. This flat file report is pushed in A2A mode and compressed when it exceeds the minimum size of  
10 2KB, since compression for the reports is mandatory.

11 All the information about the necessary attributes in each named category is stored as reference data in T2S  
12 and influences the generation of the report. The privilege to configure these reference data or to subscribe  
13 to this report is granted solely to the T2S Operator.

14 Each flat file report type provides information only on the default data scope of the concerned party (i.e.  
15 CSD). The data scope is indicated by the party for which it is configured and is limited to CSDs.

16 Flat file reports can only be configured at a system entity level, i.e. reports providing the CSD with infor-  
17 mation relating to all its CSD participants. The concerned party has to be specified, when the flat file report  
18 is configured for the first time.

19 A party configured to receive flat file reports cannot receive the equivalent reports through other channels.  
20 This does not, however, prevent CSD participants from receiving those reports through such channels, even  
21 if their CSD has opted for the flat file.

#### 22 **4.10.3.2.2 Structure**

##### 23 **XML Schema for the Request**

24 The following is the XML schema used to embed the file into a "store and forward" message:

```
<?xml version="1.0" ?>
<xs:schema xmlns="urn:T2S:MonthlyAggregatedAmountsFlatFile"
xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="urn:T2S:MonthlyAggregatedAmountsFlatFile"
elementFormDefault="qualified">
<xs:simpleType name="RestrictedFileType">
<xs:restriction base="xs:string">
<xs:pattern value="{181,181}\n+"/>
</xs:restriction>
</xs:simpleType>
<xs:element name="File" type="File"/>
<xs:complexType name="File">
<xs:simpleContent>
<xs:extension base="RestrictedFileType">
<xs:attribute name="fileId" type="xs:string" default="" />
</xs:extension>
</xs:simpleContent>
</xs:complexType>
</xs:schema>
```

1

## 2 Example of XML file

```
<?xml version="1.0" encoding="UTF-8"?>
<File fileId = "T2Ssemt044FlatFile_2020-06-30-11:35:24.123456" xmlns="urn:T2S:Month-
lyAggregatedAmountsFlatFile">

Record Body 1
Record Details 1.1
Record Details 1.2
Record Body 2
...
Record Body n
Record Details n.1
...
Record Details n.n
Footer
</File>
```

3

## 4 Encoding

5 The encoding of the flat file is UTF-8 with no Byte Order Mark (BOM).

## 6 Default Values

7 See Field Types.

1 **ISO 15022 Interoperability**

2 In order to ensure the interoperability to the ISO 15022 standard the character set of all fields is restricted  
3 to the SWIFT X Character Set (see below).

4 **Character Set**

5 All characters belong to the SWIFT X Character Set. The character set is as follows:

```

a b c d e f g h i j k l m n o p q r s t u v w x y z
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9
/ - ? : ( ) . , ' + { }
CR LF Space
    
```

6

7

8 4.10.3.3 Format of Structured Files

9 **4.10.3.3.1 Record Types**  
10

Record Type	Description	Multiplicity
Header	First row of the file contains Report general information, common to all data records.	1
Body	Each data record constitutes one instance of report information. I.e. Penalties grouped by Currency, Date, Party and Counterparty (the latter being the pair Counterparty BIC and Counterparty Account Servicer BIC).	Many
Details	Each data record constitutes one instance of the relevant record Body. I.e. each penalty details reported.	Many
Footer	Last row of the file. Acts as a trailer, marking the end of main body section.	1

11 **4.10.3.3.2 Field Types**  
12

Field Type	Description
O	Optional
M	Mandatory if the related record (block) is informed

1 Whenever an optional field is not present, the position will be filled with spaces (#x20).

2 **4.10.3.3.3 Data Format Types**

3 The report data values may appear in one of the formats described in the table below:

4

Data Type	Format	Description
DATE	YYYY-MM-DD	
DATETIME	YYYY-MM-DD-hh:mm:ss.sssss	Timestamp format
DATEMONTH	YYYY-MM	
CHAR(n)	Filled with trailing blanks up to the maximum length	Alphanumeric string with exactly n characters.
NUMERIC(p)	Filled with leading zeroes up to the maximum length	Number with maximum p integer places and no decimal places.

5 **4.10.3.3.4 Pagination**

6 Pagination will be provided as in the ISO reports, indicating a sequential number and whether the file is the  
7 last one.

8 (Page Number, Last Page Indicator Number).

9 **4.10.3.3.5 Format of Records**

10 A header will contain the following data:

11

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer.	M	Values: 'H': for Header
Header	2	Page Number	NUMERIC(p)	5	Sequence number of the concerned message within the set of divided messages recurring to pagination.	M	

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	3	Last Page Indicator	CHAR(n)	5	Indicator for last message within the set of divided messages recurring to pagination.	M	Possible values are:  'True' - Meaning 'Yes, it is the last message'  'False' - Meaning 'No', it is not the last message'
Header	4	Report Identification	CHAR(n)	16	Reference common to all the pages of the report.	M	
Header	5	Report Period Month	DATE MONTH	7	The month being aggregated	M	
Header	6	Report Frequency	CHAR(n)	4	Frequency of the report.	M	'MNTN' – Monthly: The report is generated once a month

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Header	7	Report Activity Indicator	CHAR(n)	5	It indicates whether the message contains records or not.	M	Possible values are:  'True' - Meaning 'Yes'.  'False' - Meaning 'No'.  E.g. if no aggregated amount is computed for a given month, the CSD will get from T2S a Monthly aggregated amounts of cash penalties report with activity "False".
Header	8	Account Servicer BIC	CHAR(n)	11	Primary BIC of the CSD that shall be able to receive the Daily Cash Penalty List of each and every party under its scope.	M	
Header	9	LF	CHAR(n)	1	Fixed Value: LF	M	LF = Line Feed (x'0A')

1 The report details will contain the following information:

Specifications for the flat file for reporting of penalties

1

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Record Type "Body" (Not informed if the if Report Activity Indicator in the Header is 'NO')							
Body	1	Record Type	CHAR(n)	1	Identifies record as Header, Body or Footer.	M	Values: 'B': for Body
Body	2	Currency	CHAR(n)	3	Currency of the penalties reported.	M	
Body	3	Party BIC	CHAR(n)	11	BIC of the Party reported as party imposed with the monthly net aggregated amount reported or party credited with the monthly net aggregated amount reported.	M	BIC of the party reported as the party to either pay or receive a net amount versus (to/from) the relevant counterparty.
Body	4	Party Type	CHAR(n)	4	It indicates the classification for the failing or the non-failing party of the modified penalty(ies) reported.	M	Possible values are: 'NCSD' - Central Depository. 'CCPA' - CCP. 'CSDP' - CSD Participant. 'EXTE' - External Depository.
Body	6	Counterparty Account Servicer BIC	CHAR(n)	11	Primary BIC of the CSD of the counter-	M	

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
					party of the monthly aggregated amount reported.		
Body	7	Counterparty BIC	CHAR(n)	11	BIC of the Counterparty of the monthly aggregated amount reported.	M	
Body	8	Counterparty Type	CHAR(n)	4	It specifies the classification for the failing or the non-failing counterparty of the modified penalty.	M	Possible values are: 'NCS D' - Central Depository. 'CCPA' - CCP. 'CSDP' - CSD Participant. 'EXTE' - External Depository.
Body	9	Monthly Aggregated Net Amount	NUMERIC(p)	14	Bilateral monthly net aggregated amount between a party and the corresponding counterparty.	M	Monthly aggregated net amount of all the active penalties computed for the business days of the previous month, in the related currency for the relevant party and counterparty.

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Body	10	Number of decimal digits for the Monthly Aggregated Amount	NUMERIC(p)	2	Number of decimal digits of the Monthly Aggregated Amount	M	
Body	11	Currency for the Monthly Aggregated Amount	CHAR(n)	3	Currency of the Monthly Aggregated Amount	M	
Body	12	Credit / Debit Indicator for the Monthly Aggregated Amount	CHAR(n)	4	It indicates whether the party is either imposed with or entitled to receive the Monthly Aggregated Amount.	O	Possible values are: 'DBIT' - The party is imposed with the Monthly Aggregated Amount . 'CRDT' - The party is entitled to receive the Daily Aggregated Net Amount. Not informed / Empty if the Monthly Aggregated Amount is zero.
Body	13	LF	CHAR(n)	1	Fixed Value: LF	M	LF = Line Feed (x'0A')
Record Type "Details"							
Details	1	Record Type	CHAR(n)	1	Identifies record as Header, Body,	M	Values: 'D': for Details

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
					Details, Data or Footer.		
Details	2	Market Infrastructure Identification	CHAR(n)	16	Reference assigned by T2S to the penalty that is common for both the failing and the non-failing participant.	M	It is the common ID of each penalty reported between a party and counterparty, in a given currency and for a given business day.  The common Id provided will have a length of 15 digits, built as follows: YYMMDDGGG GGGGGGS Y - Year M - Month D - Day G - Sequential number, upper limit being 999,999,999 S- Space
Details	3	Penalty Identification	CHAR(n)	16	Reference assigned by T2S that is the individual identification of the penalty for the rele-	M	It will be built by T2S by adding at the beginning of the Common ID an "F" or an "N" as

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
					vant account owner.		<p>prefix ("F" for the Failing if the Penalty is a Debit for the Party; "N" for the Non-failing if the Penalty is a Credit for the Party).</p> <p>This reference does not change during the lifecycle of the Penalty (hence, in case there is a later Switch of the Failing and Non-Failing Parties, the "F" or the "N" are not updated).</p>
Details	4	Reallocation Market Infrastructure Identification	CHAR(n)	16	Reference assigned by T2S to the penalty in case of reallocation that is common for both the failing and the non-failing participant.	0	<p>Provided if the penalty has been re-allocated.</p> <p>It is the Common Reference of either the penalty from which the reported penalty was re-allocated or the penalty</p>

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							to which the reported penalty has been re-allocated.
Details	5	Penalty Type Code	CHAR(n)	4	Type of Penalty	M	Possible values are: 'SEFP' - Settlement Fail Penalty. 'LMFP' - Late Matching Fail Penalty.
Details	6	Computed Amount	NUMERIC(p)	14	Computed Amount of the Penalty	M	Amount computed for the penalty. Each Computed Amount for a penalty is formed by the corresponding Sub-amounts reported below. In case of SEFPs, it is equal to the Sub-amount computed in the detection date of the penalty, provided there is no missing reference data on that business day.

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
							In case of LMFPs, it is the sum of each Sub-amount computed in each and every applicable day of the penalty when there is no missing reference data
Details	7	Number of decimal digits of the Computed Amount	NUMERIC(p)	2	Number of decimal digits of the Computed Amount	M	
Details	8	Currency of the Computed Amount	CHAR(n)	3	Currency of the Computed Amount	M	
Details	9	Credit / Debit Indicator of the Computed Amount	CHAR(n)	4	It indicates whether the participant is either imposed with or entitled to receive the computed penalty amount.	M	Possible values are: 'DBIT' – The computed penalty amount is due by the participant. 'CRDT' – The participant is entitled to receive the computed penalty amount.

Specifications for the flat file for reporting of penalties

Record Type	Field Number	Field Name	Data Format	Length	Description	Field Type	Additional Information
Details	10	Calculation Method	CHAR(n)	4	Calculation rule used to compute the penalty.	M	<p>Possible values are:</p> <p>'SECU' - The Penalty is based on the quantity of securities failed to be delivered and security penalty rate of the relevant Asset type.</p> <p>'MIXE' - The Penalty is based on the quantity of securities failed to be delivered and penalty rate is the discount rate of the relevant currency.</p> <p>'CASH' - Penalty is based on the amount of cash failed to be delivered and the penalty rate is the discount rate of the relevant currency</p> <p>'BOTH' - Penalty is the</p>

Example 28 - Creation of a new CoSD rule set (A).....	73
Example 29 - Definition of rules for a new CoSD rule set (A).....	73
Example 30 - Creation of a new CoSD rule set (B).....	74
Example 31 - Definition of rules for a new CoSD rule set (B).....	74
Example 32 - Update of a CoSD rule (C).....	75

---

Example 33 - Update of a CoSD rule (C) .....	75
Example 34 - Securities static data .....	78
Example 35 - Market-specific securities attributes .....	79
Example 36 - Configuration of investor-technical issuer links between CSDs (A) .....	81
Example 37 - Configuration of investor-technical issuer links between CSDs (B) .....	82
Example 38 - Eligible counterpart CSDs .....	83
Example 39 - Securities valuation data .....	86
Example 40 - Close link .....	86
Example 41 - Currency reference data .....	88
Example 42 - Securities denomination and eligibility for collateralisation (A) .....	88
Example 43 - Securities denomination and eligibility for collateralisation (B) .....	89
Example 44 - T2S dedicated cash accounts and external RTGS accounts .....	89
Example 45 - Links between T2S dedicated cash accounts and RTGS accounts .....	97
Example 46 - CSD participants and securities accounts .....	100
Example 47 - Market-specific attributes for securities accounts .....	101
Example 48 - Securities account configuration for cross-CSD settlement .....	102
Example 49 - CMB configuration for CB auto-collateralisation .....	113
Example 50 - CMB configuration for client collateralisation (A) .....	113
Example 51 - CMB configuration for client collateralisation (B) .....	114
Example 52 - Network Service Definition .....	122
<del>Example 53 - Party Technical Address and Network Services (Split book approach) .....</del>	<del>123</del>
Example 54 - Using Default Routing Configurations Only .....	126
Example 55 - Using Conditional Routing Configurations .....	127
<del>Example 56 - Basic scenario with one T2S Actor defined as one party (Split book approach) .....</del>	<del>133</del>
<del>Example 57 - Complex scenario with one T2S Actor defined as multiple parties (A) {Split book approach} .....</del>	<del>134</del>
<del>Example 58 - Complex scenario with one T2S Actor defined as multiple parties (B) {Split book approach} .....</del>	<del>135</del>
Example 59 - Directly Connected Payment Bank .....	139
Example 60 - Indirectly Connected CSD Participant .....	140
Example 61 - Indirectly Connected Payment Bank .....	141
Example 62 - Same T2S Actor being a DCP and an ICP in two different CSDs .....	142
Example 63 - Directly Connected Central Bank .....	143
Example 64 - Same T2S Actor being defined as two different ICPs in the same CSD .....	144
<del>Example 65 - Default data scope (Split book approach) .....</del>	<del>172</del>

Example 78 - <del>Configuration of access rights at party level by the T2S Operator</del> {Split book approach} .....	197
Example 79 - <del>Configuration of access rights at party level by the party administrator of a CSD</del> {Split book approach}.....	198
Example 80 - <del>Power of attorney at securities account level</del> {Split book approach} .....	199
Example 81 - <del>Power of attorney at party level</del> {Split book approach} .....	199
Example 82 - <del>Selective access at securities account level</del> {Split book approach} .....	200
Example 83 - <del>Selective access at group of securities accounts level</del> {Split book approach} .....	201
Example 84 - <del>CB access to securities accounts</del> {Split book approach} .....	202
Example 85 - Setup of Third Parties (A).....	203
Example 86 - <del>Subscribing for matching and settlement confirmation messages</del> {Split book approach} .....	229
Example 87 - <del>Subscribing for Copies of Incoming Settlement Instructions</del> {Split book approach} .....	232
Example 88 - <del>Subscribing for a sub set of reference data status advices</del> {Split book approach} .....	233
Example 89 - Closing days per currency for EUR and DKK in 2011 .....	238
Example 90 - ISIN Code Validation, ISD check .....	310
Example 91 - ISIN Code Validation respect Current Business Day.....	311
Example 92 - Settlement Quantity Validation .....	313
Example 93 - T2S Dedicated Cash Account Validation.....	314
Example 94 - Reference to Settlement Restriction Validation.....	318
Example 95 - Restriction Checking Sequence .....	322
Example 96 - Fulfilment by Settlement instructions of the Restriction Rules of a given Restriction type case one .....	328
Example 97 - Specific Restriction Validation over a Settlement instruction.....	330

---

Example 98 - Specific Restriction Validation over a Settlement Restriction on securities .....	334
Example 99 - Specific Restriction Validation over a Settlement Restriction on Cash.....	337
Example 100 - Specific Restriction Validation and Realignment .....	341
Example 101 - Revalidation due to an Update of the minimum settlement unit of a Security .....	344
Example 102 - Revalidation due to an Update in a Security CSD Link .....	345
Example 103 - Revalidation at Start of day .....	345
Example 104 - Hold Instruction .....	368
Example 105 - Release Instruction .....	370
Example 106 - Partial Release Process.....	373
Example 107 - Failed provision check for Settlement Restriction.....	397
Example 108 - Successful provision check for Settlement Instructions .....	398
Example 109 - Failed provision check due to a lack of securities .....	398
Example 110 - Failed provision check due to a lack of cash.....	400
Example 111 - Failed provision check due to insufficient headroom on a limit associated to a CMB.....	400
Example 112 - Failed provision check due to a lack of securities (with lack of cash) .....	403
Example 113 - Booking of a Settlement Restriction with pre-emption .....	406
Example 114 - Settlement Instructions with use of restriction for which provision check execution is positive .....	411
Example 115 - Use of the prioritisation in the settlement process.....	419
Example 116 - Partial settlement.....	425
Example 117 - Central bank collateralisation .....	440
Example 118 - Client-collateralisation .....	444
Example 119 - Configuration of CSD links for an ISIN.....	454
Example 120 - Configuration of accounts for realignment with a single omnibus account - Table and diagram .....	456
Example 121 - Configuration of accounts for realignment with several omnibus accounts - Table and diagram .....	458
Example 122 - Cross-CSD settlement illustration .....	462
Example 123 - Illustration of a full set of T2S generated Settlement Instructions for realignment.....	467
Example 124 - Scenario Cross 1: Two investor CSDs and one issuer CSD all in T2S.....	469
Example 125 - Scenario Cross 2: Two investor CSDs and two issuer CSDs all in T2S .....	471
Example 126 - Scenario Cross 3: Common technical issuer CSD in T2S.....	474
Example 127 - Receiving investor CSD external to T2S .....	484
Example 128 - Receiving investor CSD and issuer CSD external to T2S.....	486

---

Example 129 - Delivering investor CSD and issuer CSD external to T2S .....	489
Example 130 - The issuer CSD is external to T2S and both investor CSDs are in T2S.....	492
Example 131 - Two investor CSDs external to T2S and one issuer CSD in T2S .....	497
Example 132 - Creation of a Link .....	502
Example 133 - Amendment of a Link (from With to Befo) .....	503
Example 134 - Pool of Instructions .....	504
Example 135 - Linked instruction utilisation .....	505
Example 136 - CoSD rule sets defined by CSD A .....	513
Example 137 - DVP potentially subject to CoSD.....	516
Example 138 - DWP potentially subject to CoSD.....	516
Example 139 - FOP potentially subject to CoSD .....	517
Example 140 - PFOD potentially subject to CoSD .....	517
Example 141 - One rule is met and processing condition is Positive .....	518
Example 142 - One rule is met and processing condition is Negative .....	518
Example 143 - Several rules are defined and no rule is met .....	519
Example 144 - Securities CoSD activation .....	522
Example 145 - Cash CoSD activation .....	523
Example 146 - Securities CoSD release.....	526
Example 147 - Cash CoSD release.....	527
Example 148 - Securities CoSD activation - Settlement Instruction using references in direct debit.....	530
Example 149 - Securities CoSD activation - Settlement Instruction using references in indirect debit .....	532
Example 150 - Cash CoSD activation - Settlement Instruction using references in indirect debit .....	534
Example 151 - Securities CoSD release - Settlement Instruction using references in direct debit .....	536
Example 152 - Securities CoSD release - Settlement Instruction using references in indirect debit.....	536
Example 153 - Cash CoSD release - Settlement Instruction using references in indirect debit.....	537
Example 154 - CoSD cancellation - after settlement of the CoSD blocking.....	537
Example 155 - CoSD cancellation - before settlement of the CoSD blocking .....	538
Example 156 - CoSD rules set up .....	541
Example 157 - CoSD activation .....	542
Example 158 - CoSD release .....	543
Example 159 - CoSD cancellation .....	543
Example 160 - Set-up of a new securities blocking .....	554
Example 161 - Increase of an existing securities blocking .....	556

---

Example 162 - Decrease of an existing securities blocking .....	558
Example 163 - Use of a blocked securities position not complemented by another securities position .....	560
Example 164 - Use of blocked securities positions complemented with the deliverable position .....	564
Example 165 - Set-up of a new securities reservation .....	568
Example 166 - Increase of an existing reservation .....	571
Example 167 - Decrease of an existing reservation .....	574
Example 168 - Use of a reserved securities position not complemented by another securities position .....	577
Example 169 - Use of a reserved securities position complemented by another securities position .....	581
Example 170 - Set-up or increase of an earmarking position with a Settlement Restriction .....	585
Example 171 - Set-up or increase of an earmarking position with a Settlement Instruction .....	587
Example 172 - Decrease of an existing earmarked securities position .....	589
Example 173 - Use of an earmarked securities position .....	591
Example 174 - Limit variation following a buying .....	644
Example 175 - Limit increase .....	645
Example 176 - Limit variation following the recycling of a buying Settlement Instruction .....	646
Example 177 - Limit decrease .....	647
Example 178 - Limit variation following reverse collateral .....	648
Example 179 - Limit set up .....	651
Example 180 - Limit variation following a buying .....	652
Example 181 - Limit variation following a selling (A) .....	653
Example 182 - Limit variation following a selling (B) .....	654
Example 183 - Corporate Action proceeds automated transfer .....	669
Example 184 - Set-up of a new cash blocking .....	676
Example 185 - Increase of an existing cash blocking .....	678
Example 186 - Decrease of an existing cash blocking .....	680
Example 187 - Use of a blocked cash balance complemented by another position .....	682
Example 188 - Set-up of a new cash reservation .....	686
Example 189 - Increase of a cash reservation .....	689
Example 190 - Decrease of an existing cash reservation .....	692
Example 191 - Use of a cash reservation complemented by another balance .....	695
Example 192 - Liquidity Transfers During Sequence 0 of the Night-time Settlement period .....	701
Example 193 - Liquidity transfers during the Night-time Settlement period .....	702
Example 194 - Liquidity Transfers to reimburse the remaining liquidity .....	704
