Introduction .....	10
Reader's guide.....	16
<b>1 General Features of T2S .....</b>	<b>20</b>
<b>1.1 T2S Features Overview .....</b>	<b>20</b>
<b>1.1.1 Settlement .....</b>	<b>20</b>
<b>1.1.2 Liquidity management .....</b>	<b>26</b>
<b>1.1.3 Information Management.....</b>	<b>28</b>
<b>1.1.4 Reference Data management .....</b>	<b>28</b>
<b>1.1.5 Operations and Support.....</b>	<b>30</b>
<b>1.2 Configuration of Parties, Securities and Accounts.....</b>	<b>33</b>
<b>1.2.1 Parties.....</b>	<b>33</b>
<b>1.2.2 Securities reference data .....</b>	<b>76</b>
<b>1.2.3 Auto-collateralisation eligibility, securities valuation and close links..</b>	<b>83</b>
<b>1.2.4 Currencies reference data.....</b>	<b>86</b>
<b>1.2.5 Instruction Types .....</b>	<b>90</b>
<b>1.2.6 Accounts structure and organisation .....</b>	<b>94</b>
<b>1.2.7 Reference data for penalties.....</b>	<b>114</b>
<b>1.3 Access to T2S .....</b>	<b>116</b>
<b>1.3.1 Connectivity (A2A/U2A) .....</b>	<b>116</b>
<b>1.3.2 Authentication and authorisation .....</b>	<b>130</b>
<b>1.3.3 Access rights .....</b>	<b>145</b>
<b>1.3.4 Message subscription.....</b>	<b>203</b>
<b>1.3.5 Graphical User Interface.....</b>	<b>235</b>
<b>1.3.6 Security.....</b>	<b>236</b>
<b>1.4 Settlement Day .....</b>	<b>237</b>
<b>1.4.1 T2S calendar .....</b>	<b>238</b>
<b>1.4.2 T2S schedule .....</b>	<b>239</b>
<b>1.4.3 Overview description of the settlement day.....</b>	<b>240</b>
<b>1.4.4 Detailed description of the settlement day .....</b>	<b>245</b>
<b>1.5 Possible actions of T2S Operator .....</b>	<b>297</b>
<del><b>1.5.1 Business application configuration.....</b></del>	<del><b>297</b></del>
<b>1.5.2 T2S calendar management .....</b>	<b>299</b>
<b>1.5.3 T2S settlement day management .....</b>	<b>299</b>
<b>1.5.4 Business and operations monitoring .....</b>	<b>299</b>
<b>1.5.5 Archiving management.....</b>	<b>300</b>

1.5.6      Trouble management ..... 300

1.5.7      Invoicing management ..... 300

1.6        Application Processes Description ..... 301

    1.6.1      Settlement ..... 301

    1.6.2      Liquidity Management ..... 633

~~1.6.3      Reference Data Management ..... 711~~

    1.6.4      Information Management..... 758

    1.6.5      Operations and Support..... 824

1.7        Limitations of the system..... 898

    1.7.1      Timeout management..... 898

    1.7.2      Oversized Data Management ..... 898

    1.7.3      Timeout management in combination with oversized data ..... 899

    1.7.4      Compression..... 899

    1.7.5      Real-Time Communication (Query Responses) ..... 899

    1.7.6      Store and Forward Communication (Reports, Notifications) ..... 900

~~1.7.7      Rule-based configurations ..... 901~~

    1.7.8      Settlement Configuration ..... 902

    1.7.9      Retention Period for outbound messages ..... 903

2         Dialogue between T2S and T2S Actors ..... 904

    2.1        Introduction ..... 904

        2.1.1      Objective ..... 904

        2.1.2      Structure of the chapter..... 904

        2.1.3      Conventions used..... 905

    2.2        Communication processing ..... 915

        2.2.1      Introduction ..... 915

        2.2.2      Activity Diagram ..... 916

        2.2.3      Inbound and outbound messages..... 918

    2.3        Send Settlement Instruction..... 919

        2.3.1      Introduction ..... 919

        2.3.2      Activity Diagram ..... 919

        2.3.3      Settlement Instruction Lifecycle Processing ..... 921

        2.3.4      Settlement Instruction Settlement Processing ..... 925

        2.3.5      Settlement Instruction Cancellation Processing ..... 947

        2.3.6      Reporting of Matched Settlement Instructions identified as failed  
in their cut-off ..... 949

        2.3.7      Reporting of Unmatched Settlement Instructions identified as  
failed after the last cut-off of the settlement day ..... 950

        2.3.8      Inbound and Outbound messages ..... 952

- 2.4      Send Settlement Restriction on Securities Position ..... 953**
  - 2.4.1      Introduction ..... 953**
  - 2.4.2      Activity Diagram ..... 954**
  - 2.4.3      Securities Settlement Restriction Lifecycle Processing ..... 956**
  - 2.4.4      Securities Settlement Restriction Settlement Processing ..... 957**
  - 2.4.5      Securities Settlement Restriction Cancellation Processing ..... 960**
  - 2.4.6      Reporting of Securities Settlement Restriction identified as failed  
in their cut-off ..... 961**
  - 2.4.7      Inbound and outbound messages..... 962**
- 2.5      Send Settlement Restriction on Cash Balance ..... 962**
  - 2.5.1      Introduction ..... 962**
  - 2.5.2      Activity Diagram ..... 963**
  - 2.5.3      Cash Settlement Restriction Lifecycle Processing ..... 964**
  - 2.5.4      Cash Settlement Restriction Settlement Processing ..... 965**
  - 2.5.5      Cash Settlement Restriction Cancellation Processing ..... 968**
  - 2.5.6      Reporting of Cash Settlement Restriction identified as failed in  
their cut-off..... 968**
  - 2.5.7      Inbound and outbound messages..... 970**
- 2.6      Send Release Instruction for CoSD by Administering Party ..... 970**
  - 2.6.1      Introduction ..... 970**
  - 2.6.2      Activity Diagram ..... 971**
  - 2.6.3      CoSD Release Lifecycle Processing ..... 972**
  - 2.6.4      Inbound and outbound messages..... 974**
- 2.7      Send Cancellation Instruction for CoSD by Administering Party..... 974**
  - 2.7.1      Introduction ..... 974**
  - 2.7.2      Activity Diagram ..... 975**
  - 2.7.3      CoSD Cancellation Instruction Lifecycle Processing..... 976**
  - 2.7.4      Inbound and outbound messages..... 981**
- 2.8      Send Amendment Instruction of a Settlement Instruction or of a  
Settlement Restriction on Securities Position ..... 981**
  - 2.8.1      Introduction ..... 981**
  - 2.8.2      Activity Diagram ..... 982**
  - 2.8.3      Amendment Instruction Lifecycle Processing ..... 983**
  - 2.8.4      Inbound and outbound messages..... 984**
- 2.9      Send Amendment Instruction of a Settlement Restriction on Cash  
Balance..... 985**
  - 2.9.1      Introduction ..... 985**
  - 2.9.2      Activity Diagram ..... 985**
  - 2.9.3      Amendment Instruction Lifecycle Processing ..... 986**

2.9.4	Inbound and outbound messages.....	987
2.10	Send Hold/Release Instruction.....	988
2.10.1	Introduction .....	988
2.10.2	Activity Diagram .....	988
2.10.3	Lifecycle Processing Hold Instruction.....	989
2.10.4	Lifecycle Processing Release Instruction .....	991
2.10.5	Lifecycle Processing Partial Release Instruction .....	994
2.10.6	Inbound and outbound messages.....	997
2.11	Send Cancellation Instruction of a Settlement Instruction or a Settlement Restriction on Securities Position .....	998
2.11.1	Introduction .....	998
2.11.2	Activity Diagram .....	998
2.11.3	Cancellation Instruction Lifecycle processing .....	1000
2.11.4	Inbound and outbound messages.....	1004
2.12	Send Cancellation Instruction of a Settlement Restriction on cash balance.....	1004
2.12.1	Introduction .....	1004
2.12.2	Activity Diagram .....	1005
2.12.3	Cancellation Instruction Lifecycle processing .....	1006
2.12.4	Inbound and outbound messages.....	1007
2.13	Send immediate liquidity transfer .....	1008
2.13.1	Introduction .....	1008
2.13.2	Activity Diagram .....	1008
2.13.3	Inbound and outbound messages.....	1011
2.14	Send RTGS answer .....	1011
2.14.1	Introduction .....	1011
2.14.2	Activity Diagram .....	1012
2.14.3	Inbound and outbound messages.....	1013
2.15	Execution of Liquidity Transfer from RTGS to T2S .....	1013
2.15.1	Introduction .....	1013
2.15.2	Activity Diagram .....	1013
2.15.3	Inbound and outbound messages.....	1015
2.16	Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS.....	1016
2.16.1	Introduction .....	1016
2.16.2	Activity Diagram .....	1016
2.16.3	Inbound and outbound messages.....	1018
2.17	End-of-Day Cash Management.....	1019

- 2.17.1 Introduction ..... 1019
- 2.17.2 Activity Diagram ..... 1019
- 2.17.3 Inbound and outbound messages..... 1026
- 2.18 Send Query..... 1027
  - 2.18.1 Introduction ..... 1027
  - 2.18.2 Activity Diagram ..... 1027
  - 2.18.3 Inbound and outbound messages..... 1029
- 2.19 Receive Report ..... 1035
  - 2.19.1 Introduction ..... 1035
  - 2.19.2 Activity Diagram ..... 1035
  - 2.19.3 Outbound messages..... 1036
- 2.20 Receive Flat File Report ..... 1038
  - 2.20.1 Introduction ..... 1038
  - 2.20.2 Activity Diagram ..... 1038
- ~~2.21 Maintain Reference Data Object ..... 1040~~
  - ~~2.21.1 Introduction ..... 1040~~
  - ~~2.21.2 Activity Diagram ..... 1040~~

# 1 Introduction

2 The User Detailed Functional Specifications (UDFS) are part of the deliverables produced for the specification  
3 phase of T2S project. The diagram below presents an overview of all these deliverables allowing T2S Actors  
4 to understand how requirements described in the T2S URD are implemented in T2S.

5 **DIAGRAM 1 - OVERVIEW OF T2S SPECIFICATIONS**

6  
7 As to functional specifications, the GFS presents the solution envisaged for T2S from a functional perspec-  
8 tive, UDFS focuses on the provision of information to T2S Actors to design and build the interface of their  
9 business applications with T2S (A2A), while screens will be described into the UHB.

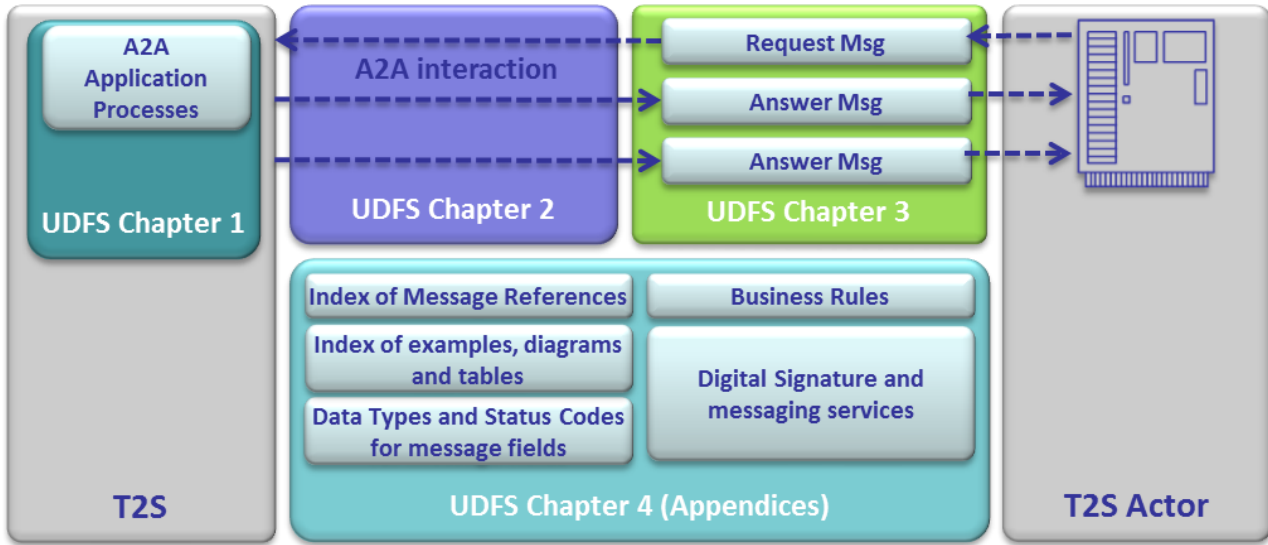

10 The UDFS provides information to:

- 11 | Business analysts of the T2S Actors, who find in the UDFS a description of the application processes and  
12 the information flows between their own business applications and the T2S platform;
- 13 | Developers, who find in the UDFS the necessary information to design and build the interface of the T2S  
14 Actors' business applications with T2S.

15 The UDFS is a self-contained document, structured along 3 different but complementary Chapters.

1

**DIAGRAM 2 - SCOPE OF UDFS CHAPTERS**

2

3 Chapter 1: General features of T2S

4 UDFS chapter 1 provides concise and descriptive information on the T2S behaviour as it is seen from a T2S  
5 Actor point of view. The background information provided in Chapter 1 on the T2S internal behaviour facili-  
6 tates the understanding of Chapters 2 and 3 (in particular to understand the information flows described in  
7 Chapter 2). Cross-referencing between Chapter 1 and Chapter 2 is ensured in order to ease the reading.

8 Information provided in Chapter 1 on the T2S application processes is user-oriented and does not include  
9 detailed descriptions of the internal T2S processes. It neither provides descriptions of the internal behaviour  
10 of T2S Actors interacting with T2S: it is not the purpose of the UDFS to predicate the conduct of business of  
11 future T2S users.

12 The following table presents the scope and user objective for each section of UDFS Chapter 1:

13  
14

**TABLE 1 - STRUCTURE OF UDFS CHAPTER 1**

SECTION	SCOPE	USER OBJECTIVE
1.1 T2S Features overview	Overall presentation of the T2S business functionalities	To understand the general behaviour of T2S.
1.2 Configuration of Parties, Securities and Accounts"	T2S transversal reference data.	To understand how securities, securi- ties accounts and cash account struc- ture can be organised in T2S.
1.3 Access to T2S	T2S Interface	To understand the main principles for the exchange of information between T2S and T2S Actors.
1.4 Settlement Day	T2S Calendar, T2S Settlement day structure and T2S Operator actions	To understand the standard and excep- tional events of the T2S schedule.

SECTION	SCOPE	USER OBJECTIVE
1.5 Possible actions of T2S Operator	Actions to be performed by the T2S Operator.	To understand the actions the T2S Operator for T2S configuration and for T2S operation monitoring.
1.6 Application Processes Description	T2S application processes accessible in A2A mode	To understand the configuration, triggering and execution of T2S application processes accessible through messages.
1.7 Limitations of the system	Processes in relation with Settlement that are not ensured by T2S	To understand the exact perimeter of T2S and what processes should not be expected from T2S.

1 Chapter 2: Dialogue between T2S and T2S Actors

2 Chapter 2 of the UDFS provides a formalised description of the application-to-application (A2A) dialogues,  
3 which allow the business applications of T2S Actors to interact with T2S. The objective of this Chapter is to  
4 describe the behaviour of T2S regarding the interactions with T2S Actors, i.e. when sending/receiving mes-  
5 sages to/from the latter. Consistently with the approach of Chapter 1, UDFS Chapter 2 does not enter into  
6 any description of the behaviour of Actors' systems interacting with T2S.

7 Each section of the Chapter 2 describes the dialogue between T2S and a T2S Actor triggered by a particular  
8 inbound message ("Use Case"). When the dialogues are very similar for a category of messages, one single  
9 use case ("Universal use case") is used to describe generically the dialogues triggered by these messages.  
10 Section 2.1.3 "Conventions used" provides detailed information regarding the formalism used for the de-  
11 scriptions of the dialogues.

12 The following use cases are described in UDFS Chapter 2:

13 **TABLE 2 - STRUCTURE OF UDFS CHAPTER 2**

SECTION	USE CASE
2.2	Communication processing
2.3	Send Settlement Instruction
2.4	Send Settlement Restriction on Securities Position
2.5	Send Settlement Restriction on Cash Balance
2.6	Send Release Instruction for CoSD by Administering Party
2.7	Send Cancellation Instruction for CoSD by Administering Party
2.8	Send Amendment Instruction of a Settlement Instruction or of a Settlement Restriction on Securities Position
2.9	Send Amendment Instruction of a Settlement Restriction on Cash Balance
2.10	Send Hold/Release Instruction

SECTION	USE CASE
2.11	Send Cancellation Instruction of a Settlement Instruction or a Settlement Restriction on Securities Position
2.12	Send Cancellation Instruction of a Settlement Restriction on cash balance
2.13	Send Immediate Liquidity Transfer
2.14	Send RTGS answer
2.15	Execution of Liquidity Transfer from RTGS to T2S
2.16	Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS
2.17	End-of-Day Cash Management
2.18	Send Query
2.19	Receive Report
2.20	Receive Flat File Report
<del>2.21</del>	<del>Maintain SD</del>
<del>2.22</del>	<del>Restriet SD(Split book approach)</del>
2.23	System Status Notification
2.24	Resend Message or File
2.25	Receive Invoice
2.26	Receive Invoice Cancellation
<del>2.27</del>	<del>Bulk Load Securities Valuations(Split book approach)</del>

### 1 Chapter 3: Catalogue of messages

2 Chapter 3 of the UDFS provides a detailed description of the messages to be used to run application-to-  
3 application communication with T2S. It describes the entire set of messages which are processed by the T2S  
4 system, i.e. which can be exchanged between T2S and the business application of a T2S Actor directly con-  
5 nected to T2S. The following information is provided:

- 6 | Description of the XML structure with mandatory/optional fields, validation rules and purpose of each  
7 | field in the context of T2S;
- 8 | Possible usages of the message in the context of T2S, including when relevant specific rules for the pop-  
9 | ulation of the message fields for a given usage;
- 10 | Business rules applicable for message processing.

11 This Chapter includes links to a set of files available on MyStandards message documentation website pro-  
12 vided by Swift including:

- 13 | The T2S customised schemas (one file for each schema presented in Chapter 3 of the document), avail-  
14 | able in xsd, html, pdf and xls format;

1 | Sample XML files illustrating each example presented in Chapter 3.

2 | The objective of the Chapter is to allow the reader to find all the necessary information related to messaging  
3 | which are needed to establish a functioning system of application-to-application communication between  
4 | T2S and its users.

5 | Information in Chapter 3 results from the customization of the enriched ISO 20022 schemas for the specific  
6 | purpose of T2S.

7 | A section of Chapter 3 deals with the specific conditions applying to exchanges of messages between T2S  
8 | and T2S Actors during the so-called "coexistence period", during which information carried out by ISO 20022  
9 | messages remain compatible with equivalent information carried out by ISO 15022 messages.

10 | Chapter 3 of the UDFS groups the descriptions of messages according to the classification of the ISO 20022  
11 | message repository:

12 | **TABLE 3 - STRUCTURE OF UDFS CHAPTER 3**

CATEGORY OF MESSAGE	PREFIX
Administration	admi
<b>Account Management</b>	<b>aemt(Split book approach )</b>
Cash Management	camt
Collateral Management	colr
Headers	head
<b>Reference Data</b>	<b>reda(Split book approach)</b>
Securities Management	semt
Securities Settlement	sese

14 | Chapter 4: Appendices

15 | The UDFS appendices provide:

16 | | Information common to several UDFS sections:

17 | – Table of T2S business rules applying to incoming messages, with the respective messages and error  
18 | codes associated;

19 | – Table of data types for message fields, providing an overview of all statuses and codes that occur in  
20 | messages used by T2S;

21 | | Information on the management of digital signature on business level;

22 | | Indexes:

23 | – Index of message references;

24 | – Index of examples;

25 | – Index of diagrams;

- 1 – Index of tables.

# 1 Reader's guide

2 The UDFS document is available for the whole community of T2S Actors: In order to ensure the same level  
3 of information for all T2S Actors, information relevant for CSDs, CBs and DCPs is contained in one single  
4 book of UDFS.

5 Nevertheless, different readers may have different needs and priorities. For instance, "business" readers  
6 interested mainly in organisational issues may not wish to enter into the full details of each and every mes-  
7 sage description, while technical readers involved in the specification of technical interfaces to T2S may not  
8 be interested in the thorough description of the T2S application processes that are leading to the sending of  
9 a given message. Not every reader wants to read the entire UDFS, or even want to follow the same reading  
10 plan.

11 However, all readers, whether "business" or "technical", may find it useful to read the following UDFS sec-  
12 tions, which are providing a background to the understanding of any other UDFS section:

13 | 1.1 "T2S Features Overview", which is a summary providing the basis for the understanding of the main  
14 T2S concepts.

15 | 1.2 "Configuration of Parties, Securities and Accounts", which provides the basis for data organisation in  
16 T2S.

## 17 "Business Oriented" perspectives

18 The business reader may be interested in the way information is structured in T2S. This user may want to  
19 follow the reading plan described below to find information about the operations that can affect a securities  
20 account <sup>1</sup> in T2S:

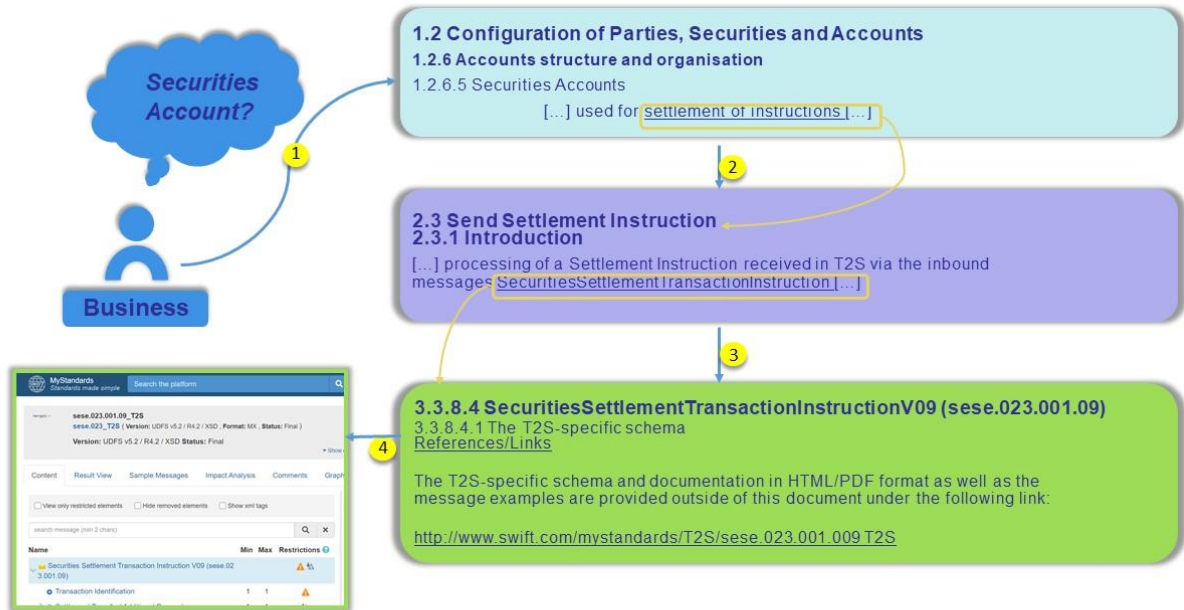

---

1 The use of the term "Securities account" is aligned with the naming convention of the URD 5.0 and the GFS 4.0 and does not predicate any legal meaning (securities records).

1

**EXAMPLE 1 - "T2S DATA AND RELATED PROCESSING" READING PLAN**

2

3 | **1** The business reader finds in section 1.2 "Configuration of Parties, Securities and Accounts" a general description of Securities Account specifying how these accounts are used for the settlement of Settlement Instructions.

6 | From this point, he may jump to section 2.3 "Send Settlement Instruction" **2** to find a description of the processing of a Settlement Instruction.

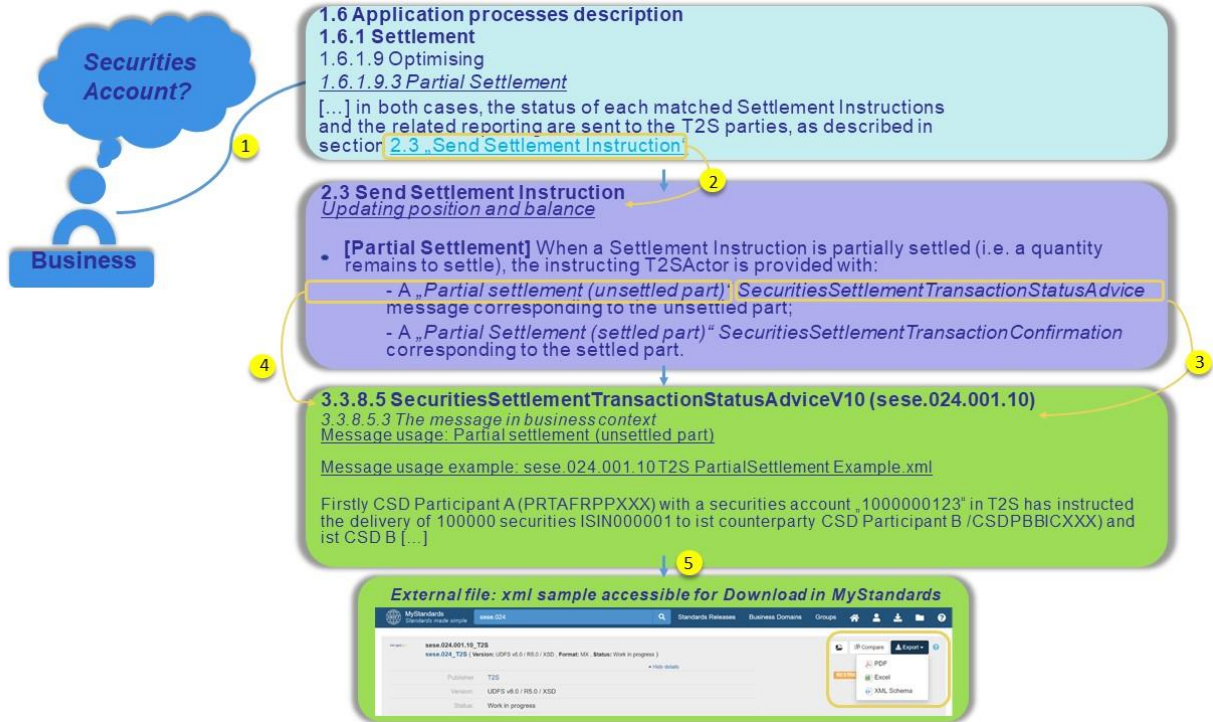

8 | Should the reader need to enter into further details, he may access through a hyperlink section 3.3.1.1 "SecuritieSettlementTransactionInstruction" **3** to find the detailed description of the message used to send Settlement Instructions to T2S.

11 | From this point, he may continue through another hyperlink to the schema description available on MyStandards website to find all the details regarding a particular field of the message **4**.

13 Alternatively, a business reader may be interested firstly in the processing capabilities offered by T2S to the T2S Actors. Starting from a particular application process (e.g. partial settlement), this user may want to follow the reading plan below in order to find all information available about this processing:

1

**EXAMPLE 2 - "APPLICATION PROCESSING DETAILS" READING PLAN**

2

1

The business reader finds under section 1.6.1.9.3 "Partial Settlement" a complete description of partial settlement in T2S: applicable thresholds, schedule restrictions, and procedures applied by T2S.

From this point, he may access through a hyperlink section 2.3 "Send Settlement Instruction" to learn more about the messages sent to the T2S Actor who originated a Settlement Instruction when this instruction is partially settled.

2

This section provides the name of the message used by T2S to inform the T2S Actor about a partial settlement (SecuritiesSettlementTransactionStatusAdvice), as well as the usage of this message in the context of partial settlement ("Partial settlement (unsettled part)").

The user may want to access through hyperlinks the relevant sections of Chapter 3 describing the message and the usage.

3

4

Eventually, the user may access through the MyStandard page of the message to a sample of an XML message sent by T2S to inform a T2S Actor about a partial settlement.

5

Further alternative reading plans can also be followed by starting e.g. from a specific dialogue situation (the sending of a settlement restriction) and analysing all the T2S processes potentially triggered during this dialogue.

"Technical oriented" perspectives

For a technical reader, it is more likely that the reading plans would start either:

- 
- 1 | From Chapter 2 "Dialogue between T2S and T2S Actors", when a complete overview of the possible A2A  
2 | dialogue with T2S is required, e.g. when structuring the interface of a T2S Actor directly connected to  
3 | T2S.
- 4 | From Chapter 3 "Catalogue of Messages", when a detailed description of the content of a given T2S A2A  
5 | message is needed, e.g. when specifying the details of the interface of a T2S Actor directly connected to  
6 | T2S.
- 7

# 1 General Features of T2S

## 2 1.1 T2S Features Overview

### 3 1.1.1 Settlement

4 The Settlement application processes manages the life cycle of securities related instructions in T2S and  
5 their settlement together with the settlement of liquidity transfers as shown in the diagram below.

6 **DIAGRAM 3 - SETTLEMENT APPLICATION PROCESSES**

7

8 The T2S Actor submits to T2S for their processing:

- 9 | Settlement instructions stemming from SecuritiesSettlementTransactionInstruction message;
- 10 | Settlement restrictions stemming from IntraPositionMovementInstruction or IntraBalanceMovementInstruction messages;
- 11 | Liquidity transfers stemming from LiquidityCreditTransfer message or from the triggering of liquidity transfer orders registered in T2S;
- 12 | Maintenance instructions including:
  - 13 | – Instruction cancellations stemming from SecuritiesTransactionCancellationRequest;

- 1 – Instruction amendments stemming from `SecuritiesSettlementConditionModificationRequest`;
- 2 – Hold, release and partial release instructions stemming from `SecuritiesSettlementConditionModifica-`
- 3 `tionRequest`.

4 The settlement instructions, settlement restrictions or liquidity transfers are submitted to the settlement  
5 application processes with the aim to settle the quantity of securities and/or amount of cash in T2S. Liquidity  
6 transfers are created upfront by the liquidity management application processes (See section [Liquidity man-](#)  
7 [agement](#) [▶ 26]), prior to their submission to the settlement application processes.

8 The maintenance instructions (instruction cancellations, instruction amendments or hold/release/partial re-  
9 lease instructions) are submitted to the settlement application processes with the aim to respectively cancel  
10 the settlement instructions and settlement restrictions, to amend the process indicators of the settlement  
11 instructions and settlement restrictions and to hold, release or partially release the settlement instructions.

12 T2S reports to the T2S Actors the relevant outgoing messages and associated status, along the T2S life cycle  
13 of:

- 14 | Settlement instructions (See section `Send Settlement Instruction` and section `Send Cancellation Instruc-`  
15 `tion for CoSD by Administering Party`);
- 16 | Settlement restrictions (See section `Send Settlement Restriction on Securities Position`, section `Send Set-`  
17 `tlement Restriction on Cash Balance` and section `End-of-Day Cash Management`);
- 18 | Liquidity transfers (See section `Send immediate liquidity transfer`, section `Execution of Liquidity Transfer`  
19 `from RTGS to T2S`, section `Execution of Standing and Predefined Liquidity Transfer Orders from T2S to`  
20 `RTGS` and section `End-of-Day Cash Management`);
- 21 | Maintenance instructions (See section `Send Amendment Instruction of a Settlement Instruction` or of a  
22 `Settlement Restriction on Securities Position`, section `Send Amendment Instruction of a Settlement Re-`  
23 `striction on Cash Balance`, section `Send Hold/Release Instruction`, section `Send Cancellation Instruction`  
24 `of a Settlement Instruction` or a `Settlement Restriction on Securities Position` and section `Send Cancell-`  
25 `ation Instruction of a Settlement Restriction on cash balance`).

#### 26 1.1.1.1 Processing of settlement instructions and settlement restrictions

27 When the incoming messages related to settlement instructions and settlement restrictions sent by the T2S  
28 Actors successfully passed the technical validation of the T2S interface, they are submitted to the business  
29 validation based on a harmonised set of validation rules and to the consistency checks with the reference  
30 data (See section [Business Validation](#) [▶ 301]).

31 The result of this business validation can be that the incoming messages related to settlement instructions  
32 and settlement restrictions are validated or rejected.

33 In addition to this consistency check with reference data, as a result of the business validation process, T2S  
34 can also set on hold the settlement instructions or reject the settlement restrictions and settlement instruc-  
35 tions if they fulfill a CSD additional validation rule.

36 Once incoming messages are validated, even if the settlement instructions are set on hold, T2S creates the  
37 settlement restrictions and settlement instructions based on these messages.

1 As regards settlement restrictions, once created, they are submitted to the posting processes as from their  
2 intended settlement date with a view to use, increase or decrease restrictions on securities positions or cash  
3 balances.

4 As far as settlement instructions are concerned, as a general rule, each incoming message related to settle-  
5 ment instruction contains one settlement instruction, except for already matched instructions, in which case  
6 T2S generates two matched settlement instructions after its business validation. Once created, settlement  
7 instructions, in case they require to be matched in T2S, are submitted to the matching by comparing the  
8 settlement details provided by each T2S Actor to ensure that both parties agree on the settlement terms of  
9 the transaction (See section [Matching](#) [▶ 347]). Following an unsuccessful matching attempt and after a  
10 predefined time, T2S generates and sends an allegation message to the counterparty of the settlement  
11 instruction created (See section [Allegation](#) [▶ 351]).

12 Once settlement instructions are matched, they are submitted to realignment based on the cross-CSD links  
13 defined in reference data (See section [Realignment](#) [▶ 451] and section Send Settlement Instruction). If  
14 there is a need to realign, T2S creates automatically T2S generated settlement instructions, for realignment  
15 purposes, and links them with the related matched settlement instructions to ensure their settlement on an  
16 all-or-none basis.

17 As from their intended settlement date, settlement instructions and, if created, their related T2S generated  
18 settlement instructions, are submitted to conditional settlement based on CoSD rules defined in the refer-  
19 ence data (See section [Conditional Settlement](#) [▶ 510]). If there is at least one CoSD rule, T2S creates au-  
20 tomatically T2S generated settlement restriction(s) to block the securities quantity and/or the cash amount  
21 and hold each matched settlement instruction waiting for the release from the administering party.

22 Once conditional settlement is checked, T2S generated settlement restrictions created are submitted to the  
23 posting processes. And once both settlement instructions are released by the administering party(ies), they  
24 are submitted to the posting processes.

25 Then, at the last stage, settlement instructions and settlement restrictions sent by the T2S Actors or created  
26 by T2S are submitted to the real-time settlement or made available for the night-time settlement. Should  
27 settlement instruction(s) and/or settlement restriction(s) be linked together either by the T2S Actors or au-  
28 tomatically by T2S, they are submitted to the settlement application process with a view to ensure their  
29 settlement in accordance with the specified link type (See section [Linked Instructions](#) [▶ 500]).

30 During the real-time, a first settlement is systematically attempted through the posting processes which  
31 check eligibility and provision and, if these checks are successfully passed, performs the booking of the secu-  
32 rities positions; the cash balances and the limit headroom, making the settlement irrevocable (See section  
33 [Posting](#) [▶ 381]).

34 The result of the settlement attempt always triggers optimising processes in order to identify settlement  
35 instructions to be submitted to another settlement attempt, with an expected success, due to settled settle-  
36 ment instructions, settlement restrictions and liquidity transfers bringing new resources, or due to unsettled  
37 settlement instructions resolving gridlocks (See section [Optimising](#) [▶ 413]).

38 During the night-time, settlement instructions and settlement restrictions are selected into cycles/sequences  
39 (See section [Settlement Day](#) [▶ 237]), submitted to optimisation procedures in order to identify sets of set-  
40 tlement instructions and settlement restrictions that can settle successfully.

1 Both for real-time and night-time, auto-collateralisation procedures are used within the posting processes in  
2 order to reduce the number of cases with lack of cash, lack of securities or insufficient external guarantee  
3 headroom (auto-collateralisation with a central bank or with a payment/settlement bank). Furthermore, the  
4 settlement resorts to partial settlement procedures in case of lack of securities, if requested and allowed,  
5 according to partial window defined in the settlement day (See section [Settlement Day](#) [▶ 237]).

6 At each end of day, T2S recycles all unmatched settlement instructions, matched pending settlement instruc-  
7 tions and pending settlement restrictions for a defined recycling period before their automatic cancellation  
8 by T2S (See section [Instructions Recycling](#) [▶ 375]).

#### 9 1.1.1.2 Processing of liquidity transfers

10 Liquidity transfers are directly submitted by the liquidity management application processes to the real-time  
11 settlement or made available for the night-time settlement.

12 Liquidity transfers are submitted to the posting processes which check eligibility, provision check and if these  
13 checks are satisfactory process the booking by the actual updating of the cash balances, making the settle-  
14 ment irrevocable (See section [Posting](#) [▶ 381]).

15 During the real-time, settlement is attempted through the posting process, which leads to a full settlement  
16 or a partial settlement for the amount available (See section [Optimising](#) [▶ 413]).

17 Should they be partially settled or not settled, liquidity transfers are not recycled for their pending part.

18 During the night-time, liquidity transfers are selected and settled into cycles/sequences (See section [Settle-  
19 ment Day](#) [▶ 237]).

#### 20 1.1.1.3 Processing of maintenance instructions

21 The maintenance instructions include cancellation instructions, amendment instructions and hold/release  
22 instructions.

23 T2S Actors can cancel or amend settlement instructions and settlement restrictions prior to their settlement  
24 or cancellation. They can also hold, release and partially release settlement instructions.

25 As regards cancellation instructions, T2S Actors may cancel a settlement instruction unilaterally, prior to its  
26 matching (See section [Instruction Cancellation](#) [▶ 360]). When a settlement instruction is matched, bilateral  
27 cancellation is needed.

28 As far as amendment instructions are concerned, T2S Actors may amend a settlement instruction only for  
29 the process indicators as partial settlement indicator, settlement priority and linkages (See section [Instruc-  
30 tion Amendment](#) [▶ 357]). T2S Actors may amend a settlement restriction, prior to its settlement, only for  
31 the process indicators as settlement priority and linkages.

32 Finally, T2S Actor may hold, release or partially release a settlement instruction in order to suspend or re-  
33 sume its processing in T2S (See section [Hold and Release](#) [▶ 364]).

34 At each end of day, T2S recycles all unmatched cancellation instructions for a defined recycling period before  
35 their automatic cancellation by T2S (See section [Instructions Recycling](#) [▶ 375]).

#### 1 1.1.1.4 Multi-currency aspects

2 T2S ensures cash settlement in central bank money in any T2S settlement currency (See section [Concept of](#)  
3 [currency in T2S](#) [▶ 87]).

4 Settlement in a given T2S settlement currency is possible only if the T2S dedicated cash account where the  
5 settlement instruction settles is denominated in this currency. Consequently, all the settlement processes  
6 related to a T2S dedicated cash account, such as posting process (See section [Posting](#) [▶ 381]) and limit  
7 management (see section [Limit Management](#) [▶ 640]), apply to the currency of this T2S dedicated cash ac-  
8 count.

9 Under specific conditions <sup>2</sup>, a central bank can provide settlement in central bank money in several curren-  
10 cies. Hence, this allows a T2S Party holding several T2S dedicated cash accounts in different T2S settlement  
11 currencies with the same central bank, provided each T2S dedicated cash account is denominated in one  
12 single T2S settlement currency (see section [T2S dedicated cash accounts in T2S](#) [▶ 95]). The fact that a  
13 central bank provides one or more currencies has no impact on the settlement process (e.g. provision check,  
14 auto-collateralisation...), since the liquidity available for settlement is appreciated at the level of each T2S  
15 dedicated cash account (consequently, currency per currency).

16 All settlement instructions are submitted to settlement through common posting and optimisation processes  
17 (See sections [Posting](#) [▶ 381] and [Optimising](#) [▶ 413]) independently from the T2S settlement currency in  
18 which their cash leg is denominated.

19 T2S Actors and T2S can link settlement instructions denominated in different T2S settlement currencies (See  
20 section [Linked Instructions](#) [▶ 500]), this has no specific impact on the settlement processes.

21 For settlement instructions denominated in different T2S settlement currencies submitted together for a  
22 settlement on all-or-none basis, the technical netting is performed per securities position and cash balance  
23 (See section [Technical Netting](#) [▶ 414]). Consequently, the technical netting applies individually to the T2S  
24 settlement currency of each relevant T2S dedicated cash account: no cross-currency netting is performed.

25 Nevertheless, the processing of these settlement instructions allows optimising securities resources. In par-  
26 ticular, optimisation on the securities side is possible when the same security is purchased in one given cur-  
27 rency and sold through a settlement instruction denominated in a different settlement currency.

28 The auto-collateralisation facility provided by a central bank or a payment/settlement bank is available for all  
29 T2S settlement currencies. Auto-collateralisation in a given currency is available for a given T2S Actor if the  
30 relevant credit provider agrees to provide intraday credit through auto-collateralisation. Besides, the list and  
31 valuations (valuation price and own-use valuation price) of eligible collateral have to be provided for each  
32 T2S settlement currency, since the collateral eligibility and valuation are managed for each T2S settlement  
33 currency (See section [Scope of multi-currency features of T2S](#) [▶ 88]).

34 Automatic release of intraday auto-collateralisation and automatic substitution (See section [Auto-](#)  
35 [collateralisation](#) [▶ 430]) are available for any T2S settlement currency. These functionalities can also be  
36 triggered in a cross-currency situation, i.e. a situation where securities are collateralised in an intraday credit  
37 operation denominated in a given currency, but must be released for being delivered in a settlement instruc-

---

2 Limits might be introduced on euro denominated cash accounts managed by non-euro CBs.

1 tion denominated in another T2S settlement currency. More precisely, in the case of a lack of securities de-  
2 tected during the provision check:

- 3 | The auto-collateralisation process triggers a dynamic reimbursement or an automatic substitution of col-  
4 lateral even if the initial intraday credit granted is not in the same currency as the currency of the set-  
5 tlement instruction which needs the collateralised securities;
- 6 | A dynamic reimbursement is first attempted with the cash holdings available on the T2S dedicated cash  
7 account which received the intraday credit. In a multi-currency situation, if this cash holding is insuffi-  
8 cient, the cash proceeds of the underlying settlement instruction cannot be used to reimburse the initial  
9 intraday credit operation since it is in a different currency;
- 10 | An automated substitution is therefore triggered in order to replace the initial collateral with other securi-  
11 ties eligible for the considered currency through a collateral settlement instruction. Due to this new col-  
12 lateral settlement instruction, the securities substitution is done without any cross-currency substitution  
13 (i.e. the amount used for the reimbursement is in the same currency as the original auto-  
14 collateralisation);
- 15 | As a result, the initial collateral can be released and can be delivered in a settlement instruction denomi-  
16 nated in any (other) T2S settlement currency.

#### 17 1.1.1.5 Penalty Mechanism

18 The Penalty Mechanism focuses on the daily Calculation of Penalties for failed Settlement Instructions as well  
19 as on providing the complementary features to manage Penalties which are necessary for T2S Actors.

20 Every business day, the Penalty Mechanism:

- 21 | Analyses the failed matched Settlement Instructions from the previous business day in order to see if  
22 they are eligible for penalties, hence, detecting new Penalties to be calculated;
- 23 | Calculates newly detected Penalties;
- 24 | Processes, on a continuous basis except during the Calculation and Recalculation of Penalties, the re-  
25 quests sent by CSDs to modify (i.e. remove, re-include, re-allocate or switch) existing Penalties;
- 26 | Performs the Recalculation of existing Penalties impacted by Reference Data changes or flagged as to be  
27 recalculated after a modification; and
- 28 | Prepares the Reporting of new Penalties (i.e. the Daily Penalty List) and of modified Penalties (i.e. the  
29 List of Modified Penalties).

30 In addition, once a month, the Penalty Mechanism:

- 31 | Performs the End of the Appeal Period process for Penalties detected on the previous month, which be-  
32 come not modifiable; and
- 33 | Prepares the Reporting of the aggregated amounts of Penalties detected on the previous month (Month-  
34 ly Aggregated Amounts Report), which may be used for the collection and redistribution of Penalties per-  
35 formed by CSDs.

36 All the Penalty reports (i.e. the Daily Penalty List, the List of Modified Penalties and the Monthly Aggregated  
37 Amounts) are available either in semt.044 format, or in a flat file format (the latter only for CSDs).

## 1 1.1.2 Liquidity management

2 The Liquidity Management application processes include the activities related to the transfers of liquidity  
3 between T2S Dedicated Cash Accounts and RTGS accounts, the setting of cash limits and restrictions in T2S,  
4 as well as the monitoring of liquidity. These T2S features may be categorized into the following main categories:  
5

- 6 | Liquidity Transfers;
- 7 | Limits, blocking and reservation;
- 8 | Liquidity monitoring.

### 9 1.1.2.1 Liquidity Transfers

10 A T2S Actor can move liquidity from its T2S Dedicated Cash Accounts to RTGS accounts held in an RTGS  
11 system via Liquidity Transfers. The initiation of outbound Liquidity Transfers from T2S to RTGS systems is  
12 under the responsibility of the T2S Dedicated Cash Account holder in T2S (or any other authorised party),  
13 whereas the initiation of inbound liquidity transfers from RTGS systems to T2S Dedicated Cash Accounts  
14 remains under the responsibility of the RTGS account holder (or any authorised party acting on behalf of the  
15 RTGS account holder) in the RTGS System. In addition to liquidity transfers from T2S to RTGS accounts,  
16 under specific conditions (i.e. the T2S Dedicated cash accounts involved belong to the same payment bank  
17 or are linked to the same RTGS account), T2S Actors can also use liquidity transfers to move liquidity be-  
18 tween T2S Dedicated Cash Accounts.

19 For initiating Liquidity Transfer requests T2S provides T2S Actors with the following possibilities:

- 20 | A T2S Actor can send requests for immediately moving liquidity (so-called Immediate Liquidity Trans-  
21 fers);
- 22 | A T2S Actor can specify to move liquidity from a T2S Dedicated Cash Account to an External RTGS Ac-  
23 count, Main Cash Account, RTGS DCA, CLM CB Account, RTGS CB Account or TIPS Account once at a  
24 predefined point in time or related to a business event (so-called Predefined Liquidity Transfer Order);
- 25 | A T2S Actor can specify to move liquidity from a T2S Dedicated Cash Account to an External RTGS Ac-  
26 count, Main Cash Account, RTGS DCA, CLM CB Account, RTGS CB Account or TIPS Account repetitively  
27 at predefined points in time or related to dedicated business events (so-called Standing Liquidity Trans-  
28 fer Order).

29 For further information, see section [Liquidity Transfer](#) [▶ 633].

30 Furthermore T2S offers the functionality to automatically transfer cash proceeds stemming from corporate  
31 actions and credited on a T2S Dedicated Cash Account to an External RTGS Account, Main Cash Account,  
32 RTGS DCA, CLM CB Account, RTGS CB Account or TIPS Account. The respective configuration (i.e. standing  
33 liquidity transfer order for corporate action) has to be defined by the T2S Dedicated Cash Account holder in  
34 T2S in advance. For further information, see section [Proceeds resulting from Corporate Actions or monetary  
35 policy operations](#) [▶ 666].

36 In addition when T2S Dedicated Cash Account holders receive liquidity from different liquidity providers (i.e.  
37 from different External RTGS Accounts, Main Cash Accounts, RTGS DCA, CLM CB Accounts, RTGS CB Ac-  
38 counts or TIPS Accounts) they can opt for a specific application process to retransfer the remaining liquidity

1 at the end of the night-time settlement to their liquidity providers according to a predefined priority. For  
2 further information, see section [Multiple Liquidity Provider](#) [▶ 699].<sup>3</sup>

3 Finally, at the end of the business day all T2S Dedicated Cash Accounts must have a balance of zero<sup>4</sup>.  
4 Therefore, T2S automatically transfers the remaining liquidity at the end of the business day to an External  
5 RTGS Account, Main Cash Account, RTGS DCA, CLM CB Account, RTGS CB Account or TIPS Account which  
6 has to be mandatorily specified for each T2S Dedicated Cash Account. It is also not possible to have over-  
7 night credit within T2S. Thus, T2S triggers forced reimbursements to close the pending intraday credits pro-  
8 vided by central banks in T2S through auto-collateralisation. For further information, see section [End of Day](#)  
9 [Cash Management](#) [▶ 655].

10 For Euro denominated T2S Dedicated Cash Accounts there is no automatic cash sweep and the T2S Dedicat-  
11 ed Cash Accounts have to be mandatorily linked to an Main Cash Account. For Euro denominated T2S Dedi-  
12 cated Cash Accounts it will be possible to initiate outbound liquidity transfers to all accounts belonging to  
13 TARGET Services (MCA, RTGS DCA and TIPS DCA (including CB accounts)) and receive cash via inbound  
14 liquidity transfers from all accounts in the TARGET Services (MCA, RTGS DCA and TIPS DCA (including CB  
15 accounts))). The actual booking process will be handled between T2S and CLM.<sup>5</sup>

16

#### 17 1.1.2.2 Limits, blocking and reservation

18 The allocation of liquidity can also be done by granting intraday credit by setting up limits.

19 T2S allows the definition of limits by CBs vis-à-vis other parties (auto-collateralisation limit) and limits by  
20 payment/settlement banks vis-à-vis their clients (including client-collateralisation limit). For further infor-  
21 mation, see section [Limit Management](#) [▶ 640].

22 Besides, T2S provides T2S Actors with the possibility to set restrictions on cash balances. Accordingly, T2S  
23 Actors can block and reserve dedicated amounts for specific purposes. Blocking is only possible for funds  
24 lower than or equal to the cash balance on the T2S Dedicated Cash Account whereas a reservation of funds  
25 greater than the cash balance would be possible. If the amount to be reserved exceeds the available bal-  
26 ance, the reservation is partially filled, the remaining amount is filled by incoming cash step by step until the  
27 full amount of the reservation is reached. For further information, see section [Cash Blocking and Reservation](#)  
28 [▶ 670].

#### 29 1.1.2.3 Liquidity Monitoring

30 T2S provides features in order to inform a T2S Dedicated Cash Account holder and any other authorised T2S  
31 Actor about settled amounts, cash balances, blockings and reservations as well as exceeding of thresholds.

---

3 Please note that the described functionality won't be available before CSLD go-live.

4 In contingency scenarios, when a T2S dedicated cash account balance cannot be swept to the RTGS system, T2S shall close the end-of-day period and change the business day with liquidity remaining on the respective cash accounts. On the next business day the T2S dedicated cash accounts shall start with the end-of-day balance of the previous business day.

5 Please note that the described functionality won't be available before CSLD go-live.

1 This information can be either requested by the T2S Actor on a real time basis or sent to the T2S Actor  
2 based on defined parameters or business events.

3 For further details, see section [Liquidity Monitoring](#) [▶ 706].

### 4 **1.1.3 Information Management**

5 T2S transmits information to T2S Actors via different information management services. The Information  
6 Management consists of the Status Management, Report Management and Query Management application  
7 processes.

#### 8 **1.1.3.1 Status management**

9 The Status Management provides information in A2A and in U2A about the processing results in T2S (e.g.  
10 status updates) of Settlement Instructions, Settlement Restrictions, Maintenance Instructions, Common Ref-  
11 erence Data Management and Liquidity Transfers. The communication of statuses is complemented by the  
12 communication of reason codes in case of negative result of a T2S process (See section [Status Management](#)  
13 [▶ 758]).

#### 14 **1.1.3.2 Report Management**

15 The Report Management allows T2S Actors receiving information through a set of predefined reports to T2S  
16 Actors. Reports are periodically created at predefined business events or scheduled time. They provide in-  
17 formation on e.g. settled Settlement Instructions, pending Settlement Instructions, cash balances and refer-  
18 ence data. T2S generates reports as XML messages and sends them directly after their creation to T2S Ac-  
19 tors in case they opted for receiving them immediately. Moreover T2S offers the possibility to display already  
20 created reports via the T2S Graphical User Interface (See section [Report generation](#) [▶ 788]).

#### 21 **1.1.3.3 Query Management**

22 The Query Management application process allows T2S Actors to retrieve information through predefined  
23 ad-hoc queries to get information about e.g. Settlement Instructions, securities positions, cash balances,  
24 reference data or dynamic data. The Query Management application process is available in A2A mode or in  
25 U2A mode (See section [Query management](#) [▶ 819]).

### 26 **1.1.4 Reference Data management**

27 ~~T2S relies on the Common Reference Data Management (CRDM) component to allows all T2S~~  
28 ~~Actors to create and maintain reference data in T2S for the configuration of data related to par-~~  
29 ~~ties, securities, securities accounts, T2S dedicated cash accounts and T2S rules and parameters.~~  
30 ~~The following list shows the main configuration areas for reference data in T2S:~~

- 31 | ~~Parties reference data;~~
- 32 | ~~Securities reference data;~~
- 33 | ~~Securities accounts reference data;~~
- 34 | ~~T2S dedicated cash accounts reference data;~~

- 1 | ~~Access rights management;~~
- 2 | ~~Message subscription configuration;~~
- 3 | ~~Network configuration;~~
- 4 | ~~Reports configuration;~~
- 5 | ~~Attribute domains management;~~
- 6 | ~~Business Day Management configuration;~~
- 7 | ~~Market specific attributes configuration;~~
- 8 | ~~Restriction types management;~~
- 9 | ~~Conditional securities delivery configuration;~~
- 10 | ~~Billing configuration;~~
- 11 | ~~Configuration parameters.~~<sup>6</sup>

12 ~~T2S Actors set up the appropriate configuration by creating and maintaining reference data~~  
13 ~~objects in CRDM. A reference data object is a set of logically related, self-consistent infor-~~  
14 ~~mation (See section Reference data objects). Parties, securities, securities accounts and T2S~~  
15 ~~dedicated cash accounts are examples of reference data objects.~~

16 ~~Reference data management allows T2S Actors to create, update and delete reference data~~  
17 ~~objects in CRDM. Deletion of a reference data object is always logical and it is possible, for a~~  
18 ~~duly authorised user, to restore a previously deleted reference data object (See section Refer-~~  
19 ~~ence data maintenance types).~~

20 ~~Reference data management allows full maintenance of all reference data objects in U2A mode,~~  
21 ~~whereas it provides only a sub-set of functions in A2A mode on a limited number reference data~~  
22 ~~objects (See section Reference data maintenance types for an exhaustive list of these static~~  
23 ~~data objects and functions).~~

24 ~~Reference data management provides versioning facilities and validity periods allowing the~~  
25 ~~implementation of data revision and data history features, in order to keep track of all past da-~~  
26 ~~ta changes, to enter changes meant to become effective as of a future date and to define refer-~~  
27 ~~ence data objects with limited or unlimited validity.~~

28 ~~All types of T2S Actors, i.e. CSDs, CBs, CSD participants, payment banks and the T2S operator~~  
29 ~~have access to reference data management, each of them to different functions and data, ac-~~  
30 ~~cording to the access rights granted to their users (See section Access rights).~~

31 ~~Duly authorised users can create and maintain reference data objects in CRDM submitting ref-~~  
32 ~~erence data maintenance instructions.~~

33 ~~Reference data management immediately processes each reference data maintenance instruc-~~  
34 ~~tions and provides a reference data maintenance response including information on the result~~

---

6 This area includes reference data for countries, currencies, partial settlement thresholds, system entities, tolerance amounts, T2S BIC directory. (Split book approach)

of the processing (e.g. the reference data maintenance instruction was successfully processed or rejected owing to a business validation error). The following diagram shows the two messages exchanged in this case between a T2S Actor and CRDM:

DIAGRAM 4 - REAL-TIME PROCESSING OF REFERENCE DATA MAINTENANCE INSTRUCTIONS (SPLIT BOOK APPROACH)

In case a night-time settlement sequence is running, reference data management temporarily stops the processing of all reference data maintenance instructions related to reference data objects used by the settlement process and then resume the processing after the end of night-time settlement sequence, in order to impede any possible impact of these reference data changes on the ongoing settlement process (See section Reference data maintenance instructions processing). In this case, reference data management provides immediately a provisional static data maintenance response (to inform the relevant T2S Actor that the initial reference data maintenance instruction is queued) and then, after the end of the current night-time settlement sequence and before the following one, it sends another reference data maintenance response providing the final result of the processing. The following diagram shows the three messages exchanged in this case between a T2S Actor and CRDM:

DIAGRAM 5 - NIGHT-TIME PROCESSING OF REFERENCE DATA MAINTENANCE INSTRUCTIONS (SPLIT BOOK APPROACH)

See section Reference data maintenance instructions processing for more information on the processing of reference data maintenance instructions.

Reference data maintenance instructions submitted in U2A mode can be executed either in Two-Eyes mode or in Four-Eyes mode (See section Security), according to the access rights granted to the submitting user.

Reference data management is available throughout the settlement day, with the exception of the maintenance window (See section Settlement Day). For further information refer to CRDM UDFS, "Introduction to CRDM". (Split book approach)

### 1.1.5 Operations and Support

This set of processes provides support to the T2S Operator in the operational management of the T2S system.

#### 1 1.1.5.1 Business application configuration

2 The configuration of the T2S business application is performed by means of a set of rules and parameters in  
3 the CRDM database. These rules and parameters are defined and maintained exclusively by the T2S Opera-  
4 tor as Reference Data objects.

5 For more details see section [Business application configuration](#) [▶ 824].

#### 6 1.1.5.2 T2S calendar management

7 The T2S Calendar defines the system's opening and closing days. These closing days are defined by the T2S  
8 Operator as Reference Data objects in the Common Reference Data Management (CRDM) component and  
9 handled within the Business Day Management (BDM) component.

10 Closing days may also be currency-specific. A currency-specific closing day defines a day in which the sys-  
11 tem may still open, but it is not possible to settle cash in that currency. Currency-specific closing days are  
12 defined by the T2S Operator following the opening days of the relevant Central Banks.

13 See section [T2S calendar](#) [▶ 238] for more details on the business concepts behind the management of the  
14 T2S Calendar.

15 For more details see section [T2S calendar management](#) [▶ 824].

#### 16 1.1.5.3 T2S settlement day management

17 The T2S Settlement Day schedule is handled within the Business Day Management (BDM) Common Compo-  
18 nent. It is defined as a series of events. Each event corresponds to a process or cut-off which is triggered  
19 within the system at a specified time and, optionally, following the completion of a set of prior events.

20 The T2S Operator defines a set of default event schedules for each business date. These are loaded auto-  
21 matically when the system reaches the relevant business date.

22 The T2S Operator can manually intervene on the current business day schedule by inserting new events,  
23 changing the scheduled time for one or more events, or closing events so that they are not executed.

24 In exceptional situations, it is possible to define certain events to be valid only for specific currencies: for  
25 instance, the DVP cut-off could be moved past the normal time for a single currency.

26 For more details see section [T2S settlement day management](#) [▶ 826].

#### 27 1.1.5.4 Business and operations monitoring

28 The Business and operations monitoring integrates information coming from different sources (e.g. the op-  
29 erational data base and the short-term statistical information data base) in order to monitor the business  
30 and operational status, to detect possible problems in real-time and to provide up-to-date information for  
31 crisis management scenarios.

32 For more details see section [Business and operations monitoring](#) [▶ 836].

#### 33 1.1.5.5 Archiving management

34 The archiving management application process copies inbound and outbound messages from the operational  
35 data base and specific Internal messages and store them, for a harmonised 10 years period, in their original

1 format into a centralised archive for audit and regulatory purposes. These messages are accessible exclu-  
2 sively by the T2S Operator upon extraction request of the T2S Actors made in order to meet requirements of  
3 a legal nature.

4 For more details see section [Archiving management](#) [▶ 837].

#### 5 1.1.5.6 Trouble management

6 The Trouble Management System (TMS) is a tool where the T2S Operator tracks all interactions with the  
7 entitled T2S Actors. Following the naming convention of the Information Technology Infrastructure Library  
8 (ITIL) used in T2S, events captured in the TMS can be

- 9 | Incidents;
- 10 | Problems;
- 11 | Service requests.

12 The entitled T2S Actors are able to report any event or to submit a request via telephone or e-mail to the  
13 T2S Service Desk. They receive an identifier through which they have the possibility to get updates on the  
14 case through its interface.

15 The T2S Actor in whose name the case is opened is entitled to access the related item in the TMS through a  
16 dedicated interface which is made available to it. The key to retrieve the information is the case number  
17 which the reporting actor is provided immediately when calling or via a return e-mail, should the latter be  
18 the way of getting in touch with the T2S Service Desk.

19 Each item within the TMS has a life cycle from the opening until the closure through updates and status  
20 changes. Every time the case is impacted by one of such events, the concerned T2S Actor receives a notifi-  
21 cation where it is invited to have a look at the case to be informed about the occurrence. The closure of a  
22 TMS case needs always the reporting T2S Actor agreement to be performed.

23 For more details see section [Trouble management](#) [▶ 838].

#### 24 1.1.5.7 Invoicing management

25 The T2S Operator can manage the T2S invoices through the Billing Common Component (BILL) functionali-  
26 ties. More specifically, the T2S Operator is allowed to perform the adjustment of consumption data, the re-  
27 generation of invoice data, the cancellation and regeneration of invoices not yet paid: in particular, it could  
28 manually trigger each BILL process step, providing the needed billing information. For additional details, see  
29 section [Invoicing](#) [▶ 840].

#### 30 ~~1.1.5.8 Data Migration management overview~~

31 ~~Data migration means the initial loading of data from CSDs into the CRDM database. Data can~~  
32 ~~be migrated into CRDM in three different ways: via XML messages, via the Graphical User Inter-~~  
33 ~~face and via the CRDM Data Migration Tool. For the latter, CRDM allows CSDs <sup>7</sup> to provide the~~

---

7 ~~Although the tool is primarily designed for CSDs, CBs can nevertheless use it, provided this usage is limited to the set of data already detailed in the Data Migration Tool specifications. (Split book approach)~~

~~data via structured files to the T2S Operator, which is in charge of inserting the structured files in the Data Migration Tool. Once the Data Migration Tool has converted the structured files into XML messages, the latter are submitted to CRDM normal processing (i.e. including business validation, etc.). Finally, the T2S Operator receives from the Data Migration Tool the structured file enriched with the conversion and business validation result and provides it to the CSD. For further information, please refer to the Data Migration Tool specifications, which are available as a separate and standalone document. (Split book approach)~~

## 1.2 Configuration of Parties, Securities and Accounts

### 1.2.1 Parties

This section provides a detailed description of all the reference data T2S stores for all its parties. More in detail, section [Setup of parties in T2S](#) [▶ 36] identifies the reference data objects related to the setup of parties in T2S and it provides detailed information as to who is responsible for the setup of these reference data. Section [Concept of party in T2S](#) [▶ 33] defines the concept of party in T2S and the way this concept relates with the different types of legal entities that can interact, directly or indirectly, with T2S. Sections [Hierarchical party model](#) [▶ 37] and [Configuration of parties in T2S](#) [▶ 38] describe the so-called T2S hierarchical party model, i.e. the organisational structure of parties in T2S and the way each party can be configured depending on the role(s) it plays within T2S. Sections [Party identification](#) [▶ 39] and [Reference data for parties](#) [▶ 40] illustrate in detail the standard reference data required in T2S for each party, i.e. the way a party can be identified in T2S and which attributes have to be stored in T2S for each party, whereas section [Market-specific attributes](#) [▶ 43] describes how CSDs and CBs can enrich the reference data under their responsibility by means of additional market-specific attributes. Finally, section [Restriction types](#) [▶ 45] deals with the configuration of reference data related to restrictions in T2S while section [Conditional Securities Delivery Configuration](#) [▶ 69] deals with the setup of reference data related to CoSD.

#### 1.2.1.1 Concept of party in T2S

Any T2S Actor, meaning any legal entity or organisation interacting with T2S either directly or indirectly (i.e. through a CSD or a CB in T2S), is defined as a party (or several parties, as explained later in this section) in the T2S reference data base. Each party in T2S belongs to one of the following party types:

- | T2S Operator;
- | CSD;
- | CB;
- | CSD Participant;
- | Payment Bank;
- | External CSD.

The following table shows how these party types map to the common business concepts generally used to refer to the different categories of legal entities interacting with T2S.

1  
2**TABLE 4 - T2S PARTY TYPES AND LEGAL ENTITIES**

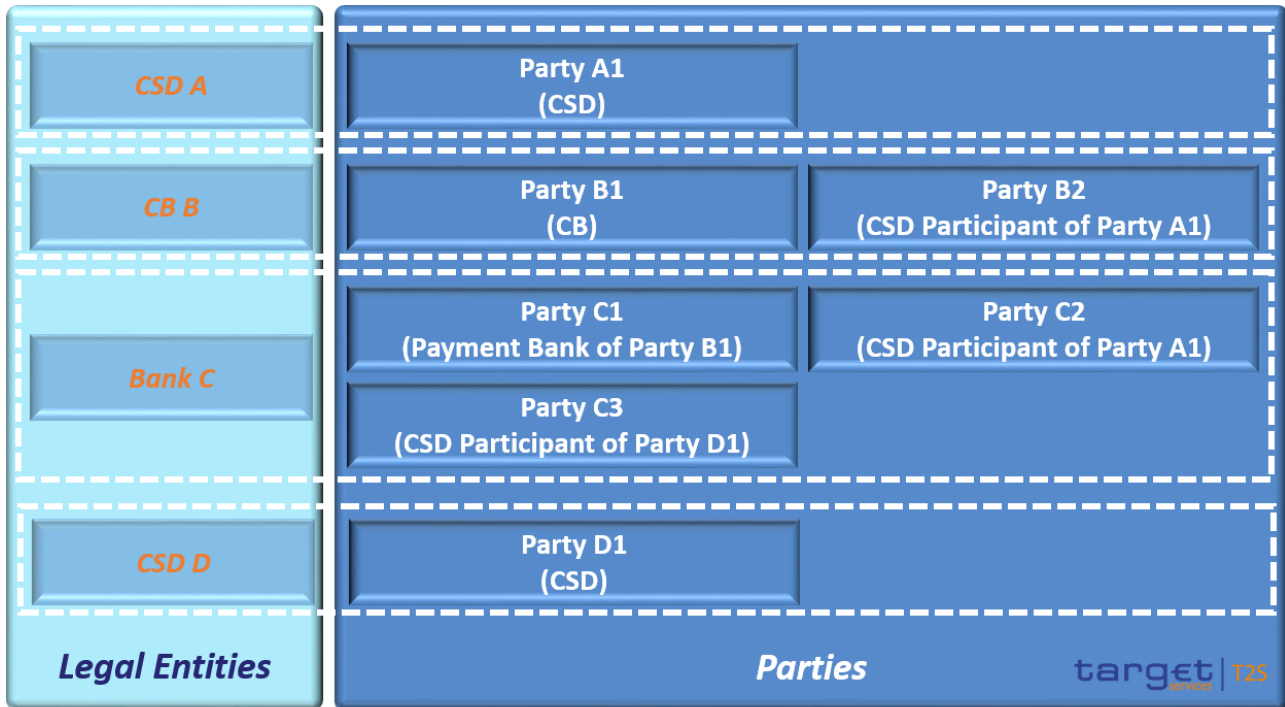

PARTY TYPE	LEGAL ENTITIES
T2S Operator	The legal and/or organizational entity operating T2S.
CSD	Central Securities Depository (participating in T2S).
CB	Central banks, European Central Bank.
CSD Participant	Banks, financial institutions, central counterparties (CCPs), stock exchanges, multi-lateral trade platform, CSDs/CBs as CSD participants.
Payment Bank	Banks, financial institutions, central banks as CB participants.
External CSD	Central Securities Depository (not participating in T2S).

3 Each legal entity may play different roles in T2S. Generally speaking, any legal entity playing multiple busi-  
4 ness roles in T2S results in the definition of multiple parties in CRDM, as long as the legal entity established  
5 several relationships with different parties in T2S (i.e. it is a participant of different CSDs or CBs in T2S). In  
6 other terms, T2S does not consider a legal entity per se, but only through its different parties representing it  
7 in the T2S reference data base. T2S does not store any explicit information as to which parties have in  
8 common the same underlying legal entity.

9 For example, a CSD having joined T2S and holding a securities account in the books of another CSD in T2S  
10 for the purpose of cross-CSD settlement is defined as two different parties in T2S, i.e. both as a CSD and as  
11 a CSD participant of another CSD.

12 Similarly, a financial institution having a T2S dedicated cash account in T2S with a CB and holding at the  
13 same time a securities account in the books of a CSD in T2S, is defined as two different parties in T2S i.e.  
14 one party as a payment bank holding a T2S dedicated cash account with a CB and another party as a CSD  
15 participant with the considered CSD. Of course, should this financial institution have securities accounts with  
16 several CSDs, this financial institution would be identified as several parties for its different CSD participa-  
17 tions (i.e. one party for each CSD). The following diagram shows some examples of the possible different  
18 scenarios.

1 **EXAMPLE 3 - LEGAL ENTITIES AND PARTIES IN T2S**

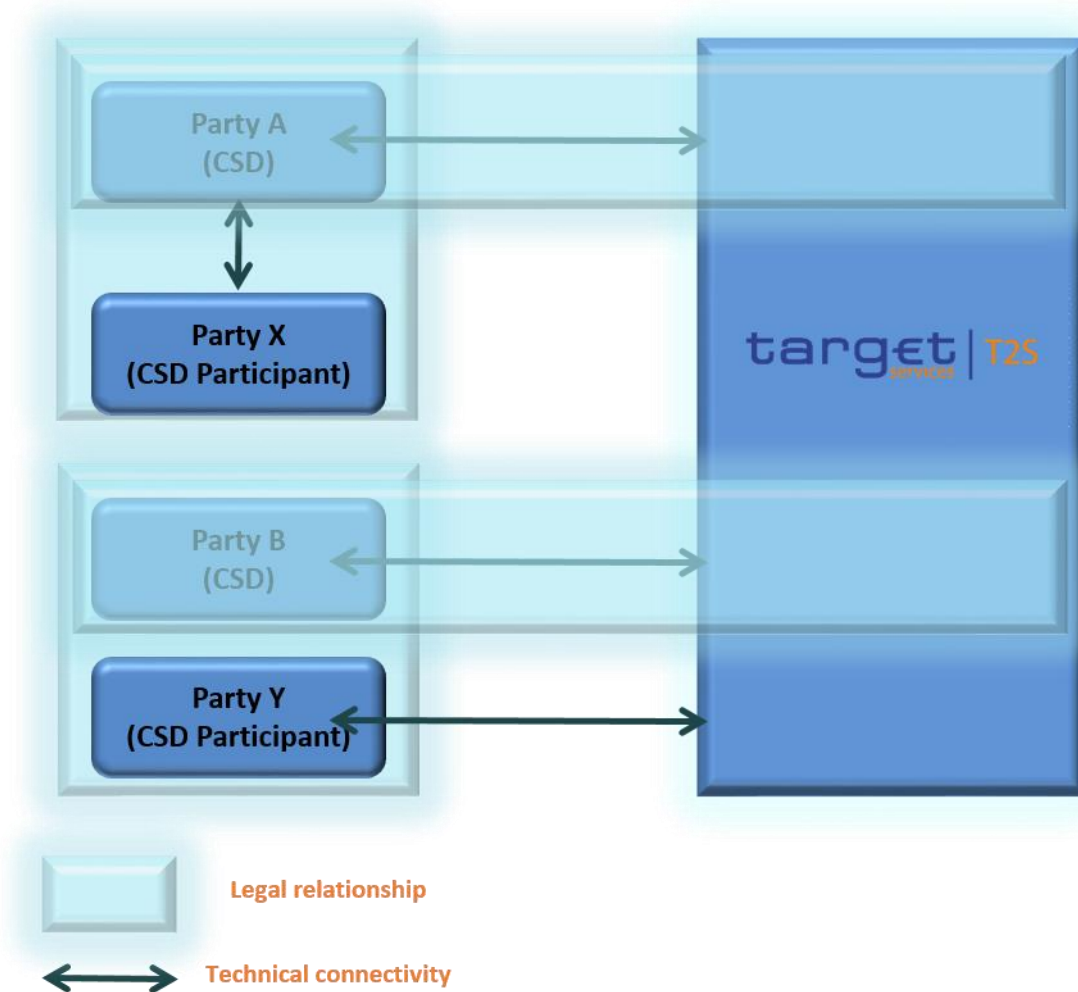

2  
3 The number of parties defined in T2S for a given legal entity does not relate in any way to the number of  
4 accounts that this legal entity may open in T2S in the books of a CSD or of a CB. For example, if a legal  
5 entity intends to open many securities accounts with the same CSD, this can be done defining the given  
6 legal entity as one party, i.e. as a CSD participant of the relevant CSD and opening all the accounts in the  
7 name of the same party.

8 With specific reference to the concepts of direct and indirect connectivity (See section [Connectivity](#)  
9 [\(A2A/U2A\)](#) [▶ 116]), each CSD/CB retains the business and legal relationship with its participants, regardless  
10 of the connectivity mode, which merely refers to the way users and applications of the participants interface  
11 with T2S in order to send instructions as well as to access information.

12 The following diagram, for example, shows a scenario including a party X (participant of CSD A) being indi-  
13 rectly connected to T2S (i.e. exchanging messages and access information exclusively via its CSD) and an-  
14 other party Y (participant of CSD B) being directly connected to T2S. In both cases, each CSD participant is  
15 in a legal relationship with its CSD only, and both CSDs are in a legal relationship with T2S (on one side) and  
16 with their own participants (on the other side). From a legal standpoint, the same distinction can be made  
17 for CBs and Payment Banks.

1

**EXAMPLE 4 - BUSINESS AND TECHNICAL RELATIONSHIP BETWEEN T2S ACTORS AND T2S**

2

This implies that the connectivity mode used by a T2S Actor to interact with T2S does not have any influence on the number of parties defined in T2S for this actor, the number of parties being determined only by the number of business relationships this actor establishes with other legal entities participating in T2S (e.g. the relationship between a CSD participant and its CSD, or the relationship between a CB participant and its CB). Consequently, even under the assumption of considering a T2S Actor directly connected to T2S for all its business, this would not result in the definition of a single party in T2S. On the contrary, this would result in the definition of a number of parties equal to the number of business relationships of the given T2S Actor. For example, if a given legal entity establishes three business relationships with three CSDs in T2S and agrees with all of them on the usage of direct connectivity for all services it gets from these CSDs, in any case this legal entity must be defined as three different parties in T2S, i.e. as three different CSD participants of the relevant CSDs.

1.2.1.2 Setup of parties in T2S

The setup of parties in T2S includes the configuration of reference data for parties, market-specific attributes (See section [Market-specific attributes](#) [▶ 43]), restriction types (See section [Restriction types](#) [▶ 45]) and conditional securities delivery (see section [Conditional Securities Delivery Configuration](#) [▶ 69]).

1 The T2S Operator is responsible for setting up and maintaining party reference data for all CSDs and CBs in  
 2 CRDM, i.e. for inputting and possibly updating all the information described in the Example 7 - [Party refer-](#)  
 3 [ence data](#) [▶ 41] and Example 8 - [Technical configuration](#) [▶ 42]. Similarly, CSDs are responsible for setting  
 4 up and maintaining party reference data for their CSD participants and for other CSDs that are external to  
 5 T2S, whereas CBs have assigned the same responsibility for setting up their payment banks.  
 6 Furthermore, CSDs can also set up and maintain market-specific attributes they can use for their securities,  
 7 parties and securities accounts, and CBs can perform the same activities for their parties.  
 8 The following tables summarise, for each reference data object related to the setup of parties in T2S, the  
 9 responsible T2S Actor for its configuration and it specifies which mode the T2S Actor can use for the config-  
 10 uration.

**TABLE 5 - SETUP OF PARTIES IN T2S**

REFERENCE DATA OBJECT	RESPONSIBLE T2S ACTOR	MODE
Party (CSD)	T2S Operator	U2A
Party (CB)	T2S Operator	U2A
Party (CSD Participant)	CSD	A2A/U2A
Party (Payment Bank)	CB	A2A/U2A
Party (External CSD)	CSD	A2A/U2A
Market-Specific Attribute	CSD, CB	U2A
Restriction Type	T2S Operator	U2A
	CSD	U2A
	CB	U2A
CoSD Rule Set	T2S Operator	U2A
	CSD	U2A

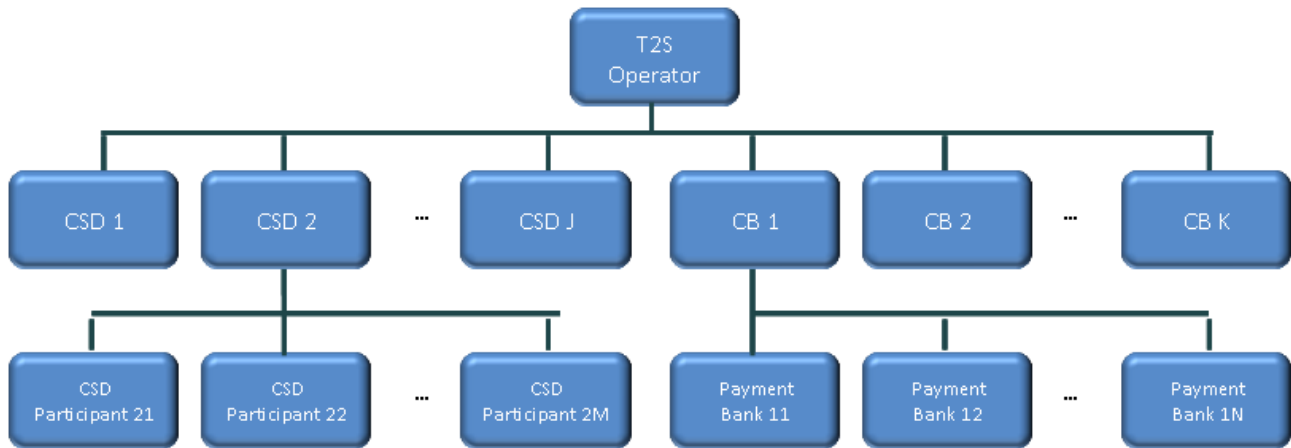

13 The configuration of all the reference data objects related to the setup of parties in T2S in A2A mode takes  
 14 place according to the dialogue pattern described by the "Maintain SD" use case (See section [Maintain Static](#)  
 15 [Data Object](#) [▶ 1040]).

### 16 1.2.1.3 Hierarchical party model

17 Legal relationships between parties in T2S determine a hierarchical party model based on a three-level struc-  
 18 ture. The T2S Operator is the only party on the top level of the hierarchy and it is in a legal relationship with  
 19 each party of the second level, i.e. each CSD and each CB in T2S. Similarly, legal relationships exist between  
 20 each party belonging to the second level of the hierarchy (i.e. a CSD or a CB) and all its participants (i.e.  
 21 CSD participants for the CSDs and payment banks for the CBs). As already pointed out above, CSD partici-  
 22 pants include central counterparties, trading platforms, stock exchanges and financial institutions with a  
 23 contractual relationship to a CSD, as well as CSDs acting as participant of itself or another CSD. The defini-

tion of a legal relationship between a CSD and a CSD participant does not necessarily require a safekeeping relationship: for instance, a trading platform can have a legal relationship with a CSD without holding any securities accounts.

**DIAGRAM 6 - T2S HIERARCHICAL PARTY MODEL**

This hierarchical model also determines the so-called reference data scope, i.e. the area of responsibility, of each CSD, of each CB and of the T2S Operator. More into detail:

The reference data scope of a CSD includes its reference data, plus the reference data of all its CSD participants;

The reference data scope of a CB includes its reference data, plus the reference data of all its payment banks;

The reference data scope of the T2S Operator includes all the reference data not included in the data scope of any CSD or CB (e.g. countries and currencies reference data).

For more information on the various SD objects and the relevant responsible T2S Actors, refer to section [Reference Data Management](#) [▶ 711].

Each CSD, each CB and the T2S Operator are responsible for their own reference data scopes, i.e. each of them is responsible for the input and maintenance of all information included in its reference data scope.

#### 1.2.1.4 Configuration of parties in T2S

As previously outlined, one legal entity playing multiple business roles in T2S is defined as multiple parties in T2S. This results in this legal entity being included multiple times in the hierarchical party model described in the previous section. For example:

1

**EXAMPLE 5 - BUSINESS RELATIONSHIPS BETWEEN PARTIES IN T2S**

2

\*The same colour corresponds to the same legal entity.

3

In this case, four different legal entities (A, B, C and D) are configured in different ways in T2S, so to reflect their specific business roles in this context. More precisely:

4

5

l The legal entity A (displayed in green in the example above) is a Central Securities Depository participating in T2S and also being a participant of another CSD in T2S (D1). Consequently, legal entity A is defined twice as a party in T2S, i.e. as a CSD (Party A1) and as a CSD participant (Party A2).

6

7

8

l The legal entity B (displayed in light orange in the example above) is a Central Bank participating in T2S and also being a participant of a CSD in T2S (A1). Consequently, legal entity B is defined twice as a party in T2S, i.e. as a CB (Party B1) and as a CSD participant (Party B2).

9

10

11

l The legal entity C (displayed in blue in the example above) is a financial institution having a legal relationship in place with two different CSDs in T2S (A1 and D1) and with its central bank (B1). Consequently, legal entity C is defined three times as a party in T2S, i.e. as a payment bank of CB B1 (Party C1), as a participant of CSD A1 (Party C2) and as a participant of CSD D1 (Party C3).

12

13

14

15

l The legal entity D (displayed in cyan in the example above) is a Central Securities Depository participant in T2S only in its role of CSD. Consequently, it is defined only once as a party in T2S, i.e. as a CSD (Party D1).

16

17

18

### 1.2.1.5 Party identification

19

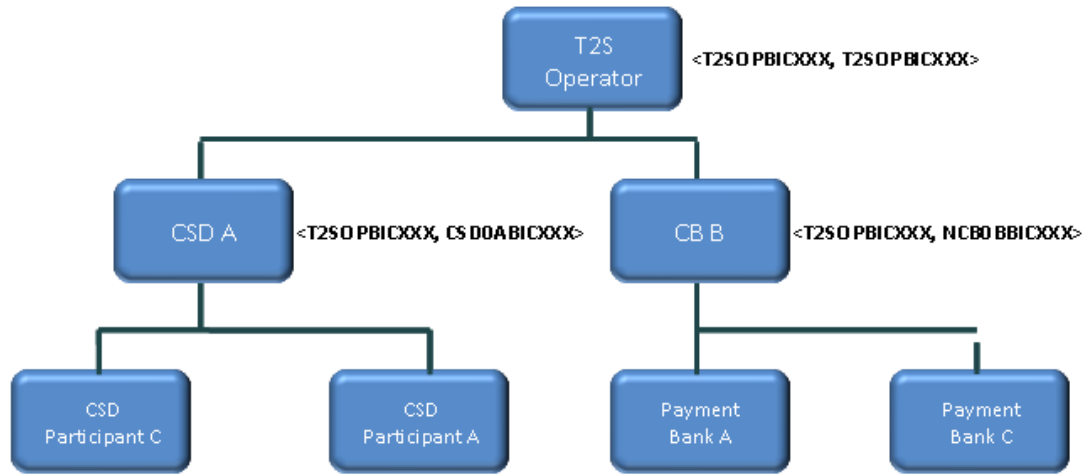

Each legal entity is identified in the financial market by a BIC (Bank Identification Code), according to the ISO 9362:2014 standard. As previously described, each legal entity or organisation may result in the definition of multiple parties in T2S. This implies that the usage of BICs is not enough to ensure uniqueness in the identification of parties in T2S, as these parties may be related to the same legal entity and, consequently, they may have been assigned the same BIC. For this reason, T2S requires two BICs to identify each party in the reference data base. More precisely, T2S identifies each party with the BIC of the party itself and the BIC of the party with which it has established a business relation in T2S. <sup>8</sup> For example:

24

25

<sup>8</sup> According to the hierarchical party model, this party is always the only connected party of the upper level of the hierarchy.

1 **EXAMPLE 6 - IDENTIFICATION OF PARTIES IN T2S**

2 <CSD0ABICXXX, PTY0CBICXXX> <CSD0ABICXXX, CSD0ABICXXX> <NCB0BBICXXX, CSD0ABICXXX> <NCB0BBICXXX, PTY0CBICXXX >

3 As shown in the diagram:

- 4 | Each CSD participant is identified by the BIC of its CSD plus its own BIC;
- 5 | Each payment bank is identified by the BIC of its CB plus its own BIC;
- 6 | Each CSD and each CB is identified by the BIC of the T2S Operator plus its own BIC.

7 T2S requires the assignment of 11-character BICs to parties, with the only constraint that this BIC must be  
 8 unique within the set of parties having established a business relationship with the same party in T2S.<sup>9</sup> This  
 9 results in the possibility, for the same legal entity, on one hand to establish multiple business relationships  
 10 with different parties in T2S using the same 11-digit BIC (e.g. CSD A acting also as payment bank A under  
 11 CB B, using the same BIC CSD0ABICXXX, in the example above). On the other hand, a given legal entity  
 12 may express the business need to be defined as several different CSD participants within the same CSD, e.g.  
 13 to segregate completely securities settlement activities related to different departments of the same legal  
 14 entity: this is possible, provided that the given legal entity assigns different 11-digit BICs to the different  
 15 parties created in T2S for this purpose.

16 In case a CSD/CB needs to define itself as its own CSD participant/payment bank, the party is identified in  
 17 T2S with the couple of identical 11-digit BICs (i.e. the BIC of the CSD/CB) as shown in the example above  
 18 for CSD A acting as CSD participant A under itself.

19 **1.2.1.6 Reference data for parties**

20 When defining a new party in T2S, the responsible T2S Actor (i.e. the T2S Operator, a CSD or a CB) has to  
 21 provide the following pieces of information:

- 22 | Identification of the party, i.e. its BIC11, short and long name and type<sup>10</sup>;

9 According to the hierarchical party model, this means that the BIC must be unique within the set of parties having in common the same party of the upper level of the hierarchy.

10 To identify univocally this party, this BIC11 has to be used together with the BIC11 of the previously defined party with which it has established a business relation in T2S as explained in section Configuration of parties in T2S

- 1 | Validity period of the party, i.e. its opening date and, if available, its closing date;
- 2 | Optional information depending on the specific party type, i.e. auto-collateralisation rule (See section [Au-](#)
- 3 | [to-collateralisation eligibility, securities valuation and close links](#) [▶ 83]) for CBs and payment banks, and
- 4 | legal address for all party types but CSD participants.

5 | **EXAMPLE 7 - PARTY REFERENCE DATA**

- 6
- 7 | Besides this information, the responsible T2S Actor is also in charge of providing technical configuration ref-
- 8 | erence data specifying the network services <sup>11</sup> and technical addresses <sup>12</sup> T2S uses to exchange data with
- 9 | the party. The following example shows a technical configuration for a party using four different network
- 10 | services (A, B, C and D):

---

11 | Network services identify the possible services used to exchange business data between T2S Actors and T2S, offered by the accredited connectivity services providers. Each network service is defined by the T2S Operator and can only be referenced by other T2S Actors when defining their technical addresses.

12 | A technical address in T2S is a possible recipient of messages the Party can use to receive copies of messages according to message subscription definition.

1

**EXAMPLE 8 - TECHNICAL CONFIGURATION**

Party													
<p>Short Name: <b>BK Bank</b>                      Long Name: <b>Black Knight Banking Corporation</b>                      Type: <b>Payment Bank</b>                      Central Bank BIC: <b>BITAITRRXXX</b>                      BIC: <b>BKBANKCCXXX</b></p> <p>Opening Date: <b>25-03-2015</b>                      Closing Date: -</p> <p>Address: <b>Charles Drive Square, 1</b>                      Country Name: <b>Italy</b></p>	<table border="1"> <thead> <tr> <th colspan="2">Technical Addresses</th> </tr> </thead> <tbody> <tr> <td>Service A</td> <td>DN=ABCD</td> </tr> <tr> <td>Service A</td> <td>DN=EFGH</td> </tr> <tr> <td>Service B</td> <td>DN=XYZ</td> </tr> <tr> <td>Service C</td> <td>DN=INTR</td> </tr> <tr> <td>Service D</td> <td>DN=OPQA</td> </tr> </tbody> </table>	Technical Addresses		Service A	DN=ABCD	Service A	DN=EFGH	Service B	DN=XYZ	Service C	DN=INTR	Service D	DN=OPQA
Technical Addresses													
Service A	DN=ABCD												
Service A	DN=EFGH												
Service B	DN=XYZ												
Service C	DN=INTR												
Service D	DN=OPQA												

2

3 For each network service, the technical address assigned to the party must be specified. The same technical  
 4 address may be used for multiple services. Conversely, the same service can use multiple technical address-  
 5 es. See section [Common rules for messages and files addressing](#) [▶ 120] for more information on how to  
 6 configure the links between network services and party technical addresses.

7 Finally, CSDs and CBs may define, input and maintain additional market-specific attributes for the party (See  
 8 section [Market-specific attributes](#) [▶ 43]). The following diagram shows an example in which a CSD defined  
 9 three additional market-specific attributes, Legal Structure, Class and Note, for its party, which in this case  
 10 are assigned the values "LLC", "Medium" and "Contract under discussion":

11

**EXAMPLE 9 - PARTY MARKET-SPECIFIC ATTRIBUTES**

### 1 1.2.1.7 Market-specific attributes

2 In addition to the standard set of reference data, each CSD and each CB can define its own specific attrib-  
3 utes for its parties, and each CSD can do the same also for its securities and securities accounts. The CSD  
4 and the CB can use these attributes:

- 5 | For informational purposes (and possibly to use them in other applications or processes) or
- 6 | For the configuration of restriction types (See section [Restriction types](#) [▶ 45]).

7 So, each CSD and each CB has the possibility either to store in T2S only the standard set of reference data  
8 for its securities, parties and securities accounts, or to opt for the definition of additional market-specific  
9 attributes, depending on its business needs. In the latter scenario, T2S allows the CSD and the CB to input,  
10 display and maintain its own market-specific attribute information. Each CSD and each CB can opt for its  
11 favourite option on a case by case basis. For example, a CSD may decide to utilise the standard set of refer-  
12 ence data for securities and securities accounts, but to define additional market-specific attributes in the  
13 case of parties.

14 A CSD or a CB has to perform the following steps in order to create a new market-specific attribute:

- 15 | Creation of a new attribute domain <sup>13</sup>. This step sets up a new attribute domain in T2S. The information  
16 required for the set-up of an attribute domain in T2S includes the name and description of an attribute  
17 domain and the format rules that apply to all the values of the attribute domain;
- 18 | Assignment of values to the new attribute domain. This optional step involves the definition of the actual  
19 list of all the possible values for the attribute domain by the CSD or by the CB <sup>14</sup>. These values are the  
20 only possible values the CSD or the CB inputs for the market-specific attribute of the new object being  
21 created, wherein the only possible object types are securities, securities accounts and parties <sup>15</sup>. In case  
22 the attribute domain does not foresee a pre-defined list of possible values, the CSD or the CB does not  
23 need to input any value at this stage, and T2S considers as valid for this attribute domain any value  
24 matching the format rules defined in the first step;
- 25 | Creation of the new market-specific attribute. In this final step, the CSD or the CB defines some general  
26 characteristics of the new attribute and it specifies the attribute domain against which T2S has to vali-  
27 date the input values.

28 Since the CSD and the CB must ensure the integrity of reference data, when creating/updating a market-  
29 specific attribute, all the existing and new objects of the respective object type owned by the CSD and the  
30 CB must have valid values for the market-specific attribute. For example, if a CSD or a CB wants to change  
31 an optional attribute to mandatory, it has to load appropriate values for all the related records before setting  
32 the attribute configuration to a mandatory field; in case a CSD or a CB wants to create a new optional mar-

---

13 Attribute domains in T2S provide the valid list of values allowed for an attribute. They include a list of all the valid values that a user can enter for an attribute of a data entity (e.g. the valid country codes for the issue country of a security). T2S uses attribute domains for field validations and for documenting the business definition of a value in an attribute.

14 The exhaustive list of attribute values is as follows: attribute format (alphabetic, alphanumeric, numeric), minimum code length, maximum code length, case (upper case, lower case, both)

15 For a CB, the only possible object type is party.

1 ket-specific attribute, appropriate values for the related records can be loaded once the attribute has been  
2 created.

3 The rest of this section presents an example showing the three steps just described. In this example, a CSD  
4 wants to create an additional market-specific attribute for its securities accounts. The purpose of this attrib-  
5 ute is to allow the CSD to classify all its securities accounts according to the following categories:

- 6 | Main;
- 7 | Proprietary;
- 8 | Omnibus;
- 9 | Collateral;
- 10 | Blocking.

11 The first step consists in the creation of a new attribute domain which includes the five categories of ac-  
12 counts just listed. The CSD can define this attribute domain as follows:

13 **EXAMPLE 10 - CREATION OF A NEW ATTRIBUTE DOMAIN**

14  
15 Then, the CSD can input all the possible values for the attribute domain just created, which are stored in  
16 T2S and linked to the relevant attribute domain:

1

**EXAMPLE 11 - INPUT OF VALUES FOR A NEW ATTRIBUTE DOMAIN**

### Attribute Domain

*Domain Name: Internal Account Type*  
*Domain Description: Internal Classification for Securities Account.*

*Format: Alphabetic*  
*Minimum Length: 1*  
*Maximum Length: 20*  
*Case: Both*

---

#### Attribute Domain Values

<i>Main</i>	<i>Main account</i>
<i>Proprietary</i>	<i>Proprietary account</i>
<i>Omnibus</i>	<i>Omnibus account</i>
<i>Collateral</i>	<i>Used for collateralised positions</i>
<i>Blocking</i>	<i>Used for restricted / segregated positions</i>

2

3 Finally, the CSD creates the new market-specific attribute, specifying in this case that it assumes values on  
 4 the attribute domain previously defined and that its input is mandatory and allowing for possible duplicates:

5

**EXAMPLE 12 - CREATION OF A NEW MARKET-SPECIFIC ATTRIBUTE**

### Market-Specific Attribute

*Attribute Name: Positions Type*  
*Attribute Type: Securities Account*

*Attribute Domain: Internal Account Type*

*Mandatory: Yes*  
*Unique: No*

6

7 1.2.1.8 Restriction types

8 The concepts of restriction types and restrictions are used in T2S with reference to four different contexts:

1 | Case one: acceptance/rejection of Settlement Instructions and Settlement Restrictions at business vali-  
2 | dation level (See section [Business Validation](#) [▶ 301]);

3 | Case two: intraday restrictions on parties, securities and securities accounts, external RTGS accounts and  
4 | T2S dedicated cash accounts to block settlement on the relevant reference data object;

5 | | Case three: restriction of securities positions or cash balances.

6 | | Case four: restriction of securities accounts and T2S dedicated cash accounts for insolvency.

7 | Configuration of restriction types in T2S depends on the aforementioned context and on the different T2S  
8 | application processes using it. As a general rule, restriction types are attributes that define the specific pro-  
9 | cessing characteristics (which may be prescribed by national legal and regulatory requirements and practic-  
10 | es) for the object they apply to for a given time period. Each CSD and each CB can define its own restriction  
11 | types in addition to harmonised restriction types defined at system level by T2S Operator (see table below  
12 | for further details). If, during this time period, T2S receives an instruction that refers to the restricted object  
13 | (e.g. a Settlement Instruction) and that matches the criteria specified for the triggering of relevant re-  
14 | striction type (e.g. the Instructing Party is a CSD participant), then T2S puts in place the specific action  
15 | specified by the same restriction type (e.g. the Settlement Instruction is rejected).

16 | CSD Participants and Payment Banks are entitled to view the restrictions that are currently applied to their  
17 | own Reference Data objects. However, only the relevant CSDs and CBs, as well as the T2S Operator, can  
18 | create, modify and apply restrictions.

19 | T2S supports the definition and set-up of restriction for the following objects:

20 | | Case one:

21 | – A Settlement Instruction;

22 | – A Settlement Restriction;

23 | | Case two:

24 | – Securities;

25 | – A securities account;

26 | – A T2S dedicated cash account;

27 | – An external RTGS account <sup>16</sup>;

28 | – A party <sup>17</sup>;

29 | | Case three:

30 | – A securities position;

31 | – A cash balance;

---

16 | The restriction of an external RTGS account results in the restriction of all the T2S dedicated cash accounts linked to the given external RTGS account;

17 | In case the restriction is applied to a party it results in restricting all the accounts belonging to the party according to the T2S hierarchical party model (e.g. restricting a CSD participant results in the restriction of all the securities accounts of the given CSD participant; restricting a CSD results in the restriction of all the securities accounts of all the CSD participants of the given CSD; restricting a CB results in the restriction of all the T2S dedicated cash accounts of all the payment banks of the given CB)

- 1 | Case four:
- 2 |     – A securities account;
- 3 |     – A T2S dedicated cash account.

4 Each restriction refers to a specific restriction type. Each restriction type is defined by the following ele-  
5 ments:

- 6 | The name and the description of the restriction type;
- 7 | The type of object, as listed before, the restriction type refers to;
- 8 | The type of processing T2S must put in place when the restriction type is triggered (e.g. rejection of a  
9 Settlement Instruction, blocking of a party, etc);
- 10 | A validity period, specified by a mandatory initial date of validity and an optional final date of validity  
11 <sup>18</sup>;{CR-808}
- 12 | A positive/negative parameter according to which T2S should apply/should not apply the restriction (if  
13 "positive", the restriction is applied if the rules are satisfied);
- 14 | With reference to restriction types belonging to case one and two, a set of rules defining the criteria ac-  
15 cording to which T2S checks whether a restriction type has to be triggered or not. These criteria are ex-  
16 pressed, for each case, on the basis of a pre-defined set of parameter types (see table below). In addi-  
17 tion to pre-defined parameters, a CSD can set-up, for restriction types belonging to case one, its own  
18 specific parameter by configuring a market-specific attribute (See section [Market-specific attributes](#)  
19 [► 43]) to be added to the restriction type entity. Each rule is assigned a validity period, specified by a  
20 mandatory initial date of validity and an optional final date of validity. The validity period of a rule cannot  
21 exceed the validity period of the restriction type it belongs to, i.e. the validity period of a rule cannot  
22 start before or end after the validation period of the relevant restriction type.

23 The table below describes the exhaustive list of parameter types that CSDs and CBs can use for configuring  
24 their restriction types belonging to case one and two.

25 **TABLE 6 - RESTRICTION TYPE PARAMETER TYPES (CASE ONE AND CASE TWO)**  
26

PARAMETER TYPE	DESCRIPTION	CASE
Party	It specifies the instructing party.	1 and 2
Party Type (of the Instructing Party)	It specifies the type of the instructing party. The exhaustive list of possible values is as follows: <ul style="list-style-type: none"> <li>  CSD</li> <li>  CSD Participant</li> <li>  External CSD</li> </ul>	1 only

18 **When applying an intraday restriction to an object, the validity period of the restriction type being applied is compared to that of the intraday restriction as a set of calendar dates, i.e. if a restriction type has date D as Valid From, an intraday restriction referring to this restriction type can only start from 00:00 on calendar day D, even if business day D started before 00:00.** {CR-808}

PARAMETER TYPE	DESCRIPTION	CASE
Party Type (of the Account Owner)	It specifies the party type of the account owner. The exhaustive list of possible values is as follows: <ul style="list-style-type: none"> <li>  CSD</li> <li>  CSD Participant</li> <li>  External CSD</li> </ul>	1 only
Security	It specifies the ISIN of a financial instrument.	1 only
Securities Movement Type	It specifies the type of securities movement. The exhaustive list of possible values is as follows: <ul style="list-style-type: none"> <li>  DELI (deliver) <sup>19</sup></li> <li>  RECE (receive) <sup>20</sup></li> <li>  ZERO (settlement quantity is null) <sup>21</sup></li> </ul>	1 and 2
Payment	It specifies the type of cash movement. The exhaustive list of possible values is as follows: <ul style="list-style-type: none"> <li>  APMT (against payment)</li> <li>  FREE (free of payment / separate payment)</li> </ul>	1 only
Transaction Identification	It specifies the ISO transaction code of the instruction.	1 and 2
Market-Specific Security Attribute	It specifies a market-specific attribute defined on securities. The exhaustive list of possible values is given by the underlying attribute domain (see section <a href="#">Market-specific attributes</a> [▶ 43]).	1 only
Market-Specific Securities Account Attribute	It specifies a market-specific attribute defined on securities accounts. The exhaustive list of possible values is given by the underlying attribute domain (see section <a href="#">Market-specific attributes</a> [▶ 43]).	1 only
Market-Specific Party Attribute	It specifies a market-specific attribute defined on parties. The exhaustive list of possible values is given by the underlying attribute domain (see section <a href="#">Market-specific attributes</a> [▶ 43]).	1 only
Matching Status	It specifies the matching status of the instruction.	1 only

19 A rule configured with the value DELI will be satisfied by all targeted Settlement Instructions with Securities Movement Type DELI regardless of their Settlement Quantity (including those with a null Settlement Quantity, i.e. PFoD).

20 A rule configured with the value RECE will be satisfied by all targeted Settlement Instructions with Securities Movement Type RECE, regardless of their Settlement Quantity (including those with a null Settlement Quantity, i.e. PFoD).

21 This value is not a type of securities movement for Settlement Instructions per se. If a rule is configured with this value, it is satisfied by all targeted Settlement Instructions with Settlement Quantity equal to zero (i.e. PFoD), regardless their Securities Movement Type (DELI or RECE).

PARAMETER TYPE	DESCRIPTION	CASE
Debited Position/Balance	It specifies the restriction type code of the delivering position or the debited balance of the instruction, i.e. it specifies a restriction type having "restriction processing" equal to one of the following values: "Earmarking", "Blocking" or "Reservation".	1 and 2
Credited Position/Balance	It specifies the restriction type code of the receiving position or the credited balance of the instruction, i.e. it specifies a restriction type having "restriction processing" equal to one of the following values: "Earmarking", "Blocking" or "Reservation"	1 and 2
Securities Account	It specifies the securities account of the instruction.	1 and 2
T2S Dedicated Cash Account	It specifies the T2S dedicated cash account of the instruction.	1 and 2
Credit Debit Indicator	It specifies the credit/debit indicator of the instruction.	1 and 2
Country of Issuance	It specifies the country of issuance of the security referenced in the instruction.	1 only
T2S Dedicated Cash Account Type	It specifies the type of the T2S dedicated cash account referenced in the instruction.	1 only
Settlement Currency	It specifies the currency referenced in the instruction.	1 and 2

1 Restriction types belonging to case one and two have a different set of applicable parameter types, depend-  
 2 ing on the type of processed instruction, i.e. whether the processed instruction is a Settlement Instruction or  
 3 a Settlement Restriction. For restriction types belonging to case one, the following table provides the list of  
 4 applicable parameter types for Settlement Instructions and Settlement Restrictions (intra-position movement  
 5 instructions and intra-balance movement instructions).

SETTLEMENT INSTRUCTION / SETTLEMENT RESTRICTION	PARTY (OF THE INSTRUCTING PARTY)	PARTY TYPE (OF THE ACCOUNT OWNER)	SECURITY	SECURITIES MOVEMENT TYPE	PAYMENT	TRANSACTION IDENTIFICATION	MARKET-SPECIFIC SECURITY ATTRIBUTE	MARKET-SPECIFIC PARTY ATTRIBUTE	MARKET-SPECIFIC SECURITY ATTRIBUTE	MATCHING STATUS	DEBITED POSITION/BALANCE	CREDITED POSITION/BALANCE	SECURITIES ACCOUNT	T2S DEDICATED CASH ACCOUNT	CREDIT DEBIT INDICATOR	COUNTRY OF ISSUANCE	T2S DEDICATED CASH ACCOUNT TYPE	SETTLEMENT CURRENCY
Settlement Instruction	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes	No	Yes
Intra-position Movement Instruction	Yes	Yes	Yes	Yes	No	No	No	Yes	Yes	Yes	No	Yes	Yes	No	No	Yes	No	No
Intra-balance Movement Instruction	Yes	Yes	Yes	No	No	No	No	No	No	Yes	No	Yes	No	Yes	No	No	Yes	Yes

6  
 7 The following table shows which message fields T2S checks in order assign any settlement instruction and  
 8 settlement restriction the actual value related to each applicable parameter type.

1  
2

**TABLE 7 - APPLICABLE PARAMETER TYPES AND MESSAGE FIELDS**

APPLICABLE PARAMETER TYPE	TYPE OF CHECK 22	MESSAGE	MESSAGE FIELD
Party	Indirect	BAH	/Fr/FIId/FinInstnId/Othr/Id, /Fr/FIId/FinInstnId/BICFI
Party Type (of the Instructing Party)	Indirect	BAH	/Fr/FIId/FinInstnId/Othr/Id, /Fr/FIId/FinInstnId/BICFI
Party Type (of the Account Owner)	Indirect	camt.066	/CshAcct/Id/Othr/Id
		sese.023	/QtyAndAcctDtIs/SfkpgAcct/Id 23
		sese.023	/DlvrSttlmPties/Pty1/SfkpgAcct/Id 24
		sese.023	/RcvgSttlmPties/Pty1/SfkpgAcct/Id 25
		semt.013	/SfkpgAcct/Id
Security	Direct	sese.023	/FinInstrmId/ISIN
		semt.013	/FinInstrmId/ISIN
Securities Movement Type	Direct	sese.023	/SttlmTpAndAddtlParams/SctiesMvmntTp /QtyAndAcctDtIs/SttlmQty/Qty/Unit 26 /QtyAndAcctDtIs/SttlmQty/Qty/FaceAmt 27
Payment	Direct	sese.023	/SttlmTpAndAddtlParams/Pmt
Transaction Identification	Direct	sese.023	/SttlmParams/SctiesTxTp/Cd
Market-Specific Security Attribute	Indirect	sese.023	/FinInstrmId/ISIN
		semt.013	/FinInstrmId/ISIN
Market-Specific Securities Account Attribute	Indirect	sese.023	/QtyAndAcctDtIs/SfkpgAcct/Id
		sese.023	/DlvrSttlmPties/Pty1/SfkpgAcct/Id

22 When the type of check is direct, T2S is able to assign the relevant value for a given applicable parameter type just on the basis of the message payload. Conversely, when the type of check is indirect, T2S retrieves the relevant value from the static data, on the basis of the content of the message payload.

23 For unmatched settlement instructions, for the delivering leg of already matched settlement instructions with Securities Movement Type = DELI and for the receiving leg of already matched settlement instructions with Securities Movement Type = RECE.

24 Only for the delivering leg of already matched settlement instructions with Securities Movement Type = RECE.

25 Only for the receiving leg of already matched settlement instructions with Securities Movement Type = DELI.

26 The check of this message field is only done if the value of the applicable Parameter Type of the rule analysed is ZERO – i.e. when the value is DELI or RECE this message field is not checked. The rule is satisfied when the settlement quantity of the Settlement Instruction is null.

27 The check of this message field is only done if the value of the applicable Parameter Type of the rule analysed is ZERO – i.e. when the value is DELI or RECE this message field is not checked. The rule is satisfied when the settlement quantity of the Settlement Instruction is null.

APPLICABLE PARAMETER TYPE	TYPE OF CHECK 22	MESSAGE	MESSAGE FIELD
		sese.023 semt.013	/RcvgSttlmPties/Pty1/SfkpgAcct/Id /SfkpgAcct/Id

Settlement Currency	Direct	sese.023	/SttlmAmt/Amt/Ccy

28 When the relevant restriction type rule referring to the market-specific party attribute is configured as DELI.

29 When the relevant restriction type rule referring to the market-specific party attribute is configured as RECE.

30 The Parameter Type Securities Account relates only to the unique securities account relevant for the movement type (i.e. it does not consider the securities account of the counterparty and therefore it cannot be used to check restrictions between two accounts)

31 For unmatched settlement instructions.

32 Only for already matched settlement instructions and with Securities Movement Type = RECE.

33 Only or already matched settlement instructions and with Securities Movement Type = DELI.

APPLICABLE PARAMETER TYPE	TYPE OF CHECK 22	MESSAGE	MESSAGE FIELD
		camt.066	/Intrabal/SttlmAmt/AmtWthCcy

1 Restriction Types belonging to case two and four need to be set for a specific object in order to become  
 2 effective: this is done by the relevant CSD/CB updating this object in CRDM data (see use case Restrict Stat-  
 3 ic Data Object for the details of the process and, with specific reference to restriction types belonging to  
 4 case two, see table below for the mapping between applicable restriction parameter types and object re-  
 5 striction types).

6 **TABLE 8 - APPLICABLE RESTRICTION PARAMETER TYPE AND OBJECT RESTRICTION TYPE (CASE TWO)**  
 7

RESTRICTION PARAMETER TYPE	OBJECT RESTRICTION TYPE				
	SECURITIES (ISIN)	SECURITIES ACCOUNT	T2S DEDI- CATED CASH AC- COUNT	EXTERNAL RTGS AC- COUNT	PARTY
Securities movement type (receive or deliver)	No	Yes	No	No	Yes
One or more market-specific securities account at- tributes	No	No	No	No	No
Debited Position/Balance	No	Yes	No	No	No
Credited Position/Balance	No	Yes	No	No	No
Securities Transaction Type (Transaction identifica- tion)	Yes	Yes	Yes	Yes	Yes
Securities Account	No	No	No	No	Yes
Cash Account	No	No	No	No	Yes
Credit Debit Indicator	No	No	Yes	Yes	No
Settlement Currency	No	No	No	No	Yes
Party	Yes	Yes	Yes	No	No

8 The relevant CSD/CB must use the same mechanism, i.e. a reference data update, also to remove an intra-  
 9 day restriction on a given object. This results in T2S recycling all the transactions previously blocked by the  
 10 removed intraday restriction. In case the intraday restriction was setup specifying a timestamp for the expi-  
 11 ration of the intraday restriction, then T2S attempts a recycling of all the blocked transactions just after the  
 12 specified timestamp occurred, without the need for the relevant CSD/CB to remove explicitly the intraday  
 13 restriction with a reference data update.

14 The table below shows all the possible actions resulting in T2S when applying a restriction processing type  
 15 to a specific object type:

1  
2**TABLE 9 - RESTRICTION MATRIX**

CASE	RESTRICTION PROCESSING	OBJECT RESTRICTION TYPE	RESULTING ACTIONS IN T2S	RESPONSIBLE T2S ACTOR
Case 1	Rejection	Settlement Instruction/ Intra-Position Movement / Intra-Balance Movement <sup>34</sup>	Rejection during the Business Validation application process of any Settlement Instruction/Settlement Restriction corresponding to criteria set in the associated parameter/rules. Their processing is definitively stopped.	CSD/CB
Case 1	CSD validation hold	Settlement Instruction	Automatic setting on hold during the Business Validation process of any Settlement Instruction corresponding to criteria set in the associated parameter/rules. Their processing is stopped waiting the release of the CSD.	CSD
Case 2	Blocking	Party <sup>35</sup>	Allow the blocking of parties from settlement according to the list of parameters set in the associated rule set.  In case no parameter/rules are specified, T2S blocks all settlement on all accounts of the given party.	CSD/CB
Case 2	Blocking	Security	Allow the blocking of securities from settlement according to the list of parameters set in the associated rule set.  In case no parameter/rules are specified, T2S blocks all settlement on the given security.  The restriction type code CAPR is used in the specific scenario where a CSD wishes to restrict an ISIN and then unblock it automatically conditional to the successful settlement of a Corporate Action instruction. This restriction is automatically lifted in the Settlement domain upon settlement of the first Corporate Action FoP instruction on any account in the same system	CSD

<sup>34</sup> Intra-Position Movement and Intra-Balance Movement are Settlement Restrictions.

<sup>35</sup> Note that blocking a CSD or NCB party will result in blocking the settlement of all the parties and accounts defined under that CSD/NCB. Only the T2S Operator is allowed to perform this operation.

CASE	RESTRICTION PROCESSING	OBJECT RESTRICTION TYPE	RESULTING ACTIONS IN T2S	RESPONSIBLE T2S ACTOR
			entity that defined the CAPR restriction on the ISIN. The CAPR restriction however remains active in CRDM Data according to its validity period as defined by the CSD, and if this period exceeds a single business day, it is once again applied by the Settlement domain on each subsequent business day until its expiry.	
Case 2	Blocking	Securities account	<p>Allow the blocking of securities account from settlement according to the list of parameters set in the associated rule set.</p> <p>In case no parameter/rules are specified, T2S blocks all settlement on the given securities account</p>	CSD
Case 2	Blocking	T2S dedicated cash account	<p>Allow the blocking of T2S dedicated cash account from settlement according to the list of parameters set in the associated rule set.</p> <p>In case no parameter/rules are specified, T2S blocks all settlement on the given T2S dedicated cash account</p>	CB
Case 2	Blocking	External RTGS account	<p>Allow the blocking of external RTGS account from settlement according to the list of parameters set in the associated rule set.</p> <p>In case no parameter/rules are specified, T2S blocks all settlement on the T2S dedicated cash accounts linked to the given external RTGS account.</p>	CB
Case 3	Reservation	Cash balance	<p>Allow the identification of reserved cash balances as balance from or balance to in Settlement Restriction, in combination with the T2S dedicated cash account reference. (<a href="#">Cash Blocking and Reservation</a> [ 670])</p> <p>No rules can be defined for this specific case.</p>	CB
Case 3	Reservation	Securities position	<p>Allow the identification of reserved securities positions in combination with the securities account reference and the ISIN in:</p>	CSD

Case 3	Earmarking for auto-collateralisation	Securities position	<p>Allow the identification of earmarked securities positions for auto-collateralisation purpose in combination with the securities account reference and the ISIN in:</p>	T2S Operator

CASE	RESTRICTION PROCESSING	OBJECT RESTRICTION TYPE	RESULTING ACTIONS IN T2S	RESPONSIBLE T2S ACTOR
			<ul style="list-style-type: none"> <li>  Settlement Restrictions, as balance from or balance to;</li> <li>  Settlement Instructions, as impacted balance.</li> </ul> <p>An earmarking for auto-collateralisation is related to the T2S settlement of the potential intraday credit provided through auto-collateralisation in the specified currency. In addition, a specific earmarking for auto-collateralisation is configured for the provision through auto-collateralisation of intraday credit in all T2S settlement currencies.</p> <p>(See section <a href="#">Securities Blocking/Reservation/Earmarking</a> [▶ 544] and section <a href="#">Auto-collateralisation</a> [▶ 430])</p> <p>No rules can be defined for this specific case.</p>	
Case 3	Deliverable	Cash balance	<p>Allow the identification of deliverable cash balances as balance from or balance to in Settlement Restriction, in combination with the T2S dedicated cash account reference. (See section <a href="#">Cash Blocking and Reservation</a> [▶ 670])</p> <p>No rules can be defined for this specific case.</p>	T2S Operator
Case 3	Deliverable	Securities position	<p>Allow the identification of deliverable securities positions in combination with the securities account reference and the ISIN in:</p> <ul style="list-style-type: none"> <li>  Settlement Restrictions, as balance from or balance to;</li> <li>  Settlement Instructions, as impacted balance.</li> <li>  (See section <a href="#">Securities Blocking/Reservation/Earmarking</a> [▶ 544])</li> </ul> <p>No rules can be defined for this specific case.</p>	T2S Operator
Case 3	Collateralised	Securities position	<p>Allow the identification of securities positions (in combination with the securities account refer-</p>	T2S Operator

CASE	RESTRICTION PROCESSING	OBJECT RESTRICTION TYPE	RESULTING ACTIONS IN T2S	RESPONSIBLE T2S ACTOR
			<p>ence and the ISIN) where collateral securing provided intraday credit through auto-collateralisation is blocked using the Pledge procedure.</p> <p>Collateralised is only set in collateral and reverse collateral T2S generated Settlement Restrictions and instructions for CB collateralisation operation.</p> <p>(See section <a href="#">Securities Blocking/Reservation/Earmarking</a> [ ▶ 544])</p> <p>No rules can be defined for this specific case.</p>	
Case 3	CoSD Blocking	Cash balance	<p>Allow the identification of cash balances (in combination with the T2S dedicated cash account reference) where cash is blocked as necessary to settle Settlement Instruction under a conditional settlement. (See section <a href="#">Cash Blocking and Reservation</a> [ ▶ 670])</p> <p>CoSD blocking is only set in CoSD blocking T2S generated Settlement Restrictions for conditional settlement.</p> <p>No rules can be defined for this specific case.</p>	T2S Operator

CASE	RESTRICTION PROCESSING	OBJECT RESTRICTION TYPE	RESULTING ACTIONS IN T2S	RESPONSIBLE T2S ACTOR
Case 3	CoSD Blocking	Securities position	<p>Allow the identification of securities position (in combination with the securities account reference and the ISIN) where securities are blocked as necessary to settle Settlement Instruction under a conditional settlement. (See section <a href="#">Securities Blocking/Reservation/Earmarking [ 544]</a>)</p> <p>CoSD blocking is only set in CoSD blocking T2S generated Settlement Restrictions for conditional settlement.</p> <p>No rules can be defined for this specific case.</p>	T2S Operator
Case 4	Rejection	Securities account	<p>Restriction type code is ISAC. Settlement Instruction is rejected during the Business Validation application process if the Settlement Instruction delivering specifies the securities account which has assigned an active insolvency restriction. Its processing is definitely stopped.</p>	CSD
Case 4	Rejection	T2S dedicated cash account	<p>Restriction type code is IDCA. Settlement Instruction is rejected during the Business Validation application process if the Settlement Instruction debiting specifies the T2S dedicated cash account which has assigned an active insolvency restriction. Its processing is definitely stopped.</p>	CB

1 Restrictions are also used in the context of case 3 for an earmarking at securities account level. In this case  
2 the securities account is set with a restriction type applying on a securities position as object restriction type  
3 (see use case Restrict Static Data Object for the details of the process). The settlement process upon the  
4 detection of such an earmarking at securities account level identifies the duly impacted securities position  
5 accordingly (see relevant process description in section [Securities Blocking/Reservation/Earmarking \[ 544\]](#)).

6 The rest of this section presents different examples of definition of restriction types: the first three provide  
7 examples on the configuration of restriction type for Settlement Instruction validation using a variety of dif-  
8 ferent parameters, including market-specific attributes defined at CSD level; the fourth one describes the  
9 setup of two restriction types used to block one T2S dedicated cash account and all the securities accounts  
10 of a party, respectively; the fifth example defines a selective blocking restriction type on securities allowing  
11 the processing of instructions related to corporate actions; the sixth example deals with the configuration of  
12 the restriction type to earmark a security position; the last example shows how to update single rules within

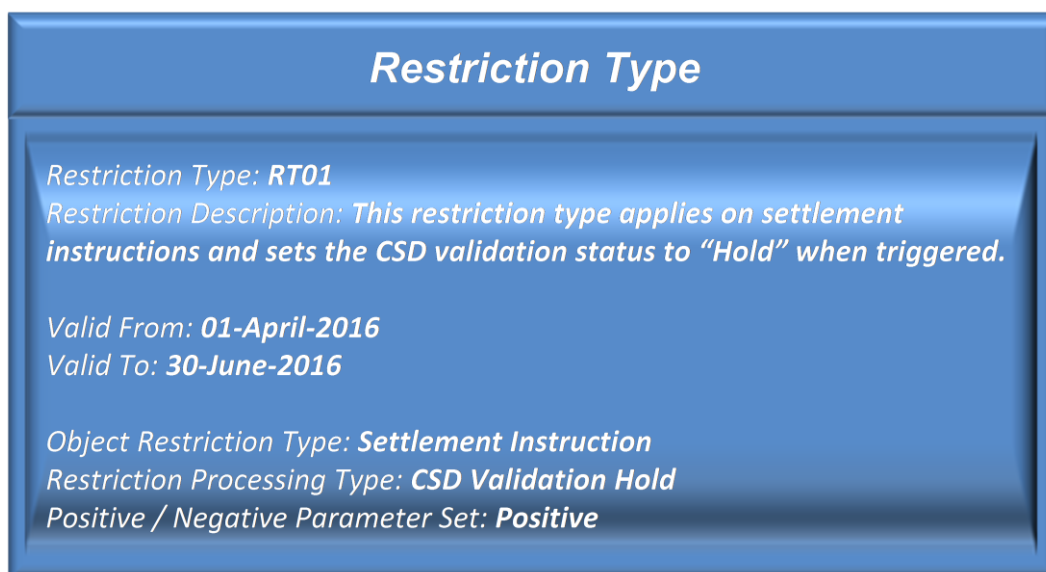

1 an already existing and valid restriction type configuration. The exhaustive list of possible parameter types is  
2 provided in section [Securities Blocking/Reservation/Earmarking](#) [▶ 544].

3 The first example defines a restriction type that is supposed to put on hold Settlement Instructions fulfilling  
4 any of the following criteria:

- 5 | The securities movement type of the instruction is "Receive" and the relevant party is either Party ABC or  
6 | Party XYZ or
- 7 | The exchanged financial instrument is identified by ISIN 1 or
- 8 | The Instructing Party is a CSD participant and the securities movement type of the instruction is "Re-  
9 | ceive" and the payment type is "Free of Payment" or
- 10 | The Instructing Party is a CSD participant and the securities movement type of the instruction is "Deliv-  
11 | er" and the payment type is "Against Payment".

12 The restriction type must be valid from the 1st of April 2016 (included) to the 30th of June 2016 (included).  
13 This restriction type can be specified as follows:

14 **EXAMPLE 13 - CREATION OF A NEW RESTRICTION TYPE(A)**

15  
16 As shown in the diagram, the new restriction type RT01 can be applied to Settlement Instruction, it is not  
17 valid in the required period, and it results in putting on hold all the Settlement Instructions triggering this  
18 restriction type. Moreover, the positive value given to the positive parameter set stipulates that all the crite-  
19 ria specified within the associated rule set specify the criteria for which T2S applies the restriction <sup>36</sup>.

20 Once defined these general features of the restriction, the CSD must specify an ad-hoc rule set including all  
21 the criteria for the possible triggering of the restriction type. The following example shows a set of three  
22 rules with the same validity period as the restriction type, that implement the requirements described be-  
23 fore:

---

36 In the other case (i.e. for a negative setting), the rule set would have specified the criteria for which T2S would not have applied the restriction.

1

**EXAMPLE 14 - DEFINITION OF A RULE SET FOR A NEW RESTRICTION TYPE (A)**

Rule Set	Valid From	Valid To	Securities Movement Type	Payment	Transaction Identification	Party Type (of the account owner)	Party Type (of the instructing party)	Party	Security	Matching Status	Debited Position/Balance	Credited Position/Balance	Securities Account	T2S Dedicated Cash Account	Credit/Debit Indicator	Country of Issuance	T2S Dedicated Cash Account Type	Settlement Currency
Rule 1	2016-04-01	2016-06-30	RECE					ABC										
			RECE					XYZ										
Rule 2	2016-04-01	2016-06-30							ISIN 1									
Rule 3	2016-04-01	2016-06-30	RECE	FREE			CSD Part											
			DELI	APMT			CSD Part											

2

3 The column of this table shows the list of possible parameter types the CSD can use in the definition of the  
4 applicable criteria for its rule sets. In this case, three rules define the rule set for the restriction type.

5 It is sufficient that one of these rules be satisfied for the restriction to be applied. The rules are defined in a  
6 strictly sequential order, i.e. Rule 1 is the first to be checked, Rule 2 is only checked if Rule 1 is not satisfied,  
7 and so on. Furthermore, each rule can have multiple possible values for the same parameters in order to be  
8 satisfied. For instance, Rule 1 is satisfied for instructions with securities movement type "Receive" and Party  
9 "ABC" or "XYZ", as outlined in the first requirement above. As shown in the diagram, each rule always  
10 checks the same set of parameters - in the case of Rule 1, "Securities Movement Type" and "Party". Sepa-  
11 rate rules can be defined when there is the need to check different parameter sets in sequence.

12 Once defined, each instruction matching any of the three rules defined above in the given period, is put on  
13 hold by T2S (See section [Business Validation](#) [▶ 301] for a detailed description of the validation process of  
14 instructions against the defined rules). For example, a Settlement Instruction sent by party ABC to receive  
15 securities is put on hold owing to rule 1. Similarly, a Settlement Instruction sent by a CSD participant to re-  
16 ceive securities and free of payment is put on hold owing to the first set of criteria of rule 3. On the contra-  
17 ry, a Settlement Instruction sent by a CSD to deliver ISIN 2 securities is not put on hold because no rules  
18 are matched in this case.

19 The second example is about a restriction type which rejects Settlement Instructions on specific types of  
20 securities and securities accounts, i.e. on taxable securities on tax-exempted securities accounts. This infor-  
21 mation is not part of the standard set of reference data T2S stores for securities and securities accounts. For

1 this reason, this restriction type has to be defined on the basis of market-specific attributes<sup>37</sup>. More precise-  
2 ly, the restriction type has to reject Settlement Instructions sent by a CSD participant with:

3 | A securities with tax status equal to "N" and a securities account with tax status equal to "X" or

4 | A securities with tax status equal to "X" and a securities account with tax status equal to "N".

5 The restriction type must be valid as of 15th of September 2015. This restriction type can be specified as  
6 follows:

7 **EXAMPLE 15 - CREATION OF A NEW RESTRICTION TYPE (B)**

8

9 As shown in the diagram, the new restriction type TAX-RT can be applied to Settlement Instructions, it is  
10 valid as of the required date, and it results in rejecting all the Settlement Instructions triggering this re-  
11 striction type. Also in this case, the positive value given to the positive / negative parameter set stipulates  
12 that all the criteria specified within the associated rule set specify the criteria for which T2S applies the re-  
13 striction.

14 In this case, the CSD can implement the requirements for the restriction type with a simple rule set made of  
15 one single rule:

---

37 This example relies on the assumption that the CSD has already defined two appropriate market-specific attributes for this purpose: Securities Tax Status (with possible values "N" and "X") for its own securities and Securities Account Tax Status (with the same couple of possible values) for the securities accounts it holds responsibility.

1

**EXAMPLE 16 - DEFINITION OF A RULE SET FOR A NEW RESTRICTION TYPE (B)**

Rule Set	Valid From	Valid To	Securities Movement Type	Payment	Transaction Identification	Party Type (of the account owner)	Party Type (of the instructing party)	Party	Security	Matching Status	Debited Position/Balance	Credited Position/Balance	Securities Account	T2S Dedicated Cash Account	Credit Debit Indicator	Country of Issuance	T2S Dedicated Cash Account Type	Settlement Currency	Securities Tax Status	Securities Account Tax Status
Rule 1	2015-09-15	-				CSD Part													N	X
						CSD Part													X	N

2

3 In this second example, the columns of the table include, besides the exhaustive list of possible parameter  
4 types, also the two additional market-specific attributes defined by the CSD.

5 Once defined, each instruction corresponding to this rule for the given period is rejected by T2S (See section  
6 [Business Validation](#) [▶ 301] for a detailed description of the validation process of instructions against the  
7 defined rules). For example, a Settlement Instruction sent by a CSD participant on a securities account with  
8 tax status set to "X" to receive/deliver securities with tax status equal to "N" is rejected.

9 The third example provides a description of a restriction type having Negative value for the attribute "Posi-  
10 tive/Negative Parameter Set", used to specify the rules and combinations of attributes for which T2S should  
11 not apply a restriction. In the following example, a positive and a negative restriction types have been de-  
12 fined. More into detail, the positive restriction type rejects in its validity period all the Settlement Instructions  
13 on proprietary<sup>38</sup> securities accounts, whereas the negative restriction type accepts in its validity period all  
14 the Settlement Instructions sent by a CSD.

38 This information is not part of the standard set of static data T2S stores for securities accounts. For this reason, this restriction type has to be defined on the basis of a market-specific securities account attribute defining a classification of securities accounts which includes the value "Proprietary" (see example in section [Market-specific attributes](#) [▶ 43]).

1

**EXAMPLE 17 - CREATION OF A NEW POSITIVE RESTRICTION TYPE (C)**

2

3 In addition, the CSD implemented a rule for this Restriction Type including only one parameter configura-  
4 tion: Securities Account Internal Classification = "Proprietary" as shown in the example below.

5

**EXAMPLE 18 - DEFINITION OF A RULE SET FOR A NEW POSITIVE RESTRICTION TYPE (C)**

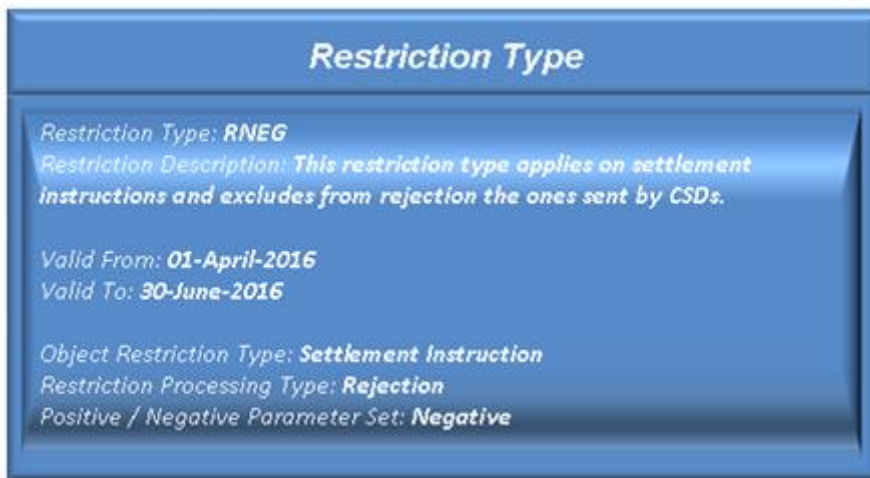

Rule Set	Valid From	Valid To	Securities Movement Type	Payment	Transaction Identification	Party Type (of the account owner)	Party Type (of the instructing party)	Party	Security	Matching Status	Debited Position/Balance	Credited Position/Balance	Securities Account	T2S Dedicated Cash Account	Credit Debit Indicator	Country of Issuance	T2S Dedicated Cash Account Type	Settlement Currency	Securities Tax Status	Securities Account Internal Classification
Rule 1	2016-04-01	2016-06-30																		Proprietary

6

7 The negative restriction type is defined as follows.

1

**EXAMPLE 19 - CREATION OF A NEW NEGATIVE RESTRICTION TYPE (C)**

2

3 In addition, the CSD implemented a rule for this Restriction Type including only one parameter configura-  
4 tion: Party Type = "CSD" as shown in the example below.

5

**EXAMPLE 20 - DEFINITION OF A RULE SET FOR A NEW NEGATIVE RESTRICTION TYPE (C)**

Rule Set	Valid From	Valid To	Securities Movement Type	Payment	Transaction Identification	Party Type (of the account owner)	Party Type (of the instructing party)	Party	Security	Matching Status	Debited Position/Balance	Credited Position/Balance	Securities Account	T2S Dedicated Cash Account	Credit Debit Indicator	Country of Issuance	T2S Dedicated Cash Account Type	Settlement Currency	Securities Tax Status	Internal Classification	Securities Account	
Rule 1	2016-04-01	2016-06-30					CSD															

6

7 As a result of the combined effect of the two restriction types when the two validity periods overlap, T2S  
8 allows all Settlement Instructions sent by a CSD, all Settlement Instructions on non-proprietary securities  
9 accounts, and Settlement Instructions on proprietary securities accounts only if they are sent by a CSD. For  
10 more details on the effect of negative and positive restriction types in the restriction validation process de-  
11 fined for the restriction processing types "Rejection" and "CSD validation hold", please see section [Business](#)  
12 [Validation](#) [▶ 301]. For more details on the effect of negative "Blocking" restriction types, please see the  
13 description of the fifth example below.

14 The fourth example describes how CBs and CSDs can set up blocking Restriction Types for their parties and  
15 accounts. More into detail, this example shows how a CB can set up a Restriction Type to block a T2S dedi-  
16 cated cash account XYZ of one of its payment banks and how a CSD can set up a Restriction Type to block  
17 all the securities accounts belonging to its CSD participant ABC as shown in Example 21 - [Creation of a new](#)  
18 [restriction type \(D1\)](#) [▶ 65] and Example 22 - [Creation of a new restriction type \(D2\)](#) [▶ 66]. In such a case  
19 the CB must define a Restriction Type with object restriction type set to T2S Dedicated Cash Account, Re-

1 striction Processing Type set to Blocking and to define the validity period. After this step is completed suc-  
2 cessfully, the CB must apply this Restriction Type to the T2S dedicated cash account XYZ to make it effective  
3 for this account. The CB can apply the Restriction Type with a Reference Data update of the relevant T2S  
4 dedicated cash account (see section Restrict Static Data Object for detailed description of messages ex-  
5 change). As a result of this Reference Data update, settlement is blocked for all Settlement Instructions and  
6 Liquidity Transfers related to the T2S dedicated cash account XYZ. Similarly, the CSD must define a Re-  
7 striction Type with object restriction type set to Party, Restriction Processing Type set to Blocking and to  
8 define the validity period. After this step is completed successfully, the CSD must apply this Restriction Type  
9 to its CSD Participant ABC to make it effective for all the securities accounts of the selected party. In this  
10 case, the CSD can apply the Restriction Type with a Reference Data update of the participant. As a result of  
11 this Reference Data update, settlement is blocked for all Settlement Instructions related to all the securities  
12 accounts of the CSD Participant ABC. Nevertheless, in both cases, T2S keeps on validating and matching  
13 (and possibly sending allegements for) settlements instructions related to the blocked T2S dedicated cash  
14 account and securities accounts. When the Settlement Instruction is under an intraday restriction the T2S  
15 Actor is provided at the eligibility check with information on the applicable reasons for eligibility failure (see  
16 section Settlement Eligibility Check).

17 **EXAMPLE 21 - CREATION OF A NEW RESTRICTION TYPE (D1)**

**Restriction Type**

*Restriction Type: RTCA*  
*Restriction Description: This restriction type blocks single T2S dedicated cash accounts.*

*Valid From: 15-August-2016*  
*Valid To:*  
*Object Restriction Type: T2S Dedicated Cash Account*  
*Restriction Processing Type: Blocking*  
*Positive / Negative Parameter Set: Positive*

18

1

**EXAMPLE 22 - CREATION OF A NEW RESTRICTION TYPE (D2)**

*Restriction Type: RTSA*  
*Restriction Description: This restriction type blocks all the securities accounts belonging to a CSD participant*

*Valid From: 01-April-2016*  
*Valid To: 30-June-2016*  
*Object Restriction Type: Party*  
*Restriction Processing Type: Blocking*  
*Positive/Negative Parameter Set: Positive*

2

3 The fifth example describes how a CSD can set up a Restriction Type to block all Settlement Instructions on  
4 a given security (whose ISIN is XXABCDEFGHIJ) with the exception of those related to the management of  
5 corporate actions. In this case, the CSD must define a Restriction Type with object restriction type set to  
6 Security, Restriction Processing Type set to Blocking, the attribute "Positive/Negative Parameter Set" set to  
7 Negative and specify the relevant validity period.

8

**EXAMPLE 23 - CREATION OF A NEW RESTRICTION TYPE (E)**

*Restriction Type: RTBS*  
*Restriction Description: This restriction type blocks all instructions not related to CA management on a security.*

*Valid From: 01-August-2015*  
*Valid To: 31-December-2015*  
*Object Restriction Type: Security*  
*Restriction Processing Type: Blocking*  
*Positive/Negative Parameter Set: Negative*

9

10 In addition, the CSD must setup a rule for this Restriction Type to specify all the ISO transaction codes of  
11 instructions related to the management of corporate actions, i.e. "CORP" or "CLAI".

1

**EXAMPLE 24 - DEFINITION OF A RULE SET FOR A NEW RESTRICTION TYPE (E)**

Rule Set	Valid From	Valid To	Securities Movement Type	Payment	Transaction Identification	Party Type (of the account owner)	Party Type (of the instructing party)	Party	Security	Matching Status	Debited Position/Balance	Credited Position/Balance	Securities Account	T2S Dedicated Cash Account	Credit Debit Indicator	Country of Issuance	T2S Dedicated Cash Account Type	Settlement Currency
Rule 1	2015-08-01	2015-12-31			CORP													
					CLAI													

2

3 Once these parameters are set, the CSD must apply this Restriction Type to the security XXABCDEFGHJI, in  
 4 order to make it effective. The CSD applies the Restriction Type with a Reference Data update of the securi-  
 5 ty (see section Restrict Reference Static Data Object for detailed description of messages exchange). As a  
 6 result of this Reference Data update and on the basis of the parameters set upfront, settlement is blocked  
 7 for all Settlement Instructions related to the security XXABCDEFGHJI, with the exception of those with an  
 8 ISO transaction code related to corporate actions management (i.e. "CORP" or "CLAI"). This blocking takes  
 9 place at the level of the eligibility process (see section [Eligibility check process](#) [▶ 383]), however T2S keeps  
 10 on validating and matching (and possibly sending allegements for) all settlements instructions related to the  
 11 same security XXABCDEFGHJI.

12 The sixth example regards the Restriction Type configuration performed by a CSD willing to earmark a secu-  
 13 rities position for ISIN XYZ on securities account 123: in this case a generic Restriction Type with Object  
 14 Restriction Type equal to Securities Position and Restriction Processing Type set to Earmarking must be de-  
 15 fined by the T2S Operator at system level (and therefore is available for all CSDs and CBs - see example  
 16 below). All the incoming Settlement Restrictions quoting this Restriction Type then earmark securities posi-  
 17 tion for ISIN XYZ for the securities account they refer to. Also in such a case the definition of Restriction  
 18 Type Rules and Restriction Type Parameters is not required.

1

**EXAMPLE 25 - CREATION OF A NEW RESTRICTION TYPE (F)**

**Restriction Type**

*Restriction Type: EASP*  
*Restriction Description: This restriction type earmarks a securities position for a securities account and ISIN in all settlement restriction using it.*

*Valid From: 01-April-2016*  
*Valid To: 30-June-2016*

*Object Restriction Type: Securities Position*  
*Restriction Processing Type: Earmarking*  
*Positive/Negative Parameter Set: Positive*

2

3 The last example shows how to update one rule within an already existing and valid restriction type configura-  
4 tion. Taking into consideration the restriction type configuration RT01 (previously defined in example 11  
5 and 12) and making the assumption the relevant CSD needs to amend rule R2 by changing the financial  
6 instrument from "ISIN 1" to "ISIN 2", these are the steps the CSD needs to perform:

- 7 | to close the rule (R2) containing the old value ("ISIN 1") inserting the date in which the value should be  
8 considered as obsolete;
- 9 | to insert a new rule (R4) containing the new value ("ISIN 2"); with a validity period starting the day after  
10 the "Valid To" date of the closed rule (R2).

11

**EXAMPLE 26 - UPDATE OF A RESTRICTION TYPE RULE (G)**

**Restriction Type**

*Restriction Type: RT01*  
*Restriction Description: This restriction type applies on settlement instructions and sets the CSD validation status to "Hold" when triggered.*

*Valid From: 01-April-2016*  
*Valid To: 30-June-2016*

*Object Restriction Type: Settlement Instruction*  
*Restriction Processing Type: CSD Validation Hold*  
*Positive / Negative Parameter Set: Positive*

12

1 **EXAMPLE 27 - UPDATE OF A RESTRICTION TYPE RULE (G)**

Rule Set	Valid From	Valid To	Securities Movement Type	Payment	Transaction Identification	Party Type (of the account owner)	Party Type (of the instructing party)	Party	Security	Matching Status	Debited Position/Balance	Credited Position/Balance	Securities Account	T2S Dedicated Cash Account	Credit/Debit Indicator	Country of Issuance	T2S Dedicated Cash Account Type	Settlement Currency	
Rule 1	2016-04-01	2016-06-30	RECE					ABC											
			RECE						XYZ										
Rule 2	2016-04-01	2016-05-31							ISIN 1										
Rule 3	2016-04-01	2016-06-30	RECE	FREE			CSD Part												
			DELI	APMT			CSD Part												
Rule 4	2016-06-01	2016-06-30							ISIN 2										

2  
3 As shown in the diagram, in order to update the value of a parameter, no change is applied on the Re-  
4 striction Type definition. In this example, the referenced financial instrument is "ISIN 1" till the end of May  
5 2016 (comprised) and it is "ISIN 2" since the beginning of June 2016.

- 7 [\[ \] Conditional Securities Delivery Configuration \[▶ 76\]](#)
- 8 [\[ \] Conditional Securities Delivery Configuration \[▶ 76\]](#)
- 9 [\[ \] Conditional Securities Delivery Configuration \[▶ 76\]](#)
- 10 [\[ \] Conditional Securities Delivery Configuration \[▶ 76\]](#)

11 **1.2.1.9 Conditional Securities Delivery Configuration**

12 T2S features a conditional securities delivery (CoSD) process which allows to settle instructions which re-  
13 quire the prior fulfillment of a settlement condition outside T2S. For instance, this allows a CSD to coordinate  
14 a FOP delivery in T2S with a cash settlement outside T2S on behalf of its participants. In order to use condi-  
15 tional settlement, a CSD needs to define a set of rules in CRDM Data. As is the case for Restrictions (see  
16 section [Restriction types \[▶ 45\]](#)), each CSD can set up a number of CoSD Rules organized into CoSD Rule  
17 Sets.

18 For each CoSD Rule Set, the CSD has to define

- 19 | The name and the description of the CoSD Rule Set;

- 1 | A Party identifier to identify the CSD Participant acting as administering party which manages the fulfill-  
2 | ment of the settlement conditions;
- 3 | A validity period, specified by a mandatory initial date of validity and an optional final date of validity;
- 4 | A pair of administration type parameters specifying whether the rule set triggers a blocking on the cash  
5 | and/or securities side;
- 6 | A set of rules defining the criteria according to which T2S checks whether CoSD processing has to be  
7 | triggered or not. These criteria are expressed, for each case, on the basis of a pre-defined set of param-  
8 | eter types (see table below). Each rule is assigned a validity period, specified by a mandatory initial date  
9 | of validity and an option final date of validity. The validity period of a rule can not exceed the validity pe-  
10 | riod of the rule set it belongs to, i.e. the validity period of a rule cannot start before or end after the val-  
11 | idation period of the relevant rule set. Each rule is also assigned a sequence number (to specify the or-  
12 | der in which the rules are processed within a given rule set) and a CoSD processing attribute, which  
13 | specifies whether a settlement instruction that matches the rule is to trigger the CoSD process (inclu-  
14 | sion) or not (exclusion).

15 | The table below describes the exhaustive list of parameter types that CSDs can use for configuring their  
16 | CoSD Rule Sets.

17 | **TABLE 10 - CoSD PARAMETER TYPES**  
18 |

PARAMETER TYPE	DESCRIPTION
ISIN	It specifies the ISIN of the security defined in the settlement instruction.
Settlement currency	It specifies the currency code defined in the settlement instruction.
CSD	It specifies the CSD owning the delivering or receiving securities account defined in the settlement instruction.
Securities account	It specifies the delivering or receiving securities account defined in the settlement instruction.
Country of issuance	It specifies the country of issuance linked to the securities code defined in the settlement instruction.
Place of settlement	It specifies the CSD of the counterparty defined in the settlement instruction.
ISO transaction code	It specifies the ISO transaction code of the settlement instruction.
Securities movement type	It specifies the type of securities movement. The exhaustive list of possible values is as follows: <ul style="list-style-type: none"> <li>  DELI (deliver)</li> <li>  RECE (receive)</li> <li>  ZERO (settlement quantity is null)</li> </ul>

PARAMETER TYPE	DESCRIPTION
Payment Type Code	It specifies the type of cash movement. The exhaustive list of possible values is as follows: <ul style="list-style-type: none"> <li>  APMT (against payment)</li> <li>  FREE (free of payment / separate payment)</li> </ul>
Credit Debit indicator	It specifies the credit/debit indicator of the instruction.
Settlement Transaction condition code	It specifies the condition code referenced in the settlement transaction.
Issuer CSD in T2S	It specifies whether the issuer CSD for the security referenced in the settlement instruction should be external to T2S or not.
Delivering CSD in T2S	It specifies whether the delivering CSD referenced in the settlement instruction should be external to T2S or not.
Receiving CSD in T2S	It specifies whether the receiving CSD referenced in the settlement instruction should be external to T2S or not.
BIC of issuer CSD	It specifies the BIC of the issuer CSD linked to the security referenced in the settlement instruction.
BIC of delivering CSD	It specifies the BIC of the delivering CSD referenced in the settlement instruction.
BIC of receiving CSD	It specifies the BIC of the receiving CSD referenced in the settlement instruction.

1 The following table provides the list of message fields that T2S checks in order to assign a given settlement  
2 instruction the value related to each applicable CoSD rule parameter.

**TABLE 11 - APPLICABLE COSD RULE PARAMETER AND MESSAGE FIELDS**

APPLICABLE COSD RULE PARAMETER	TYPE OF CHECK	MESSAGE	MESSAGE FIELD
Security	Direct	sese.023	/FinInstrmId/ISIN
Settlement Currency	Direct	sese.023	/SttlmAmt/Amt/Ccy
CSD owning the securities account	Indirect	sese.023	/QtyAndAcctDtIs/SfkpgAcct/Id
Securities Account	Direct	sese.023	/QtyAndAcctDtIs/SfkpgAcct/Id
Country of Issuance	Indirect	sese.023	/FinInstrmId/ISIN
Place of settlement (CSD of the counterparty)	Indirect	sese.023	/DlvrSttlmPties/Dpstry/Id/AnyBIC <sup>39</sup>

39 For matched settlement instructions and with Securities Movement Type = RECE

APPLICABLE COSD RULE PARAMETER	TYPE OF CHECK	MESSAGE	MESSAGE FIELD
			/RcvgSttlmPties/Dpstry/Id/AnyBIC <sup>40</sup>
ISO Transaction code	Direct	sese.023	/SttlmParams/SctiesTxTp/Cd
Securities Movement Code	Direct	sese.023	/SttlmTpAndAddtlParams/SctiesMvmntTp
Payment Type Code	Direct	sese.023	/SttlmTpAndAddtlParams/Pmt
Credit Debit Indicator	Direct	sese.023	/SttlmAmt/CdtDbtInd
Settlement Transaction Code	Direct	sese.023	/SttlmParams/SttlmTxCond/Cd
Issuer CSD in or out T2S (Boolean)	Indirect	sese.023	/FinInstrmId/ISIN
Delivering CSD in or out T2S (Boolean)	Indirect	sese.023	/DlvrgSttlmPties/Dpstry/Id/AnyBIC <sup>41</sup>
Receiving CSD in or out T2S (Boolean)	Indirect	sese.023	/RcvgSttlmPties/Dpstry/Id/AnyBIC <sup>42</sup>
BIC of Issuer CSD	Indirect	sese.023	/FinInstrmId/ISIN
BIC of delivering CSD	Direct	sese.023	/DlvrgSttlmPties/Dpstry/Id/AnyBIC <sup>43</sup>
BIC of receiving CSD	Direct	sese.023	/RcvgSttlmPties/Dpstry/Id/AnyBIC <sup>44</sup>

1 For a detailed description of the CoSD activation process, see section [Conditional Settlement](#) [▶ 510].

2 Below are a few examples of definition of CoSD rule sets. The first example shows a possible configuration  
 3 of a CoSD rule set using a set of parameters. The second example shows how to set up the CoSD processing  
 4 attribute to avoid triggering the CoSD process based on a specific parameter. Finally, the last example shows  
 5 how to modify a single rule within an existing rule set.

6 The first example defines a CoSD rule set that is supposed to block the settlement of the securities leg of a  
 7 Settlement Instructions fulfilling any of the following criteria:

- 8 | The securities movement type of the instruction is "Deliver" and the receiving CSD is either CSD XYZ or  
 9 CSD ABC; or
- 10 | The exchanged financial instrument is identified by ISIN1 or
- 11 | The Issuer CSD of the exchanged financial instrument is CSD XYZ and the securities movement type is  
 12 "Deliver".

40 For matched settlement instructions and with Securities Movement Type = DELI.

41 For matched settlement instructions and with Securities Movement Type = RECE

42 For matched settlement instructions and with Securities Movement Type = DELI.

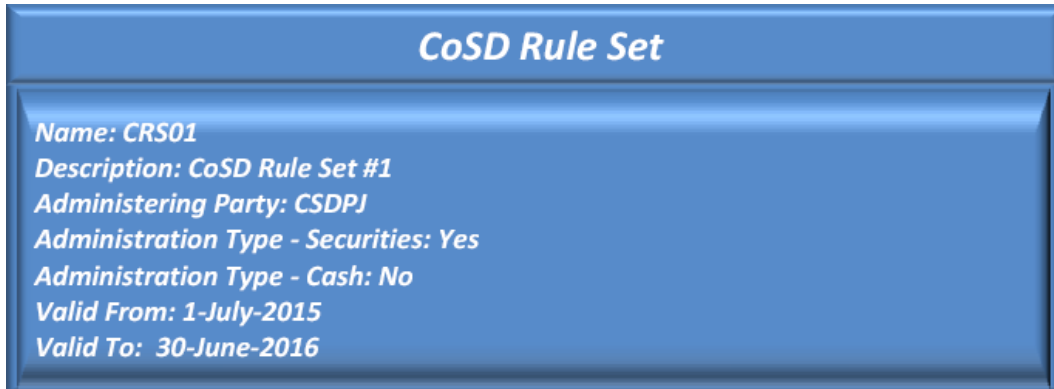

43 For matched settlement instructions and with Securities Movement Type = RECE.

44 For matched settlement instructions and with Securities Movement Type = DELI.

1 The rule set must be valid from the 1st of July 2015 (included) to the 30th of June 2016 (included). This rule  
 2 set can be specified as follows:

3 **EXAMPLE 28 - CREATION OF A NEW CoSD RULE SET (A)**

4  
 5 Once the rule set has been defined, the responsible CSD must specify the rules including the criteria which  
 6 should trigger the CoSD processing. The following example shows a set of three rules with the same validity  
 7 period as the rule set that implement the requirements described above:

8 **EXAMPLE 29 - DEFINITION OF RULES FOR A NEW CoSD RULE SET (A)**

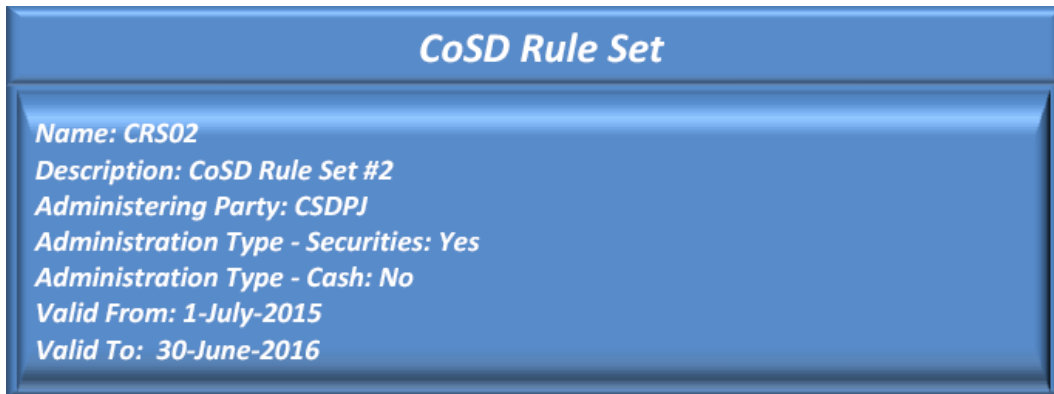

Rule Set	Valid From	Valid To	CoSD Processing	ISIN	Settlement currency	CSD	Securities account	Country of issuance	Place of Settlement	ISO transaction code	Securities movement type	Payment	Credit Debit indicator	Settlement Transaction condition code	Issuer CSD in T2S	Delivering CSD in T2S	Receiving CSD in T2S	BIC of issuer CSD	BIC of delivering CSD	BIC of receiving CSD		
Rule 1	2015-07-01	2016-06-30	True								DELI										CSDXYZ00	
											DELI											CSDABC00
Rule 2	2015-07-01	2016-06-30	True	ISIN1																		
Rule 3	2015-07-01	2016-06-30	True								DELI							CSDXYZ00				

9  
 10 The column of this table shows the list of possible parameter types the CSD can use in the definition of the  
 11 applicable criteria for its rule sets. In this case, three rules define the CoSD rule set. All rules have the "CoSD  
 12 Processing" attribute set to "True", which means that a settlement instruction matching any of these rules  
 13 will trigger the CoSD process.

14 It is sufficient that one of these rules be satisfied for the CoSD process to be triggered; as soon as this hap-  
 15 pens, or when no rules within a CoSD Rule Set are satisfied, the system moves on to checking the rules  
 16 within the next CoSD Rule Set. The rules are defined in a strictly sequential order, i.e. Rule 1 is the first to  
 17 be checked, Rule 2 is only checked if Rule 1 is not satisfied, and so on. Furthermore, each rule can have  
 18 multiple possible values for the same parameters in order to be satisfied. For instance, Rule 1 is satisfied for

1 instructions with securities movement type "Deliver" and receiving CSD identified by BICs "CSDABC00" or  
 2 "CSDXYZ00", as outlined in the first requirement above. As shown in the diagram, each rule always checks  
 3 the same set of parameters - in the case of Rule 1, "Securities Movement Type" and "BIC of receiving CSD".  
 4 Separate rules can be defined when there is the need to check different parameter sets in sequence.  
 5 Once the rules are defined as well, instructions matching any of the three rules defined above in the given  
 6 period trigger the CoSD processing which blocks the securities leg from settling (See section [Conditional](#)  
 7 [Settlement](#) [▶ 510] for a detailed description of the CoSD process). For example, a Settlement Instruction  
 8 sent to deliver securities to counterparty CSDXYZ00 is not eligible for settlement owing to rule 1. Similarly,  
 9 any Settlement Instruction sent to settle ISIN1 securities is not eligible for settlement owing to rule 2. On  
 10 the contrary, an instruction sent by CSDABC00 to receive securities different from ISIN1 does not trigger the  
 11 CoSD process based on this rule set, as it does not satisfy any rules.  
 12 The second example shows a possible use of the CoSD Processing attribute to define exceptions.

**EXAMPLE 30 - CREATION OF A NEW CoSD RULE SET (B)**

**EXAMPLE 31 - DEFINITION OF RULES FOR A NEW CoSD RULE SET (B)**

Rule Set	Valid From	Valid To	CoSD Processing	ISIN	Settlement currency	CSD	Securities account	Country of issuance	Place of Settlement	ISO transaction code	Securities movement type	Payment	Credit Debit indicator	Settlement Transaction condition code	Issuer CSD in T2S	Delivering CSD in T2S	Receiving CSD in T2S	BIC of issuer CSD	BIC of delivering CSD	BIC of receiving CSD	
Rule 1	2015-07-01	2016-06-30	False	ISIN1																	
Rule 2	2015-07-01	2016-06-30	True															CSDXYZ00			

16 This rule set contains one rule with CoSD processing set to false. This means that a Settlement Instruction  
 17 matching this rule will not trigger the CoSD process. The second rule (with CoSD processing set to true) will  
 18 trigger the CoSD process for any Settlement Instruction involving a security issued by CSDXYZ00. In this  
 19

1 example, we assume CSDXYZ00 is the issuer CSD of ISIN1. This setup allows to trigger the CoSD process for  
 2 all Settlement Instructions involving securities issued by CSDXYZ00, except ISIN1.

3 The final example shows how to update one rule within an already existing and valid rule set configuration.  
 4 Taking into consideration the rule set configuration CRS01 (defined above in the first example) and making  
 5 the assumption the relevant CSD needs to amend rule R2 by changing the financial instrument from "ISIN1"  
 6 to "ISIN2", these are the steps the CSD needs to perform:

- 7 | to close the rule (R2) containing the old value ("ISIN1") inserting the date in which the value should be  
 8 considered as obsolete;
- 9 | to insert a new rule (R4) containing the new value ("ISIN2"); with a validity period starting the day after  
 10 the "Valid To" date of the closed rule (R2).

11 **EXAMPLE 32 - UPDATE OF A CoSD RULE (C)**

CoSD Rule Set

*Name: CRS01*  
*Description: CoSD Rule Set #1*  
*Administering Party: CSDPJ*  
*Administration Type - Securities: Yes*  
*Administration Type - Cash: No*  
*Valid From: 1-July-2015*  
*Valid To: 30-June-2016*

12  
 13 **EXAMPLE 33 - UPDATE OF A CoSD RULE (C)**

Rule Set	Valid From	Valid To	CoSD Processing	ISIN	Settlement currency	CSD	Securities account	Country of issuance	Place of Settlement	ISO transaction code	Securities movement type	Payment	Credit Debit indicator	Settlement Transaction condition code	Issuer CSD in T2S	Delivering CSD in T2S	Receiving CSD in T2S	BIC of issuer CSD	BIC of delivering CSD	BIC of receiving CSD	
Rule 1	2015-07-01	2016-06-30	True								DELI										CSDXYZ00
											DELI										CSDABC00
Rule 2	2015-07-01	2016-05-31	True	ISIN1																	
Rule 4	2016-06-01	2016-06-30	True	ISIN2																	
Rule 3	2015-07-01	2016-06-30	True								DELI							CSDXYZ00			

1 As shown in the diagram, in order to update the value of a parameter, no changes are applied on the CoSD  
2 rule set definition. In this example, the referenced financial instrument is "ISIN1" till the end of May 2016  
3 (included) and it is "ISIN2" since the beginning of June 2016.

## 4 1.2.2 Securities reference data

### 5 1.2.2.1 Set up of securities in T2S

6 The setup of securities in T2S includes the configuration of reference data for securities, securities CSD links  
7 (see section [Configuration of Securities CSD Links](#) [▶ 80]) and eligible counterpart CSD links (see section  
8 [Configuration of eligible counterparts CSDs](#) [▶ 82]).

9 CSDs are responsible for setting up and maintaining securities reference data in T2S, e.g. for inputting and  
10 possibly updating all the information described in the Example 34 - [Securities static data](#) [▶ 78] and Example  
11 35 - [Market-specific securities attributes](#) [▶ 79]. They are also responsible for the configuration of all the  
12 links between investor CSDs and technical issuer CSDs and the links between eligible counterpart CSDs,  
13 needed for cross-CSD settlement.

14 The issuer CSD, i.e. the CSD that issued and distributed a given financial instrument on behalf of the issuer,  
15 is usually the entity responsible for the input and maintenance of the reference data for this financial instru-  
16 ment <sup>45</sup>. In the case the issuer CSD is not participating in T2S, then another CSD in T2S must take this re-  
17 sponsibility for the given financial instrument. In both cases, the relevant CSD is identified in CRDM Data by  
18 means of a Security CSD Link between itself and the securities object, with a specific "Maintenance Flag"  
19 marking it as the CSD in charge of the data maintenance in T2S. In any case, only one CSD can be respon-  
20 sible, at a given point in time, for the reference data management of each financial instrument. The respon-  
21 sible CSD for a given financial instrument may change over time, e.g. in the case the issuer CSD was not  
22 participating in T2S and it makes the decision to join, or vice versa.

23 Regardless of their role vis-à-vis the financial instrument, all CSDs can define their own market-specific at-  
24 tributes and restrictions on a given ISIN.

25 The following table summarises, for each reference data object related to the setup of securities in T2S, the  
26 responsible T2S Actor for its configuration and it specifies which mode the T2S Actor can use for the config-  
27 uration.

28 **TABLE 12 - SETUP OF SECURITIES IN T2S**  
29

REFERENCE DATA OBJECT	RESPONSIBLE T2S ACTOR	MODE
Securities	CSD	A2A/U2A
Security CSD link	CSD	A2A/U2A
Eligible counterpart CSD link	CSD	A2A/U2A

45 The CSD responsible for the maintenance of a financial instrument is defined by an attribute of Securities CSD Link as explained in section [Concept of securities in T2S](#) [▶ 77] : responsibility is time-dependent and can be assigned to a CSD different from the issuer CSD.

1 The configuration of all the reference data objects related to the setup of securities in T2S takes place ac-  
2 cording to the dialogue pattern described in section [Maintain Reference Data Object](#) [▶ 1040].

### 3 1.2.2.2 Concept of securities in T2S

4 T2S stores securities reference data required for settlement purpose for all eligible financial instruments.

5 T2S identifies securities by means of the International Securities Identification Number (ISIN) code, as de-  
6 fined in the ISO 6166:2013 standard. Additionally, T2S classifies securities by CFI (Classification of Financial  
7 Instruments, ISO/DIS 10962:2015(E) standards).

8 Upon defining an eligible security within T2S, the responsible CSD (see section [Set up of securities in T2S](#)  
9 [▶ 76]) has to provide the following pieces of information:

- 10 | Identification of the security, i.e. its ISIN code, CFI code, short and long name;
- 11 | Validity period of the security, i.e. its issue date and maturity/expiry date;
- 12 | Settlement-related data, i.e. its settlement type (specifying whether trades for this security specify quan-  
13 tities in units or nominal), minimum settlement unit, settlement unit multiple <sup>46</sup> and possible deviating  
14 settlement units;
- 15 | Country of issuance;
- 16 | Currency.

17 After the set-up of new securities, the responsible CSD and, subsequently, any other CSD willing to allow  
18 settlement of the financial instrument, should populate the securities CSD link entity to define its eligibility  
19 for settlement (see section [Configuration of Securities CSD Links](#) [▶ 80]).

20 The following diagram shows an example of reference data for a financial instrument identified by the ISIN  
21 XXABCDEFGHJIJ. These reference data stipulate that a trade on this financial instrument can settle in T2S if  
22 the relevant Settlement Instructions match the following criteria:

- 23 | The Intended Settlement Date is later than or equal to the 12th of April 2015 and earlier than the 11th  
24 of April 2016 <sup>47</sup> and
- 25 | The settlement quantity is either 53, or 57 or any multiple of 5 starting from 50 (i.e. 50, 55, 60, etc).

---

46 The number of decimals of the settlement unit multiple should define the maximum number of decimals that may be needed in the security lifecycle (e.g. for corporate actions), as it is used to determine the number of decimals accepted in the settlement quantity of a settlement instruction or settlement restriction (see section [Validation process](#) [▶ 302] for the related business validations). The maximum number of decimals allowed by T2S is 9.

47 T2S accepts settlement instructions and settlement restrictions from any Instructing Party when the current business date is before the issue date provided that the intended settlement date is equal to or later than the issue date. Only issuers CSDs and technical issuers CSDs are allowed to instruct with intended settlement date before the issue date. In any case, T2S accepts settlement instructions and settlement restrictions when the current business date and the intended settlement date are before the maturity date of the ISIN. In addition, T2S accepts settlement instructions when the current business date and the intended settlement date are before the maturity date of the ISIN code plus the transformation detection period. Investors CSD, Technical Issuers CSD and Issuer CSDs, when acting as instructing Party, are the only T2S Actors that can send settlement instructions with current business date and/or intended settlement date on or after the maturity date of the ISIN code plus the transformation detection period.

1

**EXAMPLE 34 - SECURITIES STATIC DATA**

Security	
ISIN: XXABCDEFGHIJ	Deviating Settlement Units
Short Name: IBM/FRI 5.25	
Long Name: International Business Machines, 5.25 Fixed Rate Interest	53
CFI: DBXXXX	57
Country of Issuance: Italy	
Currency: EUR	
Issue Date: 12-04-2015	
Final Maturity or Expiry Date: 11-04-2016	
Settlement Type: Units	
Minimum Settlement Unit: 50	
Settlement Unit Multiple: 5	

2

3 Besides this information, that is required for each security defined in T2S, the issuer CSD and each investor  
4 CSD <sup>48</sup> may input and maintain additional market-specific attributes for the security (See section [Market-  
5 specific attributes](#) [▶ 43]). The following example shows a scenario in which a CSD defined two additional  
6 market-specific attributes, Category and Type <sup>49</sup>, for its securities, which in this case are assigned the values  
7 "A" and "12.D" to reflect in T2S its own internal categorisation of securities:

---

48 See section [Configuration of Securities CSD Links](#) [▶ 80] for a definition of issuer CSD and investor CSD.

49 These two attributes are not part of the standard set of attributes of T2S and they are created by the CSD to reflect its specific business/technical needs (as explained in section [Market-specific attributes](#) [▶ 43])

1

**EXAMPLE 35 - MARKET-SPECIFIC SECURITIES ATTRIBUTES**

Security	
ISIN: XXABCDEFGHIJ	Deviating Settlement Units
Short Name: IBM/FRI 5.25	
Long Name: International Business Machines, 5.25 Fixed Rate Interest	53
CFI: DBXXXX	57
Country of Issuance: Italy	
Currency: EUR	
Issue Date: 12-04-2015	
Final Maturity or Expiry Date: 11-04-2016	
Settlement Type: Units	
Minimum Settlement Unit: 50	
Settlement Unit Multiple: 5	
Market-Specific Attributes	
Category	A
Type	12.D

2

3 The CSD responsible for defining a given security in T2S must input its mandatory securities market-specific  
 4 attributes when creating the security, whereas it can input its optional securities market-specific attributes  
 5 either when creating the security or by updating the same security at a later stage. All the other CSDs must  
 6 input their mandatory market-specific attributes by updating the same security and before creating the rele-  
 7 vant Securities CSD Link (see section [Configuration of Securities CSD Links](#) [▶ 80]), whereas they can input  
 8 their optional securities market-specific attributes either before or after having created the relevant Securi-  
 9 ties CSD Link.

10 When retrieving securities reference data, both the issuer CSD and each investor CSD get their own securi-  
 11 ties market-specific attributes only. They cannot get the securities market-specific attributes specified by any  
 12 other CSD for the same security.

13 When the responsible CSD deletes a security in T2S, this also results in the deletion of all the market-specific  
 14 attribute values assigned to it, including the values specified by each investor CSD.

15 The issuer CSD and each investor CSD may need to use these additional attributes for different reasons, for  
 16 example:

- 17 | Just for informational purposes;
- 18 | In order to define a restriction type in T2S that applies only to securities belonging to a certain category  
 19 and/or type;
- 20 | Because they are used by other applications or processes within the CSD.

### 1.2.2.3 Configuration of Securities CSD Links

Once the responsible CSD has created a new security in T2S, data defining the eligibility of this security for cross-CSD settlement and external-CSD settlement must be configured in T2S, i.e. enabling T2S to process Settlement Instructions where the two involved counterparts belong to different CSDs (external-CSD settlement scenario involves at least one CSD not participating in T2S). For a given Settlement Instruction, irrespective of the scenario, a CSD can be:

The issuer CSD, when it is the CSD in which the security was issued and distributed on behalf of the issuer;

The investor CSD, when it is the CSD of at least one of the two counterparts; or

Both, when it is the CSD in which the security was issued and the CSD of at least one of the counterparts.

In this respect, each investor CSD has the choice between:

- I Opening one (or more) omnibus account(s) (See section [Securities accounts](#) [▶ 99]), reflecting the holdings of its participants for the given financial instrument, in the books of the issuer CSD or
- I Opening one (or more) omnibus account(s) in the books of any other CSD being already an investor CSD for the same financial instrument.

In both cases, the CSD where the omnibus account is opened is defined as the technical issuer of the investor CSD for the given financial instrument. This is the reason why each investor CSD has to define, for each financial instrument it intends to define as eligible for settlement, the technical issuer CSD for this financial instrument. This results in the creation of a link between the investor CSD and its technical issuer CSD for a given financial instrument. For a given investor CSD, the technical issuer CSD may be different for each security, being in most cases the issuer CSD of the securities.

The following diagram illustrates the basic scenario in which an investor CSD (CSD A) defines the issuer CSD (CSD I) of a given financial instrument as the technical issuer CSD for that instrument. This results in the creation of a direct link between the two CSDs:

25

As an alternative, the Investor CSD may define any other Investor CSD (for the same financial instrument) as its Technical issuer CSD. E.g., in the example illustrated in [Relayed link between investor CSD and issuer CSD](#) [▶ 81], CSD A (Investor CSD) defines CSD B (Investor CSD) as its Technical Issuer CSD. In the same manner, CSD B defines CSD I (Issuer CSD) as its Technical Issuer CSD. As a result, CSD A establishes a relayed link with CSD I. The relayed link chain may consist of one or more intermediary CSDs between an Investor CSD and an Issuer CSD. Each intermediary Investor CSD is defined as a Technical Issuer CSD for the previous element of the relayed link chain.

1

**DIAGRAM 8 - RELAYED LINK BETWEEN INVESTOR CSD AND ISSUER CSD**

2

3 In this respect, the issuer CSD of a given security can be considered as being its own technical issuer for this  
4 security from a technical set-up point of view:

5

**DIAGRAM 9 - TECHNICAL ISSUER CSD OF AN ISSUER CSD**

6

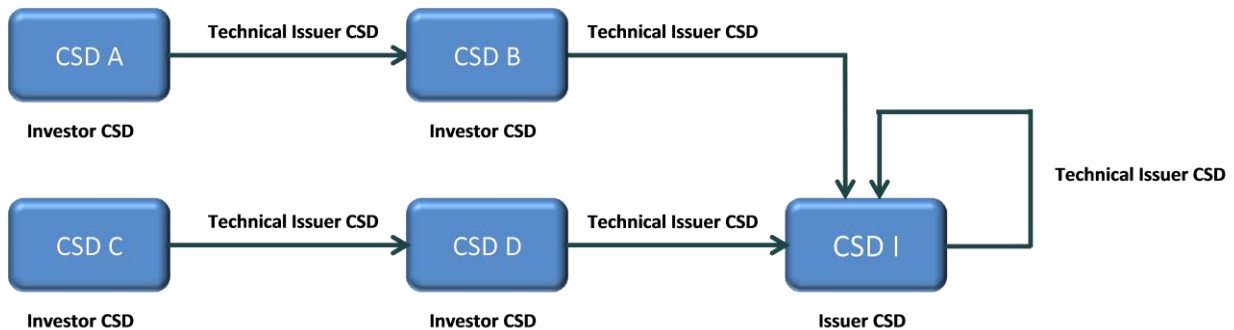

7 Note that for this configuration the Issuer CSD does not need to define an additional Security CSD Link de-  
8 fining itself as Investor and Technical Issuer at the same time. Defining itself as Issuer automatically implies  
9 that the CSD also acts as Technical Issuer for itself.

10 In this case, the account reflecting the holdings of its participants is the issuance account (See section [Secu-  
11 rities accounts](#) [▶ 99]). When linking itself to a security, the issuer CSD can optionally specify one or more of  
12 its issuance accounts and one or more of the issuance accounts of its CSD participants for the same security.  
13 If any Issuance accounts of the issuer CSD are specified, one of them must be selected as the default Issu-  
14 ance account to be used for realignment for the given link.

15 The rest of this section provides a couple of examples of configuration of investor-technical issuer links be-  
16 tween CSDs.

17

**EXAMPLE 36 - CONFIGURATION OF INVESTOR-TECHNICAL ISSUER LINKS BETWEEN CSDs (A)**

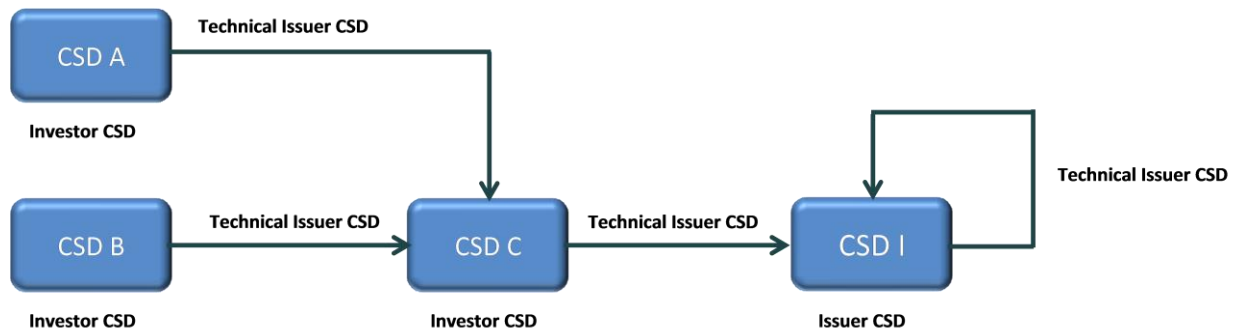

18

19 As shown in the example, CSD B and CSD D, investor CSDs for a given financial instrument, both define CSD  
20 I, issuer of the same instrument, as technical issuer CSD for this instrument. This results in the creation of  
21 two direct links between CSD B and CSD I and between CSD D and CSD I, respectively.

1 On the contrary, CSD A and CSD C, investor CSDs for the same financial instrument, define CSD B and CSD  
2 D respectively, both already defined as investor CSDs for the same instrument, as technical issuer CSD for  
3 this instrument. This results in the creation of two links between CSD A and CSD B and between CSD C and  
4 CSD D and, consequently, in two relayed links between CSD A and CSD I and between CSD C and CSD I,  
5 respectively.

6 Finally, as explained before, CSD I, as issuer CSD for the given financial instrument, is also by definition its  
7 own technical issuer CSD for the same financial instrument.

#### 8 **EXAMPLE 37 - CONFIGURATION OF INVESTOR-TECHNICAL ISSUER LINKS BETWEEN CSDs (B)**

9

10 This second example shows a similar configuration of links, the only difference with respect to the previous  
11 example being that only one direct link exists between an investor CSD and the issuer CSD for the given  
12 financial instrument, i.e. the link defined between CSD C and CSD I.

13 As to CSD A and CSD B, they are defined as investor CSDs and have the same technical issuer CSD, i.e. CSD  
14 C, already defined as investor CSD for the same financial instrument. This results in the creation of two links  
15 between CSD A and CSD C and between CSD B and CSD C and, consequently, in two relayed links between  
16 CSD A and CSD I and between CSD B and CSD I, respectively.

17 Again, CSD I, as issuer CSD for the given financial instrument, is also by definition its own technical issuer  
18 CSD for the same financial instrument.

#### 19 1.2.2.4 Configuration of eligible counterpart CSDs

20 Each CSD (internal or external to T2S) must specify which CSDs it accepts as counterpart for settlement in  
21 T2S for a given period. CSDs can specify their eligible counterpart CSDs (and maintain this information in  
22 T2S) either on an individual basis (i.e. per securities), or by issuer CSD (internal or external to T2S) or by  
23 issue country specifying, in addition, the date from/until which this relationship is valid. In this case, T2S can  
24 process a Settlement Instruction only if both counterpart CSDs have defined the other CSD as eligible coun-  
25 terpart for the relevant security. Each CSD is responsible for defining all the relevant eligible counterpart  
26 CSDs for itself and for all its external CSDs, i.e. for all its participants with party type "External CSD". For  
27 example:

1  
2**EXAMPLE 38 - ELIGIBLE COUNTERPART CSDS**

CSD	COUNTERPART	ELIGIBILITY TYPE	LINK ID
CSD A	CSD B	Securities	XYZ
CSD B	CSD A	Securities	XYZ
CSD A	CSD B	Securities	HJK
CSD B	CSD A	Country	CC
CSD A	CSD B	Securities	MNO
CSD C	CSD D	Issuer CSD	CSD E
CSD D	CSD C	Issuer CSD	CSD E
CSD D	External CSD E	Securities	XYZ
External CSD E	CSD D	Securities	XYZ

3 With the first link, CSD A defines CSD B as eligible counterpart for settlement of XYZ securities, while with  
4 the second link CSD B defines CSD A as eligible counterpart for settlement of the same XYZ securities. As a  
5 consequence, T2S can process a Settlement Instruction between these two CSDs.

6 Under the assumption that HJK securities was issued in country CC, whereas security MNO was issued in a  
7 different country, T2S can only process a Settlement Instruction between CSD A and CSD B on HJK, T2S  
8 rejects the Settlement Instruction for a settlement between CSD A and CSD B on MNO securities (because  
9 only CSD A has defined CSD B as eligible counterpart for this security and not vice versa).

10 Finally, T2S would reject any Settlement Instruction between CSD A and CSD B on any other securities is-  
11 sued in country CC, as CSD A specifically defined CSD B as eligible counterpart only for security HJK.

12 The two rows of the table related to CSDs C and D illustrate an example of two CSDs defining each other as  
13 eligible counterpart for all the securities issued by CSD E. CSDs can set up this type of configuration when  
14 dealing with a country with multiple CSDs and having the need to restrict the counterpart eligibility to a spe-  
15 cific CSD of this market.

16 The last two rows of the table show the case of a CSD in T2S (D) defining an external CSD (E) as eligible  
17 counterpart for securities XYZ and vice versa.

### 18 1.2.3 Auto-collateralisation eligibility, securities valuation and close links

#### 19 1.2.3.1 Setup of auto-collateralisation eligibility, securities valuation and close links in T2S

20 The setup of the auto-collateralisation feature in T2S includes the configuration of reference data for auto-  
21 collateralisation rules, auto-collateralisation eligibility, securities valuation and close links.

22 Central Banks and payment banks are responsible for defining the eligibility for auto-collateralisation purpose  
23 of the relevant securities and for providing prices for the valuation of securities positions for auto-  
24 collateralisation and setting up up the relevant close links between parties and financial instruments. Close

1 links data set up by a payment bank are applied only to its own client collateralisation transactions. This  
 2 information can be provided directly by the relevant actors, or indirectly via a collateral management system.  
 3 For Eurosystem NCBs, this data will normally be loaded by the Eurosystem Collateral Management System  
 4 (ECMS). In contingency situations, Eurosystem NCBs can request an operational procedure to ensure the  
 5 data in ECMS and T2S is aligned. The relevant T2S Actor can define in T2S information related to the eligibil-  
 6 ity for auto-collateralisation of a given security and to close links for a given party and security, and then  
 7 update this information only when changes occur, i.e. without the need for feeding this information on a  
 8 daily basis. Vice versa, the relevant T2S Actor must provide prices <sup>50</sup> for valuation purpose on a daily basis.

9 Each auto-collateralisation rule is defined by the type of collateralisation procedure (it can be "pledge",  
 10 "pledge sub-account or "repo" for CBs and only "repo" for payment banks). The T2S Operator creates or  
 11 updates auto-collateralisation rules when creating or updating the relevant CBs. A CB creates or updates  
 12 auto-collateralisation rules when creating or updating one of its payment banks providing client-  
 13 collateralisation.

14 It is possible to define minimum amounts to be provided in auto-collateralisation and client-collateralisation  
 15 scenarios. For each Payment Bank it is possible to define one minimum amount for auto-collateralisation  
 16 instructions (applicable to the Payment Bank) and one for client-collateralisation instructions (applicable to  
 17 all clients of the Payment bank).

18 Changes to the minimum amounts are taken into account by the system as of the following business day at  
 19 the latest. For details on how these values are used in the auto-collateralisation process, (see section [Auto-  
 20 collateralisation](#) [▶ 430]).

21 The following table summarises, for each reference data object related to the setup of auto-collateralisation  
 22 in T2S, the responsible T2S Actor for its configuration and it specifies which mode the T2S Actor can use for  
 23 the configuration.

24 **TABLE 13 - SETUP OF AUTO-COLLATERALISATION IN T2S**

REFERENCE DATA OBJECT	RESPONSIBLE T2S ACTOR	MODE
Auto-collateralisation Rule (CB)	T2S Operator	U2A
Auto-collateralisation Rule (Payment Bank)	T2S Operator, CB	U2A
Securities auto-collateralisation eligibility	CB, Payment Bank	A2A/U2A
Securities valuation	CB, Payment Bank	A2A/U2A <sup>51</sup>
Close Link	CB, Payment Bank	A2A/U2A

26 The configuration of all the reference data objects related to the setup of auto-collateralisation in T2S with  
 27 the exception of securities valuations provided by CBs and Payment Banks, takes place according to the

50 It is in fact the collateral valuation which is provided to T2S.

51 CBs and Payment Banks send their daily securities valuations in A2A mode via flat files. They can still use the U2A mode for contingency reasons or maintenance operations concerning a limited number of records.

1 dialogue pattern described by the "Maintain SD" use case (see section Maintain Static Data Object). These  
2 are the messages available in A2A mode for the setup of auto-collateralisation information in T2S:

- 3 | EligibleSecuritiesCreationRequest and EligibleSecuritiesDeletionRequest for securities auto-  
4 collateralisation eligibility;
- 5 | CollateralValueCreationRequest for securities valuations;
- 6 | CloseLinkCreationRequest and CloseLinkDeletionRequest for close links.

7 The upload of securities valuations in T2S takes place according to the dialogue pattern described by the  
8 "Load Securities Valuations" use case (see section Bulk Load Securities Valuations).

### 9 1.2.3.2 Auto-collateralisation eligibility, securities valuation and close links

10 T2S provides auto-collateralisation services to facilitate securities settlement for financial institutions that  
11 central banks have identified as eligible or clients that payment/settlement banks have identified as eligible.  
12 Auto-collateralisation with central banks is triggered when a payment bank lacks cash to process a Settle-  
13 ment Instruction. Auto-collateralisation with payment banks (otherwise known as client collateralisation) is  
14 triggered for the owner of a securities account involved in a Settlement Instruction, when the client of the  
15 payment/settlement bank lacks external guarantee headroom.

16 The auto-collateralisation service requires the configuration of three categories of reference data <sup>52</sup>:

- 17 | Securities auto-collateralisation eligibility, i.e. the specification of which financial instruments are eligible  
18 as collateral against provision of credit in a given currency;
- 19 | Securities valuation, i.e. the specification of the prices that T2S can use for the valuation of securities  
20 positions, when triggering the auto-collateralisation process for the relevant currency;
- 21 | Close links, i.e. the specification of securities that cannot be used as collateral by a party (having a close  
22 link with the issuer of the securities) in an auto-collateralisation process, or that can be used with an ad-  
23 ditional haircut.

24 As to the provisioning of securities valuation data, T2S expects a daily price feed for a financial instrument  
25 defined eligible for auto-collateralisation by a credit provider in the respective currency. The CB and the  
26 payment banks acting as credit providers provide their respective price. If applicable, CBs and payment  
27 banks may also provide a second price to be applied for the valuation of own-used assets, which will be  
28 applied in cases where a Close Link exists. If a CB or a payment bank provides credit in multiple currencies,  
29 then it has to provide daily price feeds for each of these currencies (CollateralValueCreationRequest). The  
30 following example shows a simple scenario in which the financial instrument XXABCDEFGHJI is eligible for  
31 auto-collateralisation in Euro only and securities valuation data, provided by CB A, are available from the 1st  
32 of March 2015 to the 5th of March 2015:

---

52 This is only related to securities: accounts configuration and auto-collateralisation parameters are described in the relevant sections

1 **EXAMPLE 39 - SECURITIES VALUATION DATA**

Security			
ISIN: XXABCDEFGHJ Short Name: IBM/FRI 5.25% Long Name: International Business Machines, 5.25% Fixed Rate Interest  Issue Date: 04-02-2015 Final Maturity or Expiry Date: 12-04-2016  Settlement Type: Units Minimum Settlement Unit: 50 Settlement Unit Multiple: 5		Eligible Currency: Euro Credit Provider: CB A Securities Valuation	
Market-Specific Attributes		Deviating Settlement Units	
Category	A		53
Type	12.D		57
		01-03-2015	100
		02-03-2015	102
		03-03-2015	105
		04-03-2015	98
		05-03-2015	98

2  
3 A participant may be linked directly or indirectly, in terms of capital ownership, to an issuer/debtor/guarantor  
4 of securities eligible for auto-collateralisation. For example:

- 5 | The participant may own a given percentage or more of the capital of the issuer/debtor/guarantor;
- 6 | The issuer/debtor/guarantor may own a given percentage or more of the capital of the participant;
- 7 | A third party may own a given percentage of the capital of both the participant and the issuer/debtor/guarantor.

9 In this case, the participant cannot use the underlying securities as collateral, even though they are eligible  
10 for auto-collateralisation. Central Banks and payment banks are responsible for defining the rules which al-  
11 low identifying these links. T2S receives and stores each piece of this information as a "close link" between  
12 the relevant participant and financial instrument in order to prevent the participant from using these securi-  
13 ties as collateral. For client collateralisation, close links data are applied only to transactions in which the  
14 payment bank providing close links data on T2S is the credit provider. The following example illustrates a  
15 close link defined between a party X and a financial instrument Y:

17  
18 This link prevents Party X to use Security Y as collateral in T2S.

19 **1.2.4 Currencies reference data**

20 1.2.4.1 Setup of currencies in T2S

21 The T2S Operator is responsible for setting up and maintaining currency reference data in T2S, e.g. for in-  
22 puting and updating of all the information described in Example 41 - [Maintain Reference Data Object](#) [▶ 88].

1 The configuration of currencies in T2S is possible in U2A mode only and takes place according to the dia-  
2 logue pattern described by the "Maintain SD" use case (see section Maintain Reference Data Object ).

### 3 1.2.4.2 Concept of currency in T2S

4 The concept of currency relates in T2S to the following topics:

- 5 | The denomination of securities, i.e. the currency of issuance of each financial instrument (See section  
6 [Securities reference data](#) [▶ 76]);
- 7 | The eligibility and the valuation of securities for auto-collateralisation and/or client collateralisation, i.e.  
8 currency of valuation of a financial instrument eligible for auto-collateralisation (See section [Scope of](#)  
9 [multi-currency features of T2S](#) [▶ 88]);
- 10 | The denomination of T2S dedicated cash accounts (See section [T2S dedicated cash accounts in T2S](#)  
11 [▶ 95]);
- 12 | The denomination of external RTGS accounts (See section [External RTGS accounts](#) [▶ 95]);
- 13 | The denomination of trades, i.e. the currency according to which the counterparts express the cash leg  
14 of their Settlement Instructions;
- 15 | Portfolio transfers, i.e. the currency for purchasing price.

16 T2S provides securities settlement services in euro and non-euro central bank money. In this respect, T2S  
17 differentiates between "settlement" and "non-settlement" currencies. If the cash leg of a Settlement Instruc-  
18 tion is denominated in a T2S settlement currency, then the whole Settlement Instruction, including its cash  
19 leg, can settle in T2S. Otherwise, only the securities leg of the Settlement Instruction can settle in T2S,  
20 whereas the cash leg must settle outside T2S, e.g. by means of the Conditional Securities Delivery process  
21 (See section [Conditional Settlement](#) [▶ 510]).

22 Similarly, the auto-collateralisation service is available in T2S for T2S settlement currencies only.

23 The following table summarises which processes T2S provides for "settlement" and "non-settlement" curren-  
24 cies:

25 **TABLE 14 - CURRENCIES AND T2S PROCESSES**

T2S SETTLEMENT CURRENCY	SECURITIES SETTLEMENT	CASH SETTLEMENT	AUTO-COLLATERALISATION
Yes	in T2S	in T2S	available in T2S
No	in T2S	outside T2S	not available in T2S

27 Only central bank money settlement is allowed in T2S for all T2S settlement currencies. If a securities set-  
28 tlement involves Commercial bank money, then the cash leg of the settlement must settle outside T2S. T2S  
29 provides a Conditional Securities Delivery service to perform the cash and securities leg in a specific se-  
30 quence.

31 T2S stores reference data related to currencies according to the ISO 4217:2015 standard. Additionally, ISO  
32 4217 obsolete currency codes are stored in T2S in order to allow denomination of old securities. The follow-  
33 ing is a concrete example of reference data stored for Danish krone, US dollar, euro and Swedish krona:

1  
2

**EXAMPLE 41 - CURRENCY REFERENCE DATA**

CODE	NAME	DECIMAL POSITIONS	SETTLEMENT IN T2S
DKK	Danish krone	2	Yes
USD	US dollar	2	No
EUR	Euro	2	Yes
SEK	Swedish krona	2	Yes

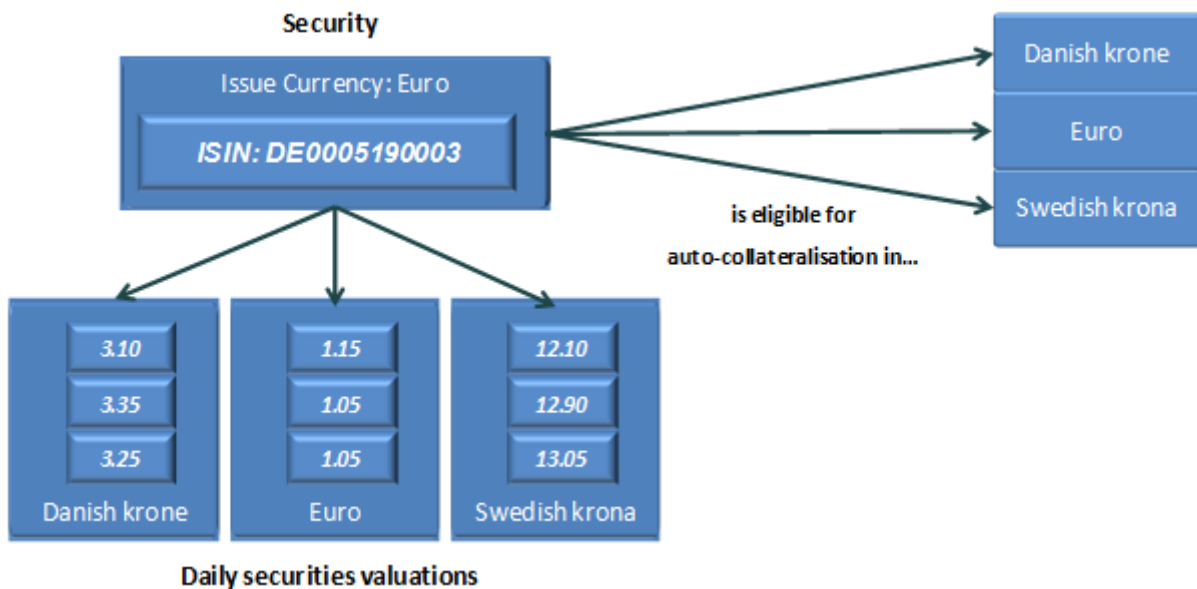

3 where only the information shown in the rightmost column is not defined in the standard and specifies  
4 whether the currency is a T2S settlement currency, i.e. whether T2S provides securities settlement services  
5 in central bank money for the currency.

6 1.2.4.3 Scope of multi-currency features of T2S

7 On the securities side, there is no restriction on the currency denomination of a security. Consequently, se-  
8 curities accepted in T2S for settlement can be denominated in all currencies.

9 The denomination of a financial instrument is fully independent from its eligibility for auto-collateralisation  
10 and/or client collateralisation in a specific currency. This means that a financial instrument denominated in a  
11 given currency CX may be eligible for auto-collateralisation and/or client collateralisation for several different  
12 currencies {C1, C2,..., CN}, possibly not including CX. For example, in the following scenario:

13 **EXAMPLE 42 - SECURITIES DENOMINATION AND ELIGIBILITY FOR COLLATERALISATION (A)**

14

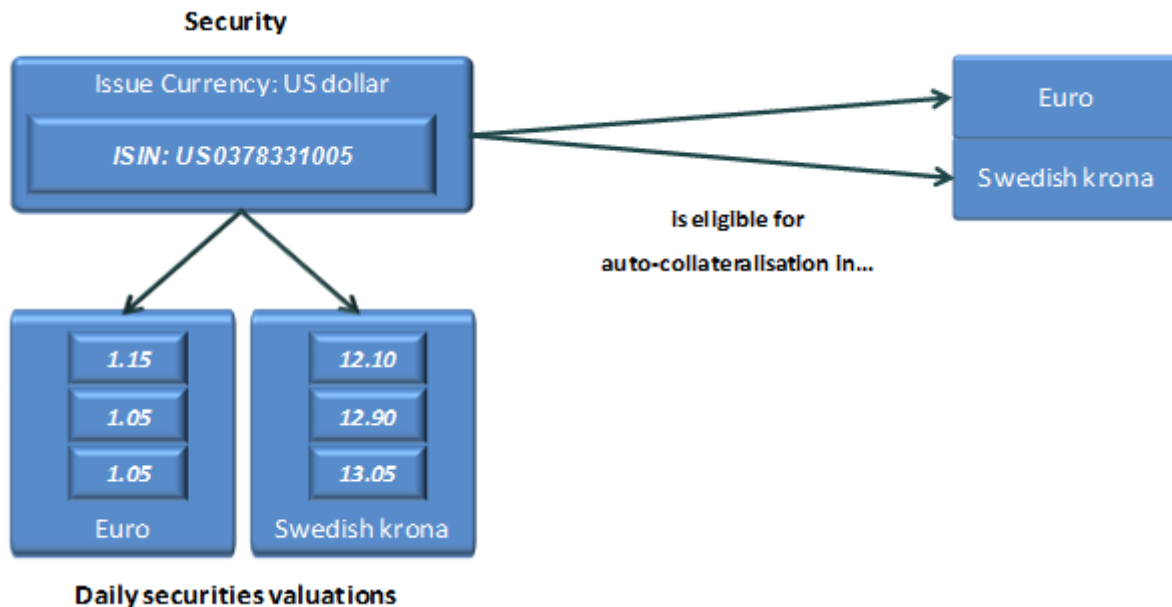

15 The financial instrument DE0005190003 is denominated in euro and it is eligible for auto-collateralisation in  
16 three different currencies: Danish krone, euro and Swedish krona. This results in the possibility for T2S to  
17 trigger the auto-collateralisation process on any of these three currencies, regardless of the denomination  
18 currency of the given financial instrument. Of course, in order to execute the auto-collateralisation process,

1 T2S needs to know the applicable prices for all the eligible currencies, as shown in the diagram, where it is  
2 assumed that CBs have provided the prices for their own currency.

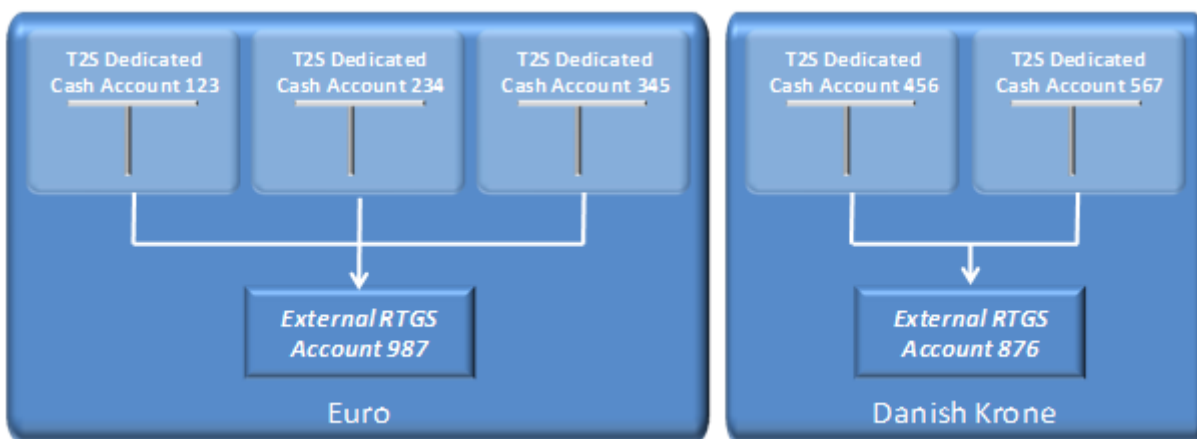

3 The set of currencies in which a financial instrument is eligible for auto-collateralisation and/or client collat-  
4 eralisation, does not necessarily include the issue currency of the instrument. The following diagram pro-  
5 vides an example of such a scenario, where the financial instrument, US0378331005, is eligible for auto-  
6 collateralisation in two currencies, euro and Swedish krona, whereas its denomination is in a different cur-  
7 rency, i.e. US dollar:

8 **EXAMPLE 43 - SECURITIES DENOMINATION AND ELIGIBILITY FOR COLLATERALISATION (B)**

9  
10 On the cash side, CBs have to denominate each external RTGS account and all the T2S dedicated cash ac-  
11 counts linked to it for end of settlement day reimbursement purpose (See section [Links between cash ac-](#)  
12 [counts in T2S and Main Cash Accounts or external RTGS accounts](#) [ > 96]), in the same T2S settlement cur-  
13 rency. For example:

14 **EXAMPLE 44 - T2S DEDICATED CASH ACCOUNTS AND EXTERNAL RTGS ACCOUNTS**

15

1 As to the settlement of instructions, the denomination of a financial instrument is fully independent from the  
2 denomination of the trades in which it is delivered/received, and vice versa. This means that securities is-  
3 sued in a given currency can be delivered/ received in Settlement Instructions whose cash legs are ex-  
4 pressed in a different currency. In this respect, the issue currency of a financial instrument does not neces-  
5 sarily have to be a T2S settlement currency.

6 Cross-currency settlement is not allowed in T2S. Each T2S dedicated cash account is denominated in one  
7 T2S settlement currency. Furthermore, each Settlement Instruction has one cash leg in a given currency,  
8 and cash netting is impossible between Settlement Instructions whose cash legs are expressed in different  
9 currencies. However, T2S allows parties to submit linked transactions with cash legs denominated in differ-  
10 ent T2S settlement currencies. It is also possible that T2S needs to link several transactions denominated in  
11 different T2S settlement currencies for optimisation purposes. In both cases, T2S submits all the relevant  
12 transactions together for settlement as linked transactions. In this scenario, T2S can only try to optimise the  
13 securities legs, and not the cash legs, of the relevant transactions.

14 As a multi-currency securities settlement system, T2S does not impose a harmonised business calendar for  
15 the cash leg settlement and applies, for each T2S settlement currency, the business calendar of the corre-  
16 sponding RTGS system. This results in a different set of closing days for each T2S settlement currency<sup>53</sup>.

17 Finally, in exceptional circumstances or contingency situations and based on a request of the relevant central  
18 bank, the T2S operator can schedule an event of the settlement day (e.g. the intraday cut-off for DVP set-  
19 tlement) according to a different timing only for the relevant currency.

20 See the section on settlement day for more information on the schedule of the T2S settlement day (See  
21 section [Settlement Day](#) [▶ 237]).

## 22 1.2.5 Instruction Types

23 There are different types of instructions in T2S. The main classification consists of: Settlement Instruction,  
24 Settlement Restriction and Maintenance Instruction.

### 25 1.2.5.1 Settlement Instruction

26 Instruction sent by a T2S Actor aiming to deliver/receive securities and/or cash between their own accounts  
27 or between one of their accounts and a counterpart's account(s).

28 There are different types of Settlement Instructions depending on their characteristics. T2S classifies the  
29 Settlement Instructions as follows:

- 30 | Depending on the nature of the exchanges involved, Settlement Instructions in T2S can be one of the  
31 following types:
- 32 – FoP: Free of payment consists of DFoP (deliver free of payment) and RFoP (receive free of payment).  
33 In both cases, securities are delivered / received without payment being made;
  - 34 – DVP/RVP: Delivery or receive versus payment, define an exchange of securities against cash;

---

53 CSDs can perform FoP regardless of T2S settlement currency closing day since no cash leg is involved

- 1 – DWP/RWP: Delivery with payment defines the delivery of cash and securities from one party to another. For example, trade netting by a CCP may result in such instructions;
- 2
- 3 – PFoD: Payment free of delivery defines an exchange of cash without the delivery of securities, where the Settlement Quantity is equal to zero and the Settlement Amount is greater than zero. PFoD instructions can be classified into Payment Free of Delivery Credit instruction "PFoD-CRDT" (crediting cash) and Payment Free of Delivery Debit instruction "PFoD-DBIT" (debiting cash).
- 4
- 5
- 6
- 7 | Depending on the number of CSDs involved in the settlement of the instruction:
- 8 – Intra CSD instructions: are those Settlement Instructions where the delivering and receiving parties belong to the same CSD;
- 9
- 10 – Cross CSD instructions: are those instructions where the delivering and receiving parties belong to different CSDs. For Cross-CSD Settlement Instructions, T2S creates T2S generated Realignment Settlement Instructions (See section [Conditional Settlement](#) [▶ 510]).
- 11
- 12
- 13 | Depending if the Settlement Instruction entered in T2S as already matched (with Match status set as "Matched") or not ("Unmatched"), it can be classified as:
- 14
- 15 – Unmatched Instructions: are those Settlement Instructions sent by the T2S Actors to be matched inside T2S;
- 16
- 17 – Matched Instructions: are those instructions from the same CSD (Intra CSD) or different CSDs (Cross CSD) that enter in T2S in a single message containing the information of the two counterparties: deliverer and receiver also known as Already Matched Settlement Instructions. (See section [Business Validation](#) [▶ 301] and [Matching](#) [▶ 347]).
- 18
- 19
- 20
- 21 | Depending on the existence of linkages in the instructions, they can be:
- 22 – Unlinked instructions: the instruction does not include any link;
- 23 – Linked instructions: T2S Actors can link their Settlement Instructions and/or Settlement Restrictions through the processing indicators "After", "Before", "With", "Info", or a pool reference, which is a collective reference to identify a set of instructions which are to be settled together all-or-none. Linked Instructions processing is described in section [Linked Instructions](#) [▶ 500].
- 24
- 25
- 26
- 27 In addition to those Settlement Instructions sent by the T2S Actors, T2S automatically generates Settlement Instructions for auto-collateralisation and for Cross-CSD settlement purposes:
- 28
- 29 T2S generated collateral Settlement Instructions and T2S generated reverse collateral Settlement Instructions are instructions automatically generated by T2S for auto-collateralisation purposes (See section [Auto-collateralisation](#) [▶ 430]).
- 30
- 31
- 32 T2S generated Realignment Settlement Instructions are instructions generated automatically by T2S when matched Settlement Instructions are identified in a Cross-CSD settlement (See section [Realignment](#) [▶ 451]).
- 33
- 34 The management of corporate actions lies outside the T2S business scope and T2S only processes the related Settlement Instructions.
- 35

## 1 1.2.5.2 Settlement Restriction

2 Settlement Restrictions sent by a T2S Actor aiming to move securities (resp cash) into a specific securities  
3 position of a securities account (resp. cash balance of a T2S dedicated cash account), and make them avail-  
4 able for a specific purpose.

5 | Depending on the message sent by the T2S Actor the Settlement Restriction is identified as:

6 – Settlement Restriction on securities;

7 – Settlement Restriction on cash;

8 | Depending on the objective of the movement within the securities position or cash balance, a Settlement  
9 Restriction may be of the following types:

10 – Securities blocking;

11 – Securities reservation;

12 – Securities earmarking;

13 – Cash blocking;

14 – Cash reservation.

15 Accordingly to the types above, Settlement Restrictions pass different validations (See section [Business Vali-  
16 dation](#) [▶ 301]).

17 The settlement process applicable varies whether it is a Settlement Restriction on securities or a Settlement  
18 Restriction on cash (See section [Securities Blocking/Reservation/Earmarking](#) [▶ 544] and section [Cash Block-  
19 ing and Reservation](#) [▶ 670])

20 The types of Settlement Restrictions on securities position differ as follows for their settlement processing:

21 | Securities blocking does not allow blocking more securities than the ones available.

22 | Securities reservation allows reserving more securities than the ones available. The Settlement Re-  
23 striction is then partially settled, and all securities received further on, are automatically pre-empted until  
24 the quantity of the reservation is filled;

25 | Securities earmarking:

26 – When relying on a Settlement Restriction, securities earmarking does not allow earmarking more secu-  
27 rities than the ones available. The Settlement Restriction is then partially settled without additional  
28 complement;

29 – When relying on a Settlement Instruction, is submitted to all the rules applicable to partial settlement,  
30 as for any other Settlement Instruction.

31 The types of Settlement Restrictions on cash balance differ as follows for their settlement processing:

32 | Cash blocking, does not allow blocking an amount of cash higher than the available amount. Cash reser-  
33 vation allows reserving an amount of cash higher than the available amount. The Settlement Restriction  
34 is partially settled and all incoming cash is automatically pre-empted until the amount of the reservation  
35 is filled.

### 1 1.2.5.3 Maintenance Instruction

2 Instructions sent by a T2S Actor aiming to cancel, amend, hold, release or partially release an existing Set-  
3 tlement Instruction or a Settlement Restriction.

4 Maintenance Instructions are applied on existing Settlement Instructions or Settlement Restrictions in T2S,  
5 known as "referenced instructions".

6 In order to hold/release/partially release, cancel or amend a referenced instruction, a T2S Actor can refer to  
7 that instruction by using either the T2S Actor Reference (Account Owner Transaction Identification, Account  
8 Servicer Transaction Identification or the Third Party Transaction Id.) or the T2S Reference (Market Infra-  
9 structure Transaction Identification). The Administering Parties can only make use of the T2S Reference  
10 (Market Infrastructure Transaction Identification) to release or cancel a Settlement Instruction identified as  
11 CoSD.

- 12 | When using the T2S Actor Reference or the T2S Reference of a Settlement Instruction/Settlement Re-  
13 striction the maintenance applies on the referenced instruction;
- 14 | When using the T2S Actor Reference of an Already Matched Settlement Instruction, the maintenance  
15 applies on the Already Matched Instruction and therefore in both legs of the Settlement Instruction;
- 16 | When using one of the T2S References of each leg of an Already Matched Settlement Instruction, the  
17 maintenance instruction applies to only the referenced leg of the Already Matched Settlement.

18 According to the intended action from the T2S Actor, Maintenance Instructions can be classified as:

- 19 | Cancellation Instruction: Settlement Instructions or Settlement Restrictions can be cancelled anytime be-  
20 fore their settlement upon request from the T2S Actor. (See section [Instruction Cancellation](#) [▶ 360]);
- 21 | Amendment Instruction: An Amendment Instruction can be used for modifying the process indicators  
22 related to the Priority, Partial Settlement Indicator or Linkages block of an unsettled Settlement Instruc-  
23 tion. For unsettled Settlement Restrictions, only Priority and Linkages Block process indicators can be  
24 amended. Amendment Instructions can also be sent to amend the Priority of a partially settled Settle-  
25 ment Instruction or Settlement Restriction. (See section [Instruction Amendment](#) [▶ 357]);
- 26 | Hold/Release Instruction: A Settlement Instruction can be put on hold any time until its settlement or  
27 cancellation, preventing it from settlement. Once a Settlement Instruction is put on hold, it can be re-  
28 leased or partially released. Settlement Restrictions cannot be put on hold in T2S. (See section [Hold and](#)  
29 [Release](#) [▶ 364]);
- 30 | CoSD Instructions: T2S allows CSDs to set up rules-based, date-dependent configurations of conditional  
31 securities delivery (See section [Conditional Settlement](#) [▶ 510]). Each CSD can set up its CoSD Rule Set  
32 that triggers conditions (e.g. settlement currency, transaction type) that have to be met by the Settle-  
33 ment Instructions. A Settlement Instruction identified as CoSD on its Intended Settlement Date is auto-  
34 matically put on Hold until the Administering Parties involved release or cancel it, sending the corre-  
35 sponding instruction:
  - 36 – CoSD Release Instruction: Is used to release Settlement Instructions CoSD on Hold (See section [Con-](#)  
37 [ditional Settlement](#) [▶ 510]). In order to successfully release a CoSD Settlement Instruction, each Ad-  
38 ministering Party must send one CoSD Release Instruction per CoSD rule that applies to such Settle-  
39 ment Instruction (See section [Send Release Instruction for CoSD by Administering Party](#));

- 1 – CoSD Cancellation Instruction: Is used to cancel Settlement Instructions identified as CoSD (See section  
2 [Conditional Settlement](#) [▶ 510] and [Instruction Cancellation](#) [▶ 360]). All the Administering Parties  
3 involved in the CoSD process must send their CoSD Cancellation Instructions in order to cancel the  
4 Settlement Instruction identified as CoSD. Nevertheless, the relevant CSD involved in the Settlement  
5 Instruction can request the cancellation of a CoSD Settlement Instruction sending one Cancellation In-  
6 struction. In both cases (CSDs or Administering Parties) the cancellations should be sent by both  
7 counterparties, as described in [Instruction Cancellation](#) [▶ 360] and in Send Cancellation Instruction  
8 for CoSD by Administering Party.

## 9 1.2.6 Accounts structure and organisation

### 10 1.2.6.1 Categories of accounts

11 T2S Actors input and maintain in CRDM the reference data for the following different categories of accounts,  
12 depending on their role:

- 13 | External RTGS accounts: CBs input and maintain external RTGS accounts, i.e. reference data concerning  
14 cash accounts opened in their books in their RTGS systems;
- 15 | T2S dedicated cash accounts: CBs open and maintain T2S dedicated cash accounts in their books for  
16 their payment banks. A payment bank's T2S dedicated cash account holds cash balances in central bank  
17 money. CBs link T2S dedicated cash accounts to external RTGS accounts denominated in the same cur-  
18 rency for automatic reimbursement of liquidity at the end of each settlement day (See sections [Liquidity](#)  
19 [Transfer](#) [▶ 633] and [End of Day Cash Management](#) [▶ 655]). In addition, CBs use these accounts for the  
20 provision of intraday credit through auto-collateralisation features. Therefore T2S requires the creation of  
21 a Credit Memorandum Balance (CMB) <sup>54</sup> whenever a new cash account is setup by the relevant CB. T2S  
22 dedicated cash accounts are used for the settlement of the cash leg of Settlement Instructions in T2S  
23 (See section [Links between cash accounts in T2S and Main Cash Accounts or external RTGS accounts](#)  
24 [▶ 96])
- 25 | Securities account: CSDs open and maintain securities accounts in their books for their participants (in-  
26 cluding external CSDs) and for themselves. In the latter case, each CSD can open securities accounts  
27 both as a CSD and as its own participant. These securities accounts hold the securities positions of the  
28 party they are linked to and are used for the settlement of instructions in T2S. Whenever a new securi-  
29 ties account is created, a link with one or more T2S Dedicated Cash Accounts can be provided in T2S  
30 (See section [Links between cash accounts in T2S and Main Cash Accounts or external RTGS accounts](#)  
31 [▶ 96]). As long as this link is not established, no settlement can take place on this securities account,  
32 except for Settlement Instructions without exchange of cash (i.e. FOP Settlement Instructions).

33 The following table summarises, for each reference data object related to the setup of accounts in T2S, the  
34 responsible T2S Actor for its configuration and it specifies which mode the T2S Actor can use for the config-  
35 uration.

---

54 A CMB is a tool T2S uses to track the provision of credit from CB to payment banks (for central bank collateralisation) and from payment banks to their clients; it is a combination of T2S dedicated cash account and BIC of the party authorised to use the account. See section [Links between securities accounts and T2S dedicated cash accounts](#) [▶ 104] for more information.

1  
2 **TABLE 15 - SETUP OF ACCOUNTS IN CRDM FOR T2S**

REFERENCE DATA OBJECT	RESPONSIBLE T2S ACTOR	MODE
External RTGS Account	CB	U2A
T2S Dedicated Cash Account	CB	A2A/U2A
Limit	CB	A2A/U2A
	Payment Bank	A2A/U2A
Securities Account	CSD	A2A/U2A
Configuration of securities accounts for cross-CSD settlement and external CSD settlement	CSD	U2A
Link between Securities Account and T2S Dedicated Cash Account	CSD	A2A/U2A

3 The configuration of all the reference data objects related to the setup of accounts in T2S takes place ac-  
4 cording to the dialogue pattern described in section [Maintain Reference Data Object](#) [► 1040] .

#### 5 1.2.6.2 External RTGS accounts

6 External RTGS accounts refer to cash accounts in central bank money opened in one of the RTGS systems  
7 connected to T2S. To this extent, an external RTGS account is not a cash account opened in the books of a  
8 central bank in T2S, but it is just a reference to a cash account existing outside T2S. In other terms, the list  
9 of external RTGS accounts defined in T2S can be considered as a directory of cash accounts that T2S can  
10 use for checking the validity of the liquidity transfer orders involving cash accounts opened in RTGS systems  
11 connected to T2S.

12 It is possible to create and maintain external RTGS accounts in T2S in U2A mode only. CBs input and main-  
13 tain reference data for external RTGS accounts. Each CB is also responsible for maintaining the consistency  
14 between its external RTGS accounts reference data and the corresponding information in its RTGS system <sup>55</sup>.  
15 For each external RTGS account, the relevant CB has to provide the following reference data:

- 16 | The name of the RTGS system in which the corresponding cash account is actually opened;
- 17 | The account reference, i.e. the cash account number used to identify the account within the relevant  
18 RTGS system (T2S imposes no format restrictions on this field);
- 19 | The denomination currency of the account;
- 20 | The status of the account, specifying whether the account is open or closed.

#### 21 1.2.6.3 T2S dedicated cash accounts in T2S

22 T2S envisages the following sub-types of T2S dedicated cash accounts:

---

55 To ensure such consistency, no automatic tool is provided in T2S: nevertheless, CBs can use the EoD Static Data Statement report for this purpose.

- 1 | T2S Dedicated Cash Accounts. Each CB opens T2S dedicated cash accounts for itself and for the pay-  
2 | ment banks under its responsibility. T2S dedicated cash accounts are denominated in a specific T2S set-  
3 | tlement currency (See section [Currencies reference data](#) [▶ 86]) and they are used for the settlement of  
4 | the cash leg of Settlement Instructions in T2S;
- 5 | RTGS Dedicated Transit Accounts. These accounts are opened by and belong to Central Banks and they  
6 | are used for liquidity transfers from/to RTGS (See section [Liquidity Transfer](#) [▶ 633]). One RTGS dedicat-  
7 | ed transit account per currency must be defined in T2S. Each CB can have only one RTGS dedicated  
8 | transit account for its currency;
- 9 | T2S Central Bank Accounts. These accounts also belong to central banks. CBs use T2S central bank ac-  
10 | counts to provide intraday liquidity to their payment banks, therefore they may have a negative balance  
11 | (See section [Liquidity Transfer](#) [▶ 633]).

12 | When opening a new cash account, the relevant central bank has to provide the following reference data:

- 13 | | An alphanumeric user-defined identifier number (which should be unique within T2S);
- 14 | | The type of account, as just specified;
- 15 | | The denomination currency of the account;
- 16 | | The opening date of the account;
- 17 | | A reference to an external RTGS account defined in T2S (See section [External RTGS accounts](#) [▶ 95]);
- 18 | | The reference to the unique party (CB or payment bank) holding the account.

19 | Furthermore, the central bank can also specify the closing date of the account, if already known, and a floor  
20 | notification amount and a ceiling notification amount, i.e. the lower and upper thresholds for triggering a  
21 | notification to the cash manager of the account. These optional amounts may be not applicable for transit  
22 | accounts; however it is up to the Central Bank who owns the transit account to define the appropriate val-  
23 | ues. In case these amounts are not specified or they are set to zero, T2S will not trigger any notification <sup>56</sup>.

24 | See section [Links between cash accounts in T2S and Main Cash Accounts or external RTGS accounts](#) [▶ 96]  
25 | for information on the possible links between T2S dedicated cash accounts and external RTGS accounts in  
26 | T2S.

#### 27 | 1.2.6.4 Links between cash accounts in T2S and Main Cash Accounts or external RTGS accounts

28 | CBs can link each T2S dedicated cash account either to an external RTGS account (as previously mentioned,  
29 | see section [T2S dedicated cash accounts in T2S](#) [▶ 95]), or to a T2 Main Cash Account; both should be de-  
30 | nominated in the same currency. This link is used to determine the RTGS account (in T2, if it is an MCA, the  
31 | relevant RTGS system for that currency if it is an External RTGS Account) to which liquidity is reimbursed  
32 | from the T2S dedicated cash account at the end of each settlement day.

33 | While MCAs are fully fledged accounts defined in CRDM and used within T2, External RTGS Accounts repre-  
34 | sent only a reference to the correct Account and RTGS system outside of T2S.

---

56 | In order to configure a floor threshold that triggers a notification when a balance becomes negative, or a ceiling threshold that triggers a notifica-  
tion when a balance becomes positive, the relevant threshold value should be set to 0.01.

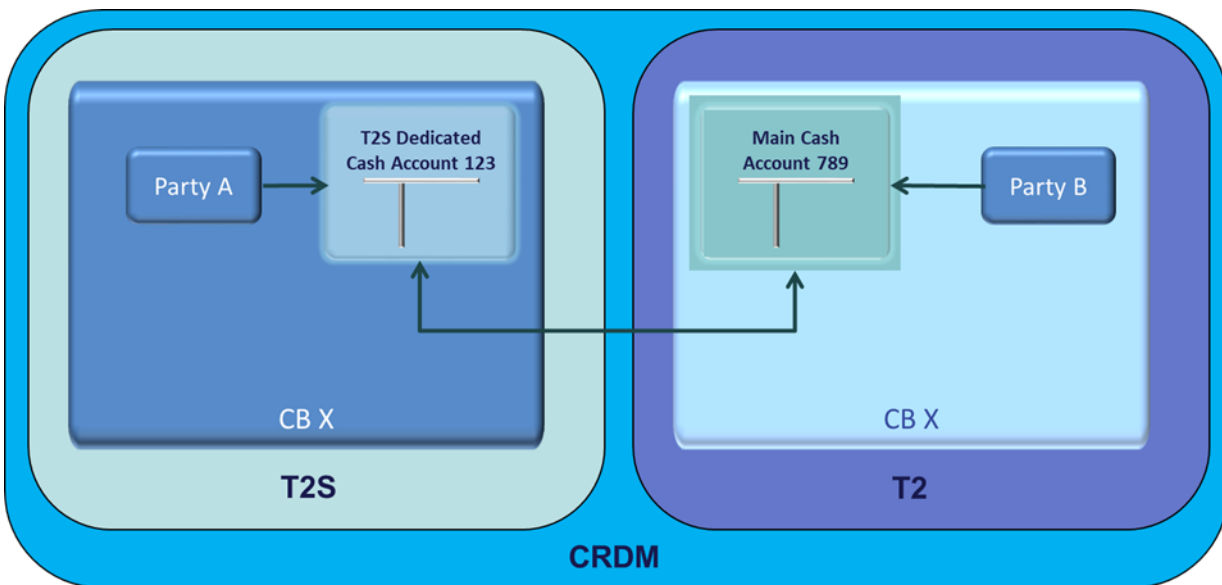

1 In the following example, CB X defined in CRDM a link between a T2S dedicated cash account 123 of a party  
 2 A and an external RTGS account 456. The external RTGS account 456 in T2S is linked to an RTGS account  
 3 456 owned by Party B in the books of the same CB X in the relevant RTGS system. The legal entity holding  
 4 the T2S dedicated cash account in T2S does not necessarily have to be the same legal entity holding the  
 5 RTGS account in the relevant RTGS systems.

6 **EXAMPLE 45 - LINKS BETWEEN T2S DEDICATED CASH ACCOUNTS AND RTGS ACCOUNTS**

7  
 8 In the following example, CB X defined in CRDM a link between a T2S dedicated cash account 123 of a party  
 9 A and a CLM Main Cash Account 789. The legal entity holding the T2S dedicated cash account does not nec-  
 10 essarily have to be the same legal entity holding the Main Cash Account.

11 **DIAGRAM 10 - LINKS BETWEEN T2S DEDICATED CASH ACCOUNTS AND MAIN CASH ACCOUNTS**

12  
 13 Based on this information, at the end of the settlement day, T2S reimburses automatically all the liquidity  
 14 held in the T2S dedicated cash account to the RTGS account (specified in the external RTGS account) in the

1 relevant RTGS system. Liquidity is not moved from T2S Dedicated Cash Account 123 to External RTGS Ac-  
 2 count 456 as the latter only provides T2S with the information on the liquidity's final destination; the liquidity  
 3 reimbursement process relies on the usage of one RTGS dedicated transit account per currency, as de-  
 4 scribed in the following diagram.

5 **DIAGRAM 11 - CONFIGURATION OF RTGS DEDICATED TRANSIT ACCOUNTS**

6  
 7 This implies that T2S does not move the liquidity to be transferred directly from a given T2S dedicated cash  
 8 account to its corresponding MCA or RTGS account. On the contrary, the retransfer of liquidity is based on  
 9 the following three-step process:

- 10 | T2S moves the liquidity to be reimbursed from the given T2S dedicated cash account to the RTGS dedi-  
 11 cated transit account denominated in the same currency. The transit account is a T2S account which  
 12 mirrors the transit account in in T2 or in the RTGS system;
- 13 | An outbound liquidity transfer for cash sweep is initiated from T2S to T2 or other RTGS. The liquidity is  
 14 transferred from this RTGS dedicated transit account in T2S to the corresponding T2S dedicated transit  
 15 account in T2 or the other destination RTGS system;

16 Finally, the liquidity is moved from the T2S dedicated transit account in T2 or the other destination RTGS  
 17 system to the relevant MCA or RTGS account.

### 1 1.2.6.5 Securities accounts

2 Each CSD opens securities accounts in its books for all its participants (including external CSDs) and for it-  
3 self. T2S envisages the following types of securities accounts:

- 4 | CSD Participant Account, i.e. the ordinary securities account linked to a CSD participant or to an external  
5 CSD and used for settlement of instructions;
- 6 | CSD Mirror Account, CSD Omnibus Account and Inter-CSD Account, all used for cross-CSD settlement  
7 (See section [Configuration of securities accounts for cross-CSD settlement and external CSD settlement](#)  
8 [[▶ 102](#)])<sup>57</sup>. Mirror Accounts and Inter-CSD Accounts are linked to a CSD, whereas Omnibus Accounts are  
9 linked to a CSD participant or to an external CSD;
- 10 | Issuance Account, i.e. the securities account linked to the CSD or to a CSD participant and reflecting the  
11 holdings of the participants of the issuer CSD for a given financial instrument. The issuer CSD can specify  
12 the issuance account for any given security when setting up its securities CSD links configuration for the  
13 same security (see section [Configuration of Securities CSD Links](#) [[▶ 80](#)]);
- 14 | T2S Technical Offset Account, i.e. a specific technical account linked to the CSD and foreseen for settle-  
15 ment in direct holding markets only.<sup>58</sup>

16 When opening a new securities account, the relevant CSD has to insert the following reference data:

- 17 | An alphanumeric user-defined identifier number (which should be unique within T2S);
- 18 | The type of account, as just specified;
- 19 | The opening date of the account;
- 20 | The hold/release default, i.e. the default setting for the hold/release status of Settlement Instructions  
21 related to the account (see section [Hold and Release](#) [[▶ 364](#)]);
- 22 | The information specifying whether the account can hold a negative position in a financial instrument;<sup>59</sup>
- 23 | The reference to the unique party (CSD or CSD participant) holding the account, based on a time-  
24 dependent relationship (see below);
- 25 | A setting specifying whether the account is used to post allocation instructions and for what types of in-  
26 structions (DVP/FOP or FOP only);
- 27 | A setting specifying the pricing scheme to be applied to the account (i.e. whether the account is charged  
28 by ISIN or by account)<sup>60</sup>.

29 Furthermore, the CSD can also specify the closing date of the account, if already known, as an optional pa-  
30 rameter.

---

57 Business validation of this data is provided in section [Business Validation](#) [[▶ 301](#)]

58 Information of usage of accounts during settlement is provided in chapter [Settlement](#) [[▶ 301](#)]

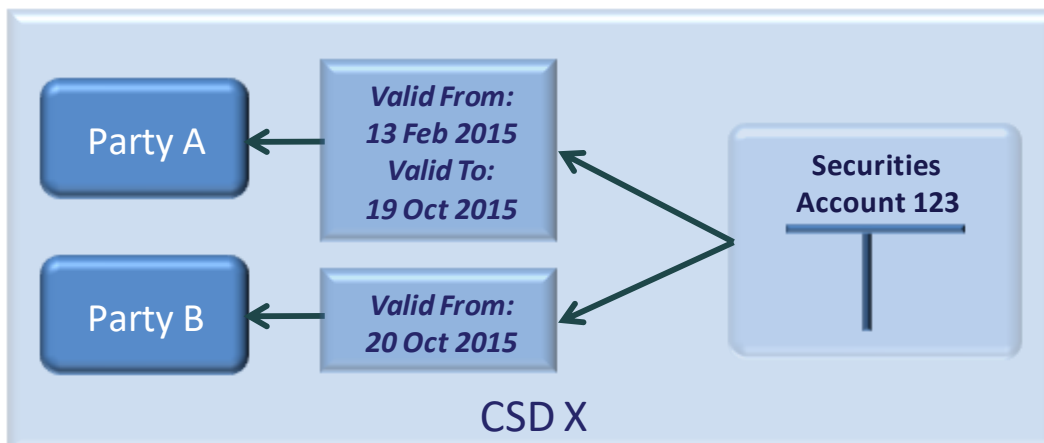

59 Information of usage of accounts during settlement is provided in chapter [Settlement](#) [[▶ 301](#)]

60 For more information see section [Billing data collection process](#) [[▶ 848](#)]

1 The relationship between a CSD participant and a securities account does not change in many markets, i.e.  
2 the CSD participant holds the account during its whole life cycle, from its opening date till its closing date.  
3 Conversely, in some other markets this relationship is time-dependent, meaning that the CSD participant is  
4 operating the account or acting as a sub-custodian on behalf of the actual entity (a legal entity, or even a  
5 physical person in a direct holding market) holding the account and not known in T2S. For this reason, in the  
6 general case, T2S provides the CSD with the possibility to define a time-dependent relationship between  
7 CSD participants and securities accounts; this time-based party-securities account relationship allows the  
8 CSD to transfer the relationship between two parties acting as account operators or sub-custodians under its  
9 responsibility. As long as a securities account exists in T2S, one and only one CSD participant must be linked  
10 to a securities account.

11 The following diagram represents two parties, A and B, participants of CSD X. In the example the securities  
12 account 123 is linked to party A with validity date 13 February. To define party B as new account operator  
13 starting from 20 October, the relevant CSD creates a new link, between Party B and the securities account,  
14 with validity date 20 October. The previously existing link, between Party A and the securities account, is  
15 automatically closed as of 19 October ensuring that the securities account, at any given point in time, is  
16 linked to a single party.

17 **EXAMPLE 46 - CSD PARTICIPANTS AND SECURITIES ACCOUNTS**

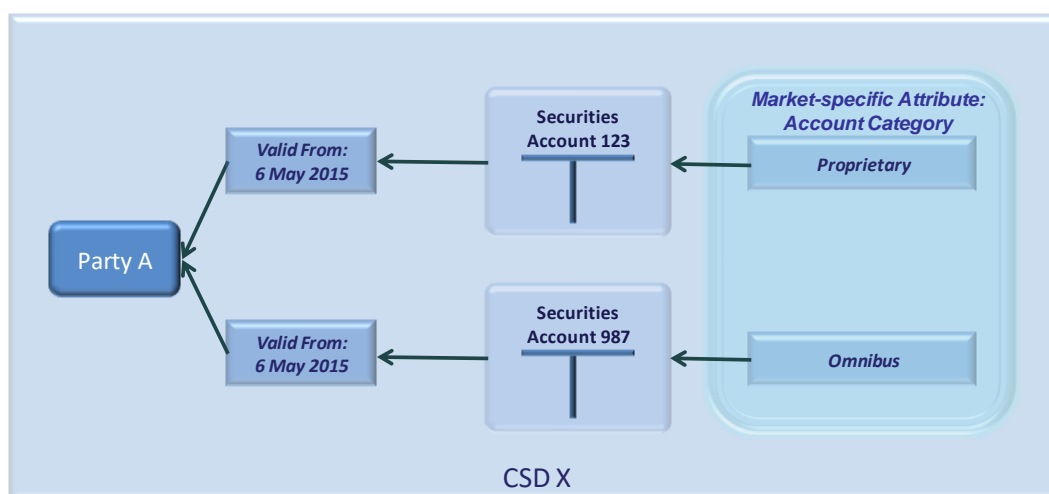

18  
19 Conversely, there is no limit on the number of securities accounts a single party may retain in T2S or even  
20 with a single CSD. For example, a custodian, acting in T2S as a CSD participant, may require to differentiate  
21 the securities positions it holds on its own behalf from those securities positions it holds on behalf of its cus-  
22 tomers (not known in T2S). This would result in the need to open two different securities accounts, one for  
23 the holdings of the custodian (usually known as "proprietary" account) and one for the holdings of its cus-  
24 tomers (a so-called "omnibus" account). Both accounts can be opened in the books of the same CSD and  
25 linked to the same CSD participant (i.e. the custodian in this case). T2S would not differentiate between  
26 these two accounts in any way, as it would not have any means to distinguish between proprietary and non-  
27 proprietary holdings. Nevertheless, from its perspective the custodian would be able to segregate its hold-  
28 ings in T2S according to its specific business needs.

29 In order to reflect the configuration of specific market structures, it is also possible for a CSD to define mar-  
30 ket-specific attributes for its securities accounts, e.g. in order to classify its securities accounts from a busi-  
31 ness perspective. In the following diagram, based on the previous example, a custodian known in T2S as

1 party A holds two securities accounts 123 and 987, both valid from the same opening date. Both accounts  
2 are opened in the books of the same CSD X. Since this particular CSD requires its participants to explicitly  
3 distinguish between their proprietary accounts and the accounts they use as omnibus accounts, it has de-  
4 fined a mandatory market-specific attribute (Account Category) to make this distinction.

5 In order to define these accounts, the CSD therefore also provides values for this additional mandatory at-  
6 tribute, i.e. either "Proprietary" or "Omnibus", allowing both the CSD and the custodian to distinguish be-  
7 tween the two different categories of securities accounts:

8 **EXAMPLE 47 - MARKET-SPECIFIC ATTRIBUTES FOR SECURITIES ACCOUNTS**

9

10 A specific case for using Market-Specific Attributes on Securities Accounts is represented by the possibility to  
11 flag a Securities Account as relevant for the Eurosystem Collateral Management System (ECMS). This is nec-  
12 essary in order to identify the Securities Accounts reported to ECMS either because they are owned by Euro  
13 NCBs or by Monetary Policy Eligible Counterparties and pledged to the NCB as well as to forward relocation  
14 instructions to the relevant ECMS participants in T2S.

15 Each CSD is responsible for setting up this MSA for their own community and configuring it for the relevant  
16 Securities Accounts. The MSA should be configured by all CSDs following the guidelines below:

- 17 | The Attribute domain name should be "ECMS MSA + System Entity Code".
- 18 | The Attribute domain should be configured as alphanumeric, upper case, with a fixed length of 11 char-  
19 | acters and no attribute value.
- 20 | The Market-Specific Attribute itself should be named 'ECMS MSA', with type 'Securities Account' and set  
21 | as non-unique and non-mandatory.

22 For all relevant Securities Accounts, the Market-Specific Attribute should be configured with the BIC of the  
23 relevant Party as Attribute Value to indicate the Party to be included for the receipt of outbound messages  
24 for relocation instructions.

25

## 1 1.2.6.6 Configuration of securities accounts for cross-CSD settlement and external CSD settlement

2 As previously outlined (See section [Configuration of Securities CSD Links](#) [▶ 80]), cross-CSD/external CSD  
3 settlement in T2S is based on the definition of security CSD links and eligible counterpart CSD entities. Once  
4 links are defined, cross-CSD/external-CSD settlement can take place after the relevant CSDs have set up the  
5 appropriate securities accounts configuration according to the appropriate business scenario. In the cross-  
6 CSD scenario, with both CSDs in T2S, this configuration is based on the two following types of securities  
7 accounts:

- 8 | Omnibus account. An omnibus account is a securities account the technical issuer CSD opens in its books  
9 for the investor CSD (as a CSD participant of the technical issuer CSD) and it holds the securities posi-  
10 tions owned by all the participants of the investor CSD for the relevant securities (i.e. the securities for  
11 which the two mentioned CSDs are in an investor – technical issuer relationship).
- 12 | Mirror account. A mirror account is a securities account the investor CSD opens in its books for itself.  
13 The CSD mirror account reflects the securities positions an Investor CSD holds in an omnibus account in  
14 its technical Issuer CSD. The positions in credit on an omnibus account normally equal the positions in  
15 debit on the corresponding mirror account and vice versa (an exception can take place in case of exter-  
16 nal CSD settlement, as explained hereunder). Each omnibus account is always linked to one and only  
17 one mirror account.

18 The following diagram shows an example of securities accounts configuration for this first scenario:

19 **EXAMPLE 48 - SECURITIES ACCOUNT CONFIGURATION FOR CROSS-CSD SETTLEMENT**

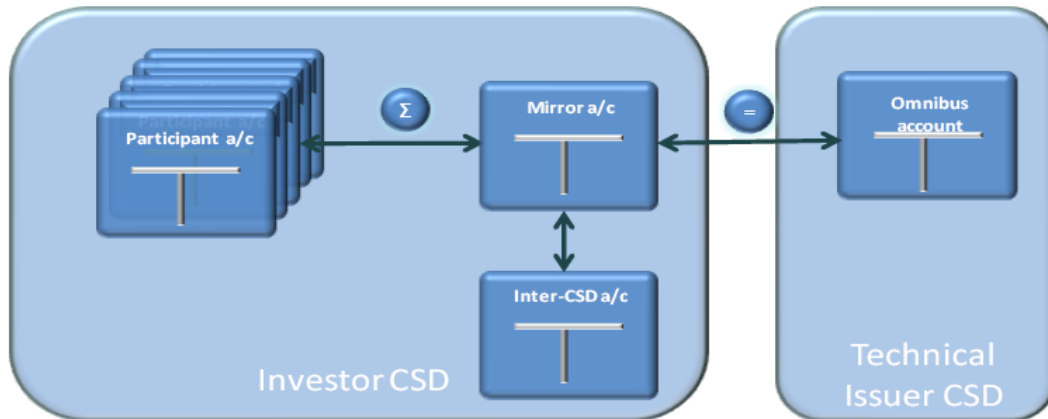

20

21 In the second scenario (external-CSD settlement), when the issuer CSD is not in T2S, i.e. it is an external  
22 CSD, the positions in credit/debit on an omnibus account do not always equal the positions in debit/credit on  
23 the corresponding mirror account. In fact, an exception occurs when securities positions are underway of  
24 transfer from T2S to this external CSD or vice versa. In this case, the investor CSD needs to use a third type  
25 of securities account, the Inter-CSD account.

26 An inter-CSD account is a securities account the investor CSD opens in its book for itself and reflecting the  
27 differences in positions between an omnibus account and its corresponding mirror account. The securities  
28 positions of an inter-CSD account equal zero, unless securities positions are underway of transfer from T2S  
29 to an external CSD or vice versa. In this case, if the securities positions on the inter-CSD account are in  
30 credit, then the same securities positions should be transferred from T2S to the external CSD. Vice versa, if  
31 the securities positions on the inter-CSD account are in debit, then the same securities positions should be  
32 transferred from the external CSD to T2S. When these transfers are executed, the CSD instructs T2S with a  
33 FOP instruction to transfer the securities positions on the inter-CSD account to the mirror account (see sec-

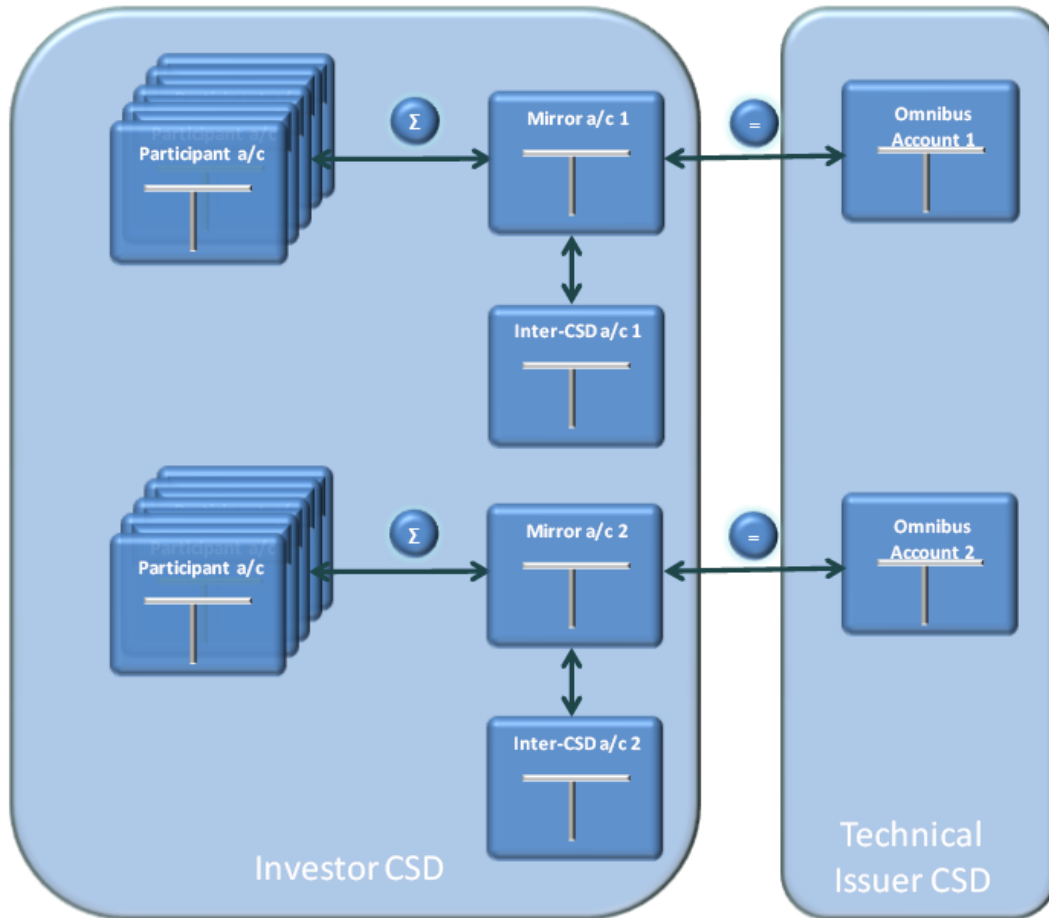

1 tion [Realignment process](#) [▶ 453] - Scenario external-CSD settlement). At the same time, the securities posi-  
2 tions on the omnibus account equal the securities positions on the corresponding mirror account. Each inter-  
3 CSD account is always linked to one and only one mirror account. The following diagram shows an example  
4 of securities accounts configuration including an inter-CSD account.

5 **DIAGRAM 12 - EXTERNAL-CSD SETTLEMENT CONFIGURATION WITH ONE OMNIBUS ACCOUNT**

6  
7 In order for external CSD settlement to take place in T2S, each investor CSD needs at least one omnibus  
8 account in the books of its technical issuer CSD and an equal number of mirror accounts and inter-CSD ac-  
9 counts (used for external CSD settlement with external issuer CSDs only) in its own books. The simplest  
10 scenario is based on the use of one omnibus account. In this case, the technical issuer CSD opens in its  
11 books a single omnibus account for the investor CSD (as a CSD participant of the technical issuer CSD) and,  
12 at the same time, the investor CSD opens in its own books one mirror account and one inter-CSD account  
13 (As shown in Diagram 11 – External-CSD settlement configuration with one omnibus account). In a more  
14 complex scenario, an investor CSD may opt for segregating the holdings of its participants within the tech-  
15 nical issuer CSD. In this case, the technical issuer CSD opens in its books several omnibus accounts for the  
16 investor CSD and, at the same time, the investor CSD opens in its own books a mirror account and an inter-  
17 CSD account per each omnibus account within the technical investor CSD. In any case, each omnibus ac-  
18 count is linked to one mirror account and each mirror account is linked to one inter-CSD account as shown in  
19 the diagram below.

1

**DIAGRAM 13 - EXTERNAL CSD SETTLEMENT CONFIGURATION WITH MULTIPLE OMNIBUS ACCOUNTS**

2

3 Finally, it is worth mentioning that the configuration of links between participant accounts, mirror accounts  
4 and omnibus accounts is still possible when one of the involved CSDs is not in T2S. In this case, all the ac-  
5 counts opened in the books of the external CSD can still be referenced in the definition of these links, even  
6 though their validity must be ensured by the configuring CSD, as these accounts are not known in T2S.

#### 7 1.2.6.7 Links between securities accounts and T2S dedicated cash accounts

8 Securities accounts and T2S dedicated cash accounts may be linked in T2S for three reasons:

- 9 | To specify, for a given securities account, the T2S dedicated cash account(s) that can be used for the  
10 settlement of the cash leg of the Settlement Instructions related to the given securities account;
- 11 | To specify, for a given T2S dedicated cash account, the securities account(s) holding positions ear-  
12 marked as collateral that can be used for auto-collateralisation operations.
- 13 | To specify, for a given T2S dedicated cash account, the securities account for receiving collateral from  
14 clients of the payment/settlement bank in collateralisation operations.

15 In all cases, a securities account is always linked to a T2S dedicated cash account via a Credit Memorandum  
16 Balance (CMB). A Credit Memorandum Balance is a tool T2S uses to track the provision of credit from CBs to  
17 payment banks (for central bank collateralisation) and from payment banks to their clients.

1 A CB may authorise its payment banks for central bank collateralisation and a payment bank may authorise  
 2 one or more of its clients to use the payment bank’s T2S dedicated cash account for the settlement of their  
 3 instructions. Each authorisation results in the creation of a new CMB for the given T2S dedicated cash ac-  
 4 count and in the assignment to the new CMB of a BIC (or set of BICs) of the payment bank or client legal  
 5 entity, which may correspond to multiple parties in T2S, authorised to use the T2S dedicated cash account.  
 6 The assigned BIC (or set of BICs) must not overlap with any other BIC (or set of BICs) defined for the same  
 7 T2S dedicated cash account in order to guarantee the uniqueness of the link between the T2S dedicated  
 8 cash account and the securities account of the payment bank or payment bank’s client. Each T2S dedicated  
 9 cash account is linked to one CMB related to the payment bank holding the T2S dedicated cash account and,  
 10 possibly, to one CMB for each client authorised to use payment bank’s T2S dedicated cash account for set-  
 11 tlement of the cash leg of its Settlement Instructions.

12 Furthermore:

- 13 | When configuring a T2S dedicated cash account for central bank collateralisation, the relevant CB must  
 14 specify an auto-collateralisation limit for this T2S dedicated cash account;
- 15 | When configuring a T2S dedicated cash account for client collateralisation, the relevant payment bank  
 16 must specify an external guarantee limit, an auto-collateralisation limit and an unsecured credit limit for  
 17 this T2S dedicated cash account (see section [Limit Management](#) [▶ 640]).

18 After a payment bank has authorised one of its clients to use a given T2S dedicated cash account, the rele-  
 19 vant CSD can link the securities account(s) of its CSD participant (i.e. the authorised client) to this T2S dedi-  
 20 cated cash account, either for settlement of the cash leg of the Settlement Instructions on its securities ac-  
 21 counts, or for auto-collateralisation purpose or both. The CSD can set up this link only if the party code, i.e.  
 22 the BIC, of the CSD participant matches the BIC (or one of the BICs) that the authorising payment bank  
 23 previously specified for the CMB.

24 The following table and the diagram below describe all the steps needed for the setup of all the relevant  
 25 links between T2S Dedicated Cash Accounts of a CB and the Securities Accounts of the same CB (defined as  
 26 a CSD Participant of a given CSD). As specified in the table, some of the steps only occur depending on the  
 27 auto-collateralisation procedure chosen by the relevant Central Bank.

28  
29

**TABLE 16 - CENTRAL BANK CONFIGURATION**

STEP	T2S ACTOR	ACTION	NOTE	MODE
1	CB	Creation of a new T2S Central Bank Account.		A2A/U2A
2	CB	Setting the T2S Central Bank Account as usable for providing intraday credit for auto-collateralisation purpose.	This action results in the creation of a Credit Memorandum Balance, which is linked to one or more BICs defined by the Central Bank.	U2A
3	CSD	Creation of a new CSD Participant for the Central Bank.	The BIC of the new CSD Participant matches with the BICs linked to the Credit	A2A/U2A

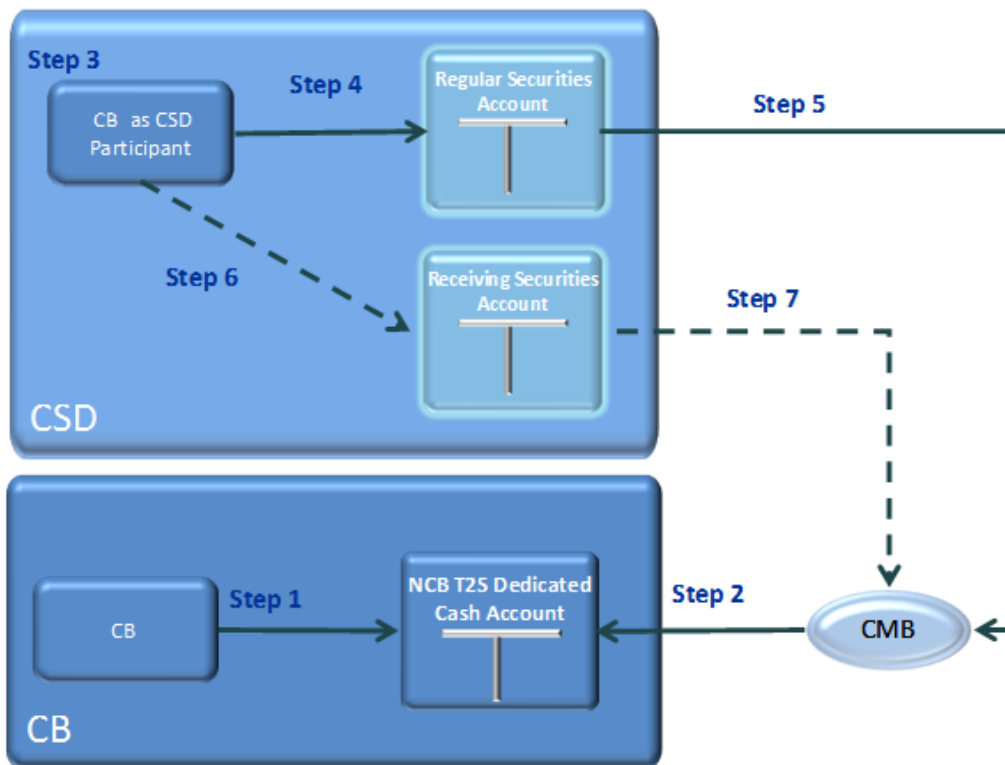

STEP	T2S ACTOR	ACTION	NOTE	MODE
			Memorandum Balance created as a result of step 2.	
4	CSD	Creation of a new Securities Account to be used as regular securities account for the Central Bank collateralisation.	<p>This Securities Account is used for collateral relocation during the EoD phase according to the configuration of the Central Bank collateralisation <sup>61</sup>.</p> <p>Possibly, different Securities Accounts can be configured as regular Securities Account according to the Central Bank needs. However, only one regular securities account must be defined for a specific Credit Memorandum Balance of a Payment Bank.</p> <p>If this Securities Account is relevant for ECMS, a Market-Specific Attribute is to be configured on it (see sections 1.2.1.7 and 1.2.6.5 for details).</p>	A2A/U2A

61 See section [End of Day Cash Management](#) [ 654] for more information on collateral relocation.

STEP	T2S ACTOR	ACTION	NOTE	MODE
5	CSD	Linking the Securities Account for regular collateral to the Central Bank T2S Dedicated Cash Account for cash settlement purpose.	<p>This Securities Account must not be used for collateralisation purpose.</p> <p>This link is required for the settlement of relocation instructions.</p>	A2A/U2A
6	CSD	Creation of a new Securities Account to be used as receiving securities account for the Central Bank collateralisation.	<p>This is the Securities Account where the selected collateral has to be stored in case of intra-day credit provision. It is used to configure the Central bank collateralisation. Possibly, different Securities Accounts can be configured as receiving Securities Account according to the Central Bank needs. However, only one receiving securities account must be defined for a specific Credit Memorandum Balance of a Payment Bank.</p> <p>This step is needed for Repo countries only, i.e. if the type of collateralisation procedure specified in the Auto-Collateralisation Rule for the Central Bank is "Repo" (see section <a href="#">Auto-collateralisation eligibility, securities valuation and close links</a> [ 83]).</p>	A2A/U2A
7	CSD	Linking the Securities Account for receiving collateral to the Central Bank T2S Dedicated Cash Account for cash settlement purpose.	<p>This Securities Account must not be used for collateralisation purpose.</p> <p>This link is required for the settlement of auto-collateralisation and reverse auto-collateralisation instructions.</p> <p>This step is needed for Repo countries only.</p>	A2A/U2A

**DIAGRAM 14 - CENTRAL BANK CONFIGURATION**

2

3 The following table and the diagram below describe all the steps needed for setup of all the relevant links  
 4 between T2S Dedicated Cash Accounts of a Payment Bank and the Securities Accounts of the same Payment  
 5 Bank (defined as a CSD Participant of a given CSD). As specified in the table, some of the steps only occur  
 6 depending on the auto-collateralisation procedure chosen by the relevant Central Bank.

**TABLE 17 - CONFIGURATION FOR CENTRAL BANK COLLATERALISATION**

7

STEP	T2S ACTOR	ACTION	NOTE	MODE
1	CB	Creation of a new Payment Bank.		A2A/U2A
2	CB	Creation of a new T2S Dedicated Cash Account for the Payment Bank.		A2A/U2A
3	CB	Linking the T2S Dedicated Cash Account of the Payment Bank: <ul style="list-style-type: none"> <li>  to the T2S Central Bank Account which provides intraday credit</li> <li>  to the Securities Account to be used as regular securities account for the Central Bank collateralisation</li> <li>  to the Securities Account to be used as</li> </ul>	This action results in the creation of a Credit Memorandum Balance, which is linked to one or more BICs of the Payment Bank and to the specified T2S Dedicated Cash Account and Securities Accounts.  A link to Securities Account for receiving collateral is needed for Repo countries only, i.e. if the type of collateralisation procedure	U2A

STEP	T2S ACTOR	ACTION	NOTE	MODE
		receiving Securities Account for the Central Bank collateralisation.	specified in the Auto-Collateralisation Rule for the Central Bank is "Repo" (see section <a href="#">Auto-collateralisation eligibility, securities valuation and close links</a> [ 83]).	
4	CSD	Creation of a new CSD Participant for the Payment Bank.	The BIC of the new CSD Participant matches the BICs linked to the Credit Memorandum Balance created as a result of step 3.	A2A/U2A
5	CSD	Creation of a new Securities Account for the Payment Bank to be used as receiving securities account for the Central Bank collateralisation.	This step is needed for Pledge countries only.	A2A/U2A
6	CSD	Linking the Securities Account for receiving collateral to a T2S Dedicated Cash Account (possibly belonging to the Payment Bank) for collateralisation purpose.	This step is needed for Pledge countries only.	A2A/U2A
7	CB	Linking the T2S Dedicated Cash Account of the Payment Bank to the Securities Account for receiving collateral.	This step is needed for Pledge countries only.	U2A
8	CSD	Creation of a new Securities Account for the Payment Bank.	This Securities Account must be linked to a T2S Dedicated Cash Account for the settlement of the cash leg of the relevant Settlement Instructions.	A2A/U2A
9	CSD	Linking the Securities Account of the Payment Bank to the T2S Dedicated Cash Account of the Payment Bank for cash settlement purpose and/or for collateralisation purpose.	When defining the link between the Securities Account and the T2S Dedicated Cash Account for settlement purpose, the CSD must specify whether such link must be used as default value in the context of Settlement Instruction validation (See section <a href="#">Validation process</a> [ 302]). When a Securities Account is linked to one or more than one T2S Dedicated Cash Account in a given settlement currency, it must have a unique default T2S Dedicated Cash Account for the same settlement currency.	A2A/U2A
10	CB	Creation of the auto-collateralisation limit for the T2S Dedicated Cash Account.		U2A

3

**DIAGRAM 16 - CONFIGURATION FOR CENTRAL BANK COLLATERALISATION (PLEDGE COUNTRIES)**

4

1 The following table and the diagram below describe all the steps needed for setup of all the relevant links  
 2 between T2S Dedicated Cash Accounts of a Payment Bank providing client collateralisation services and the  
 3 Securities Accounts of one of its clients (defined as a CSD Participant of a given CSD).

**TABLE 18 - CONFIGURATION FOR CLIENT COLLATERALISATION**

STEP	T2S ACTOR	ACTION	NOTE	MODE
1	CSD	Creation of a new CSD Participant for the client.		A2A/U2A
2	Payment Bank	Authorising the client for collateralisation, linking the T2S Dedicated Cash Account of the Payment Bank to the Securities Account for receiving collateral.	This action results in the creation of an additional Credit Memorandum Balance for the relevant T2S Dedicated Cash Account, which is linked to one or more BICs of the client and to the specified Securities Account.  The receiving Securities Account must be one of the Securities Accounts of the Payment Bank (defined as a CSD Participant) already linked to the T2S Dedicated Cash Account (as described in step 9 of the previous table) and it is used to store the collateral in case of intraday credit provision.	U2A
3	Payment Bank	Creation and set-up of the external guarantee, auto-collateralisation and unsecured credit limits.		U2A
4	CSD	Creation of a new Securities Account for the client.		A2A/U2A
5	CSD	Linking the Securities Account to the T2S Dedicated Cash Account of the Payment Bank for cash settlement purpose and/or for collateralisation purpose.		A2A/U2A

1

**DIAGRAM 17 - CONFIGURATION FOR CLIENT COLLATERALISATION**

2

3 The rest of this section presents two examples of configuration of links between securities accounts and T2S  
 4 dedicated cash accounts for auto-collateralisation purpose, with a CB and with a payment bank respectively.

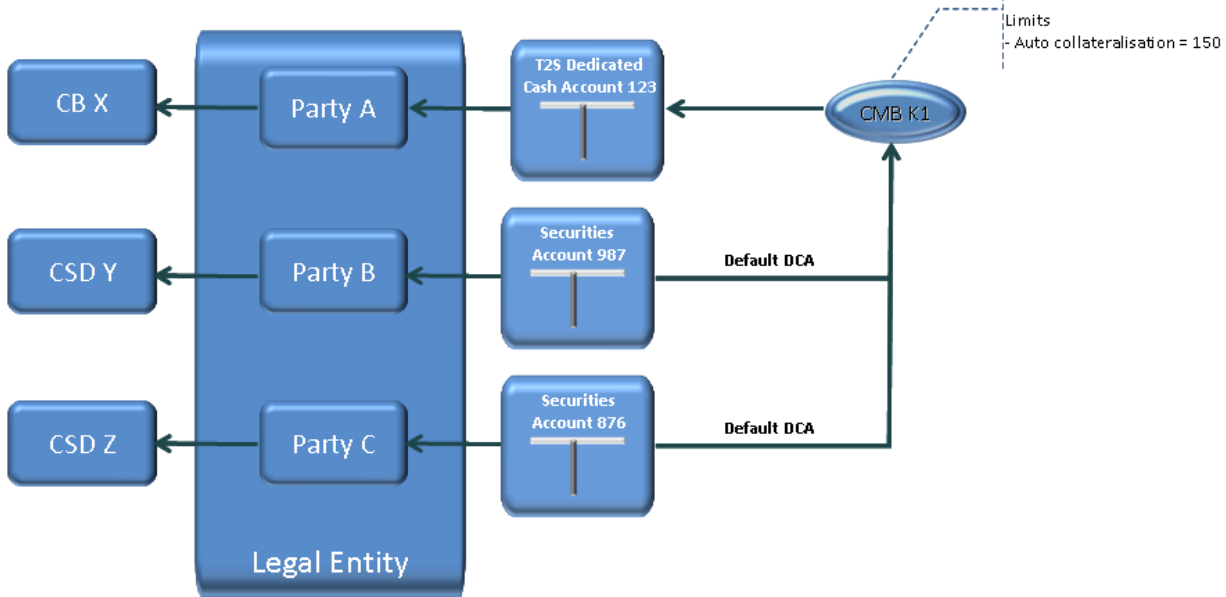

5 **1.2.6.7.1 Auto-collateralisation via CB**

6 In this example, one legal entity is defined as three separate parties in T2S: a payment bank under CB X  
 7 (Party A) and a CSD participant under two different CSDs (Party B and Party C). Once CB X opens the T2S  
 8 dedicated cash account 123 for Party A and links it to the relevant Central Bank T2S Dedicated Cash Account  
 9 and Securities Accounts for regular collateral and for receiving collateral (steps 2 and 3 of Table 16 - [Central  
 10 Bank Configuration](#) [▶ 105] and relevant diagram), T2S creates CMB K1, which authorises the legal entity,  
 11 acting as a participant of CSDs Y and Z, to select this T2S dedicated cash account as default for the settle-  
 12 ment of the cash leg of all Settlement Instructions on its respective securities accounts 987 and 876 with the  
 13 two CSDs by linking each of the securities account to the CMB K1. Finally, CB X has to create a limit for au-  
 14 to-collateralisation for the T2S dedicated cash account (in this case set to 150).

1

**EXAMPLE 49 - CMB CONFIGURATION FOR CB AUTO-COLLATERALISATION**

2

**1.2.6.7.2 Auto-collateralisation via settlement bank**

4 In this example, there are two legal entities, ABC and DEF, defined as payment banks XA and YB under CB X and CB Y respectively. Firstly, CB X opens T2S dedicated cash accounts 123 for its payment bank XA and CB Y opens T2S dedicated cash account 234 for its payment bank YB (step 2 of Table 16 - [Central Bank Configuration](#) [▶ 105] and relevant diagram). Then CB X and CB Y link the new T2S Dedicated Cash Accounts to the relevant T2S Central Bank Account and Securities Accounts for regular collateral and for receiving collateral (steps 3 of Table 16 - [Central Bank Configuration](#) [▶ 105] and relevant diagram). This step results in T2S creating the respective CMBs K1 and K2 for CB collateralisation, with CB X setting the relevant limit to 400 and CB Y setting it to 250.

12

**EXAMPLE 50 - CMB CONFIGURATION FOR CLIENT COLLATERALISATION (A)**

13

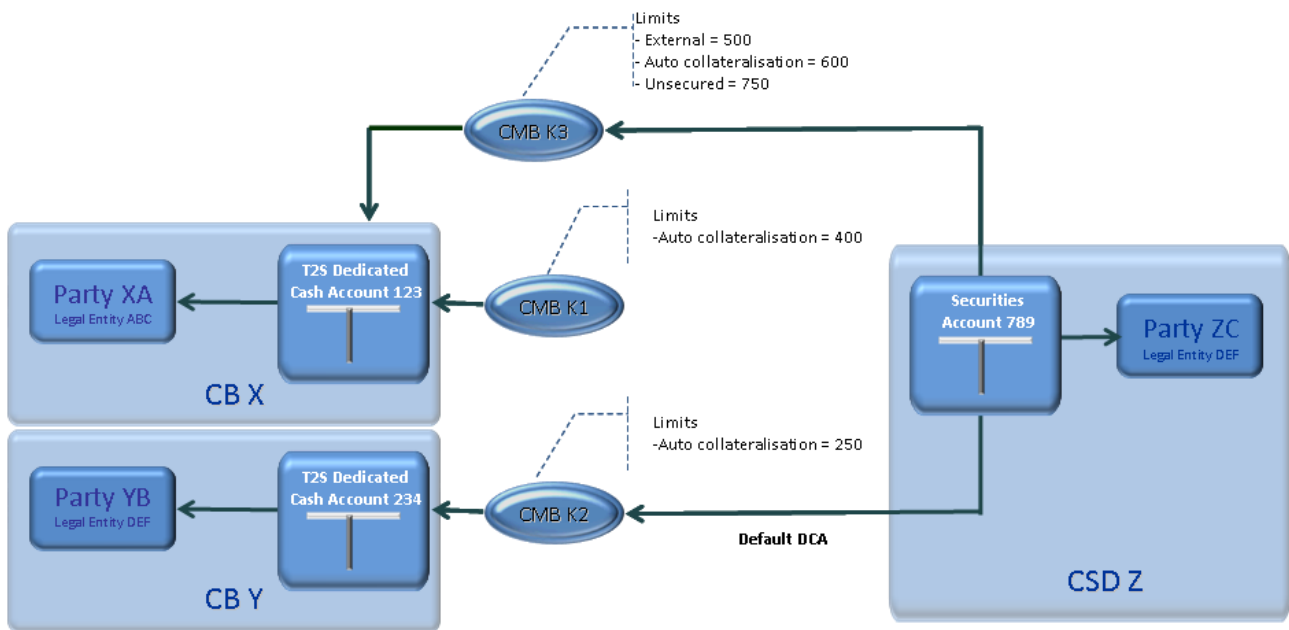

14 The legal entity DEF is also defined as a CSD participant under CSD Z, as Party ZC. Party XA (payment bank operating under CB X) authorizes Party ZC (CSD participant operating under CSD Z) to use its T2S dedicated cash account for the settlement of the cash legs of its Settlement Instructions on this T2S dedicated cash

1 account (step 2 of Table 18 - [Configuration for Client Collateralisation](#) [▶ 111] and relevant diagram). As a  
 2 result, T2S creates CMB K3 to authorise Party ZC and requires Party XA (step 3 of Table 18 - [Configuration](#)  
 3 [for Client Collateralisation](#) [▶ 111] and relevant diagram) to set three limits for client collateralisation (500,  
 4 600 and 750).

5 Since parties YB and ZC are in fact the same legal entity, Party ZC is also authorised to use Party YB's T2S  
 6 dedicated cash account 234 for settlement as soon as the relevant CSD links Party ZC's securities account  
 7 789 to the T2S dedicated cash account 234 via the already existing CMB K2. Party ZC can therefore select  
 8 both T2S dedicated cash accounts, 123 and 234, for settlement on its securities account, indicating party  
 9 YB's as the default one (step 5 of Table 18 - [Configuration for Client Collateralisation](#) [▶ 111] and relevant  
 10 diagram).

11 The difference between these two links is that CMB K3 applies to securities account 789 of Party ZC for cli-  
 12 ent collateralisation, whereas CMB K2 is used for CB collateralisation granted to payment bank YB by its  
 13 central bank on T2S dedicated cash account 234.

**EXAMPLE 51 - CMB CONFIGURATION FOR CLIENT COLLATERALISATION (B)**

15

**1.2.7 Reference data for penalties**

17 T2S provides a settlement penalty calculation mechanism, which is described in detail in section 1.6.1.14.  
 18 CSDs opting to make use of this mechanism are able to set up additional Reference Data linked to the Secu-  
 19 rities they are responsible for. Within T2S Reference Data, a CSD may define

- 20 | The list of financial instruments subject to cash penalties, among the Securities the CSD is responsible  
 21 | for (Securities Subject to Cash Penalties);
- 22 | For each Security subject to cash penalties, the daily price to be used for the calculation of the penalty.

23 If the price for a Security is not provided, T2S will consider the latest available one (i.e. the latest one loaded  
 24 in CRDM Data) within the validity period of the relevant Securities Subject to Cash Penalties. If a Securities

1 Subject to Cash Penalties instance is closed and another one is opened for the same ISIN, new Daily Price  
2 data must be provided.

3 T2S associates a specific financial instrument type to each Security Subject to Cash Penalties based on the  
4 Security's CFI code. For Securities defined as shares, when defining the list of Securities Subject to Cash  
5 Penalties, CSDs may also specify whether they are to be considered liquid or illiquid assets. The possible  
6 financial instrument types and the corresponding CFI code patterns are listed in the table below.

7 **TABLE 19 - FINANCIAL INSTRUMENT TYPES**

CFI Code Structure	Type of Financial Instrument
Position 1 of the code is "E"	SHRS
Position 1 of the code is "D" and position 4 is "T" or "C", or position 2 is "N"	SOVR
Position 1 of the code is "D", position 2 is neither "Y" or "N" and Position 4 is neither "T" nor "C"	DEBT
Position 1 of the code is "R"	SECU
Position 1 of the code is "C" and position 2 is "E"	ETFS
Position 1 of the code is "C" and position 2 is not "E"	UCIT
Position 1 of the code is "D", position 2 is "Y" and position 4 is neither "T" nor "C"	MMKT
Position 1 is "T", position 2 is "T" and position 3 is "N"	EMAL
Residual category	OTHR

9 Based on the combination of the financial instrument's type, liquidity, and whether it is traded in a SME  
10 Growth Market, it is possible to determine the instrument's asset type, each of which is assigned to a specific  
11 daily penalty rate.

12 **TABLE 20 - POSSIBLE COMBINATIONS AND ASSET TYPES**

Financial Instrument Type	Liquid/Illiquid	SME Growth Market	Asset Tpe
SHRS	Liquid	Not traded	Liquid Shares
SHRS	Illiquid	Not traded	Illiquid Shares
SHRS	Liquid or illiquid	Traded	SME Growth Market (non-Bonds)
SECU, ETFS, UCIT, EMAL, or OTHR	Not applicable	Traded	
DEBT, or MMKT	Not applicable	Not traded	Corporate Bonds

Financial Instrument Type	Liquid/Illiquid	SME Growth Market	Asset Type
DEBT, or MMKT	Not applicable	Traded	SME Growth Market Bonds
SOVR	Not applicable	Traded or Not traded	Government and Municipal Bonds
SECU, ETFS, UCIT, EMAL, or OTHR	Not applicable	Not traded	Other financial instruments
Not applicable	Not applicable	Not applicable	Cash

1 The T2S Operator is responsible for maintaining the list of cash and securities penalty rates for each currency and asset type respectively, as well as the list of BICs of CCPs to be identified as such in Penalty Reports  
2 and a list of Market Identifier Codes (MIC) corresponding to trading venues identified as belonging to the  
3 SME Growth Market segment. In addition, the T2S Operator maintains the list of CSDs opting for penalty  
4 computation in non-euro settlement currencies for FOP transactions. Finally, the ECB is responsible for main-  
5 taining the list of Foreign Exchange reference rates for all relevant currencies against the euro <sup>62</sup>. This data  
6 serves as the basic configuration along with the Securities data and the prices input by the CSDs, through  
7 which the penalty calculation takes place.  
8

## 9 1.3 Access to T2S

### 10 1.3.1 Connectivity (A2A/U2A)

#### 11 1.3.1.1 Introduction

12 The purpose of this section is to introduce the basic connectivity to T2S. It does not aim to describe in de-  
13 tails the technical connection with T2S.

#### 14 1.3.1.2 Modes of connectivity

15 T2S supports the connectivity of T2S Actors as follows:

- 16 | Communication between software applications via XML messages or files and for the specific non-  
17 standard case of securities valuation or specific reports via flat files (A2A mode);
- 18 | Online screen-based activities performed by T2S Actors (U2A mode).

---

62 The ECB loads the list of Foreign Exchange rates using the Data Migration Tool (DMT) channel. Foreign Exchange Rates are specifically configured per business date, and in the absence of a Foreign Exchange Rate for a given business date, penalties for that business date requiring conversion for that currency will not be calculated.

1

**DIAGRAM 18 - MODES OF CONNECTIVITY**

2

3 For the A2A communication, ISO 20022:2013 is the single standard, concerning both inbound and outbound  
4 communication. Using this standard, the T2S Interface complies with Giovannini protocol recommendations  
5 <sup>63</sup>.

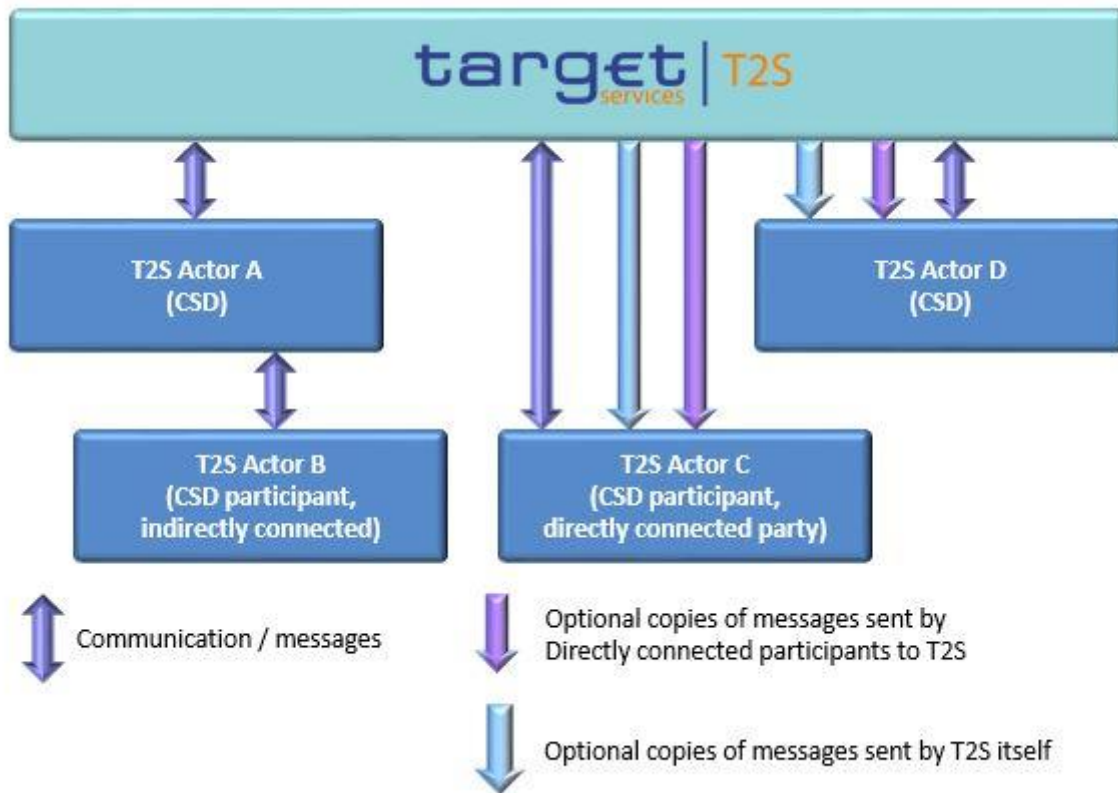

6 All messages exchanged between T2S and T2S Actors are based on XML technology and comply with the  
7 ISO 20022:2013 standards on messages and the formats and specifications defined in T2S. They can be  
8 sent to T2S either individually or in a file containing one or several messages. However, the upload of securi-  
9 ties valuations is handled via flat files. Additionally CSDs may decide to receive some specific reports via flat  
10 file instead of XML, while ECMS necessarily receives all its reports in flat file format.

### 11 1.3.1.3 Participation in and access to T2S

12 For a T2S Actor, interaction with T2S can be "direct" or "indirect", i.e. in the latter case T2S Actors do not  
13 connect directly to T2S but send their messages to the respective CSD or CB which is then responsible for  
14 managing the connection with T2S, building the valid ISO20022 messages and sending them to T2S. Mes-  
15 sages can be sent to the respective CSD or CB for forwarding to T2S only if the CSD or CB is offering con-  
16 nectivity for indirectly connected participants. It is possible for a directly connected participant to access T2S  
17 through GUI only. A participant using the GUI for direct connectivity but using A2A indirectly is also a directly  
18 connected participant. CSDs, along with CBs do not have the option of indirect connectivity to T2S. Inde-  
19 pendent from the connectivity mode, each CSD retains the business and legal relationship with its partici-  
20 pants. Moreover, the direct connectivity mode is foreseen for CSD's clients who are duly authorised by the  
21 respective CSD - if such a connection is allowed under the general terms and conditions of the respective  
22 CSD. The same rule applies for CBs and its Payment Banks. Furthermore, the relevant CSD or CB has to  
23 ensure that the directly connected T2S Actor fulfils all relevant conditions for participation in T2S. For any  
24 services that go beyond the scope of T2S, the directly connected participants connect to the relevant CSD or  
25 CB.

63 The Giovannini recommendations, published in March 2006, are an agreed set of EU-wide data standards and technology recommendations aimed at creating an environment where all industry participants can interoperate, eliminating some of the complexity and cost of cross-border clearing and settlement.

1

**DIAGRAM 19 - PARTICIPATION IN AND ACCESS TO T2S FOR CSDs AND CSD PARTICIPANTS**

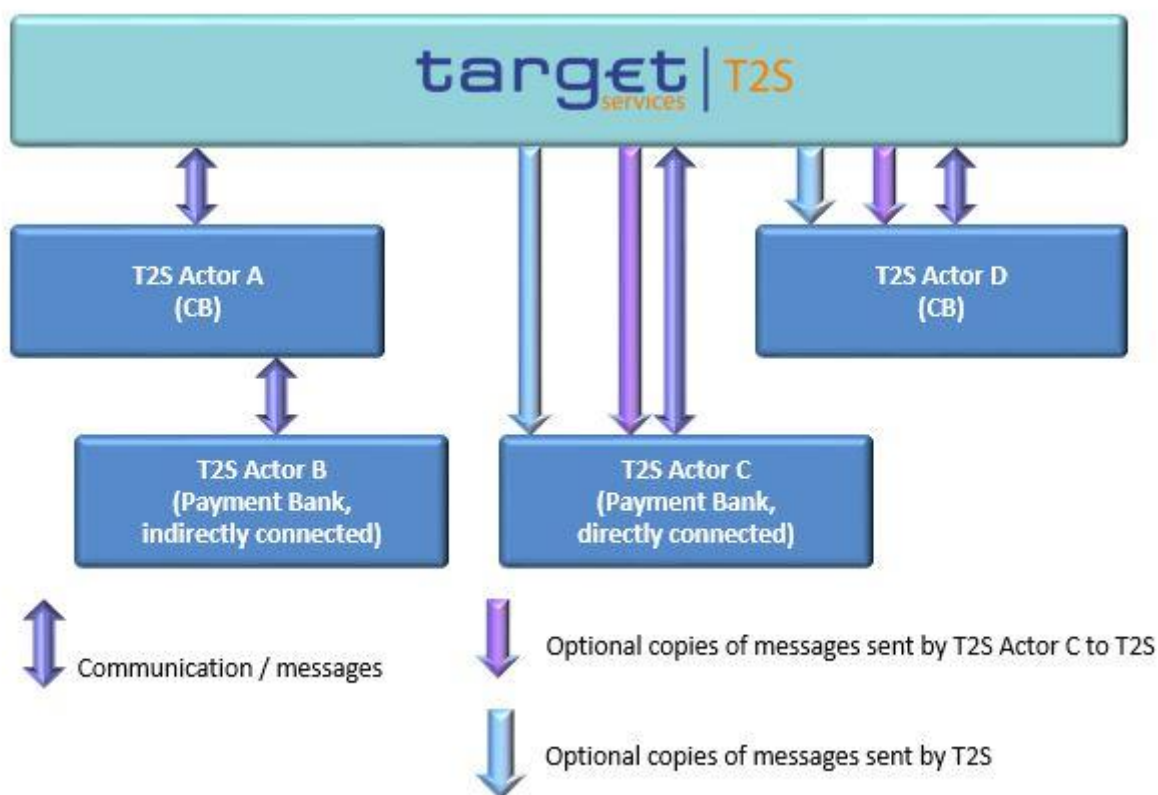

2

3 In the diagram above:

4 | "T2S Actor A" and "T2S Actor D" are CSDs with direct connectivity to T2S;

5 | "T2S Actor A" provides indirect access to T2S for "T2S Actor B" and offers additional services outside the  
6 scope of T2S. Therefore, "T2S Actor B" is an indirectly connected participant in T2S;7 | In contrast, "T2S Actor C" is a directly connected participant in T2S with the ability to send messages  
8 directly to T2S;9 | The CSD, i.e. "T2S Actor D", can subscribe for itself and "T2S Actor C" (one of its directly connected par-  
10 ticipants) for receiving copies of incoming and outgoing messages. These copies are created by T2S and  
11 sent to the T2S Actor on optional basis. The diagram above has to be read with regards to the list of  
12 messages described in Table 82 - [Messages subject to copies](#) [▶ 205].

1

**DIAGRAM 20 - PARTICIPATION IN AND ACCESS TO T2S FOR CBs AND PAYMENT BANKS**

2

3 In the diagram above:

- 4 | "T2S Actor A" and "T2S Actor D" are CBs with direct connectivity to T2S;
- 5 | "T2S Actor A" provides indirect access to T2S for "T2S Actor B" and offers additional services outside the scope of T2S. Therefore, "T2S Actor B" is an indirectly connected Payment Bank in T2S;
- 6
- 7 | In contrast, "T2S Actor C" is a directly connected Payment Bank in T2S with the ability to send messages directly to T2S. A directly connected party also has the possibility to communicate via U2A only.
- 8
- 9 | The CB, i.e. "T2S Actor D", can subscribe for itself and "T2S Actor C" (one of its directly connected participants) for receiving copies of incoming and outgoing messages. These copies are created by T2S and sent to the T2S Actor on optional basis. The diagram above has to be read with regards to the list of
- 10
- 11
- 12
- 12 | messages described in Table 82 - [Messages subject to copies](#) [▶ 205].

#### 13 1.3.1.4 Technical connectivity and connectivity services providers

14 T2S does neither provide technical connectivity nor network services<sup>64</sup> to T2S Actors. T2S Actors directly  
15 connected to T2S use a licensed network provided by an accredited connectivity services provider. T2S only  
16 defines the technical and operational requirements for the connectivity services providers.

17 Detailed information as to the usage of network services is provided in the "T2S Connectivity Guide".

64 A network service is defined in this context as a messaging service used to exchange business data between T2S Actors and T2S.

1 1.3.1.5 Common rules for messages and files addressing

2 This section describes the configuration of routing for messages and files.

3 In A2A mode, T2S Actors and T2S can exchange messages and files by means of two types of transfer ser-  
4 vices:

- 5 | The real-time message and file transfer, which requires that both parties, i.e. the sender and the receiv-  
6 er, are available at the same time to exchange the relevant data. In case of unavailability of the receiver,  
7 no retry mechanism is foreseen. For real-time transfers, T2S exchanges messages and files in push  
8 mode only <sup>65</sup>;
- 9 | The store-and-forward message and file transfer, which enables the sender to transmit messages or files  
10 even when the receiver is not available. In case of temporary unavailability of the receiver, the connec-  
11 tivity services provider stores messages and files and delivers them as soon as the receiver becomes  
12 available again.

13 The following table shows how the main types of T2S business data exchanges are mapped against the  
14 technical features of the different network services for inbound and outbound communication.

15 **TABLE 21 - T2S BUSINESS DATA EXCHANGES AND NETWORK SERVICE FEATURES**  
16

T2S BUSINESS DATA EXCHANGES	INBOUND COMMUNICATION	OUTBOUND COMMUNICATION
Settlement-related messages	Message-based, store-n-forward	Message-based, store-n-forward
Static data updates	File-based, store-n-forward	File-based, store-n-forward
Queries / Reports (pull)	Message-based, real-time	Message-based, real-time
	File-based, real-time	File-based, real-time
		Message-based, store-n-forward
		File-based, store-n-forward
Reports (push)	n/a	Message-based, store-n-forward
		File-based, store-n-forward <sup>66</sup>

17 This table shows that, as far as the inbound communication is concerned, T2S Actors can submit:

- 18 | All settlement-related messages (i.e. Settlement Instructions, Settlement Restrictions, maintenance in-  
19 structions, liquidity transfers) and static data updates either using a message-based network service or  
20 via a file-based network service. In both cases, the transfer service is store-n-forward;
- 21 | All queries and pull reports either using a message-based network service or via a file-based network  
22 service. In both cases, the transfer service is real-time;

65 The push mode refers to the originator of a message or file pushing it to the final receiver.

66 Real-time services are used for pull reports only, whereas store-n-forward services can be used for all reports.

1 The setup of network services each T2S Actor uses for inbound communication does not require any config-  
2 uration step in T2S and it has just to comply with the specifications provided in the table above;

3 As to the outbound communication, the same table shows that T2S sends:

- 4 | All outgoing settlement-related messages (i.e. status advices, notifications, advices) and responses relat-  
5 ed to static data updates using either a message-based or a file-based network service. In both cases,  
6 the transfer service is store-n-forward;
- 7 | All query responses and pull reports either using a message-based network service or via a file-based  
8 network service. In both cases, the transfer service is real-time. An exception takes place for responses  
9 exceeding a pre-defined size or time limit; in this case T2S sends these responses using either a mes-  
10 sage-based network service or a file-based network service (see section [Limitations of the system](#)  
11 [[▶ 898](#)]). In both cases, the transfer service is store-n-forward <sup>67</sup>;
- 12 | All push reports either using a message-based network service or a file-based network service. In both  
13 cases, the transfer service is store-n-forward.

14 The setup of network services T2S uses for outbound communication requires the relevant T2S Actor to  
15 define routing configurations in the T2S static data and it has to comply as well with the specifications pro-  
16 vided in the table above.

17 Routing configurations specify the technical elements T2S uses to send a given outgoing message to the  
18 relevant T2S Actor, but they do not specify the actual set of messages T2S has to send to this T2S Actor.  
19 The business elements T2S uses to identify which outgoing messages have to be sent to a given T2S Actor  
20 can be configured via message subscription (see section [Message subscription](#) [[▶ 203](#)]).

21 The rest of this section describes how to setup routing configurations for outbound communication in T2S.

#### 22 Setup of routing configurations

23 ~~The setup of routing configurations includes the configuration of the following Static Data ob-  
24 jects in T2S: network services, party technical addresses, links between network services and  
25 party technical addresses, and default and conditional routings.~~

26 ~~The T2S Operator is responsible for setting up and maintaining network service static data re-  
27 lated to services of all the connectivity services providers offering technical connectivity be-  
28 tween T2S Actors and T2S.~~

29 ~~Being included in the party static data, party technical addresses are setup and maintained, for  
30 each T2S Actor directly connected to T2S, by the party responsible for defining party static data  
31 for this T2S Actor (see section Setup of parties in T2S). After having input the party data (party  
32 technical addresses) for the directly connected T2S Actor, the responsible party has to link each  
33 of the party technical addresses to the relevant network service(s). This step allows using one  
34 party technical address for several network services.~~

---

67 These features are known as "oversized data management" (see section [Oversized Data Management](#) [[▶ 897](#)]) for responses exceeding a pre-  
defined size limit, and "time out management" (see section [Timeout management](#) [[▶ 897](#)]) for responses that T2S cannot produce within a prede-  
fined time limit.

~~Each T2S Actor directly connected to T2S is responsible for setting up and maintaining default and conditional routing static data related to its outbound communication.~~

~~The following table summarises, for each static data object related to the setup of routing configurations in T2S, the responsible T2S Actor for its configuration and it specifies which mode the T2S Actor can use for the configuration. For further information refer to CRDM UDFS, "Connectivity". (Split book approach)~~

**TABLE 22 - SETUP OF ROUTING CONFIGURATIONS IN T2S**

STATIC DATA OBJECT	RESPONSIBLE T2S ACTOR	MODE
Network Service	T2S Operator	U2A
Party (Technical Address)	T2S Operator, CSD, CB	U2A/A2A
Link between Network Service and Party Technical Address	T2S Operator, CSD, CB	U2A
Default and Conditional Routing	CSD, CB, CSD Participant, Payment Bank	U2A

Network service

T2S stores in Static Data a catalogue of all the network services allowing technical connectivity between T2S Actors and T2S for the exchange of business data. Each network service defined in Static Data corresponds to one messaging service of one of the accredited connectivity services providers.

When defining a new network service, the T2S Operator has to provide the following pieces of information:

- | The name of the network service;
- | A textual description for the network service;
- | The type of technical address for the network service.

**EXAMPLE 52 - NETWORK SERVICE DEFINITION**

In addition, the T2S Operator has to provide all the necessary data for the T2S application to identify and to use the underlying messaging service <sup>68</sup>.

Party Technical Address

~~Each party that is directly connected to T2S has one or many technical addresses that T2S uses to send outgoing messages to this party.~~

~~Links between Network Services and Party Technical Addresses~~

<sup>68</sup> These data are neither meaningful for nor needed by the T2S Actors.

1 ~~Each Network Service uses a specific type of technical address to identify the sender and the~~  
2 ~~receiver for each exchange of data. Different network services may use the same technical ad-~~  
3 ~~dress type, which means that the same Party Technical Address may be used to exchange data~~  
4 ~~using different Network Services. Consequently, there is a many-to-many association between~~  
5 ~~the catalogue of Network Services and the set of Party Technical Address defined in T2S. For~~  
6 ~~this reason, each Party Technical Address has to be linked to the relevant Network Service, so~~  
7 ~~that T2S can use them to route outbound communication.~~

8 ~~The following table shows an example of a party having five party technical addresses linked to~~  
9 ~~four different network services. For further information refer to CRDM UDFS, "Connectivity". (Split~~  
10 ~~book approach)~~

11 **EXAMPLE 53 - PARTY TECHNICAL ADDRESS AND NETWORK SERVICES (SPLIT BOOK APPROACH)**

<i>Service C</i>	<i>DN=INTR</i>												
<i>Service D</i>	<i>DN=OPQA</i>												

### 12 ~~Conditional Routing~~

13 ~~T2S applies a mandatory routing for the following outbound communication:~~

- 14 ~~| Acknowledgment of receipt;~~
- 15 ~~| Reactions on erroneous inbound messages;~~
- 16 ~~| Query results.~~

17 ~~In all these cases, T2S routes the outbound communication to the same network service and~~  
18 ~~party technical address which were used for sending the related inbound communication. This~~  
19 ~~implies that T2S does not allow defining different routing configurations for these kinds of~~  
20 ~~messages.~~

21 ~~For all other types of outbound communication, T2S allows CSDs, CBs and directly connected~~  
22 ~~participants to define specific routing configurations for their messages and files. More precise-~~  
23 ~~ly, each of these T2S Actors can define, for each type of outbound communication (i.e. mes-~~  
24 ~~sage-based/file-based, real-time/store-n-forward), either a default configuration only (to be~~  
25 ~~used by T2S for all outbound communication of a given type of this T2S Actor), or a default con-~~  
26 ~~figuration plus one or many conditional routing configurations (to be used by T2S on the basis~~  
27 ~~of a given set of parameters).~~

1 ~~When defining a default routing configuration, the responsible T2S Actor (i.e. a CSD, a CB or a~~  
2 ~~directly connected participant) has to provide the following pieces of information:~~

- 3 | ~~the routing description;~~
- 4 | ~~the network service T2S has to use for the default routing;~~
- 5 | ~~the party technical address T2S has to use for the default routing;~~
- 6 | ~~a compression setting, specifying whether T2S must compress the relevant data before~~  
7 ~~sending them to the recipient.~~

8 ~~When defining a conditional routing, the responsible T2S Actor (i.e. a CSD, a CB or a directly~~  
9 ~~connected participant) has to provide, in addition to the data required for the setup of a default~~  
10 ~~routing configuration, the following pieces of information:~~

- 11 | ~~the sequence number of the conditional routing, specifying the order according to which~~  
12 ~~T2S tries to match the current outgoing message with one of the conditional routing config-~~  
13 ~~uration, for a given recipient party <sup>69</sup>;~~
- 14 | ~~a set of conditions specifying the criteria on which the routing is defined: the type of the~~  
15 ~~message <sup>70</sup>, the size boundaries (i.e. the minimum and the maximum size of the message),~~  
16 ~~the currency of the message;~~
- 17 | ~~a Boolean information specifying whether the set of conditions represents a positive or a~~  
18 ~~negative list.~~

19 ~~In addition, T2S outbound communications are bundled into files during night-time settlement~~  
20 ~~(for specific settlement-related messages) and, on an optional basis, during real-time settle-~~  
21 ~~ment.~~

22 ~~When determining how to route outbound communication during the real-time settlement pe-~~  
23 ~~riod, T2S applies the following rules:~~

- 24 | ~~If the type of outbound communication is an acknowledgement of receipt, a reaction on an~~  
25 ~~erroneous incoming message or a query result, T2S applies a mandatory routing, i.e. it~~  
26 ~~routes the outbound communication to the same network service and party technical ad-~~  
27 ~~dress which were used for sending the related inbound communication.~~
- 28 | ~~If the type of outbound communication is different from the ones mentioned in the previous~~  
29 ~~point, then:~~
  - 30 – ~~If the outgoing message matches one of the conditional routing configurations <sup>71</sup> and the~~  
31 ~~Party has not opted to receive outbound messages bundled into files, then T2S routes the~~

---

69 ~~T2S stops this process either just after having found the first matching conditional routing configuration, or after having checked~~  
~~all the conditional routing configurations defined for the recipient party without finding any matching configuration. (Split book~~  
~~approach)~~

70 ~~The exhaustive list of possible values for the type of message is given by the list of all the outbound messages included in section~~  
~~List of Messages plus the inbound messages subject to copy, plus the value "NightTimeSettlementRelatedMessages", which~~  
~~refers to all the settlement-related messages (excluding copies of liquidity transfers) that, during the night-time settlement~~  
~~period, are sent by T2S grouped into files. For "NightTimeSettlementRelatedMessages" it is only possible to select file-based~~  
~~network services and it is not possible to define upper or lower bound size parameters. (Split book approach)~~

~~outbound communication via the network service and to the party technical address specified in the matched routing configuration.~~

- ~~– If no matching conditional routing configurations are found or the Party has opted to receive outbound messages bundled into files, then T2S routes the outbound communication to the relevant default routing configuration.~~

~~**| As to data compression:**~~

- ~~– If the outbound communication is smaller than 2KB, then T2S does not compress the data, regardless of compression setting specified in the matched routing configuration.~~
- ~~– If the outbound communication is a report, then T2S compresses the data regardless of compression setting specified in the matched routing configuration.~~
- ~~– For all other types of outbound communication, T2S compresses the data only if this is required by the compression setting specified in the matched routing configuration <sup>72</sup>~~

~~T2S applies automatic bundling into files during night-time settlement, while offering the possibility for each Party to opt for the bundling of outbound messages into files during the whole business day <sup>73</sup>. Exceptions during the business day are the maintenance window where no messages are sent and the period close to the DVP cut-off <sup>74</sup>. During this time the file bundling is deactivated and outbound messages are sent in real-time. In addition, during the NTS, messages that are already part of the NTS bundling will not be subject to this bundling feature.~~

~~For this optional bundling, T2S will bundle messages into files based on two standard parameters, with the sending of a file triggered whenever one of the two conditions expressed by these parameters is met. The two parameters refer to the maximum number of messages that can be included in a file (set to 1000) and the maximum elapsed time defining the frequency for sending bundled files (set to 2 minutes). These parameters apply equally to all parties opting for the service.~~

~~The files are sent to the Party technical address defined as default routing configuration. Such files will always be sent via the file channel.~~

~~The optional bundling function is offered for all outbound messages, excluding the following ones:~~

- ~~**| Query responses;**~~
- ~~**| Reports;**~~

---

~~71 The deactivation period is configured to begin half an hour before the first planned currency-dependent DVP cut-off and end with the last event for the cut-off processing. (Split book approach)~~

~~72 The exhaustive list of possible values for the compression setting is as follows: "No" (T2S does not compress data), "ZIP" (T2S must compress data according to the ZIP algorithm). (Split book approach)~~

~~73 The deactivation period is configured to begin half an hour before the first planned currency-dependent DVP cut-off and end with the last event for the cut-off processing. (Split book approach)~~

~~74 The deactivation period is configured to begin half an hour before the first planned currency-dependent DVP cut-off and end with the last event for the cut-off processing. (Split book approach)~~

- 1 | ~~admi.007;~~
- 2 | ~~Inbound processing rejections;~~
- 3 | ~~Error messages sent from the backend.~~

4 | ~~During the night-time settlement period, T2S sends all the settlement-related messages listed~~  
 5 | ~~in the following table grouped into files. For further information refer to CRDM UDFS, "Connectiv-~~  
 6 | ~~ity".{Split book approach}~~

7 | **TABLE 23 - SETTLEMENT-RELATED MESSAGES SENT GROUPED INTO FILES**

ISO MESSAGE	MESSAGE USAGE
sese.024	Provision check failure, partial settlement (unsettled part).
sese.025	Full settlement, partial settlement (settled part), last partial settlement.
semt.014	Provision check failure, partial settlement (unsettled part).
semt.015	Full settlement, partial settlement (settled part), last partial settlement, partial execution.
camt.054	Cash Posting Notification
camt.067	Under intraday restriction, provision check failure, partial settlement (unsettled part).
camt.068	Full settlement, partial settlement (settled part), last partial settlement, partial execution.

9 | For these messages, when determining how to route outbound communication during the night-time settle-  
 10 | ment period, T2S applies the same rules described before for the real-time settlement period, with the only  
 11 | difference that in this case T2S takes into account all the conditional routing configurations specifically relat-  
 12 | ed to the night-time settlement periodFußnote and ignores the configurations related to message types that  
 13 | are included in Settlement-related messages sent grouped into files.

14 | The rest of this section presents different examples of routing configurations for outbound communication.  
 15 | All these examples are based on the availability of the following set of network services for outbound com-  
 16 | munication, previously defined by the T2S Operator.

17 | **TABLE 24 - EXAMPLE OF NETWORK SERVICES FOR OUTBOUND COMMUNICATION**

NETWORK SERVICE NAME	NETWORK SERVICE FEATURES	TECHNICAL ADDRESS TYPE
NetSrvA	Message-based, store-n-forward	Distinguished Name
NetSrvB	File-based, store-n-forward	Distinguished Name

18 | **EXAMPLE 54 - USING DEFAULT ROUTING CONFIGURATIONS ONLY**

19 | This example describes a scenario where a given party PRTYCCTTXXX sets up default routing configurations  
 20 | only, which allow it to receive all outbound communication not subject to the mandatory routing to a given  
 21 | party technical address (specified by the distinguished name <ou=dept\_123, o=prtyccttxxx, o=netprv>).  
 22 | The following table shows the default routing configurations defined by party PRTYCCTTXXX. In addition,  
 23 |

1 the party requests T2S to compress all data before sending them via file-based communication, according to  
2 the ZIP algorithm.

3 **TABLE 25 - DEFAULT ROUTING CONFIGURATIONS**

ROUTING DESCRIPTION	NETWORK SERVICE	PARTY TECHNICAL ADDRESS	COMPRESSION
Default 1	NetSrvA	<ou=dept_123, o=prtyccttxxx, o=netprv>	No
Default 2	NetSrvB	<ou=dept_123, o=prtyccttxxx, o=netprv>	ZIP

5 On the basis of these default routing configurations, T2S routes all outbound communication (with the ex-  
6 ception of acknowledgements of receipt, reactions on erroneous incoming messages or a query results) us-  
7 ing the different available network service as shown in the following table.

8 **TABLE 26 - USAGE OF NETWORK SERVICES FOR OUTBOUND COMMUNICATION**

SETTLEMENT DAY PERIOD	MATCHED ROUTING CONFIGURATION	OUTBOUND COMMUNICATION	COMPRESSED DATA
Real-time settlement(if not opted for optional bundling)	Default 1	All individual messages <= 32KB	No
	Default 2	All individual messages > 32KB	Yes
Real-time settlement (if opted for optional bundling)	Default 2	All individual messages excluding the exceptions listed above, bundled into files, regardless of file size	Yes
Night-time settle-ment(if not opted for optional bundling)	Default 1	All individual messages not listed in Table 23 - <a href="#">Settle-ment-related messages sent grouped into files</a> [ 126] <= 32KB	No
	Default 2	All individual messages not listed in Table 23 - <a href="#">Settle-ment-related messages sent grouped into files</a> [ 126] > 32KB	Yes
		Files of messages included in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ 126], re-gardless of file size	Yes
Night-time Settlement (if opted for optional bundling)	Default 2	Files of messages not included in the list of exceptions above or in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ 126], regardless of file size	Yes

10 **EXAMPLE 55 - USING CONDITIONAL ROUTING CONFIGURATIONS**

11 This example extends the scenario described in the previous example by making the assumption that the  
12 party PRTYCCTTXXX decides to route all its outbound communication concerning one specific currency  
13 (DKK) using the same network services used in the previous example, but to a different party technical ad-

1 dress (specified by the distinguished name <ou=dept\_987, o=prtycctxxx, o=netprv>). In this case, the  
2 party requests T2S to compress all outbound communication. The following table shows the additional con-  
3 ditional routing configurations that are needed to achieve the described routing scenario.

4 **TABLE 27 - CONDITIONAL ROUTING CONFIGURATIONS**

SE- QUENCE	ROUTING DESCRIPTION	MESSAGE TYPE <sup>75</sup>	SIZE	CURRENCY	NETWORK SERVICE	PARTY TECH- NICAL AD- DRESS	COMPRES- SION
1	Conditional 1	-	-	DKK	NetSrvA	<ou=dept_987 , o=prtycctxxx, o=netprv>	ZIP
2	Conditional 2	-	-	DKK	NetSrvB	<ou=dept_987 , o=prtycctxxx, o=netprv>	ZIP
3	Conditional 3	NTSR <sup>76</sup>	-	DKK	NetSrvB	<ou=dept_987 , o=prtycctxxx, o=netprv>	ZIP

6 On the basis of the default routing configurations shown in the previous example plus the conditional routing  
7 configuration listed in the above table, T2S routes all outbound communication (with the exception of  
8 acknowledgements of receipt, reactions on erroneous incoming messages or a query results) using the dif-  
9 ferent available network services as shown in the following table.

10 **TABLE 28 - USAGE OF NETWORK SERVICES FOR OUTBOUND COMMUNICATION**

SETTLEMENT DAY PERIOD	MATCHED ROUTING CONFIGURATION	OUTBOUND COMMUNICATION	COMPRESSED DATA
Real-time settle- ment(if not opted for optional bundling)	Default 1	All individual messages not in DKK <= 32KB	No
	Default 2	All individual messages not in DKK > 32KB	Yes
	Conditional 1	All individual messages	Yes

75 The format of the message type is the ISO message identifier without version number.

76 This acronym stands here for "NightTimeSettlementRelatedMessages". On the Screen the value is present as "NTSR.000". Messages meant by this code are listed in table Table 23 - [Settlement-related messages sent grouped into files](#) [ 126].

SETTLEMENT DAY PERIOD	MATCHED ROUTING CONFIGURATION	OUTBOUND COMMUNICATION	COMPRESSED DATA
		in DKK <= 32KB	
	Conditional 2	All individual messages in DKK > 32KB	Yes <sup>77</sup>
Real-time settlement (if opted for optional bundling)	Default 2	All individual messages excluding the exceptions listed above, bundled into	Yes
Night-time settlement (if not opted for optional bundling)	Default 1	All individual messages not in DKK and not listed in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126] <= 32KB	No
	Default 2	All individual messages not in DKK and not listed in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126] > 32KB	Yes
		Files of messages not in DKK and included in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126], regardless of file size	Yes
	Conditional 1	All individual messages in DKK and not listed in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126] <= 32KB	Yes <sup>78</sup>
	Conditional 2	All individual messages in DKK and not listed in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126] > 32KB	Yes
		Files of messages in DKK and included in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126], regardless of file size	Yes
Night-time Settlement (if opted for optional bundling)	Default 2	Files of messages not included in the list of exceptions above or in Table 23 - <a href="#">Settlement-related messages sent grouped into files</a> [ > 126], regard-	Yes

77 Only for messages > 2KB.

78 Only for messages > 2KB.

SETTLEMENT DAY PERIOD	MATCHED ROUTING CONFIGURATION	OUTBOUND COMMUNICATION	COMPRESSED DATA
		less of file size	

1 1.3.1.6 General rules and procedures for the connectivity services providers services subscriptions  
2 Detailed information as to the usage of network services is provided in the "T2S Connectivity Guide".

### 3 **1.3.2 Authentication and authorisation**

4 This section provides information on the authentication and authorisation processes in T2S. More into detail,  
5 section [Authentication and authorisation concepts](#) [▶ 130] presents some basic concepts (e.g. user, certifi-  
6 cate, distinguished name, technical sender, business sending user, business sending party, instructing party)  
7 related to access rights management in T2S. On this basis, sections [Authentication process](#) [▶ 136] and [Au-  
8 thorisation process](#) [▶ 137] show how the authentication process and the authorisation process take place in  
9 T2S. Finally, section [Instructing scenarios](#) [▶ 138] describes the possible instructing options a T2S Actor can  
10 choose for instructing T2S.

#### 11 1.3.2.1 Authentication and authorisation concepts

12 This section presents the main concepts related to authentication and authorisation processes in T2S.

##### 13 **1.3.2.1.1 User**

14 A user is an individual or application that interacts with T2S triggering the available T2S user functions. The  
15 set of available T2S user functions stems from the set of privileges for which the user is grantee (see section  
16 [Access rights](#) [▶ 145]).

17 Each user defined in T2S corresponds to an individual, i.e. an employee of a given T2S Actor using the T2S  
18 GUI, or to an application, i.e. a software component of a given T2S Actor interacting with T2S in A2A mode.

##### 19 **1.3.2.1.2 Certificate**

20 A digital certificate is an electronic document binding an identity to a pair of electronic keys, a private key  
21 (used to sign digital information to be sent to a counterpart or to decrypt digital information received from a  
22 counterpart) and a public key (used to encrypt digital information to be sent to a counterpart or to perform  
23 the authentication and to ensure the integrity of digital information received from a counterpart).

24 T2S Actors assign certificates to their individuals (interacting with T2S in U2A mode) and applications (inter-  
25 acting with T2S in A2A mode). If a T2S Actor uses multiple connectivity providers to connect to T2S, then it  
26 has to assign one certificate to each of its individuals and applications for each of these connectivity pro-  
27 viders.

##### 28 **1.3.2.1.3 Distinguished Name**

29 A Distinguished Name (DN) is a sequence of attribute-value assertions (e.g. "cn=smith") separated by com-  
30 mas, e.g.:

<cn=smith,ou=t2s-ops, o=bnkacctt,o=nsp-1>

1

2 Each identity bound to a digital certificate is assigned a unique distinguished name (certificate DN). This  
3 applies both to individuals and applications. If a T2S Actor uses multiple connectivity providers, each of its  
4 individuals and applications is assigned one certificate per connectivity provider and hence one certificate DN  
5 per connectivity provider.

#### 6 **1.3.2.1.4 System User Reference**

7 The System User Reference (SUR) is a unique reference that the T2S application uses to identify one user in  
8 T2S. T2S allows T2S Actors linking one certificate DN to many system user references. As one system user  
9 reference identifies one user in T2S, this means that each T2S Actor can link one certificate DN to many  
10 users defined in T2S.

#### 11 **1.3.2.1.5 Technical sender**

12 The technical sender is the T2S Actor submitting an A2A or an U2A request to T2S. Each technical sender is  
13 identified by means of a certificate issued by the connectivity provider. The network infrastructure of the  
14 connectivity provider authenticates the technical sender on the basis of its certificate, both in A2A mode and  
15 in U2A mode. The certificate DN of the technical sender represents the technical address (see section [Refer-](#)  
16 [ence data for parties](#) [▶ 40]) used by the technical sender to connect to the T2S platform.

#### 17 **1.3.2.1.6 Business sender**

18 The business sender is the T2S Actor creating the business payload of an A2A or an U2A request to be sub-  
19 mitted to and processed by T2S. In some instructing scenarios, the business sender and the technical sender  
20 can be different T2S Actors (see section [Instructing scenarios](#) [▶ 138]).

#### 21 **1.3.2.1.7 Business sending user**

22 The business sending user is the user creating the business payload of the request. This user corresponds to  
23 an individual or to an application of the business sender T2S Actor. Each business sending user can be iden-  
24 tified on the basis of two pieces of information:

- 25 | A certificate DN and
- 26 | A system user reference.

27 Both pieces of information are included in the application header of the request. More precisely:

- 28 | For single messages they are included in the Business Application Header (see section BusinessApplica-  
29 tionHeaderV01 (head.001.001.01));
- 30 | For files (i.e. group of messages) they are included in the Business File Header (see section Business-  
31 FileHeaderV01 (head.002.001.01)) and they are not included in the Business Application Headers of the  
32 single messages belonging to the file.

33 From a business perspective, the business sending user signs only once the business payload, both in case  
34 this payload includes only one request (in this case the business sending user signs the Business Application

Header of this request) or a set of requests (in this case the business sending user signs the Business File Header of the file including these requests). Consequently, one file cannot include requests referring to different business sending users, i.e. the business sender must send requests related to different business sending users into separate files.

**1.3.2.1.8 Business sending party**

The business sending party is the party which the business sending user belongs to. The T2S application identifies the business sending party once it has identified the business sending user, as each business sending user belongs to one party.

The business sending party owns the message identifier specified in the Business Application Header. Consequently, the business sending party defines the scope for the duplicate check performed at message level.

<sup>79</sup> The system parameter regarding duplicate checks for inbound files and messages is defined in the table below. No specific configuration by the T2S Actor is required.

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	STANDARD OR DEFAULT VALUE
Message/File Duplicate Check	Number of business days in the past for duplicate check on files and individual messages	T2S Operator	T2S Operator	M	3 days

**1.3.2.1.9 Instructing party**

The instructing party is the party instructing T2S to process the business payload of the request. The instructing party is specified (as a couple of BICs) in the Business Application Header and it owns the business reference (i.e. the transaction identifier) specified in the business payload. Consequently, the instructing party defines the scope for the duplicate check at instruction level.

**1.3.2.1.10 Associations between users and certificates**

~~As illustrated in section Concept of party in T2S, any T2S Actor may play different roles in T2S and, as a consequence, it may be defined as multiple parties in T2S (e.g. a bank being a participant of multiple CSDs, or a Central Bank being defined as a CB and also as a participant of its local CSD). This can result in different types of associations between the system user references (and consequently the users) and the certificate DNs (and consequently the certificates) of a given T2S Actor.~~

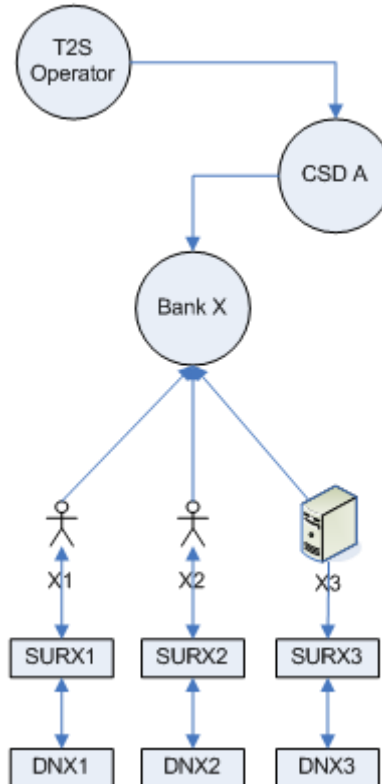

~~In a basic scenario where a given T2S Actor is defined as one party in T2S, the association between certificate DNs and system user references is one-to-one. Each individual and each ap~~

<sup>79</sup> This duplicate check is performed for A2A communication only.

1 ~~plication of the T2S Actor is defined as a user belonging to the party defined in T2S for this T2S~~  
 2 ~~Actor and the certificate DN of each individual and each application is linked to the system user~~  
 3 ~~reference of the corresponding user defined in T2S.~~

4 **EXAMPLE 56 - BASIC SCENARIO WITH ONE T2S ACTOR DEFINED AS ONE PARTY (SPLIT BOOK APPROACH)**

6 **DIAGRAM 21 - BASIC SCENARIO WITH ONE T2S ACTOR DEFINED AS ONE PARTY (SPLIT BOOK APPROACH)**

7  
 8 ~~The following table shows the one to one association between the distinguished names of the~~  
 9 ~~given individuals and applications and the system user references of the corresponding users~~  
 10 ~~defined in T2S.~~

11 **TABLE 29 - BASIC SCENARIO WITH ONE T2S ACTOR DEFINED AS ONE PARTY (SPLIT BOOK APPROACH)**

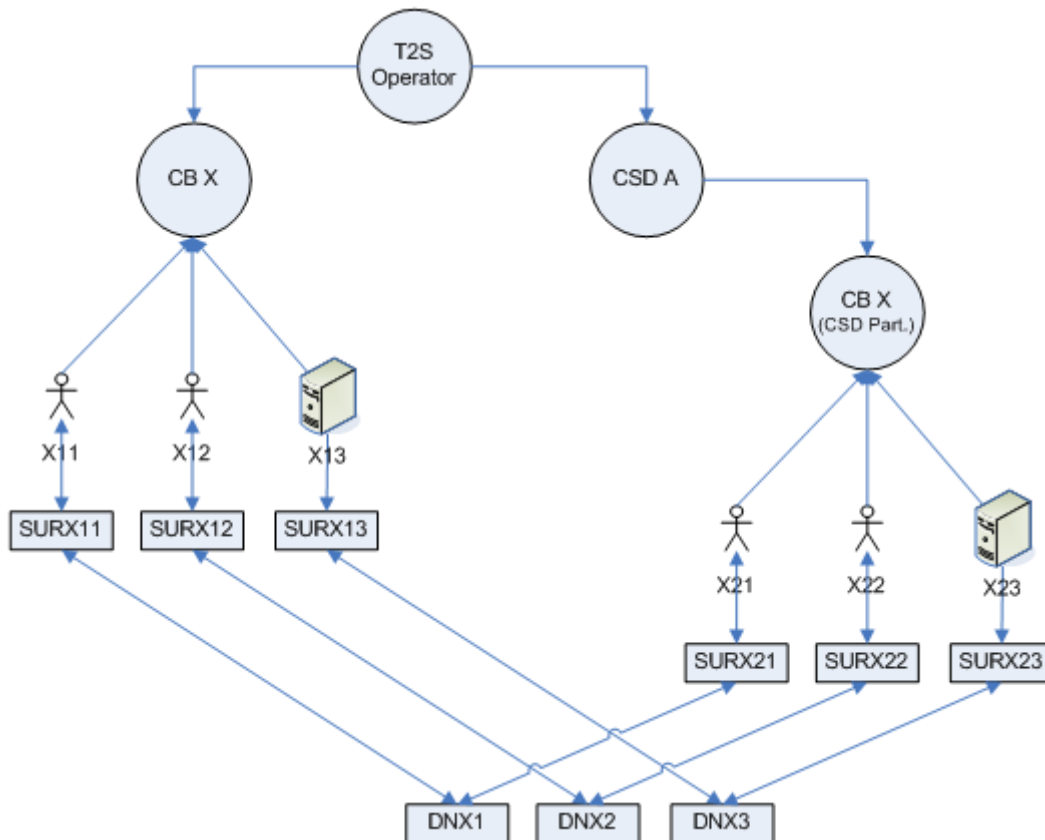

DISTINGUISHED-NAME	SYSTEM-USER-REFERENCE
DNX1	SURX1
DNX2	SURX2
DNX3	SURX3

13 ~~In a more complex scenario, where a single T2S Actor is defined as multiple parties in T2S, the~~  
 14 ~~association between certificate DNs and system user references can be one to many. In fact, in~~  
 15 ~~this scenario each individual and each application of the T2S Actor may be defined as a user for~~  
 16 ~~each of the parties defined for the given T2S Actor in T2S. In this case, T2S allows linking each~~

of the users corresponding to a given individual or to a given application to the same certificate DN, i.e. the distinguished name of the certificate of the same individual or application.

**EXAMPLE 57 - COMPLEX SCENARIO WITH ONE T2S ACTOR DEFINED AS MULTIPLE PARTIES (A)**

**DIAGRAM 22 - COMPLEX SCENARIO WITH ONE T2S ACTOR DEFINED AS MULTIPLE PARTIES (A) (SPLIT BOOK APPROACH)**

The following table shows the one-to-many association between the distinguished names of the given individuals and applications and the system user references of the corresponding users defined in T2S.

**TABLE 30 - COMPLEX SCENARIO WITH ONE T2S ACTOR DEFINED AS MULTIPLE PARTIES (A) (SPLIT BOOK APPROACH)**

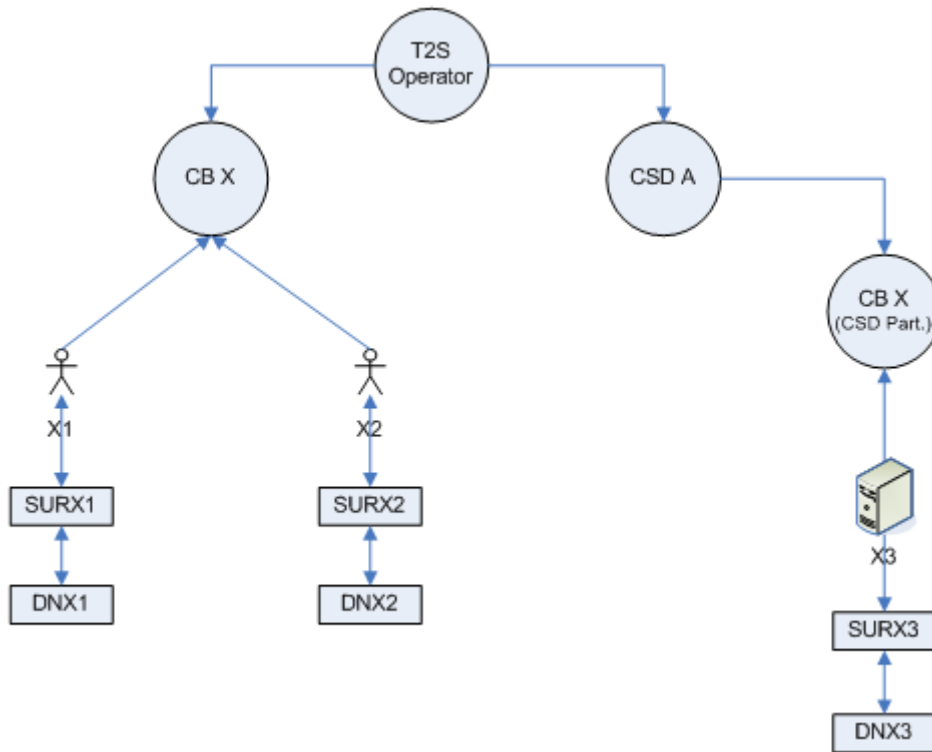

DISTINGUISHED NAME	SYSTEM USER REFERENCE
DNX1	SURX11
DNX1	SURX21
DNX2	SURX12
DNX2	SURX22
DNX3	SURX13
DNX3	SURX23

**This configuration allows each individual and application of central bank X to connect as two different users (e.g. individual X1 can connect either as user X11 or user X21) and operate either for party CB X or for party CB X (CSD Part.).**

**It is worth mentioning that the one-to-many association between certificate DNs and system user references just illustrated is not a mandatory option for the T2S Actor in a complex scenario. In fact, the T2S Actor may also opt for defining only one user belonging to one of its parties for each of its individuals and applications. This would result in a partitioning of its individuals and applications among its parties.**

**EXAMPLE 58 - COMPLEX SCENARIO WITH ONE T2S ACTOR DEFINED AS MULTIPLE PARTIES (B)**

**DIAGRAM 23 - COMPLEX SCENARIO WITH ONE T2S ACTOR DEFINED AS MULTIPLE PARTIES (B) {SPLIT BOOK APPROACH}**

**The following table shows the one-to-one association between the distinguished names of the given individuals and applications and the system user references of the corresponding users defined in T2S.**

**TABLE 31 - COMPLEX SCENARIO WITH ONE T2S ACTOR DEFINED AS MULTIPLE PARTIES (B) {SPLIT BOOK APPROACH}**

DISTINGUISHED-NAME	SYSTEM-USER-REFERENCE
DNX1	SURX1
DNX2	SURX2
DNX3	SURX3

**~~This configuration allows each individual operating only for party CB-X, whereas it allows the application operating only for party CB-X (GSD Part.)- For further information refer to CRDM UDFS, "Associations between users and certificates".(Split book approach)~~**

### 1.3.2.2 Authentication process

The authentication process refers in T2S to:

- I The authentication of the technical sender and
- I The authentication of the business sending user.

#### 1.3.2.2.1 Authentication of the technical sender

The authentication of the technical sender is performed at network infrastructure level and it is based on the certificate used by the T2S Actor to establish the technical connection with the network infrastructure itself. This authentication process is under the responsibility of the technical connectivity provider operating the Value Added Provider (VAN) selected by the T2S Actor to connect to the T2S platform.

**DIAGRAM 24 - TECHNICAL SENDER AUTHENTICATION**

In case of successful authentication of the technical sender, the T2S application gets the certificate DN of the technical sender. The T2S application uses this certificate DN later on, during the authorisation process (see section Authorisation of the technical sender).

#### 1.3.2.2.2 Authentication of the business sending user

The authentication of the business sending user is performed at application level and it is based on the certificate used either to sign the application header of a given request (in an A2A mode scenario) or to establish the secured communication channel between the T2S Actor and the T2S platform (in an U2A mode scenario).

In both cases, the authentication process retrieves one certificate DN which, owing to the fact that it could be linked to many users (see section [Associations between users and certificates](#) [▶ 132]), does not allow identifying one user. The identification of one user requires, besides the certificate DN, also the system user reference of the relevant user. The T2S Actor provides this piece of information in two different ways in A2A mode and U2A mode.

When interacting with T2S in A2A mode, the T2S actor includes both the certificate DN and the system user reference in the application header<sup>80</sup>, i.e. either in the Business Application Header (for messages) or in

<sup>80</sup> The certificate DN is not included directly, but indirectly by signing the application header with the relevant certificate.

1 Business File Header (for files). On the basis of these two pieces of information, the T2S application is able  
2 to identify the business sending user.

3 **DIAGRAM 25 - BUSINESS SENDING USER AUTHENTICATION IN A2A MODE**

4

5 In U2A mode, the certificate of the business sending user and the certificate of the technical sender are the  
6 same. The network infrastructure authenticates the technical sender on the basis of its certificate. On the  
7 basis of the related certificate DN, the T2S application retrieves all the system user references defined in the  
8 CRDM that are linked to this certificate DN and provides it to the individual in front of the T2S GUI for selec-  
9 tion on the welcome screen. The business sending user is the user corresponding to the system user refer-  
10 ence selected on the welcome screen. On this basis, each individual has to login only once and he/she can  
11 operate as any of the users linked to his/her certificate DN, just selecting the appropriate system user refer-  
12 ence and without the need to log out and to log in again.

13

**DIAGRAM 26 - BUSINESS SENDING USER AUTHENTICATION IN U2A MODE**

14

15 **1.3.2.3 Authorisation process**

16 The authorisation process refers in T2S to:

- 17 | The authorisation of the technical sender and
- 18 | The authorisation of the business sending user.

19 **1.3.2.3.1 Authorisation of the technical sender**

20 The authorisation of the technical sender is performed at application level. The T2S application authorises  
21 the technical sender for a given request only if the certificate DN (i.e. the technical address) of the same  
22 technical sender is in the list of the party technical addresses of the business sending party which are linked  
23 to the network service used to submit the request.

24 **1.3.2.3.2 Authorisation of the business sending user**

25 The authorisation of the business sending user is performed at application level. The T2S application author-  
26 ises the business sending user for a given request only if the same business sending user is granted with the  
27 privilege(s) required to process the business content of the given request, both in terms of request type and

1 data scope. See section [Access rights](#) [▶ 145] for additional information on privileges and, more in general,  
2 on access rights configuration.

### 3 1.3.2.4 Instructing scenarios

4 This section provides information on the different options a T2S Actor can choose for instructing T2S, also  
5 depending on its type of technical connection (either direct or indirect) to T2S (see section [Participation in  
6 and access to T2S](#) [▶ 117]).

#### 7 **1.3.2.4.1 Direct connection participation**

8 In this case the T2S Actor is directly connected to the T2S platform (via a Value Added Network) and it also  
9 signs the business requests it intends submitting to the T2S application for processing. This means that the  
10 T2S Actor acts both as technical sender and business sender.

11 **DIAGRAM 27 - DIRECT CONNECTION PARTICIPATION**

12

13 It is worth mentioning that in this case the T2S Actor can opt for using the same certificate to play both the  
14 role of the technical sender and the role of the business sender.

#### 15 **1.3.2.4.2 Indirect connection participation - Case 1**

16 In this case a T2S Actor A is not directly connected to the T2S platform and it does not sign the business  
17 requests it intends submitting to the T2S application for processing. This means that T2S Actor A fully relies  
18 on another T2S Actor B that is acting both as technical sender and business sender on behalf of T2S Actor A.

19

**DIAGRAM 28 - INDIRECT CONNECTION PARTICIPATION (CASE 1)**

20

21 This is the typical situation occurring when a CSD Participant is an indirectly connected participant and fully  
22 relies on its CSD for its activities on T2S.

#### 23 **1.3.2.4.3 Indirect connection participation - Case 2**

24 In this case a T2S Actor A is not directly connected to the T2S platform, but it intends to keep full responsi-  
25 bility for signing the business requests it intends submitting to the T2S application for processing. This  
26 means that T2S Actor A acts as business sender, but it relies on another T2S Actor B that is acting as tech-  
27 nical sender on behalf of T2S Actor A.

1

**DIAGRAM 29 - INDIRECT CONNECTION PARTICIPATION (CASE 2)**

2

3 This is the typical situation occurring when a CSD Participant is an indirectly connected participant and its  
 4 CSD acts as a pure technical router towards the T2S platform.

5 **1.3.2.4.4 Examples of instructing scenarios**

6 This section presents some examples describing the different instructing scenarios stemming from the three  
 7 basic cases described before and including possible usages of the instructing party concept.

8 **EXAMPLE 59 - DIRECTLY CONNECTED PAYMENT BANK**

9 Payment Bank X is a directly connected participant of Central Bank A and it sends immediate liquidity trans-  
 10 fers to T2S, playing the roles of the technical sender, of the business sender and of the instructing party.

11 **DIAGRAM 30 - DIRECTLY CONNECTED PAYMENT BANK**

12

13 The following table shows how the different elements allowing the identification of the technical sender, the  
 14 business sender and the instructing party are conveyed by the relevant communication headers.

15 **TABLE 32 - DIRECTLY CONNECTED PAYMENT BANK**

16

ELEMENT	VALUE	HEADER
Technical Sender	<cn=t2s-a2a,o=bnkxccttxxx,o=nsp1>	DEPH <sup>81</sup>
Business Sending User	<cn=t2s-a2a,o=bnkxccttxxx,o=nsp1> SURBNKX1	BAH <sup>82</sup> /BFH <sup>83</sup>
Business Sending Party	<NCBACCTTXXX,BNKXCCTTXXX>	n/a
Instructing Party	<NCBACCTTXXX,BNKXCCTTXXX>	BAH

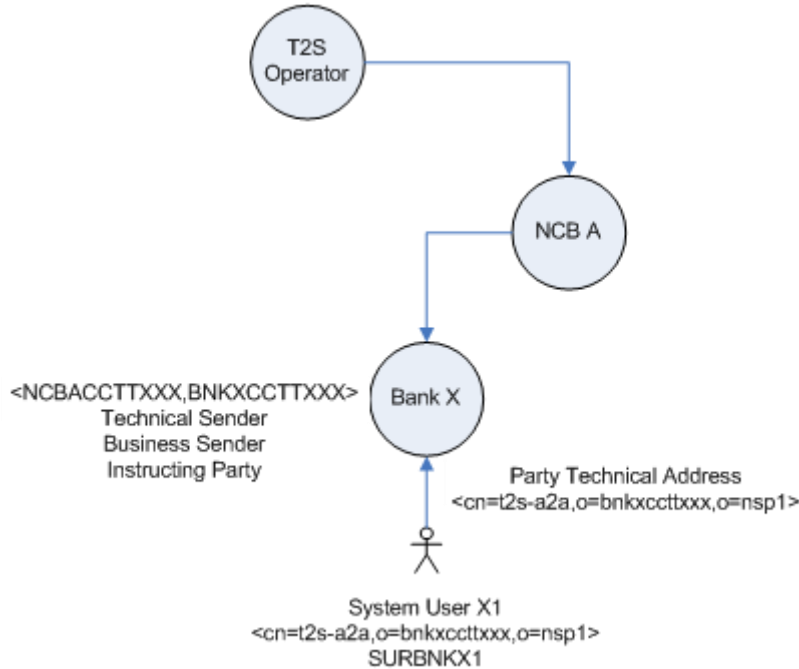

81 DEPH stands for Data Exchange Protocol Header. The Data Exchange Protocol is the network communication protocol used by T2S. Each technical connectivity provider (in a VAN scenario) must use this protocol to send data to and to receive data from T2S.

82 Business Application Header.

83 Business File Header.

1 The following diagram depicts the underlying reference data configuration of the relevant parties and users.

2 **DIAGRAM 31 - DIRECTLY CONNECTED PAYMENT BANK**

3

4 **EXAMPLE 60 - INDIRECTLY CONNECTED CSD PARTICIPANT**

5 CSD Participant X is an indirectly connected participant of CSD B and it sends settlement instructions to its  
 6 CSD. CSD Participant X acts as business sender and instructing party, while CSD B plays the role of the  
 7 technical sender, by routing to T2S all the settlement instructions received by CSD Participant X. CSD B nei-  
 8 ther reads nor modifies the settlement instructions received by CSD Participant X.

9 **DIAGRAM 32 - INDIRECTLY CONNECTED CSD PARTICIPANT**

10

11 The following table shows how the different elements allowing the identification of the technical sender, the  
 12 business sender and the instructing party are conveyed by the relevant communication headers.

1  
2

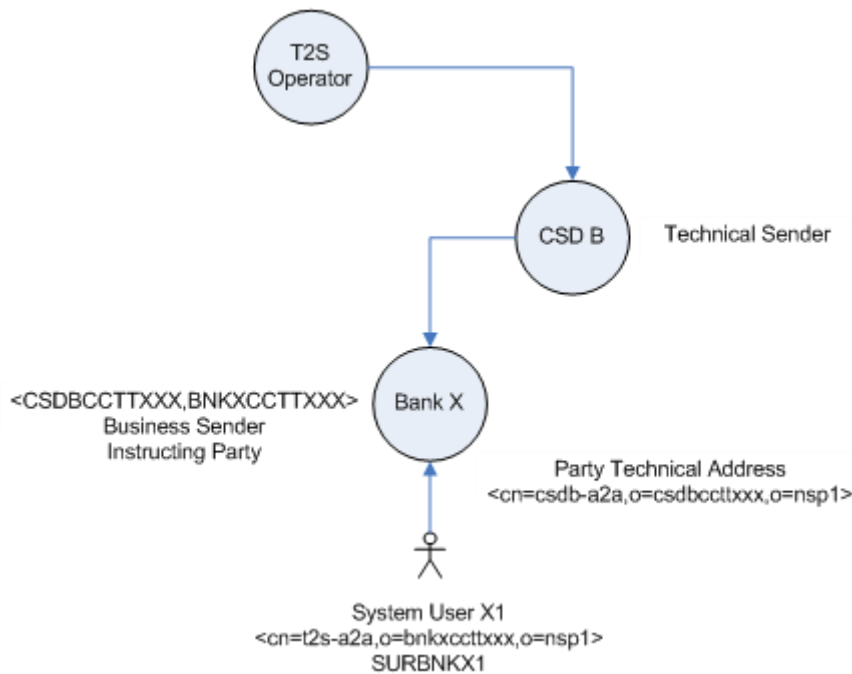

**TABLE 33 - INDIRECTLY CONNECTED CSD PARTICIPANT**

ELEMENT	VALUE	HEADER
Technical Sender	<cn=csdb-a2a,o=csdbccttxxx,o=nsp1>	DEPH
Business Sending User	<cn=t2s-a2a,o=bnkxccttxxx,o=nsp1> SURBNKX1	BAH/BFH
Business Sending Party	<CSDBCCTTXXX,BNKXCCTTXXX>	n/a
Instructing Party	<CSDBCCTTXXX,BNKXCCTTXXX>	BAH

3 The following diagram depicts the underlying reference data configuration of the relevant parties and users.

4

**DIAGRAM 33 - INDIRECTLY CONNECTED CSD PARTICIPANT**

5

6

**EXAMPLE 61 - INDIRECTLY CONNECTED PAYMENT BANK**

7 Payment Bank X is an indirectly connected participant of Central Bank A it fully relies on its CB for sending  
8 immediate liquidity transfers to T2S. Payment Bank X plays the role of the instructing party, whereas Central  
9 Bank A acts as business sender and technical sender.

10

**DIAGRAM 34 - INDIRECTLY CONNECTED PAYMENT BANK**

11

12 The following table shows how the different elements allowing the identification of the technical sender, the  
13 business sender and the instructing party are conveyed by the relevant communication headers.

4

**DIAGRAM 41 - SAME T2S ACTOR BEING DEFINED AS TWO DIFFERENT ICPs IN THE SAME CSD**

5

6 **1.3.3 Access rights**

7 ~~This section provides information on access rights management in T2S. More into detail, section~~  
 8 ~~Access rights concepts presents some basic concepts (e.g. user, privilege, role, secured object~~  
 9 ~~and secured group, data scope) related to access rights management in T2S. On this basis, sec-~~  
 10 ~~tion Access rights configuration illustrates all the available options for the configuration of ac-~~  
 11 ~~cess rights in T2S. Finally, section Access rights configuration process describes the access~~  
 12 ~~rights configuration process that each type of T2S Actor has to put in place in order to set up~~  
 13 ~~the appropriate assignment of roles and privileges for all its users. For further information refer~~  
 14 ~~to CRDM UDFS, "Access Rights".{Split book approach}~~

### 1 ~~1.3.3.1 Access rights concepts~~

2 ~~This section presents the main concepts related to access rights management in T2S.~~ (Split book  
3 approach)

#### 4 ~~1.3.3.1.1 T2S user function~~

5 ~~XML messages and GUI functions are the atomic elements users can trigger in A2A mode and in~~  
6 ~~U2A mode respectively to interact with T2S. Based on these set of XML messages and GUI func-~~  
7 ~~tions, it is possible to define the set of T2S user functions, i.e. of all the possible actions that a~~  
8 ~~user can trigger in T2S (e.g. sending a Settlement Instruction, querying the balance of a T2S~~  
9 ~~dedicated cash account, creating a party, asking for a report, and so forth), either in A2A mode~~  
10 ~~or in U2A mode.~~ (Split book approach)

#### 11 ~~1.3.3.1.2 Privilege~~

12 ~~A privilege identifies the capability of triggering one or several T2S user functions and it is the~~  
13 ~~basic element to assign access rights to users. This means that a user UX owns the access right~~  
14 ~~to trigger a given T2S user function FY if and only if UX was previously granted with the privi-~~  
15 ~~lege PY identifying the capability to trigger FY.~~

16 ~~Privileges are classified into system privileges and object privileges. A system privilege refers~~  
17 ~~to a T2S user function that does not apply to a specific static or dynamic data object (e.g. a~~  
18 ~~query on the current phase of the settlement day). An object privilege refers to a T2S user func-~~  
19 ~~tion that applies to a specific static or dynamic data object (e.g. a T2S user function to display~~  
20 ~~the reference data of a securities account). The following tables provide the exhaustive list of~~  
21 ~~privileges covering all the T2S user functions available in A2A mode:~~

- 22 | ~~Settlement instruction management;~~
- 23 | ~~Cash management;~~
- 24 | ~~Party data management;~~
- 25 | ~~Securities data management;~~
- 26 | ~~Securities account data management;~~
- 27 | ~~T2S dedicated cash account data management;~~
- 28 | ~~Dynamic data queries;~~
- 29 | ~~Reference data queries;~~
- 30 | ~~Business Day Management queries;~~
- 31 | ~~Report queries;~~
- 32 | ~~Billing queries;~~
- 33 | ~~Message Management.~~

See section Configuration of privileges for information on the configuration of privileges. (Split book approach)

**1.3.3.1.3 Secured object**

A secured object is a reference data object on which a grantee was granted an object privilege. This is the exhaustive list of the possible types of secured objects:

- | Party;
- | Security;
- | Securities account;

**T2S dedicated cash account.**(Split book approach)

**1.3.3.1.4 Secured group**

A secured group is a homogeneous group of secured objects, i.e. a group of secured objects of the same type (e.g. a group of securities accounts, a group of parties). See section Configuration of secured objects and secured groups for information on the configuration of secured groups.(Split book approach)

<sup>88</sup> See section Message subscription.(Split book approach)

1 **1.3.3.1.5 Role**

2 ~~A role is a set of privileges. See section Configuration of roles for information on the configura-~~  
 3 ~~tion of roles.~~{Split book approach}

4 **1.3.3.1.6 User**

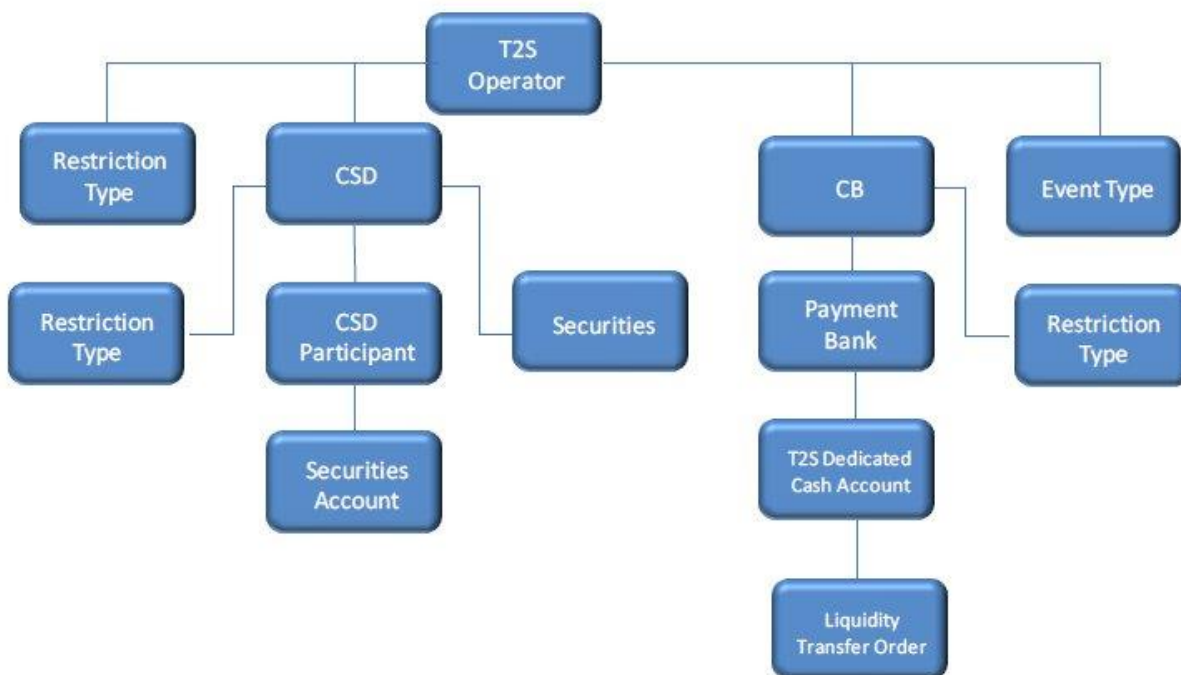

5 ~~See section Configuration of users.~~{Split book approach}

6 **1.3.3.1.7 T2S static and dynamic data objects and the hierarchical party model**

7 ~~All parties in T2S are linked to each other according to a hierarchical model (See section Hierar-~~  
 8 ~~chical party model). As shown in the following diagram and on the basis of this hierarchical~~  
 9 ~~party model, the T2S Operator is the only party at level 1, all the CSDs and all the CBs are level~~  
 10 ~~2 parties, all CSD participants and payment banks are level 3 parties. All the other static and~~  
 11 ~~dynamic data objects are linked to a party. For example:~~

- 12 | ~~A T2S dedicated cash account is linked to its CB or payment bank;~~
- 13 | ~~A securities account is linked to its CSD or CSD participant;~~
- 14 | ~~A standing or pre-defined liquidity transfer order is linked, via the relevant debited T2S ded-~~  
 15 ~~icated cash account, to the payment bank holding the same T2S dedicated cash account;~~
- 16 | ~~A restriction type is linked to the T2S Operator or to the CSD or to the CB that defined this~~  
 17 ~~restriction type;~~
- 18 | ~~A security is linked to the CSD responsible for its maintenance;~~
- 19 | ~~All event types are linked to the T2S Operator.~~{Split book approach}

20 **DIAGRAM 42 - T2S STATIC AND DYNAMIC DATA OBJECTS AND THE HIERARCHICAL PARTY MODEL**{SPLIT BOOK APPROACH}

### ~~1.3.3.1.8 Data scope~~

~~For each privilege, the hierarchical party model determines the default data scope of the grantee user, i.e. the set of static or dynamic data objects on which the grantee user can trigger the relevant T2S user function. More precisely:~~

~~| Users of the T2S Operator have visibility on all static and dynamic data objects, and can act on objects belonging to participants only in exceptional circumstances, following a specific agreement;~~

~~| Users of the CSDs and of the CBs have visibility on all static and dynamic data objects belonging to the same system entity <sup>89</sup>~~

~~| Users of the CSD participants and of the payment banks have visibility on static and dynamic data objects that are (directly or indirectly) linked to the same party.~~

~~The default data scope of each user can be extended or reduced on the basis of the actual business needs, by means of object privileges. Granting a user with a given privilege on a secured object (or on a secured group) results in extending the data scope of the user by adding the secured object (or the secured group) to the default data scope of the user. Vice versa, denying a user of a given privilege on a secured object (or on a secured group) results in reducing the data scope of the user by removing the secured object (or the secured group) from the default data scope of the user.~~

~~The default data scope of privileges can also be extended or reduced at party level. Granting a party with a given object privilege on a secured object (or on a secured group) as listed in tables~~

~~| Settlement Instruction Management~~

~~| Cash Management~~

~~| Securities Data Management~~

~~| Securities Account Data Management~~

~~| T2S Dedicated Cash Account Data Management~~

~~| Dynamic Data Queries~~

~~| Reference Data Queries~~

~~| Business Day Management Queries~~

~~| Report Queries~~

~~| Billing Queries~~

~~results in extending the data scope of the party by adding the secured object (or the secured group). This allows the party administrator of the grantee party extending the data scope of the users and roles of the party by granting them with the given object privilege on the same~~

<sup>89</sup> A system entity in T2S corresponds to a partition of data equating to the scope of a CSD or CB. For example, the system entity of a CSD includes all the data related to its CSD participants. (Split book approach)

~~object (or secured group). On the other hand, denying a party of a given object privilege on a secured object (or on a secured group)<sup>90</sup> as listed in tables~~

- ~~| Settlement Instruction Management~~
- ~~| Cash Management~~
- ~~| Securities Data Management~~
- ~~| Securities Account Data Management~~
- ~~| T2S Dedicated Cash Account Data Management~~

~~results in reducing the data scope of the party by removing the secured object (or the secured group) from the default data scope of the party. This automatically results in reducing in the same way the data scope of all the users and roles of the party.<sup>91</sup>~~

~~Extending the default data scope of a user can be meaningful in several circumstances. For example:~~

- ~~| A CSD Participant X may grant another CSD Participant Y with the power of attorney to send Settlement Instructions referencing one or many securities accounts of X. This can be obtained by extending the default data scope of a user belonging to Y in order to include the relevant securities account of X.~~
- ~~| A CSD X may grant a CB Y with the privilege to query the Settlement Instructions and the securities positions related to one or many securities accounts of the CSD X. Also in this case, the needed configuration can be set up by extending the default data scope of a user belonging to the CB Y. A similar approach can also be adopted in order to allow a CB X granting a CSD Y with the privilege to query the cash balances related to one or many T2S dedicated cash accounts of the CB X.~~
- ~~| Reducing the default data scope of a user can also be meaningful. For example, a CSD Participant may decide, for specific business or organisational reasons, to grant some or all of its users with a selective access to a given sub-set of its securities accounts. This configuration can be obtained by reducing the default data scope of the relevant users, i.e. by denying them the privilege to access this sub-set of securities accounts, which would normally belong to the default data scope of these users.~~
- ~~| A CSD may decide, for some special purpose securities accounts of one of its CSD Participants (e.g. pledge accounts, accounts used to keep collateral received as collateral taker, or accounts to segregate instructed positions in case of voluntary corporate actions), to prevent the CSD Participant instructing on these securities accounts, which normally belong to the default data scope of this CSD Participant. The CSD can setup this configuration by re-~~

---

<sup>90</sup> Each of the following examples presents only the configuration data that are relevant for the example. All the possible configuration options are defined in the following sections. (Split book approach)

<sup>91</sup> For details on the various types of assignments for an object privilege, see section Configuration of privileges. (Split book approach)

~~ducing the default data scope of the CSD Participant at party level, i.e. by denying to the party the privileges to instruct on these securities accounts.~~

~~The rest of this section presents some examples describing the concept of default, extended and reduced data scope.~~<sup>92</sup>

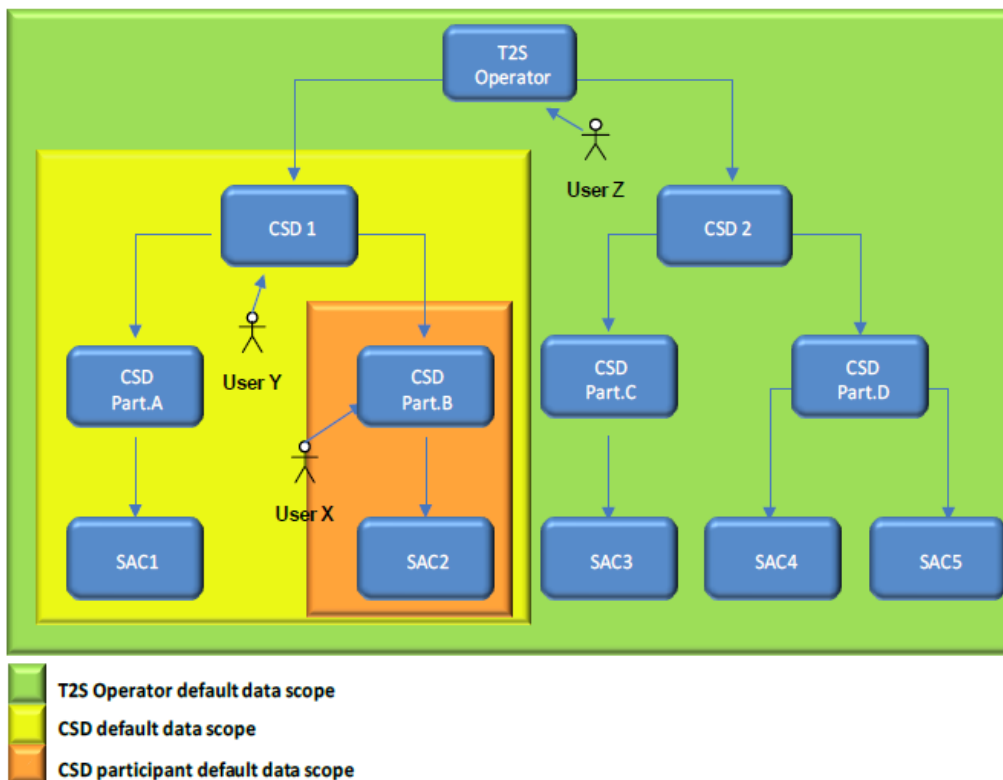

**EXAMPLE 65 - DEFAULT DATA SCOPE(SPLIT BOOK APPROACH)**

**TABLE 50 - USER PRIVILEGES (DEFAULT DATA SCOPE)(SPLIT BOOK APPROACH)**

USER	PRIVILEGE
X	<del>Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD</del>
Y	<del>Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD</del>
Z	<del>Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD</del>

~~The following diagram shows the default data scopes stemming from this access rights configuration for the three users.~~

<sup>92</sup> ~~The data scope reduction for the users is made effective on a deferred basis for performance reasons. The related process runs daily on a scheduled basis and corresponds to the business day event "Update Environment Table". If necessary, users can contact the T2S Operator to request an ad hoc run of the event in order to make the changes immediately effective.(Split book approach)~~

1 **DIAGRAM 43 - DEFAULT DATA SCOPES (SPLIT BOOK APPROACH)**

2

3 **The diagram shows that users X, Y and Z are given different default data scopes, owing to the**  
4 **fact that they belong to different parties located at different levels of the hierarchical party**  
5 **model. More precisely:**

- 6 | **User X of CSD Part.B gets a default data scope including the securities account SAC2 only,**  
7 **as SAC2 is the only securities account of CSD Part.B. User X cannot send Settlement Instruc-**  
8 **tions referencing any other securities account in T2S;**
- 9 | **User Y of CSD1 gets a default data scope including securities accounts SAC1 and SAC2, as**  
10 **these securities accounts belong to CSD participants of CSD1. User Y cannot send Settle-**  
11 **ment Instructions referencing any other securities account in T2S, i.e. any securities ac-**  
12 **count falling under the default data scope of any other CSD;**
- 13 | **User Z of the T2S Operator gets a default data scope including all securities accounts in T2S,**  
14 **as the T2S Operator is at the top level of the hierarchical party model. It is worth mention-**  
15 **ing that such a business scenario would make sense in contingency situations only, with the**  
16 **T2S Operator acting on behalf of a CSD or of a CSD participant;**

17 **EXAMPLE 66 - EXTENDED DATA SCOPE AT OBJECT LEVEL (SPLIT BOOK APPROACH)**

18

**TABLE 51 - USER PRIVILEGES (EXTENDED DATA SCOPE AT OBJECT LEVEL) (SPLIT BOOK APPROACH)**

USER	PRIVILEGE
X	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD

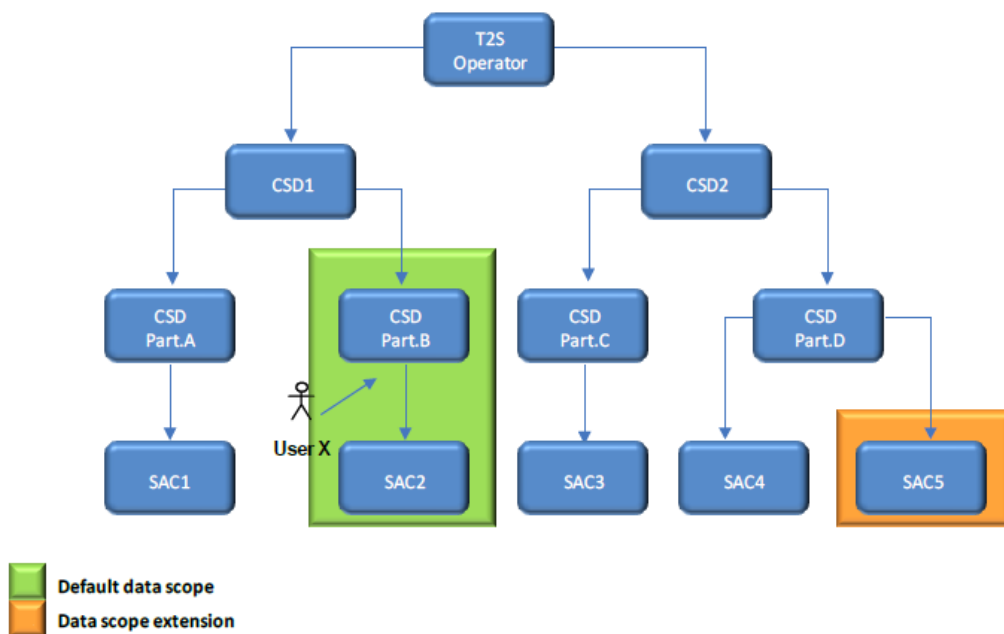

and the same privilege with specific reference to securities account SAC5 as a secured object:

**TABLE 52 - USER OBJECT PRIVILEGES (EXTENDED DATA SCOPE AT OBJECT LEVEL) (SPLIT BOOK APPROACH)**

USER	PRIVILEGE	OBJECT	OBJECT TYPE
X	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	SAC5	Securities Account

The following diagram shows that user X gets a default data scope including all the securities accounts of CSD Part.B (SAC2 only, in this example), plus a data scope extension which includes the securities account SAC5. The resulting extended data scope of user X includes SAC2 and SAC5.

**DIAGRAM 44 - EXTENDED DATA SCOPE AT OBJECT LEVEL (SPLIT BOOK APPROACH)**

**EXAMPLE 67 - EXTENDED DATA SCOPE AT PARTY LEVEL (SPLIT BOOK APPROACH)**

2

**TABLE 55 - USER PRIVILEGES (REDUCED DATA SCOPE) (SPLIT BOOK APPROACH)**

USER	PRIVILEGE	DENY <sup>94</sup>
X	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	False

3  
4

**This user is then denied the same privilege with specific reference to securities account SAC5 as a secured object:**

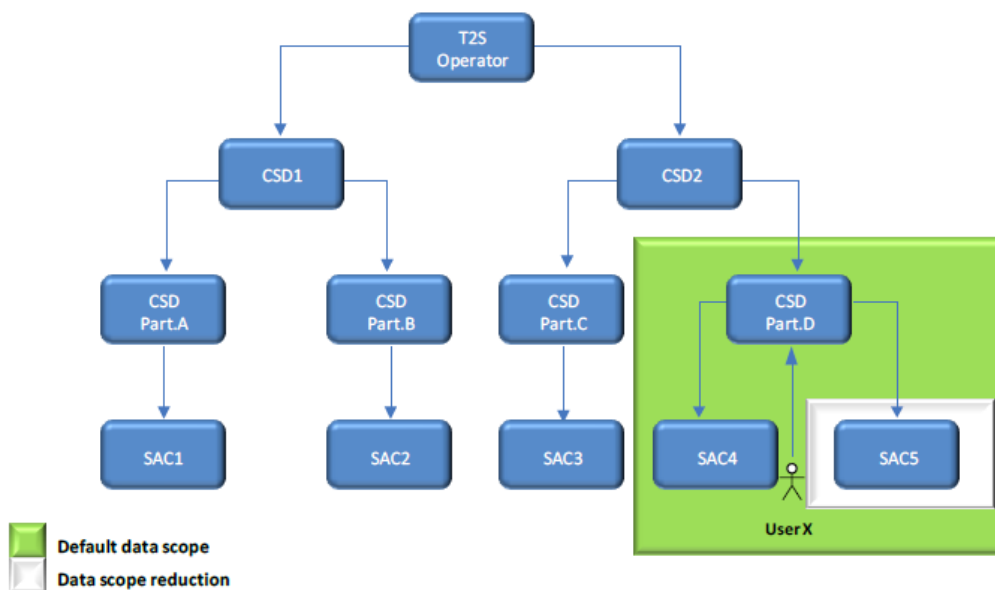

5  
6

**TABLE 56 - USER OBJECT PRIVILEGES (REDUCED DATA SCOPE) (SPLIT BOOK APPROACH)**

USER	PRIVILEGE	OBJECT	OBJECT TYPE	DENY
X	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	SAC5	Securities Account	True

7

**DIAGRAM 46 - REDUCED DATA SCOPE (SPLIT BOOK APPROACH)**

8

**The diagram shows that user X gets a default data scope including all the securities accounts of CSD Part.D (SAC4 and SAC5), minus the data scope reduction which includes SAC5. The resulting reduced data scope of user X includes SAC4 only. (Split book approach)**

9  
10  
11

94 See section Configuration of privileges for a definition of the Deny option. (Split book approach)

### 1 ~~1.3.3.2 Access rights configuration~~

2 ~~This section presents how roles, privileges, secured objects and secured groups can be config-~~  
3 ~~ured in T2S in order to grant each user with the appropriate set of access rights. (Split book ap-~~  
4 ~~proach)~~

#### 5 ~~1.3.3.2.1 Configuration of users~~

##### 6 ~~Links between users and parties~~

7 ~~Each new user is linked to the same party which the creator user belongs to. An exception~~  
8 ~~takes place when creating the first user of a party, i.e.~~

- 9 | ~~When a T2S system administrator creates a new system administrator for a CSD or for a CB;~~
- 10 | ~~When a CSD system administrator creates a new system administrator for one of its CSD~~  
11 ~~participants;~~
- 12 | ~~When a CB system administrator creates a new system administrator for one of its payment~~  
13 ~~banks.~~

14 ~~In all these cases the created user is linked to the party this user is going to administer.~~

15 ~~Through the link with the relevant party, each user inherits a default data scope (See sec-~~  
16 ~~tionData scope). The link between a user and a party cannot be changed, i.e. a user is always~~  
17 ~~linked to the same party.~~

##### 18 ~~Party administrators~~

19 ~~Each party must have at least one party administrator, i.e. a user being granted specific system~~  
20 ~~privileges that allow its grantee to grant any roles and privileges previously granted to the~~  
21 ~~grantee's party. (Split book approach)~~

#### 22 ~~1.3.3.2.2 Configuration of privileges~~

##### 23 ~~Availability of privileges~~

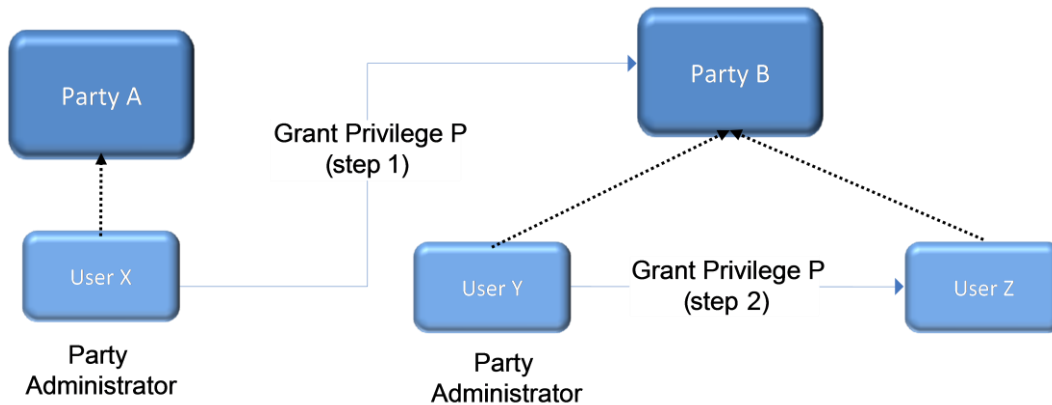

24 ~~Each privilege, just after its creation, is available to the party administrator(s) of the T2S Oper-~~  
25 ~~ator only. This means that party administrators of all the other parties cannot grant this privi-~~  
26 ~~lege to their users.~~

27 ~~A privilege becomes available to a party administrator of a party different from the T2S Opera-~~  
28 ~~tor only after this privilege has been granted to this party. From this moment on, the party ad-~~  
29 ~~ministrator can grant this privilege, according to the rules defined in the following sections.~~

30 ~~This implies that a two-step process is required in order to grant a specific privilege to a user~~  
31 ~~belonging to a party different from the T2S Operator. In the first step, the privilege is granted~~  
32 ~~to the relevant party (so that it becomes available to the party administrator(s) of this party).~~  
33 ~~With the second step, one of the party administrators grants the privilege to the relevant user.~~

1 ~~The following diagram illustrates the access rights configuration steps needed to grant a user Z~~  
2 ~~of a Party B a given privilege P that is already available to the party administrator X of another~~  
3 ~~party A.~~<sup>95</sup>

4 **DIAGRAM 47 - ACCESS RIGHTS CONFIGURATION STEPS (SPLIT BOOK APPROACH)**

5

6 ~~The two configuration steps are as follows:~~

7 | ~~User X, as a party administrator of party A, grants privilege P to party B. From this moment~~  
8 ~~on, privilege P becomes available to the party administrator Y of party B.~~

9 | ~~User Y, as a party administrator of party B, grants privilege P to user Z. From this moment~~  
10 ~~on, user Z can trigger the T2S user functions linked to privilege P.~~

11 **Granting system privileges**

12 ~~System privileges can be granted to roles, users and parties. When granting a system privilege,~~  
13 ~~the grantor specifies appropriate values for the three following assignment options: Deny op-~~  
14 ~~tion, Administration option and Four Eyes option.~~

95 ~~Party A may be the T2S Operator or any other party in T2S which was previously granted privilege P.~~(Split book approach)

1  
2

**TABLE 57 - PRIVILEGE ASSIGNMENT OPTIONS (SPLIT BOOK APPROACH)**

OPTION	DESCRIPTION
<b>Deny</b>	This option specifies whether the associated T2S user function is allowed (Deny is False) or explicitly denied (Deny is True).
<b>Administration</b>	If the grantee of the privilege is a user or a role, this option specifies whether the grantee is allowed to grant the same privilege to another user or role of the same party (Administrator is True) or not (Administrator is False).  If the grantee of the privilege is a party, this option specifies whether the party administrators of the grantee party is allowed to grant the same privilege only to users and roles of the same party (Administrator is False) or also to other parties (Administrator is True).
<b>Four-Eyes</b>	This option specifies whether the grantee of the privilege is allowed to use the function associated to the privilege according to the Two-Eyes (Four-Eyes is False) or Four-Eyes (Four-Eyes is True) principles.  This option is relevant only when the Deny option is set to False and it is always not relevant for privileges related to queries.

3 **Object privileges can also be granted as system privileges. In this case, the object privilege is**  
 4 **granted without specifying any secured object or secured group. This action results in granting**  
 5 **the given privilege on all the objects belonging to the relevant default data scope. For example,**  
 6 **granting a user of a CSD with the object privilege Update Securities Account without specifying**  
 7 **a given securities account or a given group of securities account, results in granting the user**  
 8 **with the privilege to update all the securities accounts of the CSD.**

9 **EXAMPLE 69 - ASSIGNMENT OF SYSTEM PRIVILEGES TO ROLES (SPLIT BOOK APPROACH)**

10

**TABLE 58 - ASSIGNMENT OF SYSTEM PRIVILEGES TO ROLES (SPLIT BOOK APPROACH)**

11  
12

ROW	ROLE	PRIVILEGE	DENY	ADMIN	FOUR-EYES
1	Securities Account Management	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	False	False	False
2	Securities Account Management	Securities Account Reference Data Query	False	False	not relevant
3	Securities Account Administration	Send Settlement Instruction with non-modifiable flag activated	True	True	not relevant
4	Securities Account Admin-	Securities Account Reference Data	True	True	not relevant

ROW	ROLE	PRIVILEGE	DENY	ADMIN	FOUR-EYES
	Administration	Query			
5	Party-Management	Create-Party	False	False	True
6	Party-Management	Update-Party	False	False	True
6	Party-Management	Delete-Party	False	False	True
7	Party-Management	Party-Reference-Data-Query	False	True	not-relevant

1 For each assignment of a system privilege to a role, three additional attributes define the fea-  
 2 tures of such assignment.

3 For example, according to row 1, the privilege to send new Settlement Instructions is assigned  
 4 to the Securities Account Management role:

- 5 | Without Deny, i.e. users linked to the Securities Account Management role can send new  
 6 Settlement Instructions according to the Two Eyes principle (as the privilege is assigned  
 7 without Four-Eyes);
- 8 | Without Admin, i.e. users linked to the Securities Account Management role cannot grant  
 9 the privilege to send new Settlement Instructions to other roles and users.

10 As per row 2, the privilege to query securities accounts is assigned to the Securities Account  
 11 Management role with the same assignment options as in row 1.<sup>96</sup>

12 According to row 3, the privilege to send new Settlement Instructions with non-modifiable flag  
 13 activated is assigned to the Securities Account Administration role:

- 14 | With Deny, i.e. users linked to the Securities Account Administration role cannot send new  
 15 Settlement Instructions with non-modifiable flag activated;
- 16 | With Admin, i.e. users linked to the Securities Account Administration role can grant the  
 17 privilege to send new Settlement Instructions with non-modifiable flag activated to other  
 18 roles and users of the same party, according to the Two Eyes principle or to the Four Eyes  
 19 principle (as the privilege is assigned without Four-Eyes).

20 Row 4 of the table stipulates that the privilege to query securities accounts is assigned to the  
 21 Securities Account Administration role with the same assignment options as in row 3.

22 As a whole, rows from 1 to 4 result in a segregation of duties between business users and ac-  
 23 cess rights administrators. In fact, users linked to the Securities Account Management role can  
 24 query and instruct securities accounts, but they cannot configure the same access rights for  
 25 any other user. On the contrary, users linked to the Securities Account Administration role can  
 26 not query or instruct securities accounts, but they can configure these access rights for other  
 27 users.

96 In this case the setting for the Four Eyes assignment option is not applicable, as the privilege refers to a query. (Split book approach)

~~According to row 5 the privilege to create parties is assigned to the Party Management role:~~

- ~~Without Deny, i.e. users linked to the Party Management role can create parties according to the Four Eyes principle only;~~

- ~~Without Admin, i.e. users linked to the Party Management role cannot grant the privilege to create parties to other roles and users.~~

~~As per row 6, the privilege to maintain parties is assigned to the Party Management role with the same assignment options.~~

~~Finally, according to row 7, the privilege to query parties is assigned to the Party Management role:~~

- ~~Without Deny, i.e. users linked to the Party Management role can query parties;~~

- ~~With Admin, i.e. users linked to the Party Management role can grant the privilege to query parties to other roles and users of the same party.~~

~~As a whole, rows from 5 to 7 only result in a partial segregation of duties between business users and access rights administrators. In fact:~~

- ~~Business users linked to the Party Management role can create and maintain parties, but they cannot configure the same access rights for any other user;~~

- ~~On the contrary, access rights administrators linked to the Party Management role can query parties and they can also grant the same privilege to other users.~~

**EXAMPLE 70 - ASSIGNMENT OF SYSTEM PRIVILEGES TO USERS (SPLIT BOOK APPROACH)**

**TABLE 59 - ASSIGNMENT OF SYSTEM PRIVILEGES TO USERS (SPLIT BOOK APPROACH)**

ROW	PRIVILEGE	USER	DENY	ADMIN	FOUR EYES
1	Create Security	UX	False	False	False
2	Create Security	UY	True	True	False

~~For each assignment of a system privilege to a user, three additional attributes define the features of such assignment.~~

~~According to row 1, the privilege to create securities is assigned to user UX:~~

- ~~Without Deny, i.e. user UX can create securities according to the Two Eyes principle (as the privilege is assigned without Four Eyes);~~

- ~~Without Admin, i.e. user UX cannot grant the privilege to create securities to other roles and users.~~

~~Similarly, row 2 stipulates that the privilege to create securities is assigned to user UY:~~

- ~~With Deny, i.e. user UY cannot create securities;~~

~~With Admin, i.e. user UY can grant the privilege to create securities to other roles and users of the same party, according to the Two Eyes principle or to the Four Eyes principle (as the privilege is assigned without Four Eyes).~~

~~As a whole, this configuration results in a full segregation of duties between business users and access rights administrators. In fact, user UX can create securities, but without having the possibility to grant the same privilege to any other user. Vice versa, user UY can configure this privilege for other users, but without having the possibility to use it.~~

**EXAMPLE 71 - ASSIGNMENT OF SYSTEM PRIVILEGES TO PARTIES (SPLIT BOOK APPROACH)**

**TABLE 60 - ASSIGNMENT OF SYSTEM PRIVILEGES TO PARTIES (SPLIT BOOK APPROACH)**

PRIVILEGE	PARTY	DENY	ADMIN	FOUR-EYES
T2S-Dedicated-Cash-Account-Reference-Data-Query	Payment-Bank-A	False	True	False

~~For each assignment of a system privilege to a party, three additional attributes define the features of such assignment. In this example, the privilege to query T2S dedicated cash accounts is assigned to the payment bank A:~~

- ~~Without Deny, i.e. parties administrators of the payment bank A can grant the privilege to query T2S dedicated cash accounts to other roles and users of the same party;~~
- ~~With Admin, i.e. parties administrators of the payment bank A can grant the privilege to query T2S dedicated cash accounts to other parties.~~

~~The Four-Eyes attribute is set to false but it is not relevant for this example, as the privilege refers to a Query.~~

**Granting object privileges**

~~Like system privileges, object privileges as well can be granted to roles, users and parties. However, in this case it is also necessary to specify the secured object(s) on which the privilege is going to be granted. In this respect, three different options are possible:~~

- ~~To grant the privilege on a secured object. As a result, the grantee is assigned the relevant privilege with specific reference to the given secured object. For example, this option makes it possible to grant a user with the privilege to initiate immediate liquidity transfer orders debiting a specific T2S dedicated cash account;~~
- ~~To grant the privilege on a secured group. As a result, the grantee is assigned the relevant privilege with specific reference to all the secured objects included in the given secured group (See section [Configuration of secured objects and secured groups](#)) [ 192]. For example, this option makes it possible to grant a user with the privilege to display reference data of all the securities accounts included in a previously defined secured group of securities accounts;~~
- ~~To grant the privilege on a party. As a result, the grantee is assigned the relevant privilege with specific reference to all the secured objects belonging to the given party. For example,~~

~~this option makes it possible to grant a user with the privilege to send Settlement Instructions against all the securities accounts of a party.~~<sup>97</sup>

~~Also when granting object privileges, T2S requires the specification of appropriate values for the Deny option, the Administration option and the Four-Eyes option.~~

**EXAMPLE 72 - ASSIGNMENT OF OBJECT PRIVILEGES TO ROLES (SPLIT BOOK APPROACH)**

**TABLE 61 - ASSIGNMENT OF OBJECT PRIVILEGES TO ROLES (SPLIT BOOK APPROACH)**

ROW	ROLE	PRIVILEGE	OBJECT	OBJECT-TYPE	DENY	ADMIN	FOUR-EYES
1	R01	Securities Account Position Query	SAC1	Securities Account	False	False	False
2	R02	Securities Account Position Query	SAC2	Securities Account	False	True	False
3	R01	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	SAC1	Securities Account	False	False	True

~~For each assignment of an object privilege to a role, three additional attributes define the features of such assignment:~~

~~For example, according to row 1, the privilege to query the securities account SAC1 is assigned to the role R01:~~

- ~~| Without Deny, i.e. users linked to the role R01 can query the securities account SAC1;~~
- ~~| Without Admin, i.e. users linked to the role R01 cannot grant the privilege to query the securities account SAC1 to other roles and users of the same party.~~

~~Row 2 stipulates that the privilege to query the securities account SAC2 is assigned to the role R01:~~

- ~~| Without Deny, i.e. users linked to the role R01 can query the securities account SAC2;~~
- ~~| With Admin, i.e. users linked to the role R01 can grant the privilege to query the securities account SAC2 to other roles and users of the same party.~~

~~Finally, according to row 3, the privilege to send new Settlement Instructions referencing the securities account SAC1 is assigned to the role R01:~~

<sup>97</sup> ~~If the party is a CSD participant, then the grantee can instruct all the securities accounts of this CSD participant. If the party is a CSD, then the grantee can instruct all the securities accounts of all the CSD participants of this CSD. (Split book approach)~~

- ~~| Without Deny, i.e. users linked to the role R01 can send new Settlement Instructions referencing the securities account SAC1 according to the Four Eyes principle only (as the privilege is assigned with Four Eyes);~~
- ~~| Without Admin, i.e. users linked to the role R01 cannot grant the privilege to send new Settlement Instructions referencing the securities account SAC1 to other roles and users of the same party.~~

**EXAMPLE 73 - ASSIGNMENT OF OBJECT PRIVILEGES TO USERS (SPLIT BOOK APPROACH)**

**TABLE 62 - ASSIGNMENT OF OBJECT PRIVILEGES TO USERS (A) (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT TYPE	USER	DENY	ADMIN	FOUR EYES
Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	SAC1	Securities Account	UX	False	False	True

~~For each assignment of an object privilege to a user, three additional attributes define the features of such assignment. In this example, the privilege to send new Settlement Instructions referencing the securities account SAC1 is assigned to user UX:~~

- ~~| Without Deny, i.e. user UX can send new Settlement Instructions referencing the securities account SAC1 according to the Four Eyes principle (as the privilege is assigned with Four Eyes);~~
- ~~| Without Admin, i.e. user UX cannot grant the privilege to send new Settlement Instructions referencing the securities account SAC1 to other roles and users of the same party.~~

**EXAMPLE 74 - ASSIGNMENT OF OBJECT PRIVILEGES TO PARTIES (SPLIT BOOK APPROACH)**

**TABLE 63 - ASSIGNMENT OF OBJECT PRIVILEGES TO PARTIES (A) (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT TYPE	PARTY	DENY	ADMIN	FOUR EYES
Securities Account Position Query	SAC1	Securities Account	CB-A	False	True	False
Securities Account Position Query	SAC1	Securities Account	Payment Bank B	False	False	False

~~For each assignment of an object privilege to a party, three additional attributes define the features of such assignment. In this example, the privilege to query the securities account SAC1 is assigned to the central bank A:~~

~~| Without Deny, i.e. parties administrators of the central bank A can grant the privilege to query the securities account SAC1 to other roles and users of the same party;~~

~~| With Admin, i.e. parties administrators of the central bank A can grant the privilege to query the securities account SAC1 to other parties.~~

~~Similarly, the privilege to query the securities account SAC1 is assigned to the payment bank B:~~

~~| Without Deny, i.e. parties administrators of the payment bank B can grant the privilege to query the securities account SAC1 to other roles and users of the same party;~~

~~| Without Admin, i.e. parties administrators of the payment bank B cannot grant the privilege to query the securities account SAC1 to other parties.~~

### ~~Contradicting privileges~~

~~Each system privilege and each object privilege can be granted to a role, a user or a party only once; however if a user or party has already been granted a system or object privilege via role it is still possible to assign the same privilege directly. In this case the directly granted privilege has priority over the one granted via role. This is in order to prevent the possibility to grant contradicting privileges to the same role, user or party, e.g.:~~

~~| The same user being allowed (grant with deny option set to false) and not allowed (grant with deny option set to true) to send new Settlement Instructions;~~

~~| The same role being assigned the privilege to input an immediate liquidity transfer order both according to the Two-Eyes principle and to the Four-Eyes principle.~~

~~For this reason, when granting a system privilege or an object privilege to a role, a user or a party, T2S applies the following rules:~~

~~| a system privilege can be granted to a role, a user or a party if and only if the role, the user or the party is not yet linked directly to the same system privilege;~~

~~| an object privilege on a given object or group of objects can be granted to a role, a user or a party if and only if the role, the user or the party is not yet linked directly to the same object privilege on the same object or group of object;~~

~~| a role can be granted to a user or a party if and only if the user or the party is not yet linked, directly or indirectly, to one or more system privileges contained in the role;~~

~~| These rules imply that one privilege can always be granted both as a system privilege and as an object privilege to the same role, user or party without resulting in a contradicting configuration. This also applies when granting the same object privilege on two different objects or group of objects to the same role, user or party.~~

~~The following tables show some examples on the assignment of contradicting and non-contradicting privileges.~~

**TABLE 64 - ASSIGNMENT OF CONTRADICTING PRIVILEGES (A) (SPLIT BOOK APPROACH)**

ROW	PRIVILEGE	PRIVILEGE TYPE	OBJECT	GRANTEE	DENY	ADMIN	FOUR-EYES
1	Update-Security	System	ISIN00001	User-A	False	False	False
2	Update-Security	System	ISIN00001	User-A	True	False	False

The above configuration is rejected; it is not possible to assign the same system privilege to the same user regardless of the value of the Deny flag. If Row 1 is created first, it will not be possible to create Row 2. This prevents the assignment of privileges representing a contradicting grant (in this example, the two privileges respectively allow and forbid the Update of Securities ISIN00001).

**TABLE 65 - ASSIGNMENT OF CONTRADICTING PRIVILEGES (B) (SPLIT BOOK APPROACH)**

ROW	PRIVILEGE	PRIVILEGE TYPE	OBJECT	GRANTEE	DENY	ADMIN	FOUR-EYES
1	Update-Security	System	n/a	User-A	False	False	False
2	Update-Security	Object	ISIN00001	User-A	True	False	False
3	Update-Security	Object	ISIN29021	User-A	False	False	False

The above configuration is allowed. It is possible to assign the same Privilege both at System and Object level. Row 1 grants generic access to the Update Securities function on the default data scope of User A. Row 2 blocks Update access to ISIN00001; for example, if ISIN00001 is within the default data scope of User A, the creation of Rows 1 and 2 corresponds to allowing User A to update all the Securities in its own default data scope with the exception of ISIN00001.

Additionally, Row 3 grants the same Update rights on ISIN29021. This is not in contradiction with the other privilege assignments, but is meaningful only if ISIN29021 is outside of User A's default data scope. Otherwise, it is redundant with row 1.

**TABLE 66 - ASSIGNMENT OF CONTRADICTING PRIVILEGES (C) (SPLIT BOOK APPROACH)**

ROW	PRIVILEGE	PRIVILEGE TYPE	OBJECT	GRANTEE	DENY	ADMIN	FOUR-EYES
1	Update-Security	Object	ISIN00001	User-A	False	False	False
2	Update-Security	Object	ISIN00001	User-A	False	False	True

Similarly to the first example, this configuration is rejected. It is not possible to assign the same privilege with different values for the Four-Eyes flag.

**TABLE 67 - ASSIGNMENT OF CONTRADICTING PRIVILEGES (D) (SPLIT BOOK APPROACH)**

ROW	PRIVILEGE	PRIVILEGE TYPE	OBJECT	GRANTEE	DENY	ADMIN	FOUR-EYES
1	Update Security	Object	ISIN00001	Role-X	True	False	False
2	Update Security	Object	ISIN00001	User-A	False	False	False

The above configuration is allowed, but the system blocks any attempt to grant Role X to User A. Doing so would result in a contradicting configuration similar to assigning the same privilege twice directly to User A.

**TABLE 68 - ASSIGNMENT OF CONTRADICTING PRIVILEGES (E) (SPLIT BOOK APPROACH)**

ROW	PRIVILEGE	PRIVILEGE TYPE	OBJECT	GRANTEE	DENY	ADMIN	FOUR-EYES
1	Update Security	System	n/a	Role-A	False	False	False
2	Update Security	System	n/a	USER-A (through Role-A)	False	False	False
3	Update Security	System	n/a	USER-A directly	False	False	True

The above configuration is allowed. It is possible to assign the same Privilege firstly via Role and then directly to a party or a user. As a result the user A can update securities only in four-eyes mode.

**Revoking privileges**

System privileges and object privileges can be revoked from roles, users and parties.

When revoking a system privilege or an object privilege from the user, this just results in the removal of the privilege from the list of privileges linked to the user.

When revoking a system privilege or an object privilege from a role, this results in the removal of the privilege from the list of privileges linked to the role. Consequently, all the other roles, users and parties linked to the role are not linked anymore to the privilege.

When revoking a system privilege or an object privilege from a party, T2S applies a cascade effect. This results in the removal of the privilege:

- | from the list of privileges linked to the party and
- | from the list of privileges linked to all the roles and users of the party.

The following table shows all the possible scenarios for revoking privileges that are allowed in T2S, their link with the cascade process and how party administrators of GDSs and CBs can ensure that all the privileges revoked from one of their parties are revoked also from all the users of the same party:

1  
2

**TABLE 69 - CASCADE PROCESS WHEN REVOKING PRIVILEGES (SPLIT BOOK APPROACH)**

Function	From	Cascade	Propagation to users
Revoke Privilege	User	n/a	As the grantee is already a user, there is no need to trigger any cascade process.
Revoke Privilege	Role	No	<p>If the party administrator of the CSD participant<sup>98</sup> granted a privilege included in the role directly to other users of the CSD participant, then the removal of this privilege from the role would not revoke the same privilege from these users.</p> <p>In fact, when revoking a privilege from a role, T2S does not trigger the cascade process as this may result in unintended removal of privileges from the users of the CSD participant. For example, even a simple movement of a privilege between two roles assigned to the same CSD participant (i.e. revoking the privilege from the first role and granting it to the latter) would imply the removal of the same privilege from all the users of this CSD participant and this would oblige the party administrator of the</p>

98 What is described in this table for CSD participants applies as well to payment banks and external CSDs. (Split book approach)

Function	From	Cascade	Propagation-to-users
			<p><del>CSD-participant-to-grant again this-privileges-to-all the-impacted-users.</del></p> <p><del>In-order-to-ensure-that the-relevant-privilege-is revoked-also-from-the users-of-the-CSD-partici- pant-(if-this-is-the-intend- ed-goal),-the-party-ad- ministrator-of-the-CSD should-grant-directly-this privilege-to-the-CSD-par- ticipant-and-then-revoke it,-as-this-will-trigger-the cascade-process-related to-the-Revoke-Privilege function-from-Party-(see next-row-of-this-table):</del></p>
<del>Revoke-Privilege</del>	<del>Party</del>	<del>Yes</del>	<p><del>T2S-triggers-automatical- ly-the-cascade-process, which-ensures-that-privi- leges-revoked-from-a party-are-also-revoked from-all-the-users-and roles-of-the-same-party.</del></p>

1 ~~The-cascade-process-is-automatically-triggered-in-a-deferred-mode-one-time-per-day.-However,~~  
 2 ~~in-case-the-party-administrator-needs-the-cascade-process-to-take-place-immediately,-this-can~~  
 3 ~~be-achieved-by-contacting-the-T2S-Operator,-as-the-T2S-Operator-can-trigger-this-process-on~~  
 4 ~~demand-also-intraday.}{Split book approach}~~

5 ~~1.3.3.2.3 Configuration of roles~~

6 ~~Links between roles~~

7 ~~T2S-supports-a-role-based-access-control-(RBAC)-model.-This-results-in-the-possibility-to-inherit~~  
 8 ~~privileges-from-two-or-more-roles.~~

9 ~~Granting roles~~

10 ~~Roles-can-be-granted-to-users-and-parties.~~

11 ~~When-granting-a-role-to-a-user,-the-grantee-user-inherits-all-the-privileges-of-the-granted-role,~~  
 12 ~~i.e.-all-the-privileges-linked-to-the-granted-role.~~

1 ~~When granting a role to a party, the grantee party inherits all the privileges of the granted role, i.e. all the privileges to the granted role.~~

3 ~~Revoking roles~~

4 ~~Roles can be revoked from users and parties.~~

5 ~~When revoking a role from a user, this user loses all the privileges of the revoked role, i.e. all the privileges linked to the revoked role.~~

7 ~~When revoking a role from a party, this party loses all the privileges of the revoked role, i.e. all the privileges linked to the revoked role.~~

9 ~~Both when revoking roles from users and from parties, T2S does not apply a cascade effect.~~

10 ~~The following table shows all the possible scenarios for revoking roles that are allowed in T2S, their link with the cascade process and how party administrators of CSDs and CBs can ensure that all the roles revoked from one of their parties (and all the privileges included in these roles) are revoked also from all the users of the same party:~~

14 **TABLE 70 - CASCADE PROCESS WHEN REVOKING ROLES (SPLIT BOOK APPROACH)**

15

Function	From	Cascade	Propagation to Users
Revoke Role	User	n/a	As the grantee is already a user, there is no need to trigger any cascade process.
Revoke Role	Party	No	If the party administrator of the CSD participant <sup>99</sup> granted the role (or a privilege included in the role) to any users of the CSD participant, then the revoking of this role from the party would not revoke the same role (or the privilege included in the role) from these users.  In fact, when revoking a role from a party, T2S does not trigger the cascade process as this may

99 ~~What is described in this table for CSD participants applies as well to payment banks and external CSDs. (Split book approach)~~

Function	From	Cascade	Propagation to Users
			<p><del>result in unintended removal roles (or privileges) from the users of the CSD participant <sup>100</sup>;</del></p> <p><del>In order to ensure that the relevant role is revoked also from the users of the CSD participants, the party administrator of the CSD should revoke all the privileges included in the role from the role itself and then delete the role. It should be noted that this approach can be applied without unintended side effects on other CSD participants only if the role was specifically created for (and assigned to) the relevant CSD participant only, otherwise the procedure just described would also have an effect on all CSD participants (and on all their users) being granted with the same role.</del></p> <p><del>Furthermore, in order to ensure that any privilege belonging to the role and that was granted directly to users of the CSD participants is also revoked from these users, the party administrator of the CSD should grant directly</del></p>

100 ~~See Cascade Process when Revoking Privileges for further details.~~ (Split book approach)

Function	From	Cascade	Propagation to Users
			this privilege to the CSD Participant and then revoke it, as this will trigger the cascade process related to the Revoke Privilege function from Party (see Cascade Process when Revoking Privileges).

1 The cascade process is automatically triggered in a deferred mode one time per day. However,  
 2 in case the party administrator needs the cascade process to take place immediately, this can  
 3 be achieved by contacting the T2S Operator, as the T2S Operator can trigger this process on  
 4 demand also intraday. {Split book approach}

5 **1.3.3.2.4 Configuration of secured objects and secured groups**

6 T2S provides the possibility to create and maintain secured groups, i.e. sets of secured objects  
 7 of the same type (See section Secured group). Each secured group is defined by the following  
 8 elements:

- 9 | The identifier of the secured group;
- 10 | The type of the secured group, i.e. the type of the secured objects that can be assigned to  
 11 the secured group.

12 **EXAMPLE 75 -- CREATION OF A NEW SECURED GROUP {SPLIT BOOK APPROACH}**

13  
 14 **TABLE 71 - CREATION OF A NEW SECURED GROUP {SPLIT BOOK APPROACH}**

SECURED-GROUP-ID	SECURED-GROUP-TYPE
SGX	Securities Account

16 Each newly created secured group must also already include references to one or more secured  
 17 objects. After its creation, the secured group can be assigned additional secured objects, pro-  
 18 vided that they are the same type as the secured group. Secured objects previously assigned to  
 19 a secured group can also be removed from the same secured group.

20 **EXAMPLE 76 -- ASSIGNMENT OF SECURED OBJECTS TO A SECURED GROUP {SPLIT BOOK APPROACH}**

21

**TABLE 72 - ASSIGNMENT OF SECURED OBJECTS TO A SECURED GROUP (SPLIT BOOK APPROACH)**

SECURED-GROUP-ID	SECURED-OBJECT-ID
SGX	ABC
SGX	XYZ
SGX	MNO

**Object privileges can be granted on secured groups to roles, users and parties.**

**EXAMPLE 77 - ASSIGNMENT OF OBJECT PRIVILEGES ON SECURED GROUPS (SPLIT BOOK APPROACH)**

**TABLE 73 - ASSIGNMENT OF OBJECT PRIVILEGES ON SECURED GROUPS TO ROLES (SPLIT BOOK APPROACH)**

ROLE	PRIVILEGE	OBJECT	OBJECT-TYPE	DENY	ADMIN	FOUR-EYES
R01	Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	SGX	Secured-Group	False	False	True
R01	Securities Account Position Query	SGX	Secured-Group	False	False	False

**TABLE 74 - ASSIGNMENT OF OBJECT PRIVILEGES ON SECURED GROUPS TO USERS (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT-TYPE	USER	DENY	ADMIN	FOUR-EYES
Update Securities Account	SGX	Secured-Group	Uy	False	False	True

**TABLE 75 - ASSIGNMENT OF OBJECT PRIVILEGES ON SECURED GROUPS TO PARTIES (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT-TYPE	PARTY	DENY	ADMIN	FOUR-EYES
Securities Account Position Query	SGX	Secured-Group	CSD-Part-A	False	True	False
Update Securities Account	SGX	Secured-Group	CSD-Part-A	False	False	False
Delete Securities Account	SGX	Secured-Group	CSD-Part-A	False	False	True

**For each assignment of an object privilege to a role, three additional attributes define the features of such assignment:**

**In this example:**

- 1 | ~~According to Assignment of Object Privileges on Secured Groups to Roles, users granted~~  
2 | ~~with role R01 are authorised to query and to send new Settlement Instructions according to~~  
3 | ~~the Four-Eyes principle referencing all securities accounts included in the secured group~~  
4 | ~~SGX. Users granted with role R01, however, cannot grant the same privileges to other roles~~  
5 | ~~and users (as the administration option is set to false);~~
- 6 | ~~Assignment of Object Privileges on Secured Groups to Users stipulates that user Uy can up-~~  
7 | ~~date according to the Four-Eyes principle all securities accounts included in the secured~~  
8 | ~~group SGX. User Uy, however, cannot grant the same privilege to other roles and users (as~~  
9 | ~~the administration option is set to false);~~
- 10 | ~~Finally, as per Assignment of Object Privileges on Secured Groups to Parties, the CSD partic-~~  
11 | ~~ipant A is granted with the privileges to query, update (according to the Two-Eyes principle)~~  
12 | ~~and delete (according to the Four-Eyes principle) all securities accounts included in the se-~~  
13 | ~~cured group SGX. This implies that a party administrator of the CSD participant A can grant~~  
14 | ~~the same privileges to other users and roles of the same party. Furthermore, owing to the~~  
15 | ~~specific configuration of the administration option for the three privileges, a party adminis-~~  
16 | ~~trator of the CSD participant A can only grant the privilege to query all securities accounts~~  
17 | ~~of the secured group SGX to other parties (as the administration option is set to true for this~~  
18 | ~~privilege only). (Split book approach)~~

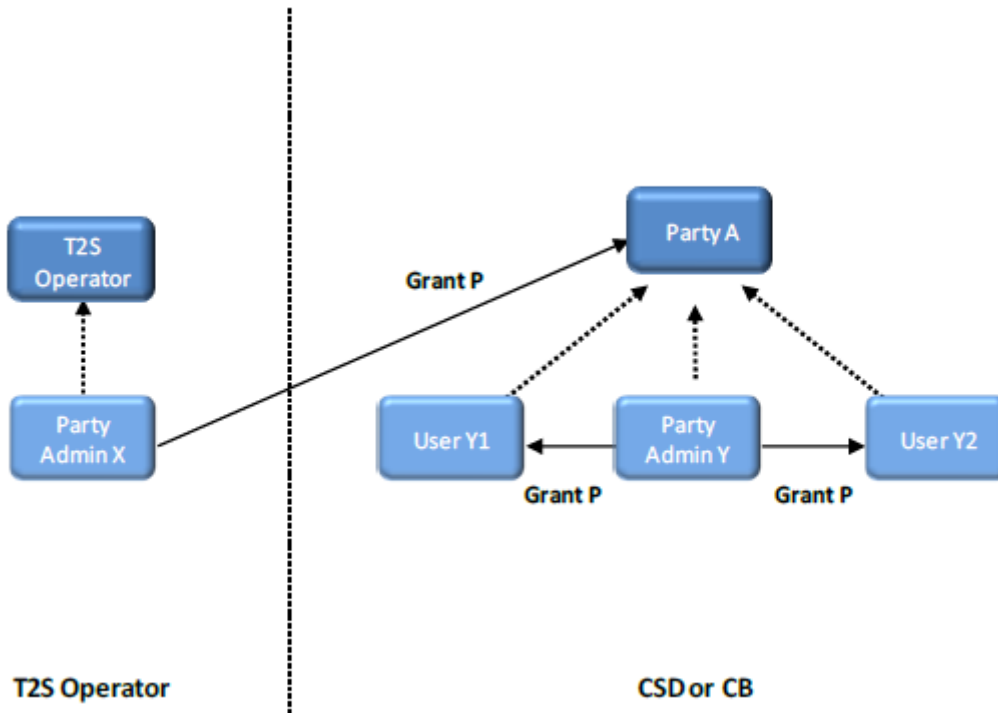

#### 19 | ~~4.3.3.3 Access rights configuration process~~

20 | ~~As described in section Configuration of privileges, before the party administrator of a given~~  
21 | ~~party can grant a privilege to a user of the same party, the same privilege has to be granted to~~  
22 | ~~the same party, so that it becomes available to the party administrator(s) of the party.~~

23 | ~~On this basis, the following diagram illustrates the steps needed for granting a given privilege P~~  
24 | ~~to the users of a CSD or of a CB (identified as Party A in the diagram).~~

1

**DIAGRAM 48 - ACCESS RIGHTS CONFIGURATION PROCESS (A) (SPLIT BOOK APPROACH)**

2

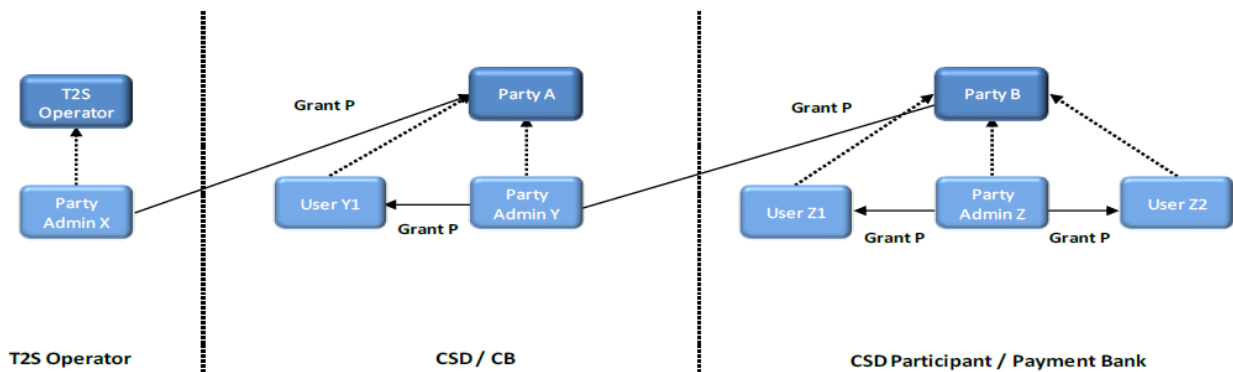

3 **The diagram shows that the two required steps are as follows:**

- 4 | **User X, as a party administrator of the T2S Operator, grants the privilege P to the party A;**
- 5 | **User Y, as a party administrator of the party A, grants the privilege P to all the relevant users (in this case, users Y1 and Y2).**

7 **The same process applies when a CSD or a CB needs to configure access rights for their CSD participants or for their payment banks, respectively. The following diagram illustrates all the steps needed for granting a given privilege P to the users of a CSD participant or of a payment bank (party B in the diagram), via the relevant CSD or CB (party A in the diagram).**

11

**DIAGRAM 49 - ACCESS RIGHTS CONFIGURATION PROCESS (B) (SPLIT BOOK APPROACH)**

12

13 **The diagram shows that the three required steps are as follows:**

- 1 | ~~User X, as a party administrator of the T2S Operator, grants the privilege P to the party A~~
- 2 | ~~(i.e. to a CSD or to a CB);~~
- 3 | ~~User Y, as a party administrator of the party A, grants the privilege P to the party B (i.e. to a~~
- 4 | ~~CSD participant or to a payment bank, respectively);~~
- 5 | ~~User Z, as a party administrator of the party B, grants the privilege P to the relevant users~~
- 6 | ~~(in this case users Z1 and Z2).~~

7 ~~In addition, the diagram shows that user Y, as a party administrator of the party A, can also~~  
8 ~~grant the privilege P to the user Y1, as this user belongs to the same party.~~

9 ~~These two examples illustrates that the access rights configuration process in T2S consists in~~  
10 ~~two main tasks:~~

- 11 | ~~Configuration of access rights at party level~~
- 12 | ~~Configuration of access rights at user level (Split book approach)~~

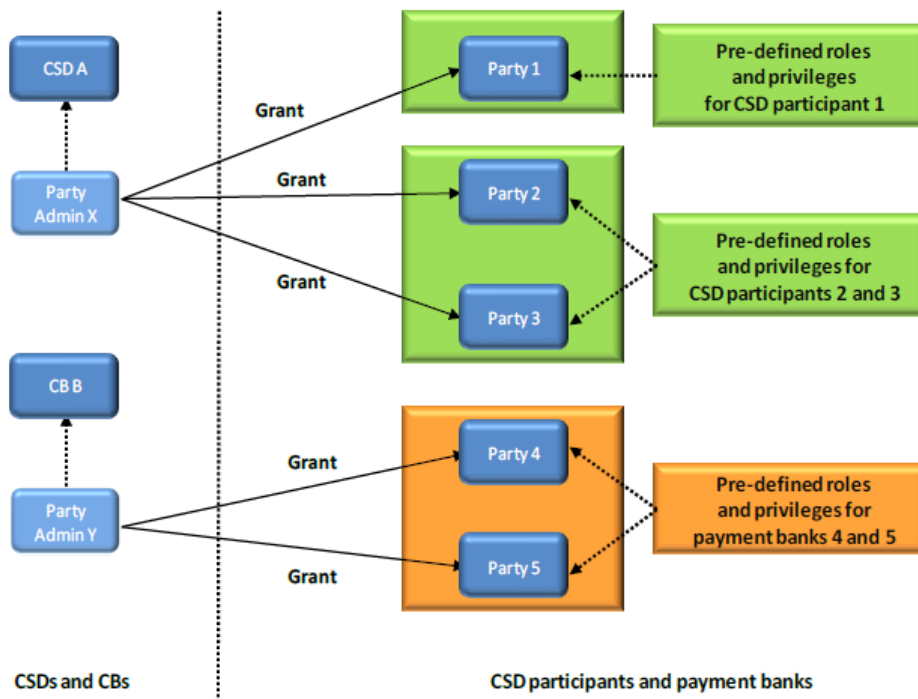

### 13 ~~1.3.3.3.1 Configuration of access rights at party level~~

14 ~~This task consists in the assignment of the relevant set of roles and privileges to a given party~~  
15 ~~in T2S. A party administrator of the T2S Operator performs this task for the configuration of~~  
16 ~~access rights of CSDs and CBs.~~

17 ~~The following diagram shows an example in which the party administrator of the T2S Operator~~  
18 ~~grants to all the CSDs the same set of roles and privileges. This set includes all the privileges~~  
19 ~~needed by the CSDs and all the privileges needed by the CSD participants. Similarly, the T2S~~  
20 ~~Operator grants to all the CBs the same set of roles and privileges, including also all the privi-~~  
21 ~~leges needed by the payment banks.~~

1

**EXAMPLE 78 - CONFIGURATION OF ACCESS RIGHTS AT PARTY LEVEL BY THE T2S OPERATOR {SPLIT BOOK APPROACH}**

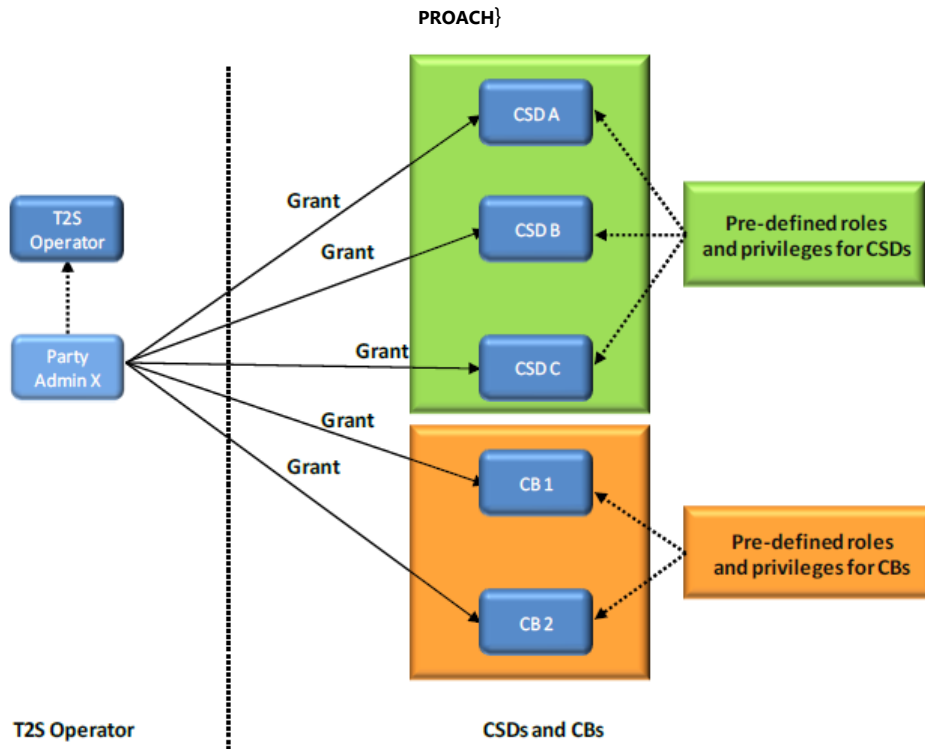

2

3 **A party administrator of each CSD assigns the relevant set of roles and privileges to all its CSD**  
 4 **participants, whereas a party administrator of each CB assigns the relevant set of roles and**  
 5 **privileges to all its payment banks.**

6 **The following diagram shows an example in which the party administrator of a CSD A config-**  
 7 **ures the relevant access rights for three CSD participants Party 1, Party 2 and Party 3. This re-**  
 8 **sults in two different set of roles and privileges, the first one being granted to the CSD partici-**  
 9 **pant Party 1 only, the latter being assigned to both CSD participants Party 2 and Party 3. Simi-**  
 10 **larly, the party administrator of a CB B assigns the relevant access rights to two payment banks**  
 11 **Party 4 and Party 5, this task resulting in the configuration of the same set of access rights for**  
 12 **both payment banks Party 4 and Party 5. {Split book approach}**

1 **EXAMPLE 79 - CONFIGURATION OF ACCESS RIGHTS AT PARTY LEVEL BY THE PARTY ADMINISTRATOR OF A CSD (SPLIT BOOK AP-**  
 2 **PROACH)**

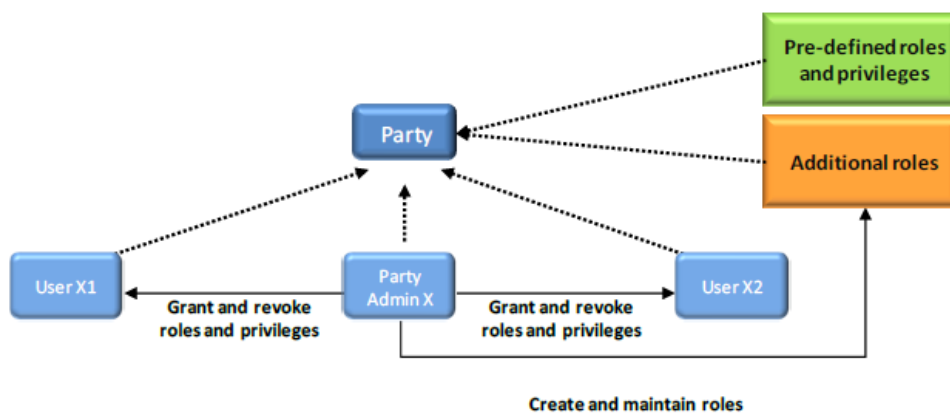

3

4 **1.3.3.3.2 Configuration of access rights at user level**

5 **After the configuration of access rights at party level has been set up for a given party, its party**  
 6 **administrator(s) can perform the configuration of access rights at user level, in order to assign**  
 7 **the appropriate roles and privileges to all the users of the given party.**

8 **DIAGRAM 50 - CONFIGURATION OF ACCESS RIGHTS AT USER LEVEL (SPLIT BOOK APPROACH)**

9

10 **The above diagram shows that the party administrator(s) can set up the appropriate access**  
 11 **rights configuration for the users of the same party:**

- 1 | ~~By possibly creating and maintaining <sup>101</sup> additional roles, besides the ones previously granted at party level <sup>102</sup>~~
- 2 | ~~By granting (and revoking) the (default and additional) roles and the (default) privileges to the users of the same party.~~

**EXAMPLE 80 - POWER OF ATTORNEY AT SECURITIES ACCOUNT LEVEL (SPLIT BOOK APPROACH)**

~~This scenario can be modelled as follows:~~

**TABLE 76 - ASSIGNMENT OF OBJECT PRIVILEGES TO PARTIES (B) (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT TYPE	PARTY	DENY	ADMIN	FOUR EYES
<del>Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD</del>	<del>SAC_X</del>	<del>Securities Account</del>	<del>PTY_Y</del>	<del>False</del>	<del>False</del>	<del>False</del>

~~The object privilege to send new Settlement Instructions referencing the securities account SAC\_X is assigned:~~

- 12 | ~~Without Deny, i.e. party administrators of PTY\_Y can grant this privilege to other roles and users of the same party;~~
- 14 | ~~Without Admin, i.e. party administrators of PTY\_Y cannot give other parties the power of attorney to send new Settlement Instructions referencing this securities account;~~
- 16 | ~~Without Four Eyes, i.e. party administrators of PTY\_Y can grant other roles and users of the same party with the privilege to send new Settlement Instructions referencing the securities account SAC\_X, according to the Two Eyes principle or to the Four Eyes principle.~~

~~From now on, party PTY\_Y has the power of attorney to send new Settlement Instructions referencing the securities account SAC\_X of party PTY\_X.~~

~~It is up to party administrators of PTY\_Y to specify the actual roles and users of the same party that are granted the privilege to send new Settlement Instructions referencing the securities account SAC\_X.~~

**EXAMPLE 81 - POWER OF ATTORNEY AT PARTY LEVEL (SPLIT BOOK APPROACH)**

~~This scenario can be modelled as follows:~~

101 ~~These additional roles can only be granted with available privileges, i.e. privileges previously granted at party level. (Split book approach)~~

102 ~~New Roles can only be created and maintained by the T2S Operator, CSD and CB parties. Payment Banks, CSD Participants and External CSDs can only grant/revoke Roles that have previously been granted to them by their CSD/CB. (Split book approach )~~

**TABLE 77 - ASSIGNMENT OF OBJECT PRIVILEGES TO PARTIES (C) (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT-TYPE	PARTY	DENY	ADMIN	FOUR-EYES
Send New Settlement Instruction/Settlement Restriction on Securities either on a Securities Account or on Behalf of an External CSD	PTY_X	Party	PTY_Y	False	False	True

The object privilege to send new Settlement Instructions referencing securities accounts of party PTY\_X is assigned:

- Without Deny, i.e. party administrators of PTY\_Y can grant this privilege to other roles and users of the same party;
- Without Admin, i.e. party administrators of PTY\_Y cannot give other parties the power of attorney to send new Settlement Instructions referencing the securities accounts of PTY\_X;
- With Four Eyes, i.e. party administrators of PTY\_Y can grant other roles and users of the same party with the privilege to send new Settlement Instructions referencing any securities account of PTY\_X, according to the Four Eyes principle only.

From now on, party PTY\_Y has power of attorney to send new Settlement Instructions referencing all securities accounts of party PTY\_X.

It is up to party administrators of PTY\_Y to specify the actual roles and users of the same party that are granted the privilege to send new Settlement Instructions referencing these securities accounts.

**EXAMPLE 82 - SELECTIVE ACCESS AT SECURITIES ACCOUNT LEVEL (SPLIT BOOK APPROACH)**

- User USR\_Y the privilege to query this securities account;
- User USR\_Z the privilege of querying and send new Settlement Instructions referencing this securities account.

This scenario can be modelled as follows:

**TABLE 78 - ASSIGNMENT OF OBJECT PRIVILEGES TO USERS (B) (SPLIT BOOK APPROACH)**

PRIVILEGE	OBJECT	OBJECT-TYPE	USER	DENY	ADMIN	FOUR-EYES
Securities Account Position Query	SAC_X	Securities Account	USR_Y	False	False	False
Securities Account Position Query	SAC_X	Securities Account	USR_Z	False	False	False
Send New Settlement Instruction/Settlement Restriction on	SAC_X	Securities Account	USR_Z	False	False	True

PRIVILEGE	OBJECT	OBJECT-TYPE	USER	DENY	ADMIN	FOUR-EYES
<del>Securities either on a Securities Account or on Behalf of an External CSD</del>						

1 ~~The privilege to query the securities account SAC\_X is assigned:~~

2 | ~~Without Deny, i.e. users USR\_Y and USR\_Z can query the securities account SAC\_X;~~

3 | ~~Without Admin, i.e. users USR\_Y and USR\_Z cannot grant the privilege to query the securities account SAC\_X to any other roles and users of the same party;~~

4 | ~~Without Four Eyes, which is not relevant for a privilege related to a read-only function.~~

5 ~~The privilege to send new Settlement Instructions referencing the securities account SAC\_X is assigned:~~

6 | ~~Without Deny, i.e. user USR\_Z can send new Settlement Instructions referencing the securities account SAC\_X;~~

7 | ~~Without Admin, i.e. user USR\_Z cannot grant the same privilege to other roles and users of the same party;~~

8 | ~~With Four Eyes, i.e. user USR\_Z can send new Settlement Instructions referencing the securities account SAC\_X according to the Four Eyes principle only.~~

9 **EXAMPLE 83 - SELECTIVE ACCESS AT GROUP OF SECURITIES ACCOUNTS LEVEL (SPLIT BOOK APPROACH)**

10

11 ~~This scenario can be modelled as follows:~~

12 **TABLE 79 - ASSIGNMENT OF OBJECT PRIVILEGES TO USERS (C) (SPLIT BOOK APPROACH)**

13

PRIVILEGE	OBJECT	OBJECT-TYPE	USER	DENY	ADMIN	FOUR-EYES
<del>Securities Account Position Query</del>	<del>SAC_1</del>	<del>Securities Account</del>	<del>USR_X</del>	<del>False</del>	<del>False</del>	<del>False</del>
<del>Securities Account Position Query</del>	<del>SAC_2</del>	<del>Securities Account</del>	<del>USR_X</del>	<del>False</del>	<del>False</del>	<del>False</del>
<del>Securities Account Position Query</del>	<del>SAC_3</del>	<del>Securities Account</del>	<del>USR_X</del>	<del>False</del>	<del>False</del>	<del>False</del>

14 ~~Alternatively, the same scenario can also be modelled as follows:~~

15 **TABLE 80 - ASSIGNMENT OF OBJECT PRIVILEGES TO USERS (D) (SPLIT BOOK APPROACH)**

16

PRIVILEGE	OBJECT	OBJECT-TYPE	USER	DENY	ADMIN	FOUR-EYES
<del>Securities Account Position</del>	<del>SG_Z</del>	<del>Secured Group</del>	<del>USR_X</del>	<del>False</del>	<del>False</del>	<del>False</del>

17

18

PRIVILEGE	OBJECT	OBJECT-TYPE	USER	DENY	ADMIN	FOUR-EYES
Query						

1 where SG\_Z is the group of secured objects defined as in the following diagram:

2  
3 **EXAMPLE 84 - CB ACCESS TO SECURITIES ACCOUNTS**{SPLIT BOOK APPROACH}

4  
5 This scenario can be modelled as follows:

6 **TABLE 81 - ASSIGNMENT OF OBJECT PRIVILEGES TO PARTIES (D)**{SPLIT BOOK APPROACH}

PRIVILEGE	OBJECT	OBJECT-TYPE	PARTY	DENY	ADMIN	FOUR-EYES
Securities Account Position Query	SAC_A	Securities Account	PTY_X	False	True	False
Securities Account Position Query	SAC_A	Securities Account	PTY_Z	False	False	False

8 The privilege to query the securities account SAC\_A is assigned by a party administrator of CSD  
9 PTY\_Y to the CSD participant PTY\_X

10 | Without Deny, i.e. party administrators of PTY\_X can grant the privilege to query the securi-  
11 ties account SAC\_A to other roles and users of the same party;

12 | With Admin, i.e. party administrators of PTY\_X can grant the privilege to query the securi-  
13 ties account SAC\_A to other parties;

14 | Without Four-Eyes, which is not relevant for a privilege related to a read-only function.

15 Moreover, the privilege to query the securities account SAC\_A is assigned by a party adminis-  
16 trator of the Y to the central bank PTY\_Z

17 | Without Deny, i.e. party administrators of PTY\_Z can grant the privilege to query the securi-  
18 ties account SAC\_A to other roles and users of the same party;

19 | Without Admin, i.e. party administrators of PTY\_Z cannot grant the privilege to query the  
20 securities account SAC\_A to other parties;

21 | Without Four-Eyes, which is not relevant for a privilege related to a read-only function.

22 From now on, the central bank PTY\_Z can query the securities account SAC\_A of the CSD Y.

1 ~~It is up to party administrators of the central bank PTY\_Z to specify the actual roles and users~~  
 2 ~~of the same party that are granted the privilege to query the securities account SAC\_A.~~{Split  
 3 book approach}

4 **1.3.4 Message subscription**

5 ~~For further information refer to CRDM UDFS, "Message Subscription".~~{Split book approach}

6 1.3.4.1 Message subscription configuration

7 CSDs and CBs can configure, for themselves and for their directly connected parties, the specific set of mes-  
 8 sages (or copies of messages) they want to receive from T2S: <sup>103</sup>

- 9 | As interested party depending on the business case; e.g. the account owner (the respective interested  
 10 parties can be extracted from the table below),
- 11 | As third party if the appropriate access rights are granted.

12 As a general principle, in order to receive a certain message, a party must be identified as an "Interested  
 13 Party" by T2S for the respective message.

14 Besides interested parties it is also possible for a third party to receive a message copy if the third party has  
 15 been granted the necessary privilege and if the respective message subscription exists. By Interested Party it  
 16 is meant a party which is involved in the business scenario processed in T2S. <sup>104</sup> In case a T2S Actor is an  
 17 Interested Party for several reasons, it only receives the message once.

18 In order to define a list of third parties, each third party should be granted with the object privilege "Third  
 19 Party receipt" on the relevant Interested Party. For detailed information on the Access Rights model and  
 20 examples of privilege granting, see section [Access rights](#) [▶ 145]. Below is an example of privilege configura-  
 21 tion related specifically to the case of third parties.

22 **EXAMPLE 85 - SETUP OF THIRD PARTIES (A)**

PRIVILEGE	OBJECT	OBJECT TYPE	PARTY	DENY	ADMIN	FOUR-EYES <small>105</small>
Third Party Receipt	CB A	Party	PAR1	False	False	False
Third Party Receipt	CB A	Party	PAR2	False	False	False

24 In the example above the privilege "Third Party Receipt" is assigned by Central Bank "CB A" (the Interested  
 25 Party) twice to two different parties: PAR1 and PAR2. Based on this setup, PAR1 and PAR2 become third

103 It is possible to receive copies of messages via A2A even if the original message was sent via U2A, provided that the messages are subject to copies.

104 Comprehensive information on interested parties for each message subject to copies is provided in Table 82 - [Messages subject to copies](#) [▶ 205].

105 Note that for the purposes of setting up third parties for the receipt of message copies, the value of the Four-Eyes field within the privilege is irrelevant.

1 parties of CB A for the receipt of message copies, provided that the related message subscription for PAR1  
2 and PAR2 is also set up.

3 The configuration of subscriptions of messages (and copies of messages) is based on the definition of a set  
4 of rules the T2S application uses for outgoing and incoming messages in order to determine to which sub-  
5 set of interested party(ies) (or to all if it is the case) the given message has to be sent or copied according  
6 to their preferences defined in this configuration. A Copy refers to a message sent to a party who is identi-  
7 fied as Interested Party for the specific business case (see Table 77) but who is not the sender of the origi-  
8 nal message initiating the outgoing message.

9 ~~Each message subscription rule set (including original and copy subscription) is defined by the~~  
10 ~~following elements:~~

- 11 | ~~The name and the description of the message subscription rule set;~~
- 12 | ~~A validity period, specified by a mandatory initial date of validity and an optional final date~~  
13 ~~of validity.~~
- 14 | ~~A set of subscribing parties to which T2S sends all the messages matching the rule set.~~
- 15 | ~~A set of rules defining the criteria according to which T2S checks whether a message has to~~  
16 ~~be sent or not. These criteria are expressed on the basis of a pre-defined set of parameter~~  
17 ~~types. Each rule is assigned a validity period, specified by a mandatory initial date of validity~~  
18 ~~and an optional final date of validity. The validity period of a rule cannot exceed the validity~~  
19 ~~period of the message subscription rule set it belongs to, i.e. the validity period of a rule~~  
20 ~~cannot start before or end after the validity period of the relevant message subscription rule~~  
21 ~~set.~~
- 22 | ~~A positive/negative parameter according to which T2S should send/should not send a given~~  
23 ~~message (if "positive", the rule set matches if one of its rules is satisfied);~~

24 ~~The positive/negative parameter allows subscribing Parties to explicitly refuse to receive mes-~~  
25 ~~sages that match certain criteria. If set to negative it means that the Party/ies does not receive~~  
26 ~~messages which match the rule set.~~ <sup>106</sup> ~~Setting it to positive means that the Party/ies receive~~  
27 ~~messages matching the rule set (i.e., the normal subscription behaviour). In the event of an~~  
28 ~~overlap, "negative" rule sets have priority over "positive" rule sets. (Split book approach)~~

29 For the set of incoming and outgoing message types listed in the following table, CSDs and CBs can config-  
30 ure, for themselves and for their directly connected parties, the copies of messages exchanged between T2S  
31 and their directly connected participants that they want to receive. If deemed necessary, the CSD or CB can  
32 decide to hand over the control to their DCPs by granting them the privilege for message subscription con-  
33 figuration (for more information on privilege granting see section [Access rights](#) [▶ 145]).

---

106 ~~Exception exists for parameter "Instruction Status Reason Code". For this parameter, also the paths of Message status, Instruc-~~  
~~tion status and all Instruction Status Reason Codes reported in the respective message are relevant. As long as one or more~~  
~~statuses or codes are provided in the respective message that do not match the one set up in the negative message subscription~~  
~~rule, the negative rule is not applied and the messages are sent provided a corresponding positive subscription rule exists. (Split~~  
~~book approach)~~

107 The concept of interested parties, including third parties, does not apply for SD messages. The recipient T2S actor for any SD response message is the T2S actor who sent the related SD request message. To put the same concepts in other terms: there is always only one interested party for outgoing message, i.e. the sender of the related incoming message. No SD message is subject to copy.

Please note that in case the counterpart CSD is an external-CSD, then the related allegement message will be sent to the parent CSD of that external-CSD and to the external-CSD.

113 The business case in these scenarios is an unmatched settlement instruction originating the related allegement message. Therefore the list of interested parties refers to the Counterpart CSD and Counterpart CSD Participant of the unmatched settlement instruction originating the allegement message. Please note that in case the counterpart CSD is an external-CSD, then the related allegement message will be sent to the parent CSD of that external-CSD and to the external-CSD.

MESSAGE DATA					
MESSAGE SET	MESSAGE SUB-SET	ISO MESSAGE NAME	INCOMING / OUT-GOING	TECH-NICAL MSG. ID.	LIST OF INTERESTED PARTIES <sup>107</sup>
	Allegement	legementRemovalAdvice			pant - Counterpart <sup>115</sup> CSD;

1 For outbound communication, CSDs, CBs and directly connected participants can receive responses for the  
 2 settlement-related messages and reference data update messages they sent to T2S only for the message  
 3 types they are interested in (the exhaustive list of the outgoing message types they can subscribe to is pro-  
 4 vided in the following section, in Table 85 - [Applicable Parameter Types for Outgoing MessagesSplit book](#)  
 5 [approach](#) [▶ 215]). As an exception, the following outgoing messages are not subject to messages subscrip-  
 6 tion, as T2S sends them to the relevant recipient regardless of its specific message subscription configura-  
 7 tion:

- 8 | Reactions on erroneous inbound messages<sup>116</sup>
- 9 | Query results
- 10 | Floor/Ceiling notification
- 11 | Outbound liquidity transfer messages.

12 Reports that are available for the different recipients are not configured via message subscription, but on the  
 13 basis of report configuration (see section [Report generation](#) [▶ 788]).

14 CSDs and CBs can configure for themselves and their directly connected parties the relevant business infor-  
 15 mation they intend to receive from T2S using the message subscription and the report configuration fea-  
 16 tures. The same T2S Actors can then configure the technical delivery mode of the business information they  
 17 subscribe for (e.g. whether the transfer is message-based or file-based) using the routing configuration fea-  
 18 ture (See section [Common rules for messages and files addressing](#) [▶ 120]).

19 Message subscription specifies the business elements T2S uses to identify which outgoing messages have to  
 20 be sent to a given T2S Actor, but it does not specify the actual network service and the technical address  
 21 T2S uses to send these messages. The technical elements T2S uses to identify which network service and  
 22 technical address have to be used to send a given outgoing message to a T2S Actor can be set up on the  
 23 basis of routing configurations (see section [Common rules for messages and files addressing](#) [▶ 120]).

114 The business case in these scenarios is an unmatched settlement instruction originating the related allegement message. Therefore the list of interested parties refers to the Counterpart CSD and Counterpart CSD Participant of the unmatched settlement instruction originating the allegement message. Please note that in case the counterpart CSD is an external-CSD, then the related allegement message will be sent to the parent CSD of that external-CSD and to the external-CSD.

115 The business case in these scenarios is an unmatched settlement instruction originating the related allegement message. Therefore the list of interested parties refers to the Counterpart CSD and Counterpart CSD Participant of the unmatched settlement instruction originating the allegement message. Please note that in case the counterpart CSD is an external-CSD, then the related allegement message will be sent to the parent CSD of that external-CSD and to the external-CSD.

116 This refers to any outbound message conveying error information. The exhaustive list of these outbound messages is included in section Index of Business Rules and Error Codes.

## 1 1.3.4.2 Message subscription parameter types

2 ~~The table below describes the exhaustive list of parameter types that CSDs and CBs can use for~~  
 3 ~~configuring their message subscription rule sets.~~

4 **TABLE 83 - MESSAGE SUBSCRIPTION PARAMETER TYPES**(SPLIT BOOK APPROACH)  
5

PARAMETER TYPE	DESCRIPTION
<del>Message Type</del>	<del>It specifies the type of message (e.g. PartyStatusAdvice). The exhaustive list of possible message types is given by the union of the incoming message types listed in section Message subscription configuration and the outgoing message types listed in section List of Messages, with the exceptions mentioned before.</del>
<del>Instruction Type</del>	<del>It specifies the type of instruction included in the message. See section Instruction Types for the exhaustive list of instruction types.</del>
<del>Message Status</del>	<del>It specifies the status of the message, i.e. the status of the request included in the message.<sup>117</sup></del>
<del>Party</del>	<del>It specifies the party referenced in the message.</del>
<del>Securities Account</del>	<del>It specifies the securities account referenced in the message.</del>
<del>ISIN</del>	<del>It specifies the financial instrument referenced in the message.</del>
<del>T2S Dedicated Cash Account</del>	<del>It specifies the T2S dedicated cash account referenced in the message.</del>
<del>Instruction Status</del>	<del>It specifies the status of the instruction. The exhaustive list of possible status values of instructions is as follows, depending on the message type:  For camt.025:  <ul style="list-style-type: none"> <li>  LIMC (Reference data Limit maintenance "Completed" code)</li> <li>  LIMQ (Reference data Limit maintenance "Queued" code)</li> <li>  LIMR (Reference data Limit maintenance "Rejected" code)</li> <li>  LTOC (Reference data Liquidity Transfer Order maintenance "Completed" code)</li> <li>  LTOQ (Reference data Liquidity Transfer Order maintenance "Queued" code)</li> <li>  LTOR (Reference data Liquidity Transfer Order maintenance "Re-</li> </ul></del>

117 ~~Consequently, the meaning of this status depends on the given message type, e.g. it is a settlement status for a message conveying the response related to an immediate liquidity transfer, whereas it is a processing status for a message conveying the response related to a static data maintenance request. The exhaustive list of possible values depends on the specific status and it is provided in the specification of the relevant message type.~~(Split book approach)

PARAMETER-TYPE	DESCRIPTION
	<p><b>jected" code)</b></p> <ul style="list-style-type: none"> <li>  <b>APPR (Liquidity Transfer "Approved" code)</b></li> <li>  <b>SPAS (Liquidity Transfer "Partially Settled" code)</b></li> <li>  <b>SSET (Liquidity Transfer "Settled" code)</b></li> <li>  <b>SUNS (Liquidity Transfer "Unsettled" code)</b></li> <li>  <b>RREJ (RTGS "Rejected" code)</b></li> </ul> <p><b>For semt.014, sese.024, sese.027, sese.031, sese.032, camt.067, camt.073 and camt.075:</b></p> <ul style="list-style-type: none"> <li>  <b>AckdAcceptd (Accepted)</b></li> </ul> <p><b>For semt.014, sese.024, sese.027, camt.067 and camt.075:</b></p> <ul style="list-style-type: none"> <li>  <b>Canc (Cancelled)</b></li> </ul> <p><b>For semt.014, sese.024, sese.032 and camt.067:</b></p> <ul style="list-style-type: none"> <li>  <b>Pdg (Pending)</b> <sup>118</sup></li> </ul> <p><b>For sese.027, sese.031, camt.073 and camt.075:</b></p> <ul style="list-style-type: none"> <li>  <b>Dnd (Denied)</b></li> </ul> <p><b>For sese.031 and camt.073:</b></p> <ul style="list-style-type: none"> <li>  <b>Cmplt (Completed)</b></li> </ul> <p><b>For sese.024:</b></p> <ul style="list-style-type: none"> <li>  <b>Mtchd (Matched)</b> <sup>119</sup></li> <li>  <b>CxlReqd (Cancellation Requested)</b></li> </ul> <p><b>For sese.027:</b></p> <ul style="list-style-type: none"> <li>  <b>PdgCxl (Pending Cancellation)</b></li> </ul>
<p><b>Instruction Status Reason Code</b></p>	<p><b>It specifies the reason codes of "pending" and "failing" settlement status messages. The exhaustive list of possible status reason codes is as follows, depending on the message type:</b></p> <p><b>For semt.014</b></p> <ul style="list-style-type: none"> <li>  <b>PendingReason10Code</b></li> <li>  <b>FailingReason3Code</b></li> </ul>

118 **If the customer wants to receive only messages for failing, he has to set up a negative message subscription for Instruction Status "Pending". (Split book approach)**

119 **If the customer wants to receive only messages with unmatched status, he has to set up a negative message subscription for Instruction Status "Matched". (Split book approach)**

PARAMETER-TYPE	DESCRIPTION
	<p><b>For sese.024</b></p> <ul style="list-style-type: none"> <li>  <b>PendingReason2Code</b></li> <li>  <b>FailingReason2Code</b></li> </ul> <p><b>For camt.067</b></p> <ul style="list-style-type: none"> <li>  <b>PendingReason10Code</b></li> <li>  <b>FailingReason3Code</b></li> </ul>
<b>Transaction-Code</b>	<b>It specifies the ISO transaction code referenced in the message.</b>
<b>Currency</b>	<b>It specifies the currency code referenced in the message.</b>
<b>Already-Matched-Flag</b>	<b>It specifies whether to select only one side of the reporting when a settlement instruction is sent as "already-matched" in T2S.</b>
<b>Settlement-Transaction-Condition-Code</b>	<b>It specifies the settlement transaction condition code referenced in the message.</b>
<b>Business-Sending-Party</b>	<b>It specifies the Business-Sending-Party of the message. For outgoing messages, it refers to the Business-Sending-Party of the related incoming message.</b>
<b>System-User-Reference</b>	<b>It specifies the System-User-Reference of the Business-Sending-User of the message.</b>
<b>Instructing-Party</b>	<b>It specifies the Instructing-Party of the message. For outgoing messages, it refers to the Instructing-Party of the related incoming message.</b>

- 1 **Not all the parameter types listed in the previous table are applicable for each message. The**
- 2 **following table provides the mapping between the incoming message types subject to subscrip-**
- 3 **tion and the applicable parameter types** <sup>120</sup>.

120 **The Message parameter type is not shown in the following table as it applicable by definition to all messages. (Split book approach)**

1

- 1 The following table shows which message fields T2S checks in order to assign to any incoming and outgoing
- 2 message the actual value related to each applicable parameter type.

1  
2

**TABLE 86 - MAPPING BETWEEN APPLICABLE PARAMETER TYPES AND MESSAGE FIELDS**

APPLICABLE PARAMETER TYPE	TYPE OF CHECK <sup>122</sup>	MESSAGE	MESSAGE FIELD
Instruction Type		sese.024	\SctiesSttlmTxStsAdv\TxDtIs\SctiesMvmntTp
		sese.024	\SctiesSttlmTxStsAdv\TxDtIs\Pmt
		sese.024	\SctiesSttlmTxStsAdv\TxDtIs\SttlmQty
		sese.024	\SctiesSttlmTxStsAdv\TxDtIs\SttlmAmt\CdtDbtInd
		sese.025	\SctiesSttlmTxConf\TxIdDtIs\SctiesMvmntTp
		sese.025	\SctiesSttlmTxConf\TxIdDtIs\Pmt
		sese.025	\SctiesSttlmTxConf\QtyAndAcctDtIs\SttlmQty
		sese.025	\SctiesSttlmTxConf\SttlmAmt\CdtDbtInd
		sese.023	\SctiesSttlmTxInstr\SttlmTpAndAddtlParams\SctiesMvmntTp <sup>123</sup>
		sese.023	\SctiesSttlmTxInstr\SttlmAmt\CdtDbtInd <sup>124</sup>

		sese.032	\SctiesSttlmTxGnrtnNtfctn\SttlmAmt\CdtDbtInd
	sese.032	\SctiesSttlmTxGnrtnNtfctn\TxIdDtIs\Pmt	
	sese.032	\SctiesSttlmTxGnrtnNtfctn\QtyAndAcctDtIs\SttlmQty	
Message	Direct	acmt.010	\AcctReqAck\Refs\Sts

122 When the type of check is direct, T2S is able to assign the relevant value for a given applicable parameter type just on the basis of the message payload. Conversely, when the type of check is indirect, T2S retrieves the relevant value from the static data, on the basis of the content of the message payload.

123 In case of an already matched settlement instruction, the information of the related sese.024 message field \SctiesSttlmTxStsAdv\TxDtIs\SctiesMvmntTp is used for the message subscription check as the sese.023 itself does only include the explicit information for one leg. This handling enables the T2S Actor to prevent double originals/copies for the same already matched settlement instruction.

124 In case of an already matched settlement instruction, the information of the related sese.024 message field \SctiesSttlmTxStsAdv\TxDtIs\SttlmAmt\CdtDbtInd is used for the message subscription check as the sese.023 itself does only include the explicit information for one leg. This handling enables the T2S Actor to prevent double originals/copies for the same already matched settlement instruction.

1 ~~The rest of this section presents different examples of configuration of message subscription~~  
 2 ~~rule sets. (Split book approach)~~

3 ~~1.3.4.3 Message subscription examples~~

4 ~~The message subscription configuration is illustrated below by three examples.~~

5 ~~EXAMPLE 86 - SUBSCRIBING FOR MATCHING AND SETTLEMENT CONFIRMATION MESSAGES (SPLIT BOOK APPROACH)~~

7 ~~I A CSD A to receive from T2S status advices related to matching and partial settlement, plus~~  
 8 ~~settlement confirmations for the Settlement Instructions of all its participants.~~

9 ~~I A directly connected participant DCP B to receive settlement confirmations for all its Set-~~  
 10 ~~tlement Instructions.~~

11 ~~These message subscription configurations must be valid as of 1st of July 2015. The general~~  
 12 ~~features of the new message subscription rule set for the CSD A, i.e. the rule set name, the~~  
 13 ~~starting validity date and the relevant interested party can be specified as follows:~~

14 ~~TABLE 87 - DEFINITION OF A NEW MESSAGE SUBSCRIPTION RULE SET (SPLIT BOOK APPROACH)~~

MESSAGE SUBSCRIPTION RULE SET	
<b>Name</b>	<b>REC_STAT_ADV_AND_CONF</b>
<b>Description</b>	<b>Receive Status Advice and Confirmation</b>
<b>Interested Party</b>	<b>CSD-A</b>

163 For mapping the tag "Xchg/PyldDesc/ApplSpfcInf/SysUsr" from Business File Header of the file including the respective inbound message is used.

MESSAGE-SUBSCRIPTION-RULE-SET	
Valid From	1-July-2015
Valid To	-
Positive/Negative	positive

1 ~~The rule set that the CSD A needs to specify for itself in order to fulfil the requirements de-~~  
 2 ~~scribed before is as follows:~~

3 **TABLE 88 - DEFINITION OF THE RULES FOR A NEW MESSAGE-SUBSCRIPTION-RULE-SET**{SPLIT BOOK APPROACH}

RULE SET	VALID FROM	VALID TO	MESSAGE TYPE	INSTRUCTION TYPE	MESSAGE STATUS	PARTY	SECURITIES ACCOUNT	ISIN	T2S DEDICATED CASH ACCOUNT	INSTRUCTION STATUS
Rule 1	2015-07-01	-	SecuritiesSettlementTransac- tionStatusAdvice							Pending
			SecuritiesSettlementTransac- tionStatusAdvice							Matched
Rule 2	2015-07-01	-	SecuritiesSettlementTransac- tionStatusConfirmation							

5 ~~Similarly, the CSD A has to configure for the directly connected participant DCP B the following~~  
 6 ~~general features:~~

7 **TABLE 89 - DEFINITION OF A NEW MESSAGE-SUBSCRIPTION-RULE-SET**{SPLIT BOOK APPROACH}

MESSAGE-SUBSCRIPTION-RULE-SET	
Name	REC_SETT_CONF
Description	Receive Settlement Confirmation
Interested-Party	DCP-B
Valid From	1-July-2015
Valid To	-
Positive/Negative	positive

1 **Finally, the following matrix shows the rule set the CSD A must specify for DCP B:**

2 **TABLE 90 - DEFINITION OF THE RULES FOR A NEW MESSAGES SUBSCRIPTION RULE SET (SPLIT BOOK APPROACH)**

RULE SET	VALID FROM	VALID TO	MESSAGE TYPE	INSTRUCTION TYPE	MESSAGE STATUS	PARTY	SECURITIES ACCOUNT	ISIN	T2S DEDICATED CASH ACCOUNT	INSTRUCTION STATUS
Rule 1	2015-07-01	-	SecuritiesSettlementTransactionConfirmation							

4 **On the basis of the two rule sets described above, as of 1st of July 2015:**

- 5 | **The CSD A starts receiving status advices for matched and pending instructions (rule 1 of**
- 6 **Definition of the rules for a new message subscription rule set) and settlement confirma-**
- 7 **tions (rule 2 of Definition of the rules for a new message subscription rule set) for the Set-**
- 8 **tlement Instructions of all its participants.**
- 9 | **The directly connected participant DCP B starts receiving settlement confirmations (rule 1**
- 10 **of Definition of the rules for a new messages subscription rule set) for all its Settlement In-**
- 11 **structions.**

12 **The following diagram shows the message flows exchanged between the two involved T2S Ac-**

13 **tors (CSD A and DCP B) and T2S when the CSD A sends a Settlement Instruction to T2S and this**

14 **instruction is fully settled.**

15 **DIAGRAM 51 - MESSAGE FLOWS EXCHANGED BETWEEN THE T2S ACTORS AND T2S (A) (SPLIT BOOK APPROACH)**

16

1 **After the CSD A has sent a Settlement Instruction to T2S (step 1 in the diagram) and this Set-**  
 2 **tlement Instructions is matched, T2S sends a status advice to CSD A to notify the matching sta-**  
 3 **tus (step 2). Finally, when the given Settlement Instruction is settled, T2S sends the related**  
 4 **settlement confirmation both to the sender party, CSD A, and to the directly connected partici-**  
 5 **pant DCP B (step 3).**

6 **EXAMPLE 87 - SUBSCRIBING FOR COPIES OF INCOMING SETTLEMENT INSTRUCTIONS**{SPLIT BOOK APPROACH}

7  
 8 **This message subscription configuration must be valid as of 1st of July 2015. The general fea-**  
 9 **tures of the new message subscription rule set for the CSD A, i.e. the rule set name, the start-**  
 10 **ing validity date and the relevant subscribing party can be specified as follows:**

11 **TABLE 91 - DEFINITION OF A NEW MESSAGE SUBSCRIPTION RULE SET**{SPLIT BOOK APPROACH}

12

MESSAGE SUBSCRIPTION RULE SET	
<b>Name</b>	<b>REC_COPY_SETT_INST</b>
<b>Description</b>	<b>Receive Copy of Settlement Instruction</b>
<b>Interested Party</b>	<b>CSD A</b>
<b>Valid From</b>	<b>1 July 2015</b>
<b>Valid To</b>	<b>-</b>
<b>Positive/Negative</b>	<b>Positive</b>

13 **The rule set that the CSD A needs to specify for itself in order to fulfil the requirements de-**  
 14 **scribed before is as follows:**

15 **TABLE 92 - DEFINITION OF THE RULES FOR A NEW MESSAGE SUBSCRIPTION RULE SET**{SPLIT BOOK APPROACH}

16

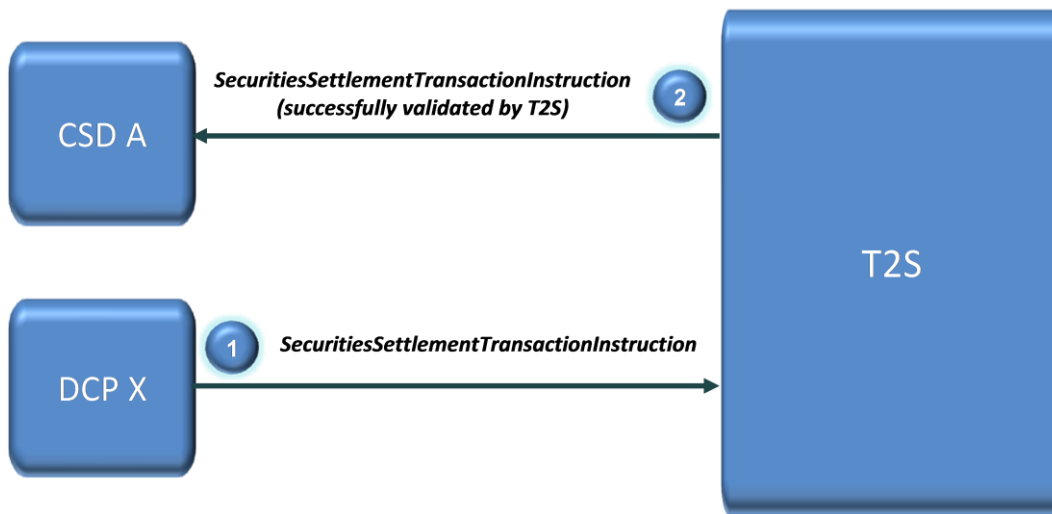

RULE SET	VALID FROM	VALID TO	MESSAGE TYPE	INSTRUCTION TYPE	MESSAGE STATUS	PARTY	SECURITIES ACCOUNT	ISIN	T2S DEDICATED CASH ACCOUNT	INSTRUCTION STATUS
<b>Rule-1</b>	<b>2015-07-01</b>	<b>-</b>	<b>SecuritiesSettlementTransac-</b>			<b>DCP-X</b>				
			<b>tionInstruction</b>							
			<b>SecuritiesSettlementTransac-</b>			<b>DCP-Y</b>				
			<b>tionInstruction</b>							

1 ~~On the basis of the message subscription configuration just described, as of 1st of July 2015~~  
 2 ~~the CSD A starts receiving copies of all Settlement Instructions submitted either by DCP X or by~~  
 3 ~~DCP Y, after T2S has successfully performed the business validation for these incoming Settle-~~  
 4 ~~ment Instructions.~~

5 ~~The following diagram shows the message flows exchanged between the involved T2S Actors~~  
 6 ~~and T2S when one of the directly connected participants (DCP X) sends a Settlement Instruc-~~  
 7 ~~tion to T2S and this instruction is successfully validated.~~

8 **DIAGRAM 52 - MESSAGE FLOWS EXCHANGED BETWEEN THE T2S ACTORS AND T2S (B) (SPLIT BOOK APPROACH)**

9  
 10 ~~After the DCP X sends a Settlement Instruction to T2S (step 1 in the diagram) and this Settle-~~  
 11 ~~ment Instructions undergoes successfully the business validation process, T2S sends a copy of~~  
 12 ~~the incoming Settlement Instruction to CSD A (step 2).~~

13 **EXAMPLE 88 - SUBSCRIBING FOR A SUB-SET OF REFERENCE DATA STATUS ADVICES (SPLIT BOOK APPROACH)**

14  
 15 ~~If the message subscription rule set must be valid from the 15th of May 2015 (included), this~~  
 16 ~~new configuration can be specified as follows.~~

17 **TABLE 93 - DEFINITION OF A NEW MESSAGE SUBSCRIPTION RULE SET (SPLIT BOOK APPROACH)**

MESSAGE SUBSCRIPTION RULE SET	
Name	REC_ADV_REJ_COMP
Description	Receive Advice Rejected or Completed
Interested-Party	NCB A
Valid From	15-May
Valid To	-
Positive/Negative	positive

1 **Once defined the general features of this new message subscription rule set, the CB A must**  
 2 **specify the following rule set, implementing the requirements described before:**

3 **TABLE 94 - DEFINITION OF THE RULES FOR A NEW MESSAGE SUBSCRIPTION RULE SET (SPLIT BOOK APPROACH)**

RULE SET	VALID FROM	VALID TO	MESSAGE TYPE	INSTRUCTION TYPE	MESSAGE STATUS	PARTY	SECURITIES ACCOUNT	ISIN	T2S DEDICATED CASH ACCOUNT	INSTRUCTION TYPE
Rule 1	2015-07-01	-	PartyStatusAdvice		Rejected					
			PartyStatusAdvice		Completed					

5 **On the basis of the rule defined above, as of 15th of May 2015, all the party status advice mes-**  
 6 **sages for reference data maintenance instructions related to parties of the CB A are sent to the**  
 7 **CB A only if their status is final, i.e. "Completed" or "Rejected".**

8 **The following diagram shows the message flows exchanged between the CB A and T2S when**  
 9 **the CB A sends a party creation request to T2S.**

10 **DIAGRAM 53 - MESSAGE FLOWS EXCHANGED BETWEEN THE T2S ACTORS AND T2S (E) (SPLIT BOOK APPROACH)**

11

1 ~~These flows are the same regardless of the phase of the settlement day in which the CB A sends~~  
2 ~~the given party modification request. In fact, even if the CB A sends this request while a night-~~  
3 ~~time settlement sequence is running, T2S does not send to the CB A the provisional party status~~  
4 ~~advice (with status = "Queued"), just after having suspended the processing of the given re-~~  
5 ~~quest until the end of the current night-time settlement sequence. (Split book approach)~~

### 6 1.3.5 Graphical User Interface

7 Users of T2S Actors granted with the appropriate privileges can communicate with T2S in U2A mode via a  
8 web-based graphical user interface (GUI).

9 **DIAGRAM 54 - GUI ACCESS**

10 T2S functionalities available in A2A mode (using messages described in chapter 3) are also available in U2A  
11 mode. ~~In addition, the following T2S functionalities are available in U2A mode only (non-~~  
12 ~~exhaustive list):~~

- 14 | ~~Maintain Closing Days;~~
- 15 | ~~Query and maintain Attribute Domains (e.g. settlement priority defaults, sequencing rules);~~
- 16 | ~~Query and maintain Market Specific Attributes (e.g. restriction types and their profiles);~~
- 17 | ~~Query and maintain Message Subscription Rule Sets;~~
- 18 | ~~Query and maintain Partial Settlement Thresholds;~~
- 19 | ~~Query and maintain Privileges;~~
- 20 | ~~Query and maintain Roles;~~
- 21 | ~~Query and maintain System Entities;~~
- 22 | ~~Query and maintain T2S BIC Directory;~~
- 23 | ~~Query and maintain Tolerance Amounts. (Split book approach)~~

24 Via U2A mode, T2S offers to T2S Actors a dual authorisation concept, the Four-Eyes-Principle (See section  
25 [Security](#) [▶ 236]).

26 Detailed description of the T2S graphical user interface will be provided into the T2S User Handbook(s).

## 1 1.3.6 Security

2 This section aims at describing the main processes performed by T2S in terms of security principles applied  
3 to ensure to T2S users that they can securely exchange information with T2S.

4 Secure means that the following security conditions are met:

- 5 | Confidentiality: Ensuring that information is accessible only to authenticated and authorised T2S Parties;
- 6 | Integrity: Safeguarding the accuracy and completeness of information;
- 7 | Monitoring: Detecting operational and technical problems and recording appropriate information for crisis  
8 management scenarios and future investigations;
- 9 | Availability: Ensuring that authorised users have access to information and associated assets when re-  
10 quired;
- 11 | Auditability: Ensuring the possibility to establish whether a system is functioning properly and that it has  
12 worked properly.

13 Additional information on common security issues and client authentication is to be provided later on with  
14 the final status of the network tender documentation.

### 15 1.3.6.1 Confidentiality

16 The confidentiality of data in T2S is ensured by the possibility to grant specific access rights for any given  
17 set of data, as detailed in section [Access rights](#) [▶ 145]. In conjunction with mechanisms of authentication  
18 <sup>164</sup> and authorisation applying to all requests received by T2S in both A2A and U2A mode, this guarantees  
19 that each T2S Actor's data is treated confidentially and is not accessible to non-authorized T2S Actors.

20 In addition to these standard mechanisms, the principle of data segregation is applied on the reference and  
21 transactional data belonging to CSDs and CBs in order to ensure a strict separation of their respective data  
22 in T2S.

### 23 1.3.6.2 Integrity

24 Within T2S, various business validations ensure the integrity of information. If a business validation fails,  
25 T2S has a concept of Error handling in place. The requested action is not processed and T2S provides the  
26 user with detailed information regarding the nature of the error via A2A or U2A.

27 In U2A mode, T2S offers users in addition the possibility to further ensure the integrity of data, data re-  
28 quests and communications via usage of a dual authorisation concept, the Four-Eyes-Principle. In case this  
29 option is chosen for a specified set of T2S operations, a second independent verification and confirmation is  
30 required before an operation becomes active in T2S. If, for example, a liquidity transfer should be executed  
31 and the person requesting the change is only allowed to do so under the Four-Eyes-Principle, then a second  
32 person of the same Party has to confirm the correctness of the request. Otherwise, the requested liquidity  
33 transfer is not executed .

---

164 Authentication means determining whether someone or something (function, component...) is who or what it is declared to be

1

**DIAGRAM 55 - FOUR-EYES-PRINCIPLE**

2

### 3 1.3.6.3 Monitoring

4 T2S operational monitoring provides tools to the T2S Operator for the detection in real-time of functional or  
5 operational problems.

6 Technical monitoring allows for the detection of hardware and software problems via real-time monitoring of  
7 the technical components involved in the processing, including the network connections.

8 In addition, the monitoring provides the T2S Operator with an overview of the message flows in T2S.

### 9 1.3.6.4 Availability

10 The overall availability of the T2S services is ensured by the infrastructure design. The technical environment  
11 for the T2S core system follows a "two regions/four sites" approach to ensure availability throughout the  
12 widest possible range of system failures. Further information regarding this architecture is available into the  
13 T2S General Technical Design published on the ECB website.

### 14 1.3.6.5 Auditability

15 T2S provides an audit trail with which it is possible e.g. to reconstruct who updated which data when. All  
16 this data is available to authorised users via queries (See section [Query management](#)).

17 In order to ensure sustainability, T2S archives all data by storing for a harmonised period of ten years all  
18 inbound and outbound messages (except queries) in their original format.

## 19 1.4 Settlement Day

20 This section presents the harmonised settlement day in T2S applicable to all markets to ensure higher de-  
21 gree of settlement efficiency, coordination of corporate actions management and settlement and to improve  
22 fail rates in a cross border environment.

## 1 1.4.1 T2S calendar

2 T2S facilitates settlement in Euro central bank money (i.e. settlements against payment or free of delivery)  
3 for which the calendar is the same as the calendar of TARGET2.

4 Further, T2S facilitates the settlement in non-Euro central bank money according to the calendar for the  
5 opening days of the relevant central bank.

6 T2S Operator maintains a T2S operating day calendar by currency, which includes the opening days and  
7 closing days for all T2S settlement currencies.

8 All Saturdays, Sundays and other specific days such as 25, 26 December and 1 January, for any type of set-  
9 tlement are common closing days for all currencies. T2S is open for settlement against payment aligning to  
10 the opening days of central banks.

11 **EXAMPLE 89 - CLOSING DAYS PER CURRENCY FOR EUR AND DKK IN 2011**

12

CURRENCY CODE	CLOSING DAY
EUR	01-Jan
EUR	22-Apr
EUR	25-Apr
EUR	25-Dec
EUR	26-Dec
DKK	01-Jan
DKK	25-Dec
DKK	26-Dec

13 When one currency is not available for cash settlement in T2S (i.e. closing day for this currency only), secu-  
14 rities transactions can nevertheless be settled in T2S either FOP transactions or through transactions against  
15 payment denominated in other T2S Settlement currencies. T2S is open for settlement of FOP transactions if  
16 at least one T2S settlement currency is open for settlement on that day. The settlement of FOP transactions  
17 is possible, for example, on TARGET2 closing days if DKK is not closed for settlement.

18 In general, T2S is open from Monday to Friday every week. At the start of a settlement day, T2S moves to  
19 the next settlement day according to the above calendar. At the end of a Friday settlement day (or the last  
20 T2S operating day of the week), T2S moves to the next Monday (or the next first T2S operating day of next  
21 week) as settlement day. T2S performs the T2S schedule of a settlement day until the end of the night-time  
22 settlement. On Monday at 5:00 (or after NTS if NTS ends before 3:00), T2S starts performing the schedule  
23 with the preparation of the real-time settlement as the continuation of the same settlement day or continue  
24 the RTS if started already before 3:00 on Saturday.

25 During the weekends, T2S interfaces and processes are not available on a regular basis due to the technical  
26 maintenance activities which are regularly executed. Outside the latter and based on specific needs, T2S can  
27 provide such services also during the remaining hours of the week-end upon specific request.

1

## 2 1.4.2 T2S schedule

3 The T2S schedule is under the control of the T2S operator, for creation of any new timelines, changing  
4 and/or deletion of existing time for a period or event. The T2S Operator has the necessary privileges by  
5 default to perform temporary or permanent changes to the T2S schedule. T2S ensures that the T2S sched-  
6 ule always conforms to the T2S operating day calendar by currency for any changes.

7 T2S manages the transition between the various periods (see section [Settlement day high level schedule](#)  
8 [▶ 240]) as an event. For each such event, T2S manages a planned time, a revised time and an effective  
9 time:

- 10 | The planned time corresponds to the standard schedule applied by default by T2S for every settlement  
11 day. The T2S Operator can update this planned time in case of a permanent change in the regular  
12 schedule;
- 13 | The revised time is the foreseen time for the current settlement day, which usually coincides with the  
14 planned time except when a delay has occurred. In contingency situations, the T2S Operator updates  
15 the revised time while the planned time remains unchanged;
- 16 | The effective time is the time of the actual occurrence of the event during the current settlement day.

17 T2S foresees the maintenance of individual T2S settlement currency dependent cut-offs and events. Howev-  
18 er, the T2S operator manages the overall processing of a settlement day based on a common T2S schedule  
19 configured for each T2S settlement currency. There is no schedule of a settlement day defined per currency  
20 in T2S, but distinct individual cut-offs and events per currency are defined.

21 This multi-currency configuration allows for some flexibility within the boundaries of the real-time settlement  
22 closure (start of cut-off phase with DVP cut-off at 16:00 hrs CET and end of cut-off phase at 18:00 hrs CET  
23 with FOP cut-off).

24 The T2S Operator is entitled to change some cut-offs and events (deadlines for receiving Settlement Instruc-  
25 tions/Settlement Restrictions for same day settlement) of a settlement day. This can be done independently  
26 for a T2S settlement currency, in exceptional circumstances or contingency situations, based on a request  
27 from the relevant T2S dependent external system (eg. RTGS, CSD platform, CMS). This exceptional proce-  
28 dure is to be defined in the T2S Manual of Operational Procedure (T2S MOP). These currency dependent  
29 cut-offs and events are specific events within the T2S daily schedule that have a cash component and are  
30 not a cut-off related to the T2S centralised processing such as the start of day and end of day. Such curren-  
31 cy dependent cut-offs and events are:

- 32 | DVP cut-off (IDVP / EDVP) –remains harmonised for all currencies at 16h00;
- 33 | Cash Settlement Restriction cut-off;
- 34 | Settlement restrictions release
- 35 | Reimbursement of intraday credit
- 36 | BATM (Bilaterally Agreed Treasury Management) cut-off;
- 37 | CBO (Central Bank Operation) cut-off;

- 1 | Optional cash sweep;
- 2 | Inbound liquidity transfer cut off;
- 3 | Automated cash sweep.

4 This change in cut-offs and events are valid only for the current T2S settlement day. When a currency de-  
5 pendent cut-off or event is extended for a currency, then the start of its dependent processes (e.g. cash  
6 sweep) is automatically extended for the same currency.

7 T2S allows such a change under the following conditions:

- 8 | The sequence and order of events (predecessors and/or successors events) in T2S must remain un-  
9 changed, i.e. a currency dependent cut-off cannot be delayed beyond a successor scheduling event if  
10 this would have an impact on T2S processing (e.g. a CBO cut-off for Danish Krone cannot be extended  
11 beyond the EOD cut-off for T2S, which is the successor in the scheduling). This includes no additions or  
12 removals of events, no changes in event ordering and no change in event dependencies;
- 13 | In the exceptional cases that T2S experiences a general issue across all currencies, it could be necessary  
14 that the T2S Operator would need to extend the EOD cut-off (e.g. the T2S revised times would apply).  
15 In this case, T2S ensures the sequence of currency independent cut-offs (securities Settlement Re-  
16 striction cut-off and FOP cut-off) is not changed. The procedures to apply in case of such an event are to  
17 be defined in the T2S MOP.

18 In the exceptional cases that T2S experiences the arrival of late peak volume transactions on Friday evening  
19 that are not available for settlement at the regular NTS, the T2S Operator would need to process into addi-  
20 tional NTS cycles. The procedure to apply in case of such an event are defined in the T2S MOP.

21 T2S controls the execution of the processes so that the start of a subsequent process depends on:

- 22 | The completion of the current process and/or;
- 23 | The occurrence of a cut-off.

24 However, for the start of a process, which is under the dependency of a preceding process and cut-off, T2S  
25 ensures that this process cannot start until the completion of the previous process and until the cut-off time  
26 is reached.

### 27 | **1.4.3 Overview description of the settlement day**

28 T2S provides a harmonised settlement day for all settlement procedures.

29 The settlement day in T2S includes five periods as listed in the next sub-section.

30 Each period includes different processes of the T2S settlement day as detailed below.

#### 31 | 1.4.3.1 Settlement day high level schedule

32 The schedule of a settlement day in T2S constitutes the major periods as listed below:

- 33 | Start of day;
- 34 | Night-time settlement;
- 35 | Maintenance window (Daily, Week-end);

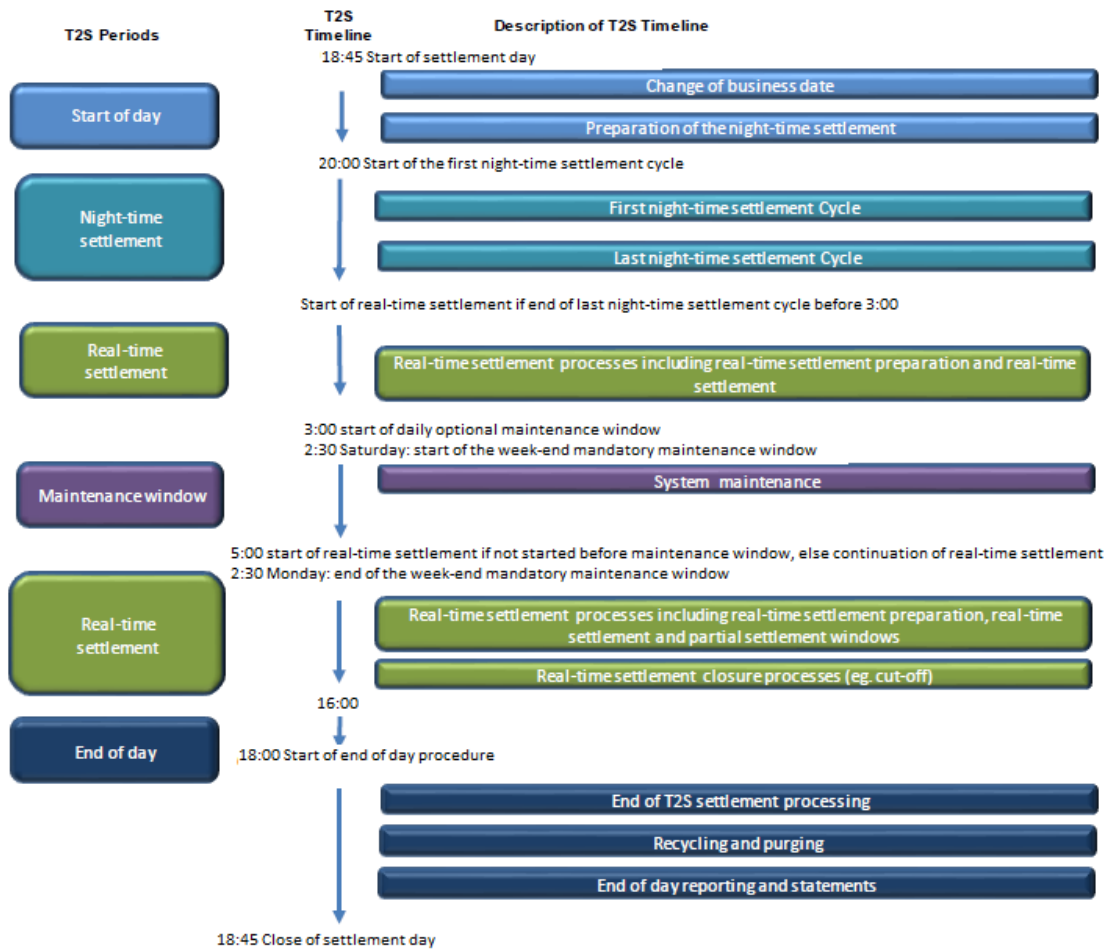

1 | Real-time settlement;

2 | End of day.

3 The different times shown in the high-level diagram below and text for the start and end of a period are only  
 4 indicative. T2S controls the execution of the periods that the start of a subsequent period starts, at the comple-  
 5 tion of the current period and/or the occurrence of a cut-off or event. All currency dependent cut-offs and  
 6 events must be configured for each T2S settlement currency.

7 **DIAGRAM 56 - HIGH LEVEL SCHEDULE OF A SETTLEMENT DAY**

8  
 9 The duration of the night-time settlement cycles is dependent on settlement volumes. In fact, even if the  
 10 duration of the settlement process itself has a pre-determined maximum duration; the duration of the gen-  
 11 eration of the settlement related messages depends on the number of transactions processed. The time  
 12 provided excludes extreme peak day volumetrics and has no associated triggered functionality (no process is  
 13 started or completed during the settlement day period at this time).

14 In order to be aware of the unfolding of the T2S settlement day, a T2S actor can subscribe to a notification  
 15 message to be informed of the current system status (see System Status Notification) and/or send a T2S  
 16 Diary Query (see Send Query). The system status provides high level information upon status change,  
 17 whereas the Diary Query provides a detailed information upon T2S actor's request.

1 1.4.3.2 Settlement day high level processes

2 The settlement day in T2S runs along the timing illustrated in the table below.

3 **TABLE 95 - SETTLEMENT DAY HIGH LEVEL PROCESSES**

T2S TIME-LINE	T2S PERIODS	HIGH LEVEL DESCRIPTION
18:45 – 20:00	Start of day (SOD)	<p>The start of day period including:</p> <ul style="list-style-type: none"> <li>  Change of business date in T2S;</li> <li>  Preparation for night-time settlement:                             <ul style="list-style-type: none"> <li>– Revalidation of Settlement Instructions/Settlement Restrictions/amendments/hold and release instructions that failed to settle or to be executed as of their Intended Settlement date;</li> <li>– At 19:00, final deadline to accept data feeds <sup>165</sup>, effective for the current business date, from collateral management systems and payment/settlement banks; CBs and Payment Banks can send their Securities Valuation as soon as possible, ideally by 17:45, but in any case T2S will accept Securities Valuations until 19:00.</li> <li>– At 20:00, final deadline to accept settlement instructions for processing in the sequence 1 of the first night time cycle.</li> <li>– Valuation of securities positions;</li> <li>– Valuation of collateral eligible Settlement Instructions.</li> </ul> </li> </ul>
20:00 – 3:00	Night-time settlement (NTS)	<p>The night-time settlement period including two cycles:</p> <ul style="list-style-type: none"> <li>  The first night-time cycle with reporting and processing of static data maintenance instructions/maintenance instructions at the end of each settlement sequences including 5 sequences:                             <ul style="list-style-type: none"> <li>– The sequence 0 (liquidity transfers from RTGS systems and from a T2S Dedicated Cash Account to another T2S dedicated cash account of the same T2S party, cash Settlement Restrictions regeneration related to the CoSD blocking and any cash Settlement Restrictions);</li> <li>– The sequence 1 (Corporate Actions on stock, new liquidity transfers, new cash Settlement Restrictions and all cash Settlement Restrictions not settled in the previous sequence);</li> <li>– The sequence 2 (FOP for rebalancing purpose, new liquidity transfers, new cash Settlement Restrictions, new Corporate Actions on stock and all Settlement Instructions/restrictions which failed to settle in the previous sequences);</li> </ul> </li> </ul>

165 T2S processes these data feeds as soon as they are available. If data feeds are not received at the 19:00 deadline, T2S bases its processes on the latest information received from the previous settlement days.

T2S TIME-LINE	T2S PERIODS	HIGH LEVEL DESCRIPTION
		<ul style="list-style-type: none"> <li>- The sequence 3 (Central Bank Operations, new liquidity transfers, new cash Settlement Restrictions, new Corporate Actions on stock, new FOP for rebalancing purpose and all Settlement Instructions/restrictions which failed to settle in the previous sequences);</li> <li>- And the sequence 4 (new liquidity transfers and all the remaining Settlement Instructions/restrictions which are new or failed to settle in the previous sequences);</li> <li>- The duration of the first night-time settlement cycle is dependent on settlement volumes but should finish by 20:20(target objective) as long as standard peak volumes are not exceeded.</li> </ul> <p>l The last night-time cycle, including partial settlement, with reporting and processing of static data maintenance instructions/maintenance instructions at the end of each settlement sequences including 4 sequences:</p> <ul style="list-style-type: none"> <li>- The sequence 4 (new liquidity transfers and all the Settlement Instructions/restrictions which are new or failed to settle in previous cycle);</li> <li>- The sequence X (new liquidity transfers and all the Settlement Instructions/restrictions which are new or failed to settle in the previous sequences and partial settlement on all unsettled Settlement Instructions, if eligible to partial settlement processing);</li> <li>- The sequence Y (reimbursement of the "multiple liquidity providers");</li> <li>- The sequence Z (liquidity transfers).</li> <li>- The duration of the last night-time settlement cycle is dependent on settlement volumes but should finish by 00:00 (target objective) as long as standard peak volumes are not exceeded.</li> </ul>
3:00 – 5:00	Maintenance window (MWI)	The maintenance optional daily window.

T2S TIME-LINE	T2S PERIODS	HIGH LEVEL DESCRIPTION
2:30 Saturday – 2:30 Monday	Maintenance window (MWI)	The mandatory weekend maintenance window.
5:00 (or after NTS if NTS ends before 3:00) – 18:00	Real-time settlement (RTS)	<p>The real-time settlement period including:</p> <ul style="list-style-type: none"> <li>  The real-time settlement preparation;</li> <li>  Penalty mechanism processing: <ul style="list-style-type: none"> <li>– At 7:30 , a final deadline for provision to accept penalty reference data to be used in current day ´s penalty calculation and recalculation processes: <ul style="list-style-type: none"> <li>(i) Securities subject to penalties information;</li> <li>(ii) Updated historic (former) prices for penalties;</li> <li>(iii) Daily prices for penalties.</li> </ul> </li> <li>– At 7:30 , start of the penalty reference data preparation processing <sup>166</sup>;</li> <li>– At 8:30 , a final deadline for completing the penalty eligibility <sup>167</sup> (starting at 19:30 or after the end of the Start of Day processes if they are completed afterwards);</li> <li>– At 8:30 of the 14th business day of the month, start of the monthly reporting of aggregated amounts of penalties (to be completed by 21:30);</li> <li>– After the completion of the penalty reference data preparation, a final deadline for provision of penalty modification requests to be considered in current day ´s penalty processes;</li> <li>– After the processing of penalty modification requests submitted before the deadline, and the penalty eligibility, but not before 9:15 , start of the Calculation, Recalculation and reporting of new and modified penalties;</li> <li>– On the 13th business day of the month, after the Recalculation is completed, start the end of appeal period process followed by the calculation of monthly aggregated amounts of penalties (to be completed by 8:30 on the next business day);</li> </ul> </li> <li>  The real-time settlement with 5 partial settlement windows;</li> <li>  The real-time settlement closure.</li> </ul>
18:00 – 18:45	End of day (EOD)	<p>The end of day period including:</p> <ul style="list-style-type: none"> <li>  The stop of settlement engine;</li> </ul>

166 Preparation processing is comprised of Static data processing of reference data for the penalty calculation and recalculation.

167 Penalty eligibility is comprised of an analysis of failed matched settlement instructions from the previous business day to determine their eligibility for penalties.

T2S TIME-LINE	T2S PERIODS	HIGH LEVEL DESCRIPTION
		<ul style="list-style-type: none"><li>  The internal T2S securities accounts consistency check;</li><li>  The recycling and purging;</li><li>  The end of day reporting and statements <sup>168</sup>.</li></ul>

#### 1 **1.4.4 Detailed description of the settlement day**

2 This section describes the breakdown and the detailed description of all periods in the T2S settlement day  
3 for all T2S relevant CSDs.

##### 4 **1.4.4.1 Start of day (SOD)**

5 This section presents the start of day processes.

6 The SOD period starts after the successful completion of the previous EOD period and after 18:45, and is  
7 followed by the night-time settlement period.

8 The SOD period concentrates on the change of T2S business date and preparation of the night-time settle-  
9 ment period. It includes the processing of the feeds from collateral management systems (CMS) and pay-  
10 ment/settlement banks for the reference prices and eligible assets (for valuation purposes).

##### 11 **1.4.4.1.1 Application processes involved during the start of day**

12 The following application processes are involved during the SOD period as per:

- 13 | Interface;
- 14 | Static Data Management;
- 15 | Settlement;
- 16 | Liquidity Management;
- 17 | Information Management.

18 These application processes are available to all T2S Actors.

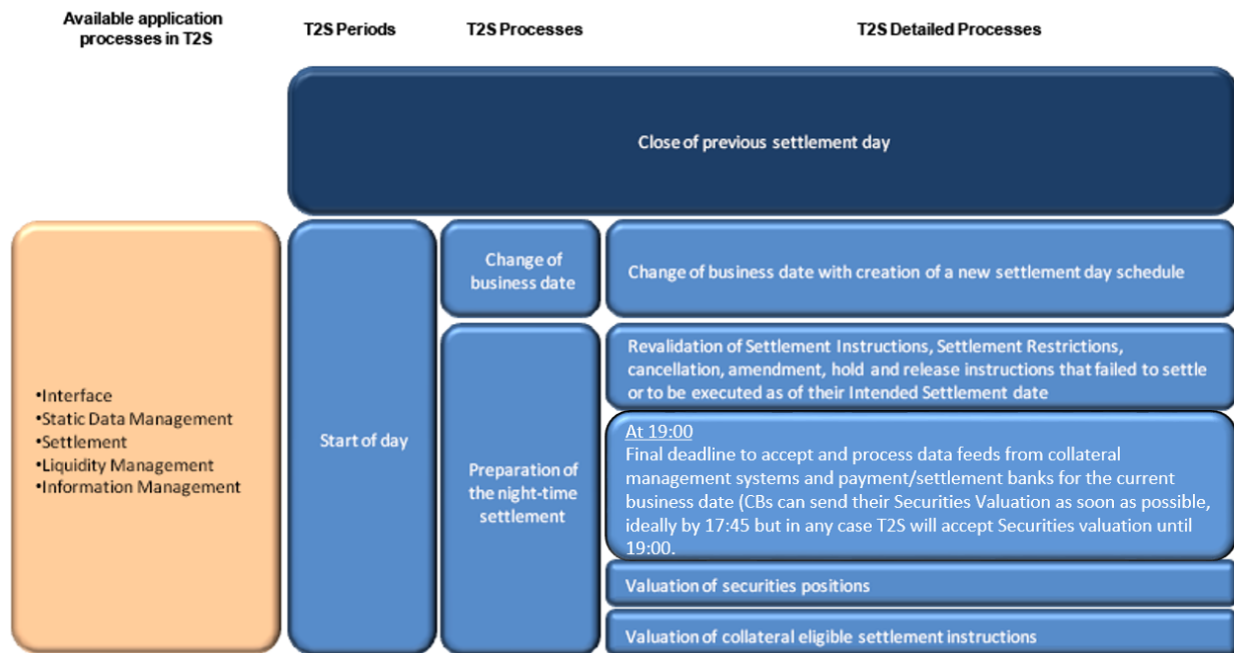

##### 19 **1.4.4.1.2 Start of day schedule**

20 The diagram below shows the different processes occurring during the SOD period along with the list of  
21 available application processes.

---

168 The target objective to deliver reports is 18:30 in normal conditions, 18:35 with standard peak volumes and 18:45 in case of extreme peaks, assuming that a mechanism is in place to enable prioritising the initiation of the most critical EOD reports and no additional security requirements beyond the signature at DEP-level are implemented.

1 **DIAGRAM 57 - START OF DAY SCHEDULE**

2

3 **1.4.4.1.3 Start of day dependencies**

4 During the SOD period, T2S performs the following detailed processes based on the specified dependencies.

5 The below diagram shows the flow of dependencies:

6 **DIAGRAM 58 - START OF DAY DEPENDENCIES**

7

8 The following table describes the different dependencies between processes occurring during the start of

9 day period.

1  
2

**TABLE 96 - DEPENDENCIES BETWEEN PROCESSES DURING THE START OF DAY PERIOD**

T2S DETAILED PROCESSED	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
Change of business date with creation of a new settlement day schedule	Previous settlement day successfully closed and Time: 18:45	This process starts after the successful close of the previous settlement day.  In addition this process does not start before 18:45
Revalidation of Settlement Instructions/Settlement Restrictions/cancellation/amendments/hold and release instructions that failed to settle or to be executed as of their Intended Settlement date	After the change of business date	This process starts after the change of the business date.
Process data feeds from CMS and payment/settlement banks	Time: 19:00	This process does not start before the "start time for processing of data feeds".
Valuation of securities positions	After the data feeds processing	This process starts after the end data feeds processing.
Valuation of collateral eligible Settlement Instructions	After the data feeds processing and the revalidation	This process starts after the end of revalidation of Settlement Instructions/Settlement Restrictions/amendments/hold and release instructions and after the end data feeds processing.

3 **1.4.4.1.4 Start of day processes**

4 During the SOD period, T2S performs the processes as detailed in the below table in relation to the flow of  
5 dependencies.

6  
7

**TABLE 97 - START OF DAY PROCESSES**

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Change of business date	T2S changes the business date according to the T2S operating day calendar by currency.
	T2S creates the new settlement day schedule on the basis of the default schedule of events and its planned times.
Preparation of the night-time settlement	T2S revalidates against the static data valid as of the new business date (see section <a href="#">Revalidation process</a> [▶ 342]):  <ul style="list-style-type: none"> <li>▮ The Settlement Instructions and Settlement Restrictions that failed to settle as of their Intended Settlement date and which are recycled for the current settlement day;</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>  The Amendment Instructions, Cancellation Instructions and Hold/Release Instructions remaining as not executed from the previous settlement day;</li> </ul> <p>The Settlement Instructions, Settlement Restrictions, Amendment Instructions, Cancellation Instructions and Hold/Release Instructions under four eyes processing in the status "awaiting for approval", are not submitted to revalidation.</p> <p>T2S receives and processes inputs from the external systems (i.e. collateral management systems of central banks and payment/settlement banks) as:</p> <ul style="list-style-type: none"> <li>  Collateral eligible securities;</li> <li>  Securities references prices;</li> <li>  Close link checks.</li> </ul> <p>See section Maintain Static Data Object and messages CollateralValueCreationRequest, EligibleSecuritiesCreationRequest and CloseLinkCreationRequest.</p> <p>Note: T2S accepts and processes these inputs until the start time for processing data feeds. This start time is the final deadline to accept such data feeds effective for the current business day. T2S processes these data feeds as soon as they are available and uses the information for any subsequent validation, acceptance and settlement of Settlement Instructions, Settlement Restrictions and liquidity transfers only. If data feeds are not provided before the deadline, and subject to T2S Operator confirmation (after confirming with the relevant parties) as far as the Securities references prices are concerned, T2S uses instead the latest available data.</p> <p>T2S processes all static data maintenance instructions including the limit updates received from a central bank or its payment/settlement banks for external guarantee limit, client-collateralisation limit, unsecured credit limit, CB collateralisation limit.</p> <p>The procedures to apply in case of an intraday data feed or an update, are to be defined in the T2S MOP. T2S does not provide an automated facility to process such intraday updates.</p> <p>Based on the latest securities prices of eligible securities and related data feeds from CMS and payment/settlement banks available as of the current settlement day, T2S values the securities positions in all eligible securities accounts for CB collateralisation/client-collateralisation purposes.</p> <p>Based on the latest securities prices of eligible securities, and related data feeds from CMS and payment/settlement banks, (available as of the current settlement day and after the revalidation of the Settlement Instructions) T2S values the collateral eligible Settlement Instructions.</p>

1 1.4.4.2 Night-time settlement (NTS)

2 This section presents the night-time settlement processes in the T2S settlement day.

3 For the ease of presentation, the night-time settlement period is shown in two parts of batch settlement,

4 each one referring to a settlement cycle.

1 The NTS period starts after the successful completion of the SOD period and is followed by the maintenance  
2 window and the real-time settlement period.

3 In the exceptional cases that T2S experience the late arrival of late peak volume transactions on Friday  
4 evening that are not available for settlement at the regular NTS, the peak volume transactions should be  
5 sent after the NTS. In that case, short NTS cycles are triggered by the T2S Operator during the injection of  
6 the late peak volume transactions put under Intraday Restriction. At the end of the injection, the T2S Opera-  
7 tor triggers an Additional NTS cycle. The exact procedure with the timing to apply in case of such an event  
8 are defined in the T2S MOP.

9 Note: The exact timing needed to perform the sequences and the time available for the sequence reporting  
10 will be defined at a later stage, but the dependencies defined are ensured.

### 11 NTS Processing

12 During the night-time settlement period, T2S processes the Settlement Instructions, Settlement Restrictions  
13 and liquidity transfers in sequences within two settlement cycles. T2S submits Settlement Instructions, Set-  
14 tlement Restrictions and liquidity transfers for settlement according to an automatic pre-defined order, called  
15 "sequence".

16 A settlement cycle may consist of more than one sequence (for settlement of different types of Settlement  
17 Instructions, Settlement Restrictions and liquidity transfers).

18 In each NTS sequence, T2S:

- 19 | Processes those new Settlement Instructions, Settlement Restrictions and liquidity transfers received be-  
20 fore the start of the sequence which are eligible for settlement at this sequence (and for the first Se-  
21 quence all the ones received in T2S before 20:00 even though the cycle starts after 20:00);
- 22 | Includes pending Settlement Instructions not settled during previous sequences.

23 If a Settlement Instruction/Settlement Restriction selected for a sequence is linked "with" or "after" a Set-  
24 tlement Instruction/Settlement Restriction which does not correspond to the sequence criteria, these Settle-  
25 ment Instruction(s)/Settlement Restriction(s) are excluded from this sequence.

26 T2S validates and accepts the static data maintenance instructions and maintenance instructions during the  
27 night-time settlement period on a continuous basis. However, T2S processes these updates only during the  
28 processing periods between the different sequences. T2S sends the information on the status of the static  
29 data maintenance instructions and maintenance instructions to T2S Actors immediately after end of their  
30 processing (i.e. acceptance/execution).

31 For all static data updates, i.e. immediate updates and updates with future date, T2S also performs a revali-  
32 dation of all Settlement Instructions and Settlement Restrictions to ensure that they are valid for the consid-  
33 ered static data update. Maintenance instructions (i.e. Amendment Instructions, Cancellation Instructions,  
34 Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the  
35 underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revali-  
36 dation, the maintenance instruction is denied when trying to be executed but not cancelled.

37 Similarly, T2S processes any instruction query received and validated during a settlement cycle run with a  
38 query response back to the relevant T2S Actor.

## 1 NTS Reporting

2 At the end of each night-time sequence, T2S generates full or delta reports as per the report configuration  
3 setup of the relevant T2S Actors.

4 T2S sends also to the T2S Actors messages such as settlement status advices, settlement confirmation,  
5 posting notification, etc that were queued due to an execution of a settlement sequence.

6 The duration of the night-time settlement cycles are dependent on settlement volumes. The target objective  
7 for the first and last night-time cycles should finish by 22:20 and 00:00 respectively, as long as volumes do  
8 not exceed standard peak volumes.

### 9 **1.4.4.2.1 Application processes involved during night-time settlement**

10 The following application processes are involved during the NTS period as per:

11 | Static Data Management;

12 | Settlement;

13 | Liquidity Management;

14 | Interface;

15 | Information Management.

16 These application processes are available for all T2S Actors.

17 Note: During the execution of a night-time settlement sequence, T2S does not respond to queries or gener-  
18 ate time-triggered reports related to securities positions or cash balances.

19 The queries and reports related to securities position or cash balance are:

20 | Securities account position query;

21 | T2S DCA cash balance query;

22 | T2S overall liquidity query;

23 | T2S cash forecast query;

24 | Limit utilisation query;

25 | Limit utilisation journal query;

26 | Total collateral value per T2S Dedicated Cash Account query;

27 | Collateral Value per T2S Dedicated Cash Account query;

28 | Collateral Value of a Security query;

29 | Outstanding Auto-Collateralisation Credit query;

30 | Statement of Holdings report;

31 | Statement of Accounts report;

32 | Current Settlement Day Cash Information report;

33 | Securities Position Detailed Restriction Details query;

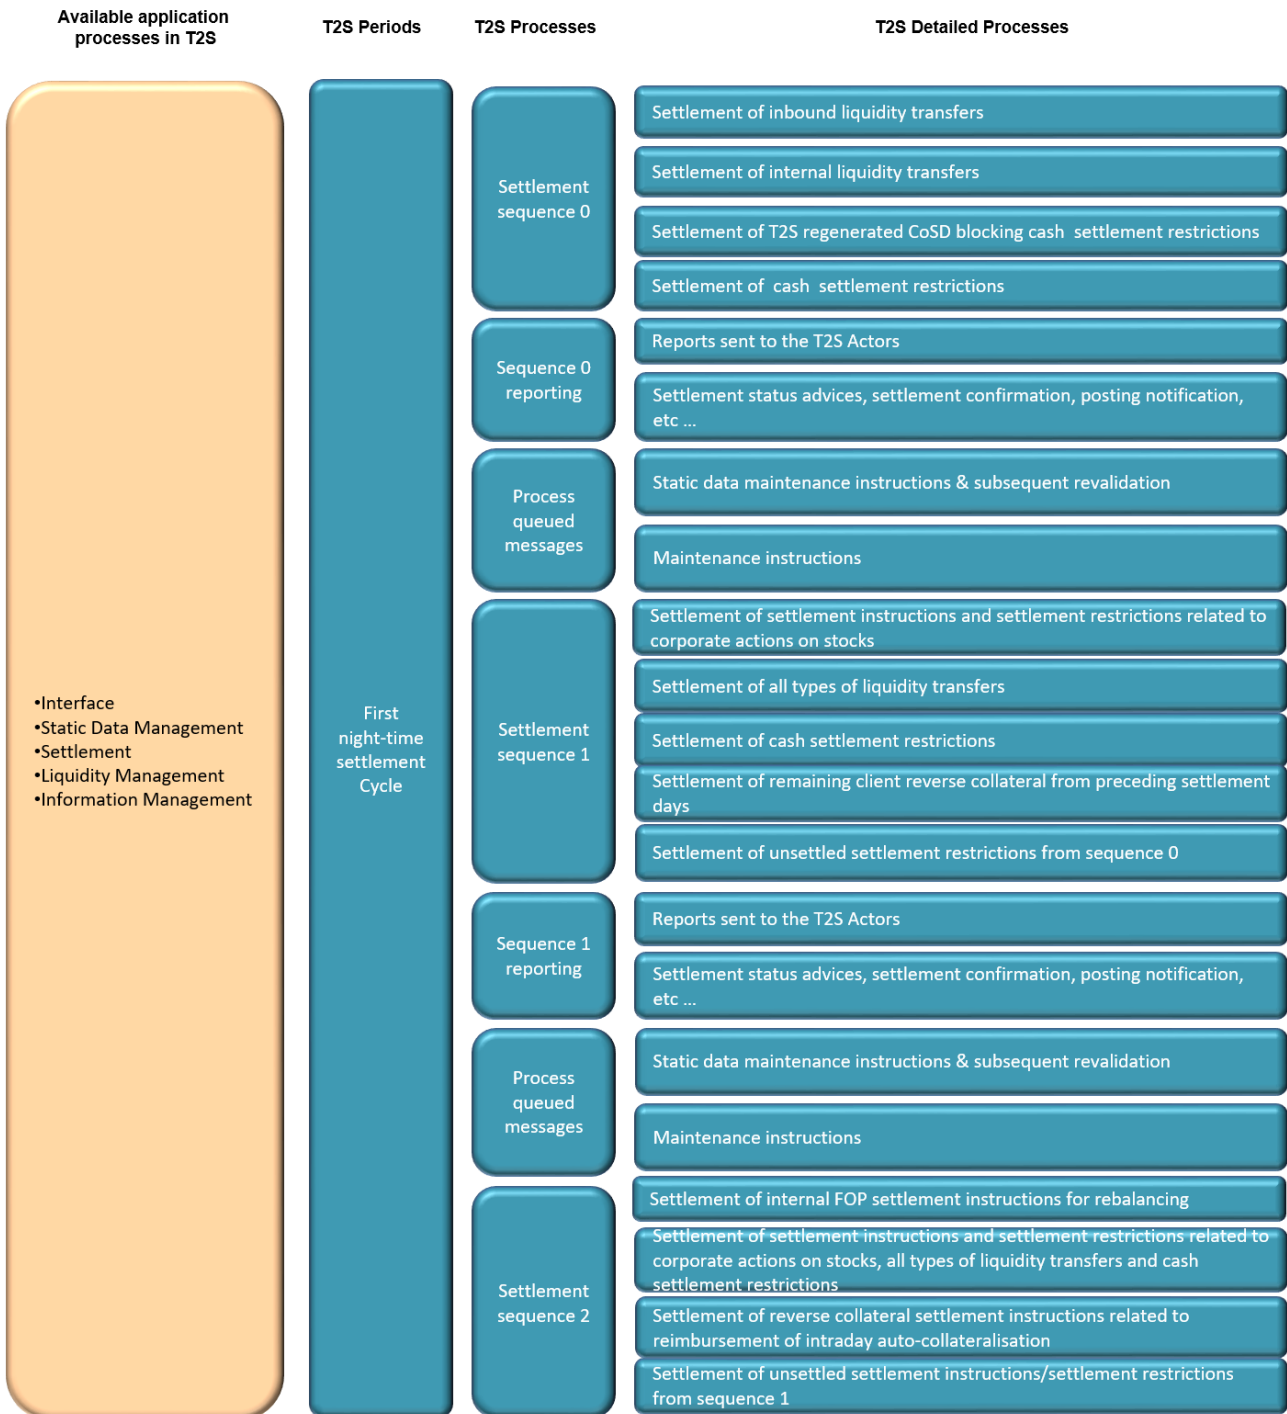

34 | T2S Dedicated Cash Account Balance Detailed Restrictions query.

1 These time-triggered reports are also not available during the start of day and the maintenance window.

2 **1.4.4.2 First night-time settlement cycle schedule**

3 The diagram below shows the different processes occurring during the first settlement cycle of the NTS peri-  
 4 od along with the list of available application processes.

5 **DIAGRAM 59 - FIRST NIGHT-TIME SETTLEMENT CYCLE SCHEDULE**

6

1 **1.4.4.2.3 First night-time settlement cycle dependencies**

2 During the first night-time cycle of the NTS period, T2S performs the following detailed processes based on  
3 the specified dependencies.

4 **DIAGRAM 60 - FIRST NIGHT-TIME SETTLEMENT CYCLE DEPENDENCIES**

5  
6 The following table describes the different dependencies between processes occurring during the first night-  
7 time cycle of the NTS period.

8 **TABLE 98 - DEPENDENCIES BETWEEN PROCESSES DURING THE FIRST NIGHT-TIME CYCLE**

T2S DETAILED PRO- CESSED	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
Settlement sequence 0	End of start of day period and Time: 20:00	This process starts after the completion of the start of day period.  In addition this process does not start before 20:00

T2S DETAILED PROCESSED	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
Sequence 0 reporting	After the end of Sequence 0	This process starts after the end of sequence 0 processing.
Process queued messages	After the end of Sequence 0	This process starts after the end of sequence 0 processing.
Settlement sequence 1	After the queued messages processing	This process starts after the processing of all queued messages.
Sequence 1 reporting	After the end of Sequence 1	This process starts after the end of sequence 1 processing.
Process queued messages	After the end of Sequence 1	This process starts after the end of sequence 1 processing.
Settlement sequence 2	After the queued messages processing	This process starts after the processing of all queued messages.
Sequence 2 reporting	After the end of Sequence 2	This process starts after the end of sequence 2 processing.
Process queued messages	After the end of Sequence 2	This process starts after the end of sequence 2 processing.
Settlement sequence 3	After the queued messages processing	This process starts after the processing of all queued messages.
Sequence 3 reporting	After the end of Sequence 3	This process starts after the end of sequence 3 processing.
Process queued messages	After the end of Sequence 3	This process starts after the end of sequence 3 processing.
Settlement sequence 4	After the queued messages processing	This process starts after the processing of all queued messages.
Sequence 4 reporting	After the end of Sequence 4	This process starts after the end of sequence 4 processing.

1 **1.4.4.2.4 First night-time settlement cycle processes**

2 During the first night-time settlement cycle, T2S performs the processes as detailed in the below table.

3 Sequence 0

1  
2

**TABLE 99 - PROCESSES DURING THE FIRST NIGHT-TIME SETTLEMENT CYCLE**

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Settlement sequence 0	<p>Only the following Settlement Restrictions and liquidity transfers validated and accepted by T2S before start of sequence 0 are proposed for settlement in the following sequence:</p> <ul style="list-style-type: none"> <li>  Inbound liquidity transfers which transfer cash amounts from RTGS accounts to T2S Dedicated cash accounts (T2S DCA);</li> <li>  Internal liquidity transfers which transfers cash amounts between two T2S DCA of the same party (or) between two T2S DCA of different party but each T2S DCA linked to the same RTGS account;</li> <li>  T2S regenerated cash Settlement Restrictions corresponding to CoSD blocking released at the end of the previous settlement day;</li> <li>  Any other cash Settlement Restrictions.</li> </ul> <p>Additionally, T2S responds to queries received via A2A except for queries related cash balances. If these queries are received via U2A, they are rejected. If T2S receives the queries via A2A, they are queued and processed during the next reporting phase.</p> <p>T2S also queues the maintenance on the Settlement Restrictions which are under settlement during this sequence.</p>
Sequence 0 reporting	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc. resulting from the execution of the settlement sequence.</p>

3 Sequence 1

1

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Process queued messages	<p>The following messages which were validated and accepted during the execution of the sequence 0 are executed:</p> <ul style="list-style-type: none"> <li>  Static data maintenance instructions;</li> <li>  Maintenance instructions.</li> </ul> <p>For all static data updates (i.e. immediate updates and updates with future date), T2S performs a revalidation of all Settlement Instructions and Settlement Restrictions that failed to settle or that have not yet been submitted to a settlement attempt to ensure that they are valid with regards to the considered static data update.</p> <p>Maintenance instructions (ie Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revalidation, the maintenance instruction is denied when trying to be executed but not cancelled.</p> <p>Additionally, T2S responds:</p> <ul style="list-style-type: none"> <li>  To new queries received via U2A/A2A and;</li> <li>  To those queries already received via A2A but queued due to a settlement sequence run.</li> </ul>
Settlement sequence 1	<p>Only the following Settlement Instructions, Settlement Restrictions and liquidity transfers validated and accepted by T2S before start of sequence 1 are proposed for settlement:</p> <ul style="list-style-type: none"> <li>  Settlement Instructions and Settlement Restrictions <sup>169</sup> related to Corporate Actions (CA) on "stocks" <sup>170 171</sup>;</li> <li>  All liquidity transfers: <ul style="list-style-type: none"> <li>– Inbound liquidity transfers which transfer cash amounts from RTGS accounts to a T2S DCA;</li> <li>– Internal liquidity transfers which transfers cash amounts between two T2S DCA of the same party (or) between two T2S DCA of different party but each T2S DCA linked to the same RTGS account;</li> <li>– Outbound liquidity transfers which transfer cash amounts from T2S DCA to RTGS accounts.</li> </ul> </li> </ul>

169 I.e. Settlement Restrictions with "Corporate Action Event ID" filled.

170 CA on stocks are events applicable on final securities positions (e.g. cash distributions). CA on flows are events related to pending transactions (e.g. market claims and transformations).

171 CA FoPs settled during this sequence or any subsequent sequence may result in the automatic release of a Corporate action processing restriction (CAPR). This automatic removal of the CAPR intraday restriction occurs upon the settlement of the first CA FoP on an account belonging to the system entity defining the intraday restriction for this ISIN. It is assumed that any such CA FoPs are linked all or none either within a pool or via WITH links.

- | When the CAPR is not removed automatically during the NTS period it remains active according to the defined validity period. For the management of the intraday restrictions please See section [Restriction types](#) [p. 45].

- | When CAPR is removed automatically during the NTS period and its validity date exceeds the current business day it will be reapplied as of the next business day. To avoid this behaviour the valid to date should be defined for the current business day only.

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>  All new cash Settlement Restrictions;</li> <li>  Remaining client reverse collateral from preceding settlement days.</li> </ul> <p>This sequence also processes the unsettled Settlement Restrictions from sequence 0.</p> <p>T2S does not attempt Settlement Instructions related to CA on “flows” for settlement during sequence 1.</p> <p>Additionally, T2S responds to queries received via A2A except for queries related to cash balances. If these queries are received via U2A, they are rejected. If T2S receives the queries via A2A, they are queued and processed during the next reporting phase.</p> <p>T2S also queues the maintenance on the Settlement Instructions/Settlement Restrictions which are under settlement during this sequence.</p>
Sequence 1 reporting	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc resulting from the execution of the settlement sequence.</p>

1 Sequence 2

1

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
<p>Process queued messages</p>	<p>The following messages which were validated and accepted during the execution of the sequence 1 are executed:</p> <ul style="list-style-type: none"> <li>  Static data maintenance instructions;</li> <li>  Maintenance instructions.</li> </ul> <p>For all static data updates (i.e immediate updates and updates with future date), T2S performs a revalidation of all Settlement Instructions and Settlement Restrictions that failed to settle or that have not yet been submitted to a settlement attempt to ensure that they are valid with regards to the considered static data update.</p> <p>Maintenance instructions (i.e Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revalidation, the maintenance instruction is denied when trying to be executed but not cancelled.</p> <p>Additionally, T2S responds:</p> <ul style="list-style-type: none"> <li>  To new queries received via U2A/A2A and;</li> <li>  To those queries already received via A2A but queued due to a settlement sequence run.</li> </ul>
<p>Settlement sequence 2</p>	<p>Only the following Settlement Instructions, Settlement Restrictions and liquidity transfers validated and accepted by T2S before start of sequence 2 are proposed for settlement:</p> <ul style="list-style-type: none"> <li>  Settlement Instructions related to FOP for rebalancing purposes (i.e. between securities accounts of the same account holder);</li> <li>  All liquidity transfers: <ul style="list-style-type: none"> <li>– Inbound liquidity transfers which transfer cash amounts from RTGS accounts to a T2S DCA;</li> <li>– Internal liquidity transfers which transfers cash amounts between two T2S DCA of the same party (or) between two T2S DCA of different party but each T2S DCA linked to the same RTGS account;</li> <li>– Outbound liquidity transfers which transfer cash amounts from T2S DCA to RTGS accounts.</li> </ul> </li> <li>  All new cash Settlement Restrictions;</li> <li>  Settlement Instructions and Settlement Restrictions <sup>172</sup> related to CA on stocks;</li> <li>  Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation. <ul style="list-style-type: none"> <li>– This sequence also processes the unsettled Settlement Instructions and unsettled Settlement Restrictions in sequence 1.</li> </ul> </li> </ul>

172 I.e. Settlement Restrictions with "Corporate Action Event ID" filled.

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>– Additionally, T2S responds to queries received via A2A except for queries related to cash balances. If these queries are received via U2A, they are rejected. T2S PROCESSES	DESCRIPTION OF THE PROCESSES
<p>Process queued messages</p>	<p>The following messages which were validated and accepted during the execution of the sequence 2 are executed:</p> <ul style="list-style-type: none"> <li>  Static data maintenance instructions;</li> <li>  Maintenance instructions.</li> </ul> <p>For all static data updates (i.e immediate updates and updates with future date), T2S performs a revalidation of all Settlement Instructions and Settlement Restrictions that failed to settle or that have not yet been submitted to a settlement attempt to ensure that they are valid with regards to the considered static data update.</p> <p>Maintenance instructions (i.e Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revalidation, the maintenance instruction is denied when trying to be executed but not cancelled.</p> <p>Additionally, T2S responds:</p> <ul style="list-style-type: none"> <li>  To new queries received via U2A/A2A and;</li> <li>  To those queries already received via A2A but queued due to a settlement sequence run.</li> </ul>
<p>Settlement sequence 3</p>	<p>Only the following Settlement Instructions, Settlement Restrictions and liquidity transfers validated and accepted by T2S before start of sequence 3 are proposed for settlement:</p> <ul style="list-style-type: none"> <li>  Settlement Instructions related to Central Bank Operations (CBO);</li> <li>  All liquidity transfers: <ul style="list-style-type: none"> <li>– Inbound liquidity transfers which transfer cash amounts from RTGS accounts to a T2S DCA;</li> <li>– Internal liquidity transfers which transfers cash amounts between two T2S DCA of the same party (or) between two T2S DCA of different party but each T2S DCA linked to the same RTGS account;</li> <li>– Outbound liquidity transfers which transfer cash amounts from T2S DCA to RTGS accounts;</li> </ul> </li> <li>  All new cash Settlement Restrictions;</li> <li>  Settlement Instructions and Settlement Restrictions <sup>173</sup> related to CA on stocks;</li> <li>  Settlement Instructions related to FOP for rebalancing purposes;</li> <li>  Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation.</li> </ul> <p>This sequence also processes the unsettled Settlement Instructions and unsettled Settlement Restrictions in sequence 2.</p>

173 I.e. Settlement Restrictions with "Corporate Action Event ID" filled.

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<p>Additionally, T2S responds to queries received via A2A except for queries related to securities positions or cash balances. If these queries are received via U2A, they are rejected. If T2S receives the queries via A2A, they are queued and processed during the next reporting phase.</p> <p>T2S also queues the maintenance on the Settlement Instructions/Settlement Restrictions which are under settlement during this sequence.</p>
Sequence 3 reporting	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc. resulting from the execution of the settlement sequence.</p>

1 Sequence 4

	<p>queries via A2A, they are queued and processed during the next reporting phase.</p> <p>T2S also queues the maintenance on the Settlement Instructions/Settlement Restrictions which are under settlement during this sequence.</p>
Sequence 4 reporting	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc resulting from the execution of the settlement sequence.</p>

1 Sequence X

1

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
<p>Process queued messages</p>	<p>The following messages which were validated and accepted during the execution of the sequence 4 of last night-time settlement cycle are executed:</p> <ul style="list-style-type: none"> <li>  Static data maintenance instructions;</li> <li>  Maintenance instructions.</li> </ul> <p>For all static data updates (i.e immediate updates and updates with future date), T2S performs a revalidation of all Settlement Instructions and Settlement Restrictions that failed to settle or that have not yet been submitted to a settlement attempt to ensure that they are valid with regards to the considered static data update.</p> <p>Maintenance instructions (i.e Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revalidation, the maintenance instruction is denied when trying to be executed but not cancelled.</p> <p>Additionally, T2S responds:</p> <ul style="list-style-type: none"> <li>  To new queries received via U2A/A2A and;</li> <li>  To those queries already received via A2A but queued due to a settlement sequence run.</li> </ul>
<p>Settlement sequence X</p>	<p>T2S attempts settlement of all validated and accepted Settlement Instructions, Partially Released Settlement Instructions, Settlement Restrictions and liquidity transfers before start of sequence X, for the current settlement day, as listed below:</p> <ul style="list-style-type: none"> <li>  Settlement Instructions related to DVP;</li> <li>  Settlement Instructions related to FOP;</li> <li>  Settlement Instructions related to PFOD;</li> <li>  Settlement Instructions related to CA on stocks and on flows;</li> <li>  Settlement Instructions related to BATM;</li> <li>  Settlement Instructions related to CBO;</li> <li>  Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation;</li> <li>  Settlement of securities/cash Settlement Restrictions;</li> <li>  Settlement of all liquidity transfers (i.e. inbound, internal and outbound).</li> </ul> <p>This sequence also processes the unsettled Settlement Instructions and Settlement Restrictions in</p>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<p>sequence 4.</p> <p>Here, T2S applies partial settlement to all fails due to a lack of securities (i.e. unsettled Settlement Instructions, partially release Settlement Instructions) which are eligible for submission to partial settlement processing.<sup>175</sup></p> <p>Additionally, T2S responds to queries received via A2A except for queries related to securities positions or cash balances. If these queries are received via U2A, they are rejected. If T2S receives the queries via A2A, they are queued and processed during the next reporting phase.</p> <p>T2S also queues the maintenance on the Settlement Instructions/Settlement Restrictions which are under settlement during this sequence.</p>
Sequence X reporting	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc resulting from the execution of the settlement sequence.</p>

1 Sequence Y

175 For Partially Released Settlement Instructions to be considered during sequence x of the night time settlement the partial release must occur after the start of day and before the end of sequence C2S4.

1

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
<p>Process queued messages</p>	<p>The following messages which were validated and accepted during the execution of the sequence X are executed</p> <ul style="list-style-type: none"> <li>  Static data maintenance instructions;</li> <li>  Maintenance instructions.</li> </ul> <p>For all static data updates (i.e immediate updates and updates with future date), T2S performs a revalidation of all Settlement Instructions and Settlement Restrictions that failed to settle or that have not yet been submitted to a settlement attempt to ensure that they are valid with regards to the considered static data update.</p> <p>Maintenance instructions (i.e Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revalidation, the maintenance instruction is denied when trying to be executed but not cancelled.</p> <p>Additionally, T2S responds:</p> <ul style="list-style-type: none"> <li>  To new queries received via U2A/A2A and;</li> <li>  To those queries already received via A2A but queued due to a settlement sequence run.</li> </ul>
<p>Settlement sequence Y (optional) <sup>176</sup></p>	<p>Only the following liquidity transfers are proposed for settlement:</p> <ul style="list-style-type: none"> <li>  Reimbursement of the "multiple liquidity providers": this reimbursement procedure involves the execution of a series of outbound liquidity transfers from a T2S DCA (of a payment/settlement bank in T2S) to RTGS accounts (of the liquidity providers in RTGS system) in accordance to a preset sequence of reimbursement.</li> </ul> <p>Additionally, T2S responds to queries received via A2A except for queries related to cash balances. If these queries are received via U2A, they are rejected. If T2S receives the queries via A2A, they are queued and processed during the next reporting phase.</p>
<p>Sequence Y reporting</p>	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc resulting from the execution of the settlement sequence.</p>

2 Sequence Z

176 Based on predefined Standing Liquidity Transfers Orders

1

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Process queued messages	<p>The following messages which were validated and accepted during the execution of the sequence Y are executed:</p> <ul style="list-style-type: none"> <li>  Static data maintenance instructions;</li> <li>  Maintenance instructions.</li> </ul> <p>For all static data updates (i.e immediate updates and updates with future date), T2S performs a revalidation of all Settlement Instructions and Settlement Restrictions that failed to settle or that have not yet been submitted to a settlement attempt to ensure that they are valid with regards to the considered static data update.</p> <p>Maintenance instructions (i.e Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process. In case the underlying Settlement Instruction or Settlement Restriction to be maintained is cancelled due to their revalidation, the maintenance instruction is denied when trying to be executed but not cancelled.</p> <p>Additionally, T2S responds:</p> <ul style="list-style-type: none"> <li>  To new queries received via U2A/A2A and;</li> <li>  To those queries already received via A2A but queued due to a settlement sequence run.</li> </ul>
Settlement sequence Z	<p>Only the following liquidity transfers are proposed for settlement:</p> <ul style="list-style-type: none"> <li>  All liquidity transfers: <ul style="list-style-type: none"> <li>– Inbound liquidity transfers which transfer cash amounts from RTGS accounts to a T2S DCA;</li> <li>– Internal liquidity transfers which transfers cash amounts between two T2S DCA of the same party (or) between two T2S DCA of different party but each T2S DCA linked to the same RTGS account;</li> <li>– Outbound liquidity transfers which transfer cash amounts from T2S DCA to RTGS accounts.</li> </ul> </li> </ul> <p>Additionally, T2S responds to queries received via A2A except for queries related to cash balances. If these queries are received via U2A, they are rejected. If T2S receives the queries via A2A, they are queued and processed during the next reporting phase.</p>
Sequence Z reporting	<p>As per the report configuration, T2S generates and sends full or delta reports to the relevant T2S Actors.</p> <p>T2S sends also to the T2S Actors a bundled file (or several files if the size exceeds 32MB) including all messages such as settlement status advices, posting notification, etc resulting from the execution of the settlement sequence.</p>

2 1.4.4.3 Maintenance window (MWI)

3 This section presents the maintenance window processes in the T2S settlement day. The optional daily  
4 maintenance window only occurs when urgent maintenance activities are required. The T2S operator must

1 communicate such cases at least one business day in advance. This optional daily maintenance window  
 2 takes place from 3.00 until 5.00, after the completion of the night-time settlement period. The weekend  
 3 maintenance window takes place from 2:30 on Saturday to 2:30 on Monday and is not optional.  
 4 In case the NTS completes before 3.00 from Mondays to Fridays and before 2.30 on Saturdays, the real-time  
 5 settlement period commences until the start of the maintenance window.

6 **1.4.4.3.1 Application processes involved during the maintenance window**

7 During the maintenance window all services are unavailable except for Interface application processes which  
 8 are restricted:

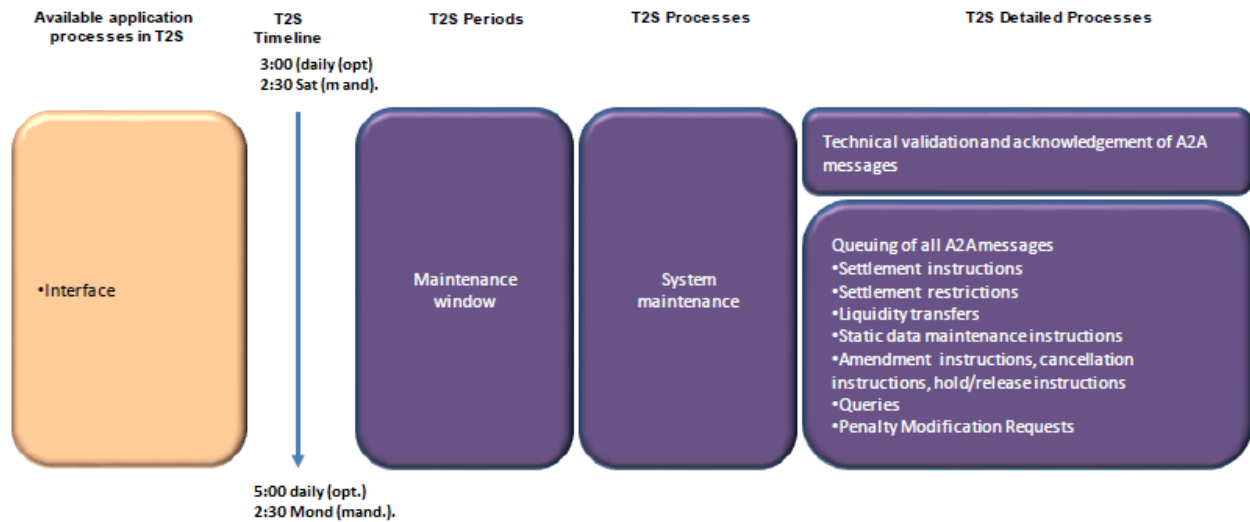

- 9 | Messages received in application-to-application (A2A) mode are queued for processing until the mainte-  
 10 nance window is completed;
- 11 | The user-to-application (U2A) mode is not available;
- 12 | The queries/reports are not available.

13 The T2S Interface services are available for all the T2S Actors.

14 **1.4.4.3.2 Maintenance window schedule**

15 The diagram below shows the different processes occurring during the maintenance window along with the  
 16 list of available services.

17 **DIAGRAM 63 - MAINTENANCE WINDOWS**

18  
 19 The weekend maintenance window takes place from 2:30 on Saturday to 2:30 on Monday and is not option-  
 20 al.

21 **1.4.4.3.3 Maintenance window processes**

22 During the maintenance window, T2S performs the processes as detailed in the below table.

1  
2

**TABLE 102 - PROCESSES DURING THE MAINTENANCE WINDOW**

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
System maintenance	During the maintenance window, Interface application process starts the queuing of all requests received in A2A mode, after a technical validation (i.e. format validation) of the incoming A2A messages (or files) and sends out related system acknowledgement.

3 1.4.4.4 Real-time settlement (RTS)

4 This section presents the real-time settlement processes in the T2S settlement day. The real-time settlement  
5 period starts after the end of the night-time settlement and is followed by the end of day period.

6 In case the NTS completes before 3.00 from Mondays to Fridays and before 2.30 on Saturdays, real-time  
7 settlement period begins before the start of the maintenance window.

8 The real-time settlement period includes:

- 9 | The real-time settlement preparation;
- 10 | The real-time settlement with the five partial settlement windows to optimise maximum value and vol-  
11 umes of settlement transactions, which are unsettled because of lack of securities:
  - 12 – The first partial settlement window between 08:00 and 08:30;
  - 13 – The second partial settlement window between 10:00 and 10:15;
  - 14 – The third partial settlement window between 12:00 and 12:15;
  - 15 – The fourth partial settlement window between 14:00 and 14:15;
  - 16 – The fifth partial settlement window is 30 minutes before the beginning of the DVP cut-off time, then  
17 between 15:30 and 16:05 or the closure of both DVP cut-offs (whichever comes first).

18 The previously unsettled Settlement Instructions and Settlement Restrictions from night-time settlement are  
19 attempted for settlement in the real-time settlement period with the arrival of new resources (securities for  
20 delivery, securities in positions earmarked available for collateral, cash).<sup>177</sup> Additionally T2S performs a set-  
21 tlement attempt for any new intraday Settlement Instructions, Settlement Restrictions and liquidity transfers  
22 validated and accepted during real-time settlement period;

- 23 | The real-time settlement closure with different cut-offs and events for different Settlement Instructions,  
24 Settlement Restrictions and liquidity transfers categories.

177 During the regular recycling, the mechanism ensures that a transaction will not be recycled if the transaction sent just before has not been attempted for settlement. This serialization process will concern all transactions with age >= 3 selected by the Regular Recycling process following a credit in securities or cash or an increase in CMB headroom or limit, guaranteeing that an older transaction will be attempted before a younger one with the same priority. The transactions selected by one given recycling process will be segregated into eight groups, depending on their priority and age:

Group 1	Group 2	Group 3	Group 4	Group 5	Group 6	Group 7	Group 8
Priority 1	Priority 1	Priority 2	Priority 2	Priority 3	Priority 3	Priority 4	Priority 4
Age >= 3	Age < 3	Age >= 3	Age < 3	Age >= 3	Age < 3	Age >= 3	Age < 3

Should the serialization process be too long (over a predetermined adjustable maximum duration), it will be automatically stopped to come back to the regular recycling process.

1 | Some of these cut-offs and events may be currency dependent.

2 For the ease of presentation, the real-time settlement period is shown in two parts:

3 | The real-time settlement;

4 | The real-time settlement closure.

5 The real-time settlement period also includes processes specific to the penalty mechanism. These are com-  
6 prised of the processing of information received within T2S including securities subject to penalties infor-  
7 mation, penalty modification requests and daily and historic prices for penalties. This information is subse-  
8 quently used for penalty calculations and reporting.

#### 9 **1.4.4.4.1 Application processes involved during the real-time settlement**

10 The following application processes are involved during the RTS period as per:

11 | Static Data Management;

12 | Settlement;

13 | Liquidity Management;

14 | Interface;

15 | Information Management.

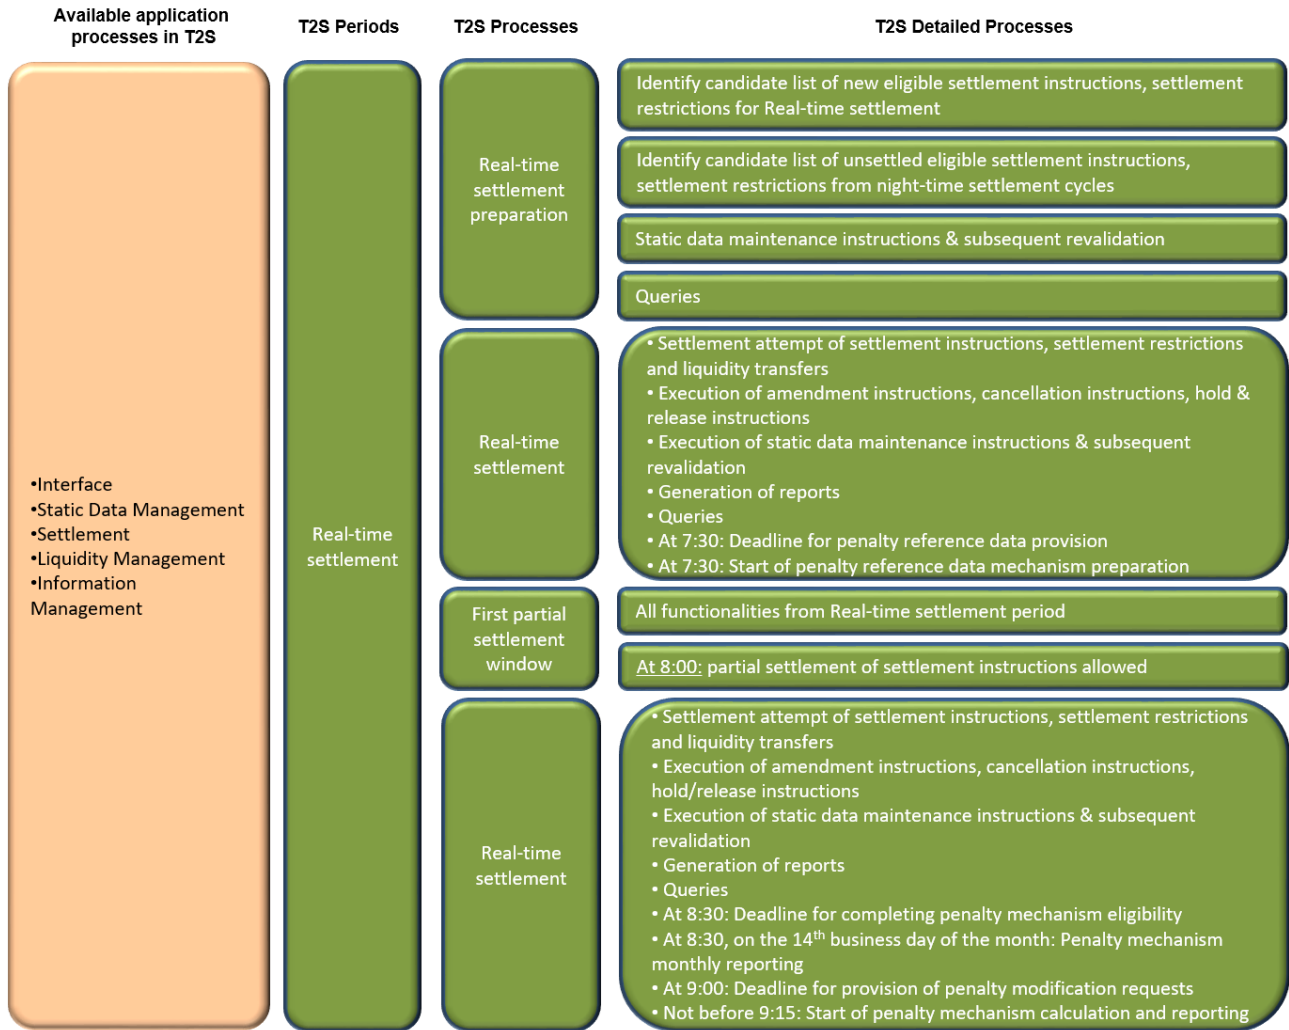

16 These application processes are available for all the T2S Actors.

#### 17 **1.4.4.4.2 Real-time settlement schedule**

18 The diagram below shows the different processes occurring during the real-time settlement of the real-time  
19 settlement period along with the list of available application processes.

1

**DIAGRAM 64 - REAL-TIME SETTLEMENT SCHEDULE**

2

1

2 **1.4.4.4.3 Real-time settlement dependencies**

3 During the real-time settlement of the real-time settlement period, T2S performs the following detailed pro-  
 4 cesses based on the specified dependencies.

1 **DIAGRAM 65 - REAL-TIME SETTLEMENT DEPENDENCIES**

2  
3 The following table describes the different dependencies between processes occurring during the real-time  
4 settlement of the real-time settlement period.

5 **TABLE 103 - DEPENDENCIES BETWEEN PROCESSES DURING THE REAL-TIME SETTLEMENT**

T2S DETAILED PRO- CESSES	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION

T2S DETAILED PROCESSES	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
Real-time settlement preparation	End of night-time settlement period or End of maintenance window completed	This process starts after the completion of the maintenance window.  If night-time settlement period is completed before the beginning of the maintenance window, the real-time settlement preparation starts and continues till the start of the maintenance window.
Real-time settlement	After the end of real-time settlement preparation	This process starts after the end real-time settlement preparation.
Deadline for penalty reference data provision	Time: 7:30	This deadline determines the end of the period whereby penalty reference data related information is accepted for current business day's calculation and recalculation processes
Penalty reference data preparation	Time: 7:30	This process does not start before 7:30
First partial settlement window	Time: 8:00	This process does not start before 8:00
Deadline for completing penalty eligibility	Time: 8:30	This deadline determines the time by when the process to analyse the eligibility for penalties should be finished.
Penalty mechanism monthly reporting	Time: 8:30	This process starts at 8:30 on the 14th business day of the month.
Deadline for provision of penalty modification requests	Penalty reference data preparation completed	This deadline determines the end of the period whereby penalty modifications are accepted for current business day's penalty processes. It triggers the processing of penalty modification requests submitted before the deadline but not yet processed
Penalty mechanism Calculation, Recalculation and reporting	Deadline for provision of penalty modification requests completed, and Penalty eligibility completed Time: 9:15	This process starts after the completion of the processing of penalty modification requests submitted before the deadline but not yet processed and the penalty eligibility.  This process does not start before 9:15
Second partial settlement window	Time: 10:00	This process does not start before 10:00
Penalty mechanism	Recalculation completed	This process starts after the completion of the Recalculation

T2S DETAILED PROCESSES	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
monthly preparation		tion on the 13th business day of the month.
Third partial settlement window	Time: 12:00	This process does not start before 12:00
Fourth partial settlement window	Time: 14:00	This process does not start before 14:00
Fifth partial settlement window	Time: 15:30	This process does not start before 15:30

1 **1.4.4.4.4 Real-time settlement processes**

2 During the real-time settlement, T2S performs the processes as detailed in the below table.

3 **TABLE 104 - PROCESSES DURING THE REAL-TIME SETTLEMENT**

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Real-time settlement preparation	<p>Identify and process static data maintenance instructions already received in the A2A mode.</p> <p>Identify candidate list of new Settlement Instructions, Settlement Restrictions, Amendment Instructions, Cancellation Instructions, Hold/Release/Partial Release Instructions and liquidity transfers applicable for the current settlement day.</p> <p>Identify all Settlement Instructions Settlement Restrictions, Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions, which were not settled/executed during night-time settlement period and are recycled for real-time settlement. The recycling takes place after the revalidation of the Settlement Instructions and Settlement Restrictions affected by a static data change.</p>
Real-time settlement	<p>Real-time settlement of new Settlement Instructions, Settlement Restrictions and liquidity transfers arriving into T2S and settlement of previous unsettled Settlement Instructions with the arrival of new resources (securities or cash or both) for the following:</p> <ul style="list-style-type: none"> <li>  Settlement Instructions related to DVP;</li> <li>  Settlement Instructions related to FOP;</li> <li>  Settlement Instructions related to PFOD;</li> <li>  Settlement Instructions related to CA on stocks and on flows;</li> <li>  Settlement Instructions related to BATM;</li> <li>  Settlement Instructions related to CBO;</li> <li>  Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation;</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>  Settlement of securities/cash Settlement Restrictions;</li> <li>  Settlement of all liquidity transfers (i.e. inbound, internal and outbound).</li> </ul> <p>T2S also performs the following:</p> <ul style="list-style-type: none"> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li> <li>  Revalidation of all settlement instructions and Settlement Restrictions affected by all static data updates (i.e immediate updates and updates with future date). Maintenance instructions (i.e Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions) are only revalidated at the SOD revalidation process;</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries.</li> </ul>
<p>Deadline for penalty reference data provision</p>	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <p>At 7:30, final deadline <sup>178</sup> for provision to accept penalty reference data for current day's calculation and recalculation processes:</p> <ul style="list-style-type: none"> <li>  Securities subject to penalties information;</li> <li>  Updated historic (former) prices for penalties;</li> <li>  Daily prices for penalties.</li> </ul>
<p>Penalty reference data preparation</p>	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Extraction and preparation of penalty related Static Data Reference data for the calculation and recalculation of penalties <sup>179</sup></li> </ul>
<p>Deadline for provision of penalty modification requests</p>	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <p>final deadline for provision of penalty modification requests for current day's processing</p> <p>Processing of remaining penalty modification requests received before the deadline <sup>180</sup>.</p>

178 Any data or prices submitted after the deadline will not be considered in this business day's penalty computations and recalculations.

179 Processing for extracting and preparing the reference data for penalties (received before deadline) must be finished to start this business day's penalty computations and recalculations.

180 Penalty modification requests are processed as received except for those queued during the maintenance window and during the processes between the Deadline for provision of Penalty Modification Requests and the completion of the End of appeal period process.

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
First partial settlement window	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Partial settlement of new Settlement Instructions arriving into T2S in this period and eligible to partial settlement;</li> <li>  Settlement of previous unsettled or partially settled Settlement Instructions which are eligible to partial settlement.</li> </ul>
Deadline for completion of penalty eligibility	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  At 8:30, final deadline for completing eligibility for penalties <sup>181</sup>.</li> </ul>
Penalty mechanism Calculation, Recalculation and reporting	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Calculation of new penalties;</li> <li>  Re-calculation of previously calculated penalties;</li> <li>  Reporting of new penalties;</li> <li>  Reporting of modified penalties.</li> </ul>
Second partial settlement window	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Partial settlement of new Settlement Instructions arriving into T2S in this period and eligible to partial settlement;</li> <li>  Settlement of previous unsettled or partially settled Settlement Instructions which are eligible to partial settlement.</li> </ul>
Penalty mechanism monthly preparation	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally, (solely on the 13th business day of the month):</p> <ul style="list-style-type: none"> <li>  End of appeal period process;</li> <li>  Calculation of monthly aggregated amounts.</li> </ul>
Penalty mechanism monthly reporting	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally (solely on the 14th business day of the month):</p> <ul style="list-style-type: none"> <li>  Reporting of monthly aggregated amounts.</li> </ul>

181 Analysis of failed matched settlement instructions from the previous business day to determine their eligibility for penalties must be finished to start this business day's penalty computations and recalculations.

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Third partial settlement window	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Partial settlement of new Settlement Instructions arriving into T2S in this period and eligible to partial settlement;</li> <li>  Settlement of previous unsettled or partially settled Settlement Instructions which are eligible to partial settlement.</li> </ul>
Fourth partial settlement window	<p>All the processes available during the real-time settlement period are also available.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Partial settlement of new Settlement Instructions arriving into T2S in this period and eligible to partial settlement;</li> <li>  Settlement of previous unsettled or partially settled Settlement Instructions which are eligible to partial settlement.</li> </ul>
Fifth partial settlement window	<p>All the processes available during the real-time settlement period are also available including auto-collateralisation.</p> <p>Additionally:</p> <ul style="list-style-type: none"> <li>  Partial settlement of new Settlement Instructions arriving into T2S in this period and eligible to partial settlement;</li> <li>  Settlement of previous unsettled or partially settled Settlement Instructions which are eligible to partial settlement.</li> <li>  Recycling of all settlement instructions submitted prior to the DVP cut-off <sup>182</sup></li> </ul>

1

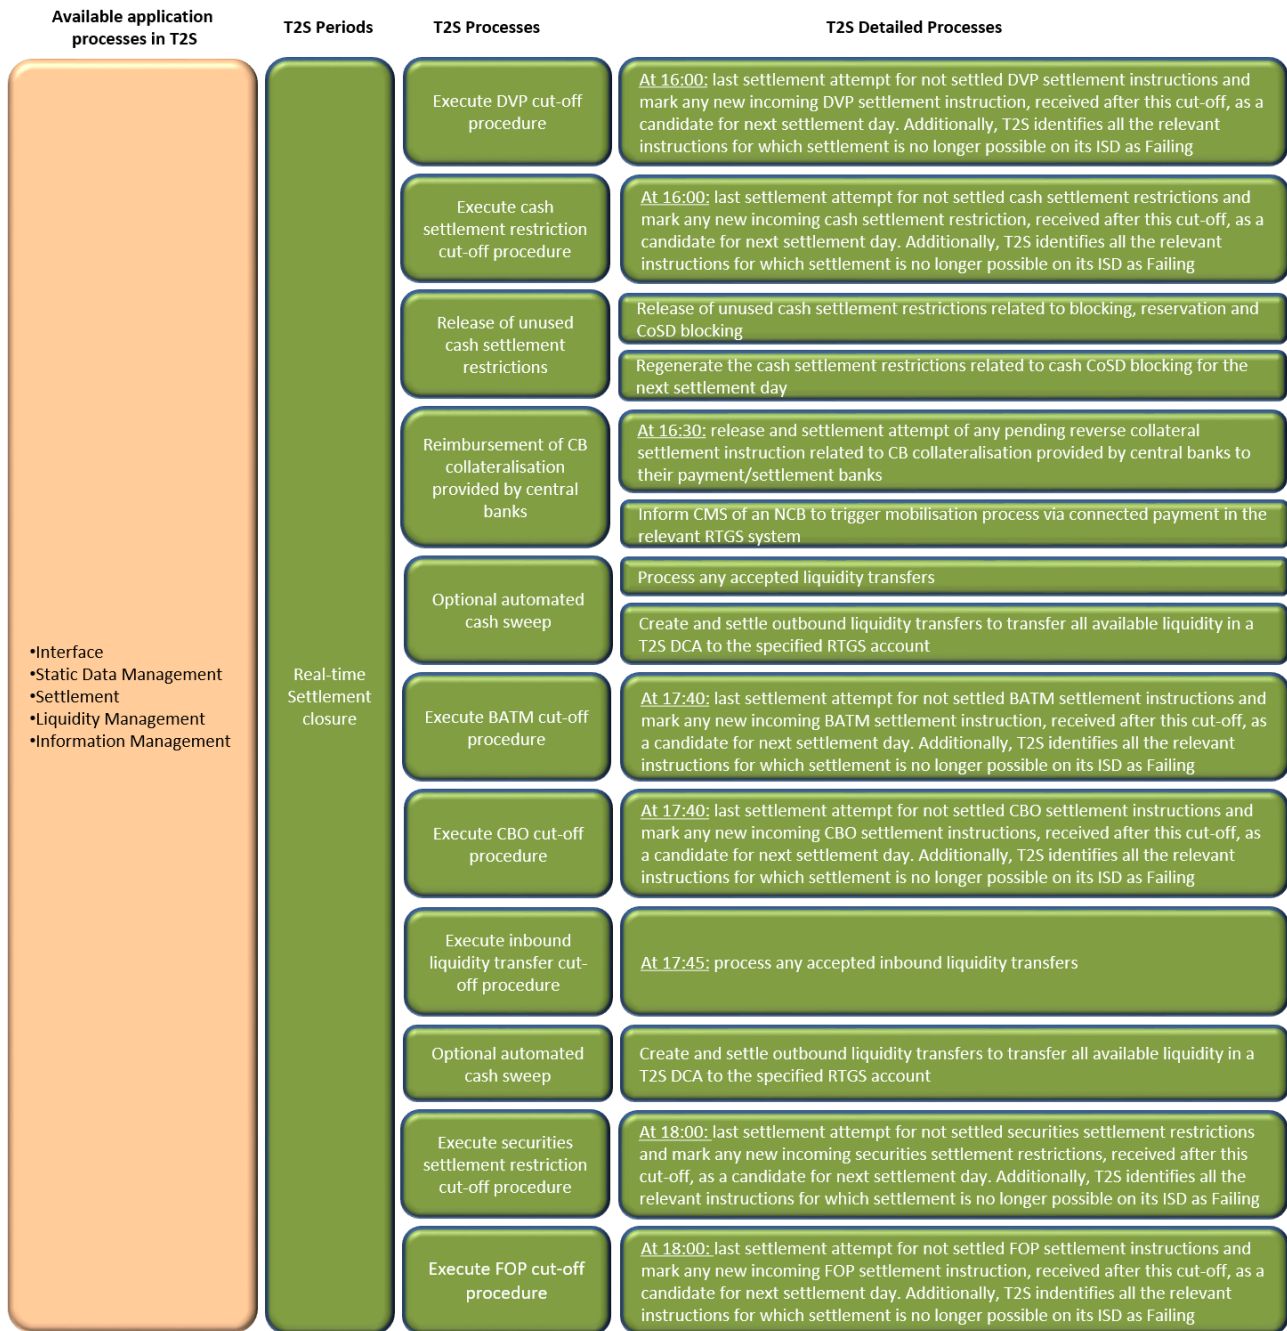

2 **1.4.4.4.5 Real-time settlement closure schedule**

3 The below diagram shows the different processes occurring during the real-time settlement closure of the  
 4 real-time settlement period along with the list of available application processes:

---

182 This is to ensure that all credits stemming from transactions submitted to the DVP cut-off are propagated through recycling. The End of the DVP cut-off only occurs once this has been completed or once a scheduled time has been reached (4:05 p.m.).

1 **DIAGRAM 66 - REAL-TIME SETTLEMENT CLOSURE SCHEDULE**

2

3 \* End of both DVP cut-offs will occur at maximum 16:05. <sup>183</sup>

4 **1.4.4.4.6 Real-time settlement closure dependencies**

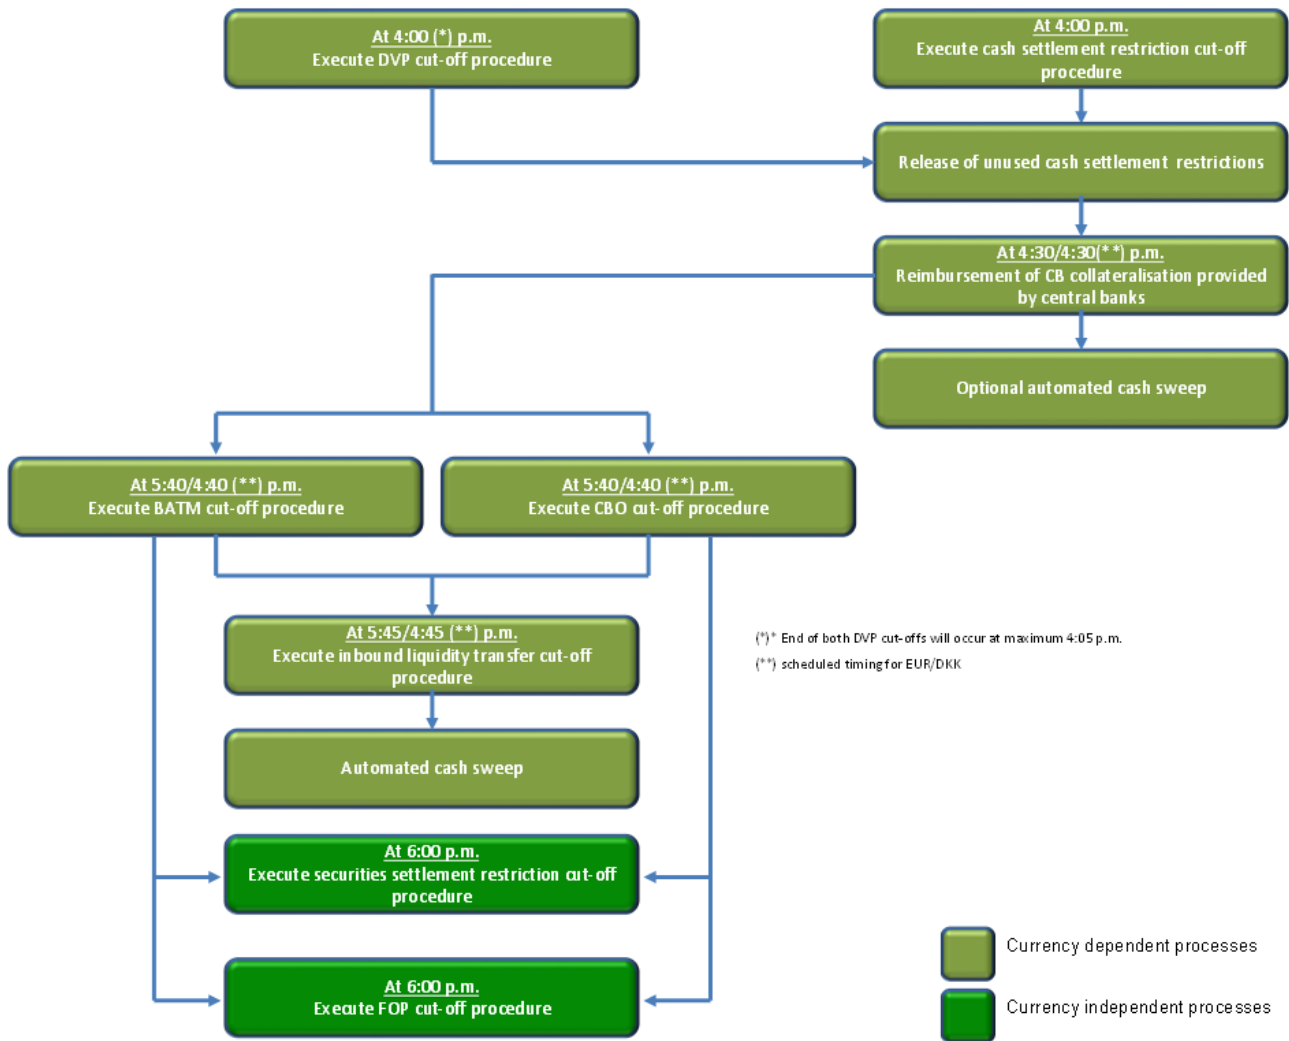

5 During the real-time settlement closure of the real-time settlement period, T2S performs the following detailed processes based on the specified dependencies.

6

183 Please note that the described functionality won't be available before CSLD go-live.

1

**DIAGRAM 67 - REAL-TIME SETTLEMENT CLOSURE DEPENDENCIES{CR-782}**

2

3 Currency dependent processes relate to T2S settlement currency specific cut-offs and events as configured  
 4 by the T2S operator. These however must respect the currency independent processes defined for the real-  
 5 time settlement closure.

6 Currency dependent processes are harmonised under the time mentioned in the diagram, under normal  
 7 circumstances. They may be altered as required by the T2S operator, for contingency situations.

8 The following table describes the different dependencies between processes occurring during the real-time  
 9 settlement closure of the real-time settlement period.

10  
11

**TABLE 105 - DEPENDENCIES DURING THE REAL-TIME SETTLEMENT CLOSURE**

T2S DETAILED PRO- CESSES	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
Execute DVP cut-off procedure	Time: 16:00	This process starts at 16:00. If it has not already occurred, the end of the process is forced at 16:05.  In case of emergency situations a change of DVP cut-off

T2S DETAILED PROCESSES	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
		is only possible according to a process to be defined in the T2S MOP.
Execute cash Settlement Restriction cut-off procedure	Time: 16:00	This process starts at 16:00.  In case of emergency situations a change of cash Settlement Restriction cut-off is only possible according to a process to be defined in the T2S MOP.
Release of unused cash settlement restrictions	DVP cut-off completed and Cash Settlement Restriction cut-off completed	This process starts after the execution of DVP cut-off procedures and the completion of the cash Settlement Restriction cut-off.
Reimbursement of CB collateralisation provided by central banks	Release of unused cash settlement restrictions completed  And  Time: 16:30	This process starts after the completion of the release of unused cash Settlement Restrictions.  In addition this process does not start before 16:30.
Optional automated cash sweep	Reimbursement of CB collateralisation completed	This process starts after the completion of the reimbursement of CB collateralisation.
Execute BATM cut-off procedure	Reimbursement of CB collateralisation completed  and  Time: 17:40	This process starts after the execution of reimbursement of CB collateralisation.  In addition this process does not start before 17:40  In case of emergency situations a change of BATM cut-off is only possible according to a process to be defined in the T2S MOP.
Execute CBO cut-off procedure	Reimbursement of CB collateralisation completed  and  Time: 17:40	This process starts after the execution of reimbursement of CB collateralisation.  In addition this process does not start before 17:40.  In case of emergency situations a change of CBO cut-off is only possible according to a process to be defined in the T2S MOP.
Execute incoming liquidity transfer cut-off procedure	BATM cut-off completed and CBO cut-off completed and	This process starts after the completion of the execution of BATM and CBO cut-off procedures.  In addition this process does not start before 17:45.  In case of emergency situations a change of incoming liquidity transfers cut-off is only possible according to a

	Time: 17:45	process to be defined in the T2S MOP.
Optional automated cash sweep	Inbound liquidity transfer cut-off completed	This process starts after the completion of the execution of inbound liquidity transfer cut-off procedures.
Execute securities Settlement Restriction cut-off procedure	BATM cut-off completed and CBO cut-off completed and Time: 18:00	This process starts after the completion of the execution of BATM and CBO cut-off procedures.  In addition this process does not start before 18:00.  In case of emergency situations a change of securities Settlement Restriction cut-off is only possible according to a process to be defined in the T2S MOP.
Execute FOP cut-off procedure	BATM cut-off completed and CBO cut-off completed and Time: 18:00	This process starts after the completion of the execution of BATM and CBO cut-off procedures.  In addition this process does not start before 18:00.  In case of emergency situations a change of FOP cut-off is only possible according to a process to be defined in the T2S MOP.

1 Partially Released Settlement Instructions that have not completely settled the released quantity, by the end  
2 of the relevant cut-off time, will be set back on hold for the full unsettled quantity.

3 **1.4.4.4.7 Real-time settlement closure processes**

4 During the real-time settlement closure, T2S performs the processes as detailed in the below table.

1  
2

**TABLE 106 - PROCESSES DURING THE REAL-TIME SETTLEMENT CLOSURE**

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
Execute DVP cut-off procedure	<p>Cut-off to differentiate the eligibility of intraday DVP/PFOD Settlement Instructions for settlement during the current settlement day:</p> <ul style="list-style-type: none"> <li>  T2S does not attempt settlement for the intraday DVP/PFOD Settlement Instructions (which is not a CBO or a BATM Settlement Instructions with specific later cut-off) received by T2S after this cut-off on the current settlement day, but recycle them for the next settlement day;</li> <li>  <b><u>After the cut-off event is received,</u></b> T2S ensures to do at least one settlement attempt for all the intraday DVP Settlement Instructions, received by T2S before the cut-off and eligible for the current settlement day.</li> </ul> <p><b><u>This period is called the "waterfall" period.</u></b></p> <p><b><u>When the waterfall period is over, T2S still recycles failed instructions which can benefit from credits received during the waterfall period.</u></b></p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of: <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation;</li> <li>– Securities/cash Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li> </ul> <p><b><u>DVP/PFOD released during the "waterfall" period still undergo a settlement attempt and may settle.</u></b></p> <p><b><u>DVP/PFOD released after the "waterfall" period are not submitted any longer to any settlement attempt until next business day.</u></b></p> <ul style="list-style-type: none"> <li>  Identification and reporting of failed Settlement Instructions: Matched Settlement Instructions eligible to the DVP cut-off are identified as "Failing" if not settled before the cut-off completion.</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Execute cash Settlement Restriction cut-off procedure	<p>Cut-off to differentiate the eligibility of cash Settlement Restrictions for settlement during the current settlement day:</p> <ul style="list-style-type: none"> <li>  T2S does not attempt settlement for the intraday cash Settlement Restrictions received by T2S after this cut-off on the current settlement day, but recycles them for the next settlement day;</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>  <b>After the cut-off event is received</b>, T2S ensures to do at least one settlement attempt for all the intraday cash Settlement Restrictions, received by T2S before the cut-off and eligible for the current settlement day.</li> </ul> <p><b><u>This period is called the "waterfall" period.</u>{CR-808}</b></p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of:               <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation;</li> <li>– Securities Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li> <li>  Identification and reporting of failed Settlement Restrictions on cash: Settlement Restrictions on cash having reached their Intended Settlement Date are identified as "Failing" if not settled before the cut-off completion.</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
<p>Release of unused cash Settlement Restrictions</p>	<p>For the unused cash restrictions:</p> <ul style="list-style-type: none"> <li>  T2S releases the unused blocked, reserved and CoSD blocked cash restrictions;</li> <li>  T2S regenerates the equivalent CoSD blocked cash Settlement Restrictions for the next settlement day.</li> </ul> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of:               <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Reverse collateral Settlement Instructions related to reimbursement of intraday auto-collateralisation;</li> <li>– Securities Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
<p>Reimbursement of CB collateralisation provided by central banks</p>	<p>T2S performs the following during the automatic reimbursement process:</p> <ul style="list-style-type: none"> <li>  T2S releases all “hold” reverse collateral Settlement Instructions linked to CB collateralisation (i.e “hold” reverse collateral Settlement Instructions generated during the process of auto-collateralisation by a payment/settlement bank with its Central Bank);</li> <li>  T2S attempts the settlement of all the released reverse collateral Settlement Instructions linked to CB collateralisation with, if needed for a credit consumer:               <ul style="list-style-type: none"> <li>– Internal rebalancing of cash between its T2S DCA;</li> <li>– And/or, sourcing additional liquidity from its Central Bank through the creation of collateral relocation Settlement Instructions;</li> </ul> </li> </ul> <p>When the available amount is insufficient for the settlement of all reverse collateral instructions T2S informs the relevant CMS for an utilisation of its credit facility in the relevant RTGS system (creation of collateral relocation Settlement Instructions). In such cases, it is the responsibility of the CMS to inform the RTGS system to facilitate the update of the credit utilisation/provision of overnight credit facilities. This process is outside T2S;</p> <p>Note: T2S does not perform an automatic release of reverse collateral Settlement Instructions related to reimbursement of intraday client-collateralisation.</p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of:               <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Settlement of securities Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
<p>Optional automated cash sweep</p>	<p>This period determines the start of the optional automated cash sweep based on the set-up of standing liquidity transfer orders.</p> <p>T2S creates cash sweep related liquidity transfers for the remaining cash of each T2S Dedicated cash account and central bank cash accounts to transfer it to the specified RTGS account.</p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of:</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Securities Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release Instructions;</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Execute BATM cut-off procedure	<p>Cut-off to differentiate the eligibility of BATM Settlement Instructions for settlement during the current settlement day:</p> <ul style="list-style-type: none"> <li>  T2S does not attempt settlement for the intraday BATM Settlement Instructions received by T2S after this cut-off on the current settlement day, but recycle them for the next settlement day;</li> <li>  <b><u>After the cut-off event is received</u></b>, T2S ensures to do at least one settlement attempt for all the intraday BATM Settlement Instructions, received by T2S before the cut-off and eligible for the current settlement day.</li> </ul> <p><b><u>This period is called the "waterfall" period.</u></b></p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of: <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Securities Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release Instructions;</li> </ul> <p><b><u>BATM DVP Instructions released during the "waterfall" period still undergo a settlement attempt and may settle.</u></b></p> <p><b><u>BATM DVP Instructions released after the "waterfall" period are not submitted any longer to any settlement attempt until next business day.</u></b></p> <ul style="list-style-type: none"> <li>  Identification and reporting of failed Settlement Instructions: Matched Settlement Instructions eligible to the BATM cut-off are identified as "Failing" if not settled before the cut-off completion.</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Execute CBO cut-off procedure	<p>Cut-off to differentiate the eligibility of CBO DVP Settlement Instructions for settlement during the current settlement day:</p> <ul style="list-style-type: none"> <li>  T2S does not attempt settlement for the intraday CBO DVP Settlement Instructions received by</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<p>T2S after this cut-off on the current settlement day, but recycle them for the next settlement day;</p> <ul style="list-style-type: none"> <li>  <b><u>After the cut-off event is received.</u></b> T2S ensures to do at least one settlement attempt for all the intraday CBO DVP Settlement Instructions, received by T2S before the cut-off and eligible for the current settlement day.</li> </ul> <p><b><u>This period is called the "waterfall" period.</u></b></p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of:             <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Securities Settlement Restrictions;</li> <li>– All liquidity transfers (i.e. inbound, internal and outbound);</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li> </ul> <p><b><u>CBO DVP Instructions released during the "waterfall" period still undergo a settlement attempt and may settle.</u></b></p> <p><b><u>CBO DVP released after the "waterfall" period are not submitted any longer to any settlement attempt until next business day. {CR-808}</u></b></p> <ul style="list-style-type: none"> <li>  Identification and reporting of failed Settlement Instructions: Matched Settlement Instructions eligible to the CBO cut-off are identified as "Failing" if not settled before the cut-off completion.</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Execute incoming liquidity transfer cut-off procedure	<p>Cut-off to differentiate the eligibility of incoming liquidity transfers for settlement during the current settlement day:</p> <ul style="list-style-type: none"> <li>  T2S settles any liquidity transfers validated and accepted prior to the beginning of this cut-off;</li> <li>  T2S rejects any incoming liquidity transfers received after this cut-off.</li> </ul> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of:             <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Securities Settlement Restrictions;</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release Instructions;</li> <li>  Generation of reports triggered by business or time events;</li> </ul>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Optional auto-mated cash sweep	<p>This period determines the start of the automated cash sweep.</p> <p>T2S creates cash sweep related liquidity transfers for the remaining cash of each T2S Dedicated cash account and central bank cash accounts to transfer it to the specified RTGS account. The automated cash sweep is completed when T2S detects no failed liquidity transfer or when the appropriate actions have been taken by the T2S operator.</p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of of:               <ul style="list-style-type: none"> <li>– Settlement Instructions other than the ones for which cut-off is reached;</li> <li>– Securities Settlement Restrictions;</li> </ul> </li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release Instructions;</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Execute Securities Settlement Restriction cut-off procedure	<p>Cut-off to differentiate the eligibility of securities Settlement Restrictions for settlement for the current settlement day:</p> <ul style="list-style-type: none"> <li>  T2S does not propose the securities Settlement Restrictions received by T2S after this cut-off on the current settlement day, but recycle them for the next settlement day.</li> <li>  <b>After the cut-off event is received,</b> T2S ensures to propose all the securities Settlement Restrictions, received by T2S before the cut-off and eligible for the current settlement day, for a settlement attempt.</li> </ul> <p><b><u>This period is called the "waterfall" period.</u></b></p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"> <li>  Settlement of Settlement Instructions other than the ones for which cut-off is reached;</li> <li>  Execution of static data maintenance instructions;</li> <li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release Instructions;</li> <li>  Identification and reporting of failed Settlement Restrictions on securities: Settlement Restrictions on Securities having reached their Intended Settlement Date are identified as "Failing" if not settled before the cut-off completion.</li> <li>  Generation of reports triggered by business or time events;</li> <li>  Responses to queries received via U2A or A2A.</li> </ul>
Execute FOP cut-off procedure	<p>Cut-off to differentiate the eligibility of FOP Settlement Instructions (including BATM and CBO Settlement Instructions without a cash leg) for settlement during the current settlement day:</p>

T2S PROCESSES	DESCRIPTION OF THE PROCESSES
	<ul style="list-style-type: none"><li>  T2S does not attempt settlement for the intraday FOP Settlement Instructions received by T2S after this cut-off on the current settlement day, but recycle them for the next settlement day;</li><li>  <b><u>After the cut-off event is received</u></b>, T2S ensures to do at least one settlement attempt for all the intraday FOP Settlement Instructions, received by T2S before the cut-off and eligible for the current settlement day.</li></ul> <p><b><u>This period is called the "waterfall" period.</u></b></p> <p>In parallel, T2S performs the following:</p> <ul style="list-style-type: none"><li>  Settlement of securities Settlement Restrictions for which cut-off is not reached;</li><li>  Execution of static data maintenance instructions;</li><li>  Execution of Amendment Instructions, Cancellation Instructions and Hold/Release/Partial Release Instructions;</li></ul> <p><b><u>FOP Instructions released during the "waterfall" period still undergo a settlement attempt and may settle.</u></b></p> <p><b><u>FOP Instructions released after the "waterfall" period are not submitted any longer to any settlement attempt until next business day.</u></b>{CR-808}</p> <ul style="list-style-type: none"><li>  Identification and reporting of failed Settlement Instructions:<ul style="list-style-type: none"><li>– Matched Settlement Instructions eligible to the FOP cut-off are identified as "Failing" if not settled before the cut-off completion.</li><li>– Additionally, upon completion of the FOP cut-off, T2S identifies all Unmatched Settlement Instructions having their Intended Settlement Date equal to the Current Business Day as "Failing".</li></ul></li><li>  Generation of reports triggered by business or time events;</li><li>  Responses to queries received via U2A or A2A.</li></ul>

#### 1 1.4.4.5 End of day (EOD)

2 This section presents the end of day processes in the harmonised settlement day.

3 The EOD period starts after the successful completion of the real-time settlement period where settlement is  
4 no longer possible and is followed by the start of day period of the next settlement day.

5 Once all settlement has been stopped, as part of the securities account consistency checks, T2S ensures that  
6 the end of day securities position for the current business day for every securities account is equal to the  
7 previous end of business day's position plus the securities movements of the current settlement day, before  
8 continuing with the actual end-of-day tasks and the creation and delivery of EOD reports to CSDs. The same  
9 applies to cash balances.

1 **1.4.4.5.1 Application processes involved during the end of day**

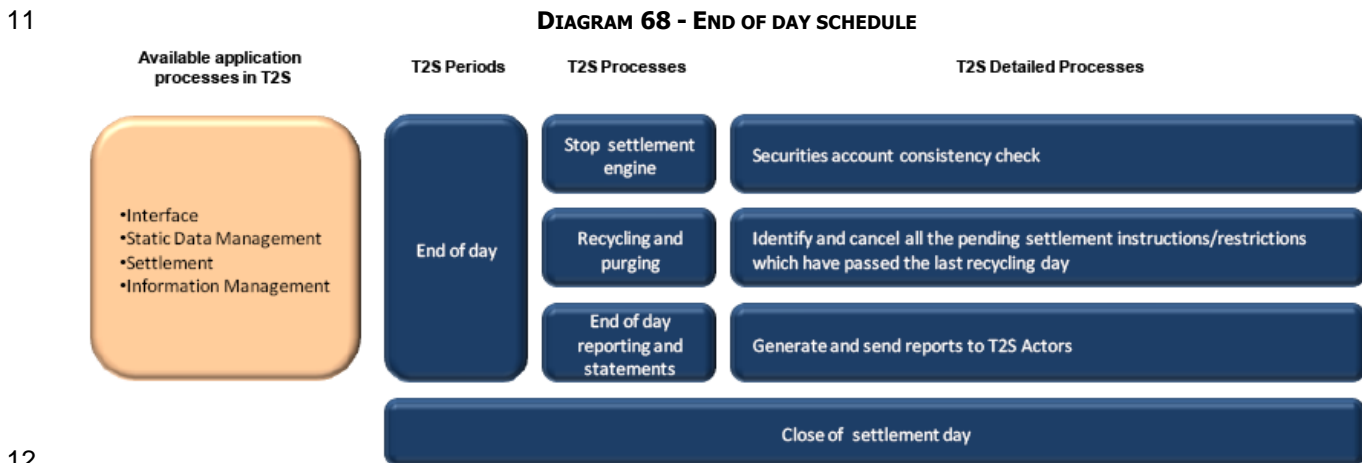

2 The following application processes are involved during the EOD period as per:

- 3 | Static Data Management;
- 4 | Settlement <sup>184</sup>;
- 5 | Interface;
- 6 | Information Management.

7 These application processes are available for all the T2S Actors.

8 **1.4.4.5.2 End of day schedule**

9 The diagram below shows the different processes occurring during the end of day period along with the list  
10 of available application processes.

13 **1.4.4.5.3 End of day dependencies**

14 During the end of day period, T2S performs the following detailed processes based on the specified depend-  
15 encies.

---

184 Settlement application is available for recycling, purging validation, matching and maintenance processes.

1

**DIAGRAM 69 - END OF DAY DEPENDENCIES**

2

3 The following table describes the different dependencies between processes occurring during the real-time  
4 settlement closure of the real-time settlement period.

5  
6

**TABLE 107 - DEPENDENCIES BETWEEN PROCESSES DURING THE END OF DAY PERIOD**

T2S DETAILED PROCESSED	DEPENDENCIES	
	TYPE OF DEPENDENCY	DESCRIPTION
Stop settlement engine	Real-time settlement period completed	This process starts after the completion of the real-time settlement period. In addition this process does not start before 18:00.
Recycling and purging	End of stop settlement engine completed	This process starts after the completion of the end of securities account consistency check.
End of day reporting and statements	Recycling and purging completed	This process starts after the completion of the recycling and purging.

7 **1.4.4.5.4 End of day processes**

8 During the end of day period, T2S performs the processes as detailed in the below table.

1  
2

**TABLE 108 - PROCESSES DURING THE END OF DAY PERIOD**

T2S processes	Description of the process
Stop settlement engine	Stop any settlement of Settlement Instructions, Settlement Restrictions and liquidity transfers and process securities account consistency check.
Recycling and purging	<p>Recycling and purging where T2S selects and cancels all accepted but unsettled or partially settled Settlement Instructions/Settlement Restrictions that have passed their last recycling day.</p> <p>It cancels unmatched instructions which remain pending for more than 20 days as defined by ECSDA standard and T2S recycles any matched instructions for an unlimited period.</p> <p>Subsequently T2S informs the T2S Actors about the cancellation of such instructions.</p>
EOD Reporting	<p>T2S generates all the end of day reports (e.g. on holdings, instructions) and account statements on T2S DCA, as per the report configuration setup and makes the generated reports available to T2S Actors.</p> <p>The provision of the generated reports is not a pre-requisite to close the T2S business day.</p>
<b>Close of T2S business day</b>	

3 **1.5 Possible actions of T2S Operator**

4 **~~1.5.1 Business application configuration~~**

5 ~~The T2S Operator is responsible for defining and maintaining a number of rules and parameters~~  
6 ~~as Reference Data objects for the configuration of the T2S business application. The rules and~~  
7 ~~parameters the T2S Operator may configure are the following:~~

8 ~~**System Entity:** a system entity in T2S corresponds to a partition of data equating to the scope~~  
9 ~~of a CSD or CB. For example, the system entity of a CSD includes all the data related to its CSD~~  
10 ~~participants. The T2S Operator is responsible for the creation and maintenance of system enti-~~  
11 ~~ties for all the CSDs <sup>185</sup> and CBs in T2S. The creation of a system entity is a necessary prelimi-~~  
12 ~~nary step for the creation of a CSD or CB as a party in T2S (and, consequently, for the creation~~  
13 ~~of CSD participants, external CSDs and payment banks).~~

14 ~~l **Reference data for penalties:** this includes the cash and security penalty rates for each cur-~~  
15 ~~rency and asset type, as well as the list of CCPs to be identified in Penalty Reports and the~~

---

185 ~~This is applicable for CSDs in T2S only. CSDs not in T2S do not require the creation of a dedicated system entity. Each CSD not in T2S is defined as an External CSD (see section Setup of parties in T2S) of each CSD with which it has established a legal relationship. Consequently, the data of a CSD not in T2S belong, as it is the case for any other type of CSD participant, to the system entity of each CSD which defined it as an External CSD. (Split book approach)~~

~~list of MIC identifiers for SME Growth Markets. For more information see section Reference data for penalties.~~

~~Party reference data for CSDs and CBs: the T2S Operator is responsible for creating and maintaining CSDs and CBs as parties in T2S. Subsequently, users from these parties may create their own CSD participants, external CSDs and payment banks. For more details, see section Parties.~~

~~Access rights configuration for CSDs and CBs: after having created the system entity and the related party, the T2S Operator may set up the participant's privileges to access the platform, depending on the type of participant. This is necessary exclusively as a preliminary configuration for CSDs and CBs, as they are subsequently able to set up their own participants' access rights and to modify the access rights of their users independently, without resorting to the T2S Operator. For details on access rights management, see section Access rights.~~

~~General restriction types: the T2S Operator may define a set of general restriction types which each CSD or CB may use in addition to the ones they define internally. See section Restriction types for details on restriction types.~~

~~Message subscription, restriction types and CoSD rules: in case of anomalies caused by a new configuration or by the update of an already existing configuration set up by a T2S Actor in these areas, the T2S Operator can deactivate with immediate effect the relevant configuration and restore the previous configuration.~~

~~General attribute domains: attribute domains provide a list of valid values for an attribute. The T2S Operator may define a set of general attribute domains that are applicable to all participants. This includes the following general configuration parameters: allegation periods (standard and before cut-off), recycling period for unmatched pending settlement instructions, acceptable time deviation period, settlement priority defaults, sequencing rules, duplicate check period (settlement instructions/restrictions, liquidity transfers, inbound files and messages, pools), billing information, retention period, insolvency setting.~~

~~Billing reference data: the T2S Operator defines all the reference data for the configuration of billing in T2S, specifically the data for all the categories of billable items and applicable fees for each range of billable units.~~

~~Country: the country codes for all relevant countries in T2S (for uses such as defining the country of origin of a payment bank or the country of issuance of a security) are stored and maintained by the T2S Operator.~~

~~Currency: the T2S Operator is responsible for setting up and maintaining currency reference data in T2S. For more information on currencies in T2S, see section Currencies reference data.~~

~~T2S BIC Directory: the T2S BIC Directory stores information needed to identify the legal entity linked to each BIC. This information is used to validate BICs used as party identifiers (See section Party identification). The T2S Operator is responsible for the monthly loading~~

~~process of the SWIFT BIC directory and for its possible updates concerning specific BICs, on the basis of information provided by SWIFT in the interim period between two loads.~~

~~Network Service: the T2S Operator maintains all the data related to the network providers available in T2S, including the data for technical identification of each service and the type of data expected to interact with each service (e.g. BIC or Distinguished Name).~~

~~Restriction types: in case of anomalies or errors in the configuration, only the T2S Operator may change the positive/negative parameter flag. See section Restriction types for details on restriction types.~~

~~Securities reference data: the T2S Operator can maintain the ISIN code of any given Security, either intraday or as of a future date, in order to correct possible input errors made by the responsible CSD while creating the same Security. (Split book approach)~~

## 1.5.2 T2S calendar management

The T2S Operator is able to manage the T2S Calendar by creating, updating and deleting Closing Days as Reference Data objects. Closing Days can also be defined by currency based on the opening day calendars of the individual Central Banks.

## 1.5.3 T2S settlement day management

The T2S Operator also prepares the default event schedule for each business day by grouping events with specific planned execution times and predecessor dependencies, and linking them to the relevant business date.

Finally, the T2S Operator is able to perform the following manual interventions at run-time on the current business day schedule:

- Inserting a new event;
- Changing the scheduled time for one or more events;
- Removing one or more events which have not yet been triggered;
- Closing an event before its completion, resulting in the system skipping that event.

For more details, see section [Operations and Support](#) [▶ 824]. For information on the business concepts behind the management of the settlement day, see section [Settlement Day](#) [▶ 237].

## 1.5.4 Business and operations monitoring

Monitoring is the activity related to the control of the platform functioning and to the immediate awareness of any event possibly impacting on it. The monitoring of T2S is a prominent task of the T2S Operator.

Through the tools referenced in section [Operations and Support](#) [▶ 824], the T2S Operator monitors the T2S infrastructure and the T2S business application continuously, thus allowing an immediate detection of possible deviations from the standard behaviours. In case an action can be taken directly in order to either remove the problem or to anyway restore the normal situation, the T2S Operator does it autonomously within the agreed internal procedures. Should this be not the case, the T2S Operator raises the alarm through the standard procedures to be defined in the T2S Manual of Operational Procedures (T2S MOP).

## 1 1.5.5 Archiving management

2 As described in section [Operations and Support](#) [▶ 824], the archiving management supports the fulfilment  
3 of audit and regulatory needs through a central repository where the inbound and outbound messages and  
4 specific internal messages in their original format are copied from the operational databases and are stored  
5 for a harmonised period of 10 years. The T2S Operator receives requests from entitled T2S Actors and ex-  
6 tracts the needed data. These requests refer to the retrieval of inbound or outbound messages processed by  
7 T2S in a time period up to 10 years before the request. The retrieved data are returned to the requesting  
8 T2S Actor within the agreed timeframe.

## 9 1.5.6 Trouble management

10 The Trouble Management System (TMS – See section [Operations and Support](#) [▶ 824]) is a tool allowing the  
11 T2S Operator and the T2S Actors entitled to have access to it, to punctually track all issues raised on the  
12 T2S system as a whole.

13 Every time a T2S Actor contacts the T2S Service Desk via telephone or e-mail, the T2S Operator in charge  
14 opens a ticket identified by a number. The latter is the unique reference through which the reporting T2S  
15 Actor can afterwards get all the information on the updates occurring until the closure of the ticket.

16 The T2S Service Desk is the entry point for all trouble management instances stemming from the T2S Actors  
17 on one side and from the different internal 4CB support levels on the other. Through the querying and re-  
18 porting facilities of the TMS itself as well as by using the Statistical Information database, the T2S Operator  
19 can get information on individual cases as well as on the overall situation per aggregation parameter (report-  
20 ing actor, case category, case type) to ensure a constant control of the flow.

## 21 1.5.7 Invoicing management

22 Without prejudice to the responsibility of the Eurosystem, the T2S Operator can manage the T2S invoices  
23 through the Billing Common Component (BILL).

24 In this context the T2S Operator can initiate the following steps:

25 | Generation: Basically, the generation of monthly consumption data, invoice data and invoices is executed  
26 automatically by the Billing Common Component (BILL). However, the T2S Operator can trigger the ad-  
27 justment of consumption data, the regeneration of invoice data and the re-generation of invoices manu-  
28 ally in exceptional circumstances for the billing period (billing periods can also be smaller than a month,  
29 never span over more than a month or overlap each other). Via the automatic and manual generation all  
30 data required for information purposes and invoicing are collected.

31 | Cancellation: In case the data underlying an invoice and therefore the invoice itself are erroneous, the  
32 T2S Operator is in charge of the data or invoice's cancellation. In case the CSD/ CB/CB Participant re-  
33 ceived an invoice before, they receive an invoice cancellation via A2A afterwards.

34 The activities related to an invoice creation are displayed in the following table.

1  
2

**TABLE 109 - T2S OPERATOR ACTIVITES FOR AN INVOICE CREATION**

CASE	INITIATION	INITIATOR	POSSIBLE INITIATION TIME	INVOICING PERIOD	T2S OPERATOR ACTIVITY	
					GENERATION	CANCELLATION POSSIBLE
1	Automatically	BILL	Monthly	Month/Billing Period	-	X
2	Manually	T2S Operator	Daily	Month/Billing Period	X	X

3 **1.6 Application Processes Description**

4 **1.6.1 Settlement**

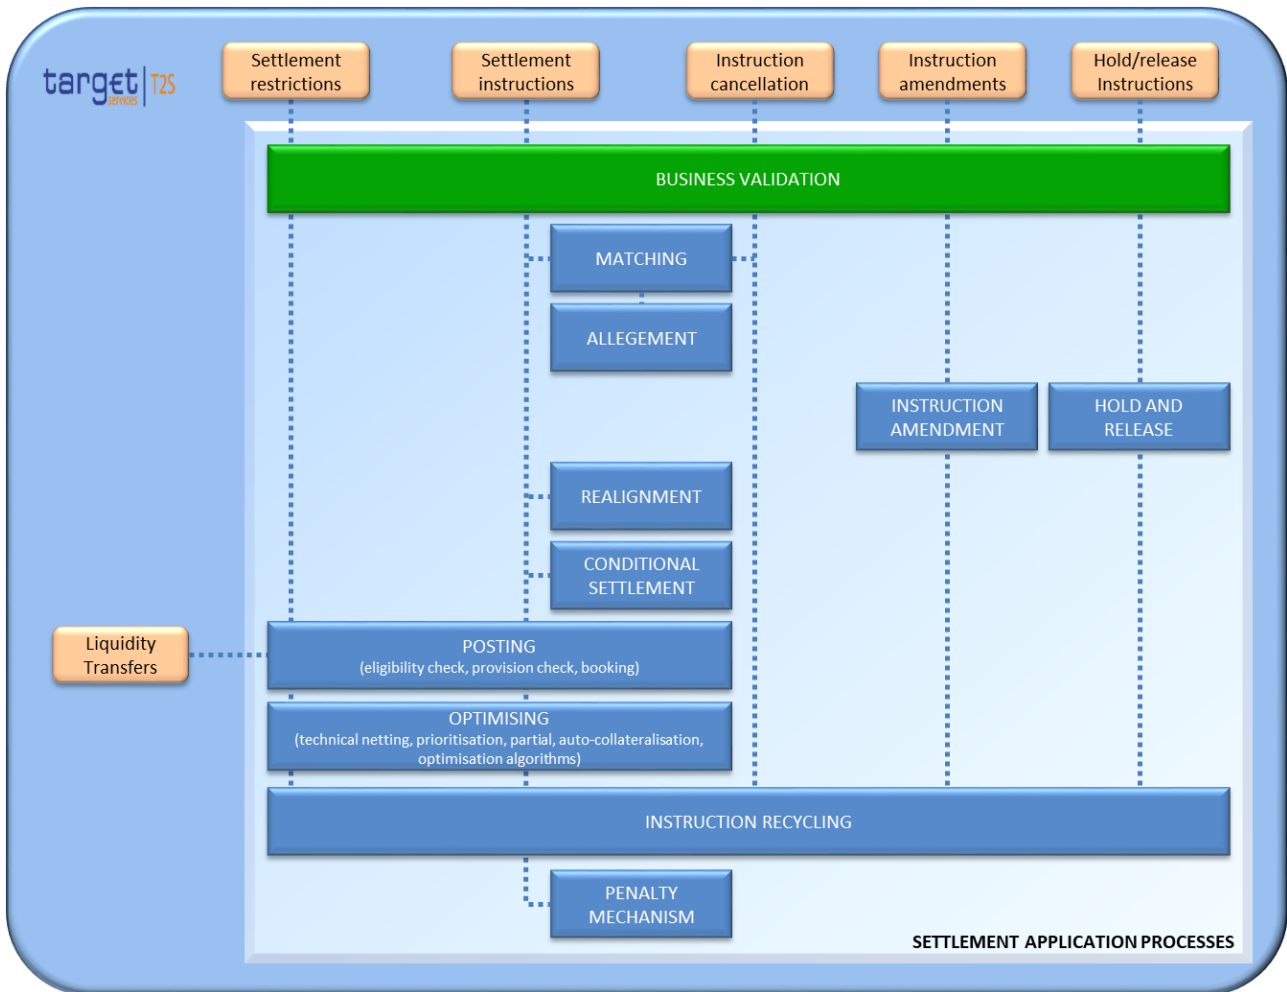

5 1.6.1.1 Business Validation

6 **1.6.1.1.1 Concept**

7 Business Validation is the process that ensures that the information in a Settlement Instruction, Settlement  
 8 Restriction or Maintenance Instruction (Cancellation Instruction, Amendment Instruction or Hold/Release  
 9 Instruction) is correct for settlement (in case of Settlement Instruction and Settlement Restriction) or execu-  
 10 tion (in case of Maintenance Instructions).

1

**DIAGRAM 70 - BUSINESS VALIDATION APPLICATION PROCESS**

2

**1.6.1.1.2 Overview**

When a T2S Actor sends any of the above mentioned instructions, this process checks the consistency of the instruction and verifies that it successfully passes the applicable validation checks. This process also checks if the Settlement Instructions and Settlement Restrictions fulfil any of the additional Business Validation rules set by a CSD.

This process triggers the revalidation of all recycled instructions in T2S at the Start of Day or when there is a change in the Reference Data, in order to check that these instructions are still valid.

**1.6.1.1.3 Validation process**

T2S validates the T2S Actor’s instruction, comparing its content with the information stored in the Reference Data. Depending on the validation, T2S considers the Reference Data either valid as of the intended settlement date of the instruction or the current configuration.

For those validations considering the intended settlement date, T2S also performs them considering the current business date when the intended settlement day is in the past. However, for the specific case of

1 migration <sup>186</sup>, the validations will be only performed at the current business day when the intended settle-  
2 ment date is in the past.

### 3 Duplicate check validation

4 At the moment T2S receives an instruction from a T2S Actor, it checks first that there are no duplicated in-  
5 structions with the same combination of T2S Actor's Instruction Reference (Transaction ID <sup>187</sup>) and Instruct-  
6 ing Party (Instructing Party BIC and Instructing Party Parent BIC). T2S compares the incoming Settlement  
7 Instruction or Settlement Restriction with the pending instructions received from the same T2S Actor that  
8 are not yet settled or cancelled and with those instructions from the same T2S Actor that have been settled,  
9 or cancelled within a certain period of time defined in Reference Data. This duplicate check is not performed  
10 on Maintenance Instructions.

11 If there is a duplicated instruction for the same Instructing Party, T2S rejects the last one received in T2S  
12 and the T2S Actor receives the respective Status Advice message informing about its rejection with the cor-  
13 responding error code.

14 Once no duplicate instruction is found, T2S proceeds with the privilege checks (for exhaustive list of Privileg-  
15 es defined in T2S, see section [Privilege](#) [▶ 146]).

16 Privilege checks as well as the rest of the validations are checked for Settlement Instruction, Settlement  
17 Restriction and Maintenance Instruction (Cancellation Instruction, Amendment Instruction or Hold/Release  
18 Instruction)

### 19 Privilege checks validation

20 T2S verifies that the T2S System User (see Section [User](#) [▶ 169]) has the relevant privileges to send the  
21 corresponding Settlement Instruction, Settlement Restriction or Maintenance instruction.

22 A T2S System User always belongs to a Party (i.e. CSD, NCB, CSD Participant, T2S Operator). The granting  
23 of privileges to T2S System Users is described in section [Configuration of privileges](#) [▶ 177].

24 The applicable validations are the following:

#### 25 | For Settlement Instruction and Settlement Restrictions:

- 26 – The T2S System User sending a Settlement Instruction or Settlement Restriction on securities must be  
27 authorised to send the Settlement Instruction or Settlement Restriction on securities on a specific Se-  
28 curities Account.
- 29 – For Already Matched Settlement Instructions, the T2S System User of a Settlement Instruction must  
30 be authorised to send a Settlement Instruction on both the delivering and the receiving Securities Ac-  
31 counts.
- 32 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
33 an external CSD, the Securities Account is not in T2S and the T2S System User of a Settlement In-  
34 struction must be authorised to send a Settlement Instruction on behalf of that external CSD.

---

186 Those Settlement Instructions flagged accordingly by means of the Corporate Action Event Identification

187 T2S Actor should not use NONREF as Transaction Id.

- 
- 1 – If a Settlement Instruction has the non-modifiable flag activated (i.e. that defines the ability of CSD  
2 participants to hold, release, amend or cancel Settlement Instructions), the T2S System User of the  
3 Settlement Instruction must be authorised to send a Settlement Instruction with the non-modifiable  
4 flag activated.
- 5 – The T2S System User of a Settlement Instruction must be authorised to send a Settlement Instruction  
6 using the ISO Transaction Code specified in the instruction.  
7 When T2S System User instructs in an already matched Settlement Instruction an ISO transaction  
8 code that occurs in pairs <sup>188</sup>, it must be authorised to use both ISO Transaction Codes.
- 9 – The T2S System User of a Settlement Instruction with a Party Hold or a CSD Hold activated must be  
10 authorised to perform a Party Hold or a CSD Hold on a specific Securities Account.
- 11 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
12 an external CSD, the T2S System User of a Settlement Instruction with a Party Hold activated must be  
13 authorised to send a Settlement Instruction with Party Hold on behalf of that external CSD.
- 14 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
15 an external CSD, the T2S System User of a Settlement Instruction with a CSD Hold activated must be  
16 authorised to send a Settlement Instruction with CSD Hold on behalf of the parent CSD of that exter-  
17 nal CSD.
- 18 – The T2S System User of a Settlement Restriction on securities that tries to unblock a CoSD securities  
19 blocking must be authorised to send a Settlement Restriction on securities to unblock a CoSD securi-  
20 ties blocking on behalf of the relevant CSD in T2S (i.e. CSD where the securities are blocked).
- 21 – The T2S System User of a Settlement Restriction on cash must be authorised to send a Settlement  
22 Restriction on Cash on a specific T2S Dedicated Cash Account.
- 23 – The T2S System User of a Settlement Restriction on cash that tries to unblock a CoSD cash blocking  
24 must be authorised to send a Settlement Restriction on cash to unblock a CoSD cash blocking on be-  
25 half of the relevant CSD in T2S (i.e. CSD of the debiting Settlement Instruction on whose T2S Dedi-  
26 cated Cash Account the cash is blocked).
- 27 – In case a Settlement Instruction, a Settlement Restriction on securities or a Settlement Restriction on  
28 cash intends to link to another instruction or pool, the T2S System User of the Settlement Instruction  
29 must be authorised to link to an instruction/pool belonging to a specific party.
- 30 – If the T2S System User of a Settlement Instruction or Settlement Restriction does not belong to the  
31 Instructing Party, then the T2S System User must be authorised to use this Instructing Party (i.e. to  
32 instruct on behalf of the Instructing Party).
- 33 | For Maintenance Instructions T2S checks the following privileges once confirmed that the referenced in-  
34 struction exist:
- 35 – The T2S System User of a Hold/Release Instruction that intends to perform a Party Hold or a CSD  
36 Hold must be authorised to perform a Party Hold or CSD Hold on a specific Securities Account.

---

188 The possible pairs of ISO transaction codes, in both directions, are the following: COLI / COLO; SECL / SECB; SBBK / BSBK; REPU / RVPO; TRPO / TRVO;

- 1 – The T2S System User of a Hold/Release Instruction that intends to release or partially release a Party  
2 Hold, or to release a CSD Hold or CSD Validation Hold must be authorised to release a Party Hold,  
3 CSD Hold or CSD Validation Hold on a specific Securities Account.
- 4 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
5 an external CSD, the T2S System User of a Hold/Release Instruction that intends to perform a Party  
6 Hold, release or partially release a Party Hold must be authorised to perform a Party Hold or release a  
7 Party Hold on behalf of that external CSD.
- 8 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
9 an external CSD, the T2S System User of a Hold/Release Instruction that intends to perform a CSD  
10 Hold or release a CSD Hold or CSD Validation Hold must be authorised to perform a CSD Hold or re-  
11 lease a CSD Hold or CSD Validation Hold on behalf of the parent CSD of that external CSD.
- 12 – The T2S System User of a Hold/Release Instruction that intends to release a CoSD Rule must be au-  
13 thorised to release a CoSD Rule on behalf of the Administering Party of the rule.
- 14 – The T2S System User of an Amendment Instruction that intends to amend Process Indicators of a Set-  
15 tlement Instruction or a Settlement Restriction on Securities must be authorised to amend Process In-  
16 dicators of a Settlement Instruction or Settlement Restriction on Securities on a specific Securities Ac-  
17 count.
- 18 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
19 an external CSD, the T2S System User of an Amendment Instruction that intends to amend Process  
20 Indicators of a Settlement Instruction must be authorised to amend Process Indicators of a Settlement  
21 Instruction on behalf of that external CSD or on behalf of the parent CSD of that external CSD.
- 22 – The T2S System User of a Cancellation Instruction that intends to cancel a Settlement Instruction or  
23 Settlement Restriction on Securities must be authorised to cancel a Settlement Instruction or Settle-  
24 ment Restriction on Securities on a specific Securities Account.
- 25 – If the Depository (Delivering Depository in case a DELI or Receiving Depository in case of a RECE) is  
26 an external CSD, the T2S System User of a Cancellation Instruction that intends to cancel a Settle-  
27 ment Instruction must be authorised to cancel a Settlement Instruction on behalf of that external CSD  
28 or on behalf of the parent CSD of that external CSD.
- 29 – The T2S System User of a Cancellation Instruction that intends to cancel a Settlement Instruction  
30 identified as CoSD must be authorised to cancel a CoSD Settlement Instruction on behalf of the Ad-  
31 ministering Party identified as the Instructing Party of the cancellation.
- 32 – The T2S System User of a maintenance instruction that intends to amend/cancel/hold/release or par-  
33 tially release a Settlement Instruction identified as a non-modifiable instruction must be authorised to  
34 amend non-modifiable Instructions on behalf of the Instructing Party of the Underlying Settlement In-  
35 struction.
- 36 – The T2S System User of an Amendment Instruction that intends to amend Process Indicators of a Set-  
37 tlement Restriction on cash (see section [Instruction Amendment](#) [▶ 357]) must be authorised to  
38 amend Process Indicators of a Settlement Restriction on cash on a specific T2S Dedicated Cash Ac-  
39 count.

- 1 – The T2S System User of a Cancellation Instruction that intends to cancel a Settlement Restriction on  
2 cash must be authorised to cancel a Settlement Restriction on cash on a specific T2S Dedicated Cash  
3 Account.
- 4 – The T2S System User of an AmendmentInstruction that intends to link a Settlement Instruction, a Set-  
5 tlement Restriction on securities or a Settlement Restriction on cash to another instruction or pool  
6 must be authorised to link to an instruction/pool belonging to a specific party.
- 7 – If the T2S System User of a Maintenance Instruction does not belong to the Instructing Party, then  
8 the T2S System User must be authorised to use this Instructing Party (i.e. to instruct on behalf of the  
9 Instructing Party).

#### 10 Instructing Party validation

11 The Instructing Party is the originator of the message which is the party who owns the T2S Actor Instruction  
12 reference (Transaction ID). It is identified as a couple of BICs (Instructing Party BIC and Instructing Party  
13 Parent BIC) in the block "From" in the Business Application Header of the message.

14 T2S performs the following validations over the Instructing Party,

- 15 | The Instructing Party exists and is active in T2S for the later date between the Intended Settlement Date  
16 and the current Business Day.
- 17 | The Instructing Party is active on the Intended Settlement Date and additionally on the current Business  
18 Day if the Intended Settlement Date is in the past.
- 19 | The CSD of the Instructing Party of a Settlement Restriction on securities must be the same as the CSD  
20 of the Securities Account.
- 21 | The CSD of the Instructing Party of an Unmatched Settlement Instruction must be the same as the CSD  
22 of the Securities Account (i.e. the Delivering Securities Account in a Delivering Settlement Instruction or  
23 the Receiving Securities Account in a Receiving Settlement Instruction).
- 24 | The CSD of the Instructing Party of an Settlement Instruction sent as already matched to T2S must be  
25 the same as the CSD of the Securities Account. for the instructed leg (i.e. the Delivering Securities Ac-  
26 count in an already matched sent as DELI or the Receiving Securities Account in an already matched  
27 sent as RECE).
- 28 | The CSD of the Instructing Party of an Settlement Instruction sent as already matched to T2S can be  
29 different than the CSD of the Securities Account of the counterparty (i.e. the Delivering Securities Ac-  
30 count in an already matched sent as RECE or the Receiving Securities Account in an already matched  
31 sent as DELI). This allows T2S Actors to send already matched intra-CSD and cross-CSD Settlement In-  
32 structions.
- 33 | The CB of the Instructing Party in a Settlement Restriction on cash must be the same as the CB of the  
34 T2S Dedicated Cash Account.
- 35 | It is worth mentioning that if the Depository of a Settlement Instruction (Delivering Depository or Receiv-  
36 ing Depository) is an external CSD, the Securities Account is not in T2S and the CSD of the Instructing  
37 Party is considered as the CSD parent of that external CSD (i.e. acting as the CSD of the related Securi-  
38 ties Account in T2S internal settlement scenarios).

1 In case the Settlement Instruction, Settlement Restriction or Maintenance instruction passes all the relevant  
2 validations of the Instructing Party, T2S continues with the rest of the business validation process.

3 The validation process checks the existence and consistency of the mandatory fields in the different instruc-  
4 tions received in T2S. Among these validations T2S checks that the counterparty included in the Settlement  
5 Instruction exist in T2S (i.e. if the Delivering/Receiving Depository specified in a Settlement Instruction is an  
6 internal CSD, the T2S Delivering/Receiving Party specified must exist in T2S). When a BIC8 is specified in  
7 any of the fields used in the business validation process (i.e. Instructing Party BIC, Instructing Party Parent  
8 BIC, Delivering or Receiving Depository BIC, Delivering or Receiving CSD Participant BIC, Client of the Deliv-  
9 ering or Receiving CSD Participant BIC, the Account Owner BIC and the linked instruction 's Reference Own-  
10 er BIC) T2S adds "XXX" to transform it in a BIC11 (i.e. BIC8+"XXX") which will be used for its validation and  
11 further processing of the instruction. Depending on the type of instruction (See section [Instruction Types](#)  
12 [► 90]) T2S applies different checks listed in the table below and detailed in the following explanatory text.

**TABLE 110 - VALIDATION CHECKS PER TYPE OF INSTRUCTION**

VALIDATION CHECK	SETTLEMENT INSTRUCTION		SETTLEMENT RE- STRICTION		AMENDMENT INSTRUC- TION	CANCELLATION INSTRUCTION	HOLD/ RELEASE INSTRUCTION

ation							

- 1 The following paragraphs provide details on the validation checks mentioned in the table above:
- 2 I : T2S verifies the following:
- 3 – The ISIN Code of an instruction is eligible for settlement in the corresponding CSD at the Intended
  - 4 Settlement Date (and additionally to the current Business Day when it is on the past).
  - 5 – The CSD of the T2S Party and the CSD of the Counterpart of a Settlement Instruction allow settlement
  - 6 with each other in the Eligible Counterpart CSDs in Reference Data (See section [Configuration of eligi-](#)
  - 7 [ble counterparts CSDs](#) [ ▶ 82]). In case one or both of the counterparts CSD does not allow settlement
  - 8 with the other, T2S rejects the instruction.
  - 9 – When the Securities Account specified in a Settlement Instruction is an Issuance Account, the ISIN
  - 10 Code must be eligible for settlement in this account on the Intended Settlement Date, and additionally
  - 11 on the current Business Day if the Intended Settlement Date is in the past. For this purpose, this
  - 12 check verifies that the CSD of the account is defined as issuer CSD of the security in the Securities
  - 13 CSD link. Also, in case the relevant Securities CSD link (the one defining the CSD of the account as is-
  - 14 sser CSD of the security) specifies one or more Issuance Accounts, then the Securities Account in-
  - 15 cluded in the Settlement Instruction must be one of them. In case the relevant Securities CSD link
  - 16 does not specify any Issuance Account, the latter check is not performed.
  - 17 – When the Instructing Party is not the Technical Issuer CSD or the Issuer CSD of the ISIN Code speci-
  - 18 fied in a Settlement Restriction on securities, the Intended Settlement Date of a Settlement Instruc-
  - 19 tion or of a Settlement Restriction on securities should be equal to or later than the Issue Date.
  - 20 – When the Instructing Party is not the Technical Issuer CSD or the Issuer CSD of the ISIN Code speci-
  - 21 fied in a Settlement Instruction, or the Settlement Instruction is a cross-CSD sent as already matched
  - 22 to T2S, the Intended Settlement Date of a Settlement Instruction or of a Settlement Restriction on se-
  - 23 curities should be equal to or later than the Issue Date.
  - 24 – When the Instructing Party is not the Investor CSD, the Technical Issuer CSD or the Issuer CSD of the
  - 25 ISIN Code specified in a Settlement Restriction on securities, the Intended Settlement Date should be
  - 26 earlier than the Maturity Date of the Security.
  - 27 – When the Instructing Party is not the Investor CSD, the Technical Issuer CSD or the Issuer CSD of the
  - 28 ISIN Code specified in a Settlement Instruction or the Settlement Instruction is a cross-CSD sent as al-
  - 29 ready matched to T2S, the Intended Settlement Date should be earlier than the Maturity date of the
  - 30 Security plus the transformation detection period, as example below:

1 **EXAMPLE 90 - ISIN CODE VALIDATION, ISD CHECK**

2

	INSTRUCTING PARTY	ISSUE DATE	ISIN CODE	INTENDED SETTLEMENT DATE	RULE	RESULT
<b>Settlement Instruction 1</b>	Party A	01/01/2015	DE000A0HCJH5	19/07/2015	ISD $\geq$ ID	Intended Settlement date > Issue Date
<b>Settlement Instruction 2</b>	Party B	12/11/2013	AT0000109004	11/11/2013	ISD $\geq$ ID	Intended Settlement date < Issue Date
<b>Settlement Instruction 3</b>	CSD Issuer	12/11/2013	AT0000109004	11/11/2013	ISD $\geq$ or<ID	Intended Settlement date < Issue Date

4 ISIN Code Check for the Maturity date:

EXAMPLE 90 – ISIN CODE VALIDATION, ISD CHECK (page 284 UDFS v2.3)  
1.6.1.1.3 – Application Processes Description – Settlement – Business Validation – Validation process

	INSTRUCTING PARTY	INTENDED SETTLEMENT DATE	ISIN CODE	MATURITY DATE	TRANSFORMATION DETECTION PERIOD (TDP)	RULE	RESULT
<b>Settlement Instruction 4</b>	Party A	11/11/2016	DE000A0HCJH6	14/10/2016	20 T2S opening days	ISD<MD + TDP	Intended Settlement date = Maturity Date + TDP
<b>Settlement Instruction 5</b>	Tec Issuer CSD	11/11/2016	DE000A0HCJH6	14/10/2016	20 T2S opening days	ISD $\geq$ or<MD	Intended Settlement date > Maturity Date
<b>Settlement Instruction 6</b>	Party B	9/12/2015	RU0000109004	12/11/2015	20 T2S opening days	ISD<MD + TDP	Intended Settlement date < Maturity Date + TDP

 Data included in the Settlement Instruction

 Data stored in Static Data

5

6 | The Current Business Day can be earlier than the Issue Date of the ISIN Code specified in a Settlement  
7 | Instruction or Settlement Restriction on securities.

8 | When the Instructing Party is not the Investor CSD, the Technical Issuer CSD or the issuer CSD of the  
9 | ISIN Code specified in the Settlement Restriction on securities, the current Business Day should be earli-  
10 | er than the Maturity date of the Security.

1 | When the Instruction Party is not the Investor CSD, the Technical Issuer CSD or the Issuer CSD of the  
 2 | ISIN Code specified in the Settlement Instruction or the Settlement Instruction is a cross-CSD sent as al-  
 3 | ready matched to T2S, the current Business Day should be earlier than the Maturity date of the security  
 4 | plus the transformation detection period, as example below:

5 | **EXAMPLE 91 - ISIN CODE VALIDATION RESPECT CURRENT BUSINESS DAY**

6 | **EXAMPLE 91-ISIN CODE VALIDATION RESPECT CURRENT BUSINESS DAY (page 285 UDFS v2.3)**  
 1.6.1.1.3 – Application Processes Description – Settlement – Business Validation – Validation process

	INSTRUCTING PARTY	ISIN CODE	MATURITY DATE	TRANSFORMATION DETECTION PERIOD (TDP)	RULE	RESULT

<b>Settlement Instruction 8</b>	Party D	GR0000109004	12/11/2016	20 T2S opening days	CBD < MD + TDP	Current Business day ≥ Maturity Date + TDP
<b>Settlement Instruction 9</b>	Tec Issuer CSD	DM0000109004	20/12/2015	20 T2S opening days	CBD < or ≥ MD	Current Business day ≥ Maturity Date

 Data included in the Settlement Instruction

 Data stored in Static Data

7 |

8 | **I Intended Settlement Date Validation:** T2S validates if the Intended Settlement Date is a T2S Settlement  
 9 | Day and:

10 | – The Intended Settlement Date is equal to or later than the Trade Date <sup>192</sup> of a Settlement Instruction  
 11 | and the Creation Date of a Settlement Restriction.

12 | – When the Intended Settlement Date is in the past or in the future, T2S checks that it does not exceed  
 13 | the predefined time frame for postdated or future dated instructions.

14 | – The Intended Settlement Date of a Settlement Instruction free of payment or of a Settlement Re-  
 15 | striction on securities is a Business Day in T2S.

16 | – The Intended Settlement Date of a Settlement Instruction against payment or of a Settlement Re-  
 17 | striction on cash is a T2S settlement Day for the Settlement Currency of the Settlement Instruction  
 18 | against payment or of the Settlement Restriction on cash.

192 Trade Date and Creation Date are validated as Business Dates for ISO-8601:2019 during the schema validation

- 1 | I Settlement Quantity Validation: Either the Settlement Quantity or the Settlement Amount is greater than  
2 | zero and:
- 3 | – The Settlement Type (Unit or Nominal) stated in the Settlement Quantity of a Settlement Instruction  
4 | or of a Settlement Restriction on Securities must be the same as the Settlement Type specified in T2S  
5 | Reference Data for the ISIN Code of the Instruction or of the Restriction.
  - 6 | – The Settlement Quantity of a Settlement Instruction with a settlement quantity greater than zero or of  
7 | a Settlement Restriction on securities is equal or greater than the Minimum Settlement Unit specified  
8 | in Reference Data for the security. There are two exceptions for which the Minimum Settlement Unit  
9 | does not apply:
    - 10 | 1. Settlement Instructions or Settlement Restrictions related to Corporate  
11 | Actions <sup>193</sup> (i.e. Settlement Instructions with ISO Transaction type code "CORP" or Settlement Re-  
12 | strictions with the field "Corp Action Event ID" filled);
    - 13 | 2. Settlement Instructions related to Market Claims and Transformations <sup>194</sup> (i.e. Settlement Instruc-  
14 | tions with ISO Transaction type code "CLAI" or Settlement Instructions with Settlement Transaction  
15 | Condition code "TRAN");
  - 16 | – The Settlement Quantity of a Settlement Instruction with a settlement quantity greater than zero or of  
17 | a Settlement Restriction on securities is a multiple unit of the Settlement Unit Multiple or a Deviating  
18 | Settlement Unit for the corresponding ISIN Code. There are the hereunder exceptions for which the  
19 | Settlement Unit Multiple does not apply:
    - 20 | 1. Settlement Instructions or Settlement Restrictions related to "Corporate Actions" <sup>195</sup> (i.e. Settlement  
21 | Instructions with ISO Transaction type code "CORP" or Settlement Restrictions with the field "Corp  
22 | Action Event ID" filled);
    - 23 | 2. Settlement Instructions related to "Market Claims" or "Transformation" <sup>196</sup> (i.e. Settlement Instruc-  
24 | tions with ISO Transaction type code "CLAI" or Settlement Instructions with Settlement Transaction  
25 | Condition code "TRAN");
- 26 | In addition, a check ensures that non-related Corporate Actions", "Market Claims" or "Transformation"  
27 | Instructions containing a multiple settlement quantity have the correct number of decimals. In order  
28 | to achieve the same result for all instructions, Settlement Instructions and Settlement Restrictions ei-  
29 | ther containing a deviating settlement unit or related to "Corporate Actions", "Market Claims" or  
30 | "Transformation", are also checked against the decimals of the Settlement Unit Multiple.

---

193 Including T2S internally generated instructions created as a consequence of a CORP instruction, i.e. realignment instructions and CoSD generated intra-position movements.

194 Including T2S internally generated instructions created as a consequence of a CLAI or TRAN instruction, i.e. realignment instructions and CoSD generated intra-position movements.

195 Including T2S internally generated instructions created as a consequence of a CORP instruction, i.e. realignment instructions and CoSD generated intra-position movements.

196 Including T2S internally generated instructions created as a consequence of a CLAI or TRAN instruction, i.e. realignment instructions and CoSD generated intra-position movements.

1 The Deviating Settlement unit has to be always equal or higher than the Minimum Settlement Unit, see ex-  
2 ample below:

3 **EXAMPLE 92 - SETTLEMENT QUANTITY VALIDATION**

4 Every security has a multiple settlement quantity or nominal. A multiple of that defines the standard lot sizes  
5 eligible for settlement on condition of being equal or greater than the minimum settlement unit. However,  
6 securities exist that have several odd lot sizes outside of the multiple that can settle. Therefore, T2S stores  
7 deviating settlement units for a security that T2S allows for settlement. There shall be no limit for the num-  
8 ber of deviating settlement units that T2S stores in Reference Data for a security.

9 For the Securities ES031710400 and PTCGDPOM00 these are the values stored in reference data:

SECURITY	MINIMUM	MULTIPLE	DEVIATING
ES031710400	10.000	5.000	14.000; 23.000
PTCGDPOM00	3.000	5.000	4.000; 102.000

10

11 For a given Settlement Instruction or Settlement Restriction these are the different possible results taking  
12 the details of the above Securities (ES031710400 and PTCGDPOM00):

SECURITY	SETTLEMENT QUANTITY (NOMINAL)	RESULT
ES031710400	9.000	✗
ES031710400	10.000	✓
PTCGDPOM00	19.000	✗
PTCGDPOM00	55.000	✓
PTCGDPOM00	102.000	✓
ES031710400	23.000	✓

 Data included in the Settlement Instruction  
 Data stored in Static Data

13

14 | In addition the following check is done during the revalidation process for Settlement Quantity Valida-  
15 tion:

- 16 – In case of a partially settled Settlement Instruction with a settlement quantity greater than zero or of  
17 a Settlement Restriction on securities, the remaining Settlement Quantity must be a multiple unit of  
18 the Settlement Unit Multiple or a Deviating Settlement Unit. There are two exceptions for which the  
19 Settlement Unit Multiple does not apply for partially settled instructions:

- 1 1. Settlement Instructions or Settlement Restrictions related to "Corporate Actions" <sup>197</sup>
- 2 2. Settlement Instructions related to "Market Claims" or "Transformation" <sup>198</sup>
- 3 | T2S Dedicated Cash Account Validation: T2S verifies for the credited or debited T2S dedicated cash ac-  
4 count specified in an Unmatched Settlement Instruction that:
- 5 – The Currency of a Settlement Instruction against payment or in a Settlement Restriction on cash must  
6 be the same as the Currency of the debited or credited T2S Dedicated Cash Account (both if it is an  
7 already matched Settlement Instruction)
- 8 – The T2S Party of a Settlement Restriction on cash is the Account Owner of the specified T2S Dedicat-  
9 ed Cash Account in the instruction.
- 10 – If the T2S Dedicated Cash Account is not specified in a Settlement Instruction against payment, a de-  
11 fault T2S Dedicated Cash Account for the Currency has been defined in the Reference Data by the  
12 T2S Actor; in such case, the default T2S Dedicated Cash Account is derived in Reference data with the  
13 Securities Account stated in the Settlement Instruction <sup>199</sup>.
- 14 – In case of an already matched Settlement Instruction, T2S validates both T2S Dedicated Cash ac-  
15 counts.
- 16 – The T2S Dedicated Cash Account specified in a Settlement Instruction against payment is related to  
17 the Securities Account specified in the instruction <sup>200</sup>.
- 18 – The T2S Dedicated Cash Account specified in a Settlement Instruction against payment or in a Settle-  
19 ment Restriction on cash exists in T2S. T2S checks that the Intended Settlement Date is between the  
20 Opening and Closing date of the Dedicated Cash Account. In case the Intended Settlement Date is in  
21 the past T2S additionally checks that the Closing date is equal or later than the current Business Day,  
22 see example below:

#### 23 **EXAMPLE 93 - T2S DEDICATED CASH ACCOUNT VALIDATION**

24 Given two Settlement Instructions with Intended Settlement Date in the past respect the current Business  
25 Day, T2S accepts the Settlement Instructions if the T2S Dedicated Cash Account is opened on the Intended  
26 Settlement Date and also on the current business day:

- 27 | Current Business Day 30/06/2026

---

197 Including T2S internally generated instructions created as a consequence of a CORP instruction, i.e. realignment instructions and CoSD generated intra-position movements.

198 Including T2S internally generated instructions created as a consequence of a CLAI or TRAN instruction, i.e. realignment instructions and CoSD generated intra-position movements.

199 In case the relevant Depository is an External CSD, the checks on the default T2S Dedicated Cash Account are performed at settlement level (see Settlement of the cash side for external-CSD settlements in Realignment process [\[section 1.6.1.10.3\]](#) [▶ 453]).

200 In case the relevant Depository is an External CSD, this check on the T2S Dedicated Cash Account is performed at settlement level (see Settlement of the cash side for external-CSD settlements in Realignment process [\[section 1.6.1.10.3\]](#) [▶ 453]).

	INTENDED SETTLEMENT DATE	OPENING DATE T2S DCA	CLOSING DATE T2S DCA	
Settlement Instruction 1	01/03/2021	02/07/2020	31/12/2025	X
Settlement Instruction 2	01/03/2021	02/07/2020	31/12/2030	✓

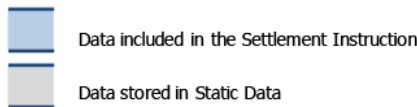

1

2 Given two Settlement Instructions with Intended Settlement Date in the future respect the current Business  
3 Day, T2S accepts the Settlement Instructions if the T2S Dedicated Cash Account is open on the Intended  
4 Settlement Date:

5 | Current Business Day 30/06/2020

	INTENDED SETTLEMENT DATE	OPENING DATE T2S DCA	CLOSING DATE T2S DCA	
Settlement Instruction 3	01/07/2020	01/06/2020	31/12/2025	✓
Settlement Instruction 4	01/07/2020	02/07/2020	31/12/2020	X

6

7 | Insolvency Restriction Type validation: In case of an insolvency of a T2S Actor, upon the activation of  
8 the "under insolvency situation" general configuration parameter by the T2S Operator, T2S verifies the  
9 following:

- 10 – The Securities Account specified in a Settlement Instruction delivering securities must not have any  
11 active "Insolvency" Restriction type assigned. In case the Securities Account has been flagged through  
12 a Restriction Type as insolvent, T2S rejects the Settlement Instruction.
- 13 – The T2S Dedicated Cash Account specified in a Settlement Instruction debiting cash must not have  
14 any active "Insolvency" Restriction type assigned. In case the T2S Dedicated Cash Account has been  
15 flagged through a Restriction Type as insolvent, T2S rejects the Settlement Instruction.  
16 If the T2S Dedicated Cash Account is not specified by the user in the Settlement Instruction, the "In-  
17 solvency restriction type" is checked for the default T2S Dedicated Cash Account derived from the Se-  
18 curities Account <sup>201</sup> of the Settlement Instruction.
- 19 – In case of Settlement Instructions mandated by the Insolvency Liquidator, in order to bypass the re-  
20 jection, the Instructing Party of the Settlement Instruction must be the CSD where the Securities Ac-  
21 count is held and the Settlement Instruction must include the code word "LIQR" as the first four char-  
22 acters of the common trade matching reference of the Settlement Instruction. This means that cross  
23 CSD Settlement Instructions sent as already matched to T2S will never bypass the rejection (conse-

201 This check is only applicable when the default DCA is calculated at the validation time since the Insolvency Restriction type validation is only applicable at the entry of the instructions to T2S (i.e. no revalidation performed)

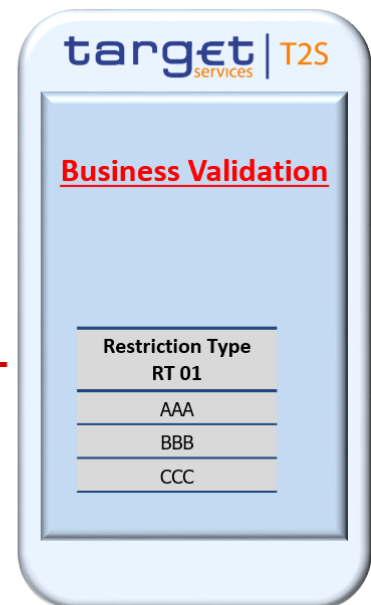

- 1 frequently, the cross CSD Settlement Instructions shall be sent unmatched to T2S by the Insolvency Liq-  
2 uidator).
- 3 – This check is not performed at revalidation level for Settlement Instructions already in the system.  
4 Upon the activation of the "Under Insolvency Situation" system parameter, only new incoming Settle-  
5 ment Instructions are checked.
- 6 | Linked Instruction Validation: In case the T2S Actor includes links in its instructions, T2S checks that  
7 they are valid and consistent. The process of Linking Instructions is described in section [Linked Instruc-](#)  
8 [tions](#) [▶ 500].
- 9 | Reference to Settlement Restriction Validation: The Restriction Reference is the unique identification as-  
10 signed by T2S when a Blocking (including CoSD Blocking) or Reservation detailed cash/securities re-  
11 striction is set up in a cash/securities account. T2S verifies that the Restriction Reference specified in a  
12 Settlement Instruction or Settlement Restriction exists in T2S and:
- 13 – If a Settlement Instruction or Settlement Restriction specifies a Restriction Reference, the account as-  
14 sociated with the Restriction Reference must be the same than the account specified in the Instruction  
15 (securities or cash account). In case the T2S Dedicated Cash Account is not present in the Settlement  
16 Instruction, the Restriction Reference must be the same than in the default T2S dedicated Cash Ac-  
17 count.
- 18 – The Restriction Reference specified in a Settlement Restriction on securities must apply to securities.
- 19 – If a Settlement Instruction or Settlement Restriction on securities specifies a Restriction Reference on  
20 securities, the security associated with the Restriction Reference must be the same than the security  
21 specified in the Instruction
- 22 – A Settlement Restriction on securities that aims to increase or decrease a blocked or reserved securi-  
23 ties position must include a Restriction Reference related to securities.
- 24 – If a Settlement Instruction specifies a Restriction Reference related to securities, the Settlement In-  
25 struction must be delivering securities, the Restriction Reference has to be related to a blocked or re-  
26 served securities position.
- 27 – A Settlement Instruction Free of Delivery cannot make use of a restricted securities position.
- 28 – When creating an "Earmarking" position through a Settlement Instruction, no Restriction Reference  
29 related to securities must be included.
- 30 – The Restriction Reference specified in a Settlement Restriction on cash must apply on cash.
- 31 – A Settlement Restriction on cash that aims to increase or decrease a blocked or reserved cash balance  
32 must include a Restriction Reference related to cash.
- 33 – If a Settlement Instruction with a Settlement Amount greater than zero, the Restriction Reference  
34 must be related to a "blocked" or "reserved" cash balance.
- 35 – If a Settlement Instruction specifies a Restriction Reference related to cash, the Settlement Instruction  
36 must be debiting cash as the Settlement Amount should be greater than zero.
- 37 – A Settlement Instruction Free of Payment cannot make use of a Restricted cash balance.

- 1 – If a Settlement Restriction specifies a Restriction Reference, one of the Restriction types either the  
2 balance from or balance to must relate to the same processing type than the Restriction Reference.
- 3 – If a Settlement Instruction specifies a Restriction type related to, either blocking or reservation (Set-  
4 tlement Instructions using a position without the ability to complement), there must be a Restriction  
5 Reference included in the Settlement Instruction applying on the same processing type than the Re-  
6 striction Type (see section [Securities Blocking/Reservation/Earmarking](#) [▶ 544]).
- 7 | Restriction Type Validation: This check ensures that the Restriction type(s) exists in T2S, and is valid for  
8 the Intended Settlement Date according to Reference data, or additionally on the current business day if  
9 the Intended Settlement Date is in the past:
  - 10 – The Restriction Types specified in a Settlement Restriction (Balance From and Balance To) cannot be  
11 the same.
  - 12 – The Restriction Types specified in a Settlement Restriction on securities (both, Balance From and Bal-  
13 ance To) or in a Settlement Instruction (in the Securities Sub Balance Type) are configured in Refer-  
14 ence Data by the T2S Operator or by the CSD of the Securities Account stated in the instruction.
  - 15 – The Restriction type specified in a Settlement Restriction on Securities must be applicable on Securi-  
16 ties Position.
  - 17 – The Restriction Types specified in a Settlement Restriction on securities cannot belong to the same  
18 processing type except in the case of a transfer between two earmarked positions.
  - 19 – A Settlement Restriction on securities must specify a Restriction type either as “Deliverable”, “Ear-  
20 marking” or “Earmarking for Auto-Collateralisation”.
  - 21 – A Settlement Restriction on Securities aimed to set up a restricted position must have the Balance  
22 From as “Deliverable” “Earmarking” or “Earmarking for auto-collateralisation”.
  - 23 – When the Restriction Types in a Settlement Restriction on securities (both, the specified in the Bal-  
24 ance From and the specified in the Balance To) are different from “blocking” or “reservation”, no Re-  
25 striction Reference must be specified.
  - 26 – If a Settlement Instruction specifies a Restriction Type in the Securities Sub Balance Type, the Settle-  
27 ment Instruction must be delivering securities (except when creating an Earmarking position) and the  
28 Restriction Type must be applicable on securities position in T2S.
  - 29 – If the Restriction type specified in the Securities Sub Balance Type of a Settlement Instruction is  
30 “Blocking” or “Reservation”, the Restriction Reference must also be specified.
  - 31 – The Restriction Types specified in a Settlement Restriction on cash (both, Balance From and Balance  
32 To) or in a Settlement Instruction (in the Cash Sub Balance Type) are configured in Reference Data by  
33 the T2S Operator or by the NCB of the T2S Dedicated Cash Account stated in the instruction (or the  
34 one by default in case of Settlement Instructions not specifying the account).
  - 35 – The Restriction type specified in a Settlement Restriction on cash must be applicable on Cash Balance.
  - 36 – The Restriction Types specified in a Settlement Restriction on cash cannot belong to the same pro-  
37 cessing type.

- 1 – A Settlement Restriction on cash must specify a Restriction type (either the Balance From or the Balance To) as “Deliverable”. A Settlement Restriction aimed to set up a restricted cash balance must have the balance from as “Deliverable”.
- 2
- 3
- 4 – If a Settlement Instruction specifies a Restriction type in the Cash Sub Balance Type, this can only be “Deliverable”, and it has to apply on cash balance in T2S.
- 5
- 6 – A T2S Actor cannot set up, increase, decrease or use a CoSD blocked position (except in case of CoSD decreasing by the CSD/CB where the resources are blocked, after CoSD cancellation), CoSD blocked cash balance, or a Collateralised position. A T2S Actor can set up, increase and decrease an “earmarking for autocollateralisation” position.
- 7
- 8
- 9

**EXAMPLE 94 - REFERENCE TO SETTLEMENT RESTRICTION VALIDATION**

	RESTRICTION REFERENCE	RESTRICTION TYPE	
Settlement Instruction 1	ABC	RT01	✗
Settlement Instruction 2	BBB	RT01	✓

11  
12 T2S verifies if the Restriction Reference specified in the Settlement Instruction exist in Reference Data for  
13 the relevant Reference Type:

14 Settlement Instruction 1: ABC does not exist in the Restriction Type “RT01” in Reference Data, so the in-  
15 struction is rejected.

16 Settlement Instruction 2: BBB does exist in the Restriction Type “RT01” in Reference Data, so T2S keeps  
17 validating the instruction.

18 | Securities Account Validation <sup>202</sup>: T2S verifies that the Securities Account included in a Settlement In-  
19 struction or in a Settlement Restriction on securities exists in T2S and is open on the Intended Settle-  
20 ment Date. In case the Securities Account of the counterparty is also included in a Settlement Instruc-

202 Checks applying on the Securities Account are not performed when the relevant Depository is an External CSD

tion, T2S also performs the abovementioned checks over the counterparty's Securities Account. This validation additionally checks:

- The Securities Account must be the same than the Securities Account of the delivering CSD Participant if this latter is present in a delivering Settlement Instruction.
- The Securities Account must be the same than the Securities Account of the receiving CSD Participant if this latter is present in a receiving Settlement Instruction.
- The T2S Party owner BIC of the Securities Account derived from the Securities Account included in a Settlement Instruction must be the same as the respective T2S Delivering or Receiving Party BIC present in the Settlement Instruction.
- The T2S Depository of the Securities Account derived from the Securities Account included in a Settlement Instruction must be the same as the respective T2S Delivering or Receiving Depository present in the Settlement Instruction.
- In case the Intended Settlement Date is in the past, T2S checks that the opening date of the Securities Account (and the counterparty's Securities Account if the latter is included in a Settlement Instruction) is equal or earlier than the current Business Day.

I Settlement Process Indicator Validation: T2S verifies the Process Indicators at the schema validation. In this validation checks that Settlement Priority value "Reserved priority" is only allowed if the Instructing Party is a CSD or a Central Bank.

I Currency Validation: T2S checks that the Currency specified in the Instruction is a valid currency in T2S<sup>203</sup> and is the same currency as that of the T2S Dedicated Cash Account. To that purpose, the following checks are performed:

- The Currency of a Settlement Instruction against payment or of a Settlement Restriction on cash is a T2S Settlement Currency.
- The number of decimals of the Settlement Amount of a Settlement Instruction against payment or of a Settlement Restriction does not exceed the number of decimals defined in Reference Data for the Currency.
- In case the Settlement Quantity is zero the Settlement Amount must be greater than zero.

I Referenced LCMM Instruction Validation: For Maintenance Instruction (Amendment Instruction, Cancellation Instruction and Hold/Release Instruction) T2S verifies that the referenced instruction (Settlement Instruction or Settlement Restriction) exists in T2S and that the information contained in both instructions is consistent. The following checks are performed:

- The referenced instruction (Settlement Instruction or Settlement Restriction) exists in T2S. For this check T2S uses the reference stated in the Maintenance Instruction: either the T2S Instruction Reference or the T2S Actor's Instruction Reference. In case the T2S Actor Instruction Reference is stated, in order to identify the referenced instruction T2S uses it with the Instructing Party of the Mainte-

203 This check is also performed on FOP instructions. The settlement currency of a Settlement Instruction is valid if it is included in the list of currencies defined by the standard ISO 4217:2015.

- 1 nance Instruction (Instructing Party BIC and Instructing Party Parent BIC in the block "From" in the  
2 Business Application Header of the Maintenance Instruction).
- 3 – The Securities Account indicated in an Amendment, Cancellation or Hold/Release Instruction is the  
4 same than the Securities Account indicated in the referenced Settlement Instruction or Settlement Re-  
5 striction on securities (only Amendment and Cancellation).
- 6 – The Dedicated Cash Account indicated in an Amendment, or Cancellation Instruction is the same than  
7 the Dedicated Cash Account indicated in the referenced Settlement Restriction on cash.
- 8 – The derived Security from the ISIN Code indicated in an Amendment, Cancellation or Hold/Release In-  
9 struction is the same as the derived Security from the ISIN Code indicated in the referenced Settle-  
10 ment Instruction or Settlement Restriction on securities (only Amendment and Cancellation).
- 11 – The Settlement Quantity indicated in an Amendment, Cancellation or Hold/Release Instruction is the  
12 same than the Settlement Quantity indicated in the referenced Settlement Instruction or Settlement  
13 Restriction on securities (only Amendment and Cancellation). When partially releasing a Settlement  
14 Instruction the Settlement Quantity must be lower than the Settlement Quantity indicated in the ref-  
15 erenced Settlement Instruction.
- 16 – The Intended Settlement Date indicated in a Cancellation Instruction must be the same as the Intend-  
17 ed Settlement Date stated in the referenced Settlement Instruction or Settlement Restriction.
- 18 – When a Cancellation Instruction refers to a T2S generated Settlement Instruction or T2S generated  
19 Settlement Restriction, the Cancellation Instruction is rejected unless the T2S generated Settlement  
20 Instruction is a recycled Reimbursement client-collateralisation Settlement Instruction.
- 21 – If present, the Settlement Amount indicated in an Amendment Instruction, Hold/Release Instruction or  
22 in a Cancellation Instruction must be the same as the Settlement Amount stated in the referenced  
23 Settlement Restriction on cash.
- 24 – When an Amendment Instruction or a Hold/Release Instruction refers to a T2S generated Settlement  
25 Instruction or T2S generated Settlement Restriction, the Amendment Instruction or a Hold/Release  
26 Instruction is rejected unless it is a Release Instruction and the T2S generated Settlement Instruction  
27 is a Reimbursement Instruction or a CoSD Release Instruction and the T2S generated Settlement In-  
28 struction has its CoSD Hold Status Set to "Yes".
- 29 – When a Hold/Release Instruction tries to Hold/Release a Settlement Restriction, the Hold/Release In-  
30 struction is rejected.
- 31 – The CoSD Release Instruction must refer to a CoSD rule.
- 32 – The referenced Settlement Instruction referred by a CoSD Release Instruction or CoSD Cancellation  
33 Instruction must be a CoSD Settlement Instruction.
- 34 – The CoSD Rule reference specified in a CoSD Release Instruction must exist in T2S for the Settlement  
35 Instruction stated in the Release Instruction.
- 36 – The Instructing Party of a CoSD Release Instruction must be the Administering Party of the CoSD Rule  
37 specified in the Condition Modification message.

- 1 – The Instructing Party of a CoSD Cancellation Instruction must be an Administering Party of at least  
2 one of the CoSD Rules associated to the underlying Settlement Instruction.
- 3 – CoSD Release and CoSD Cancellation instructions must not specify the T2S Actor Instruction Refer-  
4 ence of the underlying Settlement Instruction, only the T2S Instruction Reference must be used
- 5 | Condition Modification Validation: T2S checks that the Condition Modification Instruction (Amendment  
6 Instruction and Hold/Release Instruction) is valid for T2S. More specifically, T2S checks that:
- 7 – Each Amendment Instruction and Hold/Release Instruction only includes one single modification.  
8 When the referenced instruction was received in T2S as an already matched instruction, the modifica-  
9 tion can be done on both legs through one single Condition Modification Instruction.
- 10 – The Amendment Instruction does not modify the Partial Settlement indicator of a Settlement Re-  
11 striction.
- 12 – When an Amendment Instruction tries to amend the linkages of a Settlement Instruction or Settle-  
13 ment Restriction with an unlink type (i.e. tries to remove an existing link), the corresponding link type  
14 must exist for the referenced Settlement Instruction or Settlement Restriction.
- 15 – When an Amendment Instruction tries to amend the linkages of a Settlement Instruction or Settle-  
16 ment Restriction with a link type (i.e. tries to add a link), the corresponding link type regardless its  
17 processing position, must not exist for the referenced instruction.
- 18 | Specific Restriction Validation: T2S checks whether a restriction type case one (i.e. Rejection or CSD Val-  
19 idation Hold) applies over Settlement Instructions or Settlement Restrictions. Specific Restriction Valida-  
20 tion is only performed in case the previous business validations have been successfully passed. This vali-  
21 dation is further described in [Specific restriction validation process](#) [▶ 321].
- 22 At the end of the Business Validation T2S informs the T2S Actors on the result of the validation process,  
23 through a Status Advice message with its corresponding error code(s), if needed <sup>204</sup>. Depending on the type  
24 of instruction, a different Status Advice message is used.
- 25 The possible pairs of ISO transaction codes, in both directions, are the following: COLI / COLO; SECL /  
26 SECB; SBBK / BSBK; REPU / RVPO; TRPO / TRVO;

#### 27 **1.6.1.1.4 Specific restriction validation process**

28 CSDs can define additional validation rules in T2S to provide specific checks and processing of Settlement  
29 Instructions or Settlement Restriction on securities to fulfil legal, regulatory and supervisory requirements in  
30 their respective markets. CBs can also define additional validation rules for Settlement Restrictions on cash.

31 For this purpose, this process verifies whether any restriction type case one (i.e. Rejection or CSD Validation  
32 Hold, see section [Restriction types](#) [▶ 45]) applies over a Settlement Instruction or a Settlement Restriction.  
33 Depending on the restriction type applied, T2S rejects or puts the corresponding instruction on CSD Valida-  
34 tion Hold.

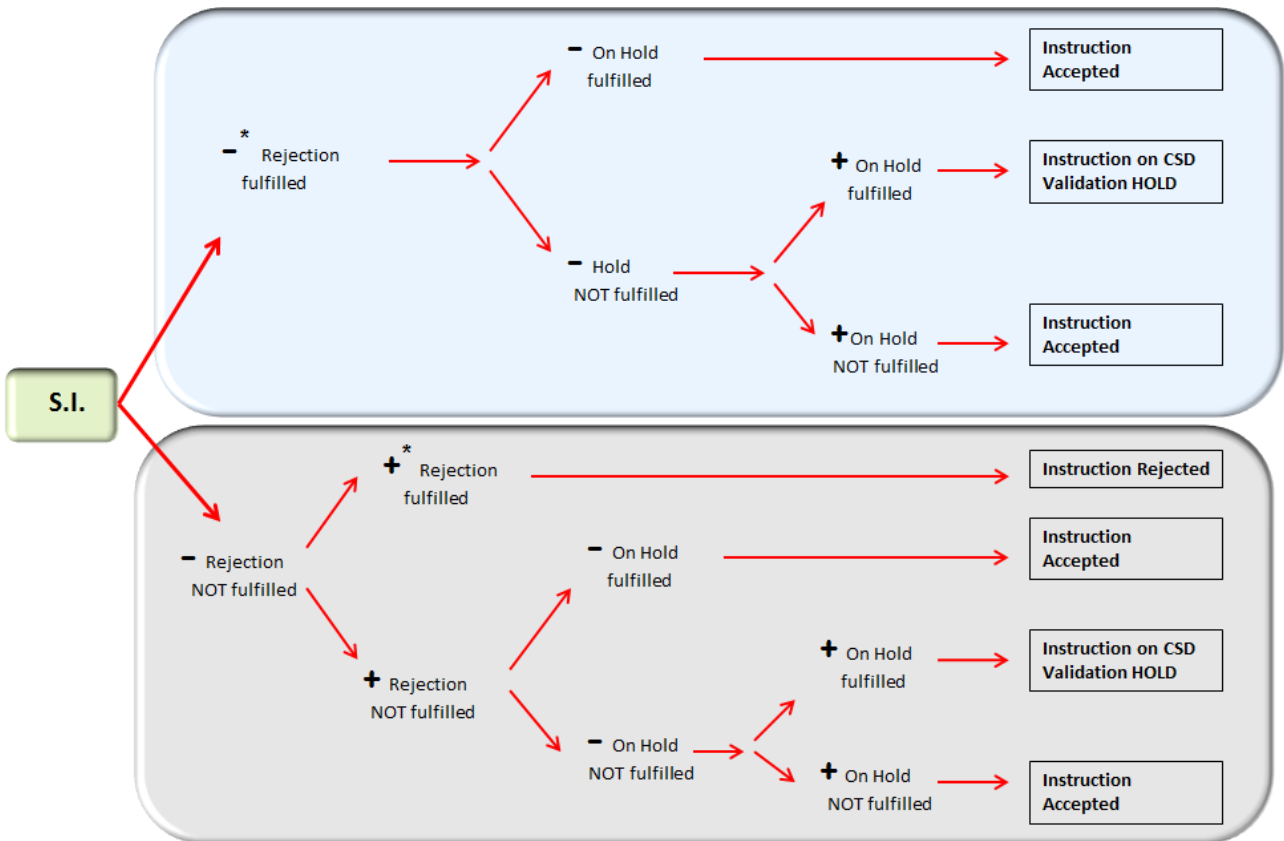

---

204 In case of rejection of an instruction, T2S sends only one Status Advice message. In case of acceptance, T2S sends one or two Status Advice messages depending on whether the instruction is already matched or not.

- 1 In order to do so, this process checks whether an instruction fulfils a Rejection restriction or a CSD Validation Hold restriction defined by the relevant CSD or CB involved in its settlement (e.g. for a delivering Settlement Instruction T2S verifies the restrictions set by the delivering CSD of the instruction).
- 2  
3
- 4 Each restriction type case one specifies the set of rules (i.e. restriction rules) including all the criteria or combinations of attributes for fulfilling the restriction type.
- 5
- 6 Also each restriction type case one specifies a positive/negative parameter according to which T2S should apply/should not apply the restriction if any of its rules is satisfied:
- 7
- 8 | Positive: A positive parameter specifies rules requiring T2S to apply the restriction.
  - 9 | Negative: A negative parameter specifies rules for which T2S does not apply a restriction (i.e. the exception for not applying the restriction). The restriction types with negative parameter are checked prior to restriction types with positive parameter, enabling T2S to identify exceptions to prevent the application of the restriction.
- 10  
11  
12
- 13 T2S checks the fulfilment of restriction types case one following a sequence that starts from the most restrictive restrictions (i.e. Rejection) to the less restrictive restrictions (i.e. CSD Validation hold) as described below:
- 14  
15
- 16 | Rejection: Settlement Instructions and Settlement Restrictions may fulfil a Rejection restriction.
    - 17 – Negative parameter value: in case one of its rules is fulfilled, the instruction satisfies the exception, therefore it is not rejected and no subsequent checks are performed for Rejection restrictions. CSD Validation Hold restrictions shall be checked;
    - 18  
19
    - 20 – Positive parameter value: in case one of its rules is fulfilled, no subsequent checks are performed for any restriction type and the instruction is rejected. In this case T2S rejects the Instruction and informs the T2S Actor through a "Rejection" Status Advice message. The dialogue is reflected in section Send Settlement Instruction, in section Send Settlement Restriction on Securities Position and in section Send Settlement Restriction on Cash Balance.
  - 25 | CSD Validation Hold: Only Settlement Instructions may fulfil a CSD Validation hold restriction since Settlement Restrictions cannot be set on Hold.
    - 27 – Negative parameter value: in case one of its rules is fulfilled, the Settlement Instruction satisfies the exception, therefore it is not put on Hold and no subsequent checks are performed for any restriction type;
    - 28  
29
    - 30 – Positive parameter value: in case one of its rules is fulfilled no subsequent checks are performed for any restriction type and the Settlement Instruction is accepted on hold by setting its CSD Validation Hold status to "Yes". In this case T2S puts the Settlement Instruction on CSD Validation Hold, until its release from the CSD. Even though the validity of the hold restriction expires, the Release Instruction from the CSD is needed to release it. The T2S Actor receives the corresponding Status Advice message informing on the successful validation and the CSD Validation Hold. This dialogue is reflected in section Send Settlement Instruction.
- 31  
32  
33  
34  
35  
36

#### 37 **EXAMPLE 95 - RESTRICTION CHECKING SEQUENCE**

38 T2S follows the below sequence for checking the restrictions that apply in a Settlement Instruction:

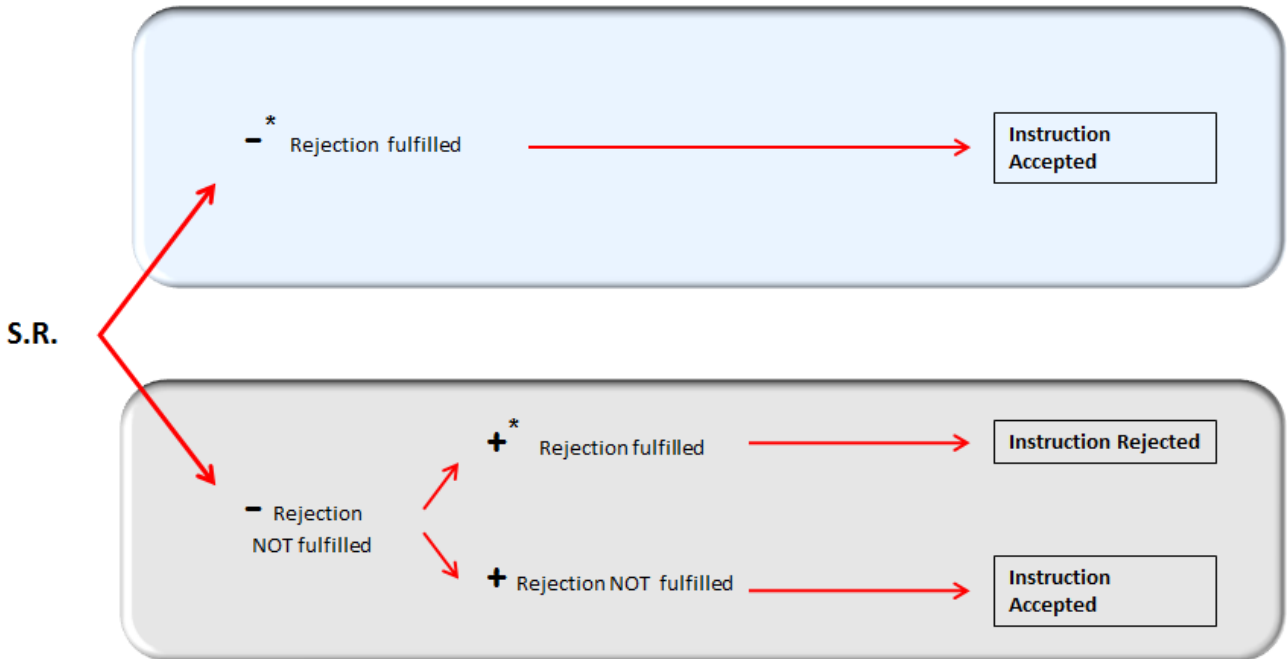

\* - Stands for a Restriction with Negative parameter

\* + Stands for a Restriction with Positive parameter

1

2 T2S follows the below sequence for checking the restrictions that apply in a Settlement Restriction:

\* - Stands for a Restriction with Negative parameter

\* + Stands for a Restriction with Positive parameter

3

1 T2S selects all the relevant restriction types case one defined by the corresponding CSD or CB and checks  
2 them in the sequence defined above.

3 Depending on the type of instruction, T2S selects the following restriction types:

4 **I** For Settlement Instructions, T2S selects the restriction types defined by the CSD involved in its settle-  
5 ment (i.e. for delivering Settlement Instructions T2S verifies the restrictions set by the delivering CSD of the  
6 instruction and for receiving Settlement Instructions T2S verifies the restrictions set by the receiving  
7 CSD of the instruction <sup>205</sup>). T2S validates both legs of already matched instructions as two separated in-  
8 structions (the delivering leg and receiving leg), verifying the restrictions that apply for each leg.

9 – For Settlement Restrictions on securities, T2S selects the restriction types defined by the CSD involved  
10 in its settlement.

11 – For Settlement Restrictions on cash, T2S selects the restriction types defined by the CB involved in its  
12 settlement.

13 T2S checks if an instruction fulfils a restriction type by checking whether the instruction fulfils any of its  
14 rules. For this purpose, T2S considers those rules that are valid on the Intended Settlement Date (or on the  
15 current business date when the Intended Settlement Date is in the past).

16 In order to verify if an instruction fulfils a restriction rule, T2S checks the relevant information contained  
17 either directly in the instruction or in Reference Data retrieved from the information contained in the instruc-  
18 tion (e.g. for the Market-specific attributes) against the criteria included in the rule. The criteria or combina-  
19 tion of attributes of the restriction rules is defined based on an exhaustive list of parameter types. An in-  
20 struction fulfils a restriction rule when all the criteria or combination of attributes included in the rule is satis-  
21 fied (i.e. when each of the parameter types defined in the rule is satisfied). A parameter type is satisfied  
22 when the relevant information equals one of the values defined for this parameter type.

23 Settlement Instructions:

24 The relevant parameter types for the restriction rules checked in a Settlement Instruction are the following:

25 **TABLE 111 - PARAMETER TYPES FOR RESTRICTION RULES CHECKED IN SETTLEMENT INSTRUCTIONS**

PARAMETER TYPE	DESCRIPTION
Party	This parameter is satisfied by Settlement Instructions whose Instructing Party Identifier equals the value defined for the rule.
Party type (of the Instructing Party)	This parameter is satisfied by Settlement Instructions whose Instructing Party has in Reference Data the Party Type defined for the rule (possible values for this parameters type are CSD, CSD Participant and External CSD).
Party type (of the account owner)	This parameter is satisfied by Settlement instructions whose Securities Account owner (or External CSD in case of external-CSD settlement) has in Reference Data the Party Type defined for the rule (possible values for this parameter type are CSD, CSD Participant and External CSD).

205 In case the delivering or receiving CSD is an External CSD, T2S verifies the restrictions set by the Parent CSD of the External CSD.

PARAMETER TYPE	DESCRIPTION
Security	This parameter is satisfied by Settlement Instructions whose Security Identifier equals the value defined for the rule.
Securities Movement Type	This parameter is satisfied by: <ul style="list-style-type: none"> <li>  Receiving Settlement Instructions, when the value defined for the rule is Receive (RECE)<sup>206</sup>;</li> <li>  Delivering Settlement Instructions, when the value defined for the rule is Deliver (DELI)<sup>207</sup>;</li> <li>  Settlement Instructions which has quantity zero (i.e. PFoD), when the value defined for the rule is Zero.<sup>208</sup></li> </ul>
Payment	This parameter is satisfied by: <ul style="list-style-type: none"> <li>  FoP Settlement Instructions when the value defined for the rule is FREE;</li> <li>  Settlement Instructions against Payment when the value defined for the rule is APMT.</li> </ul>
Transaction Identification	This parameter is satisfied by Settlement Instructions whose ISO Transaction Code equals the value defined for the rule.
Market-specific Securities Attribute	This parameter is satisfied by Settlement Instructions whose Security has in Reference Data the Market-specific Attribute value defined for the rule.
Market-specific Securities Account Attribute	This parameter is satisfied <sup>209</sup> by: <ul style="list-style-type: none"> <li>  Delivering Settlement Instructions whose Securities Account (from where the securities are delivered) has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the delivering Securities Account<sup>210</sup>;</li> <li>  Delivering Settlement Instructions whose counterpart Securities Account (where the securities are received)<sup>211</sup> has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the receiving Securities Account<sup>212</sup>;</li> </ul>

206 A rule configured with the value RECE will be satisfied by all targeted Settlement Instructions with Securities Movement Type RECE, regardless of their Settlement Quantity (including those with a null Settlement Quantity, i.e. PFoD)

207 A rule configured with the value DELI will be satisfied by all targeted Settlement Instructions with Securities Movement Type DELI, regardless of their Settlement Quantity (including those with a null Settlement Quantity, i.e. PFoD)

208 This value is not a type of securities movement for Settlement Instructions per se. If a rule is configured with this value, it is satisfied by all targeted Settlement Instructions with Settlement Quantity equal to zero (i.e. PFoD), regardless their Securities Movement Type (DELI or RECE).

209 T2S does not check the MSAs of the securities account in case it relates to an External CSD scenario (i.e. a securities account whose relevant depository is an External CSD will never satisfy the parameter Market-specific Securities Account Attribute)

210 The rule refers to the MSA of the delivering Party when the Market-specific Party Attribute is configured as "Debit"

211 T2S only retrieves the MSA of the counterpart Securities Account when it belongs to the same CSD than the one of the main Securities Account

212 The rule refers to the MSA of the receiving Securities Account when the Market-specific Securities Account attribute is configured as "Credit"

PARAMETER TYPE	DESCRIPTION
	<ul style="list-style-type: none"> <li data-bbox="443 353 1441 472">  Receiving Settlement Instructions whose Securities Account (where the securities are received) has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the receiving Securities Account <sup>213</sup>;</li> <li data-bbox="443 495 1441 613">  Receiving Settlement Instructions whose counterpart Securities Account (from which the securities are delivered) <sup>214</sup> has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the delivering Securities Account <sup>215</sup>;</li> <li data-bbox="443 636 1441 786">  Settlement Instructions where either its Securities Account <sup>216</sup> or its counterpart Securities Account has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the securities account independently on whether the securities account is delivering or receiving securities <sup>217</sup>.</li> </ul>
Market-specific Party Attribute	<p data-bbox="432 819 754 853">This parameter is satisfied by:</p> <ul style="list-style-type: none"> <li data-bbox="443 875 1441 994">  Delivering Settlement Instructions whose delivering CSD Participant (or External CSD in case of external-CSD settlement) has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the delivering Party <sup>218</sup>;</li> <li data-bbox="443 1016 1441 1135">  Delivering Settlement Instructions whose counterpart <sup>219</sup>, the receiving CSD Participant (or External CSD in case of external-CSD settlement) has in Reference Data the MSA value defined for the rule, and the rule refers to the MSA of the receiving Party <sup>220</sup>;</li> <li data-bbox="443 1158 1441 1276">  Receiving Settlement Instructions whose receiving CSD Participant (or External CSD in case of external-CSD settlement) has in Reference Data the MSA value defined for the rule, and the rule refers to the MSA of the receiving Party <sup>221</sup>;</li> <li data-bbox="443 1299 1441 1404">  Receiving Settlement Instructions whose counterpart <sup>222</sup>, the delivering CSD Participant (or External CSD in case of external-CSD settlement) has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the delivering Party <sup>223</sup>.</li> </ul>

213 The rule refers to the MSA of the receiving Securities Account when the Market-specific Securities Account Attribute is configured as "Credit"

214 T2S only retrieves the MSA of the counterpart Securities Account when it belongs to the same CSD than the one of the main Securities Account

215 The rule refers to the MSA of the delivering Securities Account when the Market-specific Securities Account Attribute is configured as "Debit"

216 T2S only retrieves the MSA of the counterpart Securities Account when it belongs to the same CSD than the one of the main Securities Account

217 The rule refers to the MSA of the Securities Account independently on whether the Securities Account is delivering or receiving securities when the Market-specific Securities Account Attribute is neither configured as "Credit" nor as "Debit" (i.e. neither the "Debit" field nor the "Credit" field are selected)

218 The rule refers to the MSA of the delivering Securities Account when the Market-specific Securities Account Attribute is configured as "Debit"

219 T2S only retrieves the MSAs of the counterpart when it belongs to the same CSD than the one of CSD Participant (or Parent CSD in case of settlement with an External CSD).

220 The rule refers to the MSA of the receiving Party when the Market-specific Party Attribute is configured as "Credit"

221 The rule refers to the MSA of the receiving Party when the Market-specific Party Attribute is configured as "Credit"

PARAMETER TYPE	DESCRIPTION
	<ul style="list-style-type: none"> <li>Settlement Instructions where either the CSD Participant or its counterpart <sup>224</sup> has in Reference Data the MSA value defined for the rule and the rule refers to the MSA of the Party independently on whether the Party is delivering or receiving securities <sup>225</sup>.</li> </ul>
Matching Status	<p>This parameter is satisfied by:</p> <ul style="list-style-type: none"> <li>Already matched Settlement Instructions, when the value defined for the rule is Matched (MACH);</li> <li>Unmatched Settlement Instructions, when the value defined for the rule is Unmatched (NMAT).</li> </ul>
Debited Position/Balance	<p>This parameter is satisfied by delivering Settlement Instructions requesting the use of a restricted securities position whose Restriction type Id (See section <a href="#">Securities Blocking/Reservation/Earmarking</a> [ 544]) equals the value defined for the rule.</p>
Credited Position /Balance	<p>This parameter is satisfied by:</p> <ul style="list-style-type: none"> <li>Delivering Settlement Instructions requesting the use of a securities position complemented with an earmarked position whose Restriction type Id indicated in the Impacted balance equals the value defined for the rule;</li> <li>Receiving Settlement Instructions requesting the increase of an earmarked securities position whose Restriction type Id indicated in the Impacted balance equals the value defined for the rule.</li> </ul>
Securities Account	<p>This parameter is satisfied by Settlement Instructions whose Securities Account equals the value defined for the rule.</p>
Credit Debit Indicator	<p>This parameter is satisfied by:</p> <ul style="list-style-type: none"> <li>Settlement Instructions crediting cash, when the value defined for the rule is Credit (CRDT);</li> <li>Settlement Instructions debiting cash, when the value defined for the rule is Debit (DBIT).</li> </ul>
Country of Issuance	<p>This parameter is satisfied by Settlement Instructions whose Security has in Reference Data the Country of Issuance defined for the rule.</p>
Settlement Currency	<p>This parameter is satisfied by Settlement Instructions whose currency equals the value de-</p>

222 T2S only retrieves the MSAs of the counterpart when it belongs to the same CSD than the one of CSD Participant (or Parent CSD in case of settlement with an External CSD).

223 The rule refers to the MSA of the delivering Party when the Market-specific Party Attribute is configured as "Debit"

224 T2S only retrieves the MSAs of the counterpart when it belongs to the same CSD than the one of CSD Participant (or Parent CSD in case of settlement with an External CSD).

225 The rule refers to the MSA of the Party independently on whether the Party is delivering or receiving securities when the Market-specific Securities Account Attribute is neither configured as "Credit" nor as "Debit" (i.e. neither the "Debit" field nor the "Credit" field are selected).

PARAMETER TYPE	DESCRIPTION
	defined for the rule.

1 **EXAMPLE 96 - FULFILMENT BY SETTLEMENT INSTRUCTIONS OF THE RESTRICTION RULES OF A GIVEN RESTRICTION TYPE CASE ONE**

2 The following example illustrates how T2S verifies whether a Settlement Instruction fulfils the restriction  
 3 rules of a given restriction type case one.

4 CSD A has defined the following rules for a restriction type case one:

RULE SET	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	MATCHING STATUS	COUNTRY OF ISSUANCE	CURRENCY
Rule 1	DELI	Party A		BLK1		NMAT	ESP	EUR
Rule 2	DELI		ABC	EAR1		NMAT		EUR
Rule 3			DEF	RSV1	EAR2			

5  
 6 In the example, Participant A from investor CSD A sends an unmatched Settlement Instruction 1 to deliver  
 7 4500 securities issued in country "ESP" to Participant B also from the same CSD A. The securities are deliv-  
 8 ered from a blocking position BLK1 in Participant A securities account ABC (the blocked position used for  
 9 delivering of securities is not complemented with any other position).

10 Also the Participant B sends an unmatched Settlement Instruction 2 to receive 4500 securities issued in  
 11 country "ESP" from the Participant A in the securities account DEF.

12 Each unmatched Settlement Instruction contains the following information to be checked against the re-  
 13 striction rules (only the relevant parameter types for the rules of the example are described):

	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	MATCHING STATUS	COUNTRY OF ISSUANCE	CURRENCY
Settlement Instruction 1	DELI	Party A	ABC	BLK1		NMAT	ESP	EUR
Settlement Instruction 2	RECE	CSD A	DEF			NMAT	ESP	EUR

14  
 15 In order to verify whether any of the Settlement Instructions fulfil the restriction type set by CSD A, T2S  
 16 processes as follows:

17 Checks performed over Settlement Instruction 1:

- 1 The following table shows the comparison between the relevant information of Settlement Instruction 1 and  
2 the values defined for the parameter types of the restriction rules and the result of the check:

target   T2S services									
RULE SET	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	MATCHING STATUS	COUNTRY OF ISSUANCE	CURRENCY	RESULT
Settlement Instruction 1	DELI	Party A	ABC	BLK1		NMAT	ESP	EUR	
Rule 1	DELI	Party A		BLK1		NMAT	ESP	EUR	✓
Rule 2	DELI		ABC	EAR1		NMAT		EUR	Not Checked
Rule 3			DEF	RSV1	EAR2				Not Checked

- 3
- 4 Specific Restriction Validation checks the restriction rules in the order they are defined. The information of  
5 the Settlement Instruction 1 fulfils Rule 1:
- 6 | The value of all the parameters types defined for Rule 1 (Securities Movement Type, Instructing Party,  
7 Debited Position Balance, Matching status, Country of Issuance and Currency) equals the information of  
8 the Settlement Instruction 1. The parameter types not defined (i.e. empty) for Rule 1 (e.g. Securities Ac-  
9 count and Credited Position Balance) are always satisfied (i.e. they are satisfied with any information of  
10 the Settlement Instruction).
- 11 Settlement Instruction 1 fulfils Rule 1 and therefore no further rules (Rule 2 and Rule 3) of the restriction  
12 type are checked. Depending on the parameter type (negative or positive) of the restriction type, T2S would  
13 apply/ would not apply the restriction. In case of a restriction type with positive parameter, T2S would apply  
14 the restriction (i.e. rejects or puts on CSD Validation Hold the Settlement Instruction).
- 15 In case of a restriction type with negative parameter, T2S would not apply the restriction (i.e. does not re-  
16 ject or does not put on CSD Validation Hold the Settlement Instruction).
- 17 Checks performed over Settlement Instruction 2:
- 18 The following table shows the comparison between the relevant information of Settlement Instruction 2 and  
19 the values of the parameter types of the restriction rules and the result of the check:

target   T2S services									
RULE SET	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	MATCHING STATUS	COUNTRY OF ISSUANCE	CURRENCY	RESULT
Settlement Instruction 2	RECE	CSD A	DEF			NMAT	ESP	EUR	
Rule 1	DELI	Party A		BLK1		NMAT	ESP	EUR	X
Rule 2	DELI		ABC	EAR1		NMAT		EUR	X
Rule 3			DEF	RSV1	EAR2				X

1

2 The Settlement Instruction 2 does not fulfil any of the restriction rules:

3 | Rule 1: The value of parameters Securities Movement Type, Instructing Party and Debited Position Bal-  
4 | ance indicated in Settlement Instruction 2 differs from the values of those parameters defined for Rule 1.  
5 | Therefore Settlement Instruction 2 does not fulfil Rule 1 and Rule 2 has to be checked.6 | Rule 2: The value of parameters Securities Movement Type, Securities Account and Debited Position Bal-  
7 | ance indicated in Settlement Instruction 2 differs from the values of those parameters defined for Rule 2.  
8 | Therefore Settlement Instruction 2 does not fulfil Rule 2 and Rule 3 has to be checked.9 | Rule 3: The value of parameters Debited Position Balance and Credited Position Balance indicated in Set-  
10 | tlement Instruction 2 differs from the values of those parameters defined for Rule 3. Therefore Settle-  
11 | ment Instruction 2 does not fulfil Rule 3 (last rule) and the check ends.12 Settlement Instruction 2 does not fulfil the restriction type (i.e. it does not fulfil any of its rules) and the  
13 check for this restriction type ends.14 **EXAMPLE 97 - SPECIFIC RESTRICTION VALIDATION OVER A SETTLEMENT INSTRUCTION**15 The following example illustrates how T2S performs Specific Restriction Validation over a Settlement Instruc-  
16 | tion (i.e. how T2S verifies whether any of the restriction types case one set by the relevant CSD applies or  
17 | not).

18 In this case, the following restriction types are defined in Reference Data by CSD A:

19 | A Rejection restriction with negative parameter with a single rule (Rule 1)

20 | A Rejection restriction with positive parameter with a single rule (Rule 2)

21 | A CSD Validation Hold restriction with negative parameter with two rules (Rule 3 and Rule 4)

22 | A CSD Validation Hold restriction with positive parameter with a single rule (Rule 5)

RESTRICTION TYPE	POSITIVE/ NEGATIVE PARAMETER	RULES	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	MARKET SPECIFIC SECURITIES ACCOUNT ATTRIBUTE (BOTH)	SECURITY	MARKET SPECIFIC SECURITIES ATTRIBUTE
REJECTION	NEGATIVE	Rule 1	DELI		TYPE 1	ISIN X	
REJECTION	POSITIVE	Rule 2	DELI		TYPE 2	ISIN X	
CSD VALIDATION HOLD	NEGATIVE	Rule 3	DELI	CSD A	TYPE 1		STRIP
		Rule 4	DELI		TYPE 3		
CSD VALIDATION HOLD	POSITIVE	Rule 5	DELI		TYPE 1		STRIP

1

2 In the example, Participant A from investor CSD A sends an unmatched Settlement Instruction to deliver  
3 4500 securities "ISIN X" to Participant B also from the same CSD A. The security "ISIN X" (issued by CSD A)  
4 has in Reference data a Market-specific attribute "STRIP". Also the securities account ABC has in Reference  
5 Data a Market-specific attribute "TYPE 1".

6 The Settlement Instruction contains the following information checked against the restriction rules (only the  
7 relevant parameter types for the rules of the example are described):

	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	SECURITIES ACCOUNT	MARKET SPECIFIC ACCOUNT ATTRIBUTE (BOTH)	SECURITY	MARKET SPECIFIC SECURITIES ATTRIBUTE
Settlement Instruction	DELI	Party A	ABC	TYPE 1	ISIN X	STRIP

8

9 Checks performed in Specific Restriction Validation over the Settlement Instruction:

10 T2S verifies if any of the restrictions set by CSD A applies over the Settlement Instruction by checking  
11 whether it fulfills their restriction rules. The following table shows the comparison between the relevant in-  
12 formation of the Settlement Instruction and the values defined for the parameter types of the restriction  
13 rules, and the result of the check:

RESTRICTION TYPE	POSITIVE/NEGATIVE PARAMETER	RULES	SECURITIES MOVEMENT TYPE	INSTRUCTING PARTY	MARKET SPECIFIC SECURITIES ACCOUNT ATTRIBUTE (BOTH)	SECURITY	MARKET SPECIFIC SECURITIES ATTRIBUTE	RESULT
Settlement Instruction			DELI	PARTY A	TYPE 1	ISIN X	STRIP	
Rejection	Negative	Rule 1	DELI		TYPE 1	ISIN X		✓
Rejection	Negative	Rule 2	DELI		TYPE 2	ISIN X		Not Checked
CSD Validation Hold	Negative	Rule 3	DELI	CSD A	TYPE 1		STRIP	✗
		Rule 4	DELI		TYPE 3			✗
CSD Validation Hold	Negative	Rule 5	DELI		TYPE 1		STRIP	✓

1

2 T2S verifies first if the Settlement Instruction fulfils the Rejection restriction with negative parameter (i.e.  
3 T2S checks if the Settlement Instruction fulfils any of the rules of this restriction type):

4 | The Settlement Instruction fulfils Rule 1: The value of all the parameter types defined for Rule 1 (Securi-  
5 ties Movement Type, Market-specific Securities Account attribute and Security) equals the information of  
6 the Settlement Instruction.

7 The Settlement Instruction fulfils Rule 1 of the Rejection restriction with negative parameter (i.e. the instruc-  
8 tion satisfies the exception). Therefore, the Rejection restriction is not applied (the Settlement Instruction is  
9 not rejected) and no further Rejection restrictions are checked.

10 Then T2S verifies if the Settlement Instruction fulfils the CSD Validation Hold restriction with negative pa-  
11 rameter:

12 | The Settlement Instruction does not fulfil Rule 3: The value of the parameter Instructing Party indicated  
13 in the Settlement Instruction differs from the value of this parameter defined for Rule 3. Rule 4 has to be  
14 checked

15 | The Settlement Instruction does not fulfil Rule 4: The value of the parameter Market-specific Securities  
16 Account attribute retrieved in Reference Data from the Securities account indicated in the Settlement In-  
17 struction differs from the value of this parameter defined for Rule 4.

18 The Settlement Instruction does not fulfil any of the rules of the CSD Validation Hold restriction with nega-  
19 tive parameter. Therefore, the CSD Validation Hold restriction with positive parameter is checked:

1 | I The Settlement Instruction fulfils Rule 5: The value of all the parameter types defined for Rule 4 (Securi-  
2 | ties Movement Type, Market-specific Securities Account attribute and Market-specific Securities attribute)  
3 | equals the information of the Settlement Instruction.

4 | The Settlement Instruction fulfils Rule 5 of the CSD Validation Hold restriction with positive parameter.  
5 | Therefore, the CSD Validation Hold restriction is applied (the Settlement Instruction is put on Hold) and the  
6 | check ends.

7 | The instruction is accepted with CSD Validation Hold.

8 | Settlement Restrictions on securities:

9 | The relevant parameter types for the restriction rules checked for a Settlement Restriction on securities are  
10 | the following:

11 | **TABLE 112 - PARAMETER TYPES FOR RESTRICTION RULES CHECKED IN SETTLEMENT RESTRICTIONS ON SECURITIES**  
12 |

PARAMETER TYPE	DESCRIPTION
Party	This parameter is satisfied by Settlement Restrictions on Securities whose Instructing Party Identifier equals the value defined for the rule.
Party type (of the Instructing Party)	This parameter is satisfied by Settlement Restrictions on Securities whose Instructing Party has in Reference Data the Party Type defined for the rule (possible values for this parameters type are CSD, CSD Participant and External CSD).
Party type (of the account owner)	This parameter is satisfied by Settlement Restrictions on Securities whose Securities Account owner has in Reference Data the Party Type defined for the rule (possible values for this parameter type are CSD, CSD Participant and External CSD).
Security	This parameter is satisfied by Settlement Restrictions on securities whose Security Identifier equals the value defined for the rule.
Market-specific Securities Attribute	This parameter is satisfied by Settlement Restrictions on securities whose Security has in Reference Data the Market-specific Attribute value defined for the rule.
Market-specific Securities Account attribute	This parameter is satisfied by Settlement Restrictions on securities whose Securities Account has in Reference Data the Market-specific Attribute value defined for the rule (independently on whether the Market-specific Attribute is configured in the rule as DELI, RECE or BOTH).
Market-specific Party Attribute	This parameter is satisfied by Settlement Restrictions on securities whose Securities Account owner has in Reference Data the Market-specific Attribute value defined for the rule (independently on whether the Market-specific Attribute is configured in the rule as DELI, RECE or BOTH).
Debited Position/Balance	This parameter is satisfied by Settlement Restrictions whose Balance From equals the one defined for the rule.

PARAMETER TYPE	DESCRIPTION
Credited Position /Balance	This parameter is satisfied by Settlement Restrictions whose Balance To equals the one defined for the rule.
Securities Account	This parameter is satisfied by Settlement Restrictions on securities whose Securities Account equals the value defined for the rule.
Country of Issuance	This parameter is satisfied by Settlement Instructions whose Security has in Reference Data the Country of Issuance defined for the rule.

1 **EXAMPLE 98 - SPECIFIC RESTRICTION VALIDATION OVER A SETTLEMENT RESTRICTION ON SECURITIES**

2 The following example illustrates how T2S performs Specific Restriction Validation over a Settlement Re-  
 3 striction on securities (i.e. how T2S verifies whether the restriction types case one set by the relevant CSD  
 4 applies or not. Since Settlement Restrictions cannot be set on Hold, only a Rejection restriction may apply).  
 5 CSD A has defined only one restriction type: a Rejection restriction with positive parameter that includes  
 6 three rules.

RULE SET	INSTRUCTING PARTY	SECURITY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	COUNTRY OF ISSUANCE
Rule 1	Party A			BLK1		ESP
Rule 2		ISIN X	ABC	EAR1		
Rule 3	Party A		DEF	RSV1	EAR2	

7  
 8 In the example, Participant A sends a Settlement Restriction to move 1000 securities "ISIN X" from a reser-  
 9 vation position "RSV1" held in the Securities Account DEF to an earmarking position "EAR2" (i.e. decrease a  
 10 reserved position). The ISIN X is a security issued in the country "ESP".

11 The Settlement Restriction contains the following information to be checked against the restriction rules  
 12 (only the relevant parameter types for the rules of the example are described):

	INSTRUCTING PARTY	SECURITY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	COUNTRY OF ISSUANCE
<b>Settlement Restriction on Securities</b>	Party A	ISIN X	DEF	RSV1	EAR2	ESP

13

1 Checks performed in Specific Restriction Validation over the Settlement Restriction on securities:

2 T2S verifies if the restriction type set by CSD A applies over the Settlement Restriction by checking whether  
3 it fulfils any of its restriction rules. The following table shows the comparison between the relevant infor-  
4 mation of the Settlement Restriction and the values defined for the parameter types of the restriction rules,  
5 and the result of the check:

RULE SET	INSTRUCTING PARTY	SECURITY	SECURITIES ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	COUNTRY OF ISSUANCE	RESULT
Settlement Restriction	Party A	ISIN X	DEF	RSV1	EAR2	ESP	
Rule 1	Party A			BLK1		ESP	✗
Rule 2		ISIN X	ABC	EAR1			✗
Rule 3	Party A		DEF	RSV1	EAR2		✓

6

7 Specific Restriction Validation checks the restriction rules in the order they are defined with the following  
8 result:

- 9 | Rule 1: The value of the parameter Debited Position Balance indicated in the Settlement Restriction dif-  
10 fers from the value defined for this rule. Therefore the Settlement Restriction does not fulfil Rule 1 and  
11 Rule 2 has to be checked.
- 12 | Rule 2: The value of parameters Securities Account and Debited Position Balance indicated in the Set-  
13 tlement Restriction differ from the values defined for this rule. Therefore the Settlement Restriction does  
14 not fulfill Rule 2 and Rule 3 has to be checked.
- 15 | Rule 3: The value of all the parameters types defined for Rule 3 equals the information of the Settlement  
16 Restriction. Therefore the Settlement Restriction fulfils Rule 3.

17 The Settlement Restriction fulfils Rule 3 of the Rejection restriction with positive parameter. Therefore, T2S  
18 applies the restriction (the instruction is rejected) and the check ends.

19 Settlement Restrictions on cash:

20 In case of set up or increase of a restricted cash balance, additionally T2S also verifies if its decrease (i.e.  
21 the reverse Settlement Restriction on cash) fulfils any restriction type defined by the CB <sup>226</sup>. In case the re-  
22 lated reverse Settlement Restriction fulfils a positive rejection restriction, T2S rejects the Settlement Re-  
23 striction for the set up or increase (even if the latter fulfilled a negative "Rejection" restriction) and informs  
24 the T2S Actor through a "Rejection" Status Advice message.

226 With this additional check, T2S verifies that neither an EoD release Settlement Restriction on cash nor a Settlement Restrictions on cash created in the settlement of a Settlement Instruction making use of a restricted cash balance created by T2S fulfil a positive Rejection restriction implying their rejection.

1 The relevant parameter types for the restriction rules checked for a Settlement Restriction on cash are the  
2 following:

3 **TABLE 113 - PARAMETER TYPES FOR RESTRICTION RULES CHECKED IN SETTLEMENT RESTRICTIONS ON CASH**  
4

Parameter type	DESCRIPTION
Party	<p>This parameter is satisfied by Settlement Restrictions on cash whose Instructing Party Identifier equals the value defined for the rule.</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the same as the one of the Settlement Restriction setting up or increasing the cash balance.</p>
Party type (of the Instructing Party)	<p>This parameter is satisfied by Settlement Restrictions on cash whose Instructing Party has in Reference Data the Party Type defined for the rule (possible values for this parameters type are CB or Payment Bank).</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the owner of the Dedicated Cash Account of the Settlement Restriction setting up or increasing the cash balance.</p>
Party type (of the account owner)	<p>This parameter is satisfied by Settlement Restrictions on cash whose T2S Dedicated Cash Account owner has in Reference Data the Party Type defined for the rule (possible values for this parameter type are CB and Payment bank)</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the owner of the Dedicated Cash Account of the Settlement Restriction setting up or increasing the cash balance.</p>
Market-specific Party Attribute	<p>This parameter is satisfied by Settlement Restrictions on cash whose T2S Dedicated Cash Account Owner has in Reference Data the Market-specific Attribute value defined for the rule.</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter are the Market-specific Attributes of the owner of the Dedicated Cash Account of the Settlement Restriction setting up or increasing the cash balance.</p>
Debited Position/Balance	<p>This parameter is satisfied by Settlement Restrictions whose Balance From equals the one defined for the rule.</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the Balance To of the Settlement Restriction setting up or increasing the cash balance.</p>

Parameter type	DESCRIPTION
Credited Position /Balance	<p>This parameter is satisfied by Settlement Restrictions whose Balance To equals the one defined for the rule.</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the Balance From of the Settlement Restriction setting up or increasing the cash balance.</p>
T2S Dedicated Cash Account	<p>This parameter is satisfied by Settlement Restrictions on cash whose T2S Dedicated Cash Account equals the value defined for the rule.</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the same as the one of the Settlement Restriction setting up or increasing the cash balance.</p>
T2S Dedicated Cash Account Type	<p>This parameter is satisfied by Settlement Restrictions on cash whose T2S Dedicated Cash Account has in Reference Data the Type defined for the rule (possible values for this parameter type are T2S Central Bank Account and T2S Dedicated Cash Account).</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the same as the one of the Settlement Restriction setting up or increasing the cash balance.</p>
Settlement Currency	<p>This parameter is satisfied by Settlement Restrictions on cash whose currency equals the value defined for the rule</p> <p>Note:</p> <p>When checking the reverse Settlement Restriction on cash, the information checked against this parameter is the same as the one of the Settlement Restriction setting up or increasing the cash balance.</p>

1 **EXAMPLE 99 - SPECIFIC RESTRICTION VALIDATION OVER A SETTLEMENT RESTRICTION ON CASH**

2 The following example illustrates how T2S performs Specific Restriction Validation over a Settlement Re-

3 striction on cash (i.e. how T2S verifies whether the restriction types case one set by the relevant CB applies

4 or not. Since Settlement Restrictions cannot be set on Hold, only Rejection restrictions may apply).

5 CB N has defined one restriction type: a Rejection restriction with positive parameter that includes two rules:

RULE SET	INSTRUCTING PARTY	T2S DEDICATED CASH ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	CURRENCY
Rule 1		1234	RSV3		EUR
Rule 2		4567	BLK5		EUR

1

2

3 In the example, Payment Bank A sends a Settlement Restriction to set up a blocked balance of EUR  
 4 1000,000 in its Dedicated Cash Account 1234 (i.e. move from a deliverable balance "DELI" to a blocked bal-  
 5 ance "BLK5").

6 The Settlement Restriction contains the following information to be checked against the restriction rules  
 7 (only the relevant parameter types for the rules of the example are described):

	INSTRUCTING PARTY	T2S DEDICATED CASH ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	CURRENCY
<b>Settlement Restriction on Cash</b>	PB A	1234	DELI	RSV3	EUR

8

9 Checks performed in Specific Restriction Validation over the Settlement Restriction on cash:

10 T2S verifies if the restriction type set by CB N applies over the Settlement Restriction by checking whether it  
 11 fulfils any of its restriction rules. The following table shows the comparison between the relevant infor-  
 12 mation of Settlement Restriction on Cash and the values of the parameter types of the restriction rules, and  
 13 the result of the check:

RULE SET	INSTRUCTING PARTY	T2S DEDICATED CASH ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	CURRENCY	RESULT
Settlement Restriction	PB A	1234	DELI	RSV3	EUR	
Rule 1		1234	RSV3		EUR	X
Rule 2		4567	BLK5		EUR	X

1

2 Specific Restriction Validation checks the restriction rules in the order they are defined with the following  
3 result:

- 4 | Rule 1: The value of the parameter Debited Position Balance indicated in the Settlement Restriction dif-  
5 fers from the value defined for this rule. Therefore, the Settlement Restriction does not fulfil Rule 1 and  
6 Rule 2 has to be checked.
- 7 | Rule 2: The value of parameters Credited Position Balance and T2S Dedicated Cash Account in the Set-  
8 tlement Restriction differ from the value defined for this rule. Therefore, the Settlement Restriction does  
9 not fulfil Rule 2 and the Settlement Restriction does not fulfil this restriction type.

10 The Settlement Restriction itself does not fulfil the Rejection restriction (i.e. it does not fulfil any of its re-  
11 striction rules). Nevertheless, the process is not yet finished, given that the Settlement Restriction is setting  
12 up a cash balance T2S also verifies if the decrease (i.e. reverse Settlement Restriction) fulfils any restriction  
13 type defined by the CB.

14 The reverse Settlement Restriction contains the following information to be checked against the restriction  
15 rules (only the relevant parameter types for the rules of the example are described):

	INSTRUCTING PARTY	T2S DEDICATED CASH ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	CURRENCY
Reverse Settlement Restriction	PB A	1234	RSV3	DELI	EUR

16

17 Checks performed in Specific Restriction Validation over the reverse Settlement Restriction:

18 The following table shows the comparison between the values of the decrease of the cash balance and the  
19 values of the rules, with the result of the check:

target   T2S services						
REJECTION RESTRICTION WITH POSITIVE PARAMETER	INSTRUCTING PARTY	T2S DEDICATED CASH ACCOUNT	DEBITED POSITION BALANCE	CREDITED POSITION BALANCE	CURRENCY	RESULT
Reverse Settlement Restriction	PB A	1234	RSV3	DELI	EUR	
Rule 1		1234	RSV3		EUR	✓
Rule 2		4567	BLK5		EUR	Not checked

1

2 The reverse Settlement Restriction fulfils Rule 1: The value of all the parameter types defined for Rule 1  
3 equals the information of the reverse Settlement Restriction.

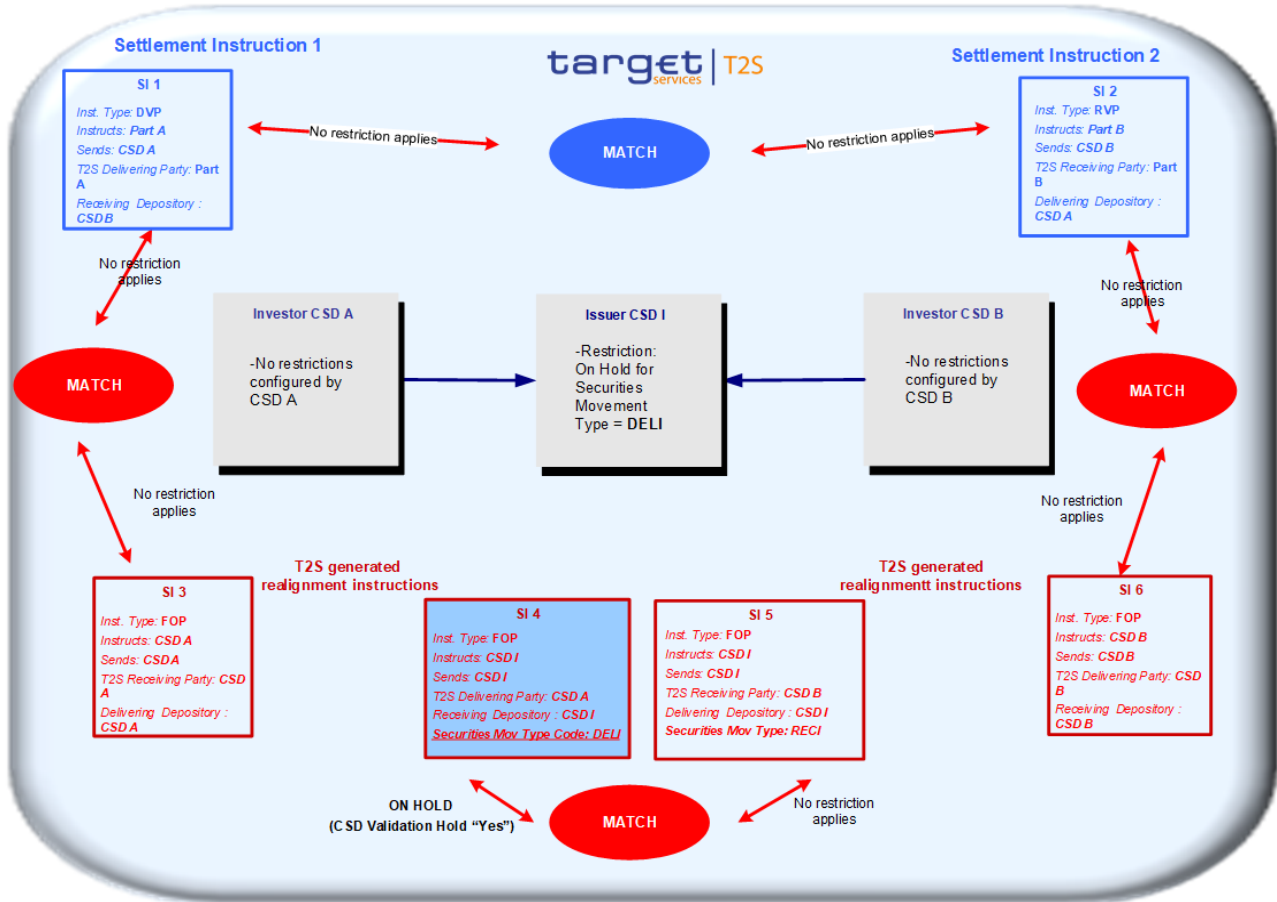

4 The reverse Settlement Restriction fulfils Rule 1 of the Rejection restriction with positive parameter. There-  
5 fore, T2S applies the restriction (the Settlement Restriction setting up the cash balance is rejected) and the  
6 check ends. Specific Restriction Validation is only performed in case the previous business validations have  
7 been successfully passed.

8 Specific Restriction Validation in Cross CSD settlements

9 For Cross-CSD settlements, the restriction types are checked for each Settlement Instruction as well as for  
10 the Realignment Instructions.

1

**EXAMPLE 100 - SPECIFIC RESTRICTION VALIDATION AND REALIGNMENT**

2

3 This example illustrates a Cross CSD settlement where Settlement Instruction 1 from Investor CSD A is de-  
 4 livering securities to Settlement Instruction 2 from Investor CSD B.

5 Both Investor CSDs (A and B) are in T2S in relationship with the Issuer CSD that is also in T2S.

6 T2S matches the instructions and creates the T2S generated realignment instructions.

7 In the Business Validation of each instruction, T2S verifies if a restriction of the relevant CSD applies (i.e. if it  
 8 fulfils any of the rules of a restriction type with positive parameter). The summary of the result of the Specif-  
 9 ic restriction validation over the business Settlement Instructions (Settlement Instruction 1 and 2) and on  
 10 the T2S generated Settlement Instructions (Settlement Instruction 3, 4, 5 and 6) is the following:

- 11 | Settlement Instruction 1, relevant CSD is CSD A (Investor CSD): CSD A does not have any restriction  
 12 | configured and therefore no restriction applies.
- 13 | Settlement Instruction 2, relevant CSD is CSD B (Investor CSD): As CSD A, CSD B does not have any re-  
 14 | striction configured and therefore no restriction applies.
- 15 | Settlement Instruction 3, relevant CSD is CSD A: no restriction applies.
- 16 | Settlement Instruction 4, relevant CSD is CSD I: the instruction is put on Hold, because it fulfils the re-  
 17 | striction rule belonging to a CSD Validation Hold restriction with positive parameter configured by CSD  
 18 | Issuer I for the instructions with Securities Movement Type delivering.

1 | I Settlement Instruction 5, relevant CSD is CSD I: no restriction applies since it does not fulfil the re-  
2 | striction rule configured by the CSD Issuer I for the instructions with Securities Movement Type deliver-  
3 | ing (its Securities Movement Type is not Delivering).

4 | I Settlement Instruction 6, relevant CSD is CSD B: no restriction applies.

5 | Therefore, no settlement attempt is performed for any of the instructions (business or T2S generated) until  
6 | a Release Instruction is sent from the CSD Issuer for Settlement Instruction 4.

7 | **1.6.1.1.5 Revalidation process**

8 | The revalidation process consists in performing the Business Validation detailed above on pending Settle-  
9 | ment Instructions, Settlement Restrictions or Maintenance Instructions, in order to check that they are still  
10 | valid. The process considers both business and T2S generated instructions. The revalidation process is trig-  
11 | gered either by a change in the Reference Data or by the Start of Day period. In each case T2S performs as  
12 | follows:

13 | I Revalidation triggered by a change in the Reference Data: Depending on the change, T2S defines the  
14 | scope of Settlement Instructions and Settlement Restrictions to be revalidated as follows:

15 | T2S revalidates all the affected Settlement Instructions and Settlement Restrictions independently on  
16 | their Intended Settlement Date upon any of the changes described in the table below:

17 | **TABLE 114 - REFERENCE DATA CHANGES TRIGGERING REVALIDATION INDEPENDENT ON THE ISD**  
18 |

REFERENCE DATA OBJECT	DESCRIPTION OF THE CHANGE
Securities	Update of its settlement type, currency, minimum settlement unit or settlement unit multiple
	Deletion of a not yet issued security or an already matured/expired security
	Deletion of a Deviating Settlement Unit

19 | T2S revalidates all the affected Settlement Instructions and Settlement Restrictions with Intended Settle-  
20 | ment Date relevant for the new validity dates related to the Reference data object changed <sup>227</sup>. The list of  
21 | Reference Data changes triggering revalidation of instructions depending on their Intended Settlement Date  
22 | is described in the table below:

23 | **TABLE 115 - REFERENCE DATA CHANGES TRIGGERING REVALIDATION DEPENDENT ON THE ISD**  
24 |

REFERENCE DATA OBJECT	DESCRIPTION OF THE CHANGE
Securities	Update of its issue date or maturity/expiry date
Security CSD Link	Update a Security CSD Link
	Deletion of a Security CSD Link that is not in its validity period

227 | In case of Deletion of a Reference data object (i.e. that is not in its validity period), the validity dates considered are the ones of the object deleted.

REFERENCE DATA OBJECT	DESCRIPTION OF THE CHANGE
Party	Creation of a new Party code for a given Party
	Update of a Party code for a given Party
	Deletion of a Party code for a given Party that is not in its validity period
	Update of its opening date or closing date
Eligible counterpart CSD	Update of an Eligible counterpart CSD
	Deletion of an Eligible counterpart CSD that is not in its validity period
Securities Account	Update of its opening date or closing date
	Update of Party owner of a Securities Account
	Deletion of a closed or not yet opened Securities Account
CMB securities account link	Update a CMB securities account link
	Deletion of a CMB securities account link that is not in its validity period
T2S Dedicated Cash Account	Update of its opening date or closing date
	Deletion of a closed or not yet opened account
Attribute domain	Update of the predefined time frame for past-dated instructions
	Update of the predefined time frame for future-dated instructions
T2S BIC Directory	Update of the T2S BIC Directory
Closing day	Creation of a closing day
Restriction type	Update of a Restriction type case three
	Deletion of a Restriction type case three that is not in its validity period
	Creation of a new restriction rule for restriction types case one

- 1 | In the specific case of a creation of a new restriction rule, T2S only checks in the Specific restriction vali-
- 2 | dation process this new configured rule, taking also into account whether the instruction has already ful-
- 3 | filled a restriction rule of the same restriction type (i.e. rejection or CSD Validation Hold) or not:
- 4 | – In case of creation of a new rule of a rejection restriction (independently on the parameter value of
- 5 | the restriction i.e. positive or negative), T2S selects for revalidation only those Settlement Instructions
- 6 | and Settlement Restriction that have not already fulfilled a rejection restriction with negative parame-
- 7 | ter value.
- 8 | – In case of creation of a new rule of a CSD Validation Hold restriction with positive parameter value,
- 9 | T2S selects for revalidation only those Settlement Instructions that have not already fulfilled a CSD
- 10 | Validation Hold restriction with negative parameter value and that are not on CSD Validation Hold.

- 1 – In case of creation of a new rule of a CSD Validation Hold restriction with negative parameter value,  
2 T2S selects for revalidation all the Settlement Instructions that have not already fulfilled a CSD Valida-  
3 tion Hold restriction with negative parameter value (including also those that are on CSD Validation  
4 Hold).
- 5 | Revalidation triggered by the Start of Day. During the Start of Day T2S revalidates all Settlement Instruc-  
6 tions and Settlement Restrictions that failed to settle on the Intended Settlement date (See section [In-](#)  
7 [structions Recycling](#) [▶ 375]) and Maintenance Instructions that failed to be executed on the creation  
8 date.
- 9 | When revalidating Settlement Instructions and Settlement Restrictions at the Start of Day, T2S only  
10 checks in the Specific restriction validation process those restriction rules with Valid From equal to the  
11 Current Business Day (i.e. becoming valid on the current business date) taking also into account whether  
12 the instruction has already fulfilled a restriction rule of the same restriction type or not:
- 13 – In case a rule of a rejection restriction becomes valid (independently on its parameter value i.e. posi-  
14 tive or negative) T2S checks the Settlement Instruction or Settlement Restriction against the rule only  
15 if the instruction has not already fulfilled a rejection type with negative parameter value.
- 16 – In case a rule of a CSD Validation Hold restriction with positive parameter value becomes valid, T2S  
17 checks the Settlement Instruction against the rule only if the Settlement Instruction has not already  
18 fulfilled a CSD Validation Hold restriction with negative parameter value and if the Settlement Instruc-  
19 tion is not on CSD Validation Hold.
- 20 – In case a rule of a CSD Validation Hold restriction with negative parameter value becomes valid, T2S  
21 checks the Settlement Instruction against the rule only if the Settlement Instruction has not already  
22 fulfilled a CSD Validation Hold restriction with negative parameter value (independently on whether  
23 the instruction is on CSD Validation Hold).
- 24 T2S cancels immediately all the instructions identified as invalid in their revalidation. I.e. at the end of the  
25 revalidation process, if the instruction does not pass successfully the validations, T2S cancels the instruction,  
26 and informs the T2S Actor accordingly. . In case of unsuccessful revalidation of a Matched Settlement In-  
27 struction, T2S also cancels the counterpart Settlement Instruction.
- 28 T2S does not send any information to the T2S Actor if the revalidation is successful unless a CSD Validation  
29 Hold is detected during the revalidation process.

30 **EXAMPLE 101 - REVALIDATION DUE TO AN UPDATE OF THE MINIMUM SETTLEMENT UNIT OF A SECURITY**

- 31 On day 1 T2S receives a Settlement Instruction A from Investor CSD "Eurosettlement" which pass success-  
32 fully the validations. Settlement Instruction A is matched with Settlement Instruction B that has the same  
33 CSD "Eurosettlement". The Intended Settlement Date of the instructions is day 1.
- 34 Also on day 1 T2S receives another Settlement Instruction C from Investor CSD "Eurosettlement" which pass  
35 successfully the validations. Settlement Instruction C is matched with Settlement Instruction D that has the  
36 same CSD "Eurosettlement". The Intended Settlement Date of the instructions is day 3.
- 37 Along day 1, the CSD "Eurosettlement" updates the minimum settlement unit of the security triggering the  
38 immediate revalidation of Settlement Instructions A, B, C and D. All the instructions fail to pass successfully

1 the validations because their Settlement Quantity is lower than the new Minimum Settlement Unit specified  
2 in Reference Data for the security and therefore T2S cancels immediately all of the instructions.

3 **EXAMPLE 102 - REVALIDATION DUE TO AN UPDATE IN A SECURITY CSD LINK**

4 Considering the same instructions of the previous example in T2S:

5 Along day 1, the CSD "Eurosettlement" updates the Security CSD Link by updating the Valid To to day 2  
6 (from day 2, Eurosettlement is no longer an Investor CSD of the security). At a specific time during the same  
7 business day, T2S triggers the revalidation of the affected instructions by this update, i.e. only of Settlement  
8 Instructions C and D because their Intended Settlement Date is after day 2. Both instructions fail to pass  
9 successfully the validations because the security is not eligible in the CSD "Eurosettlement" and therefore  
10 T2S cancels immediately both instructions.

11 **EXAMPLE 103 - REVALIDATION AT START OF DAY**

12 The CSD "Eurosettlement" has defined in Reference Data a positive restriction type to put on hold Settle-  
13 ment Instructions fulfilling any of the criteria provided in the ad-hoc rule set that includes two rules:

- 14 | Rule 1: Valid from 1st of June 2015 (included) to the 31st of March 2016 (included).
- 15 | Rule 2: Valid from the 1st of April 2016 (included) to the 30th of June 2016 (included).

16 On the 30th of March 2016, T2S receives an unmatched Settlement Instruction A with CSD "Eurosettlement"  
17 and Intended Settlement Date 31st of March 2016. When performing the Specific restriction validation, T2S  
18 checks the instruction only against Rule 1 (the Intended Settlement Date is the last day of validity of the  
19 rule). The instruction is successfully validated and is put on CSD Validation Hold since it fulfils the restriction  
20 Rule 1.

21 On the following day, Settlement Instruction A is not revalidated at Start of Day since it is not a recycled  
22 instruction (i.e. its Intended Settlement is not in the past).

23 Also on the 31st of March 2016, T2S receives an unmatched Settlement Instruction B with same CSD "Euro-  
24 settlement" and Intended Settlement Date 31st of March 2016. The instruction is successfully validated  
25 without fulfilling the restriction Rule 1. Settlement Instruction B is matched with Settlement Instruction A.  
26 The Intended Settlement Date of the instructions is the 31st of March 2016, nevertheless they cannot be  
27 settled until the release from CSD "Eurosettlement" for Settlement Instruction A is received.

28 On the 1st of April 2016, the restriction Rule 2 for CSD Validation Hold set by CSD "Eurosettlement" becomes  
29 valid. At Start of Day both instructions are revalidated along with all pending Settlement Instructions that  
30 failed to settle. When performing the Specific restriction validation, T2S checks only the Settlement Instruc-  
31 tion B against the restriction Rule 2. T2S does not check the Settlement Instruction A against the restriction  
32 Rule 2 since the instruction is already on CSD Validation Hold (although the restriction Rule 1 is no longer  
33 valid as its validity period ended on the 31st of March 2016, Settlement Instruction A remains on CSD Valida-  
34 tion Hold as it was detected on a previous day). Both instructions pass successfully the validations and Set-  
35 tlement Instruction B is put on CSD Validation Hold of due to the fulfilment of the restriction Rule 2.

36 Settlement instructions A and B remain on CSD Validation Hold until relevant Release Instructions are sent  
37 from the CSD.

1 On the 2nd of April 2016 both instructions are revalidated at the Start of Day along with all pending Settlement Instructions that failed to settle. Specific restriction validation does not check the Settlement Instructions (A and B) against any restriction rule since there is no rule becoming valid on the 2nd of April 2016.  
2  
3 Both instructions pass successfully the validations.  
4

#### 5 **1.6.1.1.6 Parameters Synthesis**

6 CSDs need to configure restriction types case one (with the aim of applying their CSD specific validations) as described in section [Configuration of Parties, Securities and Accounts](#) [▶ 33].  
7

8 Additional system parameters also exist relating to duplicate check and time frames for past and future dated instructions and to activate the Insolvency Restriction Type validation as defined in the table below.  
9

- 10 | Duplicate check for Settlement Instructions and Settlement Restrictions: Specifies the number of days that T2S uses to ensure that there are no duplicates between new incoming instructions and settled or cancelled ones.
- 11 | Duplicate check for Pools: Specifies the number of days that T2S uses to ensure that there are no duplicates between new pools and existing ones in status settled or cancelled.
- 12 | Duplicate check for Pools: Specifies the number of days that T2S uses to ensure that there are no duplicates between new pools and existing ones in status settled or cancelled.
- 13 | Duplicate check for Pools: Specifies the number of days that T2S uses to ensure that there are no duplicates between new pools and existing ones in status settled or cancelled.
- 14 | Duplicate check for Pools: Specifies the number of days that T2S uses to ensure that there are no duplicates between new pools and existing ones in status settled or cancelled.
- 15 | Time frame for past/future dated instructions: Specifies the maximum number of settlement days between the reception date of a Settlement Instruction and its intended settlement date (in the past or in the future).
- 16 | Time frame for past/future dated instructions: Specifies the maximum number of settlement days between the reception date of a Settlement Instruction and its intended settlement date (in the past or in the future).
- 17 | Time frame for past/future dated instructions: Specifies the maximum number of settlement days between the reception date of a Settlement Instruction and its intended settlement date (in the past or in the future).
- 18 | Under Insolvency Situation <sup>228</sup>: Defines whether any T2S Actors in the system is affected by an insolvency proceeding. In case this general configuration parameter is activated, every incoming Settlement Instruction is checked for the "insolvency Restriction Type validation".  
19  
20

21 No specific configuration by the T2S Actor is required.  
22

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY / OPTIONAL	STANDARD OR DEFAULT VALUE
Business Validation / Duplicate Check	Number of business days in the past for duplicate check on settlement instructions/restrictions	T2S Operator	T2S Operator	M	3 calendar months
Business Validation / Duplicate Check	Number of business days in the past for duplicate check on pools	T2S Operator	T2S Operator	M	3 calendar months

228 The under insolvency situation will be activated upon request of a CSD or CB as explained in the Manual of Operational Procedures (MOP).

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY / OPTIONAL	STANDARD OR DEFAULT VALUE
Business Validation	Time frame for past-dated instructions	T2S Operator	T2S Operator	M	Unlimited
Business Validation	Time frame for future-dated instructions	T2S Operator	T2S Operator	M	unlimited
Business Validation	Under Insolvency Situation	T2S Operator	T2S Operator	M	False

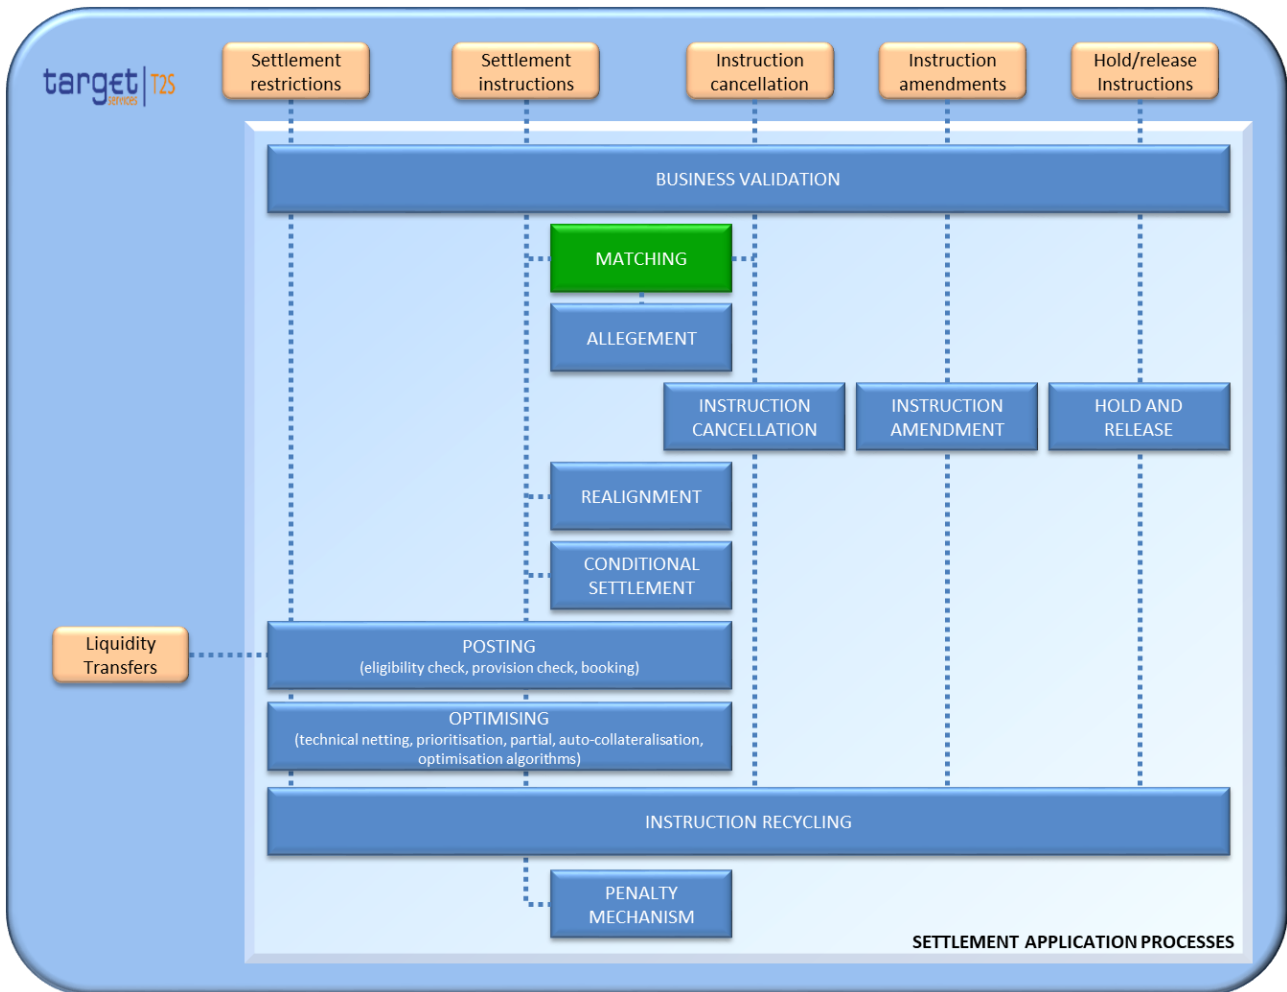

## 1 1.6.1.2 Matching

### 2 **1.6.1.2.1 Concept**

3 T2S Matching process compares the settlement details of Settlement Instructions provided by the deliverer  
4 and the receiver of securities to ensure that both parties agree on the settlement terms of the transaction in  
5 a standardised way, according to the T2S rules, which are compliant with the European Central Securities  
6 Depositories Association (ECSDA) and the European Securities Forum (ESF) matching proposals.

1

**DIAGRAM 71 - MATCHING APPLICATION PROCESS**

2

**1.6.1.2.2 Overview**

T2S provides T2S Actors matching services for Settlement Instructions that require to be matched in T2S (i.e. all Settlement Instructions except the Settlement Instructions with Match status "Matched" regardless their ISO indicator, ISO transaction code (e.g. CORP) or hold status(es)).

Settlement Restrictions, Maintenance instructions, Realignment instructions, Auto-collateralisation instructions, Reimbursement auto-collateralisation instructions and Liquidity transfers do not go through the T2S matching process. The matching of Cancellation Instructions does not follow the rules presented in this section and is presented in section [Instruction Cancellation](#) [▶ 360]).

T2S allows CSDs and CSD participants to send already matched instructions Cross-CSD and Intra CSD. Instructions that enter into T2S as already matched are created with the matching fields as if they were matched in T2S (i.e. follow the same matching rules as in T2S).

1 **1.6.1.2.3 Matching process**

2 When a new instruction enters T2S, the matching process compares <sup>229</sup> each of the Mandatory and Non-  
3 mandatory matching fields of the Settlement Instruction with the Settlement Instructions that remain un-  
4 matched in T2S:

- 5 | Mandatory matching fields are those fields that must be present in the instruction and which values  
6 should be the same in both Settlement Instructions except Settlement Amount for DVP/PFOD for which a  
7 tolerance might be applied and for Credit/Debit Code (CRDT/DBIT) and Securities Movement Type Deliv-  
8 er/Receiver (DELI/RECE), whose values match opposite.
- 9 | Non-mandatory matching fields can be Additional or Optional:
  - 10 – Additional matching fields are initially not mandatory but their values have to match when one of the  
11 counterparties provides a value for them in its instruction. Consequently, once an Additional matching  
12 field is filled in by one Counterparty, the other Counterparty should also fill it in, since a filled-in Addi-  
13 tional matching field cannot match with a field with no value.
  - 14 – In case of Optional matching fields, a filled-in field may match with a field with no value (unlike Addi-  
15 tional matching fields), but when both Parties provide a value, the values have to match.

16 Depending on the Transaction Type T2S considers some fields mandatory or not, as described in the table  
17 below. The following tables and illustrations provide examples of the use of the mandatory, optional and  
18 additional fields in the matching process.

19 **Exhaustive List of Matching Fields**

20 **DIAGRAM 72 - MANDATORY MATCHING FIELDS PER TRANSACTION TYPE AND EXAMPLE**

DVP/DWP	FOP
Payment Type	
Securities Movement Type	
ISIN Code	
Trade Date	
Settlement Quantity	
Intended Settlement Date	
Delivering Party BIC	
Receiving Party BIC	
CSD of the Delivering Party	
CSD of the Receiving Party	
Currency	n/a
Settlement Amount	n/a
Credit/Debit	n/a

e.g. Matching of Mandatory Fields:

SETTLEMENT INSTRUCTION 1		SETTLEMENT INSTRUCTION 2
ES0000011876	← MATCH →	ES0000011876
19/12/2010	← NO MATCH →	29/12/2012
EUR	← NO MATCH →	GBP

21

229 Upper and lower case letters are considered as different when comparing the values of two different instructions. In case a given matching field is filled in two different instructions with the same reference but a different combination of upper and lower case letters, this matching field is not subject to matching.

1 **Non Mandatory Matching Fields per Transaction Type**

2 **DIAGRAM 73 - ADDITIONAL MATCHING FIELDS AND EXAMPLE**

e.g. Matching of Additional Fields:

DVP/DWP	FOP		SETTLEMENT INSTRUCTION 1		SETTLEMENT INSTRUCTION 2
Opt-out ISO transaction condition indicator		→	Opt out	← MATCH →	Opt out
CUM/EX Indicator <sup>1</sup>		→	ExCoupon	← NO MATCH →	CumCoupon
n/a	Currency <sup>2</sup>	→	USD	← NO MATCH →	(blank)
n/a	Settlement Amount <sup>2</sup>	→	(blank)	← MATCH →	(blank)
n/a	Credit/Debit <sup>2</sup>	→	Credit	← MATCH →	Debit

<sup>1</sup> Matching only takes into account “ExCoupon” and “CumCoupon” values for this message field. Values different from these are considered as “blank”

<sup>2</sup> The attributes “Currency”, “Settlement amount” and “Credit/Debit” are defined as additional matching fields for FOP instructions in order to ensure that the risk of mismatching is minimised for settlement of transactions containing a cash leg in a non-T2S currency (DVP instructions in non-T2S currencies can be submitted into T2S as FOP instructions (i.e. with Payment Flag FREE), and use the COSD process to ensure DVP)

3  
4 **Non Mandatory Matching Fields per Transaction Type**

5 **DIAGRAM 74 - OPTIONAL MATCHING FIELDS AND EXAMPLE**

e.g. Matching of Optional Fields:

DVP/DWP	FOP		SETTLEMENT INSTRUCTION 1		SETTLEMENT INSTRUCTION 2
Common Trade Reference		→	25689	← MATCH →	25689
Client of delivering CSD participant *		→	BANKCCLLMAR	← NO MATCH →	BARCGB210ZS
Client of receiving CSD participant *		→	BSCHESMMXXX	← MATCH →	(blank)
Securities account of the delivering party		→	12514	← MATCH →	12514
Securities account of the receiving party		→	56541	← NO MATCH →	89852

\* Matching only takes into account BICs or Proprietary Codes. In case a Proprietary Code is used, T2S matches the three elements of the Proprietary Code (I.e. Identification, Issuer and the Schema Name). An instruction including a BIC will not match with an instruction including a Proprietary Code.

6  
7 If all the Matching fields on both instructions match, except for the Settlement Amount, T2S checks if the  
8 difference between both Settlement Amounts is compliant with the tolerance amount configured in T2S.  
9 This tolerance amount set up in T2S has two different bands per currency, depending on the cash counter-  
10 value. ECSDA proposal for Euro is the following:

1  
2 **TABLE 116 - TOLERANCE AMOUNT FOR MATCHING FOR EURO**

COUNTERVALUE FOR THE CASH AMOUNT	TOLERANCE
≤ EUR 100.000	EUR 2
> EUR 100.000	EUR 25

3 In case there is more than one potentially matching Settlement Instruction, T2S chooses the one having the  
4 smallest Settlement Amount difference. If there is more than one potentially matching Settlement Instruc-  
5 tion with the same Settlement Amount, T2S chooses the one with the closest entry time in T2S. When Set-  
6 tlement Instructions with different Settlement Amount are matched, the amount that T2S submits for set-  
7 tlement as Matched Settlement Amount is the Settlement Amount indicated by the Deliverer of the securi-  
8 ties.

9 After successful matching of both instructions, the T2S Actors receive a Status Advice message as described  
10 in section Send Settlement Instruction. This Status Advice will also contain the T2S Matching Reference as-  
11 signed to both Settlement Instructions that have been matched by T2S and the T2S Reference and Account  
12 Owner Reference of the counterparty’s instruction. Interested parties can also be informed depending on  
13 their message subscription preferences (see Section [Status Management](#) [▶ 758] and section [Message sub-  
14 scription](#) [▶ 203]).

15 In case the Settlement Instruction does not match after the first attempt, T2S sends a Settlement Al-  
16 legement message (after having waited a certain period of time) to the Counterparty informing that there is  
17 a Settlement Instruction alleged against it. The Allegement process is described below (See section [Al-  
18 legement](#) [▶ 351]), the dialogue is reflected in section Send Settlement Instruction.

19 T2S automatically cancels Settlement Instructions that remain unmatched after a certain period of time (See  
20 section [Instruction Cancellation](#) [▶ 360] and section [Instructions Recycling](#) [▶ 375]).

21

22 **1.6.1.2.4 Parameter Synthesis**

23 No specific configuration from T2S Actor is needed. The following parameter is specified by the T2S Opera-  
24 tor.

25

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DE-FAULT VALUE
Matching	Tolerance amount	T2S Operator	T2S Operator	M	To be defined	≤100.000 € = 2€ >100.000 € = 25€

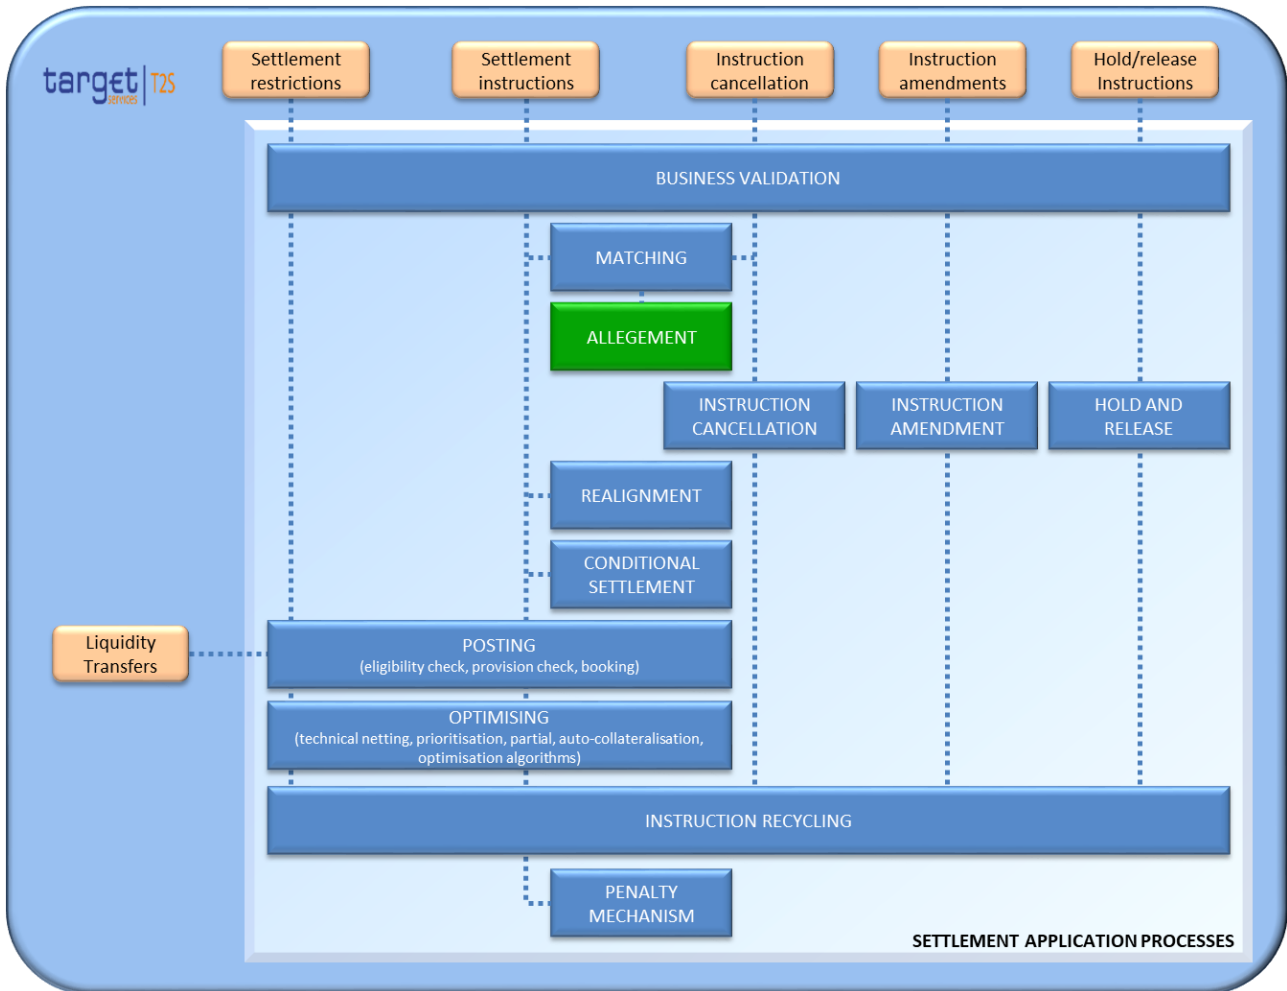

26 **1.6.1.3 Allegement**

27 **1.6.1.3.1 Concept**

28 The Allegement process consists in sending a message in order to advise an account owner that another T2S  
29 Actor has instructed against it, whereas the account owner has no corresponding instruction. In case the

1 CSD of the Counterparty is an external CSD, T2S sends the allegation message to this external CSD since it  
 2 behaves as a Participant of a CSD which is in T2S and therefore, the information to contact the external CSD  
 3 is available in T2S.

4 **DIAGRAM 75 - ALLEGEMENT APPLICATION PROCESS**

5

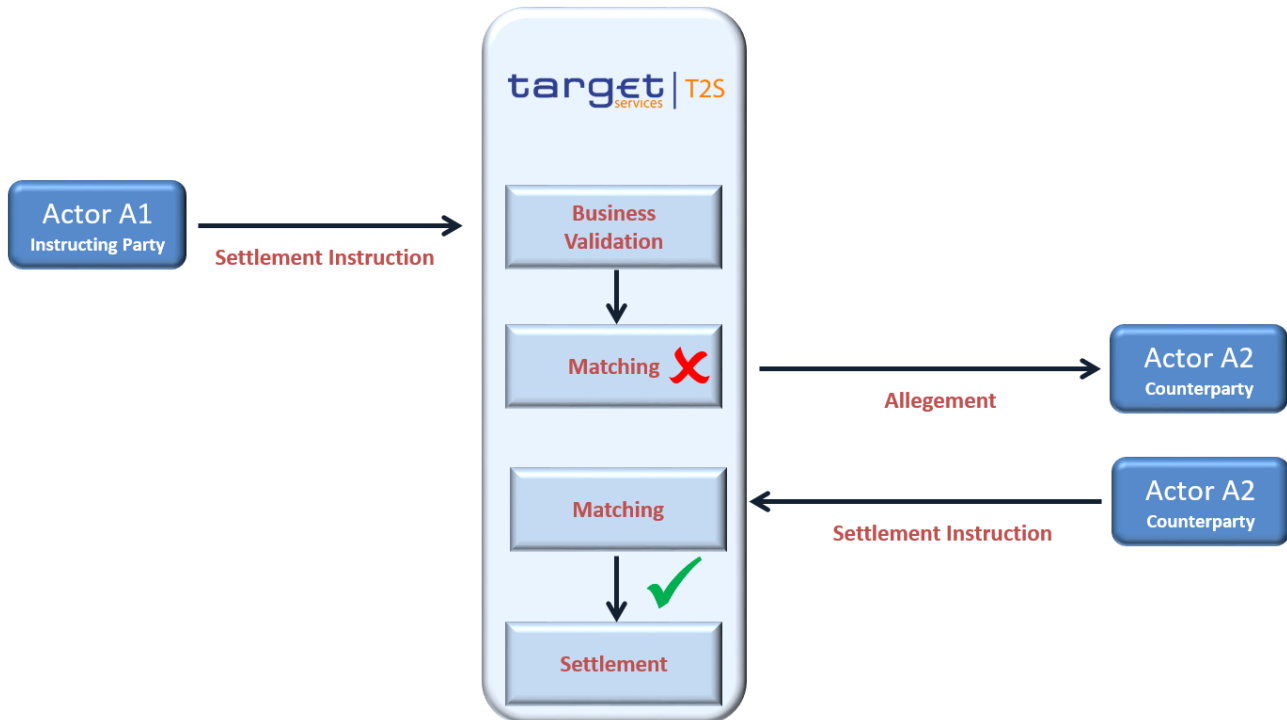

6 **1.6.1.3.2 Overview**

7 T2S applies the Allegement process for Unmatched Settlement Instructions and Unmatched Cancellation  
 8 Instructions that require matching. The Allegement process for Unmatched Settlement Instructions and the  
 9 Allegement process for Unmatched Cancellation Instructions are described below. T2S only sends one Al-  
 10 legement message per instruction. However, under specific conditions described below, this Allegement can  
 11 be cancelled or removed.

1

DIAGRAM 76 - ALLEGEMENT PROCESS

2

### 3 1.6.1.3.3 Allegement process

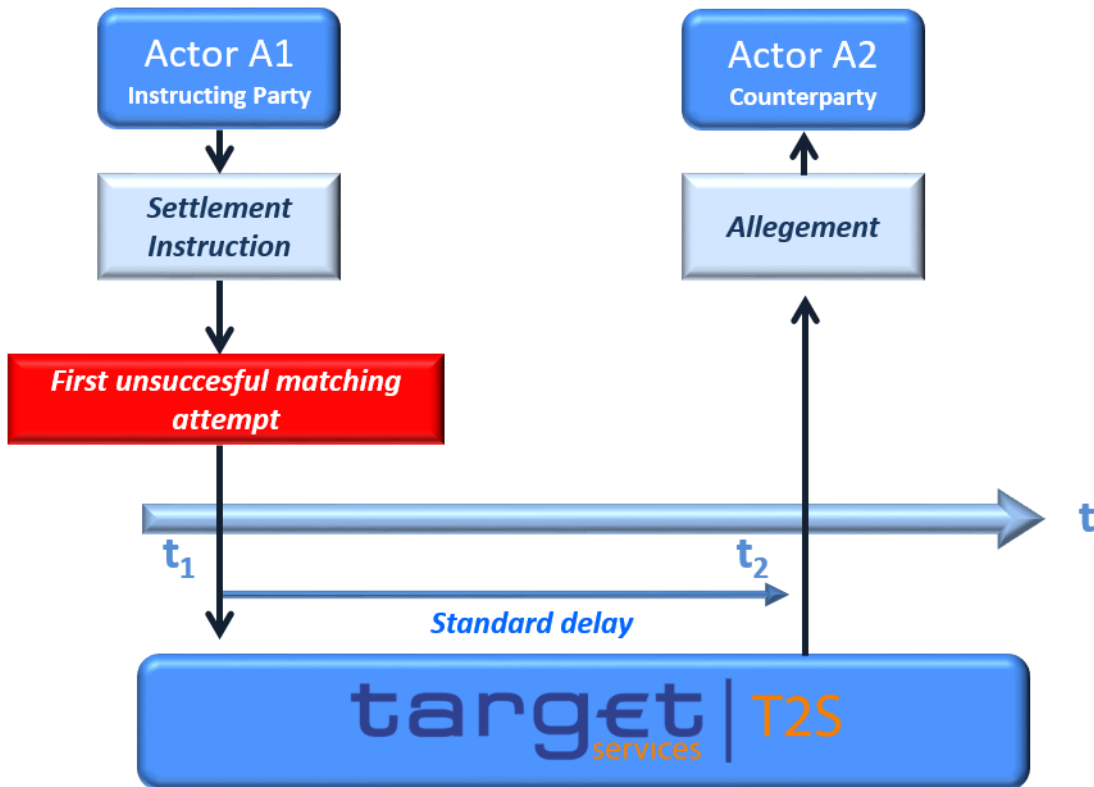

#### 4 Settlement Allegement

5 If a Settlement Instruction does not match after the first matching attempt (See section [Matching](#) [▶ 347]),  
6 the Counterparty is informed through an Allegement message after a predefined period of time (standard  
7 delay period, that is configured in T2S Reference Data by the T2S Operator). T2S does not send an Al-  
8 legement message in case the Settlement Instruction includes an ISO Transaction Code related to a type of  
9 transaction that is meant to be instructed as already matched (i.e. an ISO Transaction Code that is not pre-  
10 sent in the Allegement message). This dialogue is reflected in Send Settlement Instruction. Interested par-  
11 ties can also be informed depending on their message subscription preferences (see section [Message sub-  
12 scription](#) [▶ 203]).

13 The Counterparty receives the Allegement according to two different scenarios.

14 Scenario A: A certain time after the first matching attempt (standard delay period), to avoid early transmis-  
15 sion of the message.

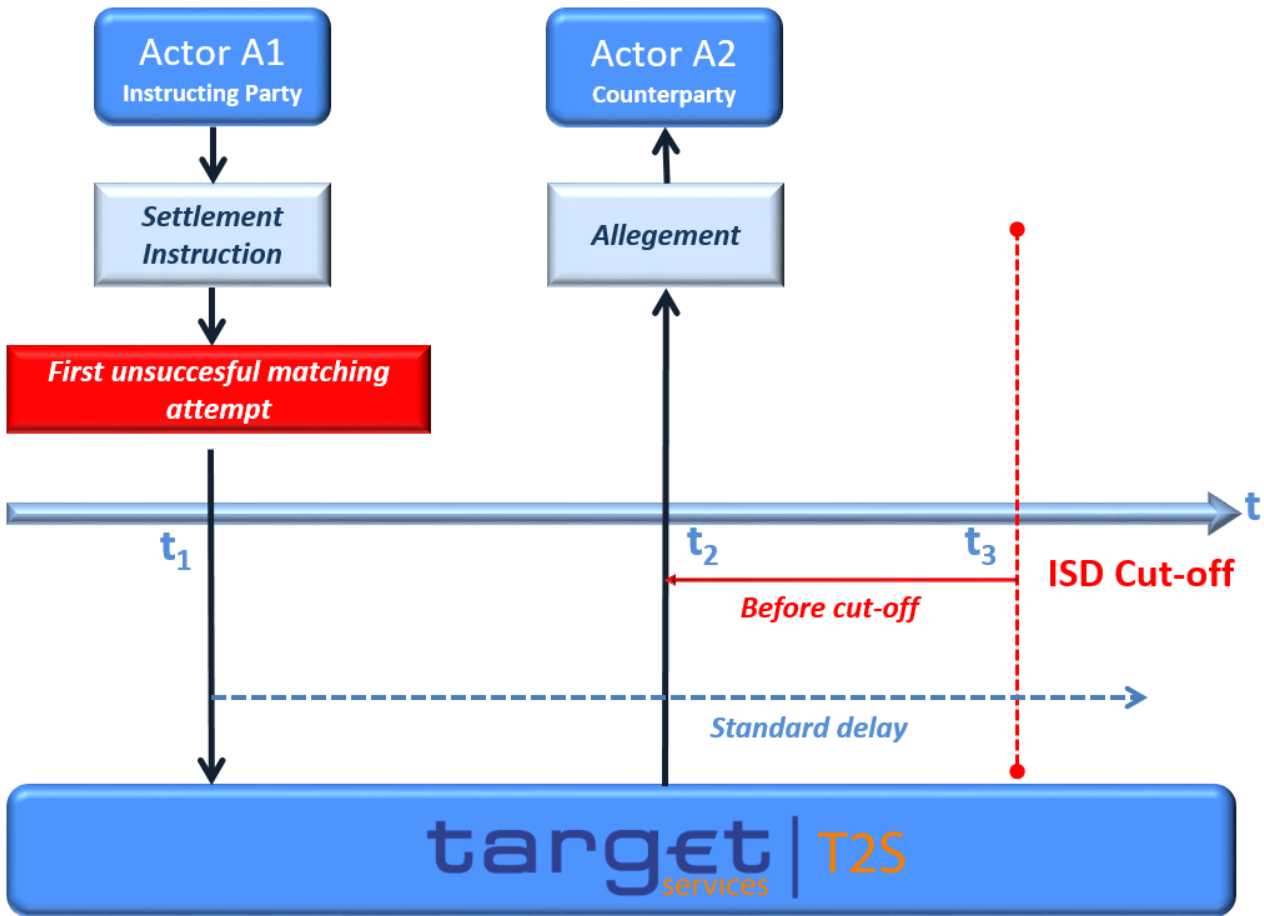

1 **DIAGRAM 77 - SCENARIO A: STANDARD DELAY PERIOD**

2  
 3 Scenario B: Or at the latest a specified time (standard delay period) before the cut-off time of the Intended  
 4 Settlement Date, i.e. in case the end of the standard delay period would leave less than the standard delay  
 5 period before the cut-off.

1

**DIAGRAM 78 - SCENARIO B: STANDARD DELAY PERIOD EXCEEDS ISD CUT OFF**

2

3 Cancellation of an Allegement Message

4 If an Unmatched Settlement Instruction is cancelled by the T2S Actor, the Counterparty receives a Cancellation of the Allegement message automatically generated by T2S. This dialogue is reflected in section Send  
5 Settlement Instruction. Interested parties can also be informed depending on their message subscription  
6 preferences (see section [Message subscription](#) [▶ 203]).  
7

8

**DIAGRAM 79 - SCENARIO A FOR SENDING A CANCELLATION OF THE ALLEGEMENT MESSAGE**

9

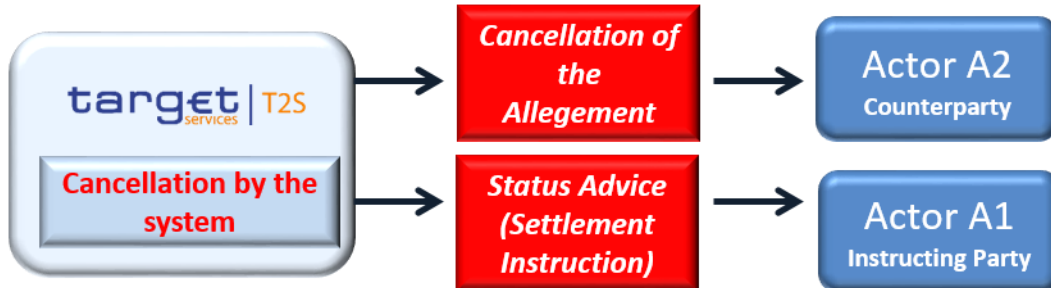

10 If an Unmatched Settlement Instruction is automatically cancelled by T2S (Cancellation by the system), the  
11 Counterparty receives a Cancellation of the Allegement message automatically generated by T2S.

12 The cases that may trigger cancellation by the system of an Unmatched Settlement Instruction as described  
13 in section [Instruction Cancellation](#) [▶ 360] are the following:

14 When the pending Unmatched Settlement Instruction exceeds the recycling period;

1 Unsuccessful revalidation: In case the instruction is affected by a reference data update or during the Start  
 2 of day revalidation.

3 **DIAGRAM 80 - SCENARIO B FOR SENDING A CANCELLATION OF THE ALLEGEMENT MESSAGE**

4  
 5 Removal of an Allegement Message

6 In case the Counterparty sends its corresponding Settlement Instruction to T2S, and if both Instructions are  
 7 matched, the Counterparty receives a Removal of Allegement message, since the previously sent Allegement  
 8 is no longer valid. This dialogue is reflected in section Send Settlement Instruction. Interested parties can  
 9 also be informed depending on their message subscription preferences (see section [Message subscription](#)  
 10 [► 203]).

11 **DIAGRAM 81 - SCENARIO FOR SENDING A REMOVAL OF THE ALLEGEMENT MESSAGE**

Ch. 1.6.1.3.2 (p.341)

12  
 13 Cancellation Allegement

14 If a T2S Actor sends a Cancellation Instruction that requires the cancellation of both legs of a Settlement  
 15 Instruction and the Counterparty has not sent its Cancellation Instruction, T2S sends a Status Advice mes-  
 16 sages to the T2S Actor (with no delay period) informing that its cancellation is pending and another one to  
 17 the Counterparty informing that its Cancellation Instruction is requested. This dialogue is reflected in section  
 18 Send Cancellation Instruction of a Settlement Instruction or a Settlement Restriction on Securities Position  
 19 and in section Send Cancellation Instruction of a Settlement Restriction on cash balance.

20 **DIAGRAM 82 - SCENARIO FOR SENDING A CANCELLATION ALLEGEMENT STATUS ADVICE**

21

#### 1 **1.6.1.3.4 Parameters Synthesis**

2 The following parameters are specified by the T2S Operator:

- 3 | Allegement for first unsuccessful matching attempt (Standard delay period): Defined as the standard de-  
4 lay period from the first unsuccessful matching attempt of a settlement instruction. It is calculated in  
5 hours and minutes.
- 6 | Allegement before Intended Settlement Date (Before cut-off): Defined as the standard delay period  
7 measured backwards from the FOP cut-off time on the intended settlement date. It is calculated in hours  
8 and minutes. T2S sends out an allegement at the earliest point in time between this period and the peri-  
9 od defined by the allegement for first unsuccessful matching.

10 No specific configuration from T2S Actor is needed.  
11

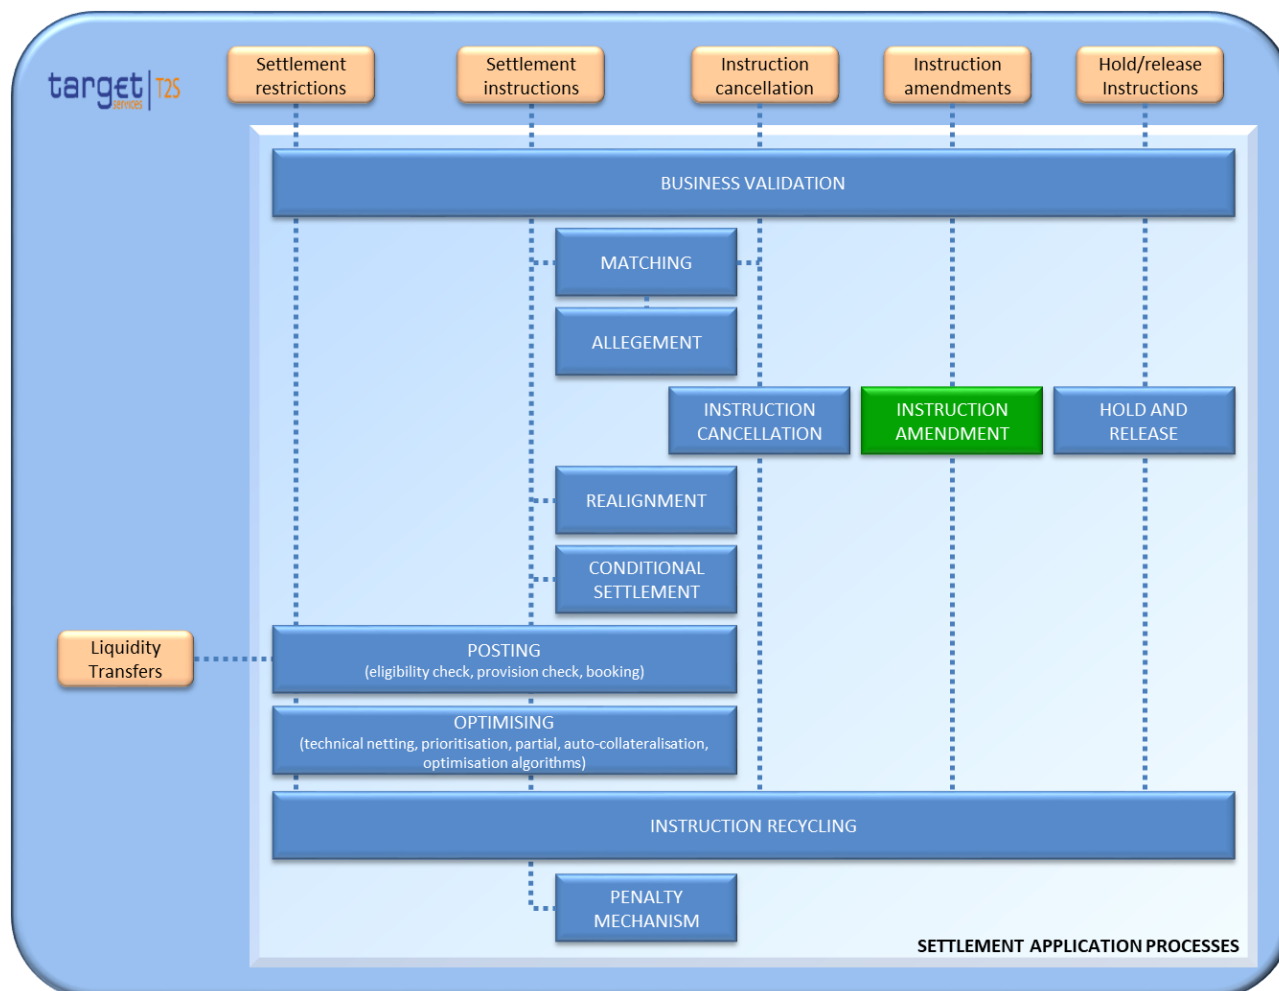

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Settlement Allegement	Standard delay period	T2S Operator	T2S Operator	M	To be defined	1 hour
Settlement Allegement	Before cut-off	T2S Operator	T2S Operator	M	To be defined	5 hours

#### 12 **1.6.1.4 Instruction Amendment**

##### 13 **1.6.1.4.1 Concepts**

14 T2S Actors are able to send an Amendment Instruction to modify a process indicator of an instruction in the  
15 system, depending on its instruction type and its settlement status. The T2S Party, the relevant CSD and the  
16 authorized parties can amend instructions of a given T2S Actor.

1

**DIAGRAM 83 - INSTRUCTION AMENDMENT APPLICATION PROCESS**

2

### 1.6.1.4.2 Overview

T2S accepts and processes an Amendment Instruction sent by a T2S Actor when it successfully passes the Business Validation process (see section [Business Validation](#) [▶ 301]), unless any of the following conditions is fulfilled:

- 7 | The Settlement Status of the Referenced Settlement Instruction or Settlement Restriction is "Settled" or
- 8 | "Cancelled";
- 9 | The Referenced Settlement Instruction is identified as CoSD and the Amendment Instruction does not
- 10 | aim to remove a linkage having the CSD as the Instructing Party (See section [Conditional Settlement](#)
- 11 | [▶ 510]);
- 12 | The referenced Settlement Instruction or Settlement Restriction is partially settled and the Amendment
- 13 | Instruction refers to a process indicator other than "Priority".

14 | If the referenced instruction fulfils any of these conditions, the Amendment Instruction is denied. T2S Actors

15 | are not able to amend other instruction types than Settlement Instructions or Settlement Restrictions, includ-

16 | ing the pending part of a partially settled Settlement Instruction or Settlement Restriction (i.e. Realignment

17 | instructions cannot be amended by T2S Actors).

1 An Amendment Instruction can be used to amend a process indicator of both legs at the same time or only  
 2 one leg of a Settlement Instruction that entered T2S as already matched depending if the reference used in  
 3 the Amendment Instruction refers to the information of one leg or both legs of the Settlement Instruction as  
 4 shown in the table below (see section [Instruction Types](#) [▶ 90]).

5 **TABLE 117 - REFERENCES FOR AMENDMENT INSTRUCTION**

	ALREADY MATCHED SETTLEMENT INSTRUCTION	SETTLEMENT INSTRUCTIONS MATCHED IN T2S
Amendment Instruction of one leg of the Settlement Instruction	T2S Reference	T2S Actor Reference Or T2S Reference
Amendment Instruction of both legs of the Settlement Instruction	T2S Actor Reference	X

7 For Amendment Instructions referring to both legs of the Settlement Instruction (i.e. if the T2S Actor In-  
 8 struction Reference refers to a Settlement Instruction sent as already matched to T2S), T2S splits the infor-  
 9 mation of the Amendment instruction into two separate maintenance instructions, one per each leg of the  
 10 referenced Settlement Instruction. As the inbound message related to the already matched maintenance  
 11 instruction is split internally, two different Amendment Instructions are created in T2S.

12 T2S Actors are only allowed to modify one process indicator per Amendment Instruction. If the T2S Actor  
 13 wants to modify a second process indicator, a new Amendment Instruction is required. If the T2S Actor  
 14 wants to modify other fields of the instruction, it has to cancel the referenced instruction and instruct it  
 15 again.

16 **1.6.1.4.3 Amendment process**

17 T2S Actors can only amend the following process indicators of a Settlement Instruction:

- 18 | Partial Settlement Indicator and threshold type;
- 19 | Priority;
- 20 | Linkages Block (See Section [Linked Instructions](#) [▶ 500]).

21 T2S Actors can only amend the following process indicators of a Settlement Restriction:

- 22 | Priority;
- 23 | Linkages Block (See Section [Linked Instructions](#) [▶ 500]).

24 Additionally, for partially settled instructions, T2S Actors are only allowed to amend the "Priority" of the un-  
 25 settled part of the partially settled Settlement Instruction or Settlement Restriction.

**TABLE 118 - PROCESS INDICATORS ALLOWED FOR AMENDMENT**

	"PARTIAL SETTLEMENT INDICATOR"	"LINKAGES BLOCK"	"PRIORITY"
Settlement Instruction	YES	YES	YES
Settlement Restriction	NO	YES	YES
Partially Settled Instruction	NO	NO	YES

1  
2

3 T2S informs the T2S Actor on the result of the amendment process through a Status Advice message, as  
4 described in sections Send Amendment Instruction of a Settlement Instruction or of a Settlement Restriction  
5 on Securities Position and Send Amendment Instruction of a Settlement Restriction on Cash Balance. Inter-  
6 ested parties can also be informed depending on their message subscription preferences (see Section [Status](#)  
7 [Management](#) [ ▶ 758] and Section [Message subscription](#) [ ▶ 203]).

8 In case of already matched Amendment Instructions, the status reporting derived from the lifecycle of each  
9 Amendment Instruction created in T2S is handled separately. Nevertheless, the T2S Actor may subscribe to  
10 the notifications of one of the two legs of the already matched Amendment Instruction only.

#### 11 **1.6.1.4.4 Parameters Synthesis**

12 No specific configuration from T2S Actor is needed in T2S Reference Data.

#### 13 **1.6.1.5 Instruction Cancellation**

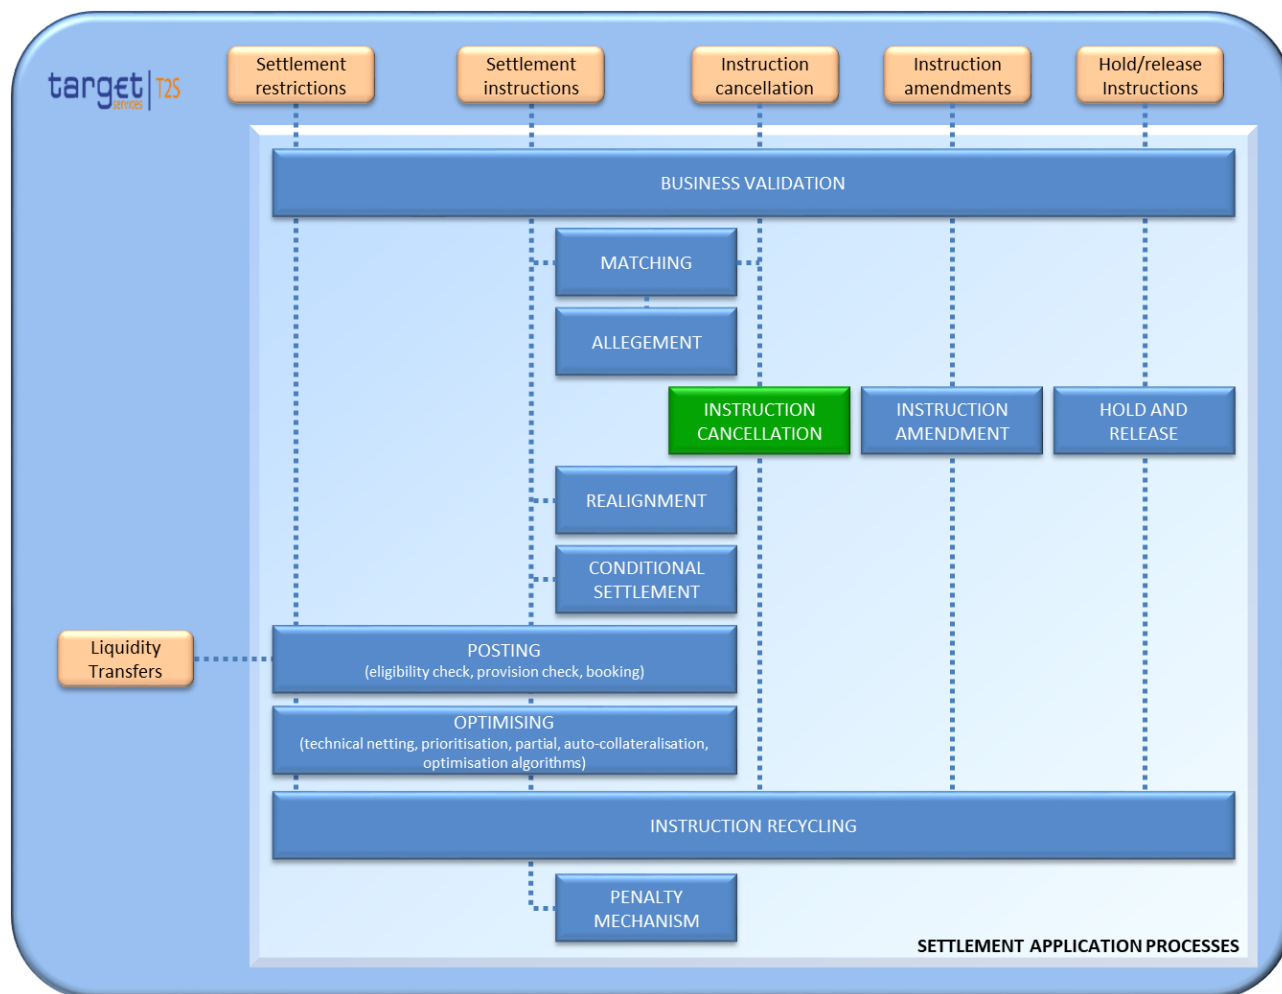

##### 14 **1.6.1.5.1 Concept**

15 T2S Actors are able to cancel their Unsettled Settlement Instructions or Settlement Restrictions through a  
16 Cancellation Instruction. The T2S Party, the relevant CSD and the authorized parties can cancel instructions  
17 of a given T2S Actor.

18 Additionally, under specific conditions, T2S cancels instructions automatically (e.g. when an Unmatched Set-  
19 tlement Instruction has exceeded its recycling period in T2S).

1

**DIAGRAM 84 - INSTRUCTION CANCELLATION APPLICATION PROCESS**

2

### 3 1.6.1.5.2 Overview

4 After its validation, T2S processes Cancellation Instructions sent by a T2S Actor to cancel previously sent  
5 Settlement Instructions or Settlement Restrictions, unless it fulfils any of the following conditions:

- 6 | The Settlement Status of the Referenced Settlement Instruction or Settlement Restriction is "Settled" or  
7 "Cancelled";
- 8 | There is a pending Cancellation Instruction for the same Settlement Instruction;
- 9 | The Referenced Settlement Instruction is identified as CoSD, and the Instructing Party is not the relevant  
10 CSD or the relevant Administering Party (See section [Conditional Settlement](#) [▶ 510]);
- 11 | There is a Realignment Instruction related with the Referenced Settlement Instruction that fulfils a CoSD  
12 Rule, and the Instructing Party is not the relevant CSD.

13 If the Cancellation Instruction fulfils any of these conditions, the Cancellation Instruction is denied and T2S  
14 communicates its denial together with the relevant reason code to the T2S Actor or any interested party,  
15 depending on their message subscription preferences (see Section [Status Management](#) [▶ 758]).

1 T2S Actors are not able to cancel other instruction types rather than Settlement Instructions or Settlement  
 2 Restrictions (e.g. T2S Actors cannot cancel Realignment instructions). Additionally, T2S Actors can cancel the  
 3 unsettled remaining part of a partially settled Settlement Instruction or Settlement Restriction.  
 4 Cancellation Instructions are immediately executed or denied during the Daytime Window, with the excep-  
 5 tion of Cancellation Instructions that need to be matched in T2S to cancel two matched Settlement Instruc-  
 6 tions ("bilateral cancellation"). During the Night time sequences, the instructions received are not taken into  
 7 account until the end of the sequence.

8 **1.6.1.5.3 Cancellation process**

9 Instruction Cancellation process

10 T2S Actors can send Cancellation Instructions to cancel previously sent Settlement Instructions or Settle-  
 11 ment Restrictions. The dialogue between T2S and T2S Actors referring to the cancellation of the referenced  
 12 Settlement Instructions or Settlement Restrictions is described as part of the overall process for each type of  
 13 instructions in section Send Cancellation Instruction of a Settlement Instruction or a Settlement Restriction  
 14 on Securities Position and section Send Cancellation Instruction of a Settlement Restriction on cash balance  
 15 while the precise description of the cancellation Processing of a Settlement Instruction or Settlement Re-  
 16 striction (either because a T2S Actor has send a Cancellation Instruction or because any other reason) is  
 17 reflected in section Settlement Instruction Cancellation Processing, section Securities Settlement Restriction  
 18 Cancellation Processing and section Cash Settlement Restriction Cancellation Processing.

19 If the referenced instruction is an Unmatched Settlement Instruction or a Settlement Restriction, the Cancel-  
 20 lation Instruction is executed or denied immediately after its validation.

21 If the referenced Settlement Instruction is matched, T2S requires bilateral cancellation and the cancellation  
 22 is only possible if both Counterparties send their Cancellation Instructions to cancel each leg separately or if  
 23 the Cancellation Instruction is sent with the information of both legs by an authorised T2S Party.

24 A Cancellation Instruction can be used to cancel both legs at the same time or only one leg of a Settlement  
 25 Instruction that entered T2S as already matched depending if the reference used in the Cancellation Request  
 26 refers to the information of one leg or both legs of the Settlement Instruction as shown in the table below  
 27 (see section [Instruction Types](#) [▶ 90]).

28 **TABLE 119 - REFERENCES USED IN CANCELLATION SCENARIOS**

	ALREADY MATCHED SETTLEMENT INSTRUCTION	SETTLEMENT INSTRUCTIONS MATCHED IN T2S
Cancellation Instruction of one leg of the Settlement Instruction (two Cancellations needed)	T2S Reference	T2S Actor Reference or T2S Reference
Cancellation Instruction of both legs of the Settlement Instruction	T2S Actor Reference	X

1 For Cancellation Instructions referring to both legs of the Settlement Instruction (i.e. if the T2S Actor In-  
2 struction Reference refers to a Settlement Instruction sent as already matched to T2S), T2S splits the infor-  
3 mation of the Cancellation instruction into two separate maintenance instructions, one per each leg of the  
4 referenced Settlement Instruction. As the inbound message related to the already matched maintenance  
5 instruction is split internally, two different Cancellation Instructions are created in T2S.

6 T2S informs the T2S Actor on the result of the cancellation process, via a Status Advice message. Interested  
7 parties can also be informed depending on their message subscription preferences (see section [Status Man-  
8 agement](#) [▶ 758] and section [Message subscription](#) [▶ 203]).

9 In case of already matched Cancellation Instructions, the status reporting derived from the lifecycle of each  
10 Cancellation Instruction created in T2S is handled separately. Nevertheless, the T2S Actor may subscribe to  
11 the notifications of one of the two legs of the already matched maintenance instruction only.

### 12 Cancellation of CoSD process

13 When a Settlement Instruction is identified as CoSD, only Administering Parties or the relevant CSD can can-  
14 cel it under certain circumstances:

- 15 | In case there is more than one Administering Party for a Settlement Instruction, each Administering Par-  
16 ty should send its CoSD Cancellation Instruction for the relevant Settlement Instruction without a need  
17 to specify any CoSD rule in the message (i.e. The Administering Parties only have to send one Cancell-  
18 ation Instruction regardless if more than one CoSD rule applies) (See section [Conditional Settlement](#)  
19 [▶ 510]), or;
- 20 | The Instructing Party's CSD involved in the Settlement Instruction (i.e. the CSD that owns the securities  
21 account) should send a Cancellation Instruction for the relevant Settlement Instruction.

22 In both cases, cancellation is only possible if either all Administering Parties or the CSD of each Settlement  
23 Instruction send their Cancellation Instruction. Cancellation takes place upon the reception by T2S of one  
24 valid Cancellation Instruction for each of the two matched Settlement Instructions.

25 T2S does not allow Administering Parties to request the cancellation of a Settlement Instruction, if at least  
26 one CoSD rule applied/applies to at least one underlying Realignment Instruction.

27 T2S rejects cancellation requests submitted by other T2S Actors (i.e. CSD Participants), when the referenced  
28 Settlement Instruction is identified as CoSD.

### 29 Cancellation by the system process

30 T2S automatically cancels pending instructions in the system under the following conditions:

- 31 | Settlement Instructions, Settlement Restrictions and Cancellation Instructions once they exceed their re-  
32 cycling period in T2S (See section [Instructions Recycling](#) [▶ 375]).
- 33 | Settlement Instructions when the realignment chain cannot be built (See section [Realignment](#) [▶ 451]).
- 34 | Instructions that do not successfully pass the revalidation process. The revalidation process is triggered  
35 at the Start of Day in T2S and by a change in the Reference Data that affects the instruction (See sec-  
36 tion [Business Validation](#) [▶ 301]).
- 37 | Pending Cancellation Instruction in the system when one of the conditions for the denial of a Cancell-  
38 ation Instruction is fulfilled. (See section Send Cancellation Instruction of a Settlement Instruction or a

1 Settlement Restriction on Securities Position and section Send Cancellation Instruction of a Settlement  
2 Restriction on cash balance.)

3 **1.6.1.5.4 Parameters Synthesis**

4 No specific configuration from T2S Actor is needed in T2S Reference Data.

5 **1.6.1.6 Hold and Release**

6 **1.6.1.6.1 Concept**

7 T2S Hold/Release process provides T2S Actors the functionality to hold and release Settlement Instructions,  
8 at any time during its lifecycle until they are settled or cancelled. It is also possible to hold the pending part  
9 of a partially settled Settlement Instruction and, under specific conditions, to partially release a Settlement  
10 Instruction.

11 T2S Actors who want to hold, release or partially release release an existing Settlement Instruction need to  
12 send a Hold/Release Instruction including only one modification per instruction. T2S Actors can also send a  
13 Settlement Instruction initially on Hold.

14 A Hold/Release Instruction can be used to put on hold both legs at the same time or only one leg of a Set-  
15 tlement Instruction that entered T2S as already matched depending if the reference used in the Hold In-  
16 struction refers to the information of one leg or both legs of the Settlement Instruction as shown in the table  
17 below (see section Instruction Types).

18 **TABLE 120 - REFERENCES USED FOR HOLD/RELEASE INSTRCTION**

	ALREADY MATCHED SETTLEMENT INSTRUCTION	SETTLEMENT INSTRUCTIONS MATCHED IN T2S
Hold/Release Instruction of one leg of the Settlement Instruction	T2S Reference	T2S Actor Reference or T2S Reference
Hold/Release Instruction of both legs of the Settlement Instruction	T2S Actor Reference	X

20 For Hold/Release Instructions referring to both legs of the Settlement Instruction (i.e. if the T2S Actor In-  
21 struction Reference refers to a Settlement Instruction sent as already matched to T2S), T2S splits the infor-  
22 mation of the Hold/Release Instruction into two separate maintenance instructions, one per each leg of the  
23 referenced Settlement Instruction. As the inbound message related to the already matched maintenance  
24 instruction is split internally, two different Hold/Release Instructions are created in T2S.

25 Additionally, T2S automatically puts a Settlement Instruction on Hold if it fulfils any restriction defined by the  
26 CSDs, known as CSD Validation Hold (See section [Business Validation](#) [▶ 301]) or if it is identified as a CoSD  
27 on the Intended Settlement Date (See section [Conditional Settlement](#) [▶ 510]).

1 Settlement Instructions on Hold are not eligible for the settlement process and are kept pending until they  
 2 are released by all the involved parties. Nevertheless, these instructions can be matched, amended or cancelled  
 3 (however Settlement Instructions on CoSD Hold cannot be amended and can only be cancelled following  
 4 specific rules - see section [Instruction Cancellation](#) [▶ 360]).

5 **DIAGRAM 85 - HOLD AND RELEASE APPLICATION PROCESS**

6

### 7 **1.6.1.6.2 Overview**

8 The Hold/Release Instruction has two hold indicators that can be filled by the T2S Actor:

- 9 | "Party Hold";
- 10 | "CSD Hold".

11 In order to hold an instruction, the T2S Actor needs to put "Yes" in the relevant hold indicator of the  
 12 maintenance instruction (Hold Instruction). If the T2S Actor wants to send a Settlement Instruction initially  
 13 on Hold, the relevant hold indicator must be also filled in. If the T2S Actor sends an already matched Set-  
 14 tlement Instruction fulfilling "Yes" in the party hold indicator, it can put only the instructed leg on party hold,  
 15 only the counter-leg on party hold, or both legs on party hold (using the codes PTYH, BOTH or PRCY). For  
 16 CSD Hold, in already matched Settlement Instructions, only the instructed leg can be put on CSD Hold.

1 A Settlement Instruction on Hold can only be released when the relevant T2S Actor that put the instruction  
2 on Hold or the relevant CSD sends the corresponding Release Instruction putting “No” in the relevant hold  
3 indicator. The T2S Actor only needs to include this change in the Hold/Release Instruction.

4 In addition to the indicators that can be filled by the T2S Actors, there are two hold indicators that T2S puts  
5 automatically:

- 6 | CSD Validation Hold;
- 7 | CoSD Hold.

8 In case of a Settlement Instruction put on Hold by T2S due to a CSD Validation Hold, it can only be released  
9 by the relevant CSD that defined the rule (See section [Business Validation](#) [▶ 301]).

10 Settlement Instructions that fulfil a CoSD rule are put on CoSD Hold on the Intended Settlement Date until  
11 all the involved Administering Parties send their CoSD Release Instructions. (See section [Conditional Settle-  
12 ment](#) [▶ 510]).

13 The different types of Hold statuses are independent, so T2S allows different T2S Actors to hold Settlement  
14 Instructions (i.e. T2S Party Hold and CSD Hold). Nevertheless, T2S does not allow T2S Actors to put on Hold  
15 Settlement Instructions already identified as CoSD (See section [Conditional Settlement](#) [▶ 510]). In case a  
16 Settlement Instruction is put on Hold before it is identified as CoSD (e.g. Party Hold), the instruction is put  
17 on CoSD Hold (and the T2S Actor is informed on the hold status of the instruction) but the CoSD blocking  
18 cannot take place until the T2S Actor or CSD sends the relevant Release Instruction.

19 T2S considers an Instruction on Hold and consequently not eligible for settlement when at least one of the  
20 four statuses (Party Hold, CSD Hold, CSD Validation Hold or CoSD Hold) is put to “Yes”.

21 In case the Settlement Instruction is under Partial Release Process it will remain on Hold (Party Hold). How-  
22 ever T2S considers it eligible for settlement but only when Partial Settlement is allowed.

23 The different scenarios for a Settlement Instruction regarding the hold process are described in the table  
24 below:

25 **TABLE 121 - HOLD /RELEASE EXHAUSTIVE SCENARIOS FOR A SETTLEMENT INSTRUCTION**

SETTLEMENT INSTRUCTION					
SCENARIO	PARTY HOLD	CSD HOLD	CSD VALIDATION HOLD	COSD HOLD	RESULT
1	NO	NO	NO	NO	Eligible for settlement
2	YES	YES	YES	YES	No settlement attempt can be performed
3	YES	YES	YES	NO	No settlement attempt can be performed
4	YES	YES	NO	NO	No settlement attempt can be performed

SETTLEMENT INSTRUCTION					
SCENARIO	PARTY HOLD	CSD HOLD	CSD VALIDATION HOLD	COSD HOLD	RESULT
5	YES	NO	NO	YES	No settlement attempt can be performed
6	NO	NO	YES	YES	No settlement attempt can be performed
7	NO	YES	YES	YES	No settlement attempt can be performed
8	NO	YES	NO	NO	No settlement attempt can be performed
9	YES	NO	NO	NO	No settlement attempt can be performed <sup>230</sup>
10	NO	NO	YES	NO	No settlement attempt can be performed
11	YES	NO	YES	NO	No settlement attempt can be performed
12	NO	YES	YES	NO	No settlement attempt can be performed
13	YES	YES	NO	YES	No settlement attempt can be performed
14	NO	YES	NO	YES	No settlement attempt can be performed
15	YES	NO	YES	YES	No settlement attempt can be performed
16	NO	NO	NO	YES	No settlement attempt can be performed No Party / CSD Hold is allowed.

- 1 If an Instruction remains on Hold at the end of its Intended Settlement Date, T2S recycles the instruction
- 2 following the T2S recycling rules (See section [Instructions Recycling](#) [▶ 375]).

230 No settlement attempt can be performed unless the Settlement Instruction is under Partial Release Process and Partial Settlement is allowed (i.e. a Partial Settlement Window is open or the corresponding sequence of the Night Time Settlement is running).

### 1 **1.6.1.6.3 Hold process**

2 After a T2S Actor sends a Hold Instruction, T2S proceeds to execute it, once checked that the referenced  
3 Settlement Instruction is not:

- 4 | Cancelled;
- 5 | Settled;
- 6 | Identified as a CoSD;
- 7 | Already put on Hold by the relevant T2S Actor (i.e. T2S Party or CSD).

8 If the Referenced Instruction fulfils any of these conditions, the Hold Instruction is denied.

9 In case of successful execution, the T2S Actor is informed through a message communicating the execution  
10 of the Hold Instruction and a Status Advice message as described in section Send Hold/Release Instruction.  
11 Interested parties can also be informed depending on their message subscription preferences (see Section  
12 [Status Management](#) [▶ 758] and Section [Message subscription](#) [▶ 203]).

13 In case of already matched Hold Instructions, the status reporting derived from the lifecycle of each Hold  
14 Instructions created in T2S is handled separately. Nevertheless, the T2S Actor may subscribe to the notifica-  
15 tions of one of the two legs of the already matched Hold Instruction only.

16 Only on the Intended Settlement Date and if the instruction is still on Hold, the Counterparty is informed (at  
17 the start of day) on the hold status of the instruction.

#### 18 **EXAMPLE 104 - HOLD INSTRUCTION**

19 This example illustrates the execution of two different Hold Instructions for the Settlement Instruction "X",  
20 which is matched with Settlement Instruction "Y", before the Intended Settlement Date:

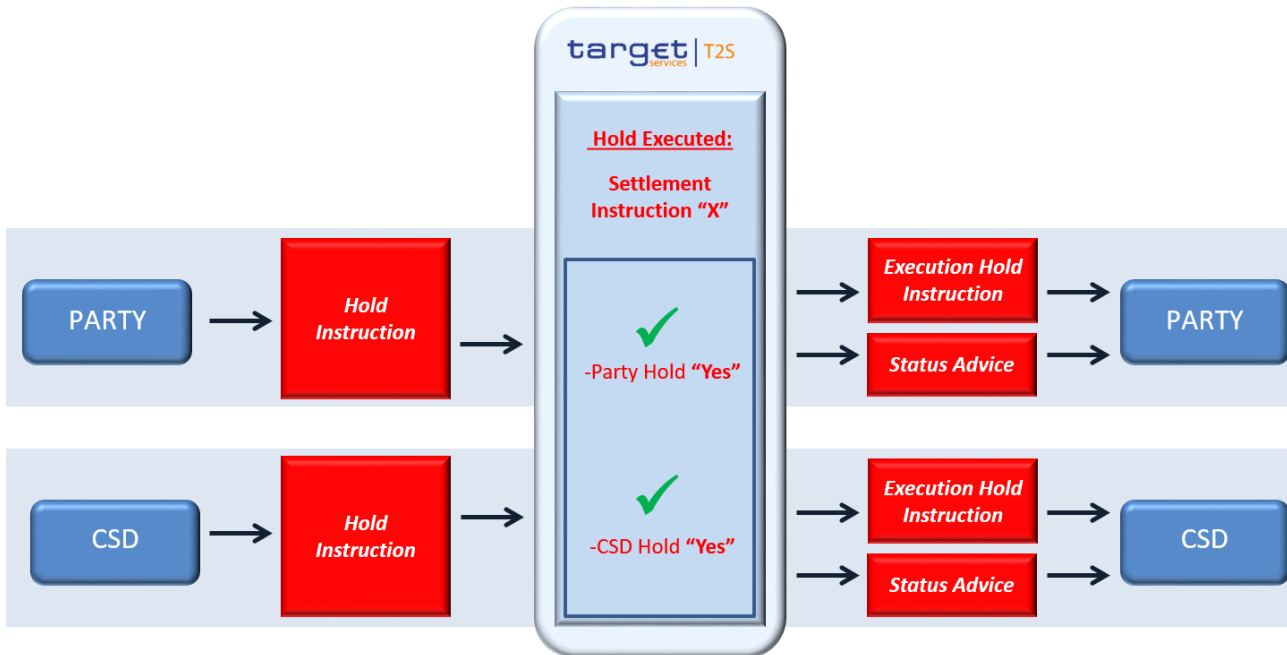

21 The T2S Party of instruction "X" sends a Hold Instruction for Party Hold. T2S validates the instruction suc-  
22 cessfully and proceeds to hold the referenced Settlement Instruction putting "Yes" in its Party Hold indicator.  
23 The execution of the Hold Instruction and the Status Advice of the Settlement Instruction are notified to the  
24 T2S Party and other interested parties, depending on their message subscription preferences.

25 The CSD of instruction "X" sends a Hold Instruction for CSD Hold. T2S validates the instruction successfully  
26 and proceeds to hold the referenced Settlement Instruction putting "Yes" in its CSD Hold indicator. The exe-  
27 cution of the hold instruction and the Status Advice of the Settlement Instruction are notified to the CSD and  
28 other interested parties, depending on their message subscription preferences.

29 As a consequence on the execution of both Hold Instructions, Settlement Instruction "X" turns from scenario  
30 1 to scenario 4 in Table above.

1

**DIAGRAM 86 - BOTH THE T2S PARTY AND THE RELEVANT CSD SEND A HOLD INSTRUCTION**

2

#### 3 **1.6.1.6.4 Release process**

4 When a T2S Actor sends a Release Instruction, T2S proceeds to execute it, once checked that the Refer-  
5 enced Instruction is not:

- 6 | Cancelled;
- 7 | Settled;
- 8 | Already released by the relevant T2S Actor (i.e. T2S Party or CSD) or by the relevant CSD in the case of  
9 the CSD Validation Hold or by the Administering Parties in case of CoSD Hold.

10 If the Referenced Instruction fulfils any of these conditions the Release Instruction is denied and its status is  
11 updated accordingly.

12 If T2S successfully executes the Release Instruction, the T2S Actor is informed through a message com-  
13 municating the execution of the Release Instruction and a Status Advice message informing if other hold  
14 remains as described in Send Hold/Release Instruction. Interested parties can also be informed depending  
15 on their message subscription preferences (see section [Status Management](#) [▶ 758] and Section [Message  
16 subscription](#) [▶ 203]).

17 In case of already matched Release Instructions, the status reporting derived from the lifecycle of each Re-  
18 lease Instruction created in T2S is handled separately. Nevertheless, the T2S Actor may subscribe to the  
19 notifications of one of the two legs of the already matched Release Instruction only.

20 Only in case the Intended Settlement Date has been reached and if no other hold remains, the Counterparty  
21 is informed on the release of the instruction.

1 **EXAMPLE 105 - RELEASE INSTRUCTION**

2 Continuing with the previous, this one illustrates the case when the T2S Party sends its Release Instruction  
 3 for Settlement Instruction "X", leaving the instruction "X" on CSD Hold until the release from the CSD is re-  
 4 ceived and executed:

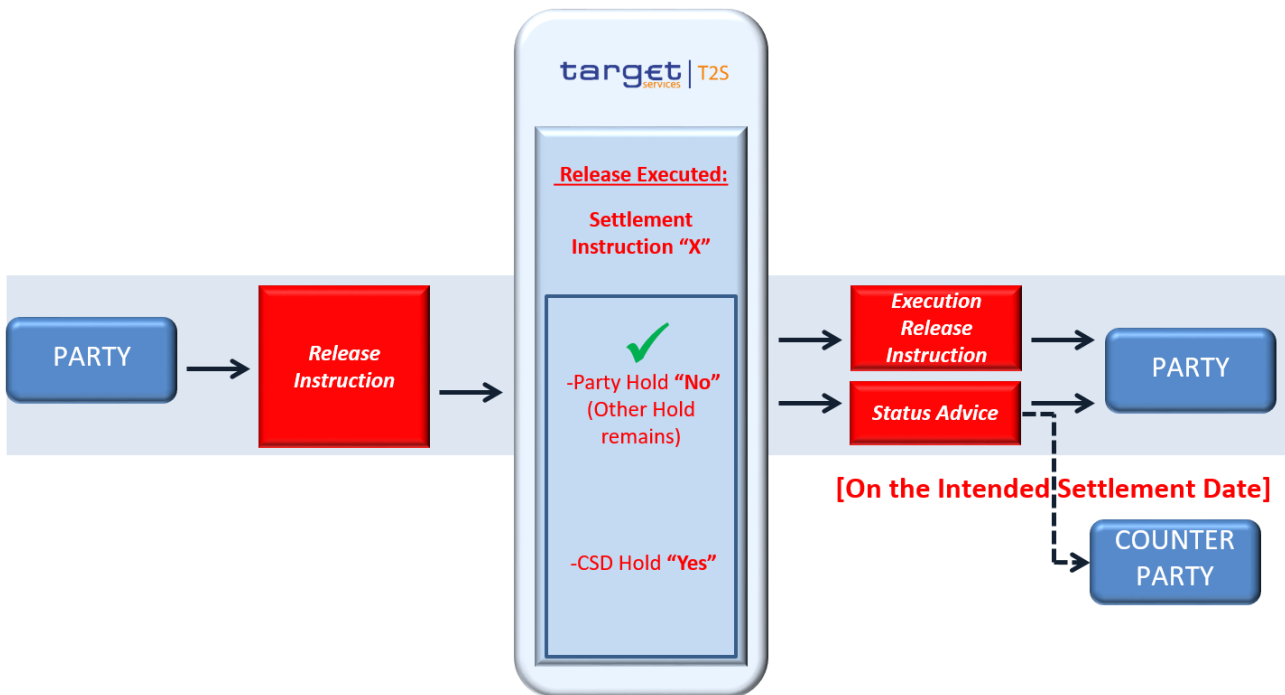

5 The T2S Party sends a Release Instruction for Party Hold. T2S validates successfully the instruction and pro-  
 6 ceeds to release the referenced Settlement Instruction putting "No" in its Party Hold indicator. The execution  
 7 of the Release Instruction and the Status Advice of the Settlement Instruction are notified to the T2S Party  
 8 and other interested parties, depending on their message subscription preferences.

9 The referenced Settlement Instruction remains on CSD Hold until the Actor (CSD) sends a Release Instruc-  
 10 tion.

11 On the Intended Settlement Date, T2S informs the Counterparty of instruction "X" (T2S Party of instruction  
 12 "Y") that its instruction cannot be settled due to the fact that Settlement Instruction "X" is on Hold (without  
 13 detailing the type of hold).

14 Then, Settlement Instruction "X" changes from scenario 4 to scenario 8 in Table 121 - [Hold /Release Exhaustive Scenarios for a Settlement Instruction](#) [▶ 366].

16 **DIAGRAM 87 - THE PARTY SENDS A RELEASE INSTRUCTION**

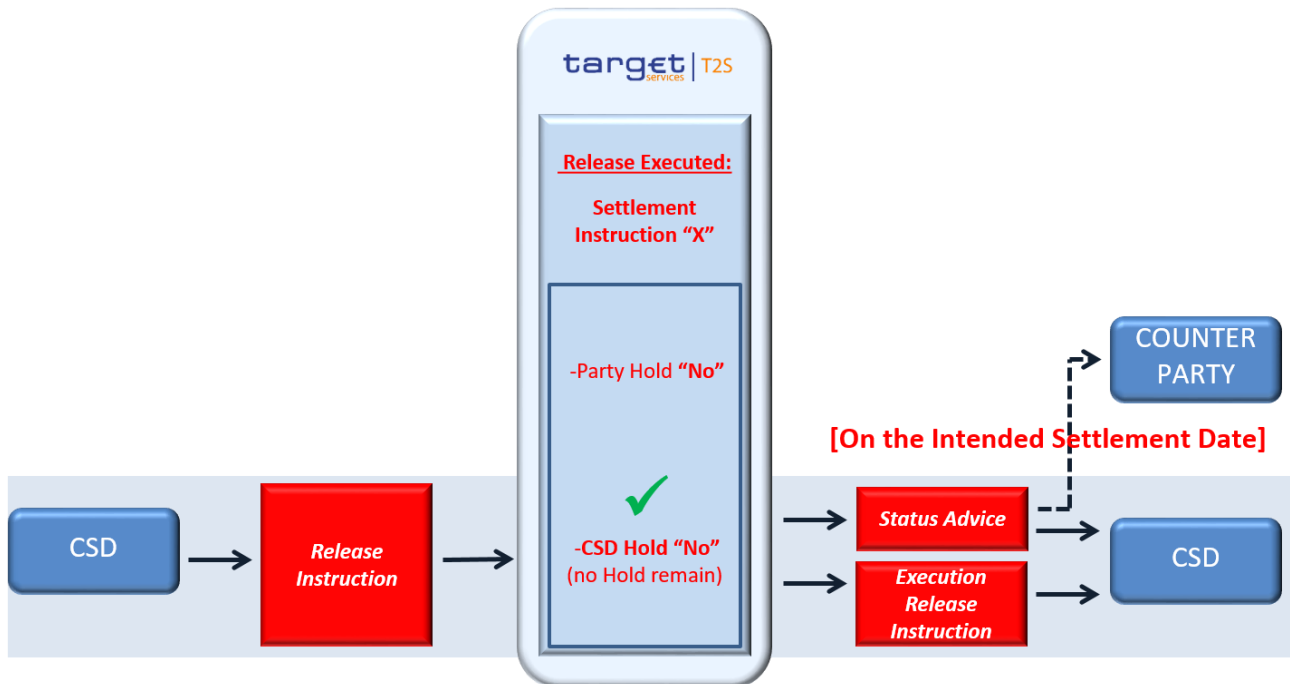

17  
 18 The CSD sends a Release Instruction for CSD Hold, T2S validates successfully the instruction and proceeds  
 19 to release the referenced Settlement Instruction putting "No" in its CSD Hold indicator. The execution of the  
 20 Release Instruction and the Status Advice of the Settlement Instruction are notified to the CSD and other  
 21 interested parties, depending on their message subscription preferences.

22 As the Intended Settlement Date has been reached and the Counterparty was previously informed on the  
 23 Hold Status, T2S informs the Counterparty of instruction "X" (T2S Party of instruction "Y") that its instruction  
 24 can be settled since no hold remains for the Settlement Instruction "X".

1 When the CSD sends its Release Instruction for the Settlement Instruction "X", then the instructions "X" and  
2 "Y" are eligible for settlement.

3 Thus, Settlement Instruction "X" changes from scenario 8 to scenario 1 in Table 121 - [Hold /Release Exhaustive Scenarios for a Settlement Instruction](#) [▶ 366].

5 **DIAGRAM 88 - THE T2S PARTY SENDS A RELEASE INSTRUCTION**

6

#### 7 **1.6.1.6.5 Hold/Release Default for Settlement Instructions**

8 When a T2S Actor sends a Settlement Instruction, T2S checks if the Settlement Instruction has the Party  
9 Hold status set (i.e. hold indicator has value "Yes" or "No") or not.

10 In case the Party Hold status is not set, T2S checks in Reference Data the "Hold Release Default" value of  
11 the Securities Account included in the Instruction <sup>231</sup>:

12 | If the "Hold Release Default" value of the Securities Account is set to "Yes", the instruction is set auto-  
13 matically On Hold through the Party Hold Status (i.e. T2S sets the value of the "Party Hold" status to  
14 "Yes") and the T2S Actor is informed through a Status Advice on the acceptance of the instruction and  
15 the Party Hold status "Yes".

16 | In case the "Hold Release Default" value of Securities Account is set to "No", the instruction is not set  
17 automatically On Hold.

18 The "Hold Release Default" check is performed only once, upon the first validation of an instruction received  
19 from a T2S Actor (i.e. it is not performed at revalidation process).

231 Internally generated instructions are not considered for Hold/Release default.

1 Changes in Reference Data of the "Hold Release Default" of a Securities Account do not trigger the revalida-  
2 tion of the instructions that include such Securities Account (i.e. the change of the "Hold Release Default"  
3 only affects instructions received after such a change).

#### 4 **1.6.1.6.6 Partial Release process**

5 When a T2S Actor sends a Release Instruction, he has the option to only release part of the quantity of the  
6 referenced Settlement Instruction in case a set of given conditions are met.

7 In order to trigger this process the T2S Actor must specify, in the Release Instruction, a quantity which shall  
8 be lower than the quantity indicated in the referenced Settlement Instruction.

9 To validate this particular type of Release Instruction, T2S checks that:

- 10 | The Referenced Instruction exists;
- 11 | The quantity to be released is lower than the original quantity of the Referenced Instruction;
- 12 | The quantity to be released complies with the Settlement Unit Multiple.
- 13 | The number of decimals of the quantity to be released is equal or lower than the number of decimals of  
14 the Settlement Unit Multiple of the related Security
- 15 | The quantity is expressed using the same Settlement Type as the one specified in T2S Reference Data  
16 for the ISIN Code of the referenced Settlement Instruction.
- 17 | The Intended Settlement Date of the referenced Settlement Instruction has been reached.
- 18 | The Securities Movement Type of the referenced Settlement Instruction is 'DELI'.
- 19 | The referenced Settlement Instruction is not a T2S generated Settlement Instruction

20 If any of these conditions is not met the Release Instruction is rejected and T2S does not undertake the  
21 Partial Release Process.

22 If the Release Instruction is successfully validated by T2S, the Partial Release Process will then carry on an-  
23 other subset of checks in order to execute the partial release:

- 24 | The Referenced Instruction is matched;
- 25 | The Referenced Instruction is not awaiting approval or revoked;
- 26 | The Referenced Instruction is not settled;
- 27 | The Referenced Instruction is not cancelled;
- 28 | The Referenced Instruction is not identified with CoSD Flag;
- 29 | The Referenced Instruction is on Party Hold;
- 30 | The quantity to be released complies with partial settlement rules regarding MSU, SUM and cash thresh-  
31 old;
- 32 | No other hold applies to the Referenced Instruction or its counterparty instruction;
- 33 | None of the related Realignment instructions is on Hold
- 34 | The Referenced Instruction and its counterparty instruction allow partial settlement;
- 35 | The Referenced Instruction and its counterparty instruction are not constrained by any settlement link;

- 1 | The Referenced Instruction and its counterparty instruction are not constrained by any non-reciprocal  
2 | link;
- 3 | The Referenced Instruction and its counterparty instruction have not reached their cut-off time.
- 4 | If the conditions for partial release are no longer present the ongoing partial release process is cancelled.
- 5 | If the quantity released is higher than the remaining quantity of the Referenced Instruction the partial re-  
6 | lease will be handled as a full Release Instruction.
- 7 | Once T2S successfully executes the partial release, the T2S Actor is informed through a message communi-  
8 | cating the execution of the maintenance instruction and through a Status Advice message informing that the  
9 | Referenced Instruction is still on Party Hold and that the partial release has been executed. Interested par-  
10 | ties can also be informed depending on their message subscription preferences (see section [Status Man-  
11 | agement](#) [▶ 758] and section [Message subscription](#) [▶ 203]).
- 12 | Once executed, a partially released Settlement Instruction will be only submitted to a settlement attempt if  
13 | Partial Settlement is allowed i.e. a Partial Settlement Window is open or the corresponding sequence of the  
14 | Night Time Settlement is running (see section [Partial Settlement](#) [▶ 421]).
- 15 | To cancel the Partial Release Process, a Party Hold instruction should be sent.
- 16 | Additionally, the Partial Release Process will be automatically cancelled when:
- 17 | | Any new holds apply to the Referenced Instruction or the counterparty instruction;
  - 18 | | A release instruction over the Referenced Instruction is received;
  - 19 | | The Partial Settlement of the Referenced Instruction or the counterparty instruction is disallowed i.e.  
20 | | Partial Settlement Indicator set to 'NPAR';
  - 21 | | A Business Link is added through an amendment or a non-reciprocal link;
  - 22 | | The Partial Release Process has not fully settled the released quantity by the relevant cut-off time.
  - 23 | | The released quantity is less than the quantity resulting from the cash threshold equivalent in the under-  
24 | | lying settlement instruction;
- 25 | If the Partial Release Process is cancelled the T2S Actor will be informed through a Status Advice message.
- 26 | In case a T2S Actor wants to amend the Partial Release Process and increase or decrease the quantity to be  
27 | partially released, the T2S Actor shall cancel the current process by sending a Party Hold instruction and  
28 | send a new partial release with the new desired quantity to be released.
- 29 | During the whole Partial Release Process, the referenced Settlement Instruction will remain on Party Hold.
- 30 | The Partial Release Process will terminate when the partially released quantity is completely settled or if the  
31 | process is cancelled, either by the T2S Actor or by T2S.

#### 32 | **EXAMPLE 106 - PARTIAL RELEASE PROCESS**

33 | This example illustrates the execution of a Release Instruction that aims to partially release Settlement In-  
34 | struction "X", which has its Party Hold indicator already set to "Yes".

35 | On the Start of Day period of the Intended Settlement Date for Settlement Instruction "X", a T2S Party  
36 | sends a Release Instruction for Party Hold, in order to partially release the referenced Settlement Instruc-

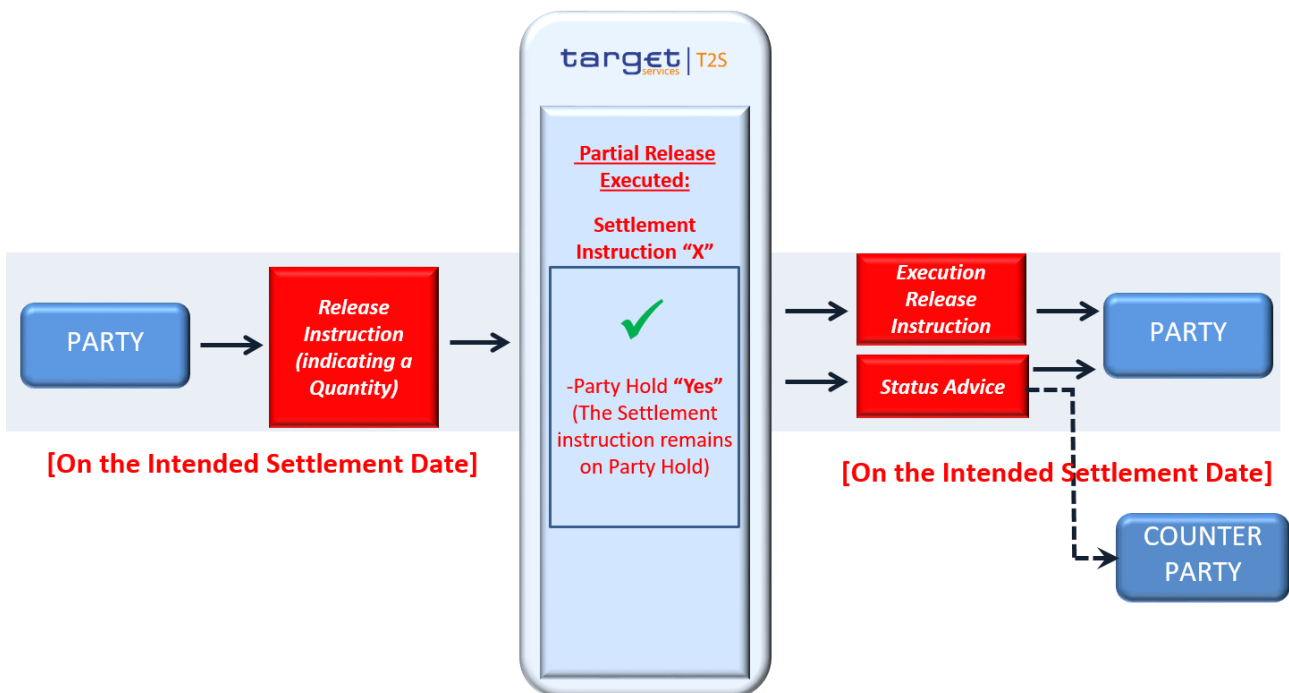

1 tion. For this, the T2S Party indicates a specific quantity in the Release Instruction which is lower than the  
 2 original quantity of Settlement Instruction "X". T2S successfully validates the instruction, and proceeds to  
 3 execute the partial release, leaving the Party Hold indicator of the referenced Settlement Instruction set to  
 4 "Yes". Additionally, T2S notifies the execution of the Release Instruction and the Status Advice of the Set-  
 5 tlement Instruction to the T2S Actor and other interested parties, depending on their message subscription  
 6 preferences.

7 After the execution of the Release Instruction, Settlement Instruction "X" will only be submitted to a settle-  
 8 ment attempt when Partial Settlement is allowed.

9 After the effective settlement of the partially released quantity, the referenced Settlement Instruction will  
 10 remain on Party Hold until the T2S Actor sends a standard Party Hold Release Instruction (i.e. without speci-  
 11 fying a quantity) or another Release Instruction indicating a quantity equal or higher than the quantity re-  
 12 maining on Party Hold.

13 The Settlement Instruction "X" remains in scenario 9 of Table 121 - [Hold /Release Exhaustive Scenarios for a](#)  
 14 [Settlement Instruction](#) [▶ 366] throughout the entire partial release process and also after its ending.

15 **DIAGRAM 89 - THE PARTY SENDS A RELEASE INSTRUCTION TO PARTIALLY RELEASE A SETTLEMENT INSTRUCTION**

16

17 **1.6.1.6.7 Parameters Synthesis**

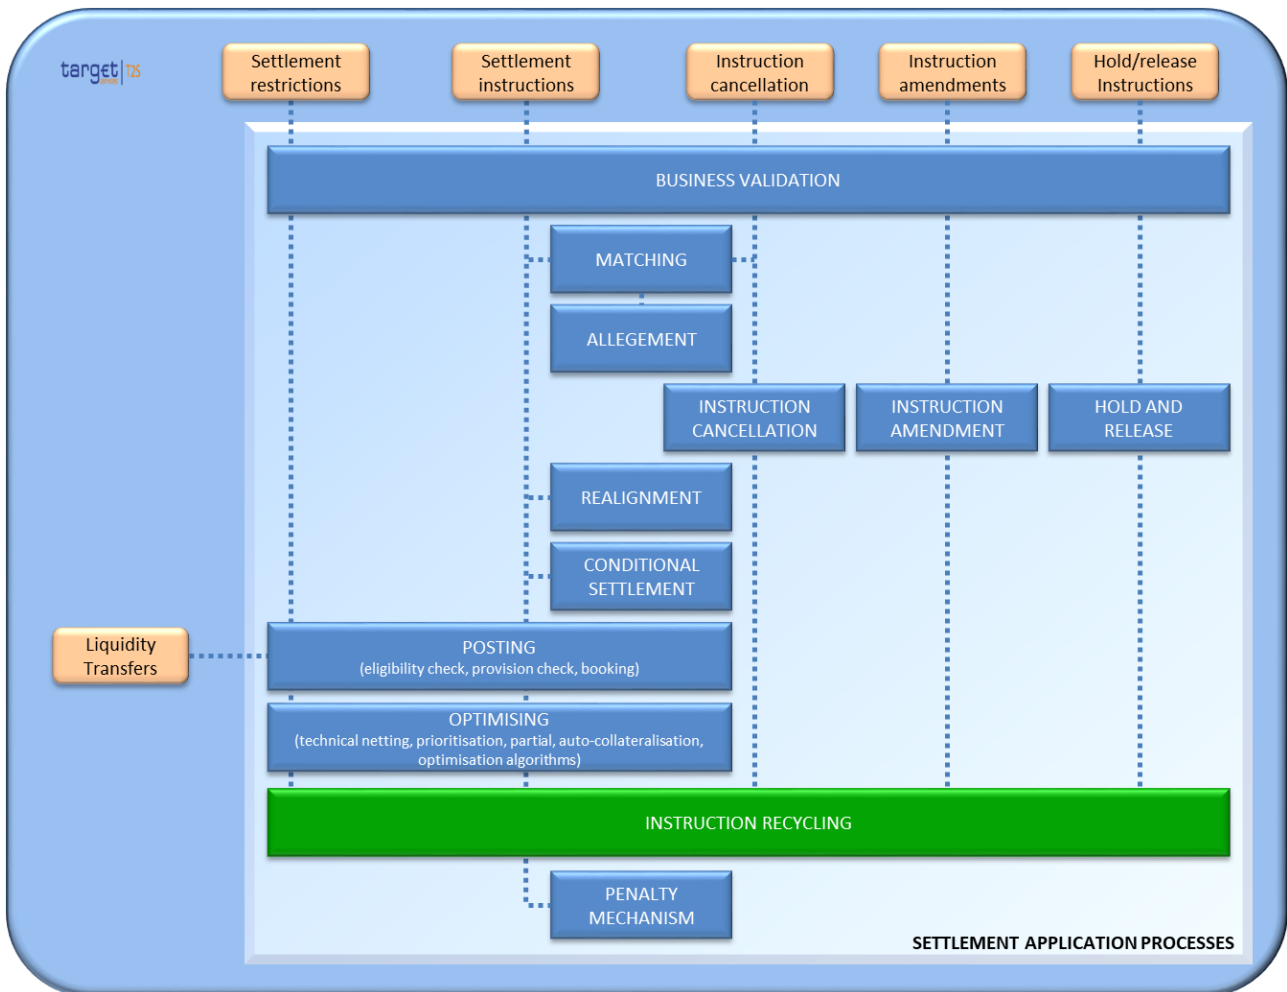

18 No specific configuration from T2S Actor is needed in T2S Reference Data.

1 1.6.1.7 Instructions Recycling

2 **1.6.1.7.1 Concept**

3 At each end of a Settlement Day (See section [Settlement Day](#) [▶ 237]), T2S recycles pending instructions for  
 4 a period of time known as recycling period, which is defined as the number of working days a pending in-  
 5 struction can remain in T2S, before being cancelled by the system.

6 **DIAGRAM 90 - INSTRUCTION RECYCLING APPLICATION PROCESS**

7

8 **1.6.1.7.2 Overview**

9 The recycling of an instruction in T2S triggers the revalidation process at the Start of Day, as described in  
 10 section [Business Validation](#) [▶ 301]. The Instruction Recycling process manages the automatic cancellation of  
 11 all the pending instructions that have exceeded their recycling period in T2S.

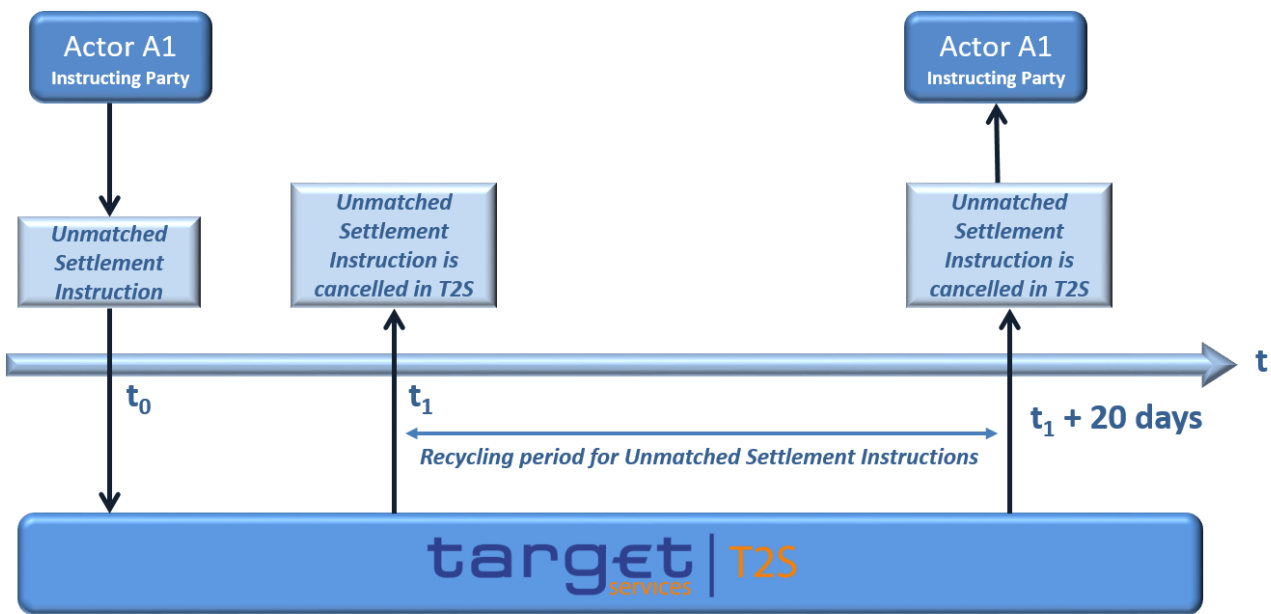

12 **1.6.1.7.3 Recycling Process**

13 T2S manages two different recycling periods for pending instructions in the system, i.e. the recycling period  
 14 for pending Unmatched Instructions and the recycling period for pending Matched Instructions and Settle-  
 15 ment Restrictions.

1 The Recycling period for Unmatched Instructions <sup>232</sup> (i.e. the number of days during which an unmatched  
 2 instruction can be matched in T2S) applies to Unmatched Settlement Instructions and Cancellations Instruc-  
 3 tions that need to be matched.

4 Unmatched Settlement Instructions are recycled in T2S for a period of working days configured by the T2S  
 5 Operator, starting from the Intended Settlement Date or the date of the last status change of the instruction  
 6 (e.g. T2S considers a change of Party Hold status from "Yes" to "No" as a status change) depending on  
 7 which date is the latest. Any status value change is considered for restarting the count of the number of  
 8 days for the recycling period. For more information on status changes see section [Status Management](#)  
 9 [[▶ 758](#)].

10 **DIAGRAM 91 - RECYCLING PERIOD FOR UNMATCHED SETTLEMENT INSTRUCTIONS**

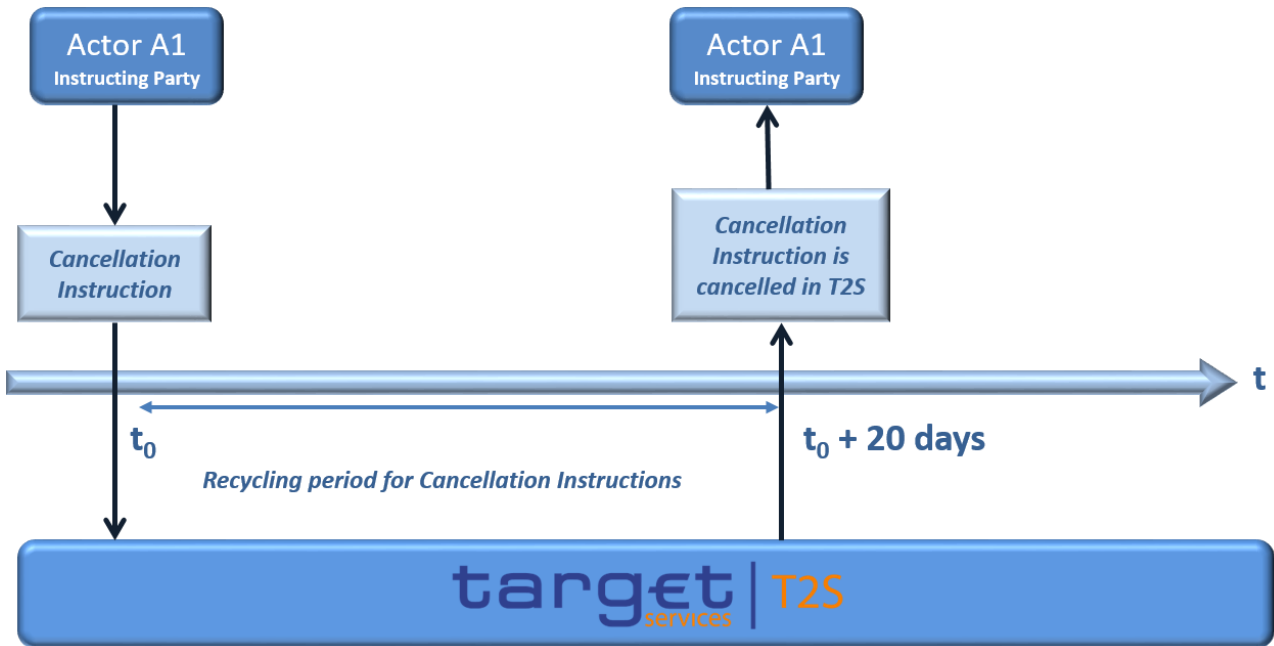

11  
 12 Unmatched Cancellation Instructions that need to be matched in T2S are recycled for a period of working  
 13 days configured by the T2S Operator, starting from its reception in T2S until its matching occurs.

232 Current recycling period for unmatched instructions of 20 working days.

1

**DIAGRAM 92 - RECYCLING PERIOD FOR UNMATCHED CANCELLATION INSTRUCTIONS**

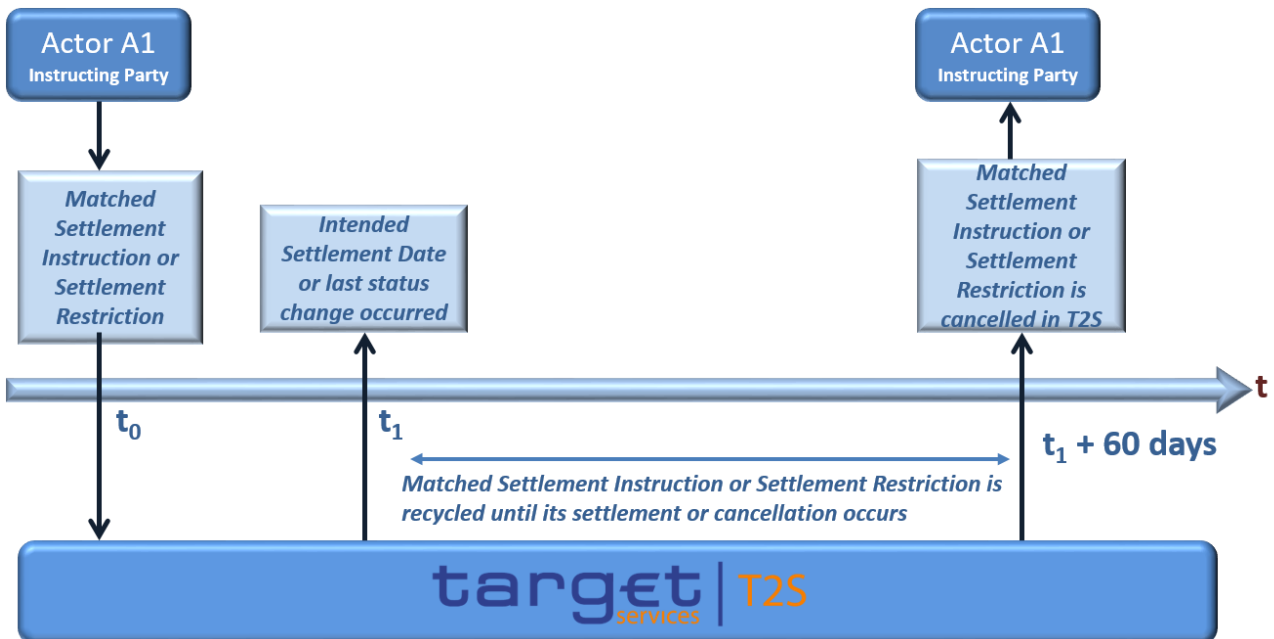

2

3 Pending Matched Instructions and Settlement Restrictions are recycled in T2S for a period of working days  
 4 <sup>233</sup> configured by the T2S Operator until its settlement or cancellation occurs (See section [Instruction Cancel-](#)  
 5 [lation](#) [▶ 360]).

6

**DIAGRAM 93 - RECYCLING PERIOD FOR MATCHED INSTRUCTIONS**

7

233 Current recycling period for matched instructions of 60 working days.

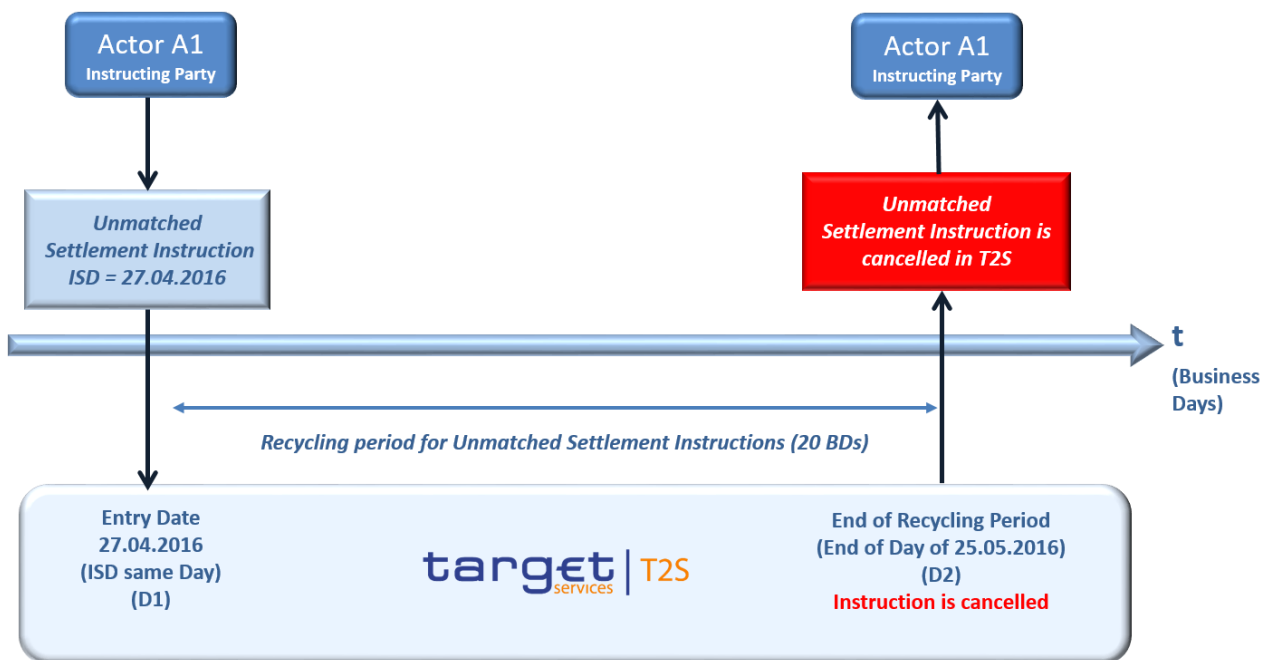

1 T2S does not send a daily message to the T2S Actors informing about the result of the recycling process.  
 2 Only when an instruction exceeds its recycling period, T2S cancels it automatically and sends a message to  
 3 the T2S Actor informing on the cancellation of its instruction with the corresponding reason code(s). The  
 4 dialogue is reflected in section Send Settlement Instruction. Interested parties can also be informed depend-  
 5 ing on their message subscription preferences (see section [Status Management](#) [▶ 758] and section [Message](#)  
 6 [subscription](#) [▶ 203]).

7 T2S calculates the recycling period applicable to a pending instruction as follows:

8 At EoD process, T2S cancels all instructions that have reached their recycling period. The recycling period is  
 9 considered as reached when: The difference between "D1" (latest date between the ISD and the business  
 10 day of the last status change of the instruction) and "D2" (current business date) equals the number of  
 11 business days defined for the applicable recycling period.

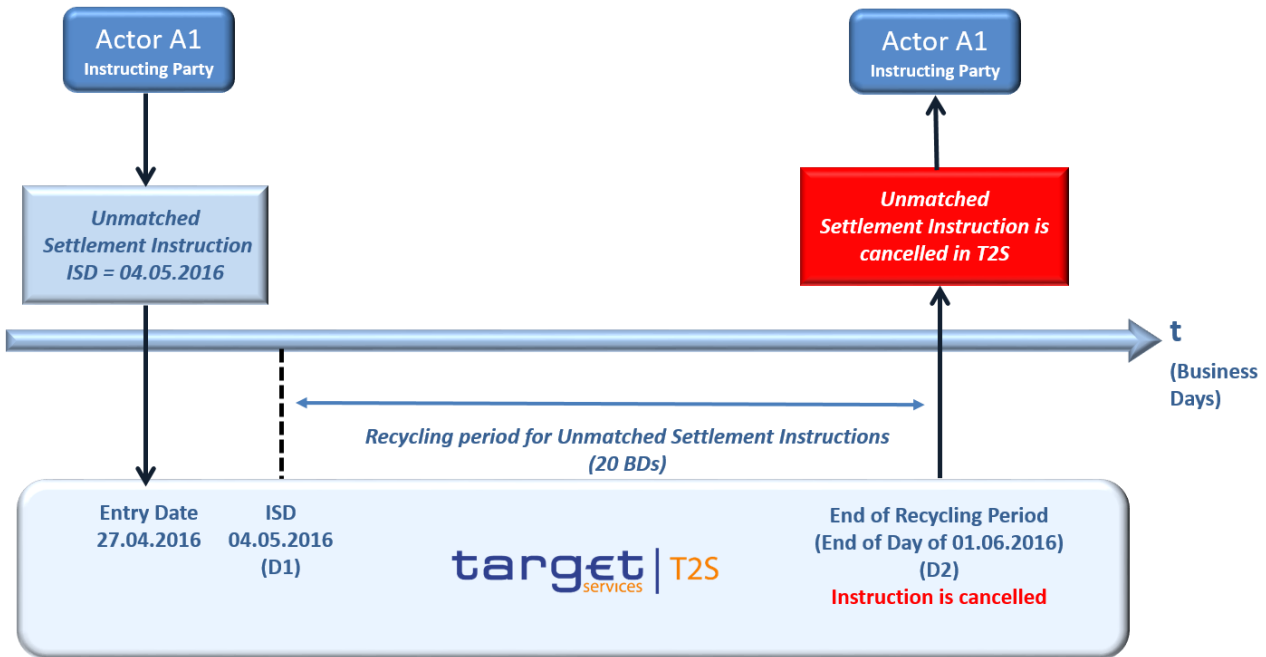

12 Once the recycling period is reached, T2S stops recycling the instruction, leading to the automatic cancella-  
 13 tion of the instruction in the system and sending of the corresponding status notification to the T2S Actors.  
 14 Nevertheless, until the EoD the instruction is still processed as normal throughout the whole business day.  
 15 The following examples consider the standard value defined for the parameter of "recycling period for un-  
 16 matched instructions".

17 **DIAGRAM 94 - RECYCLING PERIOD FOR UNMATCHED SETTLEMENT INSTRUCTIONS (ENTRY DATE THE SAME**  
 18 **DAY OF ISD AND WITHOUT ANY STATUS UPDATE DURING ITS LIFECYCLE)**

19  
 20 A Settlement Instruction enters in T2S on business day 27.04.2016 as unmatched and with ISD same day  
 21 (27.04.2016). There is no status update after its acceptance. As entry date is the same as both ISD and last  
 22 status update, i.e. 27.04.2016, the end of the recycling period will be reached on 25.05.2016, therefore the  
 23 Settlement Instruction will be cancelled at the EOD of 25.05.2016 (Since 25.05.2016 - 27.04.2016 = 20  
 24 business days).

1 **DIAGRAM 95 - RECYCLING PERIOD FOR UNMATCHED SETTLEMENT INSTRUCTIONS (ISD IN THE FUTURE AND**  
 2 **WITHOUT ANY STATUS UPDATE DURING ITS LIFECYCLE)**

3  
 4 A Settlement Instruction enters in T2S on business day 27.04.2016 as unmatched with ISD in the future  
 5 (04.05.2016). There is a status update neither after its acceptance nor after ISD. As ISD is later than the  
 6 Entry Date, the end of the recycling period will be reached on 01.06.2016, therefore the settlement instruc-  
 7 tion will be cancelled at the EOD of 01.06.2016 (Since 01.06.2016 – 04.05.2016 = 20 business days).

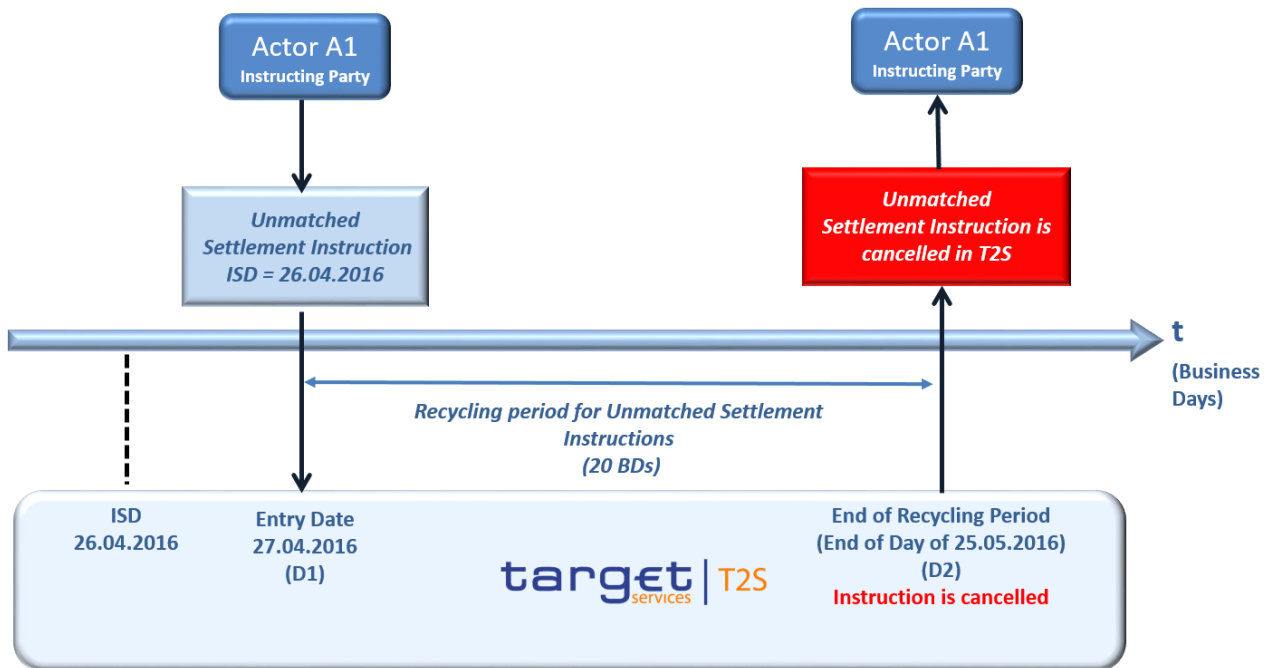

8 **DIAGRAM 96 - RECYCLING PERIOD FOR UNMATCHED SETTLEMENT INSTRUCTIONS (ISD IN THE FUTURE AND**  
 9 **A HOLD STATUS UPDATE DURING ITS LIFECYCLE)**

10  
 11 A Settlement Instruction enters in T2S on business day 27.04.2016 as unmatched with ISD in the future  
 12 (04.05.2016). There is a hold status update on 06.05.2016. As the last status update of the instruction was

1 on 06.05.2016, the recycling period will be reached on 03.06.2016, therefore the settlement instruction will  
 2 be cancelled at the EOD of 03.06.2016 (since 03.06.2016 – 06.05.2016 = 20 business days).

3 **DIAGRAM 97 - RECYCLING PERIOD FOR UNMATCHED SETTLEMENT INSTRUCTIONS (ISD IN THE PAST AND**  
 4 **WITHOUT ANY STATUS UPDATE DURING ITS LIFECYCLE)**

5  
 6 A Settlement Instruction enters in T2S on business day 27.04.2016 as unmatched with ISD in the past  
 7 (26.04.2016). There is no status update after its acceptance. As the last status update (the acceptance of  
 8 the instruction) is later than the ISD, the end of the recycling period will be reached on 25.05.2016, there-  
 9 fore the settlement instruction will be cancelled at the EOD of 25.05.2016 (Since 25.05.2016 - 27.04.2016 =  
 10 20 business days).

11

12 **1.6.1.7.4 Parameters Synthesis**

13 No specific configuration from T2S Actor is needed. The following parameter is specified by the T2S Opera-  
 14 tor.

15

Recycling	Recycling period for matched instructions	T2S Operator	T2S Operator	M	N/A	60 working days

1 1.6.1.8 Posting

2 **1.6.1.8.1 Concept**

3 The posting application process checks if the settlement of Settlement Instructions, Settlement Restrictions  
4 and Liquidity Transfers can be achieved considering their eligibility to settlement and the available resources.

5 In case of high concentration of Settlement Instructions on the same resource (i.e. debiting the same DCA,  
6 debiting or crediting the same SAC not allowed to be negative), the Settlement Instructions could be  
7 grouped without any business links between one another.

8 It may resort to the optimising application process if needed for the settlement (See section [Optimising](#)  
9 [▶ 413]).

10 When the check is satisfactory, the posting application process updates the cash balance, securities position  
11 and limit headroom, resulting in the irrevocability of the settlement.

12 **DIAGRAM 98 - SETTLEMENT APPLICATION PROCESSES / POSTING**

13

14 **1.6.1.8.2 Overview**

15 Settlement Instructions, Settlement Restrictions and Liquidity Transfers, sent by the T2S Actors or automati-  
16 cally generated by T2S, are submitted to the posting application process at the Intended Settlement Date.

- 1 They can be submitted to the posting application process individually or grouped with other Settlement In-  
2 structions or Settlement Restrictions or Liquidity Transfers due to links set by T2S Actors or by T2S applica-  
3 tion processes (See section [Linked Instructions](#) [▶ 500]).
- 4 In case of high concentration of Settlement Instructions, Settlement instructions on the same resource (i.e.  
5 debiting the same DCA, debiting or crediting the same SAC not allowed to be negative), the Settlement In-  
6 structions could be grouped without any business links between one another.
- 7 For Settlement Instructions, Settlement Restrictions and Liquidity Transfers that are submitted to the posting  
8 application process in a group, settlement is performed on an all-or-none basis (i.e. all Settlement Instruc-  
9 tions, Settlement Restrictions or Liquidity Transfers submitted together are all settled or unsettled).
- 10 In case of failure after this first settlement attempt, Settlement Instructions are submitted again to the post-  
11 ing application process, according to the reason for failure, after:
- 12 | The removal of an intraday restriction;
  - 13 | The release or partial release of hold Settlement Instructions;
  - 14 | The arrival of the missing linked Settlement Instruction(s) or Settlement Restriction(s);
  - 15 | The increase of a limit amount;
- 16 The posting of incoming resources (cash, securities for delivery, securities in positions earmarked available  
17 for collateral, limit headroom after a selling).
- 18 In case Settlement Instructions or Settlement Restrictions remain pending at the end of the settlement day,  
19 they are submitted again to the posting application process the next settlement day.
- 20 During real-time settlement, a first settlement is systematically attempted through the posting application  
21 process. Whatever the success or the failure of this first settlement attempt, its outcome is then used to  
22 trigger:
- 23 | In case of success: the settlement of pending Settlement Instructions or Settlement Restrictions with the  
24 new cash and/or securities resources and/or credit memorandum balance headroom provided;
  - 25 | In case of failure <sup>234</sup>: the settlement of pending Settlement Instructions or Settlement Restrictions with  
26 the possible resolution of gridlocks by looking for chains (simple circles, back-to-back or more complex  
27 chains).
- 28 During night-time settlement, Settlement Instructions, Settlement Restrictions and Liquidity Transfers are  
29 grouped into cycles and sequences. They are then submitted to the posting application process including an  
30 optimisation in order to identify sets that can settle successfully (See section [Settlement Day](#) [▶ 237]).
- 31 The posting application process includes the following steps:
- 32 | The eligibility check, which performs an ultimate validation at the Intended Settlement Date considering  
33 the criteria related to intraday restrictions, hold process indicator, linkages and potential applicable set-  
34 tlement cut-off;

---

234 **[In case of a high-volume event of corporate actions, failing transactions will be submitted to a dedicated process for optimisation triggered at regular time intervals](#)**(CR-783)

- 1 | The provision check, which determines the relevant securities positions, cash balances and limits on the  
2 | involved accounts and the associated credit memorandum balance. In case of lack of cash, lack of secu-  
3 | rities or insufficient external guarantee headroom, partial settlement (See section [Partial Settlement](#)  
4 | [[▶ 421](#)]) and auto-collateralisation (See section [Auto-collateralisation](#) [[▶ 430](#)]) can be used under specific  
5 | conditions;
- 6 | The booking updates the securities positions, the cash balances, the limit headroom associated to credit  
7 | memorandum balances and the statuses, making the settlement irrevocable.

### 8 | **1.6.1.8.3 Eligibility check process**

9 | This process checks at the Intended Settlement Date if the settlement of all matched Settlement Instruc-  
10 | tions, Settlement Restrictions and Liquidity Transfers submitted in an all or none basis is allowed considering  
11 | all the following eligibility conditions:  
12 |

CONDITIONS	RULES
No hold process in progress	All hold indicators of the submitted Settlement Instruction are set to "No" (See section <a href="#">Hold and Release</a> [ <a href="#">▶ 364</a> ]). <sup>235</sup>
No applicable cut-off reached	The Settlement Instruction, Settlement Restriction or Liquidity Transfer is not subject to an applicable cut-off (See section <a href="#">Settlement Day</a> [ <a href="#">▶ 237</a> ]).
No applicable intraday restriction related to the security, the securities account, the T2S dedicated cash account, the External RTGS account or the parties	The security, securities accounts, T2S dedicated cash accounts, External RTGS accounts or parties involved in the processed Settlement Restriction, Settlement Instructions or Liquidity Transfers are not under intraday restriction, i.e.: <ul style="list-style-type: none"> <li>  No intraday restriction is set on these objects by the involved CSDs and CB, or;</li> <li>  An intraday restriction is set on one of these objects but the criteria, defined in the associated rules do not match with the processed Settlement Instructions, Settlement Restrictions or Liquidity Transfer (e.g. list of ISO transaction code for an intraday restriction on security).</li> </ul> (See section <a href="#">Restriction types</a> [ <a href="#">▶ 45</a> ] for the set up and the section below "Identification of an applicable intraday restriction" for the check of an intraday restriction).
An authorised settlement instruction for securities within the transformation detection period	The settlement instruction is relating to securities within the transformation detection period (defined as a period of 20 T2S opening days past the security's maturity date, during which instructions are considered eligible for settlement). To be considered eligible for settlement within this period the settlement instruction must be either: <ul style="list-style-type: none"> <li>  Instructed by a CSD or</li> </ul>

235 Exception for partial releases where the underlying settlement instruction remains on Party Hold with only a portion eligible for settlement. No other holds may be present (including CSD Hold, CoSD Hold).

CONDITIONS	RULES
	<ul style="list-style-type: none"> <li>An instruction with an instruction type PFOD instructed by a CCPauthorised as per the 'CCP Transformation Exceptions' table.</li> </ul>

1 In case of failure on any of these conditions for at least one of the Settlement Instructions, Settlement Re-  
 2 strictions or Liquidity Transfers under process, their settlement attempt ends. The settlement status of Set-  
 3 tlement instructions and Settlement Restrictions remains unchanged, "unsettled" or "partially settled". The  
 4 settlement status of Liquidity transfers becomes final and is set to "unsettled". A reporting specifying the  
 5 reason(s) for failure is sent to the T2S Actors (See sections Send Settlement Instruction, Send Settlement  
 6 Restriction on Securities Position, Send Settlement Restriction on Cash Balance, Send immediate liquidity  
 7 transfer, Execution of Liquidity Transfer from RTGS to T2S and Execution of Standing and Predefined Liquidi-  
 8 ty Transfer Orders from T2S to RTGS).

9 Additionally the eligibility check ensures that client limits have been created and that any relevant CMB secu-  
 10 rities account link is valid for Settlement. CMB securities account links created on the current business day  
 11 are only taken into account as of the next business day (Reference Data Objects with Limited Validity Peri-  
 12 od). Settlement Instructions impacting undefined client limits or utilising CMB securities account links created  
 13 intraday will be cancelled.

14 If all eligibility criteria are fulfilled, the Settlement Instructions, Settlement Restrictions and Liquidity Trans-  
 15 fers are then submitted to the provision check process.

16 Identification of settlement instructions eligible for settlement during the transformation detection period:

17 CCP PFOD settlement instructions authorised for settlement will be identified by T2S utilising configurations  
 18 made in the attribute domain by the T2S Operator. The following table is a representation of the attribute  
 19 domain configuration used by the eligibility check to confirm that:

- 20 | The settlement instruction is of instruction type PFOD;
- 21 | The instructing party is an authorised CCP.

22 Any settlement instruction beyond the transformation detection period will be rejected by the validation pro-  
 23 cess (See section [Validation process](#) [▶ 302]).

24 Settlement instructions instructed by CSDs are not affected by the transformation period detection period  
 25 and are considered eligible for settlement regardless of the maturity date of the securities (See section [Vali-  
 26 dation process](#) [▶ 302]).

27 **TABLE 122 - CCP TRANSFORMATION EXCEPTIONS**

DESCRIPTION	PARAMETER TYPE	PARAMETER VALUE

	Instruction type	PFOD
	Party BIC	BICXAADDXXX
		BICXAAEEXXX

DESCRIPTION	PARAMETER TYPE	PARAMETER VALUE
		...

1

2 Identification of an applicable intraday restriction

3 CSD or CB can define restriction types which they can use to block the settlement of Settlement Instructions,  
4 Settlement Restrictions or Liquidity Transfers. This is achieved in three steps:

5 | CSD or CB set up Restriction Types and associated Rules in the static data (See section [Restriction types](#)  
6 [▶ 45])

7 | CSD or CB triggers intraday restriction on a specific object based on a predefined restriction type (See  
8 section [Restrict Reference Data Object](#) [▶ 1048])

9 | The eligibility check process checks the Settlement Instructions, Settlement Restrictions or Liquidity  
10 Transfers against the active intraday restrictions and blocks -or allows- their settlement. This is done in  
11 two steps:

12 – Identification of the Settlement Instructions, Settlement Restrictions or Liquidity Transfers which con-  
13 tain objects under intraday restriction,

14 – When rules are defined, check if these Settlement Instructions, Settlement restrictions or Liquidity  
15 Transfers match the rules associated to the intraday restriction.

16 Setting up Restriction Types and associated Rules

17 A CSD or a CB can set up in Static Data a Restriction Type to block - or to allow- the settlement of a Settle-  
18 ment Instruction, a Settlement Restriction or a Liquidity Transfer. The Restriction Type defines which Object  
19 Restriction Type -hereafter referred in this section as the restricted object- is restricted (security, security  
20 account, T2S dedicated cash account, external RTGS account or party) and, if any, for which Restriction  
21 Parameter Type (e.g. Security transaction type of the Settlement Instruction containing the security under  
22 intraday restriction) - hereafter referred in this section as the parameters - and associated values the block-  
23 ing shall apply (or not).

24 On that basis a "rule" is expressed with one or several parameters having each, one or several values. A  
25 Restriction type can contain zero or several rules. Furthermore the Restriction type has a "Positive/Negative  
26 parameter set" in order for the rules to express either the target or the exception for the blocking.

27 Example of set-up of a restriction type and associated rules

28 A Restriction Type is created to be used for blocking the settlement of Settlement Instructions or Settlement  
29 Restrictions on a security except those related to corporate actions or those instructed by "party A". In this  
30 example, the restricted object type is "security", one parameter is "securities transaction type" with values  
31 "CORP" or "CLAI"; the other parameter is "instructing party" with value "Party A". The "Positive/Negative  
32 parameter set" is "N" as the rules express the exceptions to the blocking.

1

RE- STRICTION TYPE	OBJECT RE- STRICTION TYPE	PROCESSING TYPE	POSI- TIVE/NEGATIV E PARAMETER SET	RESTRICTION TYPE RULE	RESTRICTION TYPE PARAMETER
RTBS	Security	Blocking	N	R_01	Securities transaction type = "CORP" or "CLAI"
				R_02	Instructing party = "Party A"

2 (For an overview of the restriction type set up, see section [Restriction types](#) [▶ 45] case two, intraday re-  
3 striction).

4 Triggering intraday restriction

5 Once a restriction type is set-up, the CSD or CB can trigger an intraday restriction using this restriction type  
6 on a specific object by sending a Static Data restriction request (See section [Restrict Reference Data Object](#)  
7 [▶ 1048] ).

8 Example of triggering an intraday restriction

9 A CSD intends to perform an intraday restriction on the security "FR0000121501" using the restriction type  
10 "RTBS" that was set-up above. The CSD sends a SecurityMaintenanceRequest on this security with a refer-  
11 ence to the Restriction Type "RTBS".

12 Detecting an intraday restriction

13 When Settlement Instruction, Settlement Restriction or Liquidity Transfer is submitted to a settlement at-  
14 tempt, the eligibility check process detects the requested blockings and report them to the relevant T2S  
15 actors. This is achieved in two steps:

- 16 | Identification of the Settlement Instructions, Settlement Restrictions and Liquidity Transfers which con-  
17 tain objects under intraday restriction,
- 18 | Check if these Settlement Instructions, Settlement Restrictions and Liquidity Transfers match the rules  
19 associated to the intraday restriction.

20 **Identification of the Settlement Instruction, Settlement Restrictions and Liquidity Transfers**  
21 **which contain objects under intraday restriction**

22 T2S identifies the incoming and pending Settlement Instructions, Settlement Restrictions and Liquidity  
23 Transfers which may be subject to an intraday restriction based on their related objects:  
24

MESSAGE	OBJECT RESTRICTION TYPE	RELATED OBJECTS IN THE MESSAGE
Settlement In- struction	Security	ISIN
	Securities account	Delivering securities account Receiving securities account
	T2S Dedicated cash	Credited T2S dedicated cash account

MESSAGE	OBJECT RESTRICTION TYPE	RELATED OBJECTS IN THE MESSAGE
	account	Debited T2S dedicated cash account
	External RTGS account	Credited T2S dedicated cash account linked to the External RTGS account Debited T2S dedicated cash account linked to the External RTGS account

		Credited T2S dedicated cash account
	External RTGS account	External RTGS account linked to the debited T2S dedicated cash account
		External RTGS account linked to the credited T2S dedicated cash account
	Party	Payment bank linked to the debited T2S dedicated cash account
		Central bank of the payment bank linked to the debited cash account
		Payment bank linked to the credited T2S dedicated cash account
		Central bank of the payment bank linked to the credited cash account

1 One message may contain several objects under intraday restriction. In that case, T2S sends several reason  
 2 codes to the relevant T2S actors, one for each object. Furthermore one single object may be restricted by  
 3 several intraday restrictions. In that case, T2S reports only one reason for the blocked object.

4 For Settlement Instruction or Settlement Restriction subject to an object restriction type "Security" T2S also  
 5 checks who has set up the restriction type and applies the following:

- 6 | By the T2S Operator: the intraday restriction is applicable on all Settlement Instructions or Settlement  
 7 Restrictions,
- 8 | By the issuer CSD of the security: the intraday restriction is applicable only on the Settlement Instruc-  
 9 tions or Settlement Restrictions where the issuer CSD is receiving or delivering CSD. Moreover as the In-  
 10 traday Restriction may apply also on realignment instructions, such set up impacts all Settlement In-  
 11 structions related to the Security issued by this issuer,
- 12 | By a CSD which is not the issuer of the security: the intraday restriction is applicable only on the Settle-  
 13 ment Instructions or Settlement Restrictions having this CSD as delivering or receiving CSD.

14 Example of detection of an intraday restriction

15 A Settlement Instruction which debits an earmarked position is under intraday restriction due to the set-up  
 16 of Restriction Types in the Static Data and the triggering of intraday restrictions as follows:

- 17 | RSA1 on its delivering securities account
- 18 | RSA2 on its delivering securities account
- 19 | RPA1 on the payment bank linked to the credited cash account

1

RE- STRICTION TYPE	OBJECT RE- STRICTION TYPE	PROCESSING TYPE	POSI- TIVE/NEGATIV E PARAMETER SET	RESTRICTION TYPE RULE	RESTRICTION TYPE PARAMETER
RSA1	Securities account	Blocking	Y	-	-
RSA2	Securities account	Blocking	Y	R_01	Debited position = "EAR1"
RPA1	Party	Blocking	N	-	-

2 When detecting the intraday restriction, the eligibility check process reports the blocking with two reason  
3 codes, one for each object under intraday restriction, "securities account" and "party".

4 **Check if these Settlement Instructions, Settlement restrictions and Liquidity Transfers match**  
5 **the rules associated to the intraday restriction**

6 Once an object under intraday restriction is identified in a Settlement Instruction, Settlement Restriction or  
7 Liquidity Transfer, T2S checks further if this Settlement Instruction, Settlement Restriction or Liquidity Trans-  
8 fer matches the rules associated to the restriction type.

9 As the set of possible parameters is predefined, the table below shows the relevant parameters for each  
10 object:  
11

OBJECT	APPLICABLE PARAMETERS
Security	Security transaction type (for SI/SR) Instructing party (for SI/SR)
Securities account	Securities movement type (for SI/SR) Debited position/balance (for SI/SR) Credited position/balance (for SI/SR) Securities transaction type (for SI) Instructing party (for SI/SR)
T2S dedicated cash account	Securities transaction type (for SI) Credit debit indicator (for SI/LT) Instructing party (for SI/LT)
External RTGS account	Securities transaction type (for SI) Credit debit indicator (for SI/LT)
Party	If the blocked party is a CSD or CSD participant: Securities movement type (for SI) Securities transaction type (for SI) Securities account (for SI/SR)

OBJECT	APPLICABLE PARAMETERS
	If the blocked party is a CB or a payment bank: Securities transaction type (for SI) T2S dedicated cash account (for SI/SR) Settlement currency (for SI/SR)

1 T2S checks the rules associated to the restriction type with the three possible outcomes:

2 | No rule is defined: the intraday restriction applies on the object without any limitation and T2S disre-  
3 gards the Positive/Negative parameter set

4 | In case one or several rules are defined and one rule is met: if several rules are defined, they are  
5 checked in the sequence defined by the CSD or CB, T2S stops checking the rules as soon as one rule is  
6 met. When one of the rules is met, T2S applies the blocking according to the "Negative/Positive paramete-  
7 r set" of the restriction type:

8 – If Positive, i.e. the rules express the target of the blocking, the Settlement Instruction, Settlement Re-  
9 striction or Liquidity Transfer is blocked

10 – If Negative, i.e. the rules express the exception to the blocking, the Settlement Instruction, Settlement  
11 Restriction or Liquidity Transfer is not blocked

12 | In case one or several rules are defined and no rule is met: if one or several rules are defined but none  
13 is met, according to the "Negative/Positive parameter set" of the restriction type:

14 – If Positive, the Settlement Instruction, Settlement Restriction or Liquidity Transfer is not blocked be-  
15 cause it does not correspond to the target

16 If Negative, the Settlement Instruction, Settlement Restriction or Liquidity Transfer is blocked because it  
17 does not correspond to the exception.

### 18 **Example with no rule**

19 In the restriction types RSA1, RPA1 defined above:

20 | RSA1 applies for any Settlement Instruction or Settlement Restriction which contains the securities ac-  
21 count under intraday restriction: the Settlement Instruction or Settlement Restriction is blocked whatever  
22 the value of the Positive/Negative Parameter set;

23 | RPA1 applies for any Settlement Instruction, Settlement Restriction or Liquidity Transfer which contains  
24 the party under intraday restriction: the Settlement Instruction or Settlement Restriction is blocked  
25 whatever the value of the Positive/Negative Parameter set.

### 26 **Example with one rule met**

27 Restriction Type with one rule & Positive Restriction Type: for the restriction type RSA2 defined above, if the  
28 debited position is "EAR1", the Settlement Instruction or Settlement Restriction is blocked.

29 RT with one rule & Negative Restriction Type: for the restriction type RTBS defined above, if the securities  
30 transaction type is "CORP" or "CLAI" or if the instructing party is "Party A", T2S does not block the Settle-  
31 ment Instruction or Settlement Restriction.

1 RT with several rules & Negative Restriction Type (for the restriction type RTBS defined above):

2 | If the first rule RS\_01 is met i.e. securities transaction type is "CORP" or "CLAI", since the Nega-  
3 tive/Positive Parameter set is negative T2S does not block the Settlement Instruction or Settlement Re-  
4 striction

5 | If the first rule is not met and the second rule RS\_02 is met, i.e. party is "party A", since the Nega-  
6 tive/Positive Parameter set is negative T2S does not block the Settlement Instruction or Settlement Re-  
7 striction

#### 8 **Example with no rule met**

9 Positive Restriction Type: for the restriction type RSA2 defined above, if the debited position is different from  
10 "EAR1", T2S does not block the Settlement Instruction or Settlement Restriction.

11 Negative Restriction Type: for the restriction type RTBS defined above, if the securities transaction type is  
12 not "CORP" or "CLAI" and if the instructing party is different from "Party A", T2S blocks the Settlement in-  
13 struction or Settlement Restriction and informs the involved actors.

#### 14 **1.6.1.8.4 Provision check process**

15 This process checks, prior to the booking, that the resources or headroom available on the securities posi-  
16 tions, cash balances and credit memorandum balances involved in the settlement under process, are suffi-  
17 cient.

18 It includes the following steps:

19 | The provision check preparation creates additional Liquidity Transfer for cash rebalancing on settlement  
20 related to corporate actions or monetary policy operations, amends the settlement data for Liquidity  
21 Transfer having an "all cash" indicator, creates additional Settlement Restrictions for settlement including  
22 use of restrictions;

23 | The provision net flows calculation computes, a net flow per involved securities position, cash balance,  
24 credit memorandum balance using technical netting;

25 | The provision check execution checks if the provision net flows calculated upfront allow the settlement  
26 considering resources or headroom available on the securities position, cash balance and external guar-  
27 antee headroom;

28 | The provision failure resolution tries to solve, if possible, any remaining lack detected by:

29 – Resorting to Auto-collateralisation process;

30 – Resorting to Partial Settlement process.

31 The booking process is then achieved following these steps, when there remains no lack.

32 Otherwise:

33 | The settlement status remains unchanged (i.e. "unsettled" or "partially settled");

34 | The reporting including the applicable reason(s) for failure is sent to the T2S Actors after the first set-  
35 tlement attempt and then after each update of the reason code (See section Send Settlement Instruction  
36 and section Send Settlement Restriction on Securities Position);

1 | An outcome of the settlement failure is sent to the optimising application process in order to trigger the  
2 | settlement of pending Settlement Instructions with the possible resolution of gridlocks.

3 | Provision check preparation

4 | Generation of Liquidity Transfer for cash rebalancing

5 | T2S rebalances automatically to the RTGS, the cash credited by Settlement Instruction related to corporate  
6 | actions or related to monetary policy operations according to the conditions below.

7 | On Settlement Instruction related to a corporate action (See section [Proceeds resulting from Corporate Ac-  
8 | tions or monetary policy operations](#) [ ▶ 666]), T2S generates immediate Liquidity Transfer if all the following  
9 | rules are fulfilled:  
10 |

CONDITIONS	RULES
Settlement Instruction related to a corporate action	The ISO transaction code of the Settlement Instructions is related to corporate action on stock or on flow.
Existence of a predefined standing order for rebalancing	A valid predefined standing order is set by the owner of the T2S dedicated cash account to rebalance cash received from a corporate action.

11 | On Settlement Instruction related to a monetary policy operation, T2S generates immediate Liquidity Trans-  
12 | fer if the following rule is fulfilled:  
13 |

CONDITIONS	RULES
Settlement Instruction related to a monetary policy operation	The ISO transaction code of the Settlement Instructions is equal to "CNCB".

14 | In both cases, the T2S generated immediate Liquidity Transfer is automatically linked to the Settlement In-  
15 | struction under process in order to ensure their settlement on an all-or-none basis.

16 | Generation of Settlement Restrictions for the use of restriction references

17 | T2S Actors can use in their Settlement Instructions, blocked or reserved securities and/or blocked or re-  
18 | served cash, through the indication of the related restriction reference(s) (See sections [Cash Blocking and  
19 | Reservation](#) [ ▶ 670], [Securities Blocking/Reservation/Earmarking](#) [ ▶ 544] and Send Settlement Instruction).

20 | T2S automatically creates T2S generated Settlement Restrictions for the settlement of Settlement Instruc-  
21 | tions using blocked or reserved securities (See section [Securities Blocking/Reservation/Earmarking](#) [ ▶ 544]),  
22 | i.e. meeting the following conditions:  
23 |

CONDITIONS	RULES
Impacted securities positions	The impacted securities positions has a "Deliverable", "Earmarking" or "Earmarking for auto-collateralisation" restriction processing type.
Existence of restriction reference(s)	The Settlement Instruction contains one or several restriction references related to securities blocking or reservation.

1 T2S automatically creates T2S generated Settlement Restrictions for the settlement of Settlement Instruc-  
2 tions using blocked or reserved cash (See section [Cash Blocking and Reservation](#) [▶ 670]), i.e. meeting the  
3 following conditions:  
4

CONDITIONS	RULES
Existence of restriction reference(s)	The Settlement Instruction contains one or several restriction references related to cash blocking or reservation.

5 Amount calculation for all cash flagged Liquidity Transfer

6 For the liquidity transfer order for which T2S Actor would like to transfer any remaining liquidity on its cash  
7 balance, T2S automatically sets the amount to be settled with the amount actually available on the consid-  
8 ered cash balance during the provision check process, when the Liquidity Transfer to be settled meets the  
9 following condition:  
10

CONDITIONS	RULES
Existence of the all cash flag	The submitted Liquidity Transfer is flagged as "all cash" by the liquidity management application process (See section <a href="#">Liquidity Transfer</a> [▶ 633]).

11 Provision net flows calculation

12 For each Settlement Instruction, Settlement Restriction, Liquidity Transfer or set of Settlement Instruction(s)  
13 and/or Settlement Restriction(s) and/or liquidity transfer(s), T2S calculates three types of provision net flow:

- 14 | The securities provision net flow;
- 15 | The cash provision net flow;
- 16 | The credit memorandum balance (CMB) provision net flow, only when a client of a payment/settlement  
17 bank is involved in a Settlement Instruction.

18 The calculation of each provision net flow corresponds to the sum of debits and credits (See section [Tech-  
19 nical Netting](#) [▶ 414]) for each involved securities position, cash balance and credit memorandum balances  
20 considering the quantity(ies) and/or amount(s) to be settled indicated in the Settlement Instructions, Set-  
21 tlement Restrictions or Liquidity Transfers. In case of partial settlement (See section [Optimising](#) [▶ 413]), the  
22 provision net flows are calculated using partial quantity(ies) and/or amount(s).

23 The provision net flow calculation takes into account the use of restricted resources (set-up, increase, de-  
24 crease and use of restriction) if the T2S Actor has required using one or several restricted securities posi-  
25 tions and/or restricted cash balances via its Settlement Instruction either through the restriction type and/or  
26 restriction reference(s) (See section [Securities Blocking/Reservation/Earmarking](#) [▶ 544]).

1 **DIAGRAM 99 - PROVISION NET FLOW CALCULATION**

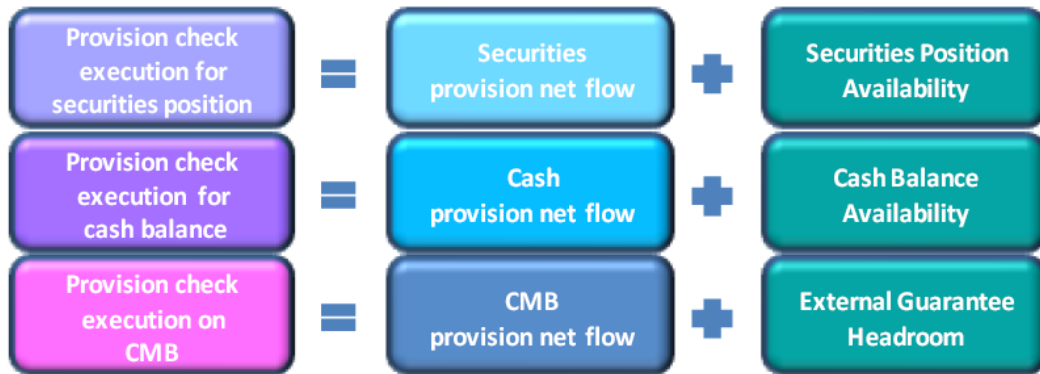

2  
3 Provision check execution

4 T2S controls if the provision net flows previously calculated allow the settlement, i.e. if the resources availa-  
5 ble on the involved securities positions, cash balances and credit memorandum balance are sufficient.

6 This step checks (i) the securities provision net flow against the quantity available on the securities position,  
7 (ii) the cash provision net flow against the amount available on the cash balance and (iii) the CMB net flow  
8 against the amount available on the external guarantee headroom only when a client of a pay-  
9 ment/settlement bank is involved in a Settlement Instruction.

10 When a lack of securities has been identified, for the instructions types DVP, RVP, DWP and RWP (FOP and  
11 PFOD are excluded), no further check of the cash provision net flow or CMB provision net flow is performed  
12 or reported.

13 **DIAGRAM 100 - PROVISION CHECK EXECUTION**

14  
15 The resources available on a securities position or on a cash balance are considered as sufficient if the cor-  
16 responding provision check execution quantity or amount is positive or if the involved securities account or  
17 T2S dedicated cash account is authorised to be negative. The external guarantee remaining on the credit  
18 memorandum balance (ie the external guarantee headroom) is considered as sufficient if the corresponding  
19 provision check execution value is positive.

20 An insufficient external guarantee limit is detected when at least one negative provision net flow amount is  
21 greater, in absolute value, than its corresponding external guarantee headroom.

22 Provision check success

23 The provision check is in success when all provision check executions are positive.

1 In this case, the booking process is achieved.

## 2 Provision check failure

3 The provision check is in failure when one of the provision check execution quantity/amount is negative.

4 T2S then tries to solve the negative provision check by the provision check failure resolution.

## 5 Exemption of provision check execution

6 For securities accounts or T2S dedicated cash accounts opened for specific purposes and allowed to have  
7 negative positions or balances (e.g. issuance accounts for securities or CB cash accounts or RTGS Dedicated  
8 transit accounts), there is no need to execute the provision check.

9 T2S identifies the securities accounts exempted of provision check through the following condition:  
10

CONDITIONS	RULES
Existence of the parameter allowing negative securities positions	The securities account is flagged in the static data as allowed being negative (See configuration in section <a href="#">Accounts structure and organisation</a> [ 94]).

11 T2S identifies the T2S dedicated cash accounts exempted of provision check if the following condition is  
12 fulfilled:  
13

CONDITIONS	RULES
Specific account types	The account type of the T2S dedicated cash account is set as, "RTGS Dedicated Transit Account" or "T2S Central Bank Account", in the static data (See configuration in section <a href="#">Accounts structure and organisation</a> [ 94]).

## 14 Provision failure resolution

15 This step attempts to solve lacks of securities, lacks of cash or insufficient external guarantee headroom  
16 identified upfront by:

- 17 | Resorting to auto-collateralisation through release of collateralised securities or intraday credit provision;
- 18 | Resorting to partial settlement of Settlement Restrictions or Liquidity Transfers.

## 19 Resolving lack of securities

20 T2S attempts to solve lack of securities on a securities position, by using the process below until the lack is  
21 filled in:  
22

ATTEMPTED RESOLUTION	CONDITIONS	RELATED OPTIMISING PROCESS
Partial settlement of Settlement Restrictions	The delivering securities position in lack is debited by Settlement Restriction(s).	T2S immediately settles partially the Settlement Restrictions if allowed (See section <a href="#">Partial Settlement</a> [ 421]).
Automated substitution of collateral	The delivering securities position in lack is earmarked for auto-collateralisation.	T2S tries to solve the lack of securities by releasing collateralised securities if possible (See section <a href="#">Auto-collateralisation</a> [ 430]).

1 Resolving lack of cash

2 T2S attempts to solve lack of cash, by using the process below until the lack is filled in:

3

ATTEMPTED RESOLUTION	CONDITIONS	PROCESS
Partial settlement of Settlement Restrictions	The debited cash balance in lack is debited by Settlement Restrictions.	T2S immediately settles partially the Settlement Restrictions if allowed (See section <a href="#">Partial Settlement</a> [ 421]).
Partial settlement of Liquidity Transfers	The debited cash balance in lack is debited by Liquidity Transfers.	T2S immediately settles partially the Liquidity Transfers if allowed (See section <a href="#">Partial Settlement</a> [ 421]).
Intraday credit provision by the central bank	<ul style="list-style-type: none"> <li>  The owner of T2S dedicated cash account is set as eligible by the considered central bank;</li> <li>  The central bank collateralisation headroom is sufficient to cover the lack.</li> </ul>	T2S tries to provide the cash necessary for the settlement, through intraday credit provided by the central bank using auto-collateralisation (See section <a href="#">Auto-collateralisation</a> [ 430]).

4 Resolving insufficient external guarantee headroom

5 T2S attempts to solve insufficient external guarantee headroom in a credit memorandum balance, using the process below:

6

7

ATTEMPTED RESOLUTION	CONDITIONS	PROCESS
Intraday credit provision by the payment/settlement bank	<ul style="list-style-type: none"> <li>  The owner of the securities account is set as eligible by the considered payment/settlement bank;</li> <li>  The sum of headroom of all limit types associated to the considered credit memorandum balance allows the settlement.</li> </ul>	T2S tries to provide the cash necessary for the settlement, through intraday credit provided by the payment/settlement bank using the auto-collateralisation and through the use of unsecured credit limit if necessary (See section <a href="#">Auto-collateralisation</a> [ 430]).

8 Result of the provision failure resolution

9 Once all lacks and insufficient headroom are resolved by the optimising application process, the provision check process executes a new provision net flows calculation followed by a new provision check execution, taken into account the potential T2S generated Settlement Instructions for auto-collateralisation operations and/or potential calculated partial settlements. After execution of these steps, if the provision check becomes positive, the booking process is done.

14 Otherwise, when at least one lack or insufficient headroom cannot be resolved, the provision check of the current settlement attempt is definitively considered as failed:

- 16 | The settlement status remains unchanged (i.e. "unsettled" or "partially settled");

- 1 | I The reporting including the applicable reason(s) for failure is sent to the T2S Actor after the first settle-  
2 | ment attempts and then after each update of the reason code (See section Send Settlement Instruction  
3 | and section Send Settlement Restriction on Securities Position);
- 4 | I An outcome of the settlement failure is sent to the optimising application process in order to trigger the  
5 | settlement of pending Settlement Instructions with the possible resolution of gridlocks or to trigger par-  
6 | tial settlement (See section [Partial Settlement](#) [▶ 421]).

7 | *Example of provision check process*

8 | The following examples illustrate the full provision check process.

9 | **EXAMPLE 107 - FAILED PROVISION CHECK FOR SETTLEMENT RESTRICTION**

10 | The following Settlement Restriction is received by T2S to increase a blocking of securities:  
11 |

OPE ID	SECURITIES AC-COUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
SR4	SA12	ISIN X	AWAS	BLO1	7,500	RRF12345

12 | Based on the Settlement Restriction related to increase of blocked securities, T2S calculates the provision  
13 | net flows and, then, the provision check execution of the deliverable securities position (SecPos12) and the  
14 | blocked securities position (SecPos13) involved:  
15 |

OPERATION	SECURITIES SIDE	
	SECPOS12	SECPOS13
	SA12 ISIN X AWAS	SA12 ISIN X BLO1
SR4	-7,500	+7,500
Provision net flow	-7,500	+7,500
Availability	+1,000	+80,000
External guarantee headroom <sup>236</sup>		
Provision check execution	-6,500 LACK	+87,500 OK

16 | As the provision check execution is negative (due to insufficient availability in the debited securities position  
17 | SecPos12), and since it applies to a Settlement Restriction to increase a blocking, no partial settlement is  
18 | allowed (See section [Partial Settlement](#) [▶ 421]). The Settlement Restriction will be recycled by the optimiza-  
19 | tion algorithms.

236 | The calculation of the provision net flow for credit memorandum balance is not applicable for Settlement Restriction.

1

**EXAMPLE 108 - SUCCESSFUL PROVISION CHECK FOR SETTLEMENT INSTRUCTIONS**

2

The following Settlement Instructions are received by T2S:

3

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	RECE	10	DCA1	EUR	DBIT	1,000.00
SI2	SA2		AWAS	DELI	10	DCA2		CRDT	1,000.00

4

T2S calculates the provision net flows and the provision check execution of each deliverable securities position (SecPos1 and SecPos2) and cash balances (CashBal1 and CashBal2) involved:

5

6

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X AWAS	DCA1 DLVR	DCA2 DLVR
SI1	+10		-1,000.00	
SI2		-10		+1,000.00
Provision net flow	+10	-10	-1,000.00	+1,000.00
Availability	+50	+100	+100,000.00	+3,000.00
External guarantee headroom <sup>237</sup>				
Provision check execution	+60 OK	+90 OK	+99,000.00 OK	+4,000.00 OK

7

As the provision check is positive, the Settlement Instructions are submitted to the booking process.

8

**EXAMPLE 109 - FAILED PROVISION CHECK DUE TO A LACK OF SECURITIES**

9

The following linked Settlement Instructions are received by T2S:

<sup>237</sup> The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

1

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	RECE	40	DCA1	EUR	DBIT	4,000.00
SI2	SA2		AWAS	DELI	40	DCA2		CRDT	4,000.00
SI3	SA1	ISIN X	AWAS	RECE	20	DCA1	EUR	DBIT	2,000.00
SI4	SA3		EXXX	DELI	20	DCA3		CRDT	2,000.00

2 T2S calculates the provision net flows and, then, the provision check execution of each securities positions  
 3 (SecPos1, SecPos2 and SecPos3) and cash balances (CashBal1, CashBal2 and CashBal3) involved:  
 4

OPERATION	SECURITY SIDE			CASH SIDE		
	SECPOS1	SECPOS2	SECPOS3	CASHBAL1	CASHBAL2	CASHBAL3
	SA1 ISIN X AWAS	SA2 ISIN X AWAS	SA3 ISIN X EXXX	DCA1 DLVR	DCA2 DLVR	DCA3 DLVR
SI1	+40			-4,000.00		
SI2		-40			+4,000.00	
SI3	+20			-2,000.00		
SI4			-20			+2,000.00
Provision net flow	+60	-40	-20	-6,000.00	+4,000.00	+2,000.00
Availability	+60	+90	+10	+99,000.00	+4,000.00	+10,000.00
External guarantee headroom 238						
Provision check execution	+120 OK	+50 OK	-10 OK	+93,000.00 OK	+8,000.00 OK	+12,000.00 OK

5 As the provision check execution is negative (-10 due to a lack of securities on securities position SecPos3,  
 6 earmarked for auto-collateralisation), T2S triggers the auto-collateralisation process resorting to a release of  
 7 already collateralised securities (See section [Auto-collateralisation](#) [▶ 430]).

238 The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

1 **EXAMPLE 110 - FAILED PROVISION CHECK DUE TO A LACK OF CASH**

2 The following Settlement Instructions are received by T2S:

3

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	RECE	90	DCA1	EUR	DBIT	9,000.00
SI2	SA2		AWAS	DELI	90	DCA2		CRDT	9,000.00

4 T2S calculates the provision net flows and, then, the provision check execution of each deliverable securities position (SecPos1 and SecPos2) and cash balances (CashBal1 and CashBal2) involved:

5  
6

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X AWAS	DCA1 DLVR	DCA2 DLVR
SI1	+90		-9,000.00	
SI2		-90		+9,000.00
Provision net flow	+90	-90	-9,000.00	+9,000.00
Availability	+50	+100	+1,000.00	+3,000.00
External guarantee headroom <sup>239</sup>				
Provision check execution	+140 OK	+10 OK	-8,000.00 LACK	+12,000.00 OK

7 As the provision check is negative (-8,000.00 due to a lack of cash), T2S triggers the auto-collateralisation process resorting to CB collateralisation (See section [Auto-collateralisation](#) [▶ 430]).

9 **EXAMPLE 111 - FAILED PROVISION CHECK DUE TO INSUFFICIENT HEADROOM ON A LIMIT ASSOCIATED TO A CMB**

10 The following Settlement Instructions are received by T2S:

239 The calculation of the provision net flow for credit memorandum balance applies, assuming here that the party sending SI1 and SI3 is a client of a payment/settlement bank.

1

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	RECE	15	DCA1	EUR	DBIT	30,000.00
SI2	SA2		AWAS	DELI	15	DCA2		CRDT	30,000.00
SI3	SA1	ISIN X	AWAS	RECE	22	DCA1	EUR	DBIT	45,000.00
SI4	SA3		AWAS	DELI	22	DCA3		CRDT	45,000.00

2 T2S calculates the provision net flows and, then, the provision check execution of each securities position  
 3 (SecPos1, SecPos2 and SecPos3), cash balances (CashBal1, CashBal2 and CashBal3) and credit memoran-  
 4 dum balances (CMB11) involved:  
 5

OPERATION	SECURITY SIDE			CASH SIDE			
	SECPOS1	SECPOS2	SECPOS3	CASHBAL1		CASHBAL2	CASHBAL3
	SA1 ISIN X AWAS	SA2 ISIN X AWAS	SA3 ISIN X AWAS	DCA1 DLVR	CMB11 DCA1	DCA2 DLVR	DCA3 DLVR
SI1	+15			-30,000.00	-30,000.00		
SI2		-15				+30,000.00	
SI3	+22			-45,000.00	-45,000.00		
SI4			-22				+45,000.00
Provision net flow	+37	-15	-22	-75,000.00	-75,000.00	+30,000.00	+45,000.00
Availability	+13	+30	+50	+200,000.00		+50,000.00	+15,000.00
External guarantee headroom <sup>240</sup>					+5,000.00		
Provision check execution	+50 OK	+15 OK	+28 OK	+125,000.00 OK	-70,000.00 Insufficiency	+80,000.00 OK	+60,000.00 OK

6 As the provision check is negative (-70,000.00 due to an insufficiency of external guarantee headroom on  
 7 credit memorandum balances CMB11), T2S triggers the auto-collateralisation process resorting to client-  
 8 collateralisation (See section [Optimising](#) [▶ 413]).

240 The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

- 1 The calculation of the provision net flow for credit memorandum balance is not applicable as parties are  
exclusively payment/settlement banks.

**EXAMPLE 112 - FAILED PROVISION CHECK DUE TO A LACK OF SECURITIES (WITH LACK OF CASH)**

The following Settlement Instructions are received by T2S:

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	RECE	500	DCA1	EUR	DBIT	10,000.00
SI2	SA2		AWAS	DELI	500	DCA2		CRDT	10,000.00

T2S calculates the provision net flows and, then, the provision check execution of each securities position (SecPos1 and SecPos2) and cash balance (CashBal1 and CashBal2) involved:

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X AWAS	DCA1 DLVR	DCA2 DLVR
SI1	+500		-10,000.00	
SI2		-500		+10,000.00
Provision net flow	+500	-500	-10,000.00	+10,000.00
Availability	+250	+100	+7,000.00	+1,000.00
External guarantee headroom <sup>241</sup>				
Provision check execution	+750 OK	-400 LACK	-3,000.00 LACK	+11,000.00 OK

As the provision check execution is negative (-400 due to a lack of securities on securities position SecPos2), the provision check failure occurs due to a lack of securities. No reporting occurs regarding the lack of cash on the cash balance CashBal1, only lack of securities is reported.

**1.6.1.8.5 Booking process**

When the provision check process is successful, the booking process takes place with the following steps:

<sup>241</sup> The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

- 1 | The pre-emption of incoming resources in order to complement the settlement of a reservation partially
- 2 | settled during a previous booking process;
- 3 | The settlement with the updating of the securities positions, the cash balances, the limit headroom asso-
- 4 | ciated to credit memorandum balances and statuses;
- 5 | The sending of the relevant reporting to the T2S Actor <sup>242</sup>;
- 6 | The triggering of the optimisation application process in order to attempt the settlement of pending Set-
- 7 | tlement Instructions with the new cash and/or securities resources provided by the successful settle-
- 8 | ment.

Pre-emption

When the Provision Check process is successful, T2S verifies if incoming resources (i.e., a positive provision check flow quantity or amount) can complement the settlement of a securities or a cash reservation that has been partially settled during a previous Booking process.

T2S checks if a pre-emption is requested on the basis of the following conditions:

CONDITIONS	RULES
Positive provision check net flow	The provision net flow associated to the securities position or cash balance is positive (i.e. the credits are higher than the debits).
Existence of pre-emption to fill	The "to be pre-empted quantity" of the credited securities position or cash balance is different than zero.

For securities positions or cash balances meeting these conditions, T2S selects the corresponding partially settled Settlement Restriction and include them in the settlement attempt for complement.

Irrevocable settlement

T2S makes the settlement irrevocable with the simultaneous update of the securities positions, the cash balances, the limit headroom associated to credit memorandum balances and the status.

T2S also checks the floor and ceiling amounts defined for each T2S dedicated cash account involved.

ACTIONS	RULES
Updates of the securities positions	T2S creates and/or updates, via the securities postings <sup>243</sup> , the securities positions credited and debited with all unitary debits and credits contained in the booked Settlement Instructions or Settlement Restrictions.
	If the created or updated securities position is earmarked for an auto-collateralisation, T2S calculates or updates its potential collateral valuation for each credit memorandum balance

242 For details about the relevant reporting, please refer to UDFS chapter 2.

243 During sequence X of night-time settlement, multiple partial settlements may occur during the booking process resulting in securities postings for each unitary debit and credit. These securities postings result in a single SecuritiesSettlementTransactionConfirmation message per sequence. The Securities Posting Search/List screen will show multiple securities postings which when cumulated will correspond to the related SecuritiesSettlementTransactionConfirmation message.

ACTIONS	RULES
	<p>for which it can be provided as collateral.</p> <p>To that purpose, the valuation is done if these securities are eligible to the CSD holding the securities account receiving the collateral.</p> <p>In case of a Settlement Restriction related to a set-up of restricted quantity, T2S creates the restriction reference and the associated quantities according to the quantity actually booked.</p> <p>In case of Settlement Restriction related to an increase, decrease or use of restricted quantity, T2S updates the quantities associated to the restriction reference according to the quantity actually booked.</p> <p>In case of first partial settlement of a Settlement Restriction related to a set-up of reserved quantities, T2S specifies the missing quantity as:</p> <ul style="list-style-type: none"> <li>  Quantity to be pre-empted in the securities position corresponding to the balance from;</li> <li>  Quantity to be filled for the corresponding created restriction reference.</li> </ul> <p>In case of pre-emption of a Settlement Restriction related to a reservation, T2S:</p> <ul style="list-style-type: none"> <li>  Decreases the quantity to be pre-empted of the securities position corresponding to the balance from with the missing quantity;</li> <li>  Updates the quantities associated to the restriction reference by increasing the remaining quantity and by decreasing the to be filled quantity with the quantity actually booked.</li> </ul>
<p>Updates of the cash balances</p>	<p>T2S creates and/or updates, via cash postings <sup>244</sup>, the cash balances credited and debited with each unitary debit and credit contained in the booked Settlement Instructions, Settlement Restrictions or Liquidity Transfers.</p> <p>In case of Settlement Restriction related to a set-up of restricted amount, T2S creates the restriction reference and the associated amounts according to the amount actually booked.</p> <p>In case of Settlement Restriction with an existing restriction reference, T2S updates the amounts associated to the restriction reference according to the amount actually booked.</p> <p>In case of first partial settlement of a Settlement Restriction related to a set-up of reserved amount, T2S specifies the missing amount as:</p> <ul style="list-style-type: none"> <li>  Amount to be pre-empted in the cash balance corresponding to the balance from;</li> <li>  Amount to be filled for the corresponding created restriction reference.</li> </ul>

244 During sequence X of night-time settlement, multiple partial settlements may occur during the booking process resulting in cash postings for each unitary debit and credit. These cash postings result in a single BankToCustomerDebitCreditNotification message per sequence. The BankToCustomerStatement message and T2S DCA Posting Search/List screen will show multiple cash postings which when cumulated will correspond to the related BankToCustomerDebitCreditNotification message.

ACTIONS	RULES
	<p>In case of pre-emption of a Settlement Restriction related to a reservation, T2S:</p> <ul style="list-style-type: none"> <li>  Decrease the amount to be pre-empted of the cash balance corresponding to the balance from with the missing amount;</li> <li>  Updates the amount associated to the restriction reference by increasing the remaining amount and by decreasing the to be filled amount with the amount actually booked.</li> </ul>
<p>Updates of the limit headroom</p>	<p>In case of settlement of T2S generated Settlement Instruction related to a central bank collateralisation, T2S updates the limit headroom of the central bank collateralisation limit.</p> <p>In case of settlement of Settlement Instruction related to a client of a payment/settlement bank and T2S generated Settlement Instruction(s) related to client-collateralisation if any, T2S updates the limit headroom of limits associated to the applicable credit memorandum balance, i.e.:</p> <ul style="list-style-type: none"> <li>  The external guarantee limit;</li> <li>  The client-collateralisation limit;</li> <li>  The unsecured credit limit.</li> </ul> <p>T2S creates the journaling of limit utilisation corresponding to each update of limit headroom associated to credit memorandum balances.</p>
<p>Updates of the status</p>	<p>T2S updates the statuses, their related timestamp and the settlement date of each matched Settlement Instruction, Settlement Restriction(s) and Liquidity Transfer(s) as:</p> <ul style="list-style-type: none"> <li>  "Settled" in case of full settlement;</li> <li>  "Partially settled" in case of partial settlement.</li> </ul>
<p>Check of the floor and ceiling amounts <sup>245</sup></p>	<p>T2S checks the floor and ceiling defined for each T2S dedicated cash account involved.</p> <p>When the amount of their cash balances falls below the defined minimum amount of liquidity or exceeds the defined maximum amount of liquidity, T2S generates information to the T2S Actor.</p>

1 The following examples illustrate the full booking process.

2 *Booking process examples*

3 **EXAMPLE 113 - BOOKING OF A SETTLEMENT RESTRICTION WITH PRE-EMPTION**

4 First step: partial settlement of Settlement Restriction to set-up a new cash reservation

5 The following Settlement Restriction is received by T2S:

245 The floor and ceiling notification functionality is ignored by settlement when the corresponding value is equal to 0. In case a customer would like to receive a floor/ceiling notification for amounts that are slightly below/above zero the T2S Actor has to define a value of 0.01 € instead.

1

OPERATION REFERENCE	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	CURRENCY	AMOUNT
SR2	DCA7	DLVR	RES1	EUR	3,000.00

2 T2S firstly calculates the provision net flows according to the deliverable cash balances (CashBal7) and the  
3 reserved cash balances (CashBal8) involved:  
4

OPERATION	CASH SIDE	
	CASHBAL7	CASHBAL8
	DCA7 DLVR	DCA7 RES1
SR2	-3,000.00	+3,000.00
Provision net flow	-3,000.00	+3,000.00
Availability	+1,000.00	0
External guarantee headroom <sup>246</sup>		
Provision check execution	-2,000.00 LACK	+3,000.00 OK

5 During the provision net flow calculation, as there is not enough deliverable cash balances (CashBal7) to  
6 fully settle the Settlement Restriction, the partial settlement process determines the partial amount to be  
7 settled (1,000.00) according to the deliverable cash balances:  
8

OPERATION	CASH SIDE	
	CASHBAL7	CASHBAL8
	DCA7 DLVR	DCA7 RES1
SR2	-1,000.00	+1,000.00
Provision net flow	-1,000.00	+1,000.00
Availability	+1,000.00	0
External guarantee headroom <sup>247</sup>		
Provision check execution	0 OK	+1,000.00 OK

246 The calculation of the provision net flow for credit memorandum balance is not applicable for Settlement Restriction.

247 The calculation of the provision net flow for credit memorandum balance is not applicable for Settlement Restriction.

1 As the provision check execution is positive using the determined partial amount, the Settlement Restriction  
2 is submitted to the booking process.

3 During the booking process, no pre-emption is possible in this case as the positive provision check execution  
4 amount is related to a reserved cash balances which cannot be used for the set-up of other reservation (See  
5 section [Cash Blocking and Reservation](#) [▶ 670]).

6 The actual booking is then processed resulting in the irrevocable settlement and:

7 | The update of cash balances CashBal7 and CashBal8 with each unitary debit and credit corresponding to  
8 the determined partial amount;

9 | The update of the to be pre-empted amount of the deliverable cash balances CashBal7 with the pending  
10 amount of the Settlement Restriction (2,000.00);

11 | The creation of the cash postings corresponding to the actual update of each cash balance;

12 | The creation of a new restriction reference RRF12345 associated to CashBal8 with the following associ-  
13 ated quantities:

14 – Initial amount = 3,000.00

15 – Used amount = 0

16 – Remaining amount = 1,000.00

17 – To be filled amount = 2,000.00

18 | The update of the settlement status of the Settlement Restriction SR2 to “Partially settled” with the re-  
19 lated timestamp and the settlement date corresponding to the current business date;

20 | The sending to the T2S Actor of the relevant reporting corresponding to the partial settlement of Settle-  
21 ment Restriction SR2 (See section Send Settlement Restriction on Cash Balance) with the generated re-  
22 striction reference RRF12345.

23 **Second step: pre-emption of incoming resources**

24 The following Settlement Instructions are then received by T2S:

25

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDI-CATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA7	ISIN X	AWAS	DELI	100	DCA7	EUR	CRDT	100,000.00
SI2	SA2		AWAS	RECE	100	DCA2		DBIT	100,000.00

26 T2S then calculates the provision net flows of each deliverable securities position (SecPos7 and SecPos2)  
27 and cash balances (CashBal7 and CashBal2) involved:

28

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS7	SECPOS2	CASHBAL7	CASHBAL2

	SA7 ISIN X AWAS	SA2 ISIN X AWAS	DCA7 DLVR	DCA2 DLVR
SI1	-100		+100,000.00	
SI2		+100		-100,000.00
Provision net flow	-100	+100	+100,000.00	-100,000.00
Availability	+500	+100	0	+300,000.00
External guarantee headroom <sup>248</sup>				
Provision check execution	+400 OK	+200 OK	+100,000.00 OK	+200,000.00 OK

1 As the provision check execution is positive, the DVP Settlement Instructions are submitted to the booking  
2 process.

3 The incoming resources on deliverable cash balance CashBal7 (+100,000.00) allow complementing the set-  
4 tlement of the pending part (2,000.00) of the previously partially settled Settlement Restriction SR2. T2S  
5 selects SR2 and updates the provision net flow and provision check execution previously calculated with the  
6 needed incoming resources (2,000.00):  
7

OPERATION	SECURITY SIDE		CASH SIDE		
	SECPOS7	SECPOS2	CASHBAL7	CASHBAL8	CASHBAL2
	SA7 ISIN X AWAS	SA2 ISIN X AWAS	DCA7 DLVR	DCA7 RES1	DCA2 DLVR
SI1	-100		+100,000.00		
SI2		+100			-100,000.00
SR2			-2,000.00	+2,000.00	
Provision net flow	-100	+100	+98,000.00	+2,000.00	-100,000.00

248 The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

OPERATION	SECURITY SIDE		CASH SIDE		
	SECPOS7	SECPOS2	CASHBAL7	CASHBAL8	CASHBAL2
	SA7 ISIN X AWAS	SA2 ISIN X AWAS	DCA7 DLVR	DCA7 RES1	DCA2 DLVR
Availability	+500	+100	0	+1,000.00	+300,000.00
External guarantee headroom <sup>249</sup>					
Provision check execution	+400 OK	+200 OK	+98,000.00 OK	+3,000.00 OK	+200,000.00 OK

- 1 The actual booking is then performed resulting in the irrevocable settlement and in:
  - 2 | The update of the securities positions SecPos7 and SecPos2 with each unitary debit and credit;
  - 3 | The creation of securities postings corresponding to the actual update of each securities position;
  - 4 | The update of the cash balances CashBal7, CashBal8 and CashBal2 with each unitary debit and credit;
  - 5 | The update to zero of the to be pre-empted amount of the deliverable cash balances CashBal7 as the
  - 6 reservation is now fully settled;
  - 7 | The creation of cash postings corresponding to the actual update of each cash balance;
  - 8 | The update of the quantities associated to the restriction reference RRF12345 with:
    - 9 – Initial amount = 3,000.00
    - 10 – Used amount = 0
    - 11 – Remaining amount = 3,000.00
    - 12 – To be filled amount = 0
  - 13 | The update of the settlement status of the Settlement Instruction SI1 and SI2 to "Settled" with the re-
  - 14 lated timestamp and the settlement date corresponding to the current business date;
  - 15 | The update of the settlement status of the Settlement Restriction SR2 to "Settled" with the related
  - 16 timestamp and the settlement date corresponding to the current business date;
  - 17 | The sending to the T2S Actor the relevant reporting corresponding to the full settlement of Settlement
  - 18 Instructions SI1 and SI2 (See section Send Settlement Instruction);
  - 19 | The sending to the T2S Actor of the relevant reporting corresponding to the full settlement of Settlement
  - 20 Restriction SR2 (See section Send Settlement Restriction on Cash Balance);
  - 21 | No information to T2S Actor needed regarding the floor/ceiling as the floor and ceiling amount is not
  - 22 reached.

249 The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

**1 EXAMPLE 114 - SETTLEMENT INSTRUCTIONS WITH USE OF RESTRICTION FOR WHICH PROVISION CHECK EXECUTION IS POSITIVE**

2 The following Settlement Instructions are received by T2S:

3

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	DELI	100	DCA1	EUR	CRDT	100,000.00
SI2	SA2		AWAS	RECE	100	DCA2		DBIT	100,000.00

4 For Settlement Instruction SI1, the T2S Actor indicates the restriction reference RRF11111 corresponding to  
5 a restricted securities position as blocking and the restriction reference RRF22222 corresponding to a re-  
6 stricted securities position as reservation (both positions have been previously set up by the T2S Actor).

7 According to the restriction references RRF11111 and RRF22222 indicated by the T2S Actor in its Settlement  
8 Instruction SI1, T2S creates the Settlement Restriction SR1, corresponding to restriction reference RRF11111  
9 (use of blocked securities in the securities position SecPos7), and Settlement Restriction SR2, corresponding  
10 to restriction reference RRF22222 (use of reserved securities in the securities position SecPos9).

11 Based on the Settlement Instructions and Settlement Restrictions created, T2S calculates the provision net  
12 flows of each deliverable securities position (SecPos1, SecPos7, SecPos9 and SecPos2) and cash balances  
13 (CashBal1 and CashBal2) involved:

14

OPERATION	SECURITY SIDE				CASH SIDE	
	SECPOS1	SECPOS7	SECPOS9	SECPOS2	CASHBAL1	CASHBAL2
	SA1 ISIN X AWAS	SA1 ISIN X BLO1	SA1 ISIN X RES1	SA2 ISIN X AWAS	DCA1 DLVR	DCA2 DLVR
SI1	-100				+100,000.00	
SI2				+100		-100,000.00
SR1	+70	-70				
SR2	+30		-30			
Provision net flow	0	-70	-30	+100	+100,000.00	-100,000.00

OPERATION	SECURITY SIDE				CASH SIDE	
	SECPOS1	SECPOS7	SECPOS9	SECPOS2	CASHBAL1	CASHBAL2
	SA1 ISIN X AWAS	SA1 ISIN X BLO1	SA1 ISIN X RES1	SA2 ISIN X AWAS	DCA1 DLVR	DCA2 DLVR
Availability	+50	+100 <sup>250</sup>	+500 <sup>251</sup>	+100	+80,000.00	+650,000.00
External guarantee headroom <sup>252</sup>						
Provision check execution	+50 OK	+30 OK	+470 OK	+200 OK	+180,000.00 OK	+550,000.00 OK

- 1 As the provision check execution is positive, the Settlement Instructions and the created Settlement Re-
- 2 strictions are submitted to the booking process.
- 3 Since no pre-emption is detected in this case, the actual booking is then processed resulting in the irrevoca-
- 4 ble settlement and:
- 5 | The update of securities positions SecPos1, SecPos7, SecPos9 and SecPos2 with each unitary debit and
  - 6 | credit;
  - 7 | The creation of securities postings corresponding to the actual update of each securities position;
  - 8 | The update of cash balances CashBal1 and CashBal2 with each unitary debit and credit;
  - 9 | The creation of cash postings corresponding to the actual update of each cash balance;
  - 10 | The update of the quantities associated to the restriction reference RRF11111 with:
    - 11 – Initial quantity = 70
    - 12 – Used quantity = 70
    - 13 – Remaining quantity = 0
    - 14 – To be filled quantity = 0
  - 15 | The update of the quantities associated to the restriction reference RRF22222 with:
    - 16 – Initial quantity = 100
    - 17 – Used quantity = 30
    - 18 – Remaining quantity = 70

250 This quantity available of +100 corresponds to the SecPos7 security position for which several restriction references exist including the restriction reference RRF11111 for +70.

251 This quantity available of +500 corresponds to the SecPos9 security position for which several restriction references exist including the restriction reference RRF22222 for +100.

252 The calculation of the provision net flow for credit memorandum balance is not applicable as parties are exclusively payment/settlement banks.

- 1 – To be filled quantity = 0
- 2 | The update of the settlement status of the Settlement Instructions SI1 and SI2 to "Settled" with the re-
- 3 | lated timestamp and the settlement date corresponding to the current business date;
- 4 | The update of the settlement status of the Settlement Restriction SR1 and SR2 to "Settled" with the re-
- 5 | lated timestamp and the settlement date corresponding to the current business date;
- 6 | The sending to the T2S Actor of the relevant reporting corresponding to the full settlement of Settlement
- 7 | Instructions SI1 and SI2 (See section Send Settlement Instruction);
- 8 | The sending to the T2S Actor of the relevant reporting corresponding to the full settlement of Settlement
- 9 | Restriction SR1 and SR2 (See section Send Settlement Restriction on Securities Position);
- 10 | No information to T2S Actor needed as the floor and ceiling amount is not reached.

#### 11 **1.6.1.8.6 Parameter Synthesis**

12 No specific configuration from T2S Actor is needed.

#### 13 1.6.1.9 Optimising

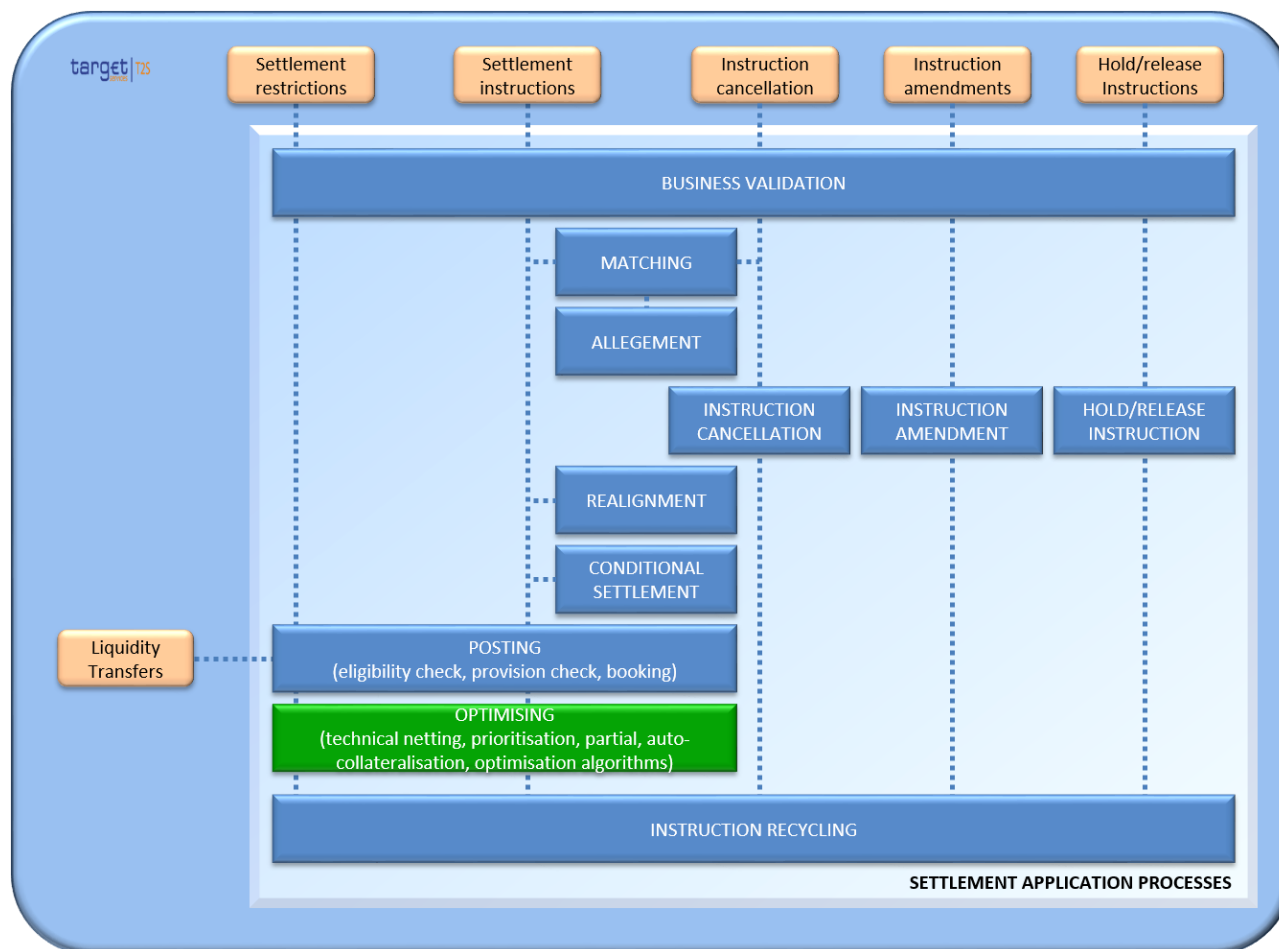

14 During the settlement of Settlement Instructions, Settlement Restrictions or liquidity transfers, T2S uses  
15 optimising application processes in a way to increase the number and value of transactions settled in T2S  
16 according to the available resources.

17 These application processes rely on the following optimisation tools:

- 18 | The technical netting which limits the resources needed for their settlement to the net quantities or
- 19 | amounts of Settlement Instructions, Settlement Restrictions and liquidity transfers submitted together to
- 20 | a settlement on an all-or-none basis;
- 21 | The prioritisation which allows T2S Actors to indicate the Settlement Instructions and Settlement Re-
- 22 | strictions to settle first in case of resources shortage;
- 23 | The partial settlement which allows T2S, under specific conditions, to settle only a part of Settlement In-
- 24 | structions, Settlement Restrictions or liquidity transfers with the available resources;
- 25 | The auto-collateralisation which allows (i) the provision of intraday credit by central banks and pay-
- 26 | ment/settlement banks for the settlement of Settlement Instruction in case of lack of cash or insufficient
- 27 | external guarantee headroom; (ii) the automatic release of collateral and automatic substitution in order
- 28 | to cover lack of securities;
- 29 | The optimisation algorithms which allow the identification and selection of pending Settlement Instruc-
- 30 | tions, Settlement Restrictions able to settle with success when they are submitted together to a settle-
- 31 | ment attempt.

32 All pending Settlement Instructions, Settlement restrictions with no chance of success are removed from the  
33 selection of the optimization algorithms. They are considered again as soon as they can successfully take  
34 part in the optimization processes.

1

**DIAGRAM 101 - SETTLEMENT APPLICATION PROCESSES / OPTIMISING**

2

### 3 **1.6.1.9.1 Technical Netting**

#### 4 Concept

5 In order to limit the resources needed for the settlement; T2S applies the technical netting during the provi-  
 6 sion check process and the auto-collateralisation process by calculating the net quantities and amounts to be  
 7 settled.

#### 8 Overview

9 During the provision check T2S calculates the net quantities and amounts to be settled (See section [Provi-  
 10 sion check process](#) [ > 391]) for all Settlement Instructions, Settlement Restrictions and liquidity transfers  
 11 submitted together for a settlement on all-or-none basis.

12 These net quantities and amounts are the basis for the check against the available resources and if needed  
 13 for the assessment of intraday credit to be provided.

14 The technical netting for the provision check process does not question the booking on a gross basis. The  
 15 postings on accounts are achieved on the basis of actual amounts and quantities in the Settlement Instruc-  
 16 tions and not for the calculated net amounts or quantities.

#### 17 Technical netting process

## 1 Technical netting in the provision check process

2 During the provision check process, T2S calculates the provision net flows according to the Settlement In-  
3 structions, Settlement Restrictions or liquidity transfers submitted together for a settlement on an all-or-none  
4 basis due to:

- 5 | Their common links set by the T2S Actors or added by T2S (See section [Linked Instructions](#) [▶ 500]);
- 6 | Their joint selection by optimisation algorithms.

7 The provision net flows are calculated per involved securities position, cash balance and credit memorandum  
8 balance taken into accounts all debits and credits.

9 The provision check is then processed comparing the calculated provision net flows to the availabilities in the  
10 involved securities positions, cash balances and credit memorandum balances (See section [Provision check](#)  
11 [process](#) [▶ 391]).

## 12 Technical netting in the auto-collateralisation process

13 The need of intraday credit is detected based on the result of the provision check execution:

- 14 | A lack of cash is identified when the net amount to settle is higher than the availability of cash in the  
15 considered cash balance;
- 16 | An insufficient external guarantee headroom is identified when the net amount to settle is higher than  
17 the available external guarantee headroom.

18 Consequently the need of intraday credit is limited to the difference between the availability in the cash bal-  
19 ance or external guarantee headroom and the calculated provision net flow using technical netting.

## 20 *Parameter synthesis*

21 No specific parameter is requested for technical netting.

## 22 **1.6.1.9.2 Prioritisation**

### 23 *Concept*

24 T2S uses priority levels in such a way that if several instructions compete with respect to using the same  
25 securities and/or cash resources, in the night-time or real-time optimisation process, preference for settle-  
26 ment is given to the instruction with the highest level of priority.

### 27 *Overview*

28 T2S offers the possibility to set four different levels of priority to Settlement Instructions or Settlement Re-  
29 strictions. This level of priority can be set by the T2S Actor or automatically assigned by T2S based on pa-  
30 rameters previously set by the T2S Operator in the static data.

31 For instructions matched in T2S, T2S determines the applicable level of priority based on the highest value  
32 set on each Settlement Instruction.

33 The level of priority is then used to rank Settlement Instructions and Settlement Restrictions whenever nec-  
34 essary in the optimisation process during the night-time and real-time periods.

### 35 *Prioritisation process*

### 36 Possible levels of priority

1 T2S Actors can assign to their Settlement Instructions and Settlement Restrictions four different levels of  
2 priority identified hereunder from the highest to the lowest:

3 **TABLE 123 - LEVEL OF PRIORITIES**

LEVEL OF PRIORITY	MAIN FEATURES
1- Reserved priority	It can only be assigned by CSD and central bank to their Settlement Instructions and Settlement Restrictions. It prevails over any other levels of priority in T2S.
2- Top priority	It can only be assigned by trading platforms (MTFs, stock exchanges, etc...) and CCP to their Settlement Instructions and Settlement Restrictions. The Top priority is not included in the Settlement Instruction/ Settlement Restriction. It is set automatically by T2S based on priority defaults rule set for the involved trading platforms or CCPs (See Table 125 - <a href="#">Settlement Priority Default – Top Priority</a> [ 417])
3- High priority	It can be assigned by all T2S Actors to their Settlement Instructions or Settlement Restrictions.
4- Normal priority	It can be assigned by all T2S Actors to their Settlement Instructions or Settlement Restrictions.

5 T2S Actors can set the level of priority directly in their Settlement Instructions or their Settlement Re-  
6 strictions sent to T2S.

#### 7 Default priority level for Settlement Instruction

8 In case no level of priority is indicated in the Settlement Instruction by the T2S Actor, T2S allows setting in  
9 the static data, a default value automatically taken into account according to the following data contained in  
10 the incoming Settlement Instruction (see section [Business application configuration](#) [▶ 297]):

- 11 | Instruction type (see section [Instruction Types](#) [▶ 90]);
- 12 | Party type;
- 13 | Party BIC;
- 14 | Market type;
- 15 | Transaction code.

16 During the processing of a Settlement Instruction without indicated level of priority, T2S then checks if its  
17 content corresponds to a default value set in static data. If yes, this level is automatically taken into account  
18 during the settlement processes.

19 The following table defines the exhaustive list of parameter values for reserved priority that are set in static  
20 data and taken into account during the settlement processes.

21 A settlement instruction having no level of priority indicated, is processed with a settlement priority default  
22 "Reserved priority", provided it has the Party Type and the Transaction Code specified in the table.

1  
2

**TABLE 124 - SETTLEMENT PRIORITY DEFAULT – RESERVED PRIORITY**

PRIORITY DESCRIPTION	PARAMETER TYPE	PARAMETER VALUE
Reserved priority for a Central Bank operation	Instruction Type	SI
	Transaction Code	CNCB <sup>253</sup>
	Priority	0001
Reserved priority for a corporate action settlement instruction delivered by an External CSD	Instruction Type	SI
	Party Type	ECSD
	Transaction Code	CORP
	Priority	0001
Reserved priority for a corporate action settlement instruction delivered by a CSD	Instruction Type	SI
	Party Type	CSD
	Transaction Code	CORP
	Priority	0001

3 In following table, a settlement instruction having no level of priority indicated, is processed with a settle-  
4 ment priority default "Top priority", provided it has the Party BIC specified in the table.

5  
6

**TABLE 125 - SETTLEMENT PRIORITY DEFAULT – TOP PRIORITY**

PRIORITY DESCRIPTION	PARAMETER TYPE	PARAMETER VALUE
Top priority for a Settlement Instruction instructed by Trading Platforms and CCPs	Instruction Type	SI
	Party BIC	BICXAABBXXX
		BICXAACCXXX
		...
Priority	0002	
Top priority for an OTC Settlement Instruction instructed by CCPs	Instruction Type	SI
	Market type	OTCO
	Party BIC	BICXAADDXXX
		BICXAAEEXXX
...		

253 Only Central Banks, in their capacity as CSD participants, should be granted with the privilege to use the CNCB transaction code to assign reserved priority and not any other CSD participants.

PRIORITY DESCRIPTION	PARAMETER TYPE	PARAMETER VALUE
	Priority	0002

1 Modification of the level of priority set on a Settlement Instruction

2 T2S Actors can modify the level of priority of a Settlement Instruction or a Settlement Restriction, until its  
3 full settlement, through an Instruction Maintenance (See section [Instruction Amendment](#) [▶ 357]). For par-  
4 tially settled Settlement Instruction, the new level of priority applies to the pending part of the Settlement  
5 Instruction (See section [Instruction Amendment](#) [▶ 357]).

6 Applicable level of priority to matched Settlement Instructions

7 For matched Settlement Instructions, T2S defines a single level of priority applicable to both Settlement  
8 Instructions based on the value of each one indicated by the T2S Actor or automatically assigned by T2S:

- 9 | If both matched Settlement Instructions indicate the same level of priority, T2S uses this level of priority  
10 for both matched Settlement Instructions;
- 11 | If both matched Settlement Instructions indicate a different level of priority, T2S uses the highest level  
12 of priority for both matched Settlement Instructions;
- 13 | If both matched Settlement Instructions do not indicate a level of priority, T2S uses the lowest level of  
14 priority (i.e. "Normal").

15 The following examples illustrate the definition of the applicable level of priority to matched Settlement In-  
16 structions according to the value set in each Settlement Instruction:

17 **TABLE 126 - PRIORITY ASSIGNED TO MATCHED SETTLEMENT INSTRUCTIONS**

CASE	INSTRUCTION	LEVEL OF PRIORITY		
		INDICATED BY THE T2S ACTOR	DEFAULT VALUE SET BY T2S	APPLICABLE TO MATCHED SETTLEMENT INSTRUCTIONS
Matched Settlement Instructions with identical level of priority	SI1	High		High
	SI2		High	
Matched Settlement Instructions with different levels of priority	SI3	Top		Top
	SI4	Normal		
Matched Settlement Instructions with no level of priority	SI5			Normal
	SI6			

19 Use of the prioritisation in the settlement process in T2S

20 During the night-time settlement period, T2S takes into the account the applicable level of priority for all  
21 Settlement Instructions and Settlement Restrictions before any settlement attempt.

1 During the real-time settlement period, T2S takes into account the applicable level of priority only for pending Settlement Instructions during the recycling <sup>254</sup> and optimisation process <sup>255</sup>. T2S does not take into account the level of priority at the first settlement attempt of Settlement Instructions and Settlement Restrictions.

5 When the priority is taken into account, T2S gives the preference, among Settlement Instruction or Settlement Restriction in competition to use the same securities position and/or cash balances, to the ones with the highest applicable level of priority <sup>256</sup>.

8 If an additional choice has to be made between Settlement Instructions or Settlement Restrictions with the same level of priority, T2S gives the preference to the oldest ones based on their Intended Settlement Date. For settlement instructions or settlement restrictions having the same intended settlement date, during RTS, priority is given first to the one with the greater securities quantity or cash amount and secondly to the one having first arrived in the T2S (earlier T2S timestamp) while during NTS the optimisation process maximises settlement by balancing the volume and value of settled instructions.

14 The following example illustrates the way that T2S selects pending Settlement Instructions that can be settled with incoming resources. In a way to simplify the description, only the securities side is described.

**EXAMPLE 115 - USE OF THE PRIORITISATION IN THE SETTLEMENT PROCESS**

17 On the settlement of matched Settlement Instructions which increase the holding (+40) of the securities position corresponding to the combination securities account SA2 - ISIN X - impacted balance AWAS, T2S selects all Settlement Instructions which deliver securities from this securities position and which are pending due to lack of securities in this securities position. The following Settlement Instructions SI2, SI4, SI6 and SI9 and their matched Settlement Instructions are retrieved:

254 During the regular recycling, the mechanism ensures that a transaction will not be recycled if the transaction sent just before has not been attempted for settlement. This serialization process will concern all transactions with age >= 3 selected by the Regular Recycling process following a credit in securities or cash or an increase in CMB headroom or limit, guaranteeing that an older transaction will be attempted before a younger one with the same priority. The transactions selected by one given recycling process will be segregated into eight groups, depending on their priority and age:

Group 1	Group 2	Group 3	Group 4	Group 5	Group 6	Group 7	Group 8
Priority 1	Priority 1	Priority 2	Priority 2	Priority 3	Priority 3	Priority 4	Priority 4
Age >= 3	Age < 3	Age >= 3	Age < 3	Age >= 3	Age < 3	Age >= 3	Age < 3

Should the serialization process be too long (over a predetermined adjustable maximum duration), it will be automatically stopped to come back to the regular recycling process.

255 The level of priority is also taken into account in the following SETT processes: Intraday restriction removal and start RTS process.

256 T2S gives the precedence for corporate action (CA) transactions over other transactions, and among CA transactions, precedence is given first to the ones carrying cash only or debiting a securities position allowed to be negative, second to the ones crediting a securities account debited by another transaction of the CA event, third to all other transactions, which are themselves sorted following highest priority and lowest remaining quantity.

1

OPER ID	SECURITIES ACCOUNT	ISIN	IMPACTED BALANCE	SEC MVT TYPE	QTY	APPLICABLE LEVEL OF PRIORITY	INTENDED SETTLEMENT DATE
SI1	SA1	ISIN X	EAR1	RECE	16	High	11/28/2015
SI2	SA2	ISIN X	AWAS	DELI	16		
SI3	SA3	ISIN X	AWAS	RECE	10	Normal	11/28/2015
SI4	SA2	ISIN X	AWAS	DELI	10		
SI6	SA2	ISIN X	AWAS	DELI	25	Top	11/27/2015
SI7	SA4	ISIN X	EAR6	RECE	25		
SI8	SA1	ISIN X	AWAS	RECE	15	High	11/27/2015
SI9	SA2	ISIN X	AWAS	DELI	15		

2 Since the sum of pending missing quantities (15+10+25+16=66) is higher than the incoming securities (40),  
3 T2S sorts those matched Settlement Instructions before selecting the one(s) to recycle using the criteria:

- 4 | Highest to lowest level of priority;
- 5 | Oldest to most recent Intended Settlement Date.

6

	MATCHED SETTLEMENT INSTRUCTIONS ID	APPLICABLE LEVEL OF PRIORITY	INTENDED SETTLEMENT DATE	NEEDED QUANTITY FOR SETTLEMENT
1	SI6 SI7	Top	11/27/2015	25
2	SI8 SI9	High	11/27/2015	15
3	SI1 SI2	High	11/28/2015	16
4	SI3 SI4	Normal	11/28/2015	10

7 The matched Settlement Instructions SI6|SI7 and SI8|SI9 are therefore selected for the settlement.

8 Parameters synthesis

9 The following parameters are specified by the T2S Operator:

10

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Priority	Default level of priority	T2S Operator	T2S Operator	O	1- Reserved priority 2- Top priority 3- High priority 4- Normal priority	N/A

### 1 **1.6.1.9.3 Partial Settlement**

#### 2 Concept

3 T2S provides partial settlement process, i.e. settles only a fraction of the original quantity or amount when  
4 full settlement is not possible due to lack of securities or cash, in order to increase the volume and value of  
5 settlement.

#### 6 Overview

7 Partial settlement applies under conditions and procedures that differ whether they apply to:

- 8 | Settlement Instructions;
- 9 | Settlement Restrictions;
- 10 | Liquidity transfers.

#### 11 Partial settlement process

##### 12 Partial settlement process for Settlement Instructions

13 A Settlement Instruction is partially settled <sup>257</sup>, in case there are insufficient securities to settle the full quan-  
14 tity and provided the following conditions are met:

- 15 | The partial settlement window is currently running;
- 16 | The Settlement Instructions are eligible to settle partially;
- 17 | The partial settlement threshold criteria are fulfilled.

##### 18 **Partial settlement window**

19 Partial settlement is active in T2S within the dedicated partial settlement windows <sup>258</sup>.

##### 20 **Partial settlement eligibility**

21 The settlement eligibility depends notably on conditions set by the T2S parties on their matched Settlement  
22 Instructions.

23 A matched pair of Settlement Instructions is eligible to partial settlement, when these Settlement Instruc-  
24 tions are entered by the T2S parties with the following characteristics:

- 25 | They are related to Free Of Payment or to Delivery Versus Payment or Delivery With Payment; <sup>259</sup>
- 26 | The partial settlement indicator is not set to "No" in any of the Settlement Instructions;
- 27 | They are not linked to any other Settlement Instruction or Settlement Restriction by the T2S parties by a  
28 link type "Before", "After" "With" or by a pool reference.

##### 29 Partial settlement of Partially Released Settlement Instructions

---

257 Partial settlement is triggered only in case of lack of securities (i.e. lack of securities only or lack of securities and cash) but not in case of lack of cash only.

258 For details about the schedule of partial settlement window, see section [Settlement Day](#) [▶ 237]

259 Including such Settlement Instructions which are on Party Hold and have been partially released.

1 A Settlement Instruction on Party Hold may be partially released to allow the partial settlement of a specified  
2 quantity. This Partially Released Settlement Instruction must conform to all the conditions of partial settle-  
3 ment as for any other Settlement Instruction. During the real-time period the partial settlement of Partially  
4 Released Settlement Instructions will only occur during a partial settlement window and until the relevant  
5 cut-off time (partial release is only valid for the current business day) at which point the partial release will  
6 be cancelled and the underlying Settlement Instruction set back on Party Hold for the full unsettled quantity.  
7 For partial release to be considered during sequence C2SX of the night time settlement the partial release  
8 must occur as of the start of day.

### 9 **Partial settlement threshold**

10 Partial settlement is conditioned by thresholds, below which it cannot apply, and that are determined in T2S  
11 when the settlement occurs, on the basis of the following content of the Settlement Instructions:

- 12 | The instruction type (FOP or DVP or DWP);
- 13 | The instruction threshold type (see table below);
- 14 | The underlying ISIN;
- 15 | The currency of the cash amount of the Settlement Instruction.

16 These contents of the Settlement Instructions allow T2S to determine the type of partial settlement thresh-  
17 old applicable on the Settlement Instructions being processed. The following types of partial settlement  
18 thresholds are possible:

- 19 | A threshold in "quantity": meaning the partial settlement cannot take place for a quantity lower than an  
20 applicable value;
- 21 | A threshold in "cash value": meaning the partial settlement cannot take place for an amount lower than  
22 an applicable value.

**TABLE 127 - APPLICABLE THRESHOLD TYPES FOR PARTIAL SETTLEMENT**

CONTENT OF SETTLEMENT INSTRUCTION				RESULTING APPLICABLE THRESHOLD TYPE	RESULTING APPLICABLE THRESHOLD VALUE
INSTRUCTION TYPE	INSTRUCTION THRESHOLD TYPE	ISIN	CURRENCY		
FOP <sup>260</sup>	n/a	applicable	n/a	Quantity	Minimum settlement unit (only for first partial settlement) and settlement unit multiple are used.
DVP/DWP	Set to "Quantity" for both matched Settlement Instructions				
DVP/DWP	Not set to "Quantity" for both matched Settlement Instructions	Unit-quoted	applicable	Cash value	Amount configured in the currency specified (for quantity, minimum settlement unit and settlement unit multiple are used).
		Nominal-quoted			Amount configured in the currency specified (for quantity, minimum settlement unit and settlement unit multiple are used).

- 3 The parameters determining the threshold applicable above are set:
- 4 | By T2S Actors from the content of their Settlement Instructions for the instruction type and instruction
- 5 threshold type mentioned in the table above;
- 6 | By the T2S Operator inside the Static Data for the applicable threshold in cash value. This parameter is
- 7 common to all T2S Parties, and set per T2S settlement currency, and separate for unit-quoted or nomi-
- 8 nal quoted ISIN;
- 9 | By the T2S Actors in charge of the administration of the relevant ISIN in the Static Data for the applica-
- 10 ble threshold in quantity (See section [Concept of securities in T2S](#) [▶ 77]).

### 11 **Partial settlement procedure**

12 Settlement Instructions are submitted to a full settlement attempt before being submitted to a partial set-

13 tlement attempt.<sup>261</sup>

14 In case the Settlement Instruction does not settle, the Settlement Instruction is submitted to Optimising

15 application process. The Optimising application process tries to settle the failed Settlement Instruction with

16 other Settlement Instructions in T2S based on different technical optimisations. In case the Optimising appli-

17 cation process is not able to find a solution for a full settlement, T2S tries to submit the Settlement Instruc-

18 tion for partial settlement provided the above conditions are met.

260 Cash value thresholds are not considered for FOP regardless of the partial settlement threshold type (partial settlement indicator PARC, PART) defined within the settlement instruction. This also applies for FOP instructions related to a foreign currency transaction (non-EUR amount).

261 Partially Released Settlement Instructions are only submitted to partial settlement attempts for the released quantity.

1 When applying the partial settlement, T2S attempts to settle the maximum quantity of securities available on  
2 the securities position of the seller taking into account:

- 3 | The securities position on the Securities Account;
- 4 | The cash resources available for the T2S Dedicated Cash Accounts;
- 5 | The applicable threshold;
- 6 | And when applicable the partially released quantity.

7 Based on the applicable threshold value T2S determines if the available quantity of the securities position, or  
8 the available amount of the cash balances, allows the partial settlement.

9 In both cases, the status of each matched Settlement Instruction and the related reporting are sent to the  
10 T2S parties, as described in section Send Settlement Instruction and in Chapter 3 for the related content of  
11 the message.

12 A "partially settled" Settlement Instruction is recycled for further settlement of its pending leg until it is:

- 13 | "partially settled" for a complementary quantity, provided the conditions mentioned above are met for  
14 partial settlement;
- 15 | Or "settled" for the remaining quantity;
- 16 | Or cancelled for its pending leg (see section [Instruction Cancellation](#) [▶ 360]).

17 For partially released Settlement Instructions:

- 18 | Only the released quantity is submitted to a partial settlement attempt;
- 19 | The unreleased quantity remains on hold;
- 20 | The partially released quantity may settle in multiple partial settlement attempts;
- 21 | The partial release process is cancelled when the released quantity has not fully settled by the relevant  
22 cut-off time. The underlying Settlement Instruction is set back on Party Hold for the full unsettled quanti-  
23 ty.

24 Examples of partial settlement in T2S during the partial settlement window and for Settlement Instructions  
25 eligible to partial settlement are provided below.

1  
2

**EXAMPLE 116 - PARTIAL SETTLEMENT**

INSTR. TYPE	PARTIAL SETTLEMENT INDICATOR/THRESHOLD TYPE AT INSTRUCTION LEVEL	APPLICABLE THRESHOLD TYPE USED BY T2S	APPLICABLE THRESHOLD VALUE	QUANTITY OF THE SETTLEMENT INSTRUCTION	AMOUNT OF THE SETTLEMENT INSTRUCTION	AVAILABLE SECURITIES POSITIONS	AVAILABLE CASH BALANCES	RESULT
FOP	Set to "Yes - Quantity" by both T2S parties	"Quantity"	Minimum settlement unit set to "50" and settlement unit multiple set to "5"	100	N/A	55	N/A	<p>Status of the Settlement Instruction is "partially settled". The settled part of the Settlement Instruction is "55". The pending part of the Settlement Instruction is "45" which becomes the remaining quantity.</p> <p>After this first partial settlement, the threshold quantity applicable to other partial settlement(s) is equal to the settlement unit multiple (i.e. "5").</p>
FOP	Set to "Yes - Quantity" by only one T2S parties	"Quantity"	Minimum settlement unit set to "50" and settlement unit multiple set to "5"	100	N/A	57	N/A	<p>Status of the Settlement Instruction is "partially settled". The settled part of the Settlement Instruction is "55". The pending part of the Settlement Instruction is "45" which becomes the remaining quantity.</p> <p>After this first partial settlement, the threshold quantity applicable to other partial settlement(s) is equal to the settlement unit multiple (i.e. "5").</p>

INSTR. TYPE	PARTIAL SETTLEMENT INDICATOR/THRESHOLD TYPE AT INSTRUCTION LEVEL	APPLICABLE THRESHOLD TYPE USED BY T2S	APPLICABLE THRESHOLD VALUE	QUANTITY OF THE SETTLEMENT INSTRUCTION	AMOUNT OF THE SETTLEMENT INSTRUCTION	AVAILABLE SECURITIES POSITIONS	AVAILABLE CASH BALANCES	RESULT
FOP	Set to "Yes - Quantity" by both T2S parties	"Quantity"	Minimum settlement unit set to "50" and settlement unit multiple set to "5"	100	N/A	49	N/A	Impossible to apply the partial settlement, since the quantity available for a partial settlement is "49" where the minimum settlement multiple is set to "50". Status of the Settlement Instruction is "unsettled".

INSTR. TYPE	PARTIAL SETTLEMENT INDICATOR/THRESHOLD TYPE AT INSTRUCTION LEVEL	APPLICABLE THRESHOLD TYPE USED BY T2S	APPLICABLE THRESHOLD VALUE	QUANTITY OF THE SETTLEMENT INSTRUCTION	AMOUNT OF THE SETTLEMENT INSTRUCTION	AVAILABLE SECURITIES POSITIONS	AVAILABLE CASH BALANCES	RESULT
DVP/DWP	Set to "Yes - Quantity" by both T2S parties	"Quantity"	Minimum settlement unit set to "50" and settlement unit multiple set to "5"	100	100,000.00	55	1,000,000.00	Status of the Settlement Instruction is "partially settled". The settled part of the Settlement Instruction is "55" for the quantity and "55,000.00" for the amount. The pending part of the Settlement Instruction is "45" which becomes the remaining quantity and "45,000.00" which becomes the remaining amount. After this first partial settlement, the threshold quantity applicable to other partial settlement(s) is equal to the settlement unit multiple (i.e. "5").
DVP/DWP	Set to "Yes - Quantity" by only one T2S parties	"Cash value"	10.000€	100	100,000.00	55	60,000.00	Status of the Settlement Instruction is "partially settled". The settled part of the Settlement Instruction is "55" for the quantity and "55,000.00" for the amount. The pending part of the Settlement Instruction is "45" which becomes the remaining quantity and "45,000.00" which becomes the remaining amount.
DVP/DWP	Set to "Yes -	"Quantity"	Minimum	100	100,000.00	49	1,000,000.00	Impossible to apply the partial

INSTR. TYPE	PARTIAL SETTLEMENT INDICATOR/THRESHOLD TYPE AT INSTRUCTION LEVEL	APPLICABLE THRESHOLD TYPE USED BY T2S	APPLICABLE THRESHOLD VALUE	QUANTITY OF THE SETTLEMENT INSTRUCTION	AMOUNT OF THE SETTLEMENT INSTRUCTION	AVAILABLE SECURITIES POSITIONS	AVAILABLE CASH BALANCES	RESULT
DWP	Quantity" by both T2S parties	ty"	settlement unit set to "50" and settlement unit multiple set to "5"		0		00.00	settlement, since the quantity available for a partial settlement is "49" where the minimum settlement unit is set to "50". Status of the Settlement Instruction is "unsettled".

1 Partial settlement process for Settlement Restrictions

2 Partial settlement is not applicable for:

- 3 | The Settlement Restrictions generated by T2S for conditional settlement (CoSD);
- 4 | Set-up, increase or decrease of a blocking.

5 If the quantity or amount available does not allow a full settlement, those Settlement Restrictions are recycled through the optimisation algorithms.

7 Partial settlement is applicable to set-up, increase or decrease of reservation and earmarking. For those Settlement Restrictions, T2S settles Settlement Restriction for a partial quantity or amount in case sufficient resource is not available on the securities position or cash balance, without submitting these Settlement Restrictions to the Optimising application process.

11 Otherwise, as opposed to the partial settlement of a Settlement Instruction there is no condition related to any specific partial settlement window or partial settlement thresholds.

13 A reservation or earmarking Settlement Restriction linked to a Settlement Instruction through a link "with" is subject to partial settlement only if the resources available are sufficient to allow a full settlement of the Settlement Instruction.

16 The Settlement Restrictions generated by T2S for conditional settlement (CoSD) are not subject to partial settlement.

18 The action following the partial settlement of a Settlement Restriction then differs according to the Settlement Restriction type:

- 1 | In case of securities earmarking restriction, the Settlement Restriction is "Settled" and there is no new  
2 | settlement attempt for the remaining quantity;
- 3 | In case of cash and securities reservation restriction, the Settlement Restriction is "Partially settled" and  
4 | the remaining amount or quantity is filled in via a pre-emption mechanism, until the full amount or quan-  
5 | tity of the original Settlement Restriction is settled.
- 6 | In all cases, the statuses of the Settlement Restrictions and the related reporting are sent to the T2S parties,  
7 | as described in section Send Settlement Restriction on Securities Position and section Send Settlement Re-  
8 | striction on Cash Balance and in Chapter 3 for the related content of the message.
- 9 | Partial settlement process for Liquidity Transfers
- 10 | T2S settles liquidity transfer for a partial amount in case sufficient cash is not available on the T2S Dedicated  
11 | Cash Account, without submitting it to the Optimising application process.
- 12 | This partial settlement is not applicable when the related immediate liquidity transfer order is initiated by the  
13 | account holder of the account to be debited. It applies in all other types of liquidity transfers, i.e. when the  
14 | liquidity transfer is initiated by a T2S Actor different from the account holder (See section [Liquidity Manage-](#)  
15 | [ment](#) [▶ 633]).
- 16 | Otherwise, as opposed to the partial settlement of a Settlement Instruction, there is no condition related to  
17 | any specific partial settlement window or partial settlement thresholds.
- 18 | In case of a partial settlement, the liquidity transfer is "Partially settled" and there is no new settlement at-  
19 | tempt for the remaining amount.
- 20 | In all cases, the statuses of the liquidity transfer and the related reporting are sent to the T2S parties, as  
21 | described in sections Send immediate liquidity transfer, Execution of Liquidity Transfer from RTGS to T2S  
22 | and Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS for dialogue related  
23 | to liquidity transfer, and in Chapter 3 for the related content of the message.

1  
2**Parameters Synthesis**

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Partial settlement on Settlement Instructions	Threshold in cash value for unit quoted securities	T2S Operator	T2S Operator	M	Amount	Per currency: equivalent to 10,000.00€
Partial settlement on Settlement Instructions	Threshold in cash value for nominal amount quoted securities	T2S Operator	T2S Operator	M	Amount	Per currency: equivalent to 100,000.00€
Partial settlement on Settlement Instructions	Threshold in quantity: minimum settlement unit	T2S Actor maintaining the ISIN	T2S Actor maintaining the ISIN	M	Quantity	To be defined per ISIN
Partial settlement on Settlement Instructions	Threshold in quantity: settlement unit multiple	T2S Actor maintaining the ISIN	T2S Actor maintaining the ISIN	M	Quantity	To be defined per ISIN

3 **1.6.1.9.4 Auto-collateralisation**4 Concept

5 T2S offers to central bank and payment/settlement banks (hereafter also called credit providers) the capacity to provide to credit consumers intraday credit automatically secured in T2S with eligible collateral. This  
6 capacity is achieved through the auto-collateralisation which is technically available in all T2S settlement  
7 currencies.  
8

9 The intraday credit provided through auto-collateralisation by a central bank (hereafter also called central  
10 bank collateralisation) aims at covering lacks of cash on the T2S dedicated cash account managed in its  
11 books.

12 The intraday credit provided through auto-collateralisation by a payment/settlement bank (hereafter also  
13 called client-collateralisation) aims at covering insufficient external guarantee headroom for its client.

14 In addition the auto-collateralisation process allows automatic release of collateral and automatic substitution  
15 in order to cover lack of securities.

16 Overview

17 The automatic provision of intraday credit through auto-collateralisation in T2S is managed by the credit  
18 provider configuring the following parameters in the static data about:

- 19 | The accounts to be used;
- 20 | The procedure for the management of the collateral;

1 | The eligible collateral and its valuations (valuation price and own-use valuation price);

2 | The maximum amount which can be provided per credit consumer;

3 | The minimum amount of intraday credit that a collateralisation instruction must provide <sup>262</sup>

4 Before any intraday credit provision, credit consumers have to identify:

5 | Links between T2S dedicated cash accounts and securities accounts for the collateral provision;

6 | Securities positions where the available collateral is held (hereafter called collateral on stock). This is  
7 achieved through the earmarking for auto-collateralisation restriction type related to the considered cur-  
8 rency.

9 Once the configuration is set, T2S automatically provides intraday credit through auto-collateralisation, when  
10 necessary, to settle Settlement Instructions. This auto-collateralisation results during the night-time and  
11 real-time periods into:

12 | The provision of additional cash on a T2S dedicated cash account for the central bank collateralisation;

13 | The increase of external guarantee limit headroom using the client-collateralisation limit headroom, for  
14 the client-collateralisation (see section [Limit Management](#) [▶ 640]).

15 To secure the intraday credit, T2S resorts firstly to collateral on flow complemented, if necessary, by collat-  
16 eral on stock. Collateral on flow is provided by securities delivered to a securities position earmarked for  
17 auto-collateralisation.

18 The actual provision of intraday credit is achieved through the generation by T2S of collateral Settlement  
19 Instructions and Settlement Restrictions necessary for the auto-collateralisation operation.

20 Additional reverse collateral Settlement Instructions and Settlement Restrictions are simultaneously generat-  
21 ed to manage all reimbursement cases:

22 | By the payment/settlement bank as credit consumer in case of central bank collateralisation or as credit  
23 provider in case of client-collateralisation;

24 | Automatically by T2S in case of automatic reimbursement of central bank collateralisation operations  
25 during a settlement day.

26 At the end of day, all intraday credit stemming from central bank collateralisation, which cannot be reim-  
27 bursed in T2S, is rebalanced into the respective RTGS system; a specific procedure is used for the relocation  
28 of the corresponding collateral (See section [End of Day Cash Management](#) [▶ 655]).

29

### 30 Auto-collateralisation process

#### 31 Static data configurations by the credit provider

32 For the provision of intraday credit through auto-collateralisation in T2S, credit providers (i.e. central banks  
33 for central bank collateralisation and payment/settlement banks for client-collateralisation) must first set in  
34 the static data the following parameters:

---

262 For example, in case of lack of cash for EUR 5,000, if the minimum amount for auto collateralisation is EUR 8,000, then the actual intraday credit provided must be at least EUR 8,000.

1

PARAMETER	FOR CENTRAL BANK COLLATERALISATION	FOR CLIENT-COLLATERALISATION
Collateral management procedure	<p>Central banks are required to determine in static data the collateralisation procedure for which they opt for all their central bank collateralisation operations in T2S among:</p> <ul style="list-style-type: none"> <li>  The REPO procedure, i.e. the selected collateral is transferred from the securities account where it is held to a securities account of the credit provider;</li> <li>  The PLEDGE procedure, i.e. the selected collateral is transferred from the securities account where it is held to another securities account of the credit consumer pledged to the credit provider;</li> <li>  The PLEDGE SUB procedure, i.e. the selected collateral is restricted in the securities account where it is held – on a restricted position - without transfer to any other securities account.</li> </ul>	No specific configuration is required since REPO procedure applies to all client-collateralisation operations.
<p>Securities accounts for collateral management in REPO procedure (see section <a href="#">Links between securities accounts and T2S dedicated cash accounts</a> [ 104])</p>	In case of REPO procedure, central banks are required to determine for each T2S dedicated cash account held in their books, the securities account where the selected collateral has to be stored in case of intraday credit provision.	Payment/settlement banks are required to determine for each of their client allowed to use its T2S dedicated cash account (i.e. for which a Credit Memorandum Balance exists), the securities account where the selected collateral has to be stored in case of intraday credit provision.
Regular collateral securities accounts configuration for collateral relocation at the end of day	<p>Central banks are required to determine the securities account where the collateral corresponding to pending intraday credit rebalanced to the RTGS has to be retransferred at the end of the day.</p> <p>(See section <a href="#">End of Day Cash Man-</a></p>	No configuration is required since the pending intraday credit provided through client-collateralisation operation is not subject to a specific process in T2S.

PARAMETER	FOR CENTRAL BANK COLLATERALISATION	FOR CLIENT-COLLATERALISATION
	<a href="#">agement</a> [ ▶ 655]).	
Cash accounts for intraday credit provision through auto-collateralisation	Central banks are required to determine in static data the T2S central bank cash account debited to provide intraday credit through auto-collateralisation in T2S in a given currency.	No specific configuration is required.
Eligible collateral and collateral prices	<p>Central banks and payment/settlement banks are required to provide to T2S the list of securities accepted as collateral and, each settlement day, the associated valuation prices and optionally own-use valuation prices in the currency of the intraday credit (See configuration in section <a href="#">Securities reference data</a> [ ▶ 76]). Auto-collateralisation will exclude securities with a close link unless an own-use valuation price is defined.</p> <p>The provision of these parameters may take place through collateral management systems.</p>	
Maximum amount which can be provided per credit consumer	<p>Central banks are required to set in the static data the maximum amount of intraday credit which can be provided to each T2S dedicated cash account held in their books for a settlement day.</p> <p>This cap is set through the central bank collateralisation limit. This limit is automatically set to zero at the creation of the T2S dedicated cash account (See section <a href="#">Limit Management</a> [ ▶ 640]).</p>	<p>For client-collateralisation, payment/settlement banks are required to set in the static data the maximum amount of intraday credit which can be provided through client-collateralisation to each of their clients allowed to use its T2S dedicated cash account.</p> <p>This cap is set through the client-collateralisation limit. This limit is automatically set to zero at the creation of the link (set through a Credit Memorandum Balance) between the T2S dedicated cash account and the T2S Party (See section <a href="#">Limit Management</a> [ ▶ 640]).</p>
Minimum amount for auto-collateralisation that the intraday credit must provide <sup>263</sup>	Payments banks may have in their static data a minimum amount of intraday credit that must be provided in a central bank collateralisation instruc-	Payments banks may have in their static data a minimum amount of intraday credit that must be provided in a client collateralisation instruction.

<sup>263</sup> For example, in case of lack of cash for EUR 5,000, if the minimum amount for auto collateralisation is EUR 8,000, then the actual intraday credit provided must be at least EUR 8,000.

PARAMETER	FOR CENTRAL BANK COLLATERALISATION	FOR CLIENT-COLLATERALISATION
	<p>tion.</p> <p>The minimum amount is not mandatory.</p> <p>Distinct amounts are defined for central bank and client collateralisation.</p>	<p>The minimum amount is not mandatory.</p> <p>The unique minimum amount is valid for all payment bank clients.</p> <p>Distinct amounts are defined for central bank and client collateralisation.</p>

### 1 Identification of available collateral by the credit consumer

2 Before being able to benefit from any intraday credit through auto-collateralisation in T2S, credit consumers  
3 (i.e. payment/settlement banks for central bank collateralisation and authorised clients for client-  
4 collateralisation) have to identify the securities they agree to provide, as collateral to their credit providers,  
5 with:  
6

PARAMETER	FOR CENTRAL BANK COLLATERALISATION	FOR CLIENT-COLLATERALISATION
Links between securities account for collateral supply	<p>The CSD of the credit consumer of an intraday credit through auto-collateralisation must set links between T2S dedicated cash account and the securities account which can be used to supply the collateral needed.</p> <p>This links is set through a Credit Memorandum Balance (See configuration in section <a href="#">Accounts structure and organisation</a> [▶ 94]).</p>	
Identification of securities positions eligible for collateral	<p>The credit consumer of an intraday credit through auto-collateralisation must segregate the securities available as collateral:</p> <ul style="list-style-type: none"> <li>▶ In securities position "Earmarking for auto-collateralisation" for the considered currency or for all currencies <sup>264</sup>(See section <a href="#">Restriction types</a> [▶ 45] and <a href="#">Securities Blocking/Reservation/Earmarking</a> [▶ 544]);</li> <li>▶ Within securities accounts, for which a link for collateral supply with a T2S dedicated cash account has been set-up as explained above.</li> </ul>	
Securities accounts pledged for collateral management in PLEDGE procedure (see section <a href="#">Links between securities accounts and T2S dedicated cash accounts</a> [▶ 104])	<p>In case of PLEDGE procedure, the CSD of the credit consumer of an intraday credit, through central bank collateralisation, must set links between the T2S dedicated cash account and the securities account used to collateralise the securities taken in guarantee.</p>	<p>No specific configuration is required.</p>

264 Restriction types related to the "Earmarking for auto-collateralisation" restriction processing are configured by the T2S Operator (See section [Securities Blocking/Reservation/Earmarking](#) [▶ 543]).

1 Implementation of a new auto-collateralisation operation by T2S

2 **Initial conditions to resort to an auto-collateralisation**

3 T2S attempts a new auto-collateralisation during the provision check (See section [Provision check process](#)  
4 [▶ 391]) if all the following conditions are met, in relation with the intraday credit limits (See section [Limit](#)  
5 [Management](#) [▶ 640]):  
6

CONDITIONS	FOR CENTRAL BANK COLLATERALISATION	FOR CLIENT-COLLATERALISATION
Existence of a missing resource	A lack of cash is identified on a T2S dedicated cash account involved in the settlement in process.	The headroom of an external guarantee limit is insufficient to settle the Settlement Instruction(s) of a payment/settlement bank's client.
Sufficient limit headroom capacity	The headroom of the central bank collateralisation limit, is sufficient to fill in the lack of cash identified	The sum of the headrooms for all limit types associated to the credit memorandum balance is sufficient to settle the Settlement Instruction of the client.

7 **Intraday credit capacity provided by the available collateral**

8 T2S then checks if the collateral available on flow and on stock identified by the credit consumer is sufficient  
9 to cover the identified missing resources. Both collateral on flow and collateral on stock are taken into ac-  
10 count if all the following conditions are met:  
11

CONDITIONS	COLLATERAL ON FLOW	COLLATERAL ON STOCK
Settlement Instruction providing collateral on flow	The Settlement Instruction under process: <ul style="list-style-type: none"> <li>  Has a receiving security movement type;</li> </ul> And <ul style="list-style-type: none"> <li>  Debits the T2S dedicated cash account in lack;</li> <li>  Or decreases the external guarantee headroom with an insufficiency.</li> </ul>	N/A
Securities account identified for collateral supply	The securities account involved in the receiving Settlement Instruction has a link through a Credit Memorandum Balance for collateral supply (see section <a href="#">Links between securities accounts and T2S dedicated cash accounts</a>	The securities account for collateral supply has a link through a Credit Memorandum Balance for collateral supply (see section <a href="#">Links between securities accounts and T2S dedicated cash accounts</a> [▶ 104]) with:

CONDITIONS	COLLATERAL ON FLOW	COLLATERAL ON STOCK
	<p>[ 104]) with:</p> <ul style="list-style-type: none"> <li>  The T2S dedicated cash account in case of lack of cash (central bank collateralisation);</li> <li>  Or with the credit memorandum balance having the external guarantee limit with an insufficient headroom (client collateralisation).</li> </ul>	<ul style="list-style-type: none"> <li>  The used T2S dedicated cash account in case of lack of cash (central bank collateralisation);</li> <li>  The associated credit memorandum balance in case of insufficient headroom in an external guarantee limit (client collateralisation).</li> </ul>
<p>Securities account for collateral supply without intraday restriction</p>	<p>The securities account for collateral supply is not subject to an intraday restriction.</p>	
<p>Securities position earmarked for auto-collateralisation in the considered currency  (See sections <a href="#">Restriction types</a> [ 45] and <a href="#">Securities Blocking/Reservation/Earmarking</a> [ 544])</p>	<p>The securities position involved in the receiving Settlement Instruction is earmarked for auto-collateralisation:</p> <ul style="list-style-type: none"> <li>  In the currency of the T2S dedicated cash account in lack;</li> <li>  Or in all currencies.</li> </ul>	<p>The securities position for collateral supply is earmarked for auto-collateralisation:</p> <ul style="list-style-type: none"> <li>  In the currency of the T2S dedicated cash account in lack;</li> <li>  Or in all currencies.</li> </ul>
<p>Eligible collateral for the credit provider</p>	<p>The ISIN involved in the receiving Settlement Instruction is:</p> <ul style="list-style-type: none"> <li>  Eligible as collateral for the credit provider;</li> <li>  In the currency of the T2S dedicated cash account in lack;</li> <li>  Or in the currency of the T2S dedicated cash account of the credit memorandum balance having the external guarantee limit with an insufficient headroom.</li> </ul>	<p>The ISIN of the securities position for collateral supply is:</p> <ul style="list-style-type: none"> <li>  Eligible as collateral for the credit provider;</li> <li>  In the currency of the T2S dedicated cash account in lack;</li> <li>  Or in the currency of the T2S dedicated cash account of the credit memorandum balance having the external guarantee limit with an insufficient headroom.</li> </ul>
<p>Eligible collateral for the CSD holding the securities account where the collateral is moved in case of cross-CSD mobilisation.</p>	<p>The ISIN involved in the receiving Settlement Instruction is eligible for settlement in the CSD holding the securities account where the collateral is moved.</p>	<p>The ISIN of the securities position for collateral supply is eligible for settlement in the CSD holding the securities account where the collateral is moved.</p>

CONDITIONS	COLLATERAL ON FLOW	COLLATERAL ON STOCK
Collateral without identified close link or own-use valuation price	The ISIN involved in the receiving Settlement Instruction has no close link identified in T2S with the credit consumer or has a close link with an own-use valuation price (See section <a href="#">Auto-collateralisation eligibility, securities valuation and close links</a> [▶ 83]).	The ISIN of the securities position for collateral supply has no close link identified in T2S with the credit consumer or has a close link with an own-use valuation price (See section <a href="#">Auto-collateralisation eligibility, securities valuation and close links</a> [▶ 83]).
Security without intraday restriction	The ISIN involved in the receiving Settlement Instruction is not subject to an intraday restriction.	The ISIN of the securities position for collateral supply is not subject to an intraday restriction.
Potential collateral Settlement Instruction/Settlement Restriction not subjected to CSD rejection, CSD Validation hold or CoSD rules	The T2S generated collateral Settlement Instruction (and linked generated Settlement Restriction in case of Pledge Sub procedure or generated Settlement Instructions in case of cross-CSD mobilisation) resulting from the selection of this collateral on flow is not subject to any CSD rejection, CSD validation hold or CoSD rules.	The T2S generated collateral Settlement Instruction (and linked generated Settlement Restriction in case of Pledge Sub procedure or generated Settlement Instructions in case of cross-CSD mobilisation) resulting from the selection of this collateral on stock is not subject to any CSD rejection, CSD validation hold or CoSD rules.

- 1 Once all potential collateral on flow and on stock are identified, T2S calculates the intraday credit capacity by
- 2 multiplying their quantity by the collateral prices received from the credit provider for the considered securi-
- 3 ties and currency.
- 4 **Collateral selection**
- 5 If the calculated intraday credit capacity covers the lack of cash or the insufficient headroom, T2S selects the
- 6 securities to take in guarantee, among the available collateral, using the rules below:
- 7 | Collateral on flow is selected first, complemented, if necessary, by collateral on stock;
- 8 | When several securities can be selected, the collateral providing the requested intraday credit with the
- 9 lowest amount is selected first.
- 10 Last, T2S ensures that the selected collateral meets all the following conditions:

1

CONDITIONS	FOR CENTRAL BANK COLLATERALISATION	FOR CLIENT-COLLATERALISATION
Limit headroom fulfilled	The intraday credit actually provided does not exceed the headroom of the applicable central bank collateralisation limit.	The intraday credit actually provided does not exceed the headroom of the applicable client-collateralisation limit.
Missing resource coverage	The intraday credit actually provided is at least equal to the lack of cash on the T2S dedicated cash account.	The intraday credit actually provided is at least equal to the insufficient headroom of the external guarantee limit decreased by the headroom of the unsecured credit limit (See section <a href="#">Limit Management</a> [ 640]).
Minimum amount for auto-collateralisation fulfilled	The intraday credit actually provided must be at least equal to the minimum amount. When the required intraday credit is below this condition, the minimum amount will be provided instead. Auto-collateralisation does not occur if the available collateral amount or central bank collateralisation headroom is below the minimum amount (even if the available collateral and central bank collateralisation headroom are sufficient to cover the lack). <sup>265</sup>	The intraday credit actually provided must be at least equal to the minimum amount. When the required intraday credit is below this condition, the minimum amount will be provided instead. Auto-collateralisation does not occur if the available collateral amount or client collateralisation headroom is below the minimum amount (even if the available collateral and client collateralisation headroom are sufficient to cover the lack). <sup>266</sup>

2 **Finalisation of the new auto-collateralisation operation**

3 The new auto-collateralisation operation is actually implemented only if all the Settlement Instructions which  
4 have to be settled in an all-or-none basis can be settled (i.e. no remaining missing resources).

5 In this case, T2S generates the necessary additional collateral Settlement Instructions for the credit consum-  
6 er and the credit provider to instruct:

- 7 | The debit and credit of the intraday credit provision on the involved T2S Dedicated cash accounts;
- 8 | The delivery of collateral from an earmarked for auto-collateralisation securities position to:
  - 9 – In case of Repo procedure for client collateralisation: the earmarked for auto-collateralisation for all
  - 10 currencies securities position in the securities account of the credit provider;

265 When several securities are required for the collateral operation the minimum amount applies for each collateral settlement instruction.

266 When several securities are required for the collateral operation the minimum amount applies for each collateral settlement instruction.

- 1 – In case of Repo procedure for central bank collateralisation: the deliverable securities position in the  
2 securities account of the central bank;
- 3 – In case of Pledge procedure, the collateralised securities position in another securities account of the  
4 credit consumer;
- 5 – In case of Pledge-Sub procedure, the collateralised securities position in the same securities account  
6 of the credit consumer.

7 Simultaneously, T2S generates additional reverse collateral Settlement Instructions corresponding to the  
8 intraday credit reimbursement. The reverse collateral Settlement Instruction of the payment/settlement  
9 bank, as credit consumer in case of central bank collateralisation or as credit provider in case of client-  
10 collateralisation, is set on hold <sup>267</sup>.

11 If the securities account supplying the collateral and the securities account receiving this collateral are in two  
12 different CSDs, additional T2S generated realignment Settlement Instructions are generated (see section  
13 [Realignment](#) [▶ 451]).

14 Information related to these generations is provided through reporting sent to the credit providers (and its  
15 collateral management systems according to their message subscription) and to the credit consumers (See  
16 section Send Settlement Instruction).

#### 17 **Validity of T2S generated collateral Settlement Instructions**

18 Once generated, the T2S generated collateral and reverse collateral Settlement Instructions (and linked Set-  
19 tlement Restrictions in case of pledge sub procedure), both for client and for central bank collateralisation,  
20 are subject to other T2S processes as any other Settlement Instruction. Furthermore in order to ensure the  
21 consistency of the the auto-collateralisation application process the following principles are implemented:

22 | Validation: T2S does not create T2S generated collateral and reverse collateral instruction if at least one  
23 of them (or any of the T2S generated realignment in case of cross-CSD mobilisation) does not success-  
24 fully pass the business validations.

25 | Revalidation: T2S revalidates Settlement Instructions upon static data update in order to cancel the Set-  
26 tlement Instructions which become not compliant with the new static data. (See section [Revalidation](#)  
27 [process](#) [▶ 342]). In order to ensure the reimbursement of the intraday credit and hence, prevent the  
28 cancellation of reverse collateral the day of their creation, following rule has been set-up:

- 29 – If the static data update applies on a security created and updated the same current business day,  
30 T2S allows the intraday static data update since in such case the security cannot be eligible to auto-  
31 collateralisation as the eligibility is identified at the start of day.
- 32 – If the static data update applies on a security created before the current business date, T2S allows the  
33 static data intraday update only if the security was not eligible to auto-collateralisation at the start of  
34 day (in such a case no reverse collateral exists)

---

267 The Party Hold based on "hold" flag in static data only applies to instructions received from T2S Actor, and therefore does not apply to T2S gener-  
ated settlement instructions (for realignment, collateral...).

- 1 | **I** Intraday Restriction: T2S does not generate collateral Settlement Instruction which would be subject to  
 2 | intraday restriction <sup>268</sup>. T2S does not attempt settlement of reverse collateral Settlement Instructions  
 3 | which are subject to Intraday Restriction (See section [Eligibility check process](#) [▶ 383]). However, the  
 4 | CSD has the possibility to configure the Intraday Restriction in a way that would still allow the end of day  
 5 | intraday credit reimbursement of reverse collateral Settlement Instructions: T2S assigns a specific ISO  
 6 | Transaction Code 'AUTO' to reverse collateral settlement transactions <sup>269</sup> which can be used to specifical-  
 7 | ly exclude them from the Intraday Restriction, e.g. by configuring a negative rule using ISO Transaction  
 8 | Code 'AUTO' <sup>270</sup>.
- 9 | **I** Cancellation or amendment: Once generated, the T2S generated collateral Settlement Instructions are  
 10 | immediately settled and therefore are not subject to cancellation. The T2S generated reverse collateral  
 11 | Settlement Instructions (and linked Settlement Restrictions in case of pledge sub procedure), cannot be  
 12 | cancelled, on the day of their creation, by any of the involved T2S Actors. The T2S generated reverse  
 13 | collateral Settlement Instructions for client collateralisation can be cancelled by T2S Actors on the days  
 14 | following their creation. The only possible amendment on T2S generated reverse collateral is for the re-  
 15 | lease of the reimbursement.

## 16 | Examples of an auto-collateralisation process

### 17 | EXAMPLE 117 - CENTRAL BANK COLLATERALISATION

18 | The following example illustrates a central bank collateralisation operation covering lack of cash on a T2S  
 19 | dedicated cash account identified during the provision check process (See section

20 | The settlement attempt applies on the following matched Settlement Instructions received in T2S:  
 21

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA1	ISIN X	AWAS	RECE	90	DCA1	EUR	DBIT	9,000.00
SI2	SA2		AWAS	DELI	90	DCA2		CRDT	9,000.00

22 | During the provision check process, the following provision net flows and provision check execution are cal-  
 23 | culated for each involved securities position (SecPos1 and SecPos2) and cash balance (CashBal1 and Cash-  
 24 | Bal2):  
 25

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1	CASHBAL2

268 | T2S generated collateral Settlement Instructions are not subject to insolvency restrictions (type 4) and as such are not impacted.

269 | To be complemented by CSDs by additional rules to ensure blocking of related realignment instructions which are not related to reimbursements for complex scenarios.

270 | To enable Cross CSD reimbursements, the rule also needs to exclude the ISO Transaction Code 'REAL'. It might be required to complement it by additional rules to ensure blocking of realignment instructions which are not related to reimbursements.

	SA1 ISIN X AWAS	SA2 ISIN X AWAS	DCA1 DLVR	DCA2 DLVR
SI1	+90		-9,000.00	
SI2		-90		+9,000.00
Provision net flow	+90	-90	-9,000.00	+9,000.00
Availability	+50	+100	+1,000.00	+3,000.00
Provision check execution	+140 OK	+10 OK	-8,000.00 LACK	+12,000.00 OK
Central bank collateralisation headroom			50,000.00	

1 Since the provision check execution is negative, the initial conditions to resort to the auto-collateralisation  
 2 process are checked:  
 3

CONDITIONS	CHECK RESULT	REASONS
Existence of a missing resource	OK	The cash balance CashBal1 presents a lack of cash (-8,000.00) due the buying Settlement Instruction SI1.
Eligible credit consumer	OK	Participant A owning the T2S dedicated cash account DCA1 is set as eligible to the central bank collateralisation by the central bank CB1 managing this account.
Sufficient limit headroom capacity	OK	At the moment of the need of intraday credit, the central bank collateralisation headroom is higher (50,000.00) than the needed intraday credit (8,000.00).

4 Once triggered, T2S calculates the intraday credit capacity allowed by the collateral available to guarantee  
 5 the provision of intraday credit on the T2S dedicated cash account DCA1.

6 Since the impacted balance indicated in SI1 is not related to an "Earmarking for auto-collateralisation" processing type (i.e. AWAS is the deliverable securities position), the use of collateral on flow to guarantee the  
 7 intraday credit is not possible.  
 8

9 T2S then selects all securities positions identified as collateral available for intraday credit provision in Euros  
 10 according to the selection criteria described above:

1

SECURITIES POSITION ID	SECURITIES AC-COUNT	ISIN CODE	RESTRICTION TYPE ID	QUANTITY OF SECURITIES	UNITARY COLLATERAL PRICE	CALCULATED SP COLLATERAL VALUATION (EUR)
SecPos1	SA1	ISIN A	EEUR	500	80.00	40,000.00
SecPos8	SA1	ISIN B	EEUR	245	78.00	19,110.00
SecPos99	SA3	ISIN C	EEUR	90	75.00	6,750.00

2 Once all potential collateral are identified, T2S calculates the intraday credit capacity summing all calculated  
3 collateral valuations (valuation price and own-use valuation price) of the identified securities position  
4 (40,000.00+19,110.00+6,750.00 = EUR 65,860.00). Since it is higher than the requested intraday credit,  
5 the auto-collateralisation process continues.

6 Ultimately, T2S selects the collateral taken in guarantee in the securities position SecPos1, since it allows a  
7 provision of collateral (100 securities for a collateral valuation of EUR 8,000.00) for the exact amount of the  
8 needed intraday credit (EUR 8,000.00).

9 Based on the selected collateral, the ultimate conditions for a central bank collateralisation process are  
10 checked:  
11

CONDITIONS	CHECK RESULT	REASONS
Limit headroom fulfilled	OK	The central bank collateralisation headroom remains positive (+EUR 42,000.00) after the central bank collateralisation operation.
Missing resource coverage	OK	The identified lack of cash (-8,000.00) is covered by the provided intraday credit (8,000.00).
Minimum amount for auto-collateralisation fulfilled	OK	The intraday credit provided (8,000) is greater than the defined minimum amount for central bank collateralisation (minimum defined as EUR 5,000 for the purposes of this example).

12 Since all the ultimate conditions are fulfilled, T2S generates the following collateral Settlement Instructions  
13 based on the parameters previously configured in the static data by CB1 and according to the collateral  
14 management procedure (Repo):  
15

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI3	CB1 ACO SA	ISIN A	AWAS	RECE	100	CB1 CBCA	EUR	DBIT	8,000.00
SI4	SA1		EEUR	DELI	100	DCA1		CRDT	8,000.00

1 Considering the new collateral Settlement Instructions (SI3 and SI4), a new provision net flows calculations  
 2 followed by a new provision check execution are computed:  
 3

OPERATION	SECURITY SIDE				CASH SIDE		
	SECPOS1	SECPOS2	SECPOS11	SECPOS99	CASHBAL1	CASHBAL2	CASHBAL99
	SA1 ISIN X AWAS	SA2 ISIN X AWAS	SA1 ISIN A EEUR	CB1 ACO SA ISIN A AWAS	DCA1 DLVR	DCA2 DLVR	CB1 CBCA DLVR
SI1	+90				-9,000.00		
SI2		-90				+9,000.00	
SI3 (collateral)				+100			-8,000.00
SI4 (collateral)			-100		+8,000.00		
Provision net flow	+90	-90	-100	+100	-1,000.00	+9,000.00	-8,000.00
Availability	+50	+100	+500	0	+1,000.00	+3,000.00	-252,000.00
Provision check execution	+140 OK	+10 OK	+400 OK	+100 OK	0 OK	+12,000.00 OK	-260,000.00 N/A
Central bank collateralisation headroom					42,000.00		

4 Since the central bank cash account CB1 CBCA used by central bank1 for the intraday credit provision is  
 5 allowed to be negative, the new provision check execution is in success. The matched Settlement Instruc-  
 6 tions and the generated Settlement Instructions are submitted to the booking process.

7 Once the settlement of SI1|SI2 and SI3|SI4 (collateral Settlement Instructions corresponding to central  
 8 bank1 as credit provider and to the payment/settlement bank PSB1 as credit consumer) is irrevocable, T2S  
 9 updates the involved securities positions and cash balances.

10 The following reverse collateral Settlement Instructions SI5|SI6 are generated for future reimbursement  
 11 during the settlement day:

1

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT	T2S PARTY HOLD INDICATOR
SI5	CB1 ACO SA	ISIN A	AWAS	DELI	100	CB1 CBCA	EUR	CRDT	8,000.00	NO
SI6	SA1		EEUR	RECE	100	DCA1		DBIT	8,000.00	YES

2 The Settlement Instruction SI6 of the payment/settlement bank PSB1 is set on hold waiting to be released to  
3 trigger the reimbursement of intraday credit. The reporting corresponding to those generations is then sent  
4 to central bank1 and PSB1 (See section Send Settlement Instruction).

5 **EXAMPLE 118 - CLIENT-COLLATERALISATION**

6 The following example illustrates a new client-collateralisation operation covering insufficient external guar-  
7 antee headroom identified during the provision check process (See section

8 The settlement attempt concerns the following matched Settlement Instructions previously received by T2S:

9

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI1	SA5	ISIN A	EEUR	RECE	100	DCA1	EUR	DBIT	8,200.00
SI2	SA2		AWAS	DELI	100	DCA2		CRDT	8,200.00

10 SI1 is instructed by Client C, client allowed by the payment/settlement bank PSB1 to use its T2S dedicated  
11 cash account DCA1 for the settlement of its Settlement Instructions. The capacity of Client C to use this T2S  
12 dedicated cash account is capped by limits set on the credit memorandum balance CMB6 (See section [Limit  
13 Management](#) [▶ 640]).

14 During the provision check process (See section [Posting](#) [▶ 381]), the following provision net flows and pro-  
15 vision check execution are calculated for each involved securities position (SecPos1 and SecPos2), cash bal-  
16 ance (CashBal1 and CashBal2) and credit memorandum balance (CMB6):  
17

OPERATION	SECURITY SIDE		CASH SIDE		
	SECPOS1	SECPOS2	CASHBAL1	CMB6	CASHBAL2
	SA5 ISIN A EEUR	SA2 ISIN A AWAS	DCA1 DLVR		DCA2 DLVR
SI1	+100		-8,200.00	-8,200.00	
SI2		-100			+8,200.00
Provision net flow	+100	-100	-8,200.00	-8,200.00	+8,200.00
Availability	+500	+110	+100,000.00	N/A	+10,000.00

OPERATION	SECURITY SIDE		CASH SIDE		
	SECPOS1	SECPOS2	CASHBAL1	CMB6	CASHBAL2
	SA5 ISIN A EEUR	SA2 ISIN A AWAS	DCA1 DLVR		DCA2 DLVR
External guarantee headroom			N/A	1,400.00	N/A
Provision check execution	+600 OK	+10 OK	+91,800.00 OK	-6,800.00 Insufficiency	+18,200.00 OK
Central bank col- lateralisation head- room			50,000.00	N/A	0.00
Client- collateralisation headroom			N/A	10,000.00	N/A
Unsecured credit headroom			N/A	3,500.00	N/A

1 Since the provision check execution is negative, the initial conditions to resort to the auto-collateralisation  
2 process are checked:  
3

CONDITIONS	CHECK RE- SULT	REASONS
Existence of a missing resource	OK	CMB6 presents an insufficient external guarantee headroom (-6,800.00) due to the buying Settlement Instruction SI1.
Eligible credit consumer	OK	Client C using the T2S dedicated cash account DCA1 is set as eligible to the client-collateralisation by the payment/settlement bank PSB1 owning this account.
Sufficient limit headroom capacity	OK	At the moment of the need of intraday credit, the sum of the external guarantee headroom (1,400.00), the client-collateralisation headroom (10,000.00) and the unsecured credit headroom (3,500.00) is higher (14,900.00) than the missing amount necessary for the settlement (8,200,00).

4 Once triggered, T2S calculates the intraday credit capacity allowed by the potential collateral identified to  
5 guarantee the provision of intraday credit through client-collateralisation for CMB6.

6 Since the impacted balance indicated in SI1 (EEUR) is related to the "Earmarking for auto-collateralisation"  
7 processing type for the currency of the needed intraday credit (EUR), the use of collateral on flow to guaran-

1 tee the intraday credit is possible (assuming the ISIN A is set as eligible for collateral by PSB1 as credit pro-  
2 vider).

3 Using collateral on flow before any collateral on stock, T2S calculates the intraday credit capacity related to  
4 SI1 by multiplying the received quantity (100) by the most recent collateral price (80.00) set by the pay-  
5 ment/settlement bank PSB1 for ISIN A. The potential intraday credit capacity from the collateral flow  
6 (8,000.00) is sufficient to cover the insufficient external guarantee headroom (-6,800.00).

7 T2S selects the collateral on flow (85 of the purchased securities for a collateral valuation of EUR 6,800.00)  
8 and checks the ultimate conditions to resort a client-collateralisation process:  
9

CONDITIONS	CHECK RE- SULT	REASONS
Limit headroom fulfilled	OK	The client-collateralisation headroom remains positive (+3,200.00) after the processed client-collateralisation operation.
Missing resource coverage	OK	The identified insufficient external guarantee headroom (-6,800.00) is covered by the provided intraday credit (6,800.00).
Minimum amount for auto-collateralisation fulfilled	OK	The intraday credit provided (6,800) is greater than the defined minimum amount for client collateralisation (minimum defined as EUR 1,000 for the purposes of this example).

10 Since all the ultimate conditions are fulfilled, T2S generates the following collateral Settlement Instructions  
11 based on the parameters previously configured in the static data by PSB1 in a way to transfer the received  
12 securities to the securities account of PSB1 (REPO procedure is systematic for client-collateralisation):  
13

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT
SI3	PSB1CCO SA	ISIN A	EXXX	RECE	85	DCA1	EUR	DBIT	6,800.00
SI4	SA5		EEUR	DELI	85	DCA1		CRDT	6,800.00

14 Considering the new collateral Settlement Instructions (SI3 and SI4), a new provision net flows calculations  
15 followed by a new provision check execution are executed:  
16

OPERATION	SECURITY SIDE			CASH SIDE		
	SECPOS1	SECPOS2	SECPOS33	CASHBAL1	CMB6	CASHBAL2
	SA5 ISIN A EEUR	SA2 ISIN A AWAS	PSB1 CCO SA ISIN A EXXX	DCA1 DLVR		DCA2 DLVR

OPERATION	SECURITY SIDE			CASH SIDE		
	SECPOS1	SECPOS2	SECPOS33	CASHBAL1	CMB6	CASHBAL2
	SA5 ISIN A EEUR	SA2 ISIN A AWAS	PSB1 CCO SA ISIN A EXXX	DCA1 DLVR		DCA2 DLVR
SI1	+100			-8,200.00	-8,200.00	
SI2		-100				+8,200.00
SI3 (collateral)			+85	-6,800.00		
SI4 (collateral)	-85			+6,800.00	+6,800.00	
Provision net flow	+15	-100	+85	-8,200.00	-1,400.00	+8,200.00
Availability	+500	+110	0	+100,000.00	N/A	+10,000.00
External guarantee headroom				N/A	1,400.00	N/A
Provision check execution	+515 OK	+10 OK	+85 OK	+91,800.00 OK	0 OK	+18,200.00 OK
Central bank collat. headroom				50,000.00	N/A	0.00
Client-collat. headroom				N/A	3,200.00	N/A
Unsecured credit headroom				N/A	3,500.00	N/A

- 1 The new provision check execution is positive. The matched Settlement Instructions and the generated Settlement Instructions are submitted to the booking process.
- 2
- 3 Once the settlement of SI1|SI2 and SI3|SI4 (collateral Settlement Instructions corresponding to PSB1 as credit provider and to Client C as credit consumer) is irrevocable, T2S updates the involved securities positions and cash balances.
- 4
- 5
- 6 The following reverse collateral Settlement Instructions SI5|SI6 are generated for future reimbursement
- 7 during the settlement day:

1

OP ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRED DEB INDIC	AMOUNT	T2S PARTY HOLD IN- DICATOR
SI5	PSB1CCO SA	ISIN A	EXXX	DELI	85	DCA1	EUR	CRDT	6,800.00	YES
SI6	SA5		EEUR	RECE	85	DCA1		DBIT	6,800.00	NO

2 The Settlement Instruction SI5 of the payment/settlement bank PSB1 is set on hold waiting for a release in  
3 order to trigger the reimbursement of intraday credit. The reporting corresponding to those generations is  
4 then sent to Client C and PSB1 (See section Send Settlement Instruction).

#### 5 Reimbursement of an auto-collateralisation operation by the payment/settlement bank

6 At any time during the settlement day, the payment/settlement bank can trigger the reimbursement of an  
7 auto-collateralisation operation acting as:

- 8 | Credit consumer in case of central bank collateralisation;
- 9 | Credit provider in case of client-collateralisation.

10 In both cases, to trigger the reimbursement of an auto-collateralisation operation, the payment/settlement  
11 bank releases the held reverse collateral Settlement Instruction generated by T2S at the intraday credit pro-  
12 vision.

#### 13 Reimbursement of a central bank collateralisation operation as credit consumer

14 To reimburse a central bank collateralisation operation, T2S checks that the necessary cash is available in  
15 the T2S dedicated cash account that received the intraday credit.

16 Once released, in case of insufficient cash, the reverse collateral Settlement Instruction follows the standard  
17 process of a failed provision check due to lack of cash (i.e. provision of intraday credit for the missing  
18 amount through a new central bank collateralisation operation if possible or recycling, see section [Provision](#)  
19 [check process](#) [▶ 391]).

20 The reverse collateral Settlement Instruction cannot be subject to a partial settlement (i.e. their partial set-  
21 tlement indicator is set to "No").

22 The actual settlement of the reverse collateral Settlement Instruction results in the increase of the headroom  
23 of the central bank collateralisation limit (See section [Limit Management](#) [▶ 640]).

#### 24 Reimbursement of a client-collateralisation operation as credit provider

25 To reimburse a client-collateralisation operation, T2S checks that the necessary headroom is available, in the  
26 external guarantee limit increased through the intraday credit.

27 Once released, in case of insufficient headroom, the reverse collateral Settlement Instruction follows the  
28 standard process of a failed provision check, due to insufficient headroom in an external guarantee limit (i.e.  
29 provision of intraday credit for the missing amount through a new client-collateralisation operation if possible  
30 or recycling, see section [Provision check process](#) [▶ 391]).

31 The reverse collateral Settlement Instruction cannot be subject to a partial settlement (i.e. their partial set-  
32 tlement indicator is set to "No").

1 The actual settlement of the reverse collateral Settlement Instruction results in the increase of the headroom  
2 of the client-collateralisation limit (See section [Limit Management](#) [▶ 640]).

### 3 Automatic release of collateral already used and potential substitution

4 If collateralised securities are needed to settle a Settlement Instruction, T2S automatically releases the held  
5 reverse collateral Settlement Instruction(s) necessary for the settlement by selecting the most appropriate  
6 reverse collateral Settlement Instructions (i.e. those that can provide the missing securities against the min-  
7 imun amount of reimbursement taking into account the available cash amount).

8 The reimbursement is achieved without additional step if:

9 | In case of central bank collateralisation: the cash available in the T2S dedicated cash account receiving  
10 the intraday credit is sufficient to reimburse the intraday credit;

11 | In case of client-collateralisation: the available headroom of the external guarantee limit is sufficient to  
12 reimburse the intraday credit.

13 If the available cash or the available headroom is not sufficient to fully reimburse the intraday credit, T2S  
14 automatically implements a new auto-collateralisation operation, in order to provide the necessary intraday  
15 credit to cover the missing resources.

### 16 Automatic reimbursement of auto-collateralisation operations with central bank during a settlement day

17 The decrease of a central bank collateralisation limit, during a settlement day, can lead to an already provid-  
18 ed intraday credit higher than the limit amount. It results in an automatic reimbursement of existing reverse  
19 collateral Settlement Instructions, in order to bring back the provided intraday credit under the new limit  
20 (see section [Limit Management](#) [▶ 640]).

21 For the automatic reimbursement, T2S:

22 | Identifies the reverse collateral Settlement Instructions debiting the concerned T2S dedicated cash ac-  
23 count;

24 | Selects the reverse collateral Settlement Instructions, for which the sum of settlement amounts is closest  
25 to, but higher than, the provided intraday credit higher than the limit;

26 | Releases the selected reverse collateral Settlement Instructions for their submission to a settlement at-  
27 tempt and ensures their selection in priority in case of recycling.

28 Then, the released reverse collateral Settlement Instructions follow standard settlement process as any re-  
29 imbursement of intraday credit.

30 This automatic reimbursement process does not apply to client-collateralisation.

### 31 Pending auto-collateralisation operations at the end of day

32 In principle, intraday credit provided in T2S through auto-collateralisation must be reimbursed at the end of  
33 the day.

34 Nevertheless, if reverse collateral Settlement Instructions remain pending at the end of day:

35 | In case of central bank collateralisation, T2S triggers a specific process for their automatic reimburse-  
36 ment or the rebalancing of pending intraday credit to the RTGS (See section [End of Day Cash Manage-  
37 ment](#) [▶ 655]);

1 I In case of client-collateralisation, T2S does not trigger any specific process at the end of the day. It is up  
2 to the payment/settlement bank to release the reverse collateral Settlement Instruction before the end  
3 of day.

4 Parameters synthesis

5 The following parameters are specified by the T2S Operator or by the T2S Actor.  
6

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Central bank collateralisation	Collateral management procedure	T2S Actor	T2S Actor	M	REPO PLEDGE PLEDGE SUB	N/A
Central bank collateralisation and client collateralisation	Securities accounts for collateral management in REPO procedure	T2S Actor	T2S Actor	M	Valid securities account Id	N/A
Central bank collateralisation	Securities accounts pledged for collateral management in PLEDGE procedure	T2S Actor	T2S Actor	M	Valid securities account Id	N/A
Central bank collateralisation	Central bank cash accounts for intra-day credit provision	T2S Actor	T2S Actor	M	Valid central bank cash account Id	N/A
Central bank collateralisation and client collateralisation	Eligible collateral	T2S Actor	T2S Actor	M	N/A	N/A
Central bank collateralisation and client collateralisation	Collateral price per eligible collateral	T2S Actor	T2S Actor	M	Valuation in a given currency	N/A
Central bank collateralisation and client collateralisation	Collateral own-use price per eligible collateral	T2S Actor	T2S Actor	O	Valuation in a given currency	N/A
Central bank collateralisation and client collateralisation	Close links	T2S Actor	T2S Actor	O	N/A	N/A
Central bank collateralisation	Central bank collateralisation limit	T2S Actor	T2S Actor	M	N/A	"0"

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Client collateralisation	Client-collateralisation limit	T2S Actor	T2S Actor	M	N/A	"0"
Central bank collateralisation and client collateralisation	Links between securities account for collateral supply	T2S Actor	T2S Actor	M	N/A	N/A
Central bank collateralisation and client collateralisation	Restriction type earmarking for auto-collateralisation	T2S Operator	T2S Operator	M	Eeee	N/A
Central bank collateralisation	Restriction type collateralised	T2S Operator	T2S Operator	M	COLL	N/A
Central bank collateralisation	Minimum amount for auto-collateralisation	T2S Actor	T2S Actor	O	N/A	N/A
Client collateralisation	Minimum amount for auto-collateralisation	T2S Actor	T2S Actor	O	N/A	N/A
Central bank collateralisation and client collateralisation	Identification of securities positions eligible for collateral	T2S Actor	T2S Actor	M	N/A	N/A

1 1.6.1.10 Realignment

2 **1.6.1.10.1 Concept**

3 The realignment application process handles the cases of:

- 4 | Cross-CSD settlements, i.e. settlements between T2S Actors of different CSDs, the latter being in T2S;
- 5 | External-CSD settlements, i.e. settlements between T2S Actors of different CSDs, with some of the CSDs
- 6 | involved in the settlement being external to T2S.

7 Cross-CSD settlement is achieved in T2S with the simultaneous booking of cash and securities for Settlement  
 8 Instructions between participants of different CSDs. Once incoming Settlement Instructions are matched (or  
 9 validated for already matched incoming Settlement Instructions), the realignment application process creates  
 10 automatically all the requested Settlement Instructions between the involved CSDs, referred hereafter as  
 11 T2S generated realignment Settlement Instructions. This automatic generation relies on links set in the static

1 data between the relevant CSDs and does not request from the T2S Actors any other action. It takes place  
 2 immediately following either the validation of already matched Settlement Instructions, or the matching of  
 3 Settlement Instructions matching in T2S.

4 Realignment application process is also applied for external-CSD settlement.

5 This section details the parameters required from T2S Actors to manage the realignment in T2S for cross-  
 6 CSD and external-CSD settlement. It also details the resulting realignment chain with the description of the  
 7 T2S generated realignment Settlement Instructions reported to the involved T2S Actors.

8 For external-CSD settlement, only the process applying to the Settlement Instructions actually submitted to  
 9 T2S is described. All actions required by the realignment but without interaction with T2S are not described.

10 **DIAGRAM 102 - REALIGNMENT APPLICATION PROCESS**

11

12 **1.6.1.10.2 Overview**

13 Upon the matching of Settlement Instructions, or upon the validation of already matched Settlement Instruc-  
 14 tions, the realignment application process verifies if the incoming business Settlement Instructions are re-  
 15 quiring realignment Settlement Instructions on securities accounts other than those of the submitting T2S  
 16 Actors (e.g. on the accounts of the issuer CSD).

17 When the need to realign is identified, the realignment application process creates automatically the T2S  
 18 generated realignment Settlement Instructions, based on the cross-CSD links set by CSDs in the static data.

1 The T2S generated realignment Settlement Instructions are then validated, and linked to the initial underlying  
2 Settlement Instructions through two links INFO providing the references of both business Settlement  
3 Instructions for information purposes. T2S ensures that the T2S generated realignment Settlement Instruc-  
4 tions and their business Settlement Instructions settle on an all-or-none basis.

5 **1.6.1.10.3 Realignment process**

6 *Parameters necessary for realignment*

7 Role and links between CSDs for cross-CSD and external-CSD settlement

8 Irrespective of whether it is a cross-CSD or an external-CSD settlement, a CSD is defined for the realignment  
9 process as:

- 10 | The issuer CSD, when it is the CSD in which the security has been issued and distributed on behalf of  
11 the Issuer;
- 12 | The investor CSD, when it is the CSD of at least one party of the Settlement Instruction;
- 13 | Or both, when it is the CSD in which the security has been issued and the CSD of at least one party of  
14 the Settlement Instruction.

15 To manage the cross-CSD and external-CSD settlements, each investor CSD has the choice between:

- 16 | Opening an omnibus account (see section below) in the books of the issuer CSD to reflect the holdings  
17 of its participants for the securities, or;
- 18 | Opening an omnibus account in the books of any other CSD being already an investor CSD for the same  
19 financial instrument.

20 In both cases, the CSD where the omnibus account is opened is defined as the technical issuer of the inves-  
21 tor CSD for the given securities. The choice between these two options is exclusive, i.e. for a given security,  
22 each investor CSD can define only one technical issuer.

23 To that purpose, CSDs are required to configure the following parameter in the static data:  
24

PARAMETERS	DEFINITION
CSD links	<p>Each investor CSD has to define a technical issuer CSD per securities it intends to set as eligible for settlement (See section <a href="#">Securities reference data</a> [▶ 76]). This results in the creation of a link between the investor CSD and its technical issuer CSD for a given financial instrument.</p> <p>For a given investor CSD, the technical issuer CSD may be different for each security. It is in most cases the issuer CSD of the security.</p> <p>The issuer CSD sets a CSD link with itself as issuer.</p> <p>(See section <a href="#">Configuration of securities accounts for cross-CSD settlement and external CSD settlement</a> [▶ 102])</p>

25 This parameter is used by T2S to derive the realignment chain applicable to matched Settlement Instructions  
26 starting from both investor CSDs to the issuer CSD of the traded securities.

1 The following example illustrates the configuration of CSD links for ISIN X.

2 **EXAMPLE 119 - CONFIGURATION OF CSD LINKS FOR AN ISIN**

3

Security CSD Link Identifier	SECURITY CSD LINK			
	Securities Identifier	Link type	Issuer/Investor Party Identifier	Technical Issuer Party Identifier
CSD Link 1	ISIN X	NVST	CSD A	CSD C
CSD Link 2	ISIN X	NVST	CSD C	CSD I
CSD Link 3	ISIN X	ISSR	CSD I	
CSD Link 4	ISIN X	NSVT	CSD B	CSD D
CSD Link 5	ISIN X	NSVT	CSD D	CSD I

4 The following diagram illustrates the derived realignment chain using these CSD links.

5 **DIAGRAM 103 - ILLUSTRATION OF THE REALIGNMENT CHAIN DERIVED FROM THE EXAMPLE**

6

7 Accounts definition and organisation for cross-CSD and external-CSD settlement

8 This section introduces the different types of securities account required for the realignment process in the  
 9 context of the links defined above between CSDs.

1  
2

**TABLE 128 - DIFFERENT TYPES OF ACCOUNTS REQUIRED FOR THE REALIGNMENT PROCESS**

SECURITIES ACCOUNTS	DEFINITION
<p>Omnibus securities account to configure by the technical issuer CSD</p>	<p>For cross-CSD and external-CSD settlement, a technical issuer CSD must configure, in the static data, an omnibus account for each investor CSD for which a CSD link exists.</p> <p>This omnibus account is used by the investor CSD to hold the securities owned by its participants. It is strictly equivalent to any participant's account of the technical Issuer CSD. It is linked to one (and only one) mirror account opened in the investor CSD.</p> <p>The investor CSD can choose to segregate such holding in several omnibus accounts.</p> <p>(See section <a href="#">Configuration of securities accounts for cross-CSD settlement and external CSD settlement</a> [▶ 102])</p>
<p>Mirror securities account to configure by the investor CSD</p>	<p>An investor CSD must configure, in the static data, a mirror account per omnibus account opened in its technical issuer CSD.</p> <p>This mirror account reflects in the investor CSD, the omnibus account held within a technical issuer CSD. It is linked to one (and only one) omnibus account opened in the technical issuer CSD.</p> <p>At any moment, the balance in credit of the omnibus account is in theory equal to the balance in debit of the mirror account. Exception to that may occur when the issuer CSD is external to T2S and the securities are underway of transfer from/to T2S to/from an external CSD. In this case, the difference between the mirror account and the omnibus account is reflected in the inter CSD account.</p> <p>(See section <a href="#">Configuration of securities accounts for cross-CSD settlement and external CSD settlement</a> [▶ 102])</p>
<p>Inter CSD securities account to configure by the investor CSD</p>	<p>For external-CSD settlement, a CSD acting as an investor CSD must configure, in the static data, an inter CSD account per mirror account.</p> <p>The inter CSD Account is linked to one (and only one) mirror account. Its balance is usually equal to zero except when the issuer CSD is external to T2S and securities are being transferred from/to T2S to/from an external CSD:</p> <p>If the balance of the inter CSD account is in credit, a quantity of securities equal to this balance should be transferred from T2S to the external CSD;</p> <p>If the balance of the inter CSD account is in debit, a quantity of securities equal to this balance should be transferred from the external CSD to T2S.</p> <p>When these transfers are executed, the balance of the inter CSD account goes back to zero and the balance of the mirror account is again in line with the balance of the omnibus account.</p>

1 The following diagram illustrates the organisation of securities accounts resulting from the use of a single  
 2 omnibus securities account at the technical issuer CSD.

3 **DIAGRAM 104 - ORGANISATION OF ACCOUNTS WITH A SINGLE OMNIBUS ACCOUNT AT THE TECHNICAL ISSUER CSD**

4  
 5 The following example illustrates the securities accounts that have to be configured by the CSD, in order for  
 6 T2S to derive the Settlement Instructions necessary for the realignment. The setup of the inter CSD account  
 7 is required only when the technical issuer CSD is outside T2S. The setup of the CSD participant securities  
 8 account is required only when the investor CSD has several omnibus accounts at the technical issuer CSD.

9 **EXAMPLE 120 - CONFIGURATION OF ACCOUNTS FOR REALIGNMENT WITH A SINGLE OMNIBUS ACCOUNT - TABLE AND DIAGRAM**  
 10

CSD ACCOUNT LINK ID	INVESTOR CSD PARTY	TECHNICAL ISSUER CSD PARTY	CSD PARTICIPANT SECURITIES ACCOUNT	OMNIBUS ACCOUNT (IN THE TECHNICAL ISSUER CSD BOOKS)	MIRROR ACCOUNT (IN THE INVESTOR CSD BOOKS)
CSD A/C LINK 1	CSD A	CSD C		Omnibus CSD A	Mirror A-C
CSD A/C LINK 2	CSD C	CSD I		Omnibus CSD C	Mirror C-I
CSD A/C LINK 5	CSD D	CSD I		Omnibus CSD D	Mirror D-I
CSD A/C LINK 4	CSD B	CSD D		Omnibus CSD B	Mirror B-D

11 On the basis of these securities accounts, the following diagram illustrates the settlement movements that  
 12 the realignment application process can derive from this configuration.

1

**DIAGRAM 105 - REALIGNMENT WITH SINGLE OMNIBUS ACCOUNT AT THE TECHNICAL ISSUER CSD**

2

3 The following diagram illustrates the organisation of securities accounts resulting from the use of multiple  
4 omnibus securities accounts at the technical issuer CSD.

5

**DIAGRAM 106 - ORGANISATION OF ACCOUNTS WITH SEVERAL OMNIBUS ACCOUNTS AT THE TECHNICAL ISSUER CSD**

6

7 The capacity to use several omnibus accounts implies the configuration of the securities account required for  
8 the realignment process for each possible triplet {Investor CSD, Technical Issuer CSD, Participant account}.

9 The following example illustrates the securities accounts that have to be configured by the CSD, in order for  
10 T2S to derive the Settlement Instructions necessary for the realignment when an investor CSD has several  
11 omnibus accounts at the technical issuer CSD. When no participant account is set up, the corresponding  
12 omnibus account is the default omnibus account.

1  
2

**EXAMPLE 121 - CONFIGURATION OF ACCOUNTS FOR REALIGNMENT WITH SEVERAL OMNIBUS ACCOUNTS - TABLE AND DIAGRAM**

CSD AC-COUNT LINK ID	INVESTOR CSD PARTY	TECHNICAL ISSUER CSD PARTY	CSD PARTICIPANT SECURITIES ACCOUNT	OMNIBUS AC-COUNT (IN THE TECHNICAL ISSUER CSD BOOKS)	MIRROR AC-COUNT (IN THE INVESTOR CSD BOOKS)	INTER CSD AC-COUNT (IN THE INVESTOR CSD BOOKS)
CSD A/C LINK 6	CSD E	CSD I	Participant E sec. A/C	Omnibus 1 CSD E	Mirror 1 E-I	
CSD A/C LINK 7	CSD E	CSD I		Omnibus 2 CSD E	Mirror 2 E-I	

3

**DIAGRAM 107 - REALIGNMENT WITH SEVERAL OMNIBUS ACCOUNTS AT THE TECHNICAL ISSUER CSD**

4

External-CSD as T2S Party

In case an external-CSD is involved in the set-up of links above, it has to be configured in the static data by the CSD in T2S that accepts such an external-CSD as counterpart in an external-CSD settlement scenario.

For this aim, the CSD in T2S creates this external-CSD as a T2S Party having a party type set to "External CSD" and a Parent BIC equal to the BIC of the CSD which creates it. (See section [Setup of parties in T2S](#) [▶ 36]). For convenience this CSD in T2S is called hereunder as the Parent CSD of an external CSD.

An "external-CSD" T2S Party is then considered as a CSD participant of the CSD in T2S. If an external-CSD has several Parent CSDs in T2S, an "external-CSD" T2S Party is created by each Parent CSD in T2S.

The identifier of this T2S Party created for the external-CSD is then used for the configuration of the parameters above.

Realignment generic process

15

1 Starting from the two matched Settlement Instructions which include the counterparts, their CSDs, the secu-  
2 rity and the securities accounts, the realignment process performs its analysis according to two steps:

- 3 | Building the two realignment chains, starting from both investor CSDs, ending at the issuer CSD of the  
4 security. This step is performed by reading the static data, storing the role of all the CSDs (investor, is-  
5 suer, technical issuer), their participation in T2S (in or external), their links to other CSDs;
- 6 | Generating all the T2S generated realignment Settlement Instructions, using the securities accounts  
7 (mirror, omnibus and inter CSD) stored in the static data, and linking them to the underlying matched  
8 Settlement Instructions.

#### 9 Building the realignment chain from the delivering investor CSD to the issuer CSD of the security

10 The realignment process identifies the investor CSD of the T2S Actor delivering the securities, allowing the  
11 identification within the static data of its technical issuer CSD for the specific security. The analysis is per-  
12 formed to identify all CSDs involved in the realignment chain and stops when:

- 13 | The investor CSD is its own technical issuer CSD (i.e. it is the issuer CSD), or;
- 14 | The technical issuer CSD is not participating to T2S (i.e. with the external CSD party type).

#### 15 Building the realignment chain from the receiving investor CSD to the issuer CSD of the security

16 The realignment process then performs the same analysis as for the delivering realignment chain starting  
17 from the investor CSD of the T2S party receiving the securities.

#### 18 Generating the realignment Settlement Instructions

19 The realignment application process generates the T2S generated realignment Settlement Instructions start-  
20 ing from both investor CSDs and for each step identified in the realignment chains. The T2S generated rea-  
21 lignment instructions debit and credit the deliverable securities positions. If the impacted account has no  
22 deliverable securities position due to earmarking at account level, T2S debits or credits the earmarked secu-  
23 rities position.

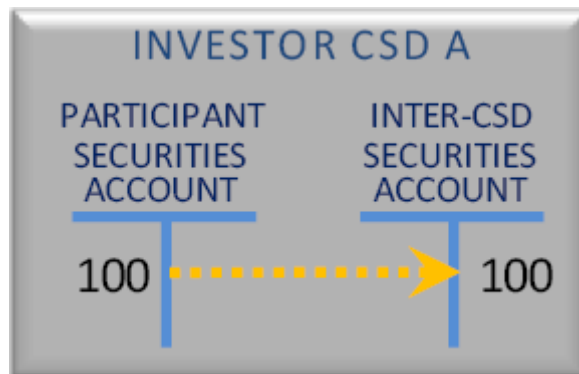

24 At each step, depending on whether the technical issuer CSD is in or outside T2S:

- 25 | If the technical issuer CSD is in T2S, a T2S generated realignment Settlement Instruction is created af-  
26 fecting the mirror account of the technical issuer CSD in the investor CSD against the T2S Party account:

27

- 28 | If the technical issuer CSD is outside of T2S, a T2S generated realignment Settlement Instruction is cre-  
29 ated affecting the inter-CSD account of the technical issuer CSD in the investor CSD against the T2S Par-  
30 ty account:

1

2 The realignment application process iterates the same process at the level of the technical issuer CSD and,  
 3 when required, creates at that level two T2S generated realignment Settlement Instructions between the  
 4 omnibus account of the previous investor CSD and either the mirror or the inter-CSD account of the follow-  
 5 ing technical issuer CSD.

6 When a common CSD that is different from the issuer CSD is detected in both chains, a complementary  
 7 analysis is required:

- 8 | If that CSD is using the same omnibus account for both of its T2S Parties (or investor CSD), one T2S  
 9 generated realignment Settlement Instruction affecting the two T2S Parties accounts (or omnibus ac-  
 10 counts of CSD) are created:

11

- 12 | Otherwise, the realignment application process creates the T2S generated realignment Settlement In-  
 13 struction between the T2S Parties accounts (or omnibus account of CSDs) and either the mirror or the  
 14 inter-CSD account of the following technical issuer CSD. In addition, the realignment application process

- 1 creates the T2S generated realignment Settlement Instruction between the omnibus accounts of the cur-  
2 rent investor CSD in the following technical issuer CSD:

- 3  
4 In the particular case of multi-issued securities where two issuer CSDs in T2S are affected, the instructions  
5 created at the level of these CSDs are affecting their main issuance accounts, instead of a mirror or an inter-  
6 CSD account.

### 7 Validity of T2S generated realignment Settlement Instructions

- 8 Once generated, the T2S realignment Settlement Instructions, are subject to other T2S processes as any  
9 other Settlement Instruction <sup>271</sup>. Furthermore in order to ensure the consistency of the realignment process,  
10 the following principles are implemented:

- 11 | Validation: T2S does not create T2S generated realignment Settlement Instruction if at least one of them  
12 does not successfully pass the business validations. In case the realignment application process fails to  
13 create the whole set of requested T2S generated realignment Settlement Instructions, the process does  
14 not generate any T2S generated realignment Settlement Instructions and cancels the original business  
15 Settlement Instructions.
- 16 | Revalidation: T2S revalidates the generated realignment Settlement Instructions when they are recycled  
17 or impacted by a static data update and hence, may cancel them (See section [Revalidation process](#)  
18 [[▶ 342](#)]). When T2S cancels a realignment Settlement Instruction, T2S cancels the whole set of generat-  
19 ed Settlement Instructions and their underlying business Settlement Instructions.
- 20 | Intraday Restriction: T2S does not attempt settlement of generated realignment Settlement Instructions  
21 which are subject to Intraday Restriction (See section [Eligibility check process](#) [[▶ 383](#)]). As the T2S gen-

271 The Party Hold based on "hold" flag in static data only applies to instructions received from T2S Actor, and therefore does not apply to T2S generated settlement instructions (for realignment, collateral...).

erated Settlement Instructions and the Business Settlement Instructions settle on all or none basis, the related Business Settlement Instructions are also not submitted to settlement.

Cancellation and amendment: Once generated, the T2S generated realignment Settlement Instructions, cannot be cancelled by any of the involved T2S Actors. The only possible amendment is for the release of realignment instructions which are under CoSD hold or under CSD validation hold <sup>272</sup>. The T2S generated realignment Settlement Instructions are cancelled by T2S if a T2S Actor cancels their underlying business Settlement Instructions.

**Examples of a realignment process**

**EXAMPLE 122 - CROSS-CSD SETTLEMENT ILLUSTRATION**

Participant A is selling securities (ISIN X) to Participant B. Both send the following Settlement Instructions matched by T2S:

OPE. ID	IN-STRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD B	Part B		
SIB	Part B	Part B S/A		RECE	100			CSD A	Part A

Chain identification

T2S retrieves from the static data all CSD links configured for ISIN X, starting from each investor CSD, ending at the issuer CSD of ISIN X (i.e. the investor CSD is the same as the technical issuer CSD).

From the delivering investor CSD, T2S retrieves the following CSD links:

SECURITY CSD LINK				
SECURITY CSD LINK IDENTIFIER	SECURITIES IDENTIFIER	LINK TYPE	ISSUER/INVESTOR PARTY IDENTIFIER	TECHNICAL ISSUER PARTY IDENTIFIER
CSD_link_1	ISIN X	NVST	CSD A	CSD C
CSD_link_2	ISIN X	NVST	CSD C	CSD I
CSD_link_3	ISIN X	ISSR	CSD I	

From the receiving investor CSD, T2S retrieves the following CSD links:

272 When on CSD validation hold by T2S; T2S communicates the positive restriction type case 1 rule that triggered such CSD validation hold. Restriction types may also be defined with a negative parameter in which case T2S communicates the negative restriction type case 1 rule preventing the instruction from being on CSD validation hold. When triggered, these rules are provided within the T2S generated realignment Settlement Instructions

1

SECURITY CSD LINK				
SECURITY CSD LINK IDENTIFIER	SECURITIES IDENTIFIER	LINK TYPE	ISSUER/INVESTOR PARTY IDENTIFIER	TECHNICAL ISSUER PARTY IDENTIFIER
CSD_link_4	ISIN X	NVST	CSD B	CSD D
CSD_link_5	ISIN X	NVST	CSD D	CSD I
CSD_link_3	ISIN X	ISSR	CSD I	

2 Both chains end at CSD I, the issuer CSD of ISIN X.

3 Accounts identification

4 T2S then identifies from the static data, the securities accounts to deliver and to receive for the realignment  
5 application process, starting from the securities account of each participant delivering or receiving the securi-  
6 ties.

7 Starting from the participant account delivering the securities (Part A S/A), T2S retrieves the accounts con-  
8 figured for the triplet {Investor CSD A, its technical issuer CSD C, and the CSD Participant account part A  
9 S/A}:

10

CSD ACCOUNT LINK IDENTIFIER	INVESTOR CSD PARTY IDENTIFIER	TECHNICAL ISSUER CSD PARTY	CSD PARTICIPANT SECURITIES ACCOUNT	INVESTOR CSD MIRROR ACCOUNT SECURITIES ACCOUNT	OMNIBUS ACCOUNT SECURITIES ACCOUNT	INVESTOR CSD INTER CSD SECURITIES ACCOUNT
CSD_acc_link_1	CSD A	CSD C	Part A S/A	Mirror A-C	Omnibus CSD A	

11 T2S continues recursively by replacing in the searched triplet the investor CSD by its technical issuer CSD  
12 (CSD C) and the participant account by the previously found omnibus account. (Omnibus CSD A):

13

CSD ACCOUNT LINK IDENTIFIER	INVESTOR CSD PARTY IDENTIFIER	TECHNICAL ISSUER CSD PARTY	CSD PARTICIPANT SECURITIES ACCOUNT	INVESTOR CSD MIRROR ACCOUNT SECURITIES ACCOUNT	OMNIBUS ACCOUNT SECURITIES ACCOUNT	INVESTOR CSD INTER CSD SECURITIES ACCOUNT
CSD_acc_link_2	CSD C	CSD I	Omnibus CSD A	Mirror C-I	Omnibus CSD C	

14 The processing stops when the technical issuer CSD is equal to the issuer CSD identified during the chain  
15 identification.

16 T2S then processes the same way starting from the participant account receiving the securities (Part B S/A):

1

CSD ACCOUNT LINK IDENTIFIER	INVESTOR CSD PARTY IDENTIFIER	TECHNICAL ISSUER CSD PARTY	CSD PARTICIPANT SECURITIES ACCOUNT	INVESTOR CSD MIRROR ACCOUNT SECURITIES ACCOUNT	OMNIBUS ACCOUNT SECURITIES ACCOUNT	INVESTOR CSD INTER CSD SECURITIES ACCOUNT
CSD_acc_link_4	CSD B	CSD D	Part B S/A	Mirror B/D	Omnibus CSD B	
CSD_acc_link_5	CSD D	CSD I	Omnibus CSD B	Mirror D/I	Omnibus CSD D	

2 The following diagram shows the identified links and accounts from the static data:

3

4 Creation of T2S generated realignment instruction

5 Once all the securities account references are retrieved, T2S generates all the Settlement Instructions necessary to the realignment process, adding these movements between both omnibus accounts in the issuer CSD I.

8 The T2S generated realignment Settlement Instructions are created already matched between them and with the incoming business Settlement Instructions. The matching reference is the same as for the underlying business Settlement Instructions, which were previously matched for business purposes.

11 Due to this matching reference, the priority and partial settlement indicator of the business Settlement Instructions automatically apply to the T2S generated realignment Settlement Instructions during the settlement attempt. The Settlement Instructions that have to be generated for the realignment process associated to SIA|SIB can be summarised as follow.

15 On the basis of the incoming business matched (0) Settlement Instructions:

1

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD B	Part B		
SIB	Part B	Part B S/A		RECE	100			CSD A	Part A

2 Eight T2S generated realignment Settlement Instructions are created as follows:

- 3 | One T2S generated realignment Settlement Instruction T2SgSI1 which credits the mirror account A-C in the investor CSD A and which is created already matched (1) with the business Settlement Instruction
- 4 | SIA debiting the participant A securities account:

5  
6

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC.MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD B	Part B		
T2SgSI1	CSD A	Mirror A-C		RECE	100			CSD A	Part A

9 | All T2S generated realignment Settlement Instructions carry automatically two links INFO providing the ref-  
 10 | erences of both business Settlement Instructions.

11 | They are all submitted on an all-or-none basis in the posting process with the original business Settlement  
 12 | Instructions (0) that allow settling the cash leg (See section [Posting](#) [▶ 381] and section [Optimising](#) [▶ 413]).

13 | The following diagram illustrates the full set of T2S generated Settlement Instructions automatically created  
 14 | by T2S for the realignment.

1 **EXAMPLE 123 - ILLUSTRATION OF A FULL SET OF T2S GENERATED SETTLEMENT INSTRUCTIONS FOR REALIGNMENT**

2  
3 Realignment scenarios for Settlement Instructions submitted to T2S

4 The generic realignment process described above applies similarly, with variation depending on the context  
5 for the CSDs involved with the Settlement Instructions that are submitted to T2S.

6 According to these contexts several scenarios are identified and can be classified as:

- 7 | Intra-CSD settlement;
- 8 | Cross-CSD settlement;
- 9 | External-CSD settlement.

10 There are, for cross-CSD settlement and for external-CSD settlement, as many scenarios as there may be  
11 investor CSDs, technical issuer CSDs and issuer CSDs involved in the chain.

12 The sections hereunder only detail the most common scenarios, i.e. for a limited number of CSDs involved in  
13 the delivery chain. In addition, to simplify the reading, only the securities side of Settlement Instructions is  
14 described.

15 Whatever it is an intra-CSD, a cross-CSD or an external-CSD settlement, the cash side, if any, is always pro-  
16 cessed using the T2S Dedicated cash accounts indicated in the incoming business Settlement Instructions or  
17 set as default cash account in the static data(See section [Posting](#) [▶ 381]).

18 Scenario intra-CSD settlement

19 This scenario covers the intra-CSD settlement defined as settlement between two participants belonging to  
20 the same CSD I in T2S. In this case, the CSD cumulates the roles of:

- 21 | Investor CSD of the two participants;
- 22 | Issuer CSD of the security;
- 23 | Its own Technical Issuer for the securities issued on its books.

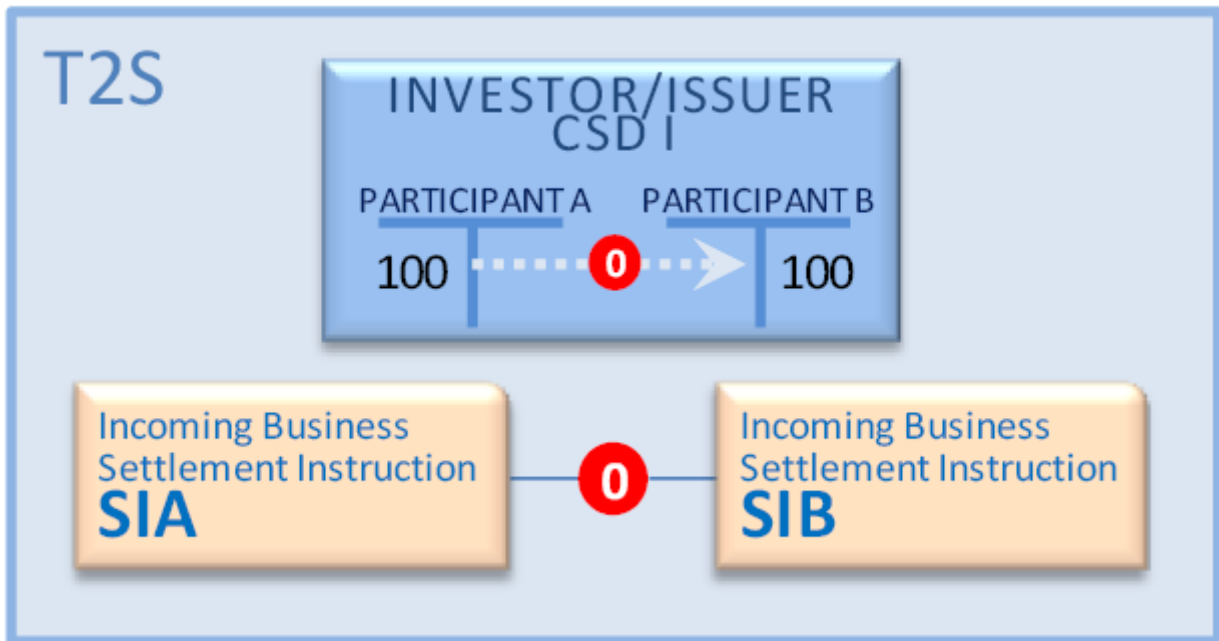

24 For example, the following incoming business matched (0) Settlement Instructions are sent to T2S:

1

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD I	Part B		
SIB	Part B	Part B S/A		RECE	100			CSD I	Part A

2 Since both participants belong to the same CSD in T2S which is the issuer of the security, there is no rea-  
 3 lignment mechanism. Consequently, T2S does not create any T2S generated realignment Settlement In-  
 4 struction.

5 **DIAGRAM 108 - INTRA-CSD SETTLEMENT SCENARIO**

6

7 Scenarios cross-CSD settlement

8 These scenarios cover the cross-CSD settlement defined as a settlement:

- 9 | Between participants not belonging to the same CSD;
- 10 | With all the CSDs involved in the chain (investor CSDs, technical issuer CSDs and issuer CSD), from the  
 11 investor CSD of the delivering counterpart to the investor CSD of the receiving counterpart, being all in  
 12 T2S.

13 In case of cross-CSD settlements, the realignment application process for identifying the links and generat-  
 14 ing the T2S realignment Settlement Instructions is identical to the generic process, i.e.:

- 15 | Building the delivering and the receiving realignment chains on the basis of the incoming business Set-  
 16 tlement Instructions sent to T2S using the links configured in the static data by the involved CSDs;
- 17 | Creating all T2S generated realignment Settlement Instructions on the basis of the securities accounts  
 18 configured in the static data by the involved CSDs.

1 There are as many scenarios as there may be investor CSDs, technical issuer CSDs and issuer CSDs involved  
 2 in the chain, as long as they are all in T2S. The scenarios below only detail the most common ones:  
 3

SCENARIOS	CONTEXT	COMMENT
Cross 1	Two Investor CSDs and one Issuer CSD all in T2S	Cross-CSD
Cross 2	Two Investor CSDs and two Issuer CSDs all in T2S	
Cross 3	Two Investor CSDs, one common Technical issuer CSD, one Issuer CSD all in T2S	

4 **EXAMPLE 124 - SCENARIO CROSS 1: TWO INVESTOR CSDS AND ONE ISSUER CSD ALL IN T2S**

5 This example describes the settlement where participant A from investor CSD A is selling securities to partic-  
 6 ipant B from investor CSD B. It implies:

- 7 | Two investor CSDs (A and B) in T2S in relationship with the issuer CSD as technical issuer;
- 8 | The issuer CSD (I) in T2S.

9 **DIAGRAM 109 - ILLUSTRATION OF SCENARIO CROSS 1: TWO INVESTOR CSDS AND ONE ISSUER CSD ALL IN T2S**

8 | All T2S generated realignment Settlement Instructions carry automatically two links INFO providing the ref-  
9 | erences of both business Settlement Instructions. They are all submitted on an all-or-none basis in the post-  
10 | ing process with the business Settlement Instructions (0) that allow settling the cash leg.

1 **DIAGRAM 110 - ILLUSTRATION OF SCENARIO CROSS 1: SECURITIES MOVEMENTS AND SETTLEMENT INSTRUCTIONS**

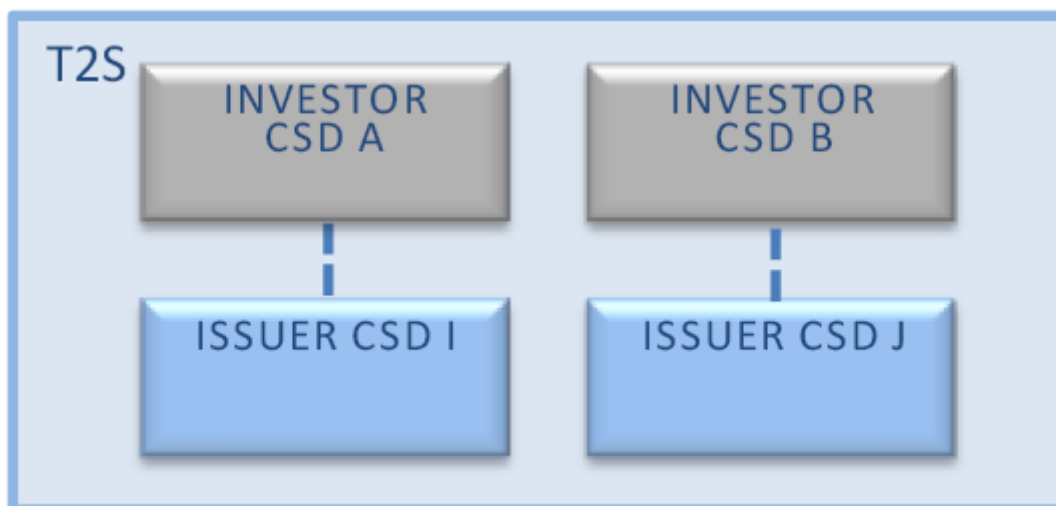

2

3 **EXAMPLE 125 - SCENARIO CROSS 2: TWO INVESTOR CSDs AND TWO ISSUER CSDs ALL IN T2S**

4 This example describes the settlement where participant A from investor CSD A is selling securities to partic-  
 5 ipant B from investor CSD B. It implies:

- 6 | Two investor CSDs (A and B) in T2S in relationship with different issuer CSDs as technical issuer CSD;
- 7 | Two issuer CSDs (I and J) in T2S.

8 **DIAGRAM 111 - ILLUSTRATION OF SCENARIO CROSS 2: TWO INVESTOR CSDs AND TWO ISSUER CSDs ALL IN T2S**

9

10 The scenario is equivalent to scenario Cross 1 with additional T2S generated realignment Settlement Instruc-  
 11 tions to update the issuance accounts in each issuer CSD. The realignment process identifies the issuance  
 12 account to be impacted based on the set up in the Security CSD link for the given security, the given issuer  
 13 CSD and the link type "issuer" (see section. [Configuration of Securities CSD Links](#) [▶ 80]), with the following  
 14 possible outcomes in each issuer CSD:

- 1 | No issuance account is set up: the realignment process cannot generate the realignment instructions and
- 2 | cancels the business instructions <sup>273</sup>,
- 3 | One issuance account is set up: the realignment process uses this account to generate the realignment
- 4 | instructions,
- 5 | Several issuances accounts are set up: the realignment process identifies the issuance account to be im-
- 6 | pacted using the "primary issuance account flag".

7 The nature of the operation on each issuance securities accounts (mark-up or mark-down) depends on the  
8 direction of the transfer (received or delivery).

9 On the basis of the incoming business matched (0) Settlement Instructions:

- 6 | All T2S generated realignment Settlement Instructions carry automatically two links INFO providing the ref-  
7 | erences of both business Settlement Instructions. They are all submitted on an all-or-none basis in the post-  
8 | ing process with the business Settlement Instructions (0) that allow settling the cash leg.

1 **DIAGRAM 115 - ILLUSTRATION OF SCENARIO CROSS 3 (B): SECURITIES MOVEMENTS AND SETTLEMENT INSTRUCTIONS**

2  
3 Scenario external-CSD settlement

4 These scenarios cover the external-CSD settlement defined as a settlement:

- 5 | Between counterparts not belonging to the same CSD;
- 6 | With one or several of the CSD(s) involved in the chain (investors, technical issuer and issuer), from the
- 7 | investor CSD of the delivering counterpart to the investor CSD of the receiving counterpart, being external to T2S.

9 For external-CSD settlement, the global settlement chain from the delivering counterpart to the receiving counterpart is dealt partly:

- 11 | In T2S, on the basis of the realignment application process;
- 12 | Outside T2S, through the own procedures of the involved T2S Actors.

13 **Part of the global settlement chain dealt in T2S**

14 T2S only considers the part of the global settlement chain starting from the first external-CSD before T2S, if  
 15 the global settlement chain starts outside T2S, and ending to the first external-CSD after T2S, if the global  
 16 settlement chain continues outside T2S. All other external-CSDs involved in the global settlement chain are  
 17 not considered by the realignment application process.

1

**DIAGRAM 116 - PART OF THE GLOBAL SETTLEMENT CHAIN CONSIDERED BY T2S**

2

3 The incoming delivering Settlement Instruction is instructed:

- 4 | By the delivering counterpart when the global settlement chain starts in T2S (as for any Settlement In-
- 5 | struction of CSD participant in T2S);
- 6 | By either the first external-CSD before T2S in the global settlement chain or by the first CSD in T2S,
- 7 | when the global settlement chain starts outside T2S.

8 The incoming receiving Settlement Instruction is instructed:

- 9 | By the receiving counterpart when the global settlement chain stops in T2S (as for any Settlement In-
- 10 | struction of CSD participant in T2S);
- 11 | Either by the first external-CSD after T2S or by the last CSD in T2S when the global settlement chain
- 12 | continues outside T2S.

13 On that basis, T2S applies the realignment process on external-CSD settlement with the following steps:

- 14 | Building the delivering and receiving chain, identically to the generic process, for the part of the settle-
- 15 | ment chain considered by T2S;
- 16 | Derivation of the first delivering and/or receiving omnibus account in T2S, when the delivering and/or
- 17 | receiving investor CSD is outside T2S and is not the issuer CSD;
- 18 | Generating the T2S generated realignment Settlement Instructions, as described in the generic process,
- 19 | for the part of the settlement chain inside T2S.

20 These steps are each described below then illustrated with a few commonly expected applicable scenarios.

## 1 Derivation of the first omnibus account in T2S

2 In case of CSDs external to T2S, T2S accepts incoming Settlement Instructions without indication of the  
3 omnibus or inter CSD securities accounts used in T2S to deliver or receive the securities. If the CSD outside  
4 T2S is the technical issuer CSD of the CSD in T2S, T2S generates the realignment Settlement Instructions as  
5 described in the realignment generic process, starting with the participant securities account of the counter-  
6 party instruction and finally impacting the relevant inter-CSD account.

7 If the CSD outside T2S is the investor CSD and the CSD in T2S is its technical issuer CSD, T2S derives the  
8 omnibus securities account using the following information contained in the incoming Settlement Instruc-  
9 tions:

10 | In case of delivering Settlement Instruction:

- 11 – Delivering CSD;
- 12 – ISIN;
- 13 – Optionally, external securities account;

14 | In case of receiving Settlement Instruction:

- 15 – Receiving CSD;
- 16 – ISIN;
- 17 – Optionally, external securities account.

18 Based on that information, T2S identifies the omnibus securities account to be used through the CSD ac-  
19 counts links configured for the triplet {Investor CSD | Technical Issuer | Participant account}.

20 If the external investor CSD uses several omnibus securities accounts in its technical issuer CSD in T2S, the  
21 external securities account indicated in the incoming Settlement Instruction is then used as participant ac-  
22 count to identify the relevant omnibus securities account to be used.

23 Once the omnibus securities account is identified, it is used by T2S as participant securities account to start  
24 the generation of the realignment Settlement instruction as described in the realignment generic process.

## 25 Settlement of the cash side for external-CSD settlements

26 In case of external-CSD settlements, the cash side is settled using:

- 27 | When it is mentioned, the T2S dedicated cash account referred in the incoming business Settlement In-  
28 structions. In such case the process checks if this cash account is associated in the static data
  - 29 – to the impacted securities account identified above, or,
  - 30 – in case of PFODS, to the Inter-CSD account associated to the External CSD, if the External CSD is con-  
31 figured as issuer CSD for the affected security.

32 Otherwise the business Settlement Instruction is cancelled;

- 33 | When the T2S dedicated cash account is not mentioned in the incoming business Settlement Instruction:  
34 the default cash account set in the static data

- 35 – for the impacted securities account identified above, or,

- 1 – in case of PFODs, to the Inter-CSD account associated to the External CSD, if the External CSD is con-  
2 figured as issuer CSD for the affected security.

3 If no DCA is linked to the inter-CSD account, the business Settlement Instruction is cancelled.

4 The cash is settled with the settlement of the incoming business instructions.

### 5 **Building the chain and generating realignment Settlement Instructions**

6 Once all instructions internal to T2S are identified (including the first derived T2S generated realignment  
7 Settlement Instruction following the derivation of omnibus or inter-CSD account) the generic realignment  
8 process (building the delivering and receiving chains, generating the T2S realignment Settlement Instruc-  
9 tions) is then applied on the Settlement Instructions.

### 10 **Conditional settlement for External-CSD settlements**

11 In case of external-CSD settlement, the settlement in T2S can be considered as:

- 12 | An unconditional In-Out when the settlement in T2S is not submitted to any external condition;
- 13 | A conditional In-Out when the settlement in T2S is subject to the fulfillment of an external condition.

14 External-CSD settlements are conditional In-Out when:

- 15 | The Issuer CSD involved in the Settlement Instruction is outside T2S;
- 16 | The investors CSD are not both in T2S.

17 The conditional In-Out is achieved in T2S with the application of conditional settlement on the T2S business  
18 Settlement Instructions (see section [Conditional Settlement](#) [▶ 510]). To that purpose, the CSDs in T2S have  
19 to configure CoSD rules.

20 The resulting CoSD activation aims to block the securities in the T2S delivering securities account or the  
21 cash, if any, in the debiting T2S Dedicated cash account, waiting for the CoSD release from the administer-  
22 ing party associated to the CoSD rules.

23 In order to avoid complex descriptions in the scenarios below, the CoSD activation step is not detailed but  
24 only mentioned when it occurs. Therefore, only the movements related to the realignment application pro-  
25 cess are described, and not the ones related to the conditional settlement.

### 26 **External-CSD settlement scenarios**

27 There are as many scenarios as there may be investors CSD technical issuers CSD and issuers CSD involved  
28 in the chain.

29 The scenarios below detail only the most common ones:

1

EXAMPLE	FIRST DELIVERING INVESTOR CSD	LAST RECEIVING INVESTOR CSD	GLOBAL SETTLEMENT CHAIN	PART OF THE SETTLEMENT CHAIN CONSIDERED BY T2S
Example 127 - <a href="#">Receiving investor CSD external to T2S</a> [ 484]	Internal	External	The first delivering investor CSD is in T2S and the last receiving investor CSD is external to T2S	The receiving chain starts outside T2S. The linked CSD in T2S is the technical issuer. So, T2S identifies the Omnibus a/c which receives the securities in T2S.
Example 128 - <a href="#">Receiving investor CSD and issuer CSD external to T2S</a> [ 486]	Internal	External	The first delivering investor CSD is in T2S and the last receiving investor CSD is external to T2S	The delivering chain ends outside T2S. The linked CSD in T2S is the investor CSD. So, T2S identifies the inter CSD a/c which receives the securities in T2S.
Example 129 - <a href="#">Delivering investor CSD and issuer CSD external to T2S</a> [ 489]	External	Internal	The first delivering investor CSD is external to T2S and the last receiving investor CSD is in T2S.	The receiving chain ends outside T2S. The linked CSD in T2S is the investor CSD. So, T2S identifies the inter CSD a/c which delivers the securities in T2S.
Example 130 - <a href="#">The issuer CSD is external to T2S and both investor CSDs are in T2S</a> [ 492]	Internal	Internal	Both delivering and receiving investor CSDs are in T2S but the issuer CSD is external to T2S.	The delivering chain ends outside T2S. The linked CSD in T2S is the investor CSD. So, T2S identifies the inter CSD a/c which receives the securities in T2S.  The receiving chain ends outside T2S. The linked CSD in T2S is the investor CSD. So, T2S identifies the inter CSD a/c which delivers the securities in T2S.
Example 131 - <a href="#">Two investor CSDs external to T2S and one issuer CSD in T2S</a> [ 497]	External	External	Both delivering and receiving investor CSDs are external to T2S, the issuer CSD is in T2S.	The delivering chain starts outside T2S. The linked CSD in T2S is the technical issuer. So, T2S identifies the omnibus a/c which delivers the securities in T2S.  The receiving chain starts outside T2S. The linked CSD in T2S is the technical issuer. So, T2S identifies the omnibus a/c which receives the securities in T2S.

2 **Scenarios– Internal first delivering investor CSD and external last receiving investor CSD**

3 These scenarios relate to external-CSD settlements with a global settlement chain starting in T2S and continuing outside T2S.

4 In such scenarios, the incoming business Settlement Instructions have the following main characteristics:

- 1 | For the delivering:
  - 2 – It is instructed by the delivering counterpart;
  - 3 – It indicates a securities account existing in T2S;
- 4 | For the receiving:
  - 5 – It is instructed by the first external-CSD after T2S or the last CSD in T2S in the settlement chain;
  - 6 – It indicates an external securities account unknown by T2S.

**EXAMPLE 127 - RECEIVING INVESTOR CSD EXTERNAL TO T2S**

This example describes the case of a settlement where participant A from investor CSD A in T2S is selling securities to participant B from investor CSD B external to T2S and where:

- 10 | The investor CSD A in T2S in relationship with the issuer CSD I as technical issuer CSD;
- 11 | The investor CSD B external to T2S in relationship with the same issuer CSD I as technical issuer CSD;
- 12 | The issuer CSD I in T2S.

**DIAGRAM 117 - SETTLEMENT CHAIN RECEIVING INVESTOR CSD EXTERNAL TO T2S**

From the perspective of T2S, this scenario appears as a settlement between:

- 16 | Participant A which belongs to investor CSD A in T2S;
- 17 | The external-CSD B as participant of the issuer CSD I in T2S where it owns an omnibus account.

It is an unconditional In/Out settlement since one investor CSD and the issuer CSD are internal to T2S.

The following business Settlement Instructions are received in T2S:

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD B	Part B		
SIB	CSD B (as CSD I part.)	Unknown		RECE	100	CSD B	Part B	CSD A	Part A

SIA and SIB are submitted to the realignment application process on external-CSD.

1 Before generating the realignment instructions, the process detects that the internal CSD linked to the ex-  
 2 ternal receiving CSD B is the technical issuer CSD I. So, it identifies that the last receiving securities account  
 3 in T2S is an omnibus securities account. If the investor CSD B uses several omnibus securities accounts in its  
 4 technical issuer CSD I, the external securities account indicated in SIB is then used to select the appropriate  
 5 internal omnibus account. The following T2S generated realignment Settlement Instructions are created:

- 6 | One T2S generated realignment Settlement Instruction T2SgSI1 which credits the mirror account A-I in  
 7 the investor CSD A and is created already matched (1) with the business Settlement Instruction SIA deb-  
 8 iting the participant A securities account:  
 9

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD B	Part B		
T2SgSI1	CSD A	Mirror A-I		RECE	100			CSD A	Part A

- 10 | Two created already matched (2) T2S generated realignment Settlement Instructions T2SgSI2 and  
 11 T2SgSI3 between omnibus securities accounts in the Issuer CSD I:  
 12

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
T2SgSI2	CSD A (as CSD I part.)	Omnibus CSD A	ISIN X	DELI	100	CSD I	CSD B		
T2SgSI3	CSD B (as CSD I part.)	Omnibus CSD B		RECE	100			CSD I	CSD A

13 Since the receiving CSD is external, after the realignment application process, the business Settlement In-  
 14 struction SIB is involved with SIA only for the settlement of the cash leg if any.

15 All T2S generated realignment Settlement Instructions carry automatically two links INFO providing the ref-  
 16 erences of both business Settlement Instructions. They are all submitted on an all-or-none basis in the post-  
 17 ing application process with the business Settlement Instructions (0).

1 **DIAGRAM 118 - SETTLEMENT MOVEMENTS AND SETTLEMENT INSTRUCTIONS RECEIVING INVESTOR EXTERNAL TO T2S**

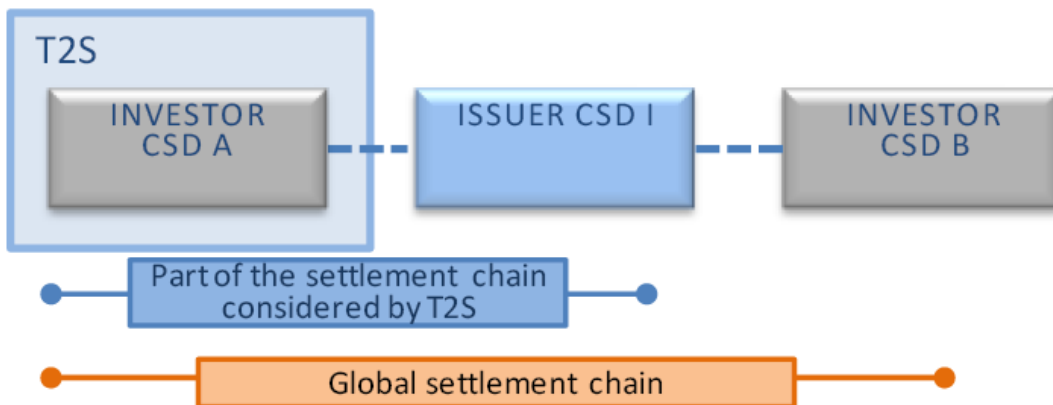

2  
3 **EXAMPLE 128 - RECEIVING INVESTOR CSD AND ISSUER CSD EXTERNAL TO T2S**

4 This example describes the case of a settlement where a participant A of the investor CSD A in T2S is selling  
5 securities to a participant B of the investor CSD B external to T2S and where:

- 6 | The investor CSD A in T2S in relationship with the issuer CSD I;
- 7 | The investor CSD B external to T2S in relationship with the same issuer CSD I;
- 8 | The issuer CSD I external to T2S.

9 **DIAGRAM 119 - SETTLEMENT CHAIN RECEIVING INVESTOR CSD AND ISSUER CSD EXTERNAL TO T2S**

10  
11 From the perspective of T2S, this scenario appears as a settlement between:

- 12 | Participant A which belongs to investor CSD A in T2S;
- 13 | The CSD A as its own participant.

14 The following business Settlement Instructions are received in T2S:

1

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIA	Part A	Part A S/A	ISIN X	DELI	100	CSD I	CSD B		
SIB	CSD A	Unknown		RECE	100	CSD I	CSD B	CSD A	Part A

2 SIA and SIB are submitted to the realignment application process on external-CSD settlement.

3 If the investor CSD A uses several omnibus securities accounts in its technical issuer CSD I, the generic rea-  
4 lignment process selects the appropriate internal CSD account based on the participant securities account  
5 provided in SIA.

6 The following T2S generated realignment Settlement Instructions are created:  
7

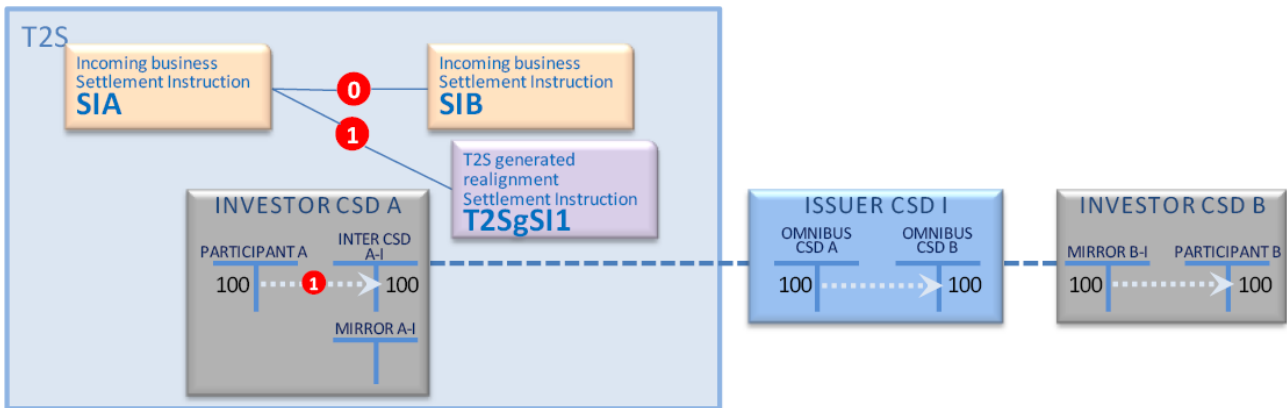

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITO- TORY	PARTY	DEPOSITO- TORY	PARTY
SIA	Part A	Part A S/A Y	ISIN X	DELI	100	CSD I	CSD B		
T2SgSI1	CSD A	inter-CSD A-I		RECE	100			CSD A	Part A

8 Since the receiving CSD is external, after the realignment application process, the business Settlement In-  
9 struction SIB is only involved with SIA for the settlement of the cash leg if any.

10 All T2S generated realignment Settlement Instructions carry automatically two links INFO providing the ref-  
11 erences of both business Settlement Instructions.

12 Since it is a conditional In-Out, a CoSD is activated (see section [Conditional Settlement](#) [► 510]) based on  
13 CoSD rules preliminary set by the relevant CSD. Securities are blocked in the securities account of Participant  
14 A until releases are received from administering parties, following the fulfillment of conditions outside T2S.  
15 At the CoSD release, the business Settlement Instructions SIA|SIB and the T2S generated realignment Set-  
16 tlement Instruction T2SgSI1 are all submitted on an all-or-none basis to the posting application process.

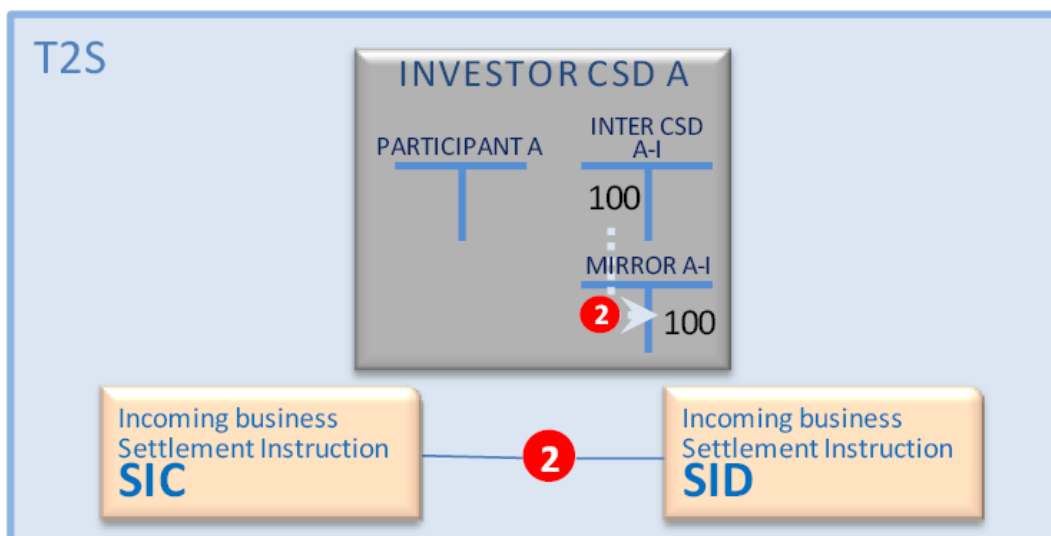

**DIAGRAM 120 - SETTLEMENT MOVEMENTS AND SETTLEMENT INSTRUCTIONS RECEIVING INVESTOR CSD AND ISSUER CSD EXTERNAL TO T2S**

In a second step, after the confirmation of the actual delivery from its omnibus securities account in the issuer CSD I, CSD A (as its own participant) instructs T2S with the following Settlement Instructions on its inter-CSD and mirror securities accounts:

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIC	CSD A	Inter CSD A-I	ISIN X	DELI	100	CSD A	CSD A		
SID	CSD A	Mirror A-I		RECE	100			CSD A	CSD A

**DIAGRAM 121 - ADDITIONAL SETTLEMENT MOVEMENTS ON CSD A INSTRUCTIONS RECEIVING INVESTOR CSD AND ISSUER CSD EXTERNAL TO T2S**

**Scenarios – External first delivering Investor CSD and internal last receiving Investor CSD**

These scenarios relate to external-CSD settlements with a global settlement chain starting outside T2S and ending in T2S.

1 In such scenarios, the incoming business Settlement Instructions have the following main characteristics:

- 2 | For the delivering:
  - 3 – It is instructed by the first external-CSD before T2S or the first CSD in T2S in the settlement chain;
  - 4 – It indicates an external securities account unknown by T2S;
- 5 | For the receiving:
  - 6 – It is instructed by the receiving counterpart;
  - 7 – It indicates a securities account existing in T2S.

8 **EXAMPLE 129 - DELIVERING INVESTOR CSD AND ISSUER CSD EXTERNAL TO T2S**

9 This example describes the case of a settlement where a participant A of the investor CSD A external to T2S  
10 is selling securities to a participant B of the investor CSD B in T2S and where:

- 11 | The investor CSD A external to T2S is in relationship with the issuer CSD I;
- 12 | The investor CSD B in T2S is in relationship with the technical issuer CSD E;
- 13 | The investor CSD E is the Parent CSD in T2S of the external CSD issuer CSD I;
- 14 | The issuer CSD I is external to T2S.

15 **DIAGRAM 122 - SETTLEMENT CHAIN DELIVERING INVESTOR CSD AND ISSUER CSD EXTERNAL TO T2S**

16  
17 In this case, from the perspective of T2S, this scenario ends as a settlement between:

- 18 | The CSD E as its own participant;
- 19 | Participant B which belongs to investor CSD B in T2S.

20 For the part of the global settlement chain dealt in T2S, the following business Settlement Instructions are  
21 received in T2S:  
22

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIA	CSD E	Unknown	ISIN X	DELI	100	CSD B	Part B	CSD I	CSD A
SIB	Part B	Part B S/A		RECE	100			CSD I	CSD A

23 SIA and SIB are submitted to the realignment application process on external-CSD settlement.

1 If the investor CSD E uses several omnibus securities accounts in its technical issuer CSD I, the generic rea-  
2 lignment process selects the appropriate internal inter CSD account based on the participant securities ac-  
3 count provided in SIB.

4 The following T2S generated realignment Settlement Instructions are created:

- 5 | One T2S generated realignment Settlement Instruction T2SgSI1 which debits the mirror account B-E in  
6 the investor CSD B and is created already matched (1) with the business Settlement Instruction SIB  
7 crediting the participant B securities account:  
8

OPE. ID	INSTRUCTS	SECURI- TIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
T2SgSI1	CSD B	Mirror B-E	ISIN X	DELI	100	CSD B	Part B		
SIB	Part B	Part B S/A	ISIN X	RECE	100			CSD I	CSD A

- 9 | Two created already matched (2) T2S generated realignment Settlement Instructions T2SgSI2 and  
10 T2SgSI3 between the inter CSD account E-I and the omnibus securities accounts of CSD B in the tech-  
11 nical issuer CSD E:  
12

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLE- MENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITO- RY	PARTY	DEPOSITO- RY	PARTY
T2SgSI3	CSD E	Inter-CSD E-I	ISIN X	DELI	100	CSD E	CSD B		
T2SgSI2	CSD B (as CSD E part.)	Omnibus CSD B		RECE	100			CSD E	CSD E

13 Since the delivering CSD is external to T2S, after the realignment application process, the business Settle-  
14 ment Instruction SIA is only involved with SIB for the settlement of the cash leg if any.

15 All T2S generated realignment Settlement Instructions carry automatically two links INFO providing the ref-  
16 erences of both business Settlement Instructions.

17 Since it is a conditional In-Out, a CoSD is activated (see section [Conditional Settlement](#) [► 510]) based on  
18 CoSD rules preliminary set by the relevant CSD. Cash is blocked, if any, in the T2S dedicated cash account of  
19 Participant B until releases are received from administering parties, following the fulfillment of conditions  
20 outside T2S. At the CoSD release, all business Settlement Instructions and T2S generated realignment Set-  
21 tlement Instructions are all submitted on an all-or-none basis to the posting application process.

1 **DIAGRAM 123 - SETTLEMENT MOVEMENTS AND SETTLEMENT INSTRUCTIONS DELIVERING INVESTOR CSD AND ISSUER CSD**

2 **EXTERNAL TO T2S**

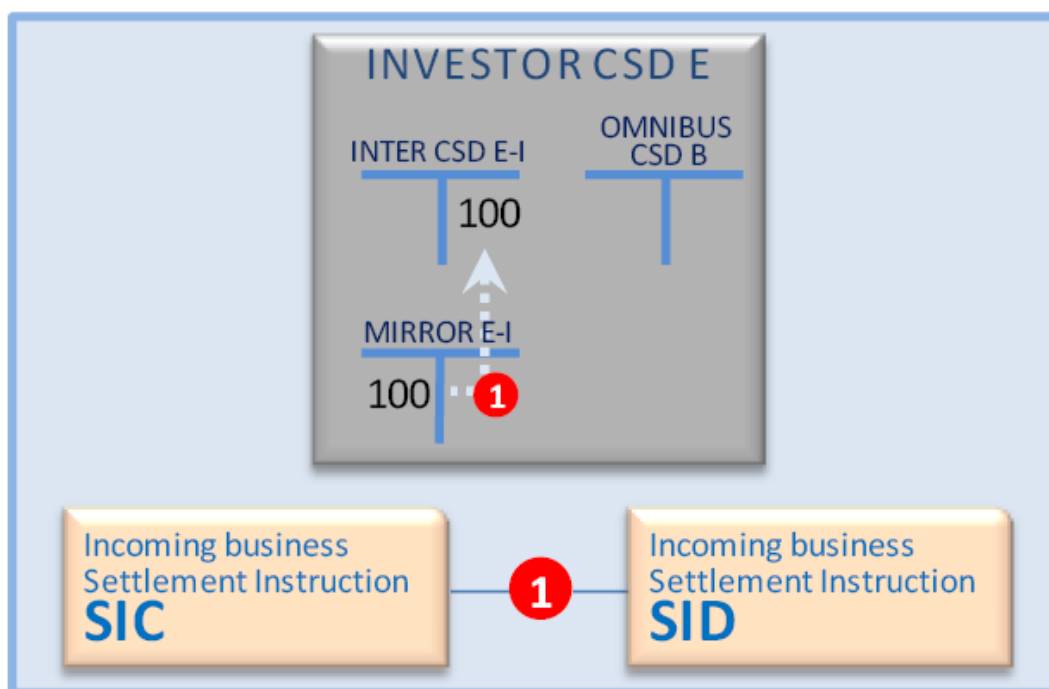

3  
 4 In a second step, after the confirmation of the actual delivery on its omnibus securities account in the issuer  
 5 CSD I, CSD E (as its own participant) instructs T2S with the following Settlement Instructions on its inter  
 6 CSD and mirror securities accounts:  
 7

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIC	CSD E	Mirror E-I	ISIN X	DELI	100	CSD E	CSD E		
SID	CSD E	Inter CSD E-I		RECE	100			CSD E	CSD E

8 These business Settlement Instructions are managed by T2S regardless of the business Settlement Instruc-  
 9 tion below concerning the part of the global settlement chain dealt in T2S. They are not subject to realign-  
 10 ment since it is an intra-CSD settlement in CSD E.

**DIAGRAM 124 - ADDITIONAL SETTLEMENT MOVEMENTS ON CSD E INSTRUCTIONS DELIVERING INVESTOR CSD AND ISSUER CSD**

EXTERNAL TO T2S

**Scenarios – Both internal delivering and receiving Investor CSD and an external issuer CSD**

These scenarios relate to external-CSD settlements with a global settlement chain starting and ending in T2S but with the issuer CSD of the securities external to T2S.

In such scenarios, the incoming business Settlement Instructions have the following main characteristics:

**I For the delivering:**

- It is instructed by the delivering counterpart;
- It indicates a securities account existing in T2S;

**I For the receiving:**

- It is instructed by the receiving counterpart;
- It indicates a securities account existing in T2S.

**EXAMPLE 130 - THE ISSUER CSD IS EXTERNAL TO T2S AND BOTH INVESTOR CSDs ARE IN T2S**

This example describes the case of a settlement where participant A from investor CSD A is selling securities to participant B from investor CSD B and where:

- I** Both investor CSDs A and B in T2S are in relationship with the same issuer CSD I;
- I** The issuer CSD I external to T2S.

1 **DIAGRAM 125 - SETTLEMENT CHAIN THE ISSUER CSD IS EXTERNAL TO T2S AND BOTH INVESTOR CSDS ARE IN T2S**

2  
3 Even if issuer CSD I is external to T2S, it is unconditional In/Out since both investor CSDs are in T2S. An  
4 unsynchronised instruction is sent by each investor CSD to the external issuer CSD I for the realignment  
5 outside T2S.

6 The following business Settlement Instructions are received in T2S:  
7

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A Y	ISIN X	DELI	100	CSD B	Part B		
SIB	Part B	Part B S/A Z		RECE	100			CSD A	Part A

8 The realignment application process creates the following T2S generated realignment Settlement Instruc-  
9 tions corresponding to the quantity indicated in the business Settlement Instructions:

- 10 | One T2S generated realignment Settlement Instructions T2SgSI1 which credits the inter CSD account A-I  
11 in the investor CSD A and is created already matched (1) with the business Settlement Instruction debit-  
12 ting the participant A securities account:  
13

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	Part A	Part A S/A Y	ISIN X	DELI	100	CSD B	Part B		
T2SgSI1	CSD A	Inter CSD A-I		RECE	100			CSD A	Part A

- 14 | One T2S generated realignment Settlement Instructions T2SgSI2 which debits the inter CSD account B-I  
15 in the issuer CSD B and is created already matched (2) with the business Settlement Instruction crediting  
16 the participant B securities account:

1

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
T2SgSI2	CSD B	Inter CSD B-I	ISIN X	DELI	100	CSD B	Part B		
SIB	Part B	Part B S/A Z		RECE	100			CSD A	Part A

2 All Settlement Instructions and T2S generated realignment Settlement Instructions are automatically linked  
 3 by T2S with two links INFO providing the references of both business Settlement Instructions. They are all  
 4 submitted on an all-or-none basis in the posting process with the original business instructions (0).

5 **DIAGRAM 126 - SETTLEMENT MOVEMENTS AND SETTLEMENT INSTRUCTIONS THE ISSUER CSD IS EXTERNAL TO T2S AND BOTH**  
 6 **INVESTOR CSDs ARE IN T2S**

7

8 In a second step, after the confirmation of the actual settlement in their omnibus securities account in the  
 9 issuer CSD I, the investor CSD A (as its own participant) and the investor CSD B (as its own participant) both  
 10 instruct independently T2S with Settlement Instructions to update their inter-CSD and mirror securities ac-  
 11 counts.

12 The investor CSD A instructs the following business Settlement Instruction:

13

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIC	CSD A	Inter CSD A-I	ISIN X	DELI	100	CSD A	CSD A		
SID	CSD A	Mirror A-I		RECE	100			CSD A	CSD A

1 The business Settlement Instructions SIC and SID are managed by T2S regardless of the initial business  
 2 Settlement Instructions SIA and SIB and the Settlement Instructions sent by the investor CSD B (see below).  
 3 They are not subject to realignment since it is an intra-CSD settlement in CSD A.

4 **DIAGRAM 127 - ADDITIONAL SETTLEMENT MOVEMENTS ON CSD A INSTRUCTIONS THE ISSUER CSD IS EXTERNAL TO T2S AND**  
 5 **BOTH INVESTOR CSDs ARE IN T2S**

6  
 7 The investor CSD B instructs the following business Settlement Instruction:  
 8

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITO- RY	PARTY
SIE	CSD B	Mirror B-I	ISIN X	DELI	100	CSD B	CSD B		
SIF	CSD B	Inter CSD B-I		RECE	100			CSD B	CSD B

1 The business Settlement Instructions SIE and SIF are managed by T2S regardless of the initial business  
2 Settlement Instructions SIA and SIB and the Settlement Instructions sent by the investor CSD A (see above).  
3 They are not subject to realignment since it is an intra-CSD settlement in CSD B.

4 **DIAGRAM 128 - ADDITIONAL SETTLEMENT MOVEMENTS ON CSD B INSTRUCTIONS THE ISSUER CSD IS EXTERNAL TO T2S AND**  
5 **BOTH INVESTOR CSDS ARE IN T2S**

6  
7 **Scenarios – External delivering and receiving investor CSDs and internal issuer CSD**

8 These scenarios relate to external-CSD settlements with a global settlement chain starting in T2S and ending  
9 outside T2S but with the issuer CSD in T2S.

10 In such scenarios, the incoming business Settlement Instructions have the following main characteristics:

11 | For the delivering:

- 12 – It is instructed by the delivering investor external CSD as participant of the issuer CSD in T2S;
- 13 – It indicates an external securities account unknown by T2S;

14 | For the receiving:

- 15 – It is instructed by the receiving investor external CSD as participant of the issuer CSD in T2S;
- 16 – It indicates an external securities account unknown by T2S.

17 Since both incoming business Settlement Instructions indicate an external securities account unknown in  
18 T2S, the realignment application process needs to identify the securities account involved in T2S using the  
19 CSD accounts links previously configured in the static data.

1                   **EXAMPLE 131 - TWO INVESTOR CSDs EXTERNAL TO T2S AND ONE ISSUER CSD IN T2S**

2 This example describes the case of an external settlement where participant A of investor CSD A is selling  
3 securities to participant B of investor CSD B.

4 It implies:

- 5 | Two investor CSDs A and B external to T2S with the issuer CSD I as technical issuer CSD and as Parent  
6 CSD in T2S of these external CSD;
- 7 | The issuer CSD I in T2S.

8                   **DIAGRAM 129 - SETTLEMENT CHAIN TWO INVESTOR CSDs EXTERNAL TO T2S AND ONE ISSUER CSD IN T2S**

9

10 From the perspective of T2S, once the involved securities account existing in T2S are identified (see section  
11 [Securities accounts](#) [▶ 99]), this scenario appears as a settlement between investors CSD A and CSD B as  
12 participants of CSD I.

13 The following business Settlement Instructions are received in T2S:

14

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
SIA	CSD A (as CSDI part.)	Unknown	ISIN X	DELI	100	CSD B	Part B	CSD A	Part A
SIB	CSD B (as CSDI part.)	Unknown		RECE	100	CSD B	Part B	CSD A	Part A

15 Both business Settlement Instructions indicate external securities accounts unknown in T2S. The realignment  
16 application process needs to identify the impacted securities account in T2S. Since CSD I in T2S is technical  
17 issuer for both external CSD A and external CSD B, the identified impacted securities accounts in T2S are the  
18 omnibus securities accounts. If the investor CSD A uses several omnibus securities accounts in its technical  
19 issuer CSD I, the external securities account indicated in SIA is then used to select the appropriate internal

1 Omnibus account. If the investor CSD B uses several omnibus securities accounts in its technical issuer CSD  
 2 I, the external securities account indicated in SIB is then used to select the appropriate internal Omnibus  
 3 account.

4 The realignment application process then creates the following business Settlement Instruction:  
 5

OPE. ID	INSTRUCTS	SECURITIES ACCOUNT	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES	
						DEPOSITORY	PARTY	DEPOSITORY	PARTY
T2SgSI1	CSD A (as CSDI part.)	Omnibus CSD A	ISIN X	DELI	100	CSD I	CSD B		
T2SgSI2	CSD B (as CSDI part.)	Omnibus CSD B		RECE	100			CSD I	CSD A

6 Since receiving and delivering CSD are external, business Settlement Instruction SIA|SIB are involved only  
 7 for the settlement of the cash leg if any. By consequence, the associated reporting presents some specificity  
 8 as described above.

9 **DIAGRAM 130 - SETTLEMENT MOVEMENTS AND SETTLEMENT INSTRUCTIONS TWO INVESTOR CSDs EXTERNAL TO T2S AND ONE**  
 10 **ISSUER CSD IN T2S**

11  
 12 **Realignment for T2S generated collateral Settlement Instructions**

13 T2S creates T2S generated collateral Settlement Instructions, in order to move the collateral in due location,  
 14 when implementing an auto-collateralisation or when relocating the collateral at end of day (See section  
 15 [Auto-collateralisation](#) [▶ 430]).

16 In such cases, T2S applies the realignment process described upfront for the cross-CSD settlement. T2S  
 17 creates the relevant T2S generated realignment Settlement Instructions on the basis of the securities posi-

tion impacted by the collateral process, their associated CSDs, and the associated links recorded in the static data for these CSDs.

### Realignment in case of revalidation

The potential applicable realignment chain is revalidated each settlement day for all revalidated Settlement Instructions.

If the revalidated Settlement Instructions are not already linked to existing T2S generated realignment Settlement Instructions, a new realignment chain analysis is performed as described above.

If the revalidated Settlement Instructions are already linked to existing T2S generated realignment Settlement Instructions, the detected realignment chain is revalidated against the static data valid for the current settlement day:

- | In case the realignment chain is unchanged, no additional actions are performed and the linked matched business Settlement Instructions and T2S generated realignment Settlement Instructions are recycled for the new settlement day;
- | In case the realignment chain is different from the one previously detected:
  - If a Conditional Settlement already exist on at least one of the matched business Settlement Instructions and T2S generated realignment Settlement Instructions, all of them are cancelled (See section [Conditional Settlement](#) [▶ 510]);

If no Conditional Settlement exist when the analysis is done, the existing T2S generated realignment Settlement Instructions are cancelled and new T2S generated realignment Settlement Instructions are created according to the realignment chain applicable for the current settlement day as described above.

#### 1.6.1.10.4 Parameters Synthesis

The following parameters are specified by the T2S Operator or by the T2S Actor (See section [Configuration of Securities CSD Links](#) [▶ 80]).

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Cross and External CSD settlement	CSD Links	T2S Actor	T2S Actor	M	N/A	N/A
Cross and External CSD settlement	CSD Accounts links	T2S Actor	T2S Actor	M	N/A	N/A
Cross and External CSD settlement	Eligible counterparts CSD	T2S Actor	T2S Actor	M	N/A	N/A

## 1 1.6.1.11 Linked Instructions

### 2 **1.6.1.11.1 Concept**

3 T2S provides the functionality to link Settlement Instruction(s) and/or Settlement Restriction(s) together.  
4 The aim is to submit such linked instructions to specific rules during business validation, eligibility or settle-  
5 ment application processes.

6 Settlement Instructions and Settlement Restrictions can be linked together either via a link specified by a  
7 T2S Actor or via a link generated automatically by T2S.

### 8 **1.6.1.11.2 Overview**

9 Settlement Instructions linked via an indicator, a Pool Reference specified by a T2S Actor aim to cover the  
10 settlement of specific operations such as coupon stripping/reattachment, baskets of collateral etc.

11 They are linked by the means of a before (BEFO), an after (AFTE) or a with (WITH) link, leading to specifici-  
12 ty at their business validation, eligibility or settlement application processes.

13 Settlement Instructions linked automatically by T2S aim to cover the settlement of operations such as rea-  
14 lignment, auto-collateralisation, corporate rebalancing liquidity, etc.

15 T2S ensures in those cases the settlement on an all-or-none basis of the initial Settlement Instruction to-  
16 gether with the T2S generated Settlement Instruction for realignment, for auto-collateralisation or the T2S  
17 generated liquidity transfer for corporate rebalancing liquidity etc.

### 18 **1.6.1.11.3 Link specified by T2S Actor**

#### 19 Means to link instructions by T2S Actor

20 A T2S Actor links Settlement Instruction(s) and/or Settlement Restriction(s) together by making the use of:

21 | A processing position code corresponding to:

22 – [INFO] Information, for information purpose. There is no processing in T2S behind this code;

23 – [BEFO] Before, which means that a Settlement Instruction or Settlement Restriction is to be settled  
24 before or at least at the same time as the linked Settlement Instruction or Settlement Restriction;

25 – [AFTE] After, which means that a Settlement Instruction or Settlement Restriction is to be settled af-  
26 ter or at least at the same time as the linked Settlement Instruction or Settlement Restriction;

27 – [WITH] All-or-none, which means that a Settlement Instruction, or Settlement Restriction is to be set-  
28 tled at the same time as the linked Settlement Instruction or Settlement Restriction;

29 | A Pool Reference;

30 With the use of a processing position code, a T2S Actor:

31 | Can link together:

32 – Two Settlement Instructions;

33 – Two Settlement Restrictions;

34 – One Settlement Instruction with one Settlement Restriction;

- 1 – One Settlement Instruction or Settlement Restriction can be executed before, after or at the same  
2 time as an existing pool, by linking the instruction to any instruction that belongs to that pool, through  
3 a processing position code WITH, AFTE or BEFO and the reference of the linked instruction. In this  
4 case, no Pool Reference is needed.
- 5 – Settlement Instruction(s) and/or Settlement Restriction(s) can be linked whatever the type (deliv-  
6 ery/receipt), the ISIN code or the Intended Settlement Date, provided that the links do not contradict  
7 each other (See Table 137 - [Set-up or increase of blocking, reservation or earmarking on securities](#)  
8 [\[▶ 592\]](#)).
- 9 | Cannot link together:
- 10 – A Liquidity Transfer with a Settlement Instruction or a Settlement Restriction;
- 11 – A T2S internally generated Settlement Instruction.

#### 12 Process to link instructions by T2S Actor

- 13 | A T2S Actor can create, update or cancel the link of a Settlement Instruction or Settlement Restriction if  
14 this Settlement Instruction or Settlement Restriction is compliant with the validation checks (See Table  
15 129 - [Rules applying to linked Settlement Instructions/Settlement Restrictions](#) [\[▶ 506\]](#)).
- 16 | To create a link, the T2S Actor sends a Settlement Instruction/Settlement Restriction including:
- 17 – A processing position code (e.g. WITH as example below)
- 18 – The reference of the linked instruction with the T2S Instruction Reference or the T2S Actor Instruction  
19 Reference.
- 20 | If the T2S Actor Instruction Reference is provided, T2S also requires the Reference Owner BIC of the  
21 Linked Instruction (Instructing Party BIC). In case the instruction does not include this field, T2S does  
22 not create the link and the instruction is rejected (i.e. no processing position code is taken by default).  
23 To identify univocally a Party in T2S, two BICs are needed (Party BIC+Parent BIC), and there is no field  
24 in the message for informing the Parent BIC of the Reference Owner: in order to identify the relevant  
25 Party in T2S for the Reference Owner BIC, T2S considers by default the Reference Owner BIC and the  
26 CSD (or NCB) of the Instructing Party of the instruction stating the link <sup>274</sup>.
- 27 | If a T2S actor wants to make use of linkages across several instructions send to T2S via different CSDs  
28 he holds accounts with (or NCBs in case of Settlement Restrictions on cash), the T2S actor has to make  
29 use of the T2S reference.

---

274 In case the Reference Owner BIC relates to a CSD that is also defined as CSD Participant of itself, T2S will consider the CSD as the relevant Party in T2S for the Reference Owner BIC.

1

**EXAMPLE 132 - CREATION OF A LINK**

	LINK PROCESSING POSITION	LINKED INSTRUCTION REF.		REFERENCE OWNER BIC	
		T2S INSTRUCTION REF.	T2S ACTOR INSTRUCTION REF.	INSTRUCTING PARTY BIC	
Settlement Instruction 0000001	WITH	50054321			✓
Settlement Instruction 0000002	AFTR		44454321		✗
Settlement Instruction 0000003	AFTR		44454321	BANKITRR666	✓
Settlement Instruction 0000004		87654321			✗

2

Data included in the Settlement Instruction

3 To update a link (e.g. changing the link from WITH to BEFO as example below), it is necessary first to unlink  
 4 the Settlement Instruction/Settlement Restriction through an Amendment Instruction, which linkage type  
 5 must contain the value UNLK and which processing position code must be the same as the one specified in  
 6 the referenced instruction. In a second step, the T2S Actor has to send another Amendment Instruction  
 7 which linkage type must contain the value LINK with the new processing position code (e.g. BEFO).

1 **EXAMPLE 133 - AMENDMENT OF A LINK (FROM WITH TO BEFO)**

	LINK PROCESSING POSITION	LINKED INSTRUCTION REF.		
		T2S INSTRUCTION REF.	T2S ACTOR INSTRUCTION REF.	
		<b>Settlement Instruction 0000001</b>	WITH	

	REFERENCED SETTLEMENT INSTRUCTION	LINKAGE TYPE	LINK PROCESSING POSITION	LINKED INSTRUCTION REF.		
				T2S INSTRUCTION REF.	T2S ACTOR INSTRUCTION REF.	
				<b>Amendment Instruction 1000001</b>	0000001	

	REFERENCED SETTLEMENT INSTRUCTION	LINKAGE TYPE	LINK PROCESSING POSITION	LINKED INSTRUCTION REF.		
				T2S INSTRUCTION REF.	T2S ACTOR INSTRUCTION REF.	
				<b>Amendment Instruction 1000002</b>	0000001	

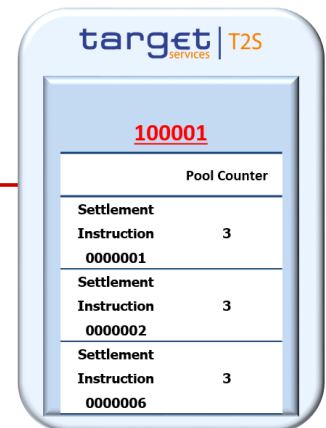

Data included in the Settlement Instruction/Amendment Instruction

- 2
- 3 | T2S Actors can create a new link in a Settlement Instruction/Settlement Restriction, by sending an
- 4 Amendment Instruction including a processing position code and the reference of the linked instruction.
- 5 If the instruction does not include these fields or the new link contradicts the existing, if any, T2S does
- 6 not create the link and the instruction is rejected (i.e. no processing position code is taken by default)
- 7 – The T2S Actor can also update a link when a Settlement Instruction/Settlement Restriction has more
- 8 than one link (e.g. A Settlement Instruction linked WITH a Settlement Restriction and linked AFTE to
- 9 another Settlement Instruction). T2S only allows the amendment of one processing indicator per
- 10 Amendment Instruction. The link to be updated is indicated in the unlink Amendment Instruction in
- 11 Link Processing Position.
- 12 – To cancel a link the T2S Actor can cancel the Settlement Instruction/Settlement Restriction and send a
- 13 new Settlement Instruction/Settlement Restriction with the link updated.
- 14 | T2S Actors can also link Settlement Instructions or Settlement Restrictions with a Pool Reference which
- 15 is a collective reference to identify a set of Settlement Instructions and/or Settlement Restrictions which
- 16 are to be settled together all-or-none. With the use of a Pool Reference, T2S Actor:
- 17 – Assigns the same collective reference to all the Settlement Instructions or Settlement Restrictions
- 18 even if they belong to different parties providing compliance with privileges check (see mention to
- 19 Privileges Check in section [Business Validation](#) [▶ 301]). Once a Pool Reference is included in the in-

- 1 instruction, T2S Actor can set the processing code to [WITH] or leave it blank. Adding an instruction to  
 2 a pool is only possible by using the processing position code WITH or blank, together with the combi-  
 3 nation of the Pool Reference and the Reference Owner BIC of the pool creator;
- 4 – Should also include a Pool Counter, which details the total number of linked instructions within a pool.  
 5 T2S rejects an instruction identified with a Pool Reference if this instruction exceeds the Pool Counter  
 6 for the Pool Reference specified;
  - 7 – Cannot send an Amendment Instruction to include/update a Pool Reference or Pool Counter. In case  
 8 the T2S Actor wants to include or update a Pool Reference or Pool Counter **it** should send a Cancell-  
 9 ation Instruction and reinstruct sending a new Settlement Instruction/Settlement Restriction with the  
 10 Pool Reference and the counter updated.
  - 11 – **Cannot send an Amendment Instruction to remove or replace an instruction of the Pool.**  
 12 **In case the T2S Actor wants to remove or replace an instruction of a pool it should send a**  
 13 **Cancellation Instruction and reinstruct sending a new Settlement Instruction/Settlement**  
 14 **Restriction with the Pool Reference and Pool Counter. The instruction cancelled is not**  
 15 **considered as belonging to the pool anymore and a new settlement instruc-**  
 16 **tion/settlement restriction can replace the cancelled instruction to consider the pool as**  
 17 **complete. Neither the Pool Reference nor the Pool Counter are updated in this scenar-**  
 18 **io\_{CR-756}**

19 **EXAMPLE 134 - POOL OF INSTRUCTIONS**

	POOL REF.	LINKED INSTRUCTION REF.	LINK PROCESSING POSITION	POOL COUNTER	REF. OWNER BIC	RESULT
Settlement Instruction 0000001	100001	-	-	3	BANKITRR666	✓ Successfully included in Pool 100001
Settlement Instruction 0000002	100001	-	WITH	3	BANKITRR666	✓ Successfully included in Pool 100001
Settlement Restriction 0000003	100001	-	WITH	-	-	✗ Rejected, Pool Counter and Reference Owner BIC must be informed.
Settlement Restriction 0000004	100001	-	AFTE	3	BANKITRR666	✗ Rejected, no link to a Pool is allowed with processing position different from blank or WITH
Settlement Instruction 0000005	-	0000001	WITH	-	-	✓ 0000005 successfully linked to 0000001, that belongs to Pool 100001
Settlement Instruction 0000006	100001	-	WITH	3	BANKITRR666	✓ Successfully included in Pool 100001

20  Data included in the Settlement Instruction/Settlement Restriction

21 Context for the use of linked instructions by T2S Actor

22 T2S Actor can link Settlement Instructions and/or Settlement Restrictions for the need of specific operations  
 23 such as described in the examples provided in the following table.

1  
2

**EXAMPLE 135 - LINKED INSTRUCTION UTILISATION**

CASES	SPECIFIC SETTLEMENT PROCEDURES
Coupon stripping (Pool Reference)	All the following Settlement Instructions should be settled on an all-or-none basis: <ul style="list-style-type: none"> <li>  A FOP delivery of the original debt instrument from the party's Securities Account to the technical issuance account of that debt instrument;</li> <li>  A FOP delivery of the principal from the technical issuance account of that debt instrument to the party's Securities Account;</li> <li>  FOP deliveries of coupons from the technical issuance accounts of each stripped coupon to the party's Securities Account (the number of deliveries is equal to the number of coupons detached from the initial debt instrument).</li> </ul>
Baskets of collateral (Pool Reference)	All the following Settlement Instructions should be settled on an all-or-none basis: <ul style="list-style-type: none"> <li>  FOP deliveries from different Securities Accounts for the securities legs;</li> <li>  A DVP from the Securities Account that is linked to required T2S Dedicated Cash Account for one securities leg with the cash leg.</li> </ul>
Securities exchange (Pool Reference)	All the following Settlement Instructions should be settled on an all-or-none basis: <ul style="list-style-type: none"> <li>  A FOP delivery of the old securities from the party's Securities Account to the corporate action technical issuance account;</li> <li>  A FOP delivery of the new securities from the corporate action technical account to the party's Securities Account.</li> </ul>
Pair-off instructions (processing position code WITH)	Both sellback DVP Settlement Instruction and the preceding DVP Settlement Instruction purchasing securities must be settled on an all-or-none basis.
Lending/Borrowing (processing position code BEFORE and AFTER)	The second Settlement Instruction, corresponding to the second leg, remains unsettled until the first Settlement Instruction, corresponding to the first leg, has been settled.
Delivery – Redelivery (processing position code BEFORE and AFTER)	To ensure the back-to-back execution of buy and sell Settlement Instructions, the delivering Settlement Instructions have to be settled before the redelivering Settlement Instruction can be settled.

3 Process applying on instructions linked by T2S Actors

4 When a link is specified by T2S Actor, T2S applies the following rules on Settlement Instruction and Settlement Restriction at the stage of validation, eligibility and settlement processes.  
5

1  
2

**TABLE 129 - RULES APPLYING TO LINKED SETTLEMENT INSTRUCTIONS/SETTLEMENT RESTRICTIONS**

PROCESS	LINK TYPE	RULES
Validation	BEFO / AFTE / WITH	<p>The existing linked instructions are not contradictory with each other regarding Intended Settlement Date and link type (e.g. an instruction including a link WITH must contain the same Intended Settlement Date as the linked instructions).</p> <p>The Party owner of the instruction/pool to which the instruction is linked must exist in T2S.</p> <p>The T2S System user of the Settlement Instruction or Settlement Restriction must be authorised to link to an instruction/pool belonging to a specific party (See section <a href="#">Validation process</a> [▶ 302]).</p> <p>The linked Settlement Instruction or Settlement Restriction should neither be cancelled (for link types WITH/AFTE) nor settled (for link types WITH/BEFO) nor partially settled (for link types BEFO/WITH/AFTE).</p> <p>In case of maintenance of a Settlement Instruction or Settlement Restriction adding/updating the processing position code and reference of an existing Settlement Instruction or Settlement Restriction, the existing Settlement Instruction or Settlement Restriction should neither be partially settled nor settled nor cancelled.</p> <p>The Amendment Instruction of a Settlement Instruction or Settlement Restriction can only modify a processing position code if indicates UNLINK in Linking Type and the same processing position code as the specified in the referenced instruction.</p>
		<p>When a Settlement Instruction or Settlement Restriction contains a Pool Reference which is already known by T2S, the Pool Counter <sup>275</sup> specified in this Settlement Instruction or Settlement Restriction should be the same that the one previously received for this Pool Reference and Reference owner (e.g. the Pool Counter indicates the total number of linked instruction in a Pool Reference).</p> <p>The addition of a new Settlement Instruction or Settlement Restriction doesn't lead to exceed the total number of linked Settlement Instruction and/or Settlement Restrictions in that pool in T2S (Pool Counter).</p>
Eligibility	WITH	<p>T2S does not submit to settlement a Settlement Instruction or Settlement Restriction having a WITH link to:</p> <ul style="list-style-type: none"> <li>  A missing Settlement Instruction or Settlement Restriction until this latter is processed successfully for eligibility</li> <li>  An already settled Settlement Instruction or Settlement Restriction</li> <li>  A cancelled instruction.</li> </ul>

275 T2S considers a Pool Reference as known by T2S when there is another Settlement Instruction or Settlement Restriction in the system with the same Pool reference and Reference owner that is not yet settled or that has been settled within a certain period of time defined in Reference Data

PROCESS	LINK TYPE	RULES
		<p>During night-time period, if a Settlement Instruction/Settlement Restriction selected for a sequence is linked "with" a Settlement Instruction/Settlement Restriction which does not correspond to the sequence criteria, these Settlement Instruction(s)/Settlement Restriction(s) are excluded from this sequence.</p> <p>This rule is not applicable during the real-time settlement period which does not include sequences.</p>
	AFTER	<p>T2S submits to settlement a Settlement Instruction or Settlement Restriction having an AFTER link to a missing, ineligible or a cancelled Settlement Instruction or Settlement Restriction and this Settlement Instruction or Settlement Restriction remains "Unsettled" until the linked Settlement Instruction or Settlement Restriction is settled.</p> <p>During night-time period, if a Settlement Instruction/Settlement Restriction selected for a sequence is linked "after" a Settlement Instruction/Settlement Restriction which does not correspond to the sequence criteria, these Settlement Instruction(s)/Settlement Restriction(s) are excluded from this sequence.</p> <p>This rule is not applicable during the real-time settlement period which does not include sequences.</p>
	BEFO	<p>T2S submits to settlement a Settlement Instruction or Settlement Restriction even if the linked Settlement Instruction or Settlement Restriction, specified with an AFTE processing position code, is missing.</p> <p>When settlement of a Settlement Instruction or Settlement Restriction with a BEFO processing position code is settled, T2S submits to settlement the pending linked Settlement Instruction or Settlement Restriction with an AFTE processing position code <sup>276</sup>.</p> <p>T2S does not submit to settlement a Settlement Instruction or Settlement Restriction having a BEFO link to an already settled Settlement Instruction or Settlement Restriction.</p>
Settlement	All links	<p>Settlement Instructions linked by T2S Actor to Settlement Instructions or to Settlement Restrictions are not submitted to partial settlement.</p> <p>Settlement Restrictions linked by T2S Actors to Settlement Instructions are submitted to partial settlement only if the linked Settlement Instructions can be fully settled and the restriction type specified in the Settlement Restriction allows partial settlement (See section <a href="#">Securities Blocking/Reservation/Earmarking</a> [ 544]).</p> <p>A Settlement Restriction linked WITH by T2S Actors to a Settlement Restriction can be submitted to partial Settlement and then can be partially filled when it is a reservation.</p> <p>In a set of linked Settlement Instructions, in case of different level of priority specified by</p>

276 For details about optimisation, see section [Posting](#) [ 381].

PROCESS	LINK TYPE	RULES
		the T2S Actors, T2S applies the highest priority of all these Settlement Instructions.
		There is no pre-emption on cash or securities to be redelivered in linked Settlement Instructions that are settled on an all or none basis.
		During the provision check process, T2S applies technical netting even if Settlement Instructions and/or Settlement Restrictions are linked by an all-or-none processing position code.

- 1 When no link is specified by T2S Actor in a Settlement Instruction or Settlement Restriction then:
- 2 | It is processed to settlement under the link constraints above, if the T2S settlement process has previously received another settlement instruction or settlement restriction linked to it;
  - 3 |
  - 4 | Otherwise it is processed to settlement with no link constraint.

5 In case the Settlement Instruction or Settlement Restriction is not consistent according to the above rules,  
6 the T2S Actor receives a message informing about the unsuccessful validation and eligibility with its corresponding reason (See sections Send Settlement Instruction, Send Settlement Restriction on Securities Position, Send Settlement Restriction on Cash Balance and Index of Business Rules and Error Codes).

9 **1.6.1.11.4 Link created by T2S**

10 Context for the generation of linked instructions by T2S

11 T2S links Settlement Instructions automatically, for an all-or-none settlement, in the cases described in the  
12 table below.

13 **TABLE 130 - LINKS AUTOMATICALLY CREATED BY T2S FOR T2S GENERATED INSTRUCTIONS**

CASES	REASON FOR LINK	ASSOCIATED UNDERLYING SETTLEMENT INSTRUCTION
Realignment <sup>277</sup>	T2S generated Settlement Instructions for realignment are to be settled at the same time as the underlying business Settlement Instructions.	Original Settlement Instructions on which the need for realignment has been detected.
Auto-collateralisation <sup>278</sup>	Collateral Settlement Instruction(s) generated is to be settled at the same time as the underlying Settlement Instruction.	Original Settlement Instruction for which auto-collateralisation has been generated to allow the settlement.
Substitution <sup>279</sup>	Reverse collateral Settlement Instruction(s) previously generated is to be settled at the same	Original Settlement Instruction for which a substitution of collateral is needed to allow the

277 For details about realignment, see section [Realignment](#) [▶ 451].

278 For details about auto-collateralisation, see section [Auto-collateralisation](#) [▶ 430].

279 For details about substitution, see section [Auto-collateralisation](#) [▶ 430].

CASES	REASON FOR LINK	ASSOCIATED UNDERLYING SETTLEMENT INSTRUCTION
	time as the underlying Settlement Instruction.	settlement (replacement of securities which have been previously provided as collateral).
Collateral relocation <sup>280</sup>	Settlement Instruction generated for the relocation of collateral is to be settled at the same time as the underlying Settlement Instruction.	Reverse collateral Settlement Instruction for which there is not sufficient liquidity to allow the reimbursement and therefore handled with a relocation of the collateral in the EOD process.
Additional liquidity transfer <sup>281</sup>	Liquidity transfer generated is to be settled at the same time as the underlying Settlement Instruction.	Reverse collateral Settlement Instruction for which insufficient liquidity has been detected during the end of day intraday credit reimbursement.
Liquidity rebalancing <sup>282</sup>	Liquidity transfer generated is to be settled at the same time as the underlying Settlement Instruction.	Original Settlement Instruction on which rebalancing has been detected.

1 Means to link instructions internally by T2S

2 T2S internally links Settlement Instructions for the needs mentioned above by making use of:

- 3 | Two links INFO providing the references of both business Settlement Instructions in the case of T2S  
4 generated Settlement Instructions for realignment and their underlying business Settlement Instructions;
- 5 | Reciprocal links INFO between the auto-collateralisation instructions generated for the securities part  
6 and those for the cash part in case of pledge and subpledge;
- 7 | A set of Settlement Instructions to be submitted for an all-or-none settlement in all cases (auto-  
8 collateralisation, substitution, collateral relocation, realignment). This settlement in all or none does not  
9 require a link visible externally.

10 Process applying on instructions internally linked by T2S

11 When Settlement Instructions are linked together internally by T2S for the cases above, T2S applies the  
12 following rules at the stage of validation, eligibility and settlement processes.

280 For details about collateral relocation, see section [End of Day Cash Management](#) [▶ 654].

281 For details about additional liquidity transfer created during the end of day intraday credit reimbursement, see section [End of Day Cash Management](#) [▶ 654].

282 For details about liquidity rebalancing of a corporate action proceeds or of a monetary policy operation, see section [Proceeds resulting from Corporate Actions or monetary policy operations](#) [▶ 665].

1  
2

**TABLE 131 - RULES APPLYING TO LINKS CREATED AUTOMATICALLY BY T2S**

PROCESS	LINK TYPE	RULES
Validation	All links	N/A
Eligibility	All links	N/A
Settlement	All links	<p>Realignment Settlement Instructions generated and linked by T2S are submitted to partial settlement if original Settlement Instructions are eligible to.</p> <p>In a set of linked Settlement Instructions, T2S applies the highest priority to all Settlement Instructions.</p> <p>In case of partial settlement of a set of Settlement Instruction and realignment Settlement Instructions, T2S attributes the same partial quantities and or amounts for all of them.</p> <p>There is no pre-emption <sup>283</sup> on cash or securities to be redelivered in linked Settlement Instructions.</p> <p>During the provision check process, T2S applies technical netting even if Settlement Instructions and/or Settlement Restrictions are linked for an all-or-none settlement.</p>

3 **1.6.1.11.5 Parameter Synthesis**

4 No specific configuration from T2S Actor is needed.

5 **1.6.1.12 Conditional Settlement**

6 **1.6.1.12.1 Concepts**

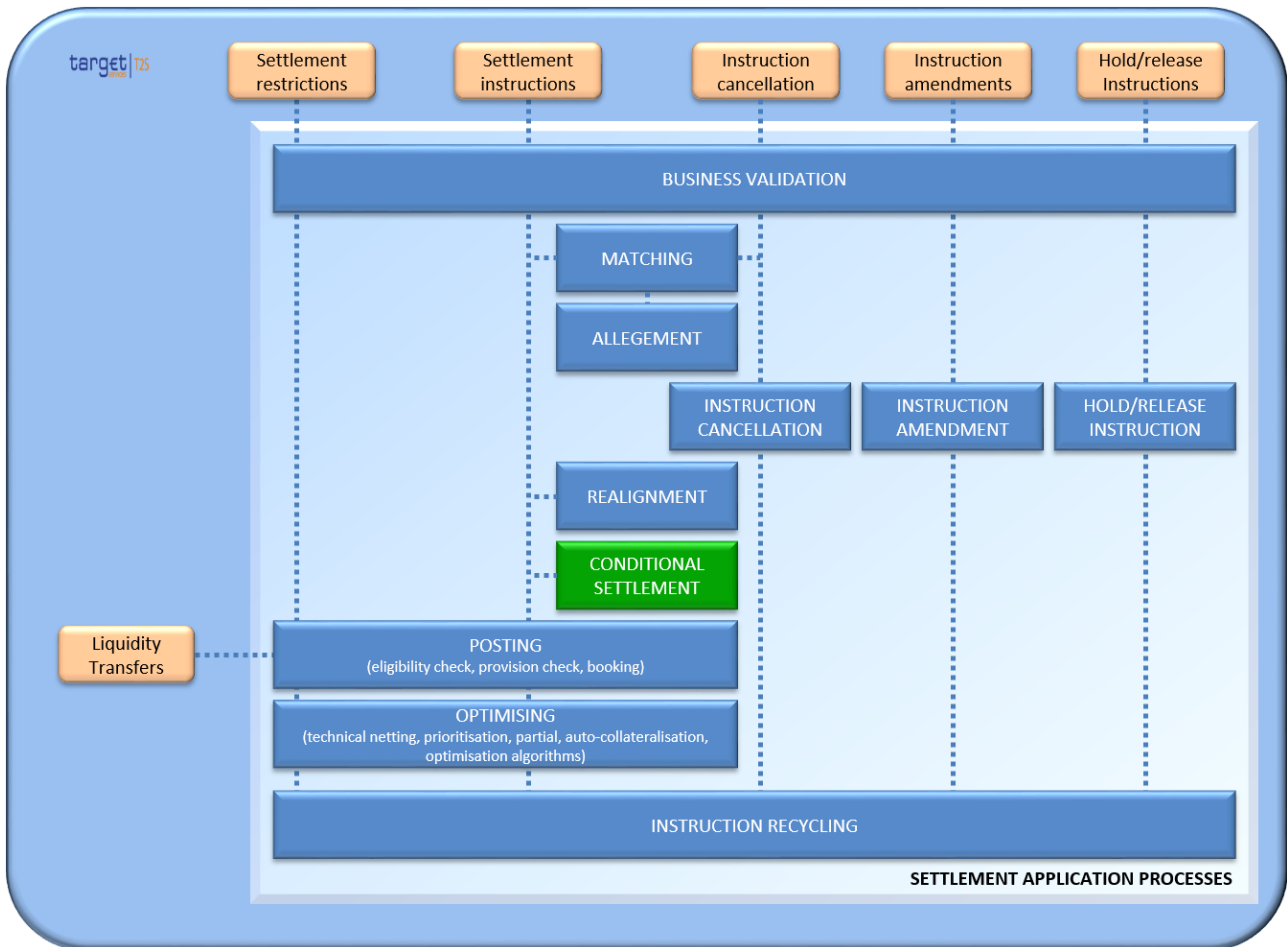

7 The conditional settlement application process allows performing a settlement in T2S with the requirement  
8 to fulfill a condition outside T2S before achieving the final booking.

---

283 For details about the pre-emption, see section [Securities Blocking/Reservation/Earmarking](#) [▶ 543].

1

**DIAGRAM 131 - CONDITIONAL SETTLEMENT APPLICATION PROCESS**

2

3 T2S automatically detects and performs conditional settlement, based on CoSD rules defined and maintained  
 4 by each CSD in the static data. These rules also identify the administering parties, i.e. the T2S Actor in  
 5 charge of managing the fulfillment of the external conditions and triggering the final booking once these  
 6 external conditions are fulfilled.

7 The external condition may relate to cash settlement in a currency not eligible in T2S, as well as to any other  
 8 condition that would need to be externally fulfilled prior to settlement. Hence, the functionality can be widely  
 9 used for the treatment of exceptions where the delivery of cash and/or securities is dependent on actions  
 10 outside T2S.

11 **1.6.1.12.2 Overview**

12 The conditional settlement application process relies on all CoSD rules set by each CSD in the static data to  
 13 identify if a conditional settlement applies on a Settlement Instruction.

14 The process starts the conditional settlement analysis of matched Settlement Instructions (and their linked  
 15 T2S generated realignment Settlement Instructions if any), as of their Intended Settlement Date.

1 The system puts the Settlement Instructions (or the linked T2S generated realignment Settlement Instruc-  
2 tions if any), that meets a CoSD rule, on CoSD hold and blocks the relevant securities and/or cash depending  
3 on the CoSD rule(s).<sup>284</sup>

4 The matched Settlement Instructions (and their linked T2S generated realignment Settlement Instructions if  
5 any) remain pending and the securities and/or cash remain blocked until T2S receives:

- 6 | Instruction releases or instruction cancellation from the administering parties;
- 7 | Or instruction cancellation from the CSD.

8 When the external conditions managed by the administering parties are fulfilled outside of T2S, these ad-  
9 ministering parties send instruction releases.

10 Upon reception of such instruction releases, the conditional settlement application process triggers the CoSD  
11 release. This latter performs the final booking of the matched Settlement Instructions, by using the securi-  
12 ties and/or cash which have been blocked at the CoSD activation.

13 The administering parties can cancel the Settlement Instructions, on their responsibilities or on behalf of the  
14 instructing parties, once the CoSD activation has been performed and only when the activation results from  
15 CoSD rule applying on the Settlement Instructions.

16 After a cancellation by administering parties or the CSD, the conditional settlement application process per-  
17 forms the cancellation of the matched Settlement Instructions.

18 In addition, if the CoSD rules only apply on the business Settlement Instructions (i.e. not on a T2S generat-  
19 ed realignment Settlement Instruction in case of cross or external settlements), the conditional settlement  
20 application process performs automatically the decrease of the CoSD blocking that has been set-up during  
21 the CoSD activation. If at least one CoSD rule applies to a T2S generated realignment Settlement Instruc-  
22 tion, the release of the CoSD blocking is handled later based on Settlement Restrictions sent by the CSD or  
23 the NCB managing the accounts where resources are blocked. Before instructing those decreases, CSD and  
24 NCB gather the agreement of all involved administering parties.

25 T2S may also cancel the Settlement Instruction and/or the T2S generated Settlement Instruction following  
26 the revalidation process (See section [Business Validation](#) [▶ 301]) and changes in the realignment chain (See  
27 section [Realignment](#) [▶ 451]). In such case of cancellation, the decrease of the CoSD blocking, if any, is  
28 handled later based on Settlement Restrictions sent by the CSD or the NCB managing the accounts where  
29 resources are blocked after the agreement of all involved administering parties.

30 Last, at the real-time settlement closure period, T2S releases all the cash that has been blocked by CoSD  
31 activations and not used during the current settlement day. At the start of the next settlement day, T2S  
32 attempts to block again the same amount of cash previously released.

### 33 **1.6.1.12.3 Conditional settlement process**

#### 34 Conditional settlement detection

---

284 In case a Settlement Instruction meets the CoSD rule and there is no securities (resp. no cash) to be blocked due to a PFOD (rep. due to a FOP), then no CoSD blocking occurs.

1 In order to use the conditional settlement application process in T2S, CSDs have first to define in static data  
 2 the CoSD rules according to which a Settlement Instruction is subject to a conditional settlement. Based on  
 3 this set-up, T2S detects, at their Intended Settlement Date, the conditional delivery of securities and/or the  
 4 conditional payment of cash of Settlement Instructions for which the delivering or receiving CSD has set up  
 5 the CoSD rule. Hence the conditional settlement is achieved in two steps:

- 6 | Setting up CoSD rule set in the T2S Static Data
- 7 | Detecting a conditional settlement on Settlement Instructions.

8 Setting up CoSD rule set A CSD can set-up several CoSD rule sets which contain one or several CoSD rules  
 9 which are defined with one or several group(s) of parameters:

- 10 | A "CoSD rule set" has validity dates and administering parties. Furthermore an "Administration type"  
 11 identifies which resources are subject to the conditional settlement: securities, cash or both. A "CoSD  
 12 rule set" has one or several CoSD rule(s), which are ordered in sequence. It is recommended to start  
 13 with the more specific CoSD rules and end with the more general.
- 14 | A "CoSD rule" has a validity date and a "CoSD processing" which is "Positive" if the CoSD rule expresses  
 15 the target of the conditional settlement and "Negative" if the CoSD rule expresses the exception to the  
 16 conditional settlement. A CoSD rule is defined with one or several group(s) of parameters.
- 17 | A group of parameter(s) is a predefined subset of possible parameters having predefined value(s) which  
 18 are the criteria to meet the CoSD rule. There can be one or several groups of parameters defining sever-  
 19 al criteria, but their order does not matter as they are exclusive by construction.
- 20 | See section [Conditional Securities Delivery Configuration](#) [▶ 69] for more details on the set up of CoSD  
 21 rule set.

22 The following example illustrates the set-up of several CoSD rule sets by a CSD A in the T2S Static data.

23 **EXAMPLE 136 - CoSD RULE SETS DEFINED BY CSD A**  
 24

RULE SET	ADMIN- ISTRATION TYPE	COSD RULE_SEQ	COSD PRO-CESS-ING	COSD RULE PARAMETER	
				GRP	VALUE
RS_1	Securities & cash	01	N	1	ISO transaction code = "CORP"
		02	N	1	Security = "ISIN Y" and place of settlement = "CSD B"
		03	Y	1	Place of settlement = "CSD B"
RS_2	Securities	01	Y	1	Currency = "DZD" and securities movement type = DELI
				2	Currency = "MAD" and securities movement type = DELI
				3	Currency = "TND" and securities movement type = DELI
				4	Currency = "EGP" and securities movement type = DELI
RS_3	Securities	01	Y	1	Issuer CSD in T2S = "No" and

RULE SET	ADMIN-ISTRATION TYPE	COSD RULE_SEQ	COSD PROCESSING	COSD RULE PARAMETER	
				GRP	VALUE
					Delivering CSD in T2S = "Yes" and Receiving CSD in T2S = "No"
RS_4	Cash	01	Y	1	Issuer CSD in T2S = "No" and Delivering CSD in T2S = "No" and Receiving CSD in T2S = "Yes"
RS_5	Cash	01	N	1	ISO transaction code = "CORP"
				Y	1
		2	Security = "ISIN B"		
		3	Security = "ISIN C"		
4	Security = "ISIN D"				

1 Detecting a conditional settlement

2 As of their Intended Settlement Date, the conditional settlement process analyses each leg RECE and DELI  
3 of the matched Settlement Instructions in two steps:

4 | Identification of the Settlement Instructions which contain a delivering or receiving CSD having defined  
5 one or several CoSD rule set(s),

6 | Check if these Settlement Instructions match at least one CoSD rule of the CoSD rule set.

7 **Identification of the Settlement Instructions which contain a delivering or receiving CSD having**  
8 **defined one or several CoSD rule set(s)**

9 T2S identifies the Settlement Instructions which potentially match a CoSD rule set using the following crite-  
10 ria:  
11

SI TYPE	SETTLEMENT INSTRUCTION			COSD RULE SET IN STATIC DATA	
	SECURITIES MOVEMENT TYPE CODE	PAYMENT TYPE CODE	CREDIT DEBIT CODE	COSD RULE SET DEFINED BY	ADMINISTRATION TYPE
DVP	DELI	APMT	CRDT	Delivering CSD	Securities
DVP	RECE	APMT	DBIT	Delivering CSD	Securities
DVP	DELI	APMT	CRDT	Receiving CSD	Cash
DVP	RECE	APMT	DBIT	Receiving CSD	Cash

SI TYPE	SETTLEMENT INSTRUCTION			COSD RULE SET IN STATIC DATA	
	SECURITIES MOVEMENT TYPE CODE	PAYMENT TYPE CODE	CREDIT DEBIT CODE	COSD RULE SET DEFINED BY	ADMINISTRATION TYPE
FOP	DELI	FREE	n/a	Delivering CSD	Securities
FOP	RECE	FREE	n/a	Delivering CSD	Securities
PFOD	DELI	APMT	CRDT	Receiving CSD	Cash
PFOD	RECE	APMT	DBIT	Receiving CSD	Cash
DWP	DELI	APMT	DBIT	Delivering CSD	Securities
DWP	RECE	APMT	CRDT	Delivering CSD	Securities
DWP	DELI	APMT	DBIT	Delivering CSD	Cash
DWP	RECE	APMT	CRDT	Delivering CSD	Cash

1 On that basis the identification of the potentially applicable rule sets is achieved as follows:

- 2 | For a pair of Settlement Instructions delivery versus payment (DVP), the process checks if a CoSD Rule  
3 set, administered from the securities side, is defined in the Static data by the delivering CSD or if a CoSD  
4 Rule set, administered from the cash side, is defined in the Static data by the receiving CSD.
- 5 | For a pair of Settlement Instructions free of payment (FOP), the process checks if a CoSD Rule set, ad-  
6 ministered from the securities side, is defined in the Static data by the delivering CSD;
- 7 | For a pair of Settlement instructions with no securities delivered (PFOD), the process checks if a CoSD  
8 Rule set, administered from the cash side, is defined in the Static data by the receiving CSD;
- 9 | For a pair of delivering Settlement Instructions delivery with payment (DWP), the process checks if a  
10 CoSD Rule set, administered from the securities side and/or the cash side, is defined in the Static data  
11 by the delivering CSD.

12 The following examples of Settlement Instructions are identified as potentially subject to CoSD in reference  
13 to the set-up of CoSD Rule set implemented in Example 136 - [CoSD rule sets defined by CSD A](#) [▶ 513]  
14 above.

1  
2

**EXAMPLE 137 - DVP POTENTIALLY SUBJECT TO CoSD**

OPE. ID	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVERING DEPOSITO- RY	CRED DEB INDIC.	AMOUNT	SUBJECT TO COSD ?	APPLICA- BLE RULE SET
SI1	DELI	60	CSD B	CSD A	CRDT	5,000.00	Yes (for secu- rities)	RS_1 RS_2 RS_3
SI2	RECE	60	CSD B	CSD A	DBIT	5,000.00	Yes (for secu- rities)	RS_1 RS_2 RS_3

3  
4

**EXAMPLE 138 - DWP POTENTIALLY SUBJECT TO CoSD**

OPE. ID	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVER- ING DEPOSITO- RY	CRED DEB INDIC.	AMOUNT	SUBJECT TO COSD ?	APPLICABLE RULE SET
SI1	DELI	60	CSD B	CSD A	DBIT	5,000.00	Yes (for cash and secu- rities)	RS_1 RS_2 RS_3 RS_4 RS_5
SI2	RECE	60	CSD B	CSD A	CRDT	5,000.00	Yes (for cash and secu- rities)	RS_1 RS_2 RS_3 RS_4 RS_5

1 **EXAMPLE 139 - FOP POTENTIALLY SUBJECT TO CoSD**

OPE. ID	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVER-ING DEPOSITO-RY	CRED DEB INDIC.	AMOUNT	SUBJECT TO COSD ?	APPLICA-BLE RULE SET
SI1	DELI	60	CSD B	CSD A	n/a	n/a	Yes (for secu-rities)	RS_1 RS_2 RS_3
SI2	RECE	60	CSD B	CSD A	n/a	n/a	Yes (for secu-rities)	RS_1 RS_2 RS_3

3 **EXAMPLE 140 - PFOD POTENTIALLY SUBJECT TO CoSD**

OPE. ID	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVER-ING DEPOSITO-RY	CRED DEB INDIC.	AMOUNT	SUBJECT TO COSD ?	APPLICABLE RULE SET
SI1	DELI	0	CSD A	CSD B	CRDT	5,000.00	Yes (for cash)	RS_1 RS_4 RS_5
SI2	RECE	0	CSD A	CSD B	DBIT	5,000.00	Yes (for cash)	RS_1 RS_4 RS_5

5 **Check if the Settlement Instructions match at least one CoSD rule of the CoSD rule set**

6 For each Settlement Instruction identified as potentially subject to a CoSD, T2S checks all the associated  
7 CoSD rule sets that have been defined by the relevant CSD.

8 For each CoSD rule set, T2S checks the associated CoSD rules with two possible outcomes:

9 | One rule is met: if one or several rules are defined, they are checked in sequence, T2S stops checking  
10 the rules as soon as one rule is met for this rule set. When one of the rules is met, T2S applies the con-  
11 ditional settlement according to the "CoSD processing condition" of the CoSD rule:

12 – If Positive, i.e. the rule expresses the target of the CoSD, the conditional settlement is activated on  
13 the:

- 14 ▪ Cash part of the Settlement Instruction if the administration type is "cash" or "cash and securi-  
15 ties",

- 1       ▪ Securities part of the Settlement Instruction if the administration type is "securities" or "cash and  
2       securities".
- 3       – If Negative, i.e. the rule expresses the exception to the CoSD, the conditional settlement is not acti-  
4       vated on the Settlement instruction for this rule set.
- 5       | No rule is met: if one or several rules are defined but none is met, the conditional settlement is not acti-  
6       vated on the Settlement instruction for this rule set.

7 A Settlement Instruction is subject to a CoSD or not once it has been checked against all CoSD Rule set. <sup>285</sup>

8                                   **EXAMPLE 141 - ONE RULE IS MET AND PROCESSING CONDITION IS POSITIVE**

9 The SI1 & SI2 of the FOP below are potentially subject to CoSD on securities based on the CoSD rule set  
10 defined by its delivering depository CSD A in Example 136 - [CoSD rule sets defined by CSD A](#) [▶ 513] above.  
11 As identified in Example 139 - [FOP potentially subject to CoSD](#) [▶ 517] the potentially applicable rule set are  
12 RS\_1, RS\_2, RS\_3.

13 The rules of the rule sets RS\_1 and RS\_3 do not apply, because:

- 14       | For RS\_1, the place of settlement is not CSD B;  
15       | For RS\_3, it is assumed that the involved CSDs are in T2S.

16 For RS\_2:

- 17       | The rule 01 is met for SI1 because the currency is the Maroc dirham and the securities movement type  
18       code is DELI;  
19       | The CoSD processing condition is Positive;  
20       | The administration type is Securities.

21 As a result the securities have to be CoSD blocked into a specific securities position of the Securities Account  
22 of the delivering party.  
23

OPE. ID	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVERING DEPOSITORY	CRED DEB INDIC.	CURRENCY	AMOUNT
SI1	DELI	60	CSD C	CSD A	CRDT	MAD	n/a
SI2	RECE	60	CSD C	CSD A	DBIT	MAD	n/a

24                                   **EXAMPLE 142 - ONE RULE IS MET AND PROCESSING CONDITION IS NEGATIVE**

25 The SI1 & SI2 of the DVP below are potentially subject to CoSD on securities based on the CoSD rule set  
26 defined by its delivering depository CSD A in Example 136 - [CoSD rule sets defined by CSD A](#) [▶ 513] above.  
27 As identified in Example 137 - [DVP potentially subject to CoSD](#) [▶ 516] the potentially applicable rule set are  
28 RS\_1, RS\_2, RS\_3.

285 The sequencing check of the CoSD Rule set has no impact on the CoSD detection process since the CoSD is activated per CoSD Rule set. So, for the same Settlement Instruction, it is possible to activate several CSD rule sets or to activate one rule set while another rule set is not activated. The CSD has to ensure a consistent set up in order to achieve or avoid the CoSD blocking according to its own business requirements.

1 The rules of the rule sets RS\_2 and RS\_3 do not apply, because:

2 | For RS\_2, the currency is EUR;

3 | For RS\_3, it is assumed that the involved CSDs are in T2S.

4 For RS\_1:

5 | Rule 01 is not met because the ISO transaction code is not "CORP";

6 | Rule 02 is met because security = "ISIN Y" and place of settlement = "CSD B";

7 | As rule 02 is met, rule 03 is not checked.

8 As a result the conditional settlement does not apply because the CoSD processing condition on rule 02 is  
9 Negative.

10 Note that in the rule set RS\_1, the sequence of the rules is important in order to apply the conditional set-  
11 tlement when the settlement place is CSD B except for corporate action.  
12

OPE. ID	TRANSACTION CODE	SECURITY	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVERING DEPOSITORY	CRED DEB INDIC.	CURRENCY	AMOUNT
SI1	TRAD	ISIN Y	DELI	60	CSD B	CSD A	CRDT	EUR	5,000.00
SI2	TRAD	ISIN Y	RECE	60	CSD B	CSD A	DBIT	EUR	5,000.00

13 **EXAMPLE 143 - SEVERAL RULES ARE DEFINED AND NO RULE IS MET**

14 The SI1 & SI2 of the PFOD below are potentially subject to CoSD on cash based on the CoSD rule set de-  
15 fined by its receiving depository CSD A in

16 | The rules of the rule sets RS\_1 and RS\_4 do not apply, because: For RS\_1, CSD B is not the place of set-  
17 tlement;

18 | For RS\_4, it is assumed that all the involved CSDs are in T2S.

19 For RS\_5:

20 | Rule 01 is not met because the transaction code is "TRAD";

21 | Rule 02 is not met because security is not among {"ISIN A", "ISIN B", "ISIN C", "ISIN D"}.

22 As a result the conditional settlement does not apply.  
23

OPE. ID	TRANSACTION CODE	SECURITY	SEC. MVT TYPE	QTY	RECEIVING DEPOSITORY	DELIVERING DEPOSITORY	CRED DEB INDIC.	AMOUNT
SI1	TRAD	ISIN Y	DELI	0	CSD A	CSD B	CRDT	5,000.00
SI2	TRAD	ISIN Y	RECE	0	CSD A	CSD B	DBIT	5,000.00

24 Conditional settlement for intra CSD settlement

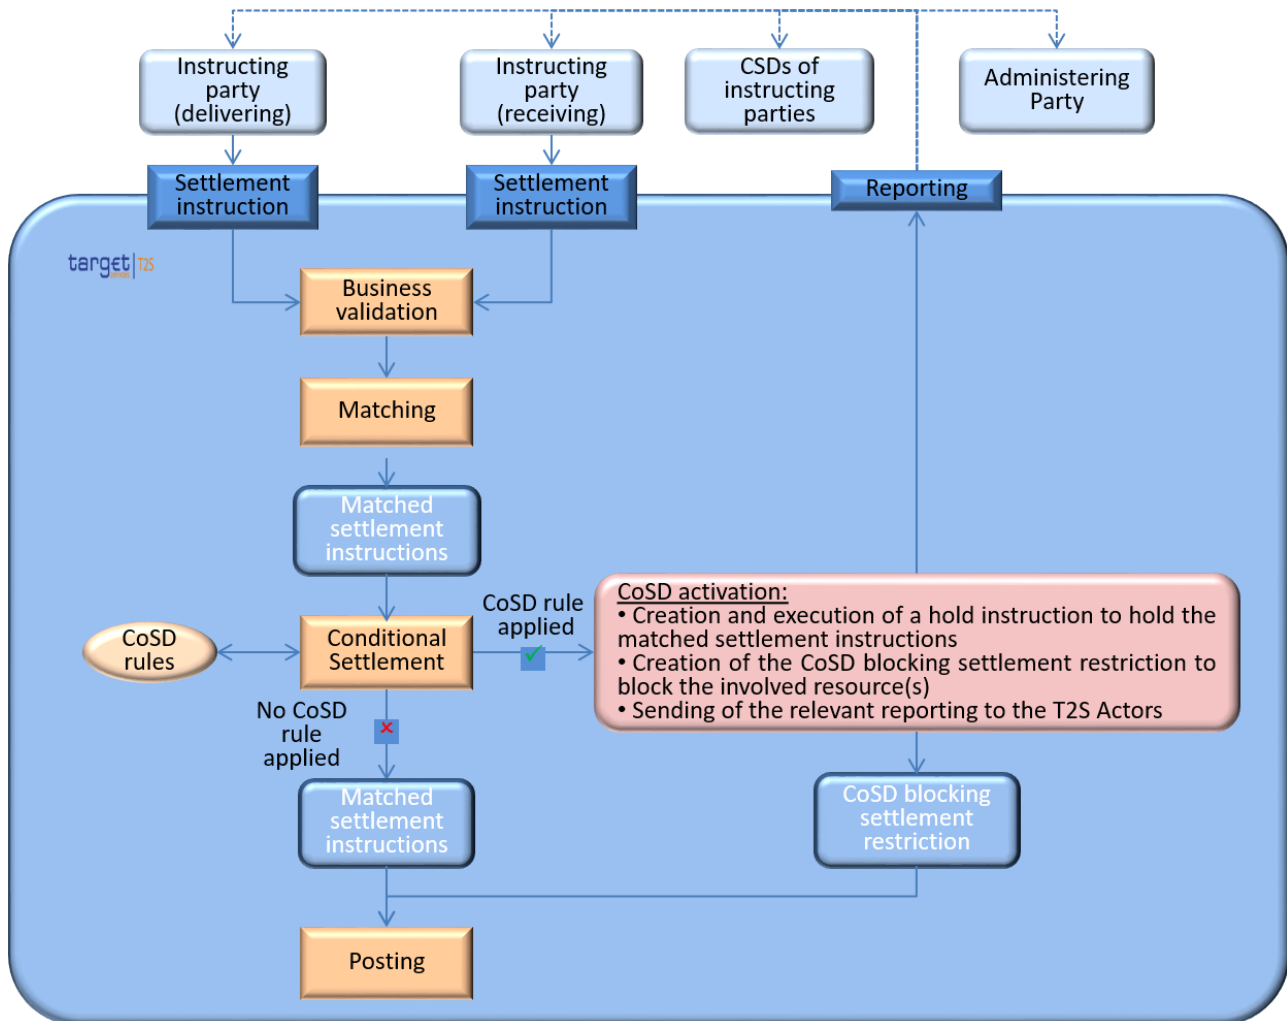

25 CoSD activation for intra CSD settlement

- 1 As of their Intended Settlement Date, matched Settlement Instructions are analysed by the conditional set-  
2 tlement process which checks if at least one CoSD rule parameter matches with the relevant attributes of  
3 each Settlement Instruction (see § Conditional settlement detection).
- 4 In case matched Settlement Instructions are revalidated after their first conditional settlement analysis:
- 5 | If no CoSD was detected before, a new conditional settlement analysis is applied;
  - 6 | If CoSD was already detected, no new submission to conditional settlement analysis.
- 7 In case a CoSD rule applies on a Settlement Instruction, the CoSD activation is performed with the following  
8 steps:
- 9 | Creation and execution of T2S generated hold maintenance instruction to set the related Settlement In-  
10 struction on hold for CoSD purpose;
  - 11 | If the matched Settlement Instructions are not on hold for other purpose, creation and settlement at-  
12 tempt of T2S generated CoSD blocking Settlement Restriction(s) in order to block the cash and/or securi-  
13 ties as defined for the CoSD rule detected;
  - 14 | Information to the T2S Actors about the above actions.
- 15 In case several CoSD rules apply on one Settlement Instruction, the same actions apply for each of them  
16 with the exception of the T2S generated CoSD blocking Settlement Restriction which is only created once,  
17 for each resource to be blocked, for the related Settlement Instruction.

1

DIAGRAM 132 - CoSD ACTIVATION OVERVIEW

2

### 3 Creation and execution of hold instructions

4 T2S creates and executes T2S generated hold maintenance instructions, one per CoSD rule and per Settlement  
 5 Instruction on which CoSD rule(s) applies, to hold the Settlement Instruction through the following  
 6 updates:

- 7 | The CoSD hold status is set to "Yes";
- 8 | The CoSD rule identification(s) is associated to the Settlement Instruction;
- 9 | CoSD flag is set to "Yes".

10 The Settlement Instruction of the counterparty for which no CoSD rule applies is updated with CoSD flag set  
 11 to "Yes".

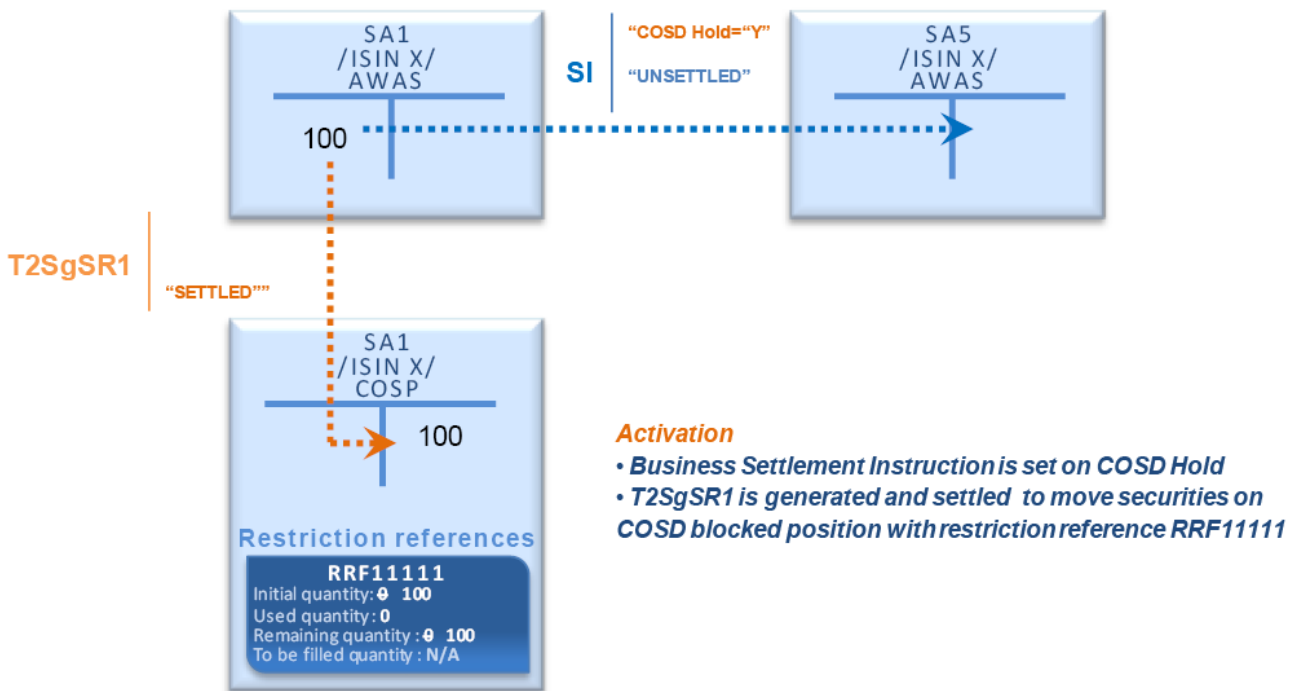

### 12 Creation and settlement of the CoSD blocking Settlement Restriction

13 Unless the matched Settlement Instructions are already on hold for another purpose (i.e. by the T2S Party,  
 14 its CSD or the business validation process, see section [Business Validation](#) [▶ 301]), T2S creates a T2S gen-  
 15 erated CoSD blocking Settlement Restriction to block the securities and/or a T2S generated CoSD blocking  
 16 Settlement Restriction to block the cash as defined within the relevant CoSD rules.

1 If any of the matched Settlement Instructions are already on hold for another purpose, the CoSD blocking is  
 2 generated only after the release of such hold. The T2S generated CoSD blocking Settlement Restriction on  
 3 securities contains the following information:  
 4

ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE(S)
T2SgSR1	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Securities position impacted in the delivering Settlement Instruction	CoSD blocking restriction type configured by the T2S Operator	Quantity necessary for the settlement of the delivering Settlement Instruction	Upon settlement, generation of a restriction reference (RRF11111)

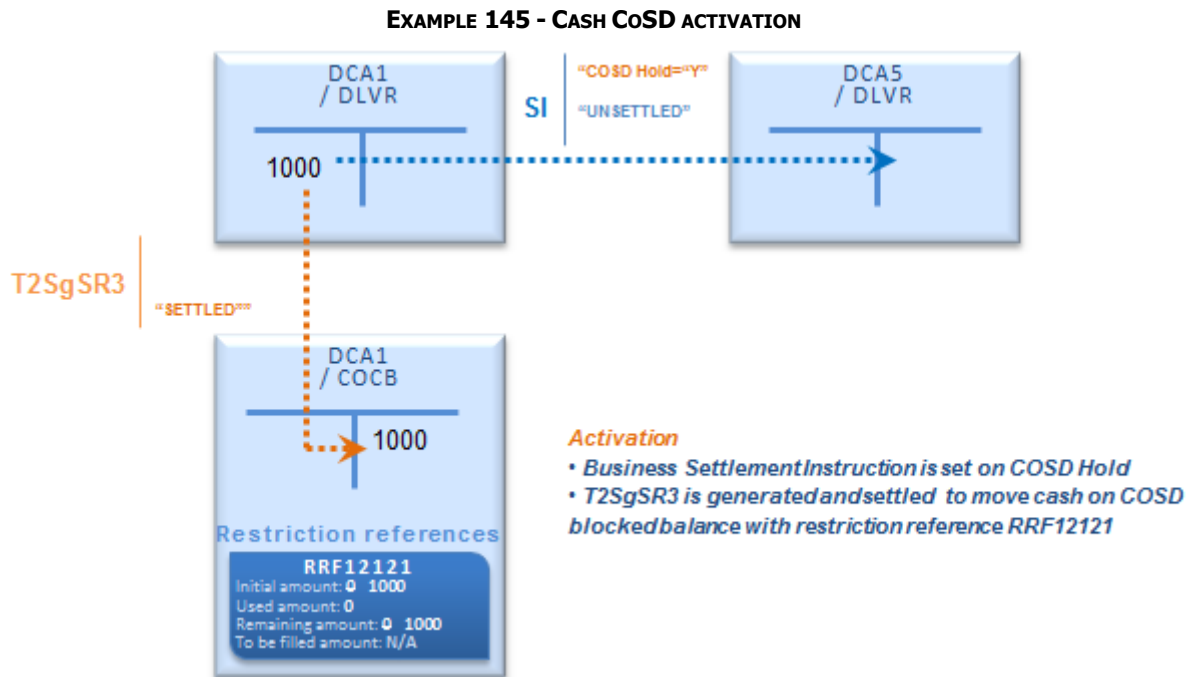

5 **EXAMPLE 144 - SECURITIES CoSD ACTIVATION**

6  
 7 The T2S generated CoSD blocking Settlement Restriction on cash contains the following information:  
 8

ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE(S)
T2SgSR3	T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	Deliverable restriction type configured by the T2S Operator	CoSD blocking restriction type configured by the T2S Operator	Amount necessary for the settlement of the receiving Settlement Instruction	Upon settlement, generation of a restriction reference (RRF12121)

1

2

3 The T2S generated CoSD blocking Settlement Restrictions are then sent to the posting application process  
4 for a settlement attempt.

5 CoSD blocking is not allowed to settle partially. In case of failure, they are recycled until their settlement.

6 Once the T2S generated CoSD blocking Settlement Restrictions are settled:

7 | In case of CoSD blocking on securities, a new restriction reference is created and associated to the de-  
8 livering Settlement Instruction.

9 | This restriction reference can only be used in the next Conditional Settlement process actions as CoSD  
10 release or CoSD cancellation without any other actions;

11 | In case of CoSD blocking on cash, a new restriction reference is created and associated to the receiving  
12 Settlement Instruction.

13 | This restriction reference can only be used in the next Conditional Settlement process actions as CoSD  
14 release or CoSD cancellation without any other actions except the temporary decrease due to the the  
15 end of day process (See section [End of Day Cash Management](#) [▶ 655]);

16 | The reason code for the settlement status of the Settlement Instructions subject to the CoSD rule(s), is  
17 set to "CoSD release awaiting from Administering Party".

### 18 **Informing the instructing and the administering parties**

19 At each step of the CoSD activation, T2S informs the T2S Actors involved as described in section Conditional  
20 Delivery (CoSD) Detection and in Chapter 3 for the related content of the messages.

21 An example of the CoSD activation is presented at the end of the present section (See Example 157 - [CoSD](#)  
22 [activation](#) [▶ 542]).

23 [CoSD release for intra CSD settlement](#)

- 
- 1 After CoSD activation process, once the external condition is externally fulfilled, the administering party  
2 sends one instruction release per CoSD rule and per Settlement Instruction previously held. The administer-  
3 ing party must indicate in each instruction release the T2S Reference of the released Settlement Instruction  
4 and the CoSD rule identifier.
- 5 In case several CoSD rules apply, the CoSD release takes effect only when T2S receives all release instruc-  
6 tion maintenance from all administering parties involved in CoSD rules which applied on this Settlement In-  
7 struction.
- 8 In case CoSD rules apply on both matched Settlement Instructions, the CoSD release takes place when all  
9 releases for both Settlement Instructions are received.
- 10 T2S informs each involved administering party with the result of the validation of its release instruction.
- 11 When the reason code of the settlement status of the Settlement Instruction on which applied a CoSD rule is  
12 "CoSD release awaiting from Administering Party", the administering party can send its CoSD Release in-  
13 structions. When T2S has processed all the necessary release instructions from all administering parties, the  
14 CoSD release is performed with the following steps:
- 15 | Release of the related Settlement Instruction;
  - 16 | Triggering of the settlement of the matched Settlement Instructions with the use of the blocked cash or  
17 securities according to the restriction reference generated during CoSD activation;
  - 18 | Information to the T2S Actors about the above actions.

1

DIAGRAM 133 - CoSD RELEASE OVERVIEW

2

### 3 Execution of releases instruction maintenance

4 When T2S has processed all release instructions received from all administering parties involved, one per  
5 CoSD rule and per Settlement Instruction:

- 6 | If the reason code of the settlement status of the Settlement Instruction on which applies a CoSD rule is  
7 "CoSD release awaiting from Administering Party", then the Settlement Instruction previously held is re-  
8 leased through the update of the CoSD hold status to "No";
- 9 | If this reason code is different (e.g. the corresponding cash CoSD blocking cannot be regenerated due to  
10 missing cash on the involved T2S Dedicated cash account), T2S rejects the release with the reason code  
11 "CoSD blocking of the referenced Settlement Instruction not settled yet".

12 The CoSD flag remains set to "Yes" for both matched Settlement Instructions to store the submission to a  
13 CoSD before its settlement.

### 14 Settlement of the matched Settlement Instructions

15 When the Settlement Instruction is released, the matched Settlement Instructions are submitted to posting  
16 application process in order to use the CoSD blocking that has been set-up at the CoSD activation step.

17 For this aim, the posting application process applies the standard process as for the use of a restriction (See  
18 section [Provision check process](#) [▶ 391]), i.e.:

1 In case of CoSD blocking on securities, creates a T2S generated use of blocking Settlement Restriction containing the following information:

ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
T2SgSR2	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	CoSD blocking restriction type configured by the T2S Operator	Securities position impacted in the delivering Settlement Instruction	Remaining quantity in the restriction reference	Restriction reference generated at the CoSD activation step (RRF11111)

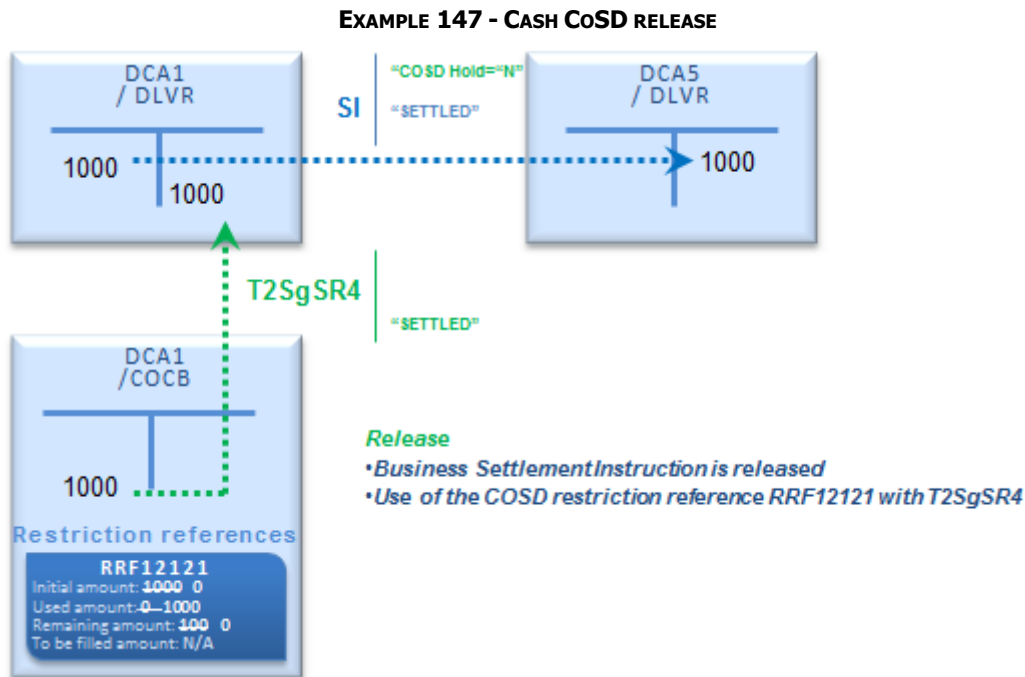

4 **EXAMPLE 146 - SECURITIES CoSD RELEASE**

5  
6 In case of CoSD blocking on cash, creates a T2S generated use of blocking Settlement Restriction containing the following information:

ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
T2SgSR4	T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	CoSD blocking restriction type configured by the T2S Operator	Deliverable restriction type configured by the T2S Operator	Remaining amount in the restriction reference	Restriction reference generated at the CoSD activation step (RRF12121)

1

2

3 The T2S generated Settlement Restriction(s) then settle on an all or none basis with the matched Settlement  
4 Instructions.

### 5 **Informing the instructing and the administering parties**

6 At the CoSD release, T2S informs the parties involved as described in section Send Release Instruction for  
7 CoSD by Administering Party and in Chapter 3 for the related content of the messages.

8 At the posting application process, T2S informs only the parties involved as described in section Send Set-  
9 tlement Instruction and in Chapter 3 for the related content of the messages.

### 10 CoSD cancellation by T2S Actor for intra CSD settlement

11 Once identified as conditional settlement (i.e. their CoSD flag is set to "Yes"), the matched Settlement In-  
12 struction subjected to CoSD rule can only be cancelled by:

- 13 | Either the administering parties of the applying CoSD rules through only one instruction cancellation irre-  
14 | spective of the number of CoSD rules that they administer on the Settlement Instruction;
- 15 | Or CSDs through an instruction cancellation per Settlement Instruction where they are involved.

16 Whatever the number of CoSD rules applying, T2S waits for an instruction cancellation per involved adminis-  
17 tering parties or CSDs.

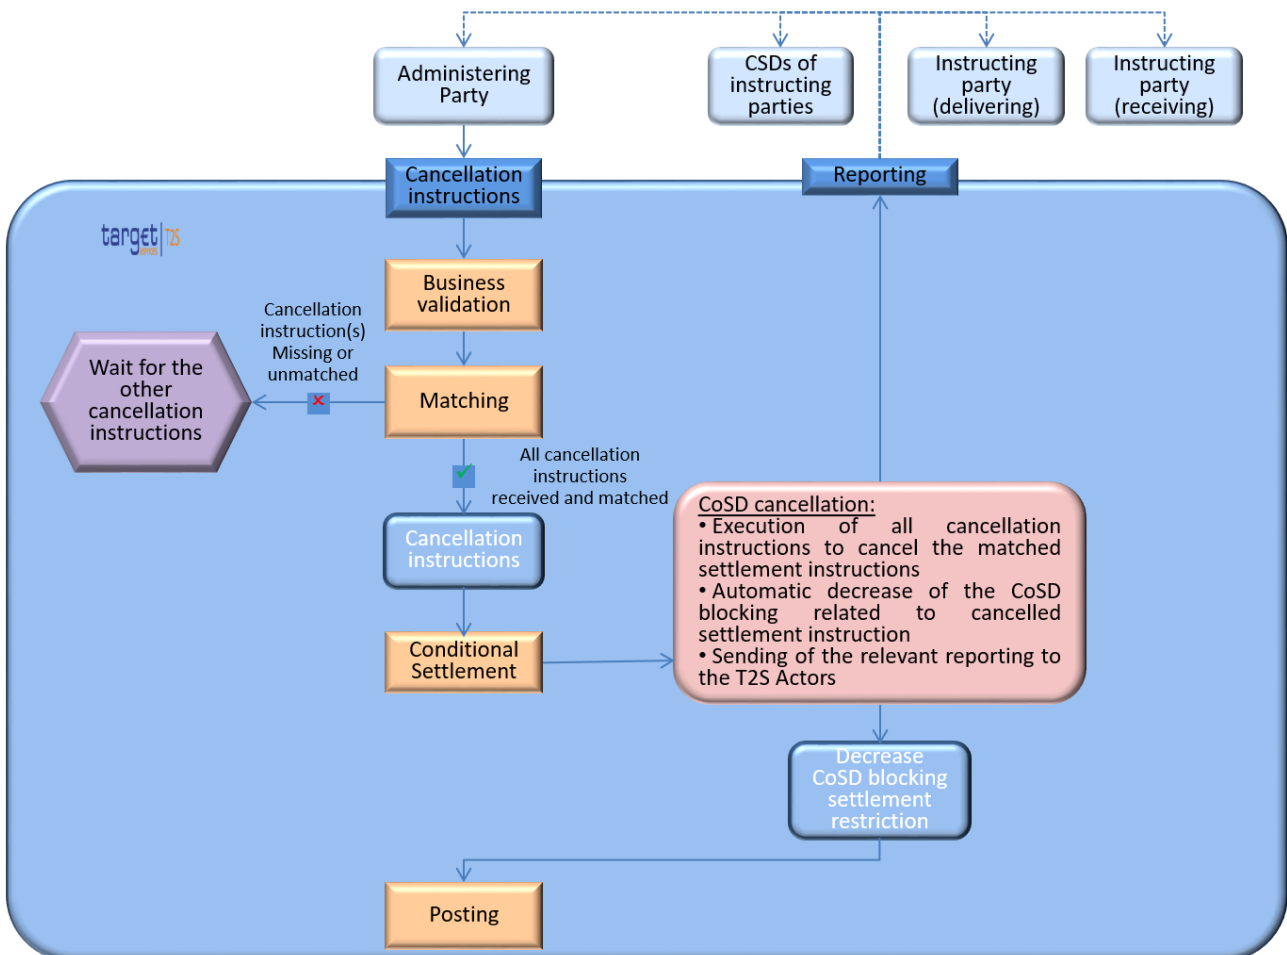

18 If several CoSD rules were detected on matched Settlement Instructions, the CoSD cancellation takes effect  
19 only when T2S receives all Cancellation Instructions from the involved administering parties or CSDs and  
20 after matching of these Cancellation Instructions (See section [Instruction Cancellation](#) [▶ 360]).

21 When T2S has validated an instruction cancellation received from an involved administering party or CSD,  
22 this administering party or CSD is informed about the acceptance of their instruction cancellation.

23 When T2S has validated all Cancellation Instructions received from all relevant involved administering parties  
24 or CSDs, the CoSD cancellation is performed with the following steps:

- 1 | I If the cancellation is performed after the settlement of the CoSD blocking created during CoSD activation:
- 2 |   Cancellation of the matched Settlement Instructions,
- 3 |   Automatic decrease of the CoSD blocking set at the CoSD activation,
- 4 |   Information to the T2S Actors;
- 5 |
- 6 | I If the cancellation is performed before the settlement of the CoSD blocking created during CoSD activation:
- 7 |   Cancellation of the T2S generated CoSD blocking Settlement Restriction created during CoSD activation,
- 8 |   Cancellation of the matched Settlement Instructions,
- 9 |   Information to the T2S Actors.
- 10 |
- 11 |
- 12 |

**DIAGRAM 134 - CoSD CANCELLATION OVERVIEW**

- 13 |
- 14 | Informing the instructing and the administering parties
- 15 | At the CoSD cancellation, T2S informs the parties involved as described in section Send Cancellation Instruction for CoSD by Administering Party and in Chapter 3 for the related content of the messages.
- 16 |
- 17 | Specificities of conditional Settlement process for cross and external CSD settlement

1 The conditional settlement process on a cross-CSD settlement or an external-CSD settlement is similar to the  
2 process of conditional settlement for an intra CSD settlement with the few differences hereafter.

### 3 CoSD activation for cross and external CSD settlement

4 In case of cross and external CSD settlement (i.e. T2S generated realignment Settlement Instructions exist):

5 | Both business Settlement Instructions and T2S generated realignment Settlement Instructions (hereafter  
6 called CoSD group of Settlement Instructions) are:

7 – Submitted to the check against CoSD rules configured by CSDs managing the involved securities ac-  
8 counts;

9 – Updated with the CoSD flag set to “Yes” in case of conditional settlement (i.e. once the instruction is  
10 identified as a CoSD);

11 | T2S generated CoSD blocking Settlement Restriction(s) is(are) done only on the delivering securities ac-  
12 count <sup>286</sup> or debited T2S dedicated cash account of the business Settlement Instructions, irrespective on  
13 which Settlement Instruction(s) of the CoSD group (i.e. the business Settlement Instructions and the  
14 T2S generated realignment Settlement Instructions) the CoSD rules applied.

### 15 CoSD release for cross and external CSD settlement

16 In case of cross and external CSD settlement, release maintenance instructions for each Settlement Instruc-  
17 tion of the CoSD group on which CoSD rules apply (ie on the business Settlement Instructions or on the T2S  
18 generated realignment Settlement Instructions) are necessary to perform the CoSD release and the settle-  
19 ment attempt of all Settlement Instructions of the CoSD group.

### 20 CoSD cancellation by T2S Actor for cross and external CSD settlement

21 As for intra settlement, in case of cross and external CSD settlement, the Cancellation Instruction can be  
22 instructed by the involved CSD or administering parties.

23 If the CoSD rules only apply to the business Settlement Instructions, the cancellation rules are the same as  
24 the rules used in case of intra CSD settlement with the decrease of the CoSD blocking handled automatically.

25 If at least one CoSD rule applies on a T2S generated realignment Settlement Instruction of the CoSD group,  
26 the cancellation rules are identical but without automatic decrease of CoSD blocking. Decreases of the CoSD  
27 blocking are handled later by the CSD or the NCB managing the accounts where resources are blocked. CSD  
28 and NCB gather the agreement of all involved administering parties before instructing the decrease with  
29 Settlement Restrictions.

### 30 *Specificities of conditional Settlement process for Settlement Instructions using restriction references*

#### 31 CoSD activation for Settlement Instructions using restriction references

#### 32 **Creation and settlement of the CoSD blocking Settlement Restrictions**

33 When a CoSD is activated for a Settlement Instruction using restriction references, resources have to be  
34 moved from the restricted positions/balances of the restriction references provided in the Settlement In-  
35 struction to the CoSD blocking position/balance. Such transfer cannot be done directly (see section [Securities](#)

---

286 For external CSD scenarios the T2S generated CoSD blocking Settlement Restriction(s) is(are) done only on the first account within the realignment chain defined within T2S (which may be a securities account for cross CSD and external CSD settlement; e.g. Inter-CSD, Omnibus).

1 [Blocking/Reservation/Earmarking](#) [▶ 544] and section [Cash Blocking and Reservation](#) [▶ 670]), therefore,  
 2 T2S implements the CoSD blocking using the deliverable securities position (or the earmarked securities  
 3 position in case of an earmarked securities account) or the deliverable cash balance as a "pivot" posi-  
 4 tion/balance.

5 For CoSD on securities, the CoSD activation differs depending on whether:

- 6 | The use is a direct debit: i.e. the restriction references are used only from the single impacted blocked or  
 7 reserved position for the settlement of the Settlement Instruction
- 8 | The use is an indirect debit: i.e. the restriction references are used from several blocked and/or reserved  
 9 positions and can be complemented with the deliverable position for the settlement of the Settlement  
 10 Instruction
- 11 | (See section [Securities blocking process](#) [▶ 552] and section [Securities reservation process](#) [▶ 566] for  
 12 the description of direct debit and indirect debit).

13 In case of direct debit T2S generates two matched Settlement Instructions in addition to the CoSD blocking  
 14 Settlement Restriction.

15 **EXAMPLE 148 - SECURITIES CoSD ACTIVATION - SETTLEMENT INSTRUCTION USING REFERENCES IN DIRECT DEBIT**

16  
 17 The additional Settlement Instructions generated to move the securities from the blocked/reserved position  
 18 to the deliverable position contain following information:

1

ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SECURITIES MOVEMENT TYPE	QUANTITY	RESTRICTION REFERENCE(S)
T2SgSI1	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Restriction type of the blocked (reserved) securities position where the restriction reference(s) of the delivering Settlement Instruction are attached	DELI	Quantity necessary for the settlement of the delivering Settlement Instruction	Restriction reference(s) of the delivering Settlement Instruction (RRF33333)
T2SgSI2	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Deliverable or earmarked securities position of the instructed securities account in the delivering Settlement Instruction	RECE	Quantity necessary for the settlement of the delivering Settlement Instruction	n/a

2  
3

The CoSD blocking Settlement Restriction contains following information:

ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE(S)
T2SgSR2	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Deliverable or earmarked restriction type of the instructed securities account in the delivering Settlement Instruction	CoSD blocking restriction type configured by the T2S Operator	Quantity necessary for the settlement of the delivering Settlement Instruction	Upon settlement, generation of a Restriction Reference (RRF22222)

4 In case of indirect debit (i.e. the restriction reference(s) can be complemented with the deliverable position  
5 for the settlement of the Settlement Instruction), T2S generates:

6 | One Settlement Restriction to the deliverable, per used restriction reference

1 | One Settlement Restriction from the deliverable to the CoSD blocking

2 | **EXAMPLE 149 - SECURITIES CoSD ACTIVATION - SETTLEMENT INSTRUCTION USING REFERENCES IN INDIRECT DEBIT**

3 |

4 | The generated Settlement Restrictions contain following information:

1

ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE (S)
T2SgSR1	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Restriction type of the blocked (reserved) securities position where the restriction reference(s) of the delivering Settlement Instruction are attached	Deliverable position of the instructed securities account in the delivering Settlement Instruction	Part of the quantity necessary for the settlement of the delivering Settlement Instruction	Restriction reference(s) of the delivering Settlement Instruction (RRF56789)
T2SgSR2	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Restriction type of the blocked (reserved) securities position where the restriction reference(s) of the delivering Settlement Instruction are attached	Deliverable position of the instructed securities account in the delivering Settlement Instruction	Part of the quantity necessary for the settlement of the delivering Settlement Instruction	Restriction reference(s) of the delivering Settlement Instruction (RRF33333)
T2SgSR3	Instructed securities account in the delivering Settlement Instruction	Instructed Security in the delivering Settlement Instruction	Deliverable position of the instructed securities account in the delivering Settlement Instruction	CoSD blocking restriction type configured by the T2S Operator	Quantity necessary for the settlement of the delivering Settlement Instruction	Upon settlement, generation of a Restriction Reference (RRF22222)

2 For CoSD on cash, the use of cash blocked or reserved is always done with indirect debit, so when a condi-  
3 tional cash debit is activated on a Settlement Instruction which uses blocked or reserved cash, T2S gener-  
4 ates:

- 5 | One Settlement Restriction to the deliverable, per used restriction reference
- 6 | One Settlement Restriction from the deliverable to the CoSD blocking

1

**EXAMPLE 150 - CASH CoSD ACTIVATION - SETTLEMENT INSTRUCTION USING REFERENCES IN INDIRECT DEBIT**

2

3 | The generated Settlement Restrictions contain following information:

4

ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE (S)
T2SgSR1	T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	Restriction type of the blocked (reserved) cash balance where the restriction reference(s) of the receiving Settlement Instruction are attached	Deliverable restriction type of the receiving Settlement Instruction	Part of the amount necessary for the settlement of the receiving Settlement Instruction	Restriction reference(s) of the receiving Settlement Instruction (RRF56789)
T2SgSR2	T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	Restriction type of the blocked (reserved) cash balance where the restriction reference(s) of the receiving Settlement Instruction are attached	Deliverable restriction type of the receiving Settlement Instruction	Part of the amount necessary for the settlement of the receiving Settlement Instruction	Restriction reference(s) of the receiving Settlement Instruction (RRF33333)
T2SgSR3	T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	Deliverable restriction type configured by the T2S Operator	CoSD blocking restriction type configured by the T2S Operator	Amount necessary for the settlement of the receiving Settlement Instruction	Upon settlement, generation of a Restriction Reference

ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE (S)
	tlement Instruction			tion	(RRF22222)

1 **Informing the instructing and the administering parties**

2 In the specific case of the conditional settlement of Settlement Instructions using blocked or reserved refer-  
 3 ences, the activation of the CoSD generates an additional pair of matched Settlement Instructions in case of  
 4 direct debit, and one or several additional Settlement Restriction(s) in case of indirect debit. As a conse-  
 5 quence, T2S sends a message for each of these additional Settlement instruction and/or Settlement Re-  
 6 striction:

7 Generation notifications for T2SgSI;

8 | Settlement confirmation when the Settlement Restrictions for CoSD settle;

9 | Status advice when the Settlement Restrictions for CoSD fail to settle.

10 (For more details on the information flows, see sections Conditional Delivery (CoSD) Detection Settlement  
 11 Securities CoSD blocking and Settlement Cash CoSD blocking)

12 CoSD release for Settlement Instructions using restriction references

13 As for the intra CSD settlement described above, once the external condition is externally fulfilled, the ad-  
 14 ministering party sends one instruction release per CoSD rule and per Settlement Instruction previously held.  
 15 When T2S has processed all the necessary release instructions from all administering parties, the CoSD re-  
 16 lease is performed with the following steps:

17 | Release of the related Settlement Instruction;

18 | Triggering of the settlement of the matched Settlement Instructions with the use of the blocked cash or  
 19 securities according to the restriction reference generated during CoSD activation;

20 | Information to the T2S Actors about the above actions.

1 **EXAMPLE 151 - SECURITIES CoSD RELEASE - SETTLEMENT INSTRUCTION USING REFERENCES IN DIRECT DEBIT**

2  
3 **EXAMPLE 152 - SECURITIES CoSD RELEASE - SETTLEMENT INSTRUCTION USING REFERENCES IN INDIRECT DEBIT**

4

1 **EXAMPLE 153 - CASH CoSD RELEASE - SETTLEMENT INSTRUCTION USING REFERENCES IN INDIRECT DEBIT**

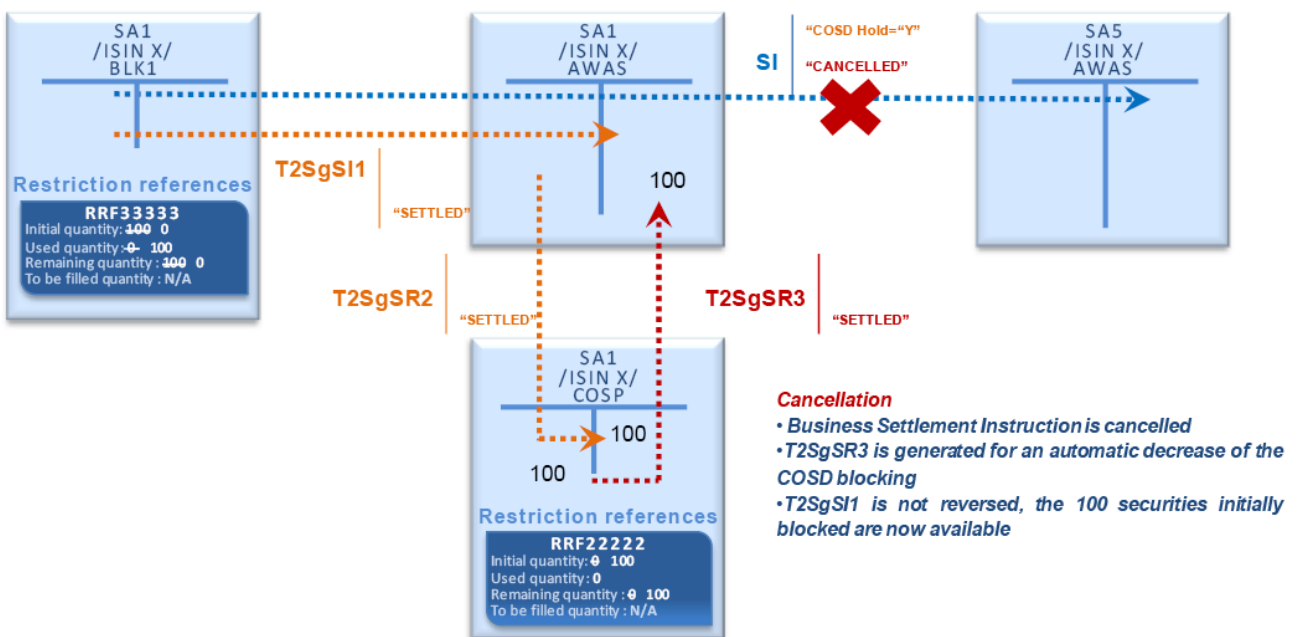

2  
3 CoSD cancellation by T2S Actor for Settlement Instructions using restriction references

4 For the cancellation of a Settlement Instruction using blocked or reserved reference(s) which is identified as  
5 conditional settlement, T2S applies the same cancellation rules as for intra CSD settlement, with the follow-  
6 ing exceptions:

- 7 | If the cancellation is performed after the settlement of the CoSD blocking created during CoSD activa-  
8 tion: the resources which were initially blocked or reserved and used for the settlement of the CoSD  
9 blocking are moved back to the deliverable position and not to their original restricted position.

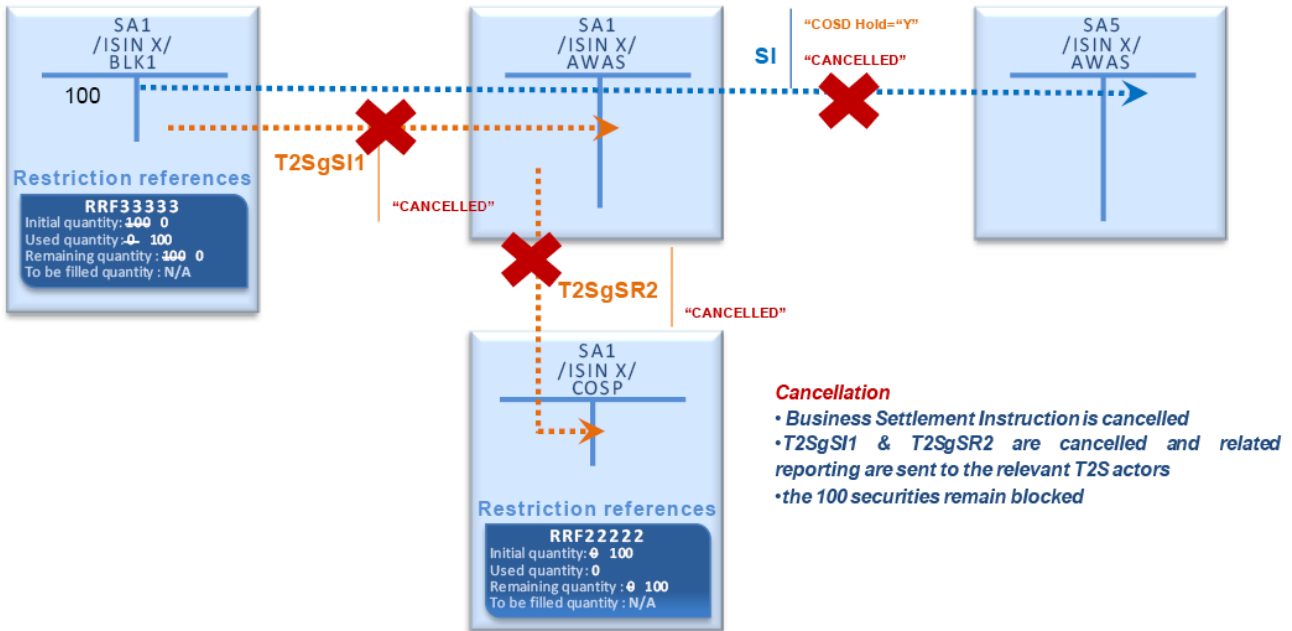

10 **EXAMPLE 154 - CoSD CANCELLATION - AFTER SETTLEMENT OF THE CoSD BLOCKING**

- 11  
12 | If the cancellation is performed before the settlement of the CoSD blocking created during CoSD activa-  
13 tion: as several CoSD blocking Settlement Restrictions were generated, the involved T2S actor(s) receive  
14 several status advices related to their cancellation.

1

**EXAMPLE 155 - CoSD CANCELLATION - BEFORE SETTLEMENT OF THE CoSD BLOCKING**

2

CoSD detection on revalidated Settlement Instructions

4 At the start of day or after a static data update, the business Settlement Instructions and their linked T2S  
 5 generated realignment Settlement Instruction, that are not fully settled nor cancelled at the end of previous  
 6 T2S settlement day, are revalidated against the static data valid for the new settlement day and the CSD  
 7 Validation/Rejection restriction rules (See section [Business Validation](#) [▶ 301]).

8 This revalidation may trigger the activation of a conditional settlement according the following rules:

- 9 | If a CoSD has been detected before (i.e. CoSD flag of Settlement Instructions set to "Yes") on at least  
 10 one Settlement Instruction of the CoSD group:
  - 11 – If all Settlement Instructions of the CoSD group are successfully revalidated, T2S does not re-analyse  
 12 the conditional settlement;
  - 13 – If the revalidation of one of the Settlement Instructions of the CoSD group fails, T2S processes an au-  
 14 tomatic cancellation of all Settlement Instructions of the CoSD group. The decrease of CoSD blocking  
 15 related to cancelled Settlement Instructions is handled later by the CSD and the NCB managing the  
 16 accounts where resources are blocked after the agreement of all involved administering parties;
- 17 | If no CoSD was detected (i.e. CoSD flag of Settlement Instructions set to "No"):
  - 18 – If the revalidation of one of the Settlement Instructions and their linked T2S generated realignment  
 19 Settlement Instruction fails, T2S processes an automatic cancellation of these Settlement Instructions;
  - 20 – If all matched Settlement Instructions are successfully revalidated, T2S checks if any CoSD applies.

1  
2 **TABLE 132 - RULE FOR COSD DETECTION AT REVALIDATION**

ALREADY DETECTED COSD	REVALIDATION RESULT	RESULTING PROCESS AT START OF DAY
No	Successful revalidation	New analysis of Conditional Settlement performed on matched Settlement Instructions.
No	Unsuccessful revalidation	Automatic cancellation of matched Settlement Instructions.
Yes	Successful revalidation	No new analysis of conditional settlement.
Yes	Unsuccessful revalidation	Automatic cancellation of the matched Settlement Instruction. If the related CoSD blocking is already set up, its decrease is handled later by the CSD and the NCB managing the accounts where resources are blocked after the agreement of all involved administering parties.

3 Realignment process / impact on Conditional Settlement

4 Following the realignment chain analysis on business Settlement Instructions, T2S checks the conditional  
5 settlement as follows:

- 6 | If CoSD was previously detected (i.e. CoSD flag set to "Yes"):
- 7 – If there is no change in the realignment chain, T2S does not re-analyse the conditional settlement;
- 8 – If there is a change in the realignment chain, T2S processes an automatic cancellation of all Settle-  
9 ment Instructions of the CoSD group (i.e. the business Settlement Instructions and the T2S generated  
10 realignment Settlement Instructions). The T2S Operator is informed about an existing CoSD blocking  
11 related to cancelled Settlement Instructions;
- 12 | If no CoSD was previously detected (i.e. CoSD flag set to "No"), T2S analyse the conditional settlement  
13 on the business and realignment Settlement Instructions.

14 When a conditional settlement applies on realignment Settlement Instruction, the CoSD blocking of the secu-  
15 rities to be delivered and/or the cash to be debited is done by T2S on the relevant account associated to the  
16 business Settlement Instruction.

17 Real-time closure period / impact on Conditional Settlement

18 During the real-time closure period, before triggering the automatic reimbursement of any pending intraday  
19 credit provided by central bank, T2S releases all unused cash restrictions (See section [End of Day Cash Man-  
20 agement](#) [▶ 655]). This process includes the release of cash blocked through CoSD blocking on cash balance  
21 (See section Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS).

22 To that purpose, a new T2S generated end of day cash release Settlement Restriction is created for each  
23 CoSD blocking on cash balance. It transfers the amount back to the deliverable cash balance as a decrease  
24 of the restriction reference created during CoSD activation:

1

T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	CoSD blocking restriction type configured by the T2S Operator	Deliverable restriction type configured by the T2S Operator	Remaining amount in the restriction reference	Restriction reference generated at the CoSD activation step to be decreased

2 This new T2S generated end of day cash release Settlement Restriction is settled in the current settlement  
 3 day. This settlement results in the update of the settlement status for the related Settlement Instruction on  
 4 which a CoSD rule applies. The reason code "CoSD release awaiting from Administering Party" is removed. It  
 5 avoids any CoSD release until the Settlement Restriction increasing again the cash CoSD blocking (see be-  
 6 low) is settled.

7 Simultaneously, a new T2S generated CoSD blocking regeneration Settlement Restriction is created, for each  
 8 CoSD blocking cash balance released, in order to transfer this amount back to the CoSD blocking cash at the  
 9 next settlement day:

10

T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
T2S dedicated cash account debited for the settlement of the receiving Settlement Instruction	Deliverable restriction type configured by the T2S Operator	CoSD blocking restriction type configured by the T2S Operator	Released amount during the end of day process	Restriction reference generated at the CoSD activation step to be increased

11 This new T2S generated CoSD blocking regeneration Settlement Restriction is processed in the next settle-  
 12 ment day, during sequence 0 (i.e. simultaneously to the first incoming liquidity transfers on the considered  
 13 cash balance), using incoming cash on the considered T2S Dedicated cash account. In case of insufficient  
 14 cash for the settlement, the T2S generated CoSD blocking regeneration Settlement Restriction is recycled  
 15 until settlement occurs.

16 The settlement of the T2S generated CoSD blocking regeneration Settlement Restriction results in the up-  
 17 date of the settlement status for the related Settlement Instruction on which a CoSD rule applies. The rea-  
 18 son code is updated to "CoSD release awaiting from Administering Party". It allows again the CoSD release  
 19 by the administering party.

20 End of day period/ impact on Conditional Settlement

21 If at the end of the day, the administering party(ies) has/(have) not sent any release instruction mainte-  
 22 nance or instruction cancellation, the Settlement Instructions identified as CoSD are recycled for the next  
 23 settlement day based on the recycling period for pending matched Settlement Instructions (See section [In-  
 24 structions Recycling](#) [▶ 375]).

25 Validity of T2S generated CoSD blocking Settlement Restrictions

1 Once generated, the T2S CoSD blocking Settlement Restrictions (and Settlement Instructions in case of  
2 CoSD applying on a use of restriction), are subject to other T2S processes as any other Settlement Instruc-  
3 tion. Furthermore in order to ensure the consistency of the conditional settlement process, the following  
4 principles are implemented:

- 5 | Validation: T2S does not create T2S generated CoSD blocking Settlement Restrictions if at least one of  
6 them does not successfully pass the business validations. When T2S cannot generate a CoSD Settlement  
7 Restriction, T2S cancels its underlying business Settlement Instructions.
- 8 | Revalidation: T2S revalidates generated CoSD blocking Settlement Restrictions when they are recycled or  
9 impacted by a static data update and hence, may cancel them (See section [Revalidation process](#)  
10 [[▶ 342](#)]). When T2S cancels a CoSD Settlement Restriction, T2S cancels the group of CoSD Settlement  
11 Restriction and their underlying business Settlement Instructions.
- 12 | Intraday Restriction: T2S does not attempt settlement of CoSD blocking Settlement Restrictions which  
13 are subject to Intraday Restriction (See section [Eligibility check process](#) [[▶ 383](#)]). As a consequence, the  
14 underlying business Settlement Instructions remain unsettled as long as the required resources are not  
15 blocked.
- 16 | Cancellation or amendment: Once generated, the T2S generated CoSD blocking Settlement Restrictions,  
17 cannot be cancelled or amended by any of the involved T2S Actors. The T2S Actors can only cancel the  
18 underlying business Settlement Instruction. In such case, if the generated CoSD blocking Settlement Re-  
19 striction is not yet settled, T2S cancels it.

20 Conditional Settlement examples

21 **EXAMPLE 156 - CoSD RULES SET UP**

22 A CSD A defines the following CoSD rule sets:  
23

COSD RULE SET	COSD RULE SET VALIDITY DATE	ADMIN PARTY	PROCESSING CONDITION	COSD RULE	COSD PROCESSING	COSD RULE PARAMETER		
						SEC. MVT TYPE	SETT. CURRENCY	PLACE OF SETTLEMENT
RS_1	01/01/14	AP J	Securities	R_01	Yes	DELI	JPY	CSD B
RS_2	01/01/14	AP B	Cash	R_02	Yes	-	GBP	CSD B

24 For the CoSD rule set "RS\_1", valid as from January 1st 2014, the following CoSD rules apply:

- 25 | "R\_01": any Settlement Instruction involving a JPY settlement currency, with a securities movement  
26 code "Deliver" and a counterparty in the CSD B is subject to conditional settlement;
- 27 | The blocking process is defined as securities blocking;
- 28 | The administering party is AP J;

29 For the CoSD rule set "RS\_2", valid as from January 1st 2014, the following CoSD rules apply:

- 30 | "R\_02": any Settlement Instruction with a GBP settlement currency and in CSD B is subject to conditional  
31 settlement;

1 | The blocking process is defined as cash blocking;

2 | The administering party is AP B.

3 CSD B has not configured any CoSD rules set.

4 **EXAMPLE 157 - CoSD ACTIVATION**

5 At their Intended Settlement Date, the conditional settlement application process relies on CoSD rules to  
6 identify if a conditional settlement applies on SI1 & SI2.  
7

OPE. ID	INSTR. PARTY	CSD	SEC. ACC.	ISIN CODE	SEC. MVT TYPE	QTY	RECEIVING SETTLEMENT PARTIES		DELIVERING SETTLEMENT PARTIES		T2S DCA	CUR.	CRED DEB INDIC.	AMOUNT
							DEP.	PARTY	DEP.	PARTY				
							SI1	IP1	CSD A	SA1				
SI2	IP2	CSD B	SA2		RECE	60			CSD A	IP1	DCA2		DBIT	5,000.00

8 Instructed by a CSD participant of CSD A, the Settlement Instruction SI1 is checked against the CoSD Rule  
9 set "RS\_1" then "RS\_2".

10 For RS\_1:

11 | The CoSD rule "R\_01" of "RS\_1" applies on Settlement Instruction SI1 due to the fact that:

12 – The securities movement type is equal to "DELI";

13 – The counterparty is in the CSD B;

14 – The settlement currency is "JPY". .

15 For RS\_2:

16 | The CoSD rule "R\_02" of "RS\_2" does not apply on the Settlement Instructions.

17 Since CSD B has not configured any CoSD rules set, Settlement Instruction2 is not checked.

18 As a result the CoSD activation:

19 | Creates T2S generated CoSD hold instruction maintenance IM1 that holds SI1 with a CoSD hold status  
20 set to "Yes", sets the CoSD flag to "Yes" , links SI1 with the CoSD rule "R\_01";

21 | Updates SI2 with a CoSD flag set to "Yes";

22 | Creates and settles the T2S generated CoSD blocking Settlement Restriction SR1 to block the 60 shares  
23 on the CoSD blocking securities position of securities account SA1 and generates a new restriction refer-  
24 ence RRF11111;

25 | When SR1 is settled:

26 – The restriction reference RRF11111 is associated to the Settlement Instruction SI1;

27 – The reason code of the Settlement Instruction SI1 on which apply the CoSD rule is set to "CoSD re-  
28 lease awaiting from Administering Party";

29 | Informs the T2S Actors with the relevant messages.

1 SI1 remains on hold until the external condition is externally fulfilled, i.e. until the release from administering  
2 party AP J.

3 **EXAMPLE 158 - CoSD RELEASE**

4 When the external settlement condition is fulfilled outside T2S, the administering party AP J releases each  
5 Settlement Instruction previously held, with a release maintenance instruction IR1 for releasing Settlement  
6 Instruction SI1. T2S validates and accepts IR1.

7 As no more instruction release is needed, the CoSD release:

- 8 | Executes IR1 which releases SI1 with a CoSD hold status set to "No";
- 9 | Submits the matched Settlement Instructions to the Posting application process;
- 10 | Informs the T2S Actors with the relevant messages.

11 During the settlement attempt, the posting application process:

- 12 | Creates a T2S generated use Settlement Restriction SR2 to unblock the 60 shares by using the re-  
13 striction reference RRF11111 generated during CoSD activation;
- 14 | Settles SI1 and SI2 and the T2S generated use Settlement Restriction SR2;
- 15 | Informs the T2S Actors with the relevant messages.

16 **EXAMPLE 159 - CoSD CANCELLATION**

17 Should AP J intend to cancel the Settlement Instruction SI1 previously held, it sends an instruction cancella-  
18 tion IC1 for cancelling Settlement Instruction SI1. T2S validates and accepts IC1.

19 CSD B sends an instruction cancellation IC2 for cancelling Settlement Instruction SI2. T2S validates and  
20 accepts IC2.

21 When all Cancellation Instructions are received, the CoSD cancellation:

- 22 | Executes IC1 and IC2 which cancel Settlement Instructions SI1 and SI2;
- 23 | Creates T2S generated Settlement Restriction to release the existing CoSD blocking related to the can-  
24 celled Settlement Instructions.

25 T2S Actors are informed with the relevant messages.

26 **1.6.1.12.4 Parameter Synthesis**

27 The following parameters are specified by each CSD.  
28

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DE-FAULT VALUE
Conditional Settlement	CoSD rule set	CSD	CSD	Optional	N/A	N/A
Conditional Settlement	CoSD rules	CSD	CSD	Optional	N/A	N/A

## 1 1.6.1.13 Securities Blocking/Reservation/Earmarking

### 2 **1.6.1.13.1 Concept**

3 Blocking, reservation, and earmarking on securities, allow a T2S Actor or a T2S operator, to move securities  
4 into a specific securities position of a Securities Account, and make them available for a specific purpose  
5 (e.g. blocked securities for Conditional Securities Delivery, earmarked securities for auto-collateralisation,  
6 blocked securities for a pledge sub procedure for central bank collateralisation, reserved/blocked securities  
7 for a dedicated aim with the use of a restriction reference in the Settlement Instruction, etc...).

8 Blocking, reservation, earmarking are referred together as restriction processing. Their settlement processes  
9 differ for the set up of a new restricted securities position, the increase or decrease of securities in an exist-  
10 ing restricted securities position and the way to use the restricted securities for a securities settlement.

11 A T2S Actor instructs T2S:

- 12 | With a Settlement Restriction (See section Send Settlement Restriction on Securities Position) to set-up,  
13 increase, and decrease a blocking and reservation;
- 14 | With a Settlement Restriction (See section Send Settlement Restriction on Securities Position) or a Set-  
15 tlement Instruction (See section Send Settlement Instruction) to set-up, increase, and decrease an ear-  
16 marking;
- 17 | With a Settlement Instruction (See section Send Settlement Instruction) to use a blocking, reservation or  
18 earmarking.

### 19 **1.6.1.13.2 Overview**

#### 20 Main features of restricted securities position

##### 21 Identification of a securities position

22 The settlement in T2S leads to move securities from a securities position to another securities position.

23 In a way to identify the securities positions to update, T2S uses the combination of the following identifiers:

- 24 | The Securities Account Id;
- 25 | The ISIN;
- 26 | The restriction type Id.

27 T2S retrieves these identifiers from the Settlement Instruction or Settlement Restriction that are submitted  
28 to settlement, for securities account, ISIN and restriction type that have been configured in static data (See  
29 section [Restriction types](#) [► 45]).

30 The following diagram illustrates the reference Id used by T2S for the identification of a securities position.

1

**DIAGRAM 135 - REFERENCE ID USED FOR THE IDENTIFICATION OF A SECURITIES POSITION**

2

**3 Actions applicable on restricted securities positions**

4 A T2S Actor can perform <sup>287</sup> the following actions on blocked, reserved or earmarked securities positions:

- 5 | Set-up: action to create (i) a new restricted securities position (and a new restriction reference for block-
- 6 | ing and reservation) or (ii) only a new restriction reference when the restricted securities position for
- 7 | blocking and reservation already exists;
- 8 | For the case of earmarked securities positions, there is no management of restriction reference.
- 9 | Increase: action to restrict additional quantity of securities in an existing blocking, reservation or ear-
- 10 | marking;
- 11 | Decrease: action to free quantity of securities held in an existing blocking, reservation or earmarking;
- 12 | Use: action to use restricted securities for the settlement of a delivering Settlement Instruction.

13 The set-up, increase and decrease are instructed only with a Settlement Restriction for blocking and reserva-

14 tion (See section 2.4 "Send Settlement Restriction on Securities Position") and also with Settlement Instruc-

15 tion (See section Send Settlement Instruction) for earmarking.

16 The use is instructed with a Settlement Instruction (See section Send Settlement Instruction) mentioning the

17 restriction reference except in case of earmarking where the restriction type Id is sufficient.

18 If after a decrease or a use, the restricted securities position becomes equal to zero, this restricted securities

19 position and its restriction reference are not deleted.

**20 Main features of blocking, reservation, earmarking**

21 The settlement process applicable, whether it is a blocking, reservation or earmarking, varies with the fol-

22 lowing main features:

- 23 | Blocking and reservation:

---

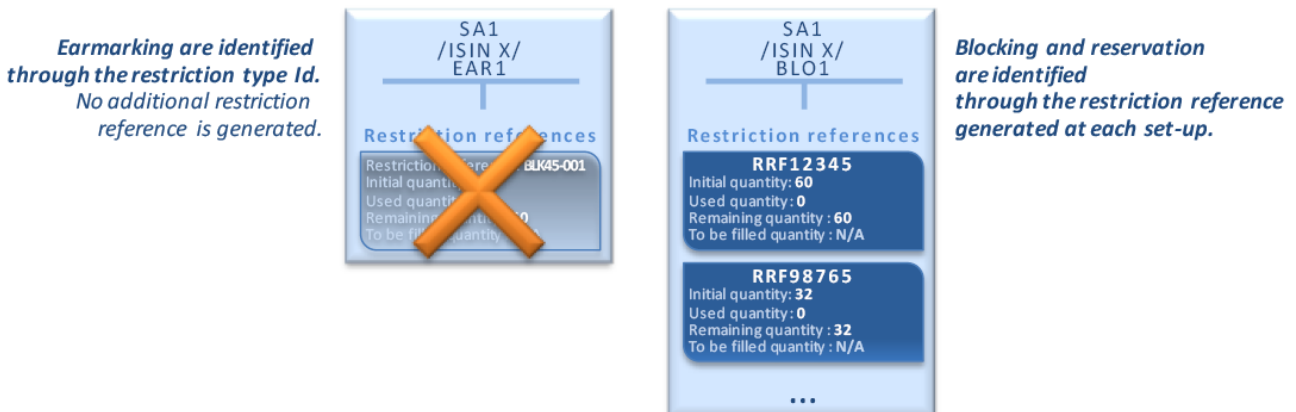

287 Provided he has the privileges to instruct the requested settlement instructions/settlement restrictions (see section [Privilege](#) [ 146])

- 1 – Are identified through restriction references generated by T2S at each set up;
- 2 – Are set up, increased or decreased only through Settlement Restrictions;
- 3 – Are used by specifying the generated restrictions reference(s) in one or several Settlement Instruc-
- 4 tions;
- 5 – Have different settlement processes in case of partial settlement (See section [Partial Settlement](#)
- 6 [▶ 421]):
- 7
  - It is not possible to block more securities than the ones available. The Settlement Restriction is
  - 8 not partially settled and is recycled waiting incoming securities;
  - 9
    - It is possible to reserve more securities than the ones available. The Settlement Restriction is par-
    - 10 tially settled, and all securities received further on, are automatically pre-empted until the quantity
    - 11 of the reservation is filled.
- 12 | Earmarking:
- 13 – Is identified through its restriction type Id without additional restriction reference (i.e. there is no seg-
- 14regation by restriction reference in an earmarked securities position);
- 15 – Is set up, increased or decreased through Settlement Restrictions or Settlement Instructions;
- 16 – Is used by specifying the corresponding restriction type in Settlement Instructions as the impacted de-
- 17livering securities position;
- 18 – Has different settlement processes in case of partial settlement according to the type of the underly-
- 19ing instruction:
- 20
  - An earmarking, relying on a Settlement Restriction, is partially settled without additional comple-
  - 21ment;
  - 22
    - An earmarking, relying on a Settlement Instruction, is submitted to all the rules applicable to par-
    - 23 tial settlement, as for any other Settlement Instruction.

24 The following diagram illustrates the identification and main features of securities blocking, reservation or  
25 earmarking in T2S.

26 **DIAGRAM 136 - IDENTIFICATION OF SECURITIES RESTRICTIONS IN T2S**

Identification of securities restrictions in T2S

27

1 Configuration of restricted securities positions

2 Configuration of restriction types

3 The restriction type allows identifying the impacted securities position with the combination: Securities Account Id/ISIN/restriction type Id.

5 It must be configured in the static data prior the set-up of any blocking, reservation or earmarking on a securities position.

7 The restriction type is configured by:

- 8 | The T2S Operator when the purpose applies to every T2S Party whatever their CSD;
- 9 | A CSD when the purpose applies only to the T2S Parties of this CSD and their securities positions;

10 Data used to configure the restriction types are the following among the restriction type attributes, as described in the table below.

12 **TABLE 133 - DATA USED TO CONFIGURE SECURITIES RESTRICTION TYPES**

ATTRIBUTE	DESCRIPTION	DATA CONFIGURED BY T2S ACTOR	DATA CONFIGURED BY T2S OPERATOR ONLY
Restriction type Id	Code for the identification of the restriction type.	For example: "BLOd" for blocking "RESd" for reservation "EARd" for earmarking d: reference number from 1 to 9 Codes provided only for illustration. When configuring restriction types T2S Actors are free to use other codes.	For example: "AWAS": for deliverable securities position "COSP": for securities position to block for conditional delivery "COLL": for securities position receiving collateralised securities following an auto-collateralisation "Eeee" for earmarking for auto-collateralisation eee: currency (XXX if available for all currencies)
Restriction description	Description of the restriction purpose.	RT for blocking RT for reservation RT for earmarking	RT for deliverable securities position RT for conditional settlement RT for collateralised securities position RT for earmarking for auto-collateralisation
Object restriction type	Object type on which the restriction type applies.	"Securities Position"	"Securities Position"

ATTRIBUTE	DESCRIPTION	DATA CONFIGURED BY T2S ACTOR	DATA CONFIGURED BY T2S OPERATOR ONLY
Restriction Processing Type	Processing type in T2S applicable to the restriction type.	"Blocking" "Reservation" "Earmarking"	"Deliverable" "CoSD Blocking" "Collateralised" "Earmarking for auto-collateralisation"
Valid from	Date from which the restriction type can be set up in a Securities Account.	All admitted value in compliance with attribute description.	Unlimited
Valid To	Date to which the restriction type can be set up in a Securities Account.	All admitted value in compliance with attribute description.	unlimited

1 It has to be noted that the process applicable on Settlement Restrictions, under the restriction processing  
2 type "Earmarking" and "Earmarking for auto-collateralisation", are the one detailed for "Earmarking" in the  
3 following description.

4 These two restriction processing types only differ for the auto-collateralisation process, which selects only  
5 the securities that are earmarked under a restriction processing type "Earmarking for auto-collateralisation".

6 Last, the restriction processing type "CoSD Blocking" and "Collateralised" are handled by the system only.  
7 Therefore they are not subject to a description of their management by the T2S Actor in the following de-  
8 scription.

#### 9 Configuration of securities position

10 Once the Securities Account (See section [Securities accounts](#) [▶ 99]), the ISIN (See section [Set up of securi-](#)  
11 [ties in T2S](#) [▶ 76]) and the restriction type (See section [Restriction types](#) [▶ 45]) are configured in the static  
12 data, the T2S Actor has to create securities position for the related Securities Account, ISIN and restriction  
13 type under the conditions below.

14 Only the securities position debited in a Settlement Instruction or Settlement Restriction need to exist prior  
15 to their settlement. This includes the securities position for the restriction type corresponding to the deliver-  
16 able securities position.

17 The securities position to be credited, if they do not exist yet, are automatically created by T2S during the  
18 settlement process, with the relevant Securities Account, ISIN and restriction type.

19 Since securities are segregated by restriction type, several securities position related to the same restriction  
20 processing can exist for a Securities Account and a security (several blocking, several reservations, several  
21 earmarking) but each of them having a different restriction type Id.

22 The following diagram illustrates the configuration of securities positions used for blocking, reservation,  
23 earmarking by the users.

1 **DIAGRAM 137 - POSSIBLE SECURITIES POSITION CONFIGURATION FOR A SECURITIES ACCOUNT AND SECURITY**

2

3 **Earmarking at Securities Account level**

4 In order to simplify the way to instruct its Securities Account, a T2S Actor can earmark a Securities Account  
5 at the Securities Account level. In this case the Securities Account is set with a restriction type applying on a  
6 securities position as object restriction type allowing the identification of the Securities Position impacted by  
7 the posting application process (see section [Restriction types](#) [▶ 45]).

8 Earmarking a Securities Account results in a specific interpretation of the restriction type Id referred in the  
9 Settlement Instruction or Settlement Restriction that settle on this Securities Account:

- 10 | If the indicated restriction type Id relates to a restriction processing "Deliverable", "Earmarking" or "Ear-  
11 marking for auto-collateralisation": T2S overrides the indicated value, using instead the restriction type  
12 Id for earmarking set at the level of the Securities Account;
- 13 – With the exception, that no overriding takes place in:
- 14 ▪ Settlement Restrictions when one of the restriction type Ids relates to that used at the level of the  
15 Securities Account;
  - 16 ▪ Settlement Instructions, with the same delivering and receiving Securities Accounts and the same  
17 party, when the impacted balance(s) relates to that used at the level of the Securities Account;
- 18 | If the indicated restriction type Id relates to a restriction processing "Blocking" or "Reservation", the indi-  
19 cated value is not overridden.
- 20 | Creation, update and deletion are taken into account on the next business day (See Reference Data Ob-  
21 jects with Limited Validity Period).

22 This interpretation apart, the Settlement Restrictions or Settlement Instructions are processed the same way  
23 as for any other restriction on securities position.

24 Last, if a Securities Account is earmarked with one given earmarking restriction type, all pre-existing Securi-  
25 ties Positions related to other restriction type (deliverable or any other earmarking) cannot be used anymore  
26 once the Securities Account is earmarked, unless using Settlement Restrictions or Settlement Instructions  
27 under the exceptions raised above.

28 Nonetheless the holdings of such Securities Positions should be moved to the relevant earmarked Securities  
29 Position before the set-up of the earmarking at Securities Account level, should it be performed by any other  
30 means than the use of Settlement Restrictions or Settlement Instructions under the exceptions raised above.

31 The tables below provide concrete examples of possible business cases:

1  
2

**TABLE 134 - EXAMPLES OF SETTLEMENT RESTRICTIONS WITH EARMARKING AT SECURITIES ACCOUNT LEVEL**

Earmarking at securities account level	Balance From	Balance To	Actual Settlement	Balances not overridden (due to exception)

- 1 Pending instructions settle on the restriction type applicable (as found in the instruction or the one resulting
- 2 from an earmarking at account level) at the start of day, as is the case for incoming instructions. Pending
- 3 partial settlements and released settled instructions will adhere to this same principal settling on the re-
- 4 striction type identified as of the start of day, as is the case for incoming instructions.
- 5 The following diagram illustrates the configurations of securities positions allowed for an earmarked Securi-
- 6 ties Account versus a Securities Account which is not earmarked.

1 **DIAGRAM 138 - POSSIBLE SECURITIES POSITIONS CONFIGURATION FOR AN EARMARKED SECURITIES ACCOUNT**

2

3 **1.6.1.13.3 Securities blocking process**

4 This section details the actions a T2S Actor can perform with a blocking:

- 5 | Set-up a new restriction reference in a blocked securities position;
- 6 | Increase an existing restriction reference in a blocked securities position;
- 7 | Decrease an existing restriction reference in a blocked securities position;
- 8 | Use an existing restriction reference in a blocked securities position:
  - 9 – With ability to complement from the deliverable or earmarked securities position;
  - 10 – Without ability to complement.

11 Set-up a new restriction reference in a blocked securities position

12 Process

13 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position) with the following information in order to set-up a new restriction reference in a blocked securities position:

15

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.
Balance To	Restriction type Id of the securities position where the securities are received.
Settlement Quantity	Quantity to block.

16 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

17

1

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable" or "earmarking" (i.e. its restriction processing cannot be "reservation" or "blocked": it is not allowed to block securities from a reserved or blocked position).</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is referenced in the Static Data by the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
Posting		<p>If a securities position, referred in the Balance From, does not exist, T2S considers the holding equal to zero.</p>
		<p>If a securities position, referred in the Balance To, does not exist, T2S creates the securities position.</p>
		<p>If the holding of the securities position referred in the Balance From is not sufficient to fully settle the Settlement Restriction, the Settlement Restriction is unsettled until its recycling after the booking of the necessary incoming securities</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p>
		<p>When the Settlement Restriction is booked, T2S updates the involved securities positions and generates a new restriction reference.</p>
		<p>T2S sends the restriction reference, created for the new blocking, in the settlement confirmation of the Settlement Restriction.</p>

2 This process is illustrated by the example below.

1 **EXAMPLE 160 - SET-UP OF A NEW SECURITIES BLOCKING**

2 To set-up a new blocking, a T2S Actor sends to T2S the following Settlement Restriction SR1:

3

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	SETTLEMENT QUANTITY
SR1	SA1	ISIN X	AWAS	BLO1	60

4 If the availability of the securities position associated to the balance from allows a full settlement, T2S set-  
5 tles the Settlement Restriction SR1, with the following updates on the involved securities positions and quan-  
6 tities of the restriction references related to the blocking:

**Full Settlement**

-i.e. securities position identified as Balance From holding (100) >= settlement quantity (60)-

7

8 T2S generates a new restriction reference (RRF12345) in the blocked securities position and sends it back to  
9 the T2S Actor in the settlement confirmation (See section Send Settlement Restriction on Securities Posi-  
10 tion). T2S Actors shall mention this reference –available through the ad-hoc securities restriction detail  
11 screen - for future increase, decrease or use.

12 If the availability of the securities position associated to the balance from does not allow full settlement, the  
13 Settlement Restriction SR1 is unsettled until its recycling using incoming resources.

14 Increase an existing restriction reference in a blocked securities position

15 Process

16 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
17 with the following information in order to increase an existing restriction reference in a blocked securities  
18 position:

19

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.

INFORMATION	DESCRIPTION
Balance To	Restriction type Id of the securities position to which the securities are received and restricted.
Settlement Quantity	Quantity to block.
Restriction Reference	Restriction reference to increase in the blocked securities position.

1 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):  
 2  
 3

PROCESS	INFORMATION	RULES
Business Validation	Balance From	The restriction type Id indicated in the Balance From: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to “deliverable” or “earmarking” (i.e. its restriction processing cannot be “reservation” or “blocked”: it is not allowed to block securities from a reserved or blocked position).</li> </ul>
	Balance To	The restriction type Id indicated in the Balance To: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is referenced in the Static Data by the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
	Restriction reference	The indicated restriction reference exists in the securities position indicated as Balance To.
Posting		If the securities position referred in the Balance From does not exist, T2S considers the holding equal to zero.
		If the holding of the securities position referred in the Balance From is not sufficient to fully settle the Settlement Restriction, the Settlement Restriction is unsettled until its recycling after the booking of the necessary incoming securities
		If the Settlement Restriction is linked to Settlement Instruction(s), the

PROCESS	INFORMATION	RULES
		Settlement Restriction can settle only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).
		When the Settlement Restriction is booked, T2S updates the involved securities positions and quantities of the restriction reference.

1 This process is illustrated by the example below.

2 **EXAMPLE 161 - INCREASE OF AN EXISTING SECURITIES BLOCKING**

3 To increase an existing blocking, a T2S Actor sends to T2S a Settlement Restriction SR2 with the following  
4 information:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
SR2	SA1	ISIN X	AWAS	BLO1	30	RRF12345

6 If the availability of the securities position associated to the balance from allows a full settlement, T2S set-  
7 tles the Settlement Restriction SR2 with the following updates on the involved securities positions and quan-  
8 tities of the restriction references related to the blocking:

**Full Settlement**

-i.e. securities position identified as Balance From holding (100) >= settlement quantity (30)-

9

10 If the availability of the securities position associated to the balance from does not allow full settlement, the  
11 Settlement Restriction SR2 is unsettled until its recycling using additional incoming resources.

12 Decrease an existing restriction reference in a blocked securities position

13 Process

14 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
15 with the following information in order to decrease an existing restriction reference in a blocked securities  
16 position:

1

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.
Balance To	Restriction type Id of the securities position to which the securities are received.
Settlement Quantity	Quantity to decrease.
Restriction Reference	Restriction reference to decrease in the blocked securities position.

2 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

3  
4

PROCESS	INFORMATION	RULES
Business Validation	Balance From	The restriction type Id indicated in the Balance From: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
	Balance To	The restriction type Id indicated in the Balance To: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable" or "earmarking" (i.e. its restriction processing cannot be "reservation" or "blocked": it is not allowed to remove blocked securities into another reserved or blocked position).</li> </ul>
	Restriction reference	The restriction reference indicated exists in the securities position indicated as Balance From.

PROCESS	INFORMATION	RULES
Posting		If the remaining quantity of the restriction reference is not sufficient to fully settle the Settlement Restriction, the Settlement Restriction is unsettled until its recycling after the booking of the necessary incoming securities.
		If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).
		When the Settlement Restriction is booked, T2S updates the involved securities positions and quantities of the restriction reference (not deleted when the remaining quantity following the booking is equal to zero).

1 This process is illustrated by the example below.

2 **EXAMPLE 162 - DECREASE OF AN EXISTING SECURITIES BLOCKING**

3 To decrease an existing blocking, a T2S Actor sends to T2S a Settlement Restriction SR3 with the following  
4 information:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
SR3	SA1	ISIN X	BLO1	AWAS	50	RRF12345

6 If the remaining quantity in the restriction reference allows a full settlement, T2S settles the Settlement  
7 Restriction SR3 with the following updates on the involved securities positions and quantities of the re-  
8 striction references related to the blocking:

-i.e. remaining quantity in the restriction reference (90) >= settlement quantity (50)-

9  
10 If the remaining quantity in the restriction reference does not allow a full settlement, the Settlement Re-  
11 striction is unsettled until its recycling after the booking of the necessary incoming securities.

12 Use of blocked securities position without possibility to complement with other securities position

1 Process (direct debit)

2 A T2S Actor can use one or several restriction reference(s) in a blocked securities position for the settlement  
3 of a Settlement Instruction, excluding the ability to complement the requested quantity with the one of other  
4 securities position.

5 In this case the impacted balance indicates only the blocked securities position and all the restriction refer-  
6 ences mentioned have to belong to this single blocked securities position.

7 The T2S Actor sends a Settlement Instruction containing the following information:  
8

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of the impacted securities position.
Security	ISIN of the impacted securities positions.
Impacted Balance	Restriction type Id of the blocked securities position where the restriction refer- ence(s) are attached
Settlement Quantity	Quantity to deliver.
Securities Movement Type	Movement of the Settlement Instruction set to "Delivering"
Restriction Reference(s)	Restriction reference(s) to be used to settle the Settlement Instruction.

9 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business](#)  
10 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):  
11

PROCESS	INFORMATION	RULES
Business Validation	Impacted Balance	The restriction type Id indicated in the Impacted Balance: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Re- striction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
	Restriction reference	All the indicated restriction reference(s) exist in the blocked securities position referred with the Securities Account Id/ISIN/restriction type Id indicated as Impacted Balance.
Posting		For the provision check, T2S considers: <ul style="list-style-type: none"> <li>  The sum of the remaining quantity of all the restriction reference(s) indicated in the Settlement Instruction;</li> <li>  Excluding any other restriction reference(s) even if they are part of the same blocked securities position.</li> </ul>

PROCESS	INFORMATION	RULES
		<p>The provision check fails, if the calculated sum is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [▶ 381]).</p> <p>The settlement status of the Settlement Instruction is set to "Unsettled".</p> <p>The provision check is successful, if the calculated sum is sufficient to fully settle or to partially settle (if applicable) the Settlement Instruction.</p> <p>The settlement status of the Settlement Instruction is set to "Settled" or "Partially Settled" (the remaining quantity being then subject to further settlement attempt as for any settlement instruction- see <a href="#">Partial Settlement</a> [▶ 421]).</p> <p>In case of successful provision check, T2S updates the involved securities positions and the quantities of the restriction reference(s) used.</p> <p>In case several restriction references are used, their quantities are updated according to the order they are mentioned in the Settlement Instruction.</p>

1 This process is illustrated by the example below.

2 **EXAMPLE 163 - USE OF A BLOCKED SECURITIES POSITION NOT COMPLEMENTED BY ANOTHER SECURITIES POSITION**

3 To deliver securities using existing blocking references, without complement from other securities positions a  
 4 T2S Actor sends to T2S a Settlement Instruction SI1 which is matched with the counterpart's Settlement  
 5 Instruction SI2:  
 6

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC. MVT TYPE	QTY	RESTRICTION REFERENCE(S)
SI1	SA1	ISIN X	BLO1	DELI	50	RRF12345; RRF99999
SI2	SA5		AWAS	RECE	50	N/A

7 T2S performs the provision check considering only the remaining quantity of the indicated restriction refer-  
 8 ence(s) with the possible following results:

- 9 | A failure when the sum of the remaining quantity of all indicated restriction references is not sufficient to  
 10 settle the Settlement Instruction (and partial settlement is not allowed). No update of securities position  
 11 or quantities of the restriction reference is performed and the settlement status of the Settlement In-  
 12 struction is set to "Unsettled":

**Case A – Failed provision-check**

-i.e. sum of remaining quantity in the restriction references (25) < settlement quantity (50)-

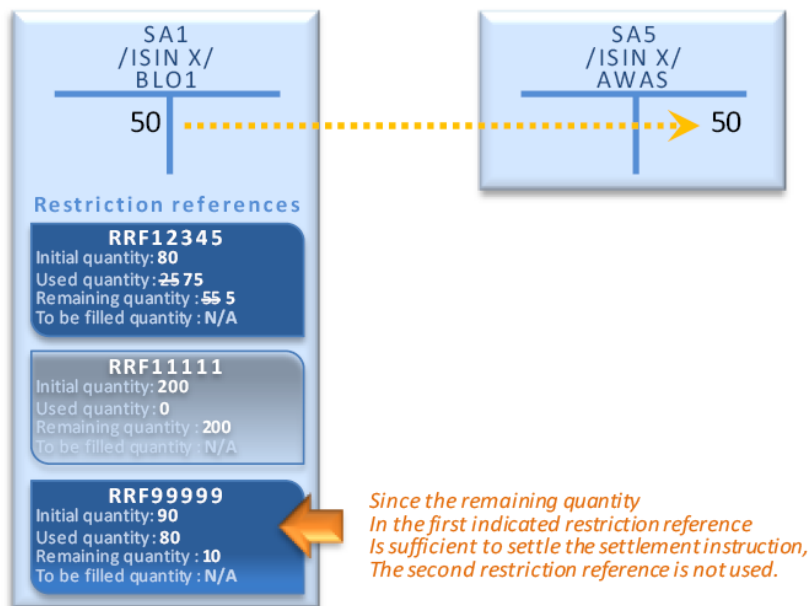

1

- 2 | A success when the sum of the remaining quantity of all indicated restriction references is sufficient to
- 3 | (partially) settle the Settlement Instruction:

**Case B – Successful provision-check**

-i.e. sum of remaining quantity in the restriction references (65) > settlement quantity (50)-

4

5 Informing the instructing party:

6 The settlement confirmation of the settlement instructions using restriction references does not provide the

7 references which are effectively used. In the case of direct debit, the T2S Actor identifies the references that

8 have been used with a query on the securities postings. In the above example, the instructing party of SI1

9 receives a settlement confirmation which does not inform that only the reference RRF12345 has been used.

10 The T2S Actor identifies the references that have been used with a query on the postings associated to the

11 position of securities account SA1 for ISIN X and restriction type BLO1.

12 Use of blocked securities position complemented with deliverable or earmarked position

1 Process (indirect debit)

2 A T2S Actor can use one or several restriction reference(s) for the settlement of a Settlement Instruction,  
3 with a possibility to complement from another securities position, if the remaining quantities of those re-  
4 striction references are not sufficient.

5 In this case, all restriction references can belong to several blocked securities positions, and the securities  
6 position used for the complement has to be the deliverable securities position or an earmarked securities  
7 position. The securities position used for the complement is referred in the Impacted Balance as described in  
8 the table below.

9 The T2S Actor sends a Settlement Instruction (See section Send Settlement Instruction) containing the fol-  
10 lowing information:  
11

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of the impacted securities position.
Security	ISIN of the impacted securities positions.
Impacted Balance	Restriction type Id of the securities position from which the securities are delivered. If not specified, the deliverable securities position is taken by default (or an earmarked securities position in an earmarked securities account).
Settlement Quantity	Quantity to deliver.
Securities Movement Type	Movement of the Settlement Instruction set to "Delivering"
Restriction Reference(s)	Restriction reference(s) to be used to settle the Settlement Instruction.

12 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business](#)  
13 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):  
14

PROCESS	INFORMATION	RULES
Business Validation	Impacted Balance	The restriction type Id indicated in the Impacted Balance: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable", "earmarking" or not specified.</li> </ul>
	Restriction reference	All the indicated restriction reference(s) exist in the securities position related to the same Securities Account Id/ISIN.
Posting		For the provision check, T2S considers:

PROCESS	INFORMATION	RULES
		<ul style="list-style-type: none"> <li data-bbox="683 353 1445 427">  The sum of the remaining quantity of all the restriction reference(s) indicated in the Settlement Instruction;</li> <li data-bbox="683 450 1445 524">  Complemented, if necessary, with the holding of the impacted securities position.</li> </ul> <p data-bbox="671 555 1422 674">The provision check fails if the calculated sum is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [▶ 381]).</p> <p data-bbox="671 696 1398 770">The settlement status of the Settlement Instruction is set to "Unsettled".</p> <p data-bbox="671 792 1406 911">The provision check is successful if the calculated sum is sufficient to fully settle or to partially settle (if applicable) the Settlement Instruction.</p> <p data-bbox="671 934 1414 1097">The settlement status of the Settlement Instruction is set to "Settled" or "Partially Settled" (the remaining quantity being then subject to further settlement attempt as for any settlement instruction- see section <a href="#">Partial Settlement</a> [▶ 421]).</p> <p data-bbox="671 1120 1445 1328">In case of successful provision check, T2S generates one additional Settlement Restriction per involved blocked securities position (i.e. involved with a remaining quantity not equal to zero), in a way to transfer the blocked securities to the securities position impacted by the Settlement Instruction (deliverable or earmarked).</p> <p data-bbox="671 1350 1445 1424">The unblocked quantity of securities is equal to the necessary securities for the settlement of the Settlement Instruction.</p> <p data-bbox="671 1447 1445 1568">The Settlement Restrictions generated by T2S to release the blocked securities are settled in T2S on an all-or-none basis with the Settlement Instruction.</p> <p data-bbox="671 1590 1430 1836">In case of successful provision check, T2S updates the involved securities positions and the quantities of the restriction reference(s) used (not deleted when the remaining quantity following the booking is equal to zero). In case of several used restriction references, their quantities are updated according to their indication order in the Settlement Instruction.</p>

- 1 Validity of Settlement Restrictions generated by T2S for the use of a blocked position
- 2 Once generated, the T2S Settlement Restrictions are subject to other T2S processes as any other Settlement Instruction. Furthermore in order to ensure the consistency of the process for the use of blocked position, the following principles are implemented:

- 1 | Validation: Settlement Instructions using blocked position on securities are validated in a way that the  
2 | Settlement Restriction(s) to be generated for the use are not rejected when they are created.
- 3 | Revalidation: The Settlement Restrictions generated for the use of a blocked position are generated only  
4 | if they can settle immediately. As a consequence, they are not subject to revalidation. (See section [Re-  
5 | validation process](#) [▶ 342])
- 6 | Intraday Restriction: T2S does not generate the Settlement Restriction for the use of a blocked position  
7 | if it would be subject to intraday restriction. Instead, T2S sets the underlying Settlement Instruction un-  
8 | der intraday restriction. Furthermore, once generated, the Settlement Restriction for the use of a re-  
9 | stricted position is immediately settled and hence, cannot be subject to intraday restriction. (See section  
10 | [Eligibility check process](#) [▶ 383]).
- 11 | Cancellation or amendment: Once generated, the T2S generated Settlement Restrictions are immediately  
12 | settled, so, they cannot be cancelled or amended by any of the involved T2S Actors.

13 | The use of blocked securities position complemented with deliverable or earmarked position is illustrated by  
14 | the example below.

15 | **EXAMPLE 164 - USE OF BLOCKED SECURITIES POSITIONS COMPLEMENTED WITH THE DELIVERABLE POSITION**

16 | To deliver a quantity of 50 shares of ISIN X using existing blocking restriction references and complementing  
17 | if needed with the availability in the deliverable securities position a T2S Actor sends to T2S a Settlement  
18 | Instruction SI3 which is matched with the counterpart's Settlement Instruction SI4:  
19 |

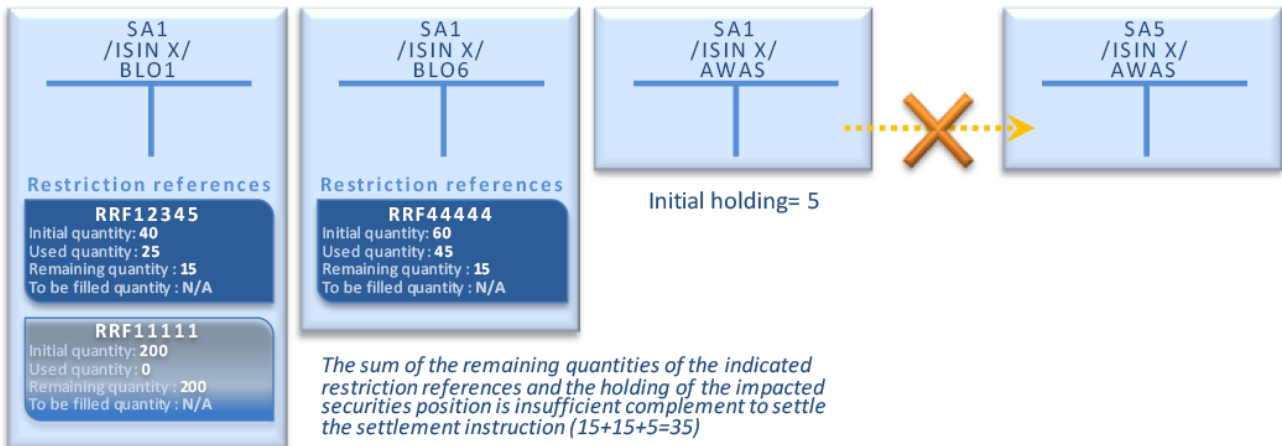

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC. MVT TYPE	QTY	RESTRICTION REFERENCE(S)
SI3	SA1	ISIN X		DELI	50	RRF12345; RRF44444
SI4	SA5			RECE	50	N/A

20 | T2S performs the provision check considering the remaining quantity of all indicated restriction references;  
21 | complemented if needed with the availability of the impacted securities position (i.e. AWAS by default since  
22 | Impacted Balance is not provided) with the possible following results:

- 23 | | A failure when the sum of the remaining quantity of all indicated restriction references, complemented if  
24 | needed with the availability of the impacted securities position, is not sufficient to settle the Settlement  
25 | Instruction (and partial settlement is not allowed). No update of securities position or quantities of the  
26 | restriction reference is performed and the settlement status of the Settlement Instruction is set to "Un-  
27 | settled":

**Case A – Failed provision-check**

-i.e. remaining quantities in the indicated restriction references (30) complemented with holding in the impacted securities position (5) < settlement quantity (50)-

1  
2  
3  
4  
5  
6  
7

A success when the sum of the remaining quantity of all indicated restriction references, complemented if needed with the availability of the impacted securities position, is sufficient to settle the Settlement Instruction.

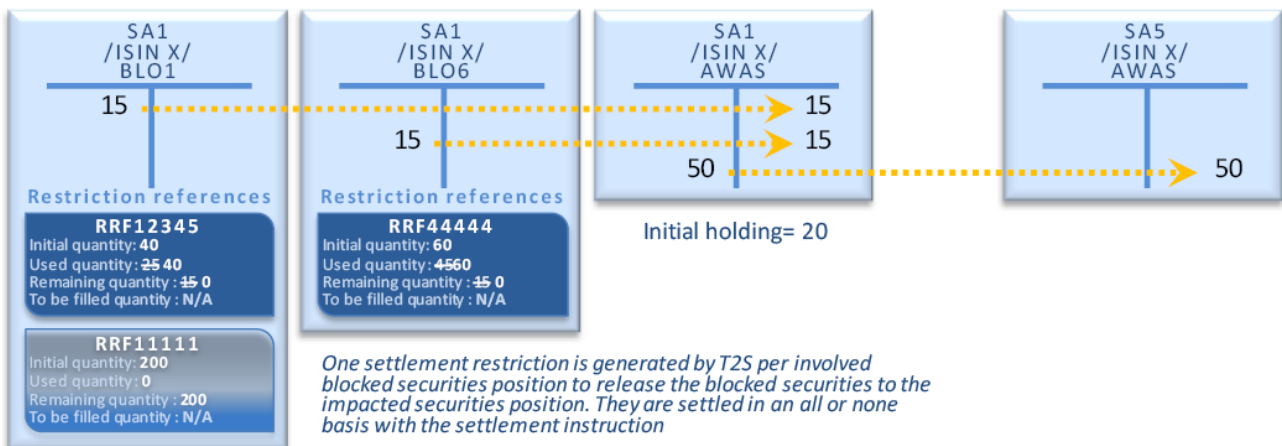

In case of success, T2S generates the Settlement Restrictions needed to rebalance the blocked securities used for the settlement to the impacted securities position:

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
T2SgSRa	SA1	ISIN X	BLO1	AWAS	15	RRF12345
T2SgSRb	SA1	ISIN X	BLO6	AWAS	15	RRF44444

The T2S generated Settlement Restriction T2SgSRa and T2SgSRb are then settled in an all-or-none basis with the Settlement Instruction:

**Case B – Successful provision-check**

-i.e. remaining quantities in the indicated restriction references (30) complemented with holding in the impacted securities position (20) >= settlement quantity (50)-

10  
11

Informing the instructing party:

1 The settlement confirmation of the settlement instruction using restriction references does not provide the  
2 restriction references that have been effectively used. In the case of an indirect debit, the instructing party is  
3 informed of these references through the intra position movement confirmation received for each T2S gen-  
4 erated settlement restriction.

5 In the above example, the instructing party of SI3 receives two intra position movement confirmations: one  
6 for the reference RRF12345 for restriction type BLO1 and one for the reference RRF44444 for the restriction  
7 type BLO6.

#### 8 **1.6.1.13.4 Securities reservation process**

9 This section details the actions a T2S Actor can perform with a reservation:

- 10 | Set-up a restriction reference in a reserved securities position;
- 11 | Increase an existing restriction reference in a reserved securities position;
- 12 | Decrease an existing restriction reference in a reserved securities position;
- 13 | Use of an existing restriction reference in a reserved securities position:
  - 14 – Without any possible complement from other securities position,
  - 15 – With complementary quantity allowed from the deliverable securities position or from an earmarked  
16 securities position.

17 The section then provides features of the pre-emption process that applies following the partial settlement of  
18 a reservation.

#### 19 Set-up a new restriction reference in a reserved securities position

##### 20 Process

21 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
22 with the following information in order to set-up a new restriction reference in a reserved securities position:  
23

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.
Balance To	Restriction type Id of the securities position to which the securities are received.
Settlement Quantity	Quantity to reserve.

24 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)  
25 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable" or "earmarking" (i.e. its restriction processing cannot be "reservation" or "blocked": it is not allowed to reserve securities from a reserved or blocked position).</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
Posting		<p>If a securities position, referred in the Balance From, does not exist, T2S considers the holding equal to zero.</p>
		<p>If a securities position, referred in the Balance to, does not exist, T2S creates the securities position.</p>
		<p>If the holding of the securities position, referred in the Balance From, is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the available quantity. Such partial settlement is not subject to any condition (such as window, threshold...) and is complemented with future pre-emption.</p>
		<p>In case of partial settlement, a reservation is complemented through the pre-emption of any incoming securities.</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p>
		<p>Even if the holding in the securities position referred in the Balance From is equal to zero: the Settlement Restriction is partially settled for a</p>

PROCESS	INFORMATION	RULES
		zero quantity, the restriction reference is generated, and the pre-emption mechanism is implemented.
		When the Settlement Restriction is (partially) settled, T2S updates the involved securities positions and generates or updates the quantities of the restriction reference.
		T2S sends the restriction reference created for the new reservation in the settlement confirmation of the Settlement Restriction.

1 This process is illustrated by the example below.

2 **EXAMPLE 165 - SET-UP OF A NEW SECURITIES RESERVATION**

3 To set-up a new reservation, a T2S Actor sends to T2S the Settlement Restriction SR4 containing the follow-  
4 ing information:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	SETTLEMENT QUANTITY
SR4	SA1	ISIN X	AWAS	RES4	60

6 T2S settles the Settlement Restriction SR4 with the following updates on the involved securities positions  
7 and quantities of the restriction references related to the reservation:

8 | If the availability of the securities position associated to the balance from allows a full settlement:

**Case A - Full Settlement**  
-i.e. securities position identified as Balance From holding (100) >= settlement quantity (60)-

9

10 | If the availability of the securities position associated to the balance from does not allow full settlement:

**Case B – Partial settlement**

-i.e. securities position identified as Balance From holding (40) < settlement quantity (60)-

1

2 T2S generates the restriction reference (RRF54321) in the reserved securities position and sends it back to  
3 the T2S Actor in the settlement confirmation of the Settlement Restriction. T2S Actors can use this reference  
4 for future increase, decrease or use.

5 In case of partial settlement of the Settlement Restriction SR4, any further delivered securities in the original  
6 delivering securities position, is pre-empted until the reservation is fully filled:

**Additional settlement of a partially settled settlement restriction related to a reservation**

-i.e. delivered securities in the securities position associated to the Balance From and to be pre-empted quantity > 0-

7

Increase an existing restriction reference in a reserved securities position

Process

10 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
11 with the following information in order to increase an existing restriction reference in a reserved securities  
12 position:  
13

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.

INFORMATION	DESCRIPTION
Balance To	Restriction type Id of the securities position to which the securities are received and restricted.
Settlement Quantity	Quantity to reserve.
Restriction Reference	Restriction reference to increase in the reserved securities position.

1 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

2

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable" or "earmarking" (i.e. its restriction processing cannot be "reservation" or "blocked": it is not allowed to reserve securities from a reserved or blocked position).</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
	Restriction reference	The indicated restriction reference exists in the securities position indicated as Balance To.
Posting		<p>If a securities position, referred in the Balance From, does not exist, T2S creates the securities position and considers the holding equal to zero.</p>
		<p>If the holding of the securities position, referred in the Balance From, is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the available quantity. Such partial settlement is not subject to any condition (such as window, threshold...) and is complemented with future pre-emption.</p>

PROCESS	INFORMATION	RULES
		In case of partial settlement, a reservation is complemented through the pre-emption of any incoming securities.
		If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).
		When the Settlement Restriction is (partially) settled, T2S updates the involved securities positions and updates the quantities of the restriction reference.

1 This process is illustrated by the example below.

2 **EXAMPLE 166 - INCREASE OF AN EXISTING RESERVATION**

3 To increase an existing reservation, a T2S Actor sends to T2S a Settlement Restriction SR5 containing the  
4 following information:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
SR5	SA1	ISIN X	AWAS	RES4	20	RRF54321

6 T2S settles the Settlement Restriction SR5 with the following updates on the involved securities positions  
7 and quantities of the restriction references related to the reservation:

- 8 | If the availability of the securities position associated to the balance from allows a full settlement:

**Case A - Full Settlement**  
-i.e. securities position identified as Balance From holding (100) >= settlement quantity (20)-

9

- 10 | If the availability of the securities position associated to the balance from does not allow full settlement:

**Case B – Partial settlement**

-i.e. securities position identified as Balance From holding (5) < settlement quantity (20)-

1

2 In case of partial settlement of the Settlement Restriction SR5, any delivered securities, in the securities  
3 position associated to the Balance From, is pre-empted until the reservation is fully filled:

**Additional settlement of a partially settled settlement restriction related to a reservation**

-i.e. delivered securities in the securities position associated to the Balance From and to be pre-empted quantity > 0-

4

5 Decrease an existing restriction reference in a reserved securities position

6 Process

7 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
8 with the following information in order to decrease an existing restriction reference in a reserved securities  
9 position:  
10

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type of the restricted securities position from which the securities are delivered.
Balance To	Restriction type Id of the securities position to which the securities are received.
Settlement Quantity	Quantity to decrease.
Restriction Reference	Restriction reference to decrease in the reserved securities position.

1 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)  
2 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):  
3

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable" or "earmarking" (i.e. its restriction processing cannot be "reservation" or "blocked": it is not allowed to remove securities into a reserved or blocked position).</li> </ul>
	Restriction reference	<p>The restriction reference indicated exists in the securities position referred as Balance From.</p>
Posting		<p>If a securities position, referred in the Balance To, does not exist, T2S creates the securities position.</p>
		<p>If the remaining quantity of the restriction reference, in the securities position referred in the Balance From, is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the available quantity. Such partial settlement is not subject to any condition (such as window, threshold...) and is not complemented with a further settlement.</p>
		<p>The Settlement Restriction is "settled" (i.e. instead of being "unsettled" or "partially settled").</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle</p>

PROCESS	INFORMATION	RULES
		(since partial not allowed on linked Settlement Instruction).
		If the remaining quantity of the restriction reference in the securities position referred in the Balance From is equal to zero, the Settlement Restriction is "settled" for a zero quantity (i.e. instead of being "unsettled" or "partially settled")
		When the Settlement Restriction is booked for a quantity different from zero, T2S updates the involved securities positions and quantities of the restriction reference (not deleted when the remaining quantity following the booking is equal to zero).

1 It is to be noted that a decrease in a reserved securities position impacts only the remaining quantity of the  
 2 restriction reference to decrease (i.e. the quantity actually reserved, not yet used, and not waiting for a pre-  
 3 emption).

4 For the cancellation of the part still waiting for a pre-emption, the T2S Actor has to cancel the pending part  
 5 of the Settlement Restriction (See section Send Cancellation Instruction of a Settlement Instruction or a Set-  
 6 tlement Restriction on Securities Position) that initially sets-up or increases the reservation.

7 This process is illustrated by the example below.

8 **EXAMPLE 167 - DECREASE OF AN EXISTING RESERVATION**

9 To decrease an existing reservation, a T2S Actor sends to T2S a Settlement Restriction SR6 with the follow-  
 10 ing information:  
 11

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
SR6	SA1	ISIN X	RES4	AWAS	50	RRF54321

12 T2S settles the Settlement Restriction SR6 with the following updates on the involved securities positions  
 13 and quantities of the restriction references related to the reservation:

14 | If the remaining quantity in the restriction reference allows a full settlement:

**Case A - Full Settlement**

-i.e. remaining quantity in the restriction reference (80) >= settlement quantity (50) -

1 I If the remaining quantity in the restriction reference does not allow full settlement:

**Case B – Partial settlement**

-i.e. remaining quantity in the restriction reference (30) < settlement quantity (50)-

2

3 Use of reserved securities position without possibility to complement with other securities position

4 Process (direct debit)

5 A T2S Actor can use, one, or several restriction reference(s) in a reserved securities position, for the settle-  
6 ment of a Settlement Instruction, excluding the ability to complement the requested quantity with the one of  
7 other securities position.

8 In this case the impacted balance indicates only the reserved securities position and all the restriction refer-  
9 ences mentioned have to belong to this single reserved securities position.

10 The T2S Actor sends a Settlement Instruction (See Section Send Settlement Instruction) containing the fol-  
11 lowing information:  
12

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of the impacted securities position.
Security	ISIN of the impacted securities positions.
Impacted Balance	Restriction type Id of the reserved securities position where the restriction refer- ence(s) are attached.
Settlement Quantity	Quantity to deliver.
Securities Movement Type	Movement of the Settlement Instruction set to "Delivering".
Restriction Reference(s)	Restriction reference(s) to use to settle the Settlement Instruction.

13 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business](#)  
14 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Impacted Balance	<p>The restriction type Id indicated in the Impacted Balance:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
	Restriction reference	<p>All the indicated restriction reference(s) exist in the reserved securities position referred with the Securities Account Id/ISIN/restriction type Id indicated as Impacted Balance.</p>
Posting		<p>For the provision check, T2S considers:</p> <ul style="list-style-type: none"> <li>  The sum of the remaining quantity of all the restriction reference(s) indicated in the Settlement Instruction</li> <li>  Excluding any other restriction reference(s) even if in the same reserved securities position.</li> </ul>
		<p>The provision check fails if the calculated sum is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [ 381]).</p> <p>The settlement status of the Settlement Instruction is then set to "Unsettled".</p>
		<p>The provision check is successful if the calculated sum is sufficient to fully settle or to partially settle (when partial settlement is applicable) the Settlement Instruction.</p> <p>The settlement status of the Settlement Instruction is set to "Settled" or "Partially Settled".</p>
		<p>In case of successful provision check, T2S updates the involved securities positions and the quantities of the restriction reference(s) used (not deleted when the remaining quantity following the booking is equal to zero).</p>
		<p>In case several restriction references are used, they are updated according to the order they are mentioned in the Settlement Instruction.</p>

2 This process is illustrated by the example below.

1 **EXAMPLE 168 - USE OF A RESERVED SECURITIES POSITION NOT COMPLEMENTED BY ANOTHER SECURITIES POSITION**

2 To deliver securities using existing restriction references without complement from other securities position,  
3 a T2S Actor sends to T2S a Settlement Instruction SI5 which is matched with the counterpart's Settlement  
4 Instruction SI6:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC. MVT TYPE	QTY	RESTRICTION REFERENCE(S)
SI5	SA1	ISIN X	RES4	DELI	50	RRF54321; RRF33333
SI6	SA5		AWAS	RECE	50	N/A

6 T2S performs the provision check considering only the remaining quantity in the indicated restriction refer-  
7 ences with the possible following results:

- 8 | A failure when the sum of the remaining quantity of all indicated restriction references is not sufficient to  
9 settle the Settlement Instruction. No update of securities position or quantities of the restriction refer-  
10 ence is performed and the settlement status of the Settlement Instruction is set to "Unsettled":

**Case A – Failed provision-check**

-i.e. sum of the remaining quantity in the restriction references (25) < settlement quantity (50)-

- 11
- 12 | A success when the sum of the remaining quantity of all indicated restriction references is sufficient to  
13 (partially) settle the Settlement Instruction:

**Case B – Successful provision-check**

-i.e. sum of the remaining quantity in the restriction references (65) > settlement quantity (50) -

1

2 Informing the instructing party

3 The settlement confirmation of the settlement instructions using restriction references does not provide the  
 4 references which are effectively used. In the case of direct debit, the T2S Actor identifies the references that  
 5 have been used with a query on the securities postings. In the above example, the instructing party of SI5  
 6 receives a settlement confirmation which does not inform that only the reference RRF54321 has been used.  
 7 The T2S Actor identifies the references that have been used with a query on the postings associated to the  
 8 position of securities account SA1 for ISIN X and restriction type RES4.

9 Use of reserved securities position complemented with deliverable or earmarked position

10 Process (indirect debit)

11 A T2S Actor can use one or several restriction reference(s) for the settlement of a Settlement Instruction  
 12 with a possibility to complement from another securities position if the remaining quantities of those re-  
 13 striction references are not sufficient.

14 In this case, all restriction references can belong to several reserved securities positions and the securities  
 15 position used for the complement has to be the deliverable securities position or an earmarked securities  
 16 position. The securities position used for the complement is referred in the Impacted Balance as described in  
 17 the table below

18 The T2S Actor sends a Settlement Instruction (See section Send Settlement Instruction) containing the fol-  
 19 lowing information:

20

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of the impacted securities position.
Security	ISIN of the impacted securities positions.
Impacted Balance	Restriction type Id of the securities position from which the securities are delivered

INFORMATION	DESCRIPTION
	after the transfer of the reserved securities. If not specified, the deliverable securities position is taken by default (or an earmarked securities position in an earmarked securities account).
Settlement Quantity	Quantity to deliver.
Securities Movement Type	Movement of the Settlement Instruction set to "Delivering"
Restriction Reference(s)	Restriction reference(s) to use to settle the Settlement Instruction.

1 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

2  
3

PROCESS	INFORMATION	RULES
Business Validation	Impacted Balance	<p>The restriction type Id indicated in the Impacted Balance:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable", "earmarking" or is not specified.</li> </ul>
	Restriction reference	All the indicated restriction references exist in the securities positions related to the same Securities Account Id/ISIN.
Posting		If a securities position, referred in the Balance From, does not exist, T2S considers its holding equal to zero.
		<p>For the provision check, T2S considers:</p> <ul style="list-style-type: none"> <li>  The sum of the remaining quantity of all the restriction reference(s) indicated in the Settlement Instruction;</li> <li>  Complemented, if necessary, with the holding of the impacted securities position.</li> </ul>
		The provision check fails if the calculated sum is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [▶ 381]).
		The settlement status of the Settlement Instruction is set to "Unsettled".
		The provision check is successful if the calculated sum is sufficient to fully settle or to partially settle (if applicable) the Settlement Instruction.

PROCESS	INFORMATION	RULES
		The settlement status of the Settlement Instruction is set to "Settled" or "Partially Settled".
		In case of successful provision check, T2S generates one additional Settlement Restriction per involved reserved securities position (i.e. involved with a remaining quantity not equal to zero), in, in a way to transfer the reserved securities to the impacted securities position.
		The released quantity of securities is equal to the necessary securities for the settlement of the Settlement Instruction.
		The Settlement Restrictions generated by T2S to transfer the reserved securities are settled in T2S on an all-or-none basis with the Settlement Instruction.
		In case of successful provision check, T2S updates the involved securities positions and the quantities of the restriction reference(s) used (not deleted when the remaining quantity following the booking is equal to zero).
		In case several restriction references are used, their quantities are updated according to their indication order in the Settlement Instruction.

#### 1 Validity of Settlement Restrictions generated by T2S for the use of a reserved position

2 Once generated, the T2S Settlement Restrictions are subject to other T2S processes as any other Settlement  
3 Instruction. Furthermore in order to ensure the consistency of the process for the use of reserved position,  
4 the following principles are implemented:

- 5 | Validation: Settlement Instructions using reserved position on securities are validated in a way that the  
6 Settlement Restriction(s) to be generated for the use are not rejected when they are created.
- 7 | Revalidation: The Settlement Restrictions generated for the use of a reserved position are generated on-  
8 ly if they can settle immediately. As a consequence, they are not subject to revalidation. (See section  
9 [Revalidation process](#) [▶ 342])
- 10 | Intraday Restriction: T2S does not generate the Settlement Restriction for the use of a reserved position  
11 if it would be subject to intraday restriction. Instead, T2S sets the underlying Settlement Instruction un-  
12 der intraday restriction. Furthermore, once generated, the Settlement Restriction for the use of a re-  
13 served position is immediately settled and hence, cannot be subject to intraday restriction.
- 14 | Cancellation or amendment: Once generated, the T2S generated Settlement Restrictions are immediately  
15 settled, so, they cannot be cancelled or amended by any of the involved T2S Actors.

16 The use of reserved securities position complemented with deliverable or earmarked position is illustrated by  
17 the example below.

**EXAMPLE 169 - USE OF A RESERVED SECURITIES POSITION COMPLEMENTED BY ANOTHER SECURITIES POSITION**

To deliver securities using existing restriction references with complement, if needed, from other securities position, a T2S Actor sends to T2S a Settlement Instruction SI5 which is matched with the counterpart's Settlement Instruction SI6:

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC. MVT TYPE	QTY	RESTRICTION REFERENCE(S)
SI5	SA1	ISIN X	EAR7	DELI	50	RRF54321;RRF44444
SI6	SA5		AWAS	RECE	50	N/A

T2S performs the provision check with the possible following results:

- A failure when the sum of the remaining quantity of all indicated restriction references, complemented if needed with the availability in the impacted securities position, is not sufficient to settle the Settlement Instructions. No update of securities position or quantities of the restriction reference is performed and the settlement status of the Settlement Instruction remains set to "Unsettled":

**Case A – Failed provision-check**  
 -i.e. remaining quantities in the indicated restriction references (30) complemented with holding in the impacted securities position (5) < settlement quantity (50)-

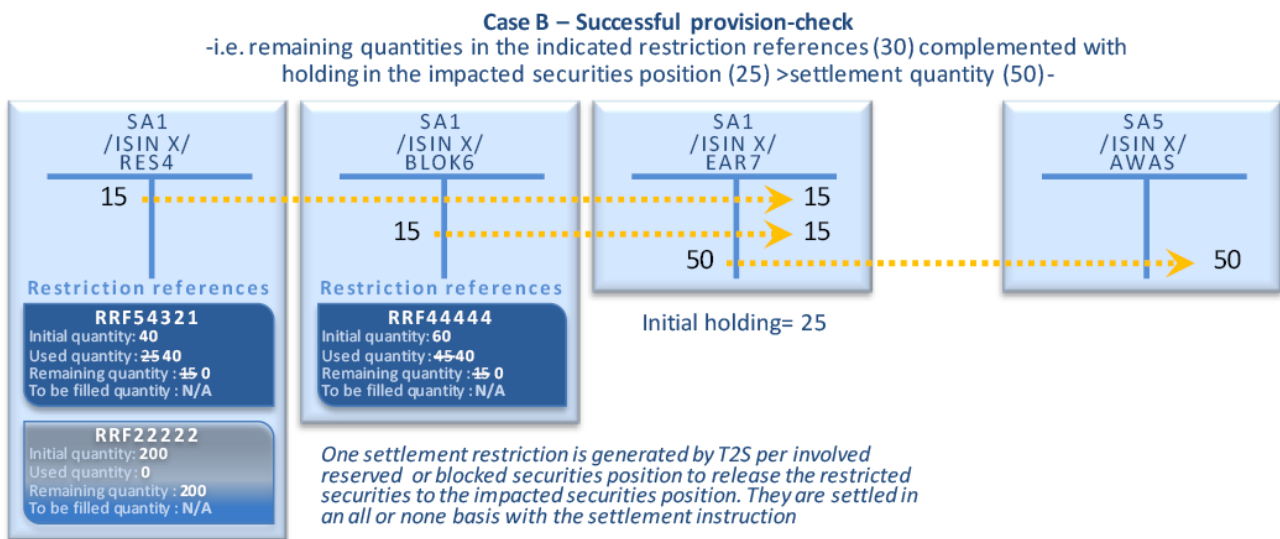

- A success when the sum of the remaining quantity of all indicated restriction references, complemented if needed with the holding of the impacted securities position, is sufficient to settle the Settlement Instruction.

In case of success, T2S generates the Settlement Restrictions needed to rebalance the reserved securities used for the settlement to the impacted securities position:

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
T2SgSRc	SA1	ISIN X	RES4	EAR7	15	RRF54321
T2SgSRd	SA1	ISIN X	BLO6	EAR7	15	RRF44444

- 1 The T2S generated Settlement Restriction T2SgSRc and T2SgSRd are then settled in an all-or-none basis  
2 with the Settlement Instruction:

- 3  
4 Informing the instructing party

5 The settlement confirmation of the settlement instruction using restriction references does not provide the  
6 restriction references that have been effectively used. In the case of indirect debit, the instructing party is  
7 informed of these references through the intra position movement confirmation received for each T2S gen-  
8 erated settlement restriction.

9 In the above example, the instructing party of SI5 receives two intra position movement confirmations: one  
10 for the reference RRF54321 for restriction type RES4 and one for the reference RRF44444 for the restriction  
11 type BLOK6.

#### 12 Pre-emption features following a partially settled reservation

13 If the holding of the securities position debited for the set-up or the increase of a reservation is not sufficient  
14 to fully settle such reservation then T2S books the reservation for the available quantity. Such partial settle-  
15 ment is not subject to any condition (such as window, threshold...) and is complemented with future pre-  
16 emption.

17 When booking a settlement instruction T2S verifies if incoming resources can complement the settlement of  
18 securities that have been partially settled during a previous Booking process. The pre-emption is performed  
19 with the net quantity actually delivered in the securities position as determined by the Provision check (See  
20 section [Booking process](#) [▶ 403]).

21 The pre-emption is performed prior any other settlement instruction that may use the incoming resources  
22 since it is booked on an all or none basis with the settlement instruction delivering the necessary securities.

23 If several reservations are not fully filled, the pre-emption mechanism fills firstly the oldest one, based on  
24 their arrival within T2S and without taking into consideration the priority.

25 The cancellation of a partially settled Settlement Restriction results in the cancellation of the pre-emption  
26 mechanism associated to the pending part of such a reservation.

### 1 **1.6.1.13.5 Securities earmarking process**

2 This section details the actions a T2S Actor can perform with an earmarking:

- 3 | Set-up or increase an earmarked securities position with:
  - 4 – A Settlement Restriction to earmark securities already held in another securities position;
  - 5 – A Settlement Instruction to earmark directly received securities;
- 6 | Decrease an earmarked securities position;
- 7 | Use of an earmarked securities position to settle a Settlement Instruction.

8 It is reminded that the process, described hereunder for the “earmarking” restriction processing type, is also  
9 valid for “earmarking for auto-collateralisation” since these two restriction processing types only differ for  
10 the auto-collateralisation process.

#### 11 Set-up or increase an earmarked securities position with a Settlement Restriction

##### 12 Process

13 T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
14 with the following information in order (i) to set-up a new earmarked securities position or (ii) to increase an  
15 existing earmarked securities position, with securities already held in another securities position of one of its  
16 Securities Account:

17

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.
Balance To	Restriction type Id of the securities position where the securities are received.
Settlement Quantity	Quantity to earmark.

18 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)  
19 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "deliverable", "earmarking", "earmarking for auto-collateralisation", "blocking" or "reservation"<sup>288</sup>.</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "earmarking" or "earmarking for auto-collateralisation".</li> </ul>
Posting		<p>If a securities position, referred in the Balance From does not exist, T2S considers the holding equal to zero.</p>
		<p>If a securities position, referred in the Balance to, does not exist, T2S creates the securities position.</p>
		<p>If the holding of the securities position, referred in the Balance From, is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the available quantity. Such partial settlement is not subject to any condition (such as window, threshold...) and is not complemented with a further settlement.</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p>

<sup>288</sup> In case of restriction processing related to "blocking" or "reservation", the restriction reference is then mandatory (please refer above to decrease action on blocking and on reservation).

PROCESS	INFORMATION	RULES
		If the holding in the securities position, referred in the Balance From, is equal to zero, the Settlement Restriction is settled for a zero quantity (i.e. instead of being "unsettled")
		When the Settlement Restriction is booked for a quantity different from zero, T2S updates the involved securities positions.

1 This process is illustrated by the example below.

2 **EXAMPLE 170 - SET-UP OR INCREASE OF AN EARMARKING POSITION WITH A SETTLEMENT RESTRICTION**

3 To set-up or increase an earmarking (for auto-collateralisation), a T2S Actor sends to T2S a Settlement Re-  
4 striction SR7 containing the following information:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	SETTLEMENT QUANTITY
SR7	SA1	ISIN X	AWAS	EEUR	60

6 T2S settles the Settlement Restriction SR7 with the following updates on the involved securities positions:

7 | If the availability of the securities position associated to the balance from allows a full settlement:

**Case A - Full Settlement**

-i.e. securities position identified as Balance From holding (100) >= settlement quantity (60)-

8

9 | If the availability of the securities position associated to the balance from does not allow a full settle-  
10 ment:

**Case B - Partial settlement**

-i.e. securities position identified as Balance From holding (40) < settlement quantity (60)-

11

12 It is to be noted that no restriction reference is generated by T2S.

13 For any action (set-up, increase, decrease, use), the earmarking is identified only with the restriction type  
14 corresponding to the earmarked securities position.

15 Set-up or increase an earmarked securities position with a Settlement Instruction

16 Process

1 T2S Actor sends a Settlement Instruction (See section Send Settlement Instruction) with the following in-  
 2 formation in order (i) to set-up a new earmarked securities position or (ii) to increase an existing earmarked  
 3 securities position, with securities received from another Securities Account:  
 4

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of the impacted securities position.
Security	ISIN of the impacted securities positions.
Impacted Balance	Restriction type Id of the securities position where the securities are received.
Settlement Quantity	Quantity to receive.
Securities Movement Type	Movement of the Settlement Instruction set to "Receiving"

5 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business](#)  
 6 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):  
 7

PROCESS	INFORMATION	RULES
Business Validation	Impacted Balance	The restriction type Id indicated in the Impacted Balance: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Instruction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account</li> <li>  Has a restriction processing equal to "earmarking" or "earmarking for auto-collateralisation" or, in case of earmarked securities account, is not specified.</li> </ul>
Posting		If a securities position, referred in the Impacted Balance, does not exist, T2S creates the securities position.  For the provision check, T2S considers the holding of the delivering securities position indicated in the counterparty's Settlement Instruction.  The provision check fails if the holding of the delivering securities position is not sufficient to settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [▶ 381]).  The settlement status of the Settlement Instruction is set to "Unsettled".  The provision check is successful if the holding of the delivering securities position is sufficient to fully settle or to partially settle the Settlement Instruction.  The settlement status of the Settlement Instruction is set to "Settled" or

PROCESS	INFORMATION	RULES
		"partially settled".
		In case of successful provision check, T2S updates the involved securities positions.

1 This process is illustrated by the example below.

2 **EXAMPLE 171 - SET-UP OR INCREASE OF AN EARMARKING POSITION WITH A SETTLEMENT INSTRUCTION**

3 To set-up or to increase an earmarking (for auto-collateralisation), a T2S Actor sends to T2S a Settlement  
 4 Instruction SI8 with the following information which is matched with the counterpart's Settlement Instruction  
 5 SI7:  
 6

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC. MVT TYPE	QUANTITY
SI7	SA1	ISIN X	AWAS	DELI	50
SI8	SA5		EEUR	RECE	50

7 T2S performs the provision check with the possible following results:

- 8 | A failure when the availability of the delivering securities position is not sufficient to settle the Settlement  
 9 Instruction (and partial settlement is not allowed). No update of securities position is performed and the  
 10 settlement status of the Settlement Instruction is set to "Unsettled":

**Case A – Failed provision-check**

-i.e. holding in the delivering securities position of the counterparty (5) < settlement quantity (50)-

11

- 12 | A success when the availability of the delivering securities position is sufficient to settle the Settlement  
 13 Instruction:

**Case B – Partial settlement**

-i.e. cash balance identified as Balance From amount (5) < settlement amount (20)-

14

1 Decrease of an existing earmarked securities position

2 Process

3 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Securities Position)  
4 with the following information in order to decrease an existing earmarked securities position, by releasing  
5 the securities in another securities position of the same Securities Account:  
6

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of both involved securities positions.
Security	ISIN of both involved securities positions.
Balance From	Restriction type Id of the securities position from which the securities are delivered.
Balance To	Restriction type Id of the securities position to which the securities are received.
Settlement Quantity	Quantity to decrease.

7 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)  
8 [Validation](#) [ ▶ 301]) and in the posting processes (See section [Posting](#) [ ▶ 381]):  
9

PROCESS	INFORMATION	RULES
Business Validation	Balance From	The restriction type Id indicated in the Balance From: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account;</li> <li>  Has a restriction processing equal to "earmarking" or "earmarking for auto-collateralisation".</li> </ul>
	Balance To	The restriction type Id indicated in the Balance To: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities</li> </ul>

PROCESS	INFORMATION	RULES
		<p>Account</p> <ul style="list-style-type: none"> <li>Has a restriction processing equal to "deliverable", "earmarking", "earmarking for auto-collateralisation", "blocking" or "reservation"<sup>289</sup>.</li> </ul>
Posting		<p>If the holding in the securities position referred in the Balance From is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the available quantity. Such partial settlement is not subject to any condition (such as window, threshold...) and is not complemented with a further settlement.</p> <p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p> <p>If the holding in the securities position referred in the Balance From is equal to zero, the Settlement Restriction is settled for a zero quantity (i.e. instead of being "unsettled")</p> <p>When the Settlement Restriction is booked for a quantity different from zero, T2S updates the involved securities positions.</p>

1 This process is illustrated by the example below.

2 **EXAMPLE 172 - DECREASE OF AN EXISTING EARMARKED SECURITIES POSITION**

3 To decrease an existing earmarking (for auto-collateralisation), a T2S Actor sends to T2S a Settlement Re-  
4 striction SR8 containing the following information:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	BALANCE FROM	BALANCE TO	SETTLEMENT QUANTITY
SR8	SA1	ISIN X	EEUR	AWAS	50

6 T2S settles the Settlement Restriction with the following updates on the involved securities positions:

7 

- If the availability in the earmarked securities position allows a full settlement:

289 In case of restriction processing related to "blocking" or "reservation", the restriction reference is then mandatory (please refer above to increase action on blocking and on reservation).

**Case A - Full Settlement**

-i.e. remaining quantity in the restriction reference (90) >= settlement quantity (50)-

1

2 | If the availability in the earmarked securities position does not allow full settlement:

**Case B – Partial settlement**

-i.e. remaining quantity in the restriction reference (30) < settlement quantity (50)-

3

4 Use of an earmarked securities position to settle a delivering Settlement Instruction

5 Process (direct debit)

6 The T2S Actor sends a Settlement Instruction (See section Send Settlement Instruction) containing the fol-  
7 lowing information in order to deliver the holding of an earmarked securities position:  
8

INFORMATION	DESCRIPTION
Securities Account	Securities Account Id of the impacted securities position.
Security	ISIN of the impacted securities positions.
Impacted Balance	Restriction type Id of the earmarked securities position from which the securities are delivered.
Settlement Quantity	Quantity to deliver.
Securities Movement Type	Movement of the Settlement Instruction set to "Delivering"

9 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business](#)  
10 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Impacted Balance	<p>The restriction type Id indicated in the Impacted Balance:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the T2S Operator, the CSD which manages the Securities Account or by the owner of the Securities Account.</li> </ul>
Posting		<p>If the securities position referred in the Impacted Balance does not exist, T2S considers the holding equal to zero.</p> <p>For the provision check, T2S considers the holding of the delivering earmarked securities position.</p> <p>The provision check fails, if the holding of the delivering earmarked securities position is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting [ 381]</a>).</p> <p>The settlement status of the Settlement Instruction is set to "Unsettled".</p> <p>The provision check is successful, if the holding of the delivering earmarked securities position is sufficient to fully settle, or to partially settle the Settlement Instruction.</p> <p>The settlement status of the Settlement Instruction is then set to "Settled" or "Partially Settled".</p> <p>In case of successful provision check, T2S updates the involved securities positions.</p>

2 This process is illustrated by the example below.

3 **EXAMPLE 173 - USE OF AN EARMARKED SECURITIES POSITION**

4 To deliver securities held in an earmarked securities position (for auto-collateralisation) a T2S Actor sends to  
5 T2S a Settlement Instruction SI9 which is matched with the counterpart's Settlement Instruction SI0:  
6

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC. MVT TYPE	QUANTITY
SI9	SA1	ISIN X	EEUR	DELI	50
SI0	SA5		AWAS	RECE	50

7 T2S performs a provision check with the possible following results:

- 1 | A failure when the availability in the delivering earmarked securities position is not sufficient to settle the  
 2 | Settlement Instruction (and partial settlement is not allowed). No update of securities position is per-  
 3 | formed and the settlement status of the Settlement Instruction is set to "Unsettled":

**Case A – Failed provision-check**

-i.e. holding in the delivering earmarked securities position (5) < settlement quantity (50)-

- 4 |  
 5 | A success when the availability in the delivering earmarked securities position is sufficient to (partially)  
 6 | settle the Settlement Instruction:

**Case B – Successful provision-check**

-i.e. holding in the delivering earmarked securities position (80) > settlement quantity (50)-

7 |  
 8 | **1.6.1.13.6 Synthesis per restriction processing**

9 | The following tables summarize the actions to be performed by T2S Actors for the management of each  
 10 | restriction processing.

11 | Set-up or increase

12 | **TABLE 137 - SET-UP OR INCREASE OF BLOCKING, RESERVATION OR EARMARKING ON SECURITIES**

#### 1 1.6.1.14 Penalty Mechanism

##### 2 **1.6.1.14.1 Concept**

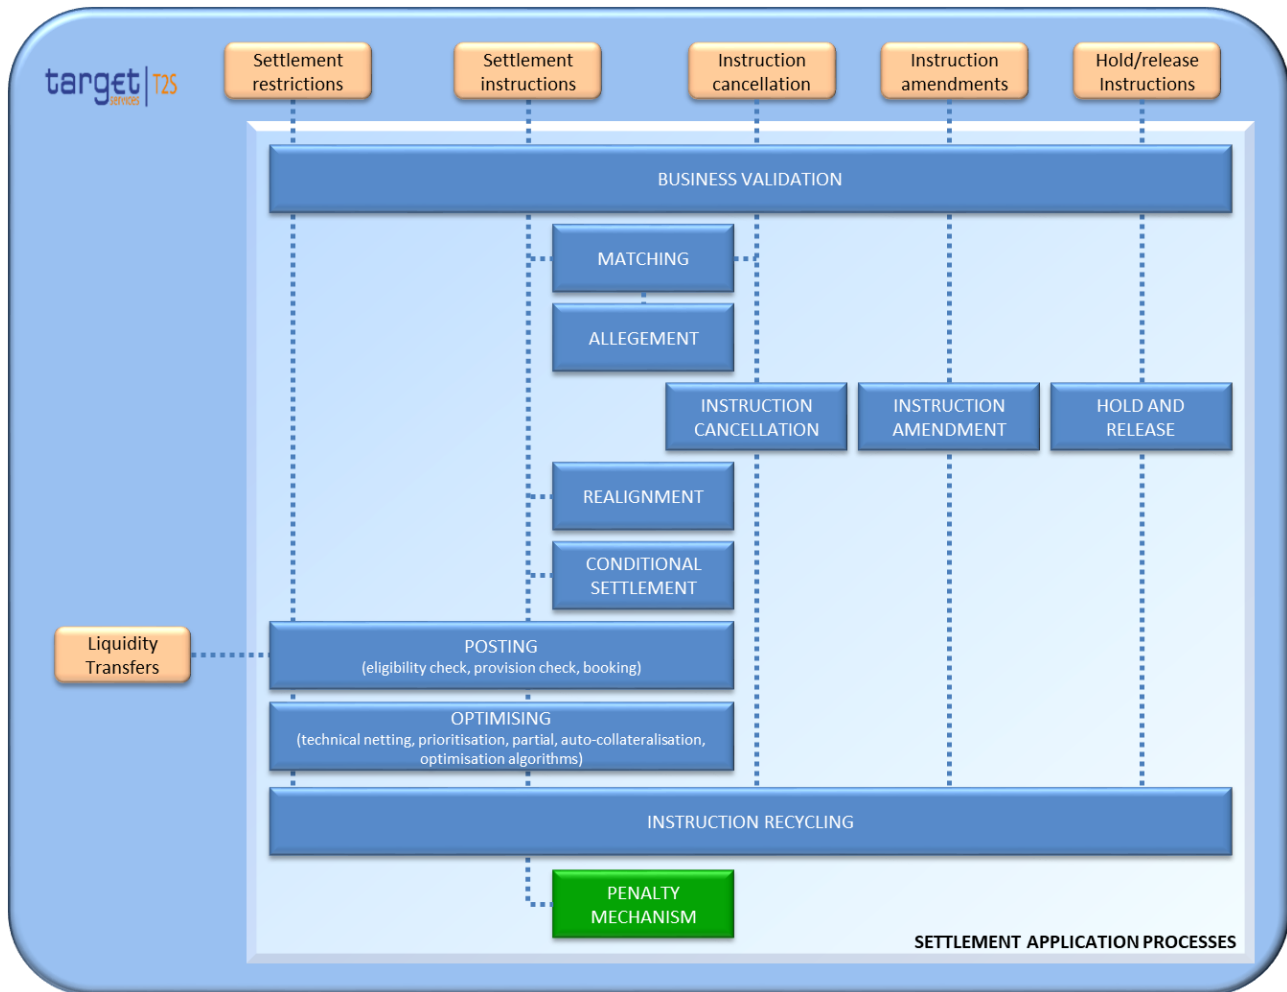

3 The Penalty Mechanism comprises the processes necessary for the daily Calculation and Reporting of Penalties  
4 on Matched Settlement Instructions which are not settled on their intended settlement day and following  
5 business days.

6 The Penalty Mechanism can generate two types of Penalties:

- 7 | Settlement Fail Penalties (SEFP) penalise a non-execution or failure of settlement after the completion of  
8 the settlement processing of the relevant cut-off on or after ISD and are calculated for each business  
9 day the Settlement Instruction fails in T2S, hence, a SEFP is generated for each business day the in-  
10 struction fails to settle in T2S;
- 11 | Late Matching Fail Penalties (LMFP) penalise the late sending of Settlement Instructions that prevents  
12 timely settlement of a transaction, and are calculated only once by T2S, on the business day when they  
13 are matched, but considering all the previous business days passed from the Intended Settlement Date  
14 when the instruction did not settle due to the late matching of the instruction. Hence, a LMFP can in-  
15 clude as many business days as days passed between the Intended Settlement Date and the day the in-  
16 struction is matched.

17 The Penalty Mechanism manages the processes for analysing the eligibility of instructions for Penalties, cal-  
18 culation, modification and automatic recalculation of Penalties, as well as the daily and monthly reporting to  
19 T2S Actors.

1

**DIAGRAM 139 - PENALTY MECHANISM APPLICATION PROCESS**

2

**1.6.1.14.2 Overview**

When a Matched Settlement Instruction fails to settle on or after its Intended Settlement Date, or is matched at a point in time where it can no longer be settled on its Intended Settlement Date, the Penalty Mechanism evaluates whether there is a Penalty to be imposed to the relevant party of the Settlement Instruction, or not. If a Penalty has to be imposed, the Penalty Mechanism calculates it, and prepares the data necessary to report it.

After the Penalty Calculation and until the end of its Appeal Period (on the 13th business day of the month following its computation), CSDs can request to modify the Penalties that they or their participants have been imposed with. The Penalty Mechanism checks that the modifications requested comply with the applicable business requirements, and executes the valid modifications.

Additionally, whenever a reference data used to calculate a Penalty is updated, the Penalty Mechanism selects the impacted Penalties which are still in their Appeal Period and automatically recalculates them.

Every business day, the Penalty Mechanism prepares the data necessary to report the newly computed and the modified and recalculated Penalties to both, the CSD of the Failing Party and the CSD of the non-Failing

1 Party, and to the Failing and the non-Failing Parties. Reports are available via semt.044 message format,  
2 thought alternatively CSD can opt to receive them via Flat File.

3 On the 13th business day of every month, once the Recalculation and Preparation for daily Reporting pro-  
4 cesses have taken place, the end of Appeal Period process is triggered and Penalties detected on the previ-  
5 ous month are set as not modifiable. Afterwards, the Penalty Mechanism starts preparing the data necessary  
6 to report, on the 14th business day of the month, the Monthly Aggregated Amounts of Penalties of the pre-  
7 vious month to the CSD and CSD Participants that have configured the report. The report is available in  
8 semt.044 message format, though alternatively CSDs can opt to receive it via Flat File.

### 9 **1.6.1.14.3 Overall view of the Penalty Mechanism Processes**

10 Every business day, the following Penalty Mechanism processes are performed:

- 11 | Penalty Eligibility: this process analyses the failed matched Settlement Instructions from the previous  
12 business day, and the instructions matched on the previous business day, in order to see if they are eli-  
13 gible for penalties, hence, detecting new Penalties to be calculated. It starts after the end of the Start of  
14 Day and must be finished before the Calculation of Penalties process starts;
- 15 | Penalty Calculation: this process calculates newly detected Penalties. It starts once the Penalty Eligibility  
16 Process, the Reference Data preparation for penalties and the processing of penalty modification re-  
17 quests submitted before the deadline have finished;
- 18 | Penalty Modification: T2S processes, on a continuous basis except during the Calculation and Recalcula-  
19 tion of Penalties, the requests sent by CSDs to modify (i.e. remove, re-include, re-allocate or switch) ex-  
20 isting Penalties;
- 21 | Penalty Recalculation: this process recalculates existing Penalties impacted by Reference Data changes  
22 or flagged as to be recalculated after a modification. It starts after the Penalty Calculation process has  
23 finished; and
- 24 | Penalty Reporting of new and modified Penalties: this process starts after the end of the Penalty Calcula-  
25 tion and preparation for reporting of new Penalties (i.e. the Daily Penalty List), and after the end of the  
26 Penalty Recalculation and preparation of its reporting (i.e. the List of Modified Penalties).

27 In addition, once a month, the following Penalty Mechanism processes are performed:

- 28 | End of the Appeal Period process for Penalties detected on the previous month, which become not modi-  
29 fiable. This process is run on the 13th business day of the month, after the Penalty Recalculation process  
30 has finished; and
- 31 | Reporting of the aggregated amounts of Penalties detected on the previous month (Monthly Aggregated  
32 Amounts Report), which may be used for the collection and redistribution of Penalties performed by  
33 CSDs. This process is performed on the on the 14th business day and starts after the aggregated  
34 amounts have been prepared for its reporting (process which starts on the 13th business day of the  
35 month, after the End of the Appeal Period process has finished).

3

#### 4 1.6.1.14.4 Penalty Eligibility

5 Every business day, T2S analyses the failed Matched Settlement Instructions from the previous business day  
6 in order to see if they are eligible for penalties.

1 **Eligibility for a Settlement Fail Penalty (SEFP)**

2 To determine whether a Settlement Instruction is eligible for a Settlement Fail Penalty (SEFP) or not, T2S  
3 retrieves all the Matched Settlement Instructions which failed to settle at the end of the relevant previous  
4 business day’s cut-off. I.e.:

5 Matched Settlement Instructions that: i) having an Intended Settlement Date equal or earlier than the previ-  
6 ous business day, ii) remain Unsettled or Partially Settled after the completion of their applicable cut-off.

7 T2S analyses separately each instruction retrieved, and:

- 8 | Settlement Instructions automatically generated by T2S for realignment purposes are discarded, as they  
9 are out of scope of the T2S Penalty Mechanism;
- 10 | Settlement Instructions with ISO Transaction Code “CORP” (related to Corporate Actions on Stock) are  
11 exempted, as they are not subject to penalties.

12 For the rest of Settlement Instructions, their eligibility for a Penalty is derived from the reason(s) for failing  
13 that the instruction had at the end of the applicable cut-off. T2S analyses one by one the reason(s) for fail-  
14 ing against the Failing Reasons Dictionary provided in the table below <sup>290</sup> and:

- 15 | As soon as one reason for failing has a positive eligibility result, the Settlement Instruction is eligible for  
16 a penalty.
- 17 | In case none of the reasons for failing have a positive eligibility result, the Settlement Instruction is not  
18 eligible for a penalty.

19 **TABLE 140 - FAILING REASONS DICTIONARY**

Reason Code	Description of the Error	Eligibility Result
BLOC	SXAA001 - Settlement Instruction is not settled because of an intraday re- striction on the cash account used	TRUE
BLOC	SXAA002 - Settlement Instruction is not settled because of an intraday re- striction on the cash account used by the counterpart	FALSE
BLOC	SXAA003 - Settlement Instruction is not settled because of an intraday re- striction on the securities account used	TRUE
BLOC	SXAA004 - Settlement Instruction is not settled because of an intraday re- striction on the securities account used by the counterpart	FALSE

290 ~~In case a Settlement Instruction, had at the end of the applicable cut-off, a reason for failing that is not in the “Failing reasons Dictionary” an alarm is raised to the T2S Operator.~~{CR-786 }

Reason Code	Description of the Error	Eligibility Result
SBLO	SXAA005 - Settlement Instruction is not settled because of an intraday restriction on the ISIN code used	TRUE
MONY	SXAA012 - Failure of the settlement attempt of the settlement instruction due to a lack of cash in your cash balance	TRUE
CMON	SXAA013 - Failure of the settlement attempt of the settlement instruction due to a lack of cash in the cash balance of the counterparty	FALSE
LACK	SXAA014 - Failure of the settlement attempt of the settlement instruction due to a lack of securities in your securities position	TRUE
CLAC	SXAA015 - Failure of the settlement attempt of the settlement instruction due to a lack of securities in the securities position of the counterparty	FALSE
MONY	SXAA016 - Failure of the settlement attempt of the settlement instruction due to your insufficient credit headroom	TRUE
CMON	SXAA017 - Failure of the settlement attempt of the settlement instruction due to an insufficient credit headroom of the counterparty	FALSE
LINK	SXAA018 - Failure of the settlement attempt due to a link with a settlement instruction or a settlement restriction in failure	TRUE <sup>291</sup>
BLOC	SXAA023 - Settlement Instruction is not	TRUE

291 **The eligibility result will be 'TRUE' if the Settlement Instruction having received this reason 'LINK' has failed to settle due to being linked to another instruction. However, the eligibility result will be 'FALSE' if such Settlement Instruction receives reason 'LINK' but has no links and fails to settle because of its counterparty which is linked in failure to (an)other instruction(s).**(CR-786  
}

Reason Code	Description of the Error	Eligibility Result
	settled because of an intraday restriction on the restriction reference(s) indicated	
BLOC	SXAA024 - Settlement Instruction is not settled because of an intraday restriction on the restriction reference(s) indicated by the counterpart	FALSE
BLOC	SXAA025 - Settlement Instruction is not settled because of an intraday restriction on the receiver party	TRUE
BLOC	SXAA026 - Settlement Instruction is not settled because of an intraday restriction on the deliverer party	TRUE
BLOC	SXAA027 - Settlement Instruction is not settled because of an intraday restriction on the securities counterparty.	FALSE
BLOC	SXAA028 - Settlement Instruction is not settled because of an intraday restriction on the credited party.	TRUE
BLOC	SXAA029 - Settlement Instruction is not settled because of an intraday restriction on the debited party.	TRUE
BLOC	SXAA030 - Settlement Instruction is not settled because of an intraday restriction on the cash counterparty	FALSE
PREA	SPSA003 - Settlement Instruction is on hold due to the settlement of a partially released instruction	TRUE
PRCY	SPSA004 - Counterparty Settlement Instruction is on hold due to the settlement of a partially released quantity.	FALSE
PREA	SPSA005 - Settlement instruction is on hold because the relevant cut-off has been reached.	TRUE
PRCY	SPSA006 - Counterparty Settlement	FALSE

Reason Code	Description of the Error	Eligibility Result
	instruction is on hold because the relevant cut-off has been reached.	
PREA	SPSA007 - Settlement instruction is on hold because other holds apply on the referenced Settlement Instruction or its counterpart.	TRUE
PRCY	SPSA008 - Counterparty Settlement instruction is on hold because other holds apply on the referenced Settlement Instruction or its counterpart.	FALSE
PREA	SPSA009 - Settlement instruction is on hold because the referenced Settlement Instruction or its counterpart does not allow partial settlement.	TRUE
PRCY	SPSA010 - Counterparty Settlement instruction is on hold because the referenced Settlement Instruction or its counterpart does not allow partial settlement.	FALSE
PREA	SPSA011 - Settlement instruction is on hold because a settlement link applies either on the referenced Settlement Instruction or its counterpart.	TRUE
PRCY	SPSA012 - Counterparty Settlement instruction is on hold because a settlement link applies on the referenced Settlement Instruction or its counterpart.	FALSE
PREA	SPSA013 - Settlement instruction is on hold because a non-reciprocal settlement link applies on the referenced Settlement Instruction or its counterpart.	TRUE
PRCY	SPSA014 - Counterparty Settlement instruction is on hold because a non-reciprocal settlement link applies on the referenced Settlement Instruction	FALSE

Reason Code	Description of the Error	Eligibility Result
	or its counterpart.	
PREA	SPSA015 - Settlement instruction is on hold because the partially released quantity was less than the quantity resulting from the cash threshold equivalent in the underlying settlement instruction.	TRUE
PRCY	SPSA016 - Counterparty Settlement instruction is on hold because the partially released quantity was less than the quantity resulting from the cash threshold equivalent in the underlying settlement instruction.	FALSE
PREA	SPSA017 - Settlement instruction is temporary on hold because the referenced Settlement Instruction has been released.	TRUE
PRCY	SPSA018 - Counterparty Settlement instruction is temporary on hold because the referenced Settlement Instruction has been released.	FALSE
OTHR	SPSA019 - At least one associated realignment Settlement Instruction is on hold.	TRUE
PRCY	SPST002 - Settlement Instruction is unsettled because its counterpart settlement instruction is 'On Hold'	FALSE
LINK	SPST003 - Settlement Instruction is unsettled because a linked settlement instruction is 'On Hold'	TRUE
LINK	SPST007 - Settlement Instruction is unsettled because its linked settlement instruction is 'CoSD On Hold'	TRUE
LINK	SPST011 - Settlement Instruction is	TRUE <sup>292</sup>

Reason Code	Description of the Error	Eligibility Result
	unsettled because another instruction which is suspended (due to cut-off reached) states a link WITH or BEFORE this instruction.	
LINK	SPST015 - Settlement Instruction is unsettled because another restriction which is suspended (due to cut-off reached) states a link WITH or BEFORE this instruction.	TRUE
INBC	SPST016 - Settlement Instruction is unsettled because one of its linked settlement instructions is missing	TRUE
INBC	SPST017 - Settlement Instruction is unsettled because one of the counterparty's linked settlement instructions is missing	FALSE
LINK	SPST019 - Settlement Instruction is unsettled because it states a link WITH or BEFORE an instruction that is already settled because its reciprocal link was not stated by the party.	TRUE <sup>293</sup>
LINK	SPST020 - Settlement Instruction is unsettled because its counterpart Settlement Instruction is linked to a Settlement Instruction 'On Hold'.	FALSE
LINK	SPST021 - Settlement Instruction is unsettled because another instruction stating a link WITH or BEFORE this	TRUE <sup>294</sup>

292 **The eligibility result will be 'TRUE' if the Settlement Instruction having received this reason 'LINK' has failed to settle due to being linked to another instruction. However, the eligibility result will be 'FALSE' if such Settlement Instruction receives reason 'LINK' but has no links and fails to settle because of its counterparty which is linked in failure to (an)other instruction(s).**(CR-786 }

293 **The eligibility result will be 'TRUE' if the Settlement Instruction having received this reason 'LINK' has failed to settle due to being linked to another instruction. 301 **The eligibility result will be 'TRUE' if the Settlement Instruction having received this reason 'LINK' has failed to settle due to being linked to another instruction. However, the eligibility result will be 'FALSE' if such Settlement Instruction receives reason 'LINK' but has no links and fails to settle because of its counterparty which is linked in failure to (an)other instruction(s).**(CR-786 )

Reason Code	Description of the Error	Eligibility Result
	or Restriction with an earlier Intended Settlement Date	
PREA	Your Instruction On Hold	TRUE
PRSY	System On Hold <sup>302</sup>	TRUE
CDLR	CoSD awaiting from Administering Party <sup>303</sup>	TRUE
CSDH	CSD Hold	TRUE
CVAL	CSD Validation Hold	TRUE
PRCY	Counterparty Instruction On Hold	FALSE
OTHR	Relates to transfer to pivot position required for CoSD activation when business Settlement Instruction uses restriction references in direct debit	FALSE
CYCL	Awaiting Next Settlement Cycle	FALSE
CYCL	MMRI214: -Instruction released the latest --	TRUE
PART	Trade will Settle in Partials	Perform further checks
CYCL	Instruction Released During Cut-off	TRUE

1 In case of Reason Code "PART", the Securities Movement Type of the Settlement Instruction must be  
2 checked in order to determine the eligibility result:

3 **TABLE 141 - ELIGIBILITY RESULT IN CASE OF PARTIAL SETTLEMENT**  
4

Reason Code	Securities Movement Type Code	Eligibility Result
PART	DELI	TRUE
	RECE	FALSE

5 Given that each Settlement Instruction is analysed separately, it may happen that the counterpart instruction  
6 fulfils an exemption because of its ISO code whereas the Settlement Instruction does not, and also that both  
7 instructions are eligible for a Penalty.

302 Together with PRSY (System on hold) it is the reason and description provided when the instruction is on COSD Hold.

303 Together with CDLR (CoSD awaiting from Administering Party) it is the reason and description provided when the instruction is on COSD Hold. For more information on these reasons please refer to section Conditional Delivery (CoSD) Detection.

1 In order to illustrate how the eligibility result is determined, 5 6 examples are provided hereafter. All of the  
2 examples relate to a pair of Matched Settlement Instructions that having reached its ISD, fail to settle in T2S  
3 before the completion of the relevant cut-off. {CR-786 }

4 **DIAGRAM 140 - PENALTY ELEGIBILITY**

- 5
- 6 | Settlement Instruction A is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
7 reason for failing at the EDVP cut-off, i.e.: "LACK". According to the data dictionary, the result is that  
8 Settlement Instruction A is eligible for a Penalty.
- 9 | Settlement Instruction B is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
10 reason for failing at the EDVP cut-off, i.e.: "CLAC". According to the data dictionary, the result is that  
11 Settlement Instruction B is not eligible for a Penalty.
- 12 | Settlement Instruction A is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
13 reason for failing at the EDVP cut-off, i.e.: "PREA". According to the data dictionary, the result is that  
14 Settlement Instruction A is eligible for a Penalty.
- 15 | Settlement Instruction B is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
16 reason for failing at the EDVP cut-off, i.e.: "CSDH". According to the data dictionary, the result is that  
17 Settlement Instruction B is also eligible for a Penalty.
- 18 | Settlement Instruction A is exempted because of its ISO Transaction Code ("CORP"), hence, the result is  
19 that Settlement Instruction A is not eligible for a Penalty.
- 20 | Settlement Instruction B is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
21 reason for failing at the EFOP cut-off, i.e.: "CLAC". According to the data dictionary, the result is that  
22 Settlement Instruction B is not eligible for a Penalty.
- 23 | Settlement Instruction A is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
24 reason for failing at the EFOP cut-off, i.e.: "LACK". According to the data dictionary, the result is that  
25 Settlement Instruction A is eligible for a Penalty.
- 26 | Settlement Instruction B is exempted because of its ISO Transaction Code ("CORP"), hence, the result is  
27 that Settlement Instruction B is not eligible for a Penalty.
- 28 | Settlement Instruction A is not exempted because of its ISO Transaction Code, hence, T2S analyses the  
29 reason for failing at the EFOP cut-off, i.e.: "CYCL" and the associated Business Rule informing that it was  
30 the instruction which completely released the Settlement transaction. According to the Failing Reasons  
31 Dictionary, the result is that Settlement Instruction A is eligible for a Penalty.
- 32 | Settlement Instruction B is not exempted because of its ISO Transaction Code hence, T2S analyses the  
33 reason for failing at the EFOP cut-off, i.e.: "CYCL". According to the Failing Reasons Dictionary, the result  
34 is that Settlement Instruction B is not eligible for a Penalty.

- 1 | **Settlement Instruction A is not exempted because of its ISO Transaction Code, hence, T2S**  
2 | **analyses the reason for failing at the EFOP cut-off, i.e.: "LINK" and checks that Settlement**  
3 | **Instruction A has a link with another instruction in failure. Consequently, according to the**  
4 | **Failing Reasons Dictionary, the result is that Settlement Instruction A is eligible for a Penal-**  
5 | **ty.**
- 6 | **Settlement Instruction B is not exempted because of its ISO Transaction Code, hence, T2S**  
7 | **analyses the reason for failing at the EFOP cut-off, i.e.: "LINK" and checks that Settlement**  
8 | **Instruction B has no link. Consequently, the result is that Settlement Instruction B is not el-**  
9 | **igible for a Penalty, as it failed to settle because its counterparty Settlement Instruction A**  
10 | **was linked in failure to (an)other instruction(s).**{CR-786 }

11 | In case a Settlement Instruction is eligible for a SEFP, T2S retrieves the information that would be needed  
12 | for the calculation of the Penalty:

- 13 | | The Quantity and/or Amount: remaining quantity and/or amount to be settled at the time of completion  
14 | | of the applicable previous business day's cut-off and,  
15 | | The Place of Trade (Market Identifier Code), which, if it is informed in the Settlement Instruction eligible  
16 | | for the Penalty with the same value as the one in its counterpart's Settlement Instruction, will be used  
17 | | as the Common MIC (Market Identifier Code) to determine the underlying Asset Type for the Penalty.

18 | Additionally, for each Penalty to be calculated, T2S identifies the Applicable Parties, i.e.: the Failing Party to  
19 | which the Penalty is imposed, and the Counterparty to which the Penalty is credited.

- 20 | | The Failing Party will be the account owner of the securities account of the Settlement Instruction eligi-  
21 | | ble for the SEFP, whereas  
22 | | The non-Failing Party will be the securities account owner of the counterpart's Settlement Instruction.

23 | In external CSD settlement scenarios, T2S will consider the "External CSD" as the securities account owner  
24 | of the relevant Settlement Instruction.

25 | Once the Applicable Parties are identified, T2S analyses whether they are a CCP or not by checking if their  
26 | BIC is in the "Cash Penalties CCP List" of the Attribute Domain, as T2S shall identify and flag in the Penalty  
27 | reports the T2S Parties or the Counterparties of the Penalty(ies) that are a Central Counterparty (CCP).

28 | Then, T2S triggers the identification of the Calculation Method that has to be used to calculate the Penalty.

### 29 | **Eligibility for a Late Matching Fail Penalty (LMFP)**

30 | To determine whether a Settlement Instruction is eligible for a Late Matching Fail Penalty (LMFP) or not, T2S  
31 | retrieves the Settlement Instructions with Intended Settlement Date equal or earlier than the previous busi-  
32 | ness day and that were matched on the previous business day. I.e.:

- 33 | | Matched Settlement Instructions having i) an Intended Settlement Date equal or earlier than the previ-  
34 | | ous business day and ii) a Matching Timestamp between the previous business day Start and End  
35 | | Timestamps.

36 | T2S analyses separately each instruction retrieved, and:

- 37 | | Settlement Instructions automatically generated by T2S for realignment purposes are discarded, as they  
38 | | are out of scope of the T2S Penalty Mechanism;

- 1 | Settlement Instructions with ISO Transaction Code "CORP" (related to Corporate Actions on Stock) are  
2 | exempted, as they are not subject to penalties;
- 3 | Settlement Instructions with Settlement Transaction Condition "BSSP" (resulting from a partially success-  
4 | ful buy-in i.e. instructed for the remaining quantity to be settled) and whose counterparty Settlement In-  
5 | struction also have Settlement Transaction Condition "BSSP", are exempted; i.e. Settlement Instruction  
6 | won't be exempted if its counterparty Settlement instruction does not have Settlement Transaction Con-  
7 | dition "BSSP".

8 | For the rest of Settlement Instructions T2S checks if they were matched late. For this purpose T2S verifies  
9 | the following conditions:

- 10 | | First, if the Settlement Instructions were matched at a point in time when it was no longer possible to  
11 | settle on the previous business day, i.e. after their cut-off. For this purpose T2S checks if:
- 12 | – either the Settlement Instruction got a LATE in its Reason History;
  - 13 | – or if its Matching Timestamp is later than the end of the last cut-off of the business day (Timestamp  
14 | when "EFOP" event is triggered) <sup>304</sup>;
- 15 | | If the first condition is not fulfilled, the instructions were matched before their cut-off. Hence, the in-  
16 | struction can only be eligible for a LMFP if its Intended Settlement Date is earlier than the previous busi-  
17 | ness day. Therefore, if the first condition is not fulfilled, T2S checks if the Intended Settlement Date of  
18 | the Settlement Instruction is before the previous business day.

19 | If any of the aforementioned conditions is fulfilled, the Settlement Instruction was matched late. In order to  
20 | finally determine the eligibility for a Penalty of the instruction, T2S checks if it was matched in T2S or if it  
21 | was received as already matched, and processes it as described hereafter:

- 22 | | If the Settlement Instruction was matched in T2S, its Validation Ending Timestamp is compared with the  
23 | Validation Ending Timestamp of its Counterpart's instruction: only the Settlement Instruction with the  
24 | latest Validation Ending Timestamp is deemed as eligible for a Penalty.
- 25 | | If the Settlement Instruction was received as already matched in T2S, the Settlement Instruction is eligi-  
26 | ble for a Penalty if it is the delivering leg of the already matched (i.e.: if the Settlement Instruction has  
27 | Movement Type "DELI").

28 | In case the Settlement Instruction is eligible for a LMFP, T2S retrieves the following information that would  
29 | be needed for the calculation of the Penalty:

- 30 | | The Quantity and/or Amount: quantity and/or amount to be settled at the time of matching and,
- 31 | | The Place of Trade (Market Identifier Code), which, if it is informed in the Settlement Instruction eligible  
32 | for the Penalty with the same value as the one in its counterpart's Settlement Instruction, will be used  
33 | as the Common MIC (Market Identifier Code) to determine the underlying Asset Type for the Penalty.

34 | Additionally, for each Penalty to be calculated, T2S identifies the Applicable Parties, i.e.: the Failing Party to  
35 | which the Penalty is imposed, and the Counterparty, non-failing Party, to which the Penalty is credited.

---

304 | This step is performed to cater for the cases in which the settlement instruction doesn't get a LATE in its reason History because, having been matched after the EFOP event, it wasn't possible to attempt its settlement.

1 In case of instructions matched in T2S:

2 | The Failing Party will be the account owner of the securities account of the Settlement Instruction eligi-  
3 ble for the LMFP, whereas

4 | The non-Failing Party will be the securities account owner of the counterpart 's Settlement Instruction.

5 In external CSD settlement scenarios, T2S will consider the "External CSD" as the securities account owner  
6 of the relevant Settlement Instruction.

7 In case of already matched instructions, the Instructing Party of the already matched Settlement Instruction  
8 will be both the Failing and the non-Failing Party, as the information for identifying the last participant to  
9 enter the relevant Settlement Instruction is not available in T2S.

10 Once the Applicable Parties are identified, T2S analyses whether they are a CCP or not by checking if their  
11 BIC is in the "Cash Penalties CCP List" of the Attribute Domain, as T2S shall identify and flag in the Penalty  
12 reports the T2S Parties or the Counterparties of the Penalty(ies) that are a Central Counterparty (CCP).

13 Then, T2S triggers the identification of the Calculation Method that has to be used to calculate the Penalty.

14 **Identification of the Calculation Method:**

15 There are four possible Calculation Methods:

- 16 | "SECU": Calculation Method based on the quantity of securities failed to be delivered, the price of the  
17 Security and the Penalty rate of the relevant Asset Type;
- 18 | "MIXE": Calculation Method based on the quantity of securities failed to be delivered, the price of the  
19 Security and the discount rate of the relevant Currency, or "MIXE";
- 20 | "CASH": Calculation Method based on the amount of cash failed to be delivered and the discount rate of  
21 the relevant Currency.
- 22 | "BOTH": the Penalty is calculated as the sum of the Penalty calculated with the "SECU" method and the  
23 "CASH" method.

24 The Calculation Method to be used depends on the Type of Settlement Instruction:

25 **TABLE 142 - CALCULATION METHOD IDENTIFICATION**

26

Penaty Type	Settlement Instruction Type	Calculation Method
SEFP	DVP, DFOP or RFOP	SECU
	RVP	MIXE
	PFOD-Debit or PFOD-Credit	CASH
	DWP or RWP	BOTH
LMFP	DVP, DFOP or RFOP	SECU
	RVP <sup>305</sup>	MIXE

305 As described previously in "Eligibility for a Late Matching Fail Penalty (LMFP)", in case of a RVP received as already matched, the Settlement Instruction deemed as eligible for the LMFP is only the delivering leg (i.e. the DVP).

Penalty Type	Settlement Instruction Type	Calculation Method
	PFOD-Debit or PFOD-Credit	CASH
	DWP or RWP	BOTH

1 After the above processes, Penalties have been detected and are ready for their calculation. T2S has identi-  
2 fied the Penalties to be computed for the previous business day and assigned them the following infor-  
3 mation:

- 4 | A Common Penalty ID (composed of 15 characters);
- 5 | The Individual Penalty ID for the Failing Party (F+Common Penalty ID)
- 6 | The Individual Penalty ID for the Non-Failing Party (N+Common Penalty ID)
- 7 | The Penalty Detection Date, i.e.: the previous business date;
- 8 | The type of Penalty: SEFP or LMFP;
- 9 | The Calculation Method (SECU, MIXE, CASH or BOTH);
- 10 | The Security
- 11 | Quantity of the underlying Settlement Instruction
- 12 | The payment type of the underlying Settlement Instruction (FREE or APM); and
- 13 | Amount of the underlying Settlement Instruction

#### 14 **1.6.1.14.5 Penalty Calculation**

15 Every business day, after the Penalties to be computed for the previous business day have been detected,  
16 T2S calculates their amount.

17 T2S calculates Penalties in T2S Settlement Currencies:

- 18 | For Penalties on Settlement Instructions against payment, the Penalty is calculated in the currency of the  
19 cash leg;
- 20 | For Penalties on Settlement Instructions free of payment, the Penalty is calculated "EUR", except when  
21 the underlying Security (if the settlement type of the underlying Security is nominal) or in the currency  
22 of the Reference Price (if the settlement type of the underlying Security is Unit) is a non-Euro T2S Set-  
23 tlement Currency (e.g. "DKK"), and the BIC of either the CSD of the failing party or the CSD of the non-  
24 failing party of the penalty is in the List of CSDs with penalty computation in non-Euro T2S settlement  
25 currencies for FOPs, for that given currency. If this is the case, the Penalty is calculated in the non-Euro  
26 T2S settlement currency.

27 The Penalty amount will be the sum of as many sub-amounts as business days the Penalty applies to. I.e.:

- 28 | A SEFP always applies to a single business day (therefore it has a single sub-amount), which is the de-  
29 tection date of the Penalty. It is worth mentioning that a Settlement Instruction may have several SEFPs  
30 if it fails to settle in T2S on several business days. Each SEFP will be computed for each business day the  
31 Settlement Instruction fails in T2S.

- 1 | A LMFP applies to each business day when the Settlement Instruction was due to settle according to the  
2 | T2S calendar <sup>306</sup>, i.e.:
- 3 | – The business days as from the ISD <sup>307</sup> until, and including, the business day when the instruction is  
4 | matched, in case that the instruction is matched after its relevant cut-off <sup>308</sup>;
  - 5 | – The business days as from the ISD <sup>309</sup> until, and excluding, the business day when the instruction is  
6 | matched in case that the instruction is matched before its relevant cut-off.
- 7 | For each applicable business day of the Penalty, T2S checks if the Security of the Settlement Instruction is  
8 | subject to penalties (i.e. is defined in the list of Security Subject to Cash Penalties for the relevant date):
- 9 | | In case the Security of the Settlement Instruction is not subject to penalties in all the applicable business  
10 | days, T2S records the Penalty with Status "Not computed" (NCOM), but no further processing is needed,  
11 | the Penalty will not be reported.
  - 12 | | In case the Security of the Settlement Instruction is subject to penalties at least in one of the applicable  
13 | business days, T2S records the Penalty with Status 'active' ('ACTV') <sup>310</sup> and computes it based on the rel-  
14 | evant sub-amount(s) for the applicable business days for which the Security is subject to penalties.
- 15 | T2S calculates each sub-amount using the Calculation Method previously identified by the Penalty Eligibility  
16 | process:

---

306 T2S operating days that are: either not closing days for the relevant currency if the underlying instruction is against payment; or not common closing days all currencies if the if the underlying instruction is free of payment

307 for Settlement Instructions with Intended Settlement Date prior the Entry into Force of the CSDR, the sub-amounts of a LMFP will apply from the Date of the Entry into Force of the CSDR.

308 Whether the instruction was matched before or after its Cut-off, was checked by T2S during the "Eligibility for a Late Matching Fail Penalty (LMFP)"

309 for Settlement Instructions with Intended Settlement Date prior the Entry into Force of the CSDR, the sub-amounts of a LMFP will apply from the Date of the Entry into Force of the CSDR.

310 Status 'active' ('ACTV') with no reason code

1  
2 **TABLE 143 - FORMULA FOR EACH CALCULATION METHOD**

Calculation Method	Formula
CASH	Cash Discount Penalty Rate <sup>311</sup> x Amount <sup>312</sup>
SECU	Security Penalty Rate <sup>313</sup> x Reference Price <sup>314</sup> x Quantity <sup>315</sup>
MIXE	Cash Discount Penalty Rate <sup>316</sup> x Reference Price <sup>317</sup> x Quantity <sup>318</sup>
BOTH	SECU + CASH

3  
4 As shown in the table above, each Calculation Method requires a different set of reference data.

5 The required reference data for the Calculation Method (and if needed foreign exchange rates) is retrieved  
6 taking into account that the maximum period reference data remains in the system without being purged is  
7 3 calendar months, and that a penalty can be 52 calendar days in its appeal period. Consequently, in case a  
8 Settlement Instruction is matched in T2S with an ISD more than 40 <sup>319</sup> calendar days in the past (i.e.: in  
9 case of a LMFP), T2S will compute the LMFP:

- 10 | Using, for the business days that are within the last 40 calendar days, the reference data of the corre-  
11 sponding business day; and
- 12 | Using, for the business days that are before the last 40 calendar days, the reference data of the business  
13 day equal to current business day minus 40 calendar days.

14 The required reference data per Calculation Method <sup>320</sup> is selected as follows:

- 15 | "CASH" Calculation Method:  
16 The Cash Discount Penalty Rate <sup>321</sup> for the currency of the Penalty and the applicable business day.

---

311 Reference data retrieved from Reference Data

312 Underlying Settlement Instruction data already retrieved in the Penalty Eligibility process

313 Reference data retrieved from Reference Data

314 Reference data retrieved from Reference Data

315 Underlying Settlement Instruction data already retrieved in the Penalty Eligibility process

316 Reference data retrieved from Reference Data

317 Reference data retrieved from Reference Data

318 Underlying Settlement Instruction data already retrieved in the Penalty Eligibility process

319 40 being the result of subtracting the 52 calendars a penalty can be in its appeal period, to the 92 calendar days set as Retention Period.

320 "BOTH" is not described as the required reference data is the same as the one described for "SECU" and for "CASH"

321 Provided by Reference Data as a "BaseOneRate" i.e. rate expressed as a decimal, for example, 0.7 is 70%

- 1 | I "SECU" Calculation Method:
- 2 | The Security Penalty Rate <sup>322</sup> of the relevant Asset Type and the applicable business date; and the Ref-
- 3 | erence Price <sup>323</sup> for the Security and the applicable business date.
- 4 | Concretely, the Security Penalty Rate is retrieved as follows:
- 5 | For the Security and business date, Reference Data provides the derived Financial Instrument Type, the
- 6 | liquidity attribute in case of shares ("SHRS"), the Daily Price and the two possible Security Penalty Rates
- 7 | <sup>324</sup>(each one for the relevant asset type corresponding to instruments traded on SME growth market or
- 8 | not traded on SME growth market). T2S selects the applicable Security Penalty Rate depending on
- 9 | whether the Common MIC <sup>325</sup> is in the Reference Data´s list of MIC identifiers for SME Growth Markets:
- 10 | – If the Common MIC is in the list of SME Growth Markets, the Security Penalty Rate for instruments
- 11 | traded in an SME growth market applies;
- 12 | – If the Common MIC is not in the list of SME Growth Markets, the Security Penalty Rate for instruments
- 13 | not traded in an SME growth market applies.
- 14 | I "MIXE" Calculation Method:
- 15 | The Cash Discount Penalty Rate <sup>326</sup> for the currency of the Penalty and the applicable business day; and
- 16 | the Reference Price <sup>327</sup> for the Security and the applicable business date.
- 17 | **Use of foreign exchange rates:**
- 18 | In order to calculate the Penalty amount in the currency in which it must be calculated according to the prin-
- 19 | ciples described above, T2S applies an exchange rate <sup>328</sup> when necessary.
- 20 | I Converting the amount won't be necessary for Penalties with Calculation Method "CASH" (applied for
- 21 | penalties on free of delivery instructions: PFOD-Debit and PFOD-Credit), as the currency of the amount
- 22 | of cash failed to be delivered is, by definition, the currency of the cash leg of the instruction, which will
- 23 | always be a T2S settlement currency. I.e.:
- 24 |  $AMOUNT = \text{Cash Discount Penalty Rate} * \text{Amount failed to be delivered (in EUR or DKK)}$

---

322 Provided by Reference Data as a "BaseOneRate" i.e. rate expressed as a decimal, for example, 0.7 is 70%

323 Provided by Reference Data either as an amount if the settlement type of the underlying Security is Unit or as a coefficient if the settlement type of the underlying Security is Nominal. Prices as coefficient are provided as "BaseOneRate" i.e. rate expressed as a decimal, for example, 0.7 is 70%

324 Except if the Financial Instrument Type is "SOVR", in which case only one Security Penalty Rate is possible (see TABLE XX – Possible combinations and Assets Types)

325 As described in Penalty Eligibility Section [·page], the Common MIC is the Place of Trade (Market Identifier Code) specified with the same value in both, the underlying Settlement Instruction and the counterparts' Settlement Instruction.

326 Provided by Reference Data as a "BaseOneRate" i.e. rate expressed as a decimal, for example, 0.7 is 70%

327 Provided by Reference Data either as an amount if the settlement type of the underlying Security is Unit or as a coefficient if the settlement type of the underlying Security is Nominal. Prices as coefficient are provided as "BaseOneRate" i.e. rate expressed as a decimal, for example, 0.7 is 70%

328 If there is no foreign exchange rate in T2S for a given business day and currency, LMFP and SEFP cash penalties applicable for that business day and requiring conversion for that currency will not be calculated. See Section 1.2.7. Reference Data for Penalties for further clarification on the behaviour of the FX Rate.

1 | For Penalties with Calculation Method "SECU" or "MIXE", applying an exchange rate will be necessary in  
2 | case that the reference data used for the calculation is denominated in a different currency than the one  
3 | of the penalty as described in the following examples <sup>329</sup>:

#### 4 | **Example - Conversion of Penalties on Settlement Instructions Against Payment**

5 | For Penalties where the underlying Settlement Instruction is against payment (i.e. DVP or RVP) and there-  
6 | fore with Calculation Method "SECU" or "MIXE", the Penalty has to be calculated in the currency of the cash  
7 | leg, i.e. EUR or DKK. For this purpose, one or two foreign exchange rates might be necessary:

8 | | Currency of the Penalty is EUR: one Foreign Exchange Rate might be needed:  
9

	Calculation Method	Settlement Instruction Type	Cash leg Currency	Penalty Currency	Security/ Price Currency <sup>330</sup>	EUR FX Rate required
1	SECU	DVP	EUR	EUR	EUR	N/A
2	SECU	DVP	EUR	EUR	GBP	EURGBP
3	MIXE	RVP	EUR	EUR	EUR	N/A
4	MIXE	RVP	EUR	EUR	DKK	EURDKK

10 | | The first Penalty, with Calculation Method "SECU" because it is over a DVP Settlement Instruction, will  
11 | not need any Foreign Exchange Rate for its calculation.

12 | | The second Penalty, with Calculation Method "SECU" because it is over a DVP Settlement Instruction, will  
13 | be calculated as follows:

14 | ORIGINAL AMOUNT (in GBP) = Security Penalty Rate x Reference Price x Quantity failed to settle

15 | AMOUNT (in EUR) = ORIGINAL AMOUNT x [1 / Euro Foreign Exchange Rate (GBP)]

16 | | The third Penalty, with Calculation Method "MIXE" because it is over a RVP Settlement Instruction, will  
17 | not need any Foreign Exchange Rate for its calculation.

18 | | The fourth Penalty, with Calculation Method "MIXE" because it is over a RVP Settlement Instruction, will  
19 | be calculated as follows:

20 | ORIGINAL AMOUNT (in DKK) = Cash Discount Penalty Rate x Reference Price x Quantity failed to settle

21 | AMOUNT (in EUR) = ORIGINAL AMOUNT x [1 / Euro Foreign Exchange Rate (DKK)]

22 | | Currency of the Penalty is DKK: one or two Foreign Exchange Rates might be needed. In case two For-  
23 | eign Exchange Rates are applied, the EUR is used to pivot from the original currency to DKK, hence the  
24 | first Foreign Exchange Rate will be used to convert the amount to EUR, and the second one will be used  
25 | to convert the amount to DKK:

329 The application of an exchange rate for penalties with Calculation Method "BOTH" ("SECU" + "CASH") is not described separately as will depend on the need to apply it for its "SECU" part

330 Currency of the underlying Security if the settlement type of the Security is nominal; Currency of the Reference Price if the settlement type of the Security is Unit

1

	Calculation Method	Settlement Instruction Type	Cash leg Currency	Penalty Currency	Security/ Price Currency <sup>331</sup>	EUR FX Rates required
1	SECU	DVP	DKK	DKK	DKK	N/A
2	SECU	DVP	DKK	DKK	EUR	EURDKK
3	SECU	DVP	DKK	DKK	NOK	EURNOK   EURDKK
4	MIXE	RVP	DKK	DKK	DKK	N/A
5	MIXE	RVP	DKK	DKK	EUR	EURDKK
6	MIXE	RVP	DKK	DKK	CHF	EURCHF   EURDKK

2 | The first Penalty, with Calculation Method "SECU" because it is over a DVP Settlement Instruction, will  
3 not need any Foreign Exchange Rate for its calculation.

4 | The second Penalty, with Calculation Method "SECU" because it is over a DVP Settlement Instruction, will  
5 be calculated as follows:

6 ORIGINAL AMOUNT (in EUR) = Security Penalty Rate x Reference Price x Quantity failed to settle

7 AMOUNT (in DKK) = ORIGINAL AMOUNT x Euro Foreign Exchange Rate (DKK)

8 | The third Penalty, with Calculation Method "SECU" because it is over a DVP Settlement Instruction, will  
9 be calculated as follows:

10 ORIGINAL AMOUNT (in NOK) = Security Penalty Rate x Reference Price x Quantity failed to settle

11 AMOUNT (in DKK) = ORIGINAL AMOUNT x [1 / First Euro Foreign Exchange Rate (NOK)] x Second Euro  
12 Foreign Exchange Rate (DKK)

13 | The fourth Penalty, with Calculation Method "MIXE" because it is over a RVP Settlement Instruction, will  
14 not need any Foreign Exchange Rate for its calculation.

15 | The fifth Penalty, with Calculation Method "MIXE" because it is over a RVP Settlement Instruction, will be  
16 calculated as follows:

17 ORIGINAL AMOUNT (in EUR) = Cash Discount Penalty Rate x Reference Price x Quantity failed to settle

18 AMOUNT (in DKK) = ORIGINAL AMOUNT x Euro Foreign Exchange Rate (DKK)

19 | The sixth Penalty, with Calculation Method "MIXE" because it is over a RVP Settlement Instruction, will  
20 be calculated as follows:

21 ORIGINAL AMOUNT (in CHF) = Cash Discount Penalty Rate x Reference Price x Quantity failed to settle

331 Currency of the underlying Security if the settlement type of the Security is nominal; Currency of the Reference Price if the settlement type of the Security is Unit

1 AMOUNT (in DKK) = ORIGINAL AMOUNT x [1 / First Euro Foreign Exchange Rate (CHF)] x Second Euro  
2 Foreign Exchange Rate (DKK)

3 **Example - Conversion of Penalties on Settlement Instructions Free of Payment**

4 For Penalties where the underlying Settlement Instruction is free of payment (i.e. DFOP or RFOP) and there-  
5 fore with Calculation Method "SECU", the Penalty has to be calculated:

- 6 | In a T2S Settlement Currency different from "EUR" (e.g. "DKK") when: i) this currency is either the cur-  
7 rency of underlying Security (if the settlement type of the underlying Security is nominal) or the currency  
8 of the Reference Price (if the settlement type of the underlying Security is Unit), and ii) the BIC of either  
9 the CSD of the failing party or the CSD of the non-failing party of the penalty is in the List of CSDs with  
10 penalty computation in non-Euro T2S settlement currencies for FOPs for that given currency;
- 11 | In "EUR" in any other case.

12 **Currency of the Penalty is EUR:**

13 One Foreign Exchange Rate might be needed:  
14

	Calculation Method	Settlement Instruction Type	Security Settlement Type	Currency of the Security	Currency of the Price	BIC of either CSD defined for "DKK"	Penalty Currency	EUR FX Rates required
1	SECU	DFOP	Unit	N/A	EUR	N/A	EUR	N/A
2	SECU	DFOP	Unit	N/A	USD	N/A	EUR	EURUSD
3	SECU	DFOP	Unit	N/A	DKK	No	EUR	EURDKK
4	SECU	RFOP	Nominal	EUR	N/A	N/A	EUR	N/A
5	SECU	DFOP	Nominal	CAD	N/A	N/A	EUR	EURCAD
6	SECU	DFOP	Nominal	DKK	N/A	No	EUR	EURDKK

15 | The first Penalty, with Calculation Method "SECU" because it is over a DFOP Settlement Instruction, and  
16 with currency of the Reference Price (EUR) because the settlement type of the Security is Unit, will not  
17 need any Foreign Exchange Rate for its calculation.

18 | The second Penalty, with Calculation Method "SECU" because it is over a DFOP Settlement Instruction,  
19 and with currency of the Reference Price (USD) because the settlement type of the Security is Unit, will  
20 be calculated as follows:

21 ORIGINAL AMOUNT (in USD) = Security Penalty Rate x Reference Price x Quantity failed to settle

22 AMOUNT (in EUR) = ORIGINAL AMOUNT x [1 / Euro Foreign Exchange Rate (USD)]

23 | The third Penalty, with Calculation Method "SECU" because it is over a DFOP Settlement Instruction, and  
24 with currency of the Reference Price (DKK) because the settlement type of the Security is Unit, will be  
25 calculated in EUR because for DKK neither the BIC of CSD of the failing party nor the BIC of CSD of the  
26 non-failing party are in the List of CSDs with penalty computation in non-Euro T2S settlement currencies  
27 for FOPs. It will be calculated as follows:

1 ORIGINAL AMOUNT (in DKK) = Security Penalty Rate x Reference Price x Quantity failed to settle

2 AMOUNT (in EUR) = ORIGINAL AMOUNT x [1 / Euro Foreign Exchange Rate (DKK)]

3 | The fourth Penalty, with Calculation Method "SECU" because it is over a RFOP Settlement Instruction,  
4 and with currency of the underlying Security (EUR) because its settlement type is Nominal, will not need  
5 any Foreign Exchange Rate for its calculation.

6 | The fifth Penalty, with Calculation Method "SECU" because it is over a DFOP Settlement Instruction, and  
7 with currency of the underlying Security (CAD) because its settlement type is Nominal, will be calculated  
8 as follows:

9 ORIGINAL AMOUNT (in CAD) = Security Penalty Rate x Reference Price x Quantity failed to settle

10 AMOUNT (in EUR) = ORIGINAL AMOUNT x [1 / Euro Foreign Exchange Rate (CAD)]

11 | The sixth Penalty, with Calculation Method "SECU" because it is over a DFOP Settlement Instruction, and  
12 with currency of the underlying Security (DKK) because its settlement type is Nominal, will be calculated  
13 in EUR because for DKK neither the BIC of CSD of the failing party nor the BIC of CSD of the non-failing  
14 party are in the List of CSDs with penalty computation in non-Euro T2S settlement currencies for FOPs.  
15 It will be calculated as follows:

16 ORIGINAL AMOUNT (in DKK) = Security Penalty Rate x Reference Price x Quantity failed to settle

17 AMOUNT (in EUR) = ORIGINAL AMOUNT x [1 / Euro Foreign Exchange Rate (DKK)]

18 **Currency of the Penalty is DKK:**

19 When the currency for penalties on free of payment instructions is DKK, the currency of the Security or the  
20 currency of the Price must be "DKK" (, otherwise the Penalty is calculated in "EUR"). Therefore, no Foreign  
21 Exchange Rate is needed:  
22

	Calculation Method	Settlement Instruction Type	Security Settlement Type	Currency of the Security	Currency of the Price	BIC of either CSD defined for "DKK"	Penalty Currency	EUR FX Rates required
1	SECU	DFOP	Unit	N/A	DKK	Yes	DKK	N/A
2	SECU	RFOP	Nominal	DKK	N/A	Yes	DKK	N/A

23 | The first Penalty, with Calculation Method "SECU" because it is over a DFOP Settlement Instruction, and  
24 with currency of the Reference Price (DKK) because the settlement type of the Security is Unit, will not  
25 need any Foreign Exchange Rate for its calculation as it has to be calculated in DKK because the BIC of  
26 either CSD of the failing party or the CSD of the non-failing party (or both) is in the List of CSDs with  
27 penalty computation in non-Euro T2S settlement currencies for FOPs for this currency.

28 | The second Penalty, with Calculation Method "SECU" because it is over a RFOP Settlement Instruction,  
29 and with currency of the underlying Security (DKK) because its settlement type is Nominal, will not need  
30 any Foreign Exchange Rate for its calculation as it has to be calculated in DKK because the BIC of either  
31 CSD of the failing party or the CSD of the non-failing party (or both) is in the List of CSDs with penalty  
32 computation in non-Euro T2S settlement currencies for FOPs for this currency.

#### 1.6.1.14.6 Penalty Modifications

T2S provides the CSDs with the features to make ex-post modifications/corrections on the Penalties computed. As a general rule, only the CSD of the Failing Party is allowed to perform modifications on a Penalty and as long as they are requested in the allowed time frame (also known as Appeal Period). The modifications a CSD may perform on a Penalty are:

- I Removal of a Penalty: in cases foreseen in the CSDR framework when settlement cannot be performed for reasons that are independent from any of the CSD participants or the CSD, the Penalty shall not be charged. In such cases, the CSD shall be able to remove the Penalty<sup>332</sup> computed.
- I Re-inclusion of a previously removed Penalty: to cater for operational errors in the Removal of Penalties, T2S allows the CSD to re-include a Penalty that has been previously removed.
- I Switch between the Failing and non-Failing Party of a Penalty: to cater inter alia for cases where a transaction is settled on multiple platforms, i.e. when settlement on T2S depends on the fulfilment of a condition outside T2S. For example, when cash settlement takes place outside T2S while the settlement of securities takes place in T2S, conditional securities deliveries (CoSD) may be used by T2S Actors to block the securities in T2S until cash settlement takes place on the relevant platform. Depending on the CoSD configuration and on the business scenario, T2S could compute and assign the Penalty to the incorrect party (i.e. to the delivering instead of to the receiving participant or vice versa), e.g. because the free-of-payment delivery in T2S is failing, while it is due to the lack of cash of the Counterparty on the external cash settlement platform. Hence, in order to allow the CSD to make the required ex-post correction, the CSD shall be able to swap the Failing Party and the non-Failing Party of the Penalty.
- I Re-allocation of a LMFP: to cater for the cases where an already matched Settlement Instruction is sent late to T2S and, consequently, a LMFP is computed and assigned to the Instructing Party as both the Failing Party and non-Failing Party. T2S does not have the information for identifying the last participant to enter the relevant instruction, but the Instructing Party does. Hence, in such cases, the CSD shall be able to re-allocate the Penalty from the initially assigned Failing and non-Failing Party (i.e. the Instructing Party of the Settlement Instruction) to the Delivering Party and the Receiving Party of the instruction (i.e. as the actual Failing Party and non-Failing Party or vice versa)

CSDs, or the T2S Operator on their behalf, can send their modification requests via the T2S GUI or A2A via flat files (see section Penalty Modification Requests bulk file format specifications).

T2S validates each modification request received in order to reject it if it does not successfully pass the validations or to execute otherwise.

#### Modification Request validation:

- I For a Removal request, T2S performs the following validations:
  - It refers to the Penalty by the Individual Penalty ID and not by the Common Penalty ID;
  - The Penalty with the Individual Penalty ID exists, has Status "Active" ("ACTV") and is on its Appeal Period (i.e. it is modifiable);
  - The Individual Penalty ID relates to the Failing Party;

332 The whole Penalty is removed (it is not possible to remove a portion /sub-amount of a Penalty). E.g. full LMFP will be removed.

- 
- 1 – The CSD requesting the removal is the CSD of the Failing Party of the Penalty; and
- 2 – The Removal request provides:
- 3 – A Removal Reason, among the standard reason codes defined by ESMA, i.e.: "INSO", "SEMP", "SESU",
- 4 "SUSP", "TECH" or "OTHR";
- 5 A 'Description text' when the Removal Reason is "OTHR".
- 6 | For a Re-inclusion request, T2S performs the following validations:
- 7 – It refers to the Penalty by the Individual Penalty ID and not by the Common Penalty ID;
- 8 – The Penalty with the Individual Penalty ID exists, has Status Removed ("REMO"), is not Removed be-
- 9 cause of a previous Re-allocation, and is on its Appeal Period (i.e. it is modifiable);
- 10 – The Individual Penalty ID relates to the Failing Party; and
- 11 – The CSD requesting the re-inclusion is the CSD of the Failing Party of the Penalty.
- 12 | For a Switch request, T2S performs the following validations:
- 13 – It refers to the Penalty by the Individual Penalty ID and not by the Common Penalty ID;
- 14 – The Penalty with the Individual Penalty ID exists, has Status "Active" ("ACTV") and is on its Appeal
- 15 Period (i.e. it is modifiable);
- 16 – The Individual Penalty ID relates to the Failing Party;
- 17 – The CSD requesting the switch is the CSD of the Failing Party of the Penalty; and
- 18 – The Switch request provides a 'Description text'.
- 19 | For a Re-allocation request, T2S performs the following validations:
- 20 – It refers to a Penalty by the Common Penalty ID and not by the Individual Penalty ID;
- 21 – The Penalty with the Common Penalty ID exists, has Status "Active" ("ACTV"), has not been re-
- 22 allocated before and is on its Appeal Period (i.e. it is modifiable);
- 23 – The Penalty with the Common Penalty ID is a LMFP over a Settlement Instruction sent as already
- 24 matched to T2S;
- 25 – The CSD requesting the Re-allocation is the same as the CSD of the Instructing Party of the underly-
- 26 ing Settlement Instruction of the LMFP;
- 27 – The new Failing Party BIC and the new non-Failing Party BIC provided are the BICs of the delivering
- 28 and the receiving Party of the underlying Settlement Instruction;
- 29 – If the new Failing Party BIC corresponds to the delivering party of the underlying Settlement Instruc-
- 30 tion, then the new Non-Failing Party BIC corresponds to the receiving party (or vice versa).
- 31 – The T2S Reference of the failed Settlement Instruction is provided if, and only if, the specified new
- 32 Failing Party BIC is equal to the New Non-Failing Party BIC; and
- 33 – The T2S reference of the failed Settlement Instruction is either the delivering or the receiving Settle-
- 34 ment Instruction created in T2S for the underlying instruction sent already matched.

1 In case the Modification Request does not successfully pass the validations, T2S rejects it and informs the  
2 T2S Actor (see section Send Penalty Modification Requests).

3 Otherwise, T2S executes the modification request, informs the T2S Actor (see section Send Penalty Modifica-  
4 tion Requests) and performs the relevant actions over the Penalty according to the request, as described  
5 hereafter.

6 **Modification of the Penalty:**

7 Depending on the request, the actions performed on the Penalty are the following:

8 | In a Removal, T2S:

- 9 – Sets the Status to Removed (“REMO”);
- 10 – Stores the Removal Reason specified by the CSD in the request as well as the additional description  
11 text included in case the Removal Reason was “OTHR”;
- 12 – Reduces the Amount to zero; and
- 13 – Flags the Penalty as “to be reported”, so it is included in the next List of Modified Penalties Report but  
14 without providing information about its Sub-amounts (Calculation Data) that will not be visible any  
15 more.

16 | In a Re-inclusion, T2S:

- 17 – Sets the Status to Active (“ACTV”) and Reason Code to Updated (“UPDT”);
- 18 – Restores the Amount as it was before the Penalty was removed; and
- 19 – Flags the Penalty as “to be recalculated” and as “to be reported”, so it is recalculated in the next Re-  
20 calculation process and it is included in the next List of Modified Penalties Report.

21 | In a Switch, T2S:

- 22 – Sets the Reason Code to Switched (“SWIC”);
- 23 – Stores the additional description text if specified by the CSD;
- 24 – Updates the Debit/Credit indicator of both Applicable Parties (if the value is “Debit” it is updated to  
25 “Credit” and vice versa) so the Failing Party becomes the non-Failing Party and the non-Failing Party  
26 becomes the Failing Party:

ORIGINAL PENALTY		PENALTY SWITCHED
Failing Party (“Debit”)	⇒	Non-Failing Party (“Credit”)
Non-Failing Party (“Credit”)	⇒	Failing Party (“Debit”)

28 It is worth mentioning that the Individual Penalty ID is not updated. Hence, after the first switch, the Indi-  
29 vidual Penalty ID for the (new) Failing Party will start by “N”, and the Individual Penalty ID for the (new)  
30 Non-Failing Party will start by “F”.

31 | Updates the Calculation Method if necessary in order to remain in line with the Table Table 142 - [Calcu-  
32 lation Method Identification](#) [▶ 613]. I.e.: <sup>333</sup>

- 1 – If the Calculation Method is "MIXE", it is updated to "SECU";
- 2 – If the Calculation Method is "SECU" and the Payment Type of the underlying Settlement Instruction is
- 3 against payment, it is updated to "MIXE".
- 4 – Flags the Penalty as "to be recalculated" and as "to be reported", so it is recalculated in the next Re-
- 5 calculation process and it is included in the next List of Modified Penalties Report.
- 6 | In a Re-allocation, T2S removes the existing Penalty and creates a new reallocated Penalty:
- 7 – For the existing Penalty, T2S:
- 8 – Sets the Status to Removed ("REMO") and Reason Code to Re-allocation ("RALO");
- 9 – Reduces the Amount to Zero;
- 10 – Storing the reference of the new Penalty it has been re-allocated to; and
- 11 – Flags the Penalty as "to be reported", so it is included in the next List of Modified Penalties Report but
- 12 without providing information about its Sub-amounts (Calculation Data) that will not be visible any
- 13 more.
- 14 – For the new reallocated Penalty, T2S:
- 15 | Sets the Status Active ("ACTV") and Reason Code Re-allocation ("RALO");
- 16 | Storing the reference <sup>334</sup> of the removed Penalty it has been re-allocated from; and
- 17 | Defines the Calculation Method according to Table Table 142 - [Calculation Method Identification](#) [▶ 613]
- 18 | Flags the Penalty as "to be recalculated" and as "to be reported", so it is recalculated in the next Recal-
- 19 culation process and it is included in the next List of Modified Penalties Report.

#### 20 **1.6.1.14.7 Recalculation**

21 Every business day, after the Penalty Calculation process, T2S recalculates Penalties due to the execution of

22 modifications requested by the CSD (see previous section) or due to Reference Data updates.

23 The Reference Data updates that can affect a Penalty are:

- 24 | Insertion of a Security in the Securities Subject to Cash Penalties;
- 25 | Updates on the attributes of a Security Subject to Cash Penalties (the Liquidity or the Financial Instru-
- 26 ment Type associated to the underlying Security's CFI) and the related Daily Price or Security Penalty
- 27 Rate **(such rate depends on, among other variables, the applicable CFI code and could**
- 28 **change due to a CFI code modification, as described in [Identification and routing](#) [▶ 2412]);{CR-**
- 29 **808}**
- 30 | Changes (insertion, update or deletion) in the Cash Discount Penalty Rate (of a Currency);
- 31 | Changes (insertion, update or deletion) in the Euro Foreign Exchange Rate (vs a Currency); and
- 32 | Changes (insertion, update or deletion) in the List of SME Growth Markets.

---

333 The Common Penalty ID

334 The Common Penalty ID

- 1 T2S automatically recalculates Penalties affected by the above updates as long as the Penalty:
- 2 | Has a status different from Removed ("REMO");
  - 3 | Is on its Appeal Period (i.e. is modifiable);
  - 4 | Has not been flagged as "to be recalculated" due to the execution of a modification request <sup>335</sup>.
- 5 For this purpose, every business day Reference Data provides the Penalty Mechanism with the relevant data  
6 updates <sup>336</sup> occurred since the last deadline for provision of penalty data (see section [Settlement Day](#)  
7 [[▶ 237](#)]). In case several data updates affect the same Penalty, all of them will be taken into account (i.e.  
8 T2S recalculates the Penalty considering all the Reference Data updates occurred).
- 9 The daily communication from Reference Data includes the business day(s) impacted by each data update,  
10 so that the Penalty Mechanism can identify the affected Penalties <sup>337</sup> and perform the relevant actions on  
11 them as described in the following table:

**TABLE 144 - SELECTION AND ACTIONS ON THE PENALTY FOR EACH UPDATE TYPE**

Update Type	Selection and Actions on the Penalty
Insertion of a Security in the Securities Subject to Cash Penalties	<p>T2S selects Penalties with the related Security and an applicable business day equal to the ones informed in the update.</p> <p>For each Penalty selected:</p> <ul style="list-style-type: none"> <li>  In case the Status is Not Computed "NCOM", it is updated to Active "ACTV" and the Reason Code is set to New Penalty "NEWP";</li> <li>  In case the Status is Active "ACTV", the Reason Code is set to Updated "UPDT";</li> <li>  The Penalty Amount is recalculated with the new Reference data; and</li> <li>  It is flagged as "to be reported", so it is included in the next List of Modified Penalties Report.</li> </ul>
Updates on the attributes of a Security Subject to Cash Penalties (the Liquidity or the Financial Instrument Type associated to the underlying Security's CFI) and the relat-	T2S selects Penalties with status Active "ACTV", with relevant Calculation Method <sup>338</sup> , and with the related Security and an applicable business day equal to the ones informed

335 When a Penalty is flagged as "to be recalculated" it will be recalculated considering the latest the Reference Data, so there is no need to recalculate these Penalties because of Reference Data updates

336 When impacting business days before the previous business day

337 As long as they fulfill the above mention conditions for being recalculated (status different from Removed ("REMO"), on their Appeal Period and not flagged as "to be recalculated" due to the execution of a modification request)

338 E.g. for changes in the Liquidity or Security Penalty Rate, only Penalties with Calculation Method "SECU" or "BOTH" are selected, whereas for changes in the Daily Price, Penalties with Calculation Method "SECU", "MIXE" or "BOTH" are selected

Update Type	Selection and Actions on the Penalty
<p>Updated Daily Price or Security Penalty Rate</p>	<p>in the update.</p> <p>For each Penalty selected:</p> <ul style="list-style-type: none"> <li>  The Penalty Reason Code is set to Updated "UPDT";</li> <li>  The Penalty Amount is recalculated with the new Reference Data; and</li> <li>  It is flagged as "to be reported", so it is included in the next List of Modified Penalties Report.</li> </ul>
<p>Changes on a Cash Discount Penalty Rate (of a Currency)</p>	<p>T2S selects Penalties with status Active "ACTV", Calculation Method different from "SECU", and with the related Currency and an applicable business day equal to the ones informed in the update.</p> <p>For each Penalty selected:</p> <ul style="list-style-type: none"> <li>  The Penalty Reason Code is set to Updated "UPDT";</li> <li>  The Penalty Amount is recalculated with the new Reference Data; and</li> <li>  It is flagged as "to be reported", so it is included in the next List of Modified Penalties Report.</li> </ul>
<p>Changes on an Euro Foreign Exchange Rate (vs a Currency)</p>	<p>T2S selects Penalties with status Active "ACTV" and the related Currency of the Original amount and an applicable business day equal to the ones informed in the update.</p> <p>For each Penalty selected:</p> <ul style="list-style-type: none"> <li>  The Penalty Reason Code is set to Updated "UPDT";</li> <li>  The Penalty Amount is recalculated with the new Reference Data; and</li> <li>  It is flagged as "to be reported", so it is included in the next List of Modified Penalties Report.</li> </ul>
<p>Changes in the list of MIC identifiers for SME Growth Markets</p>	<p>T2S selects Penalties with status Active "ACTV", Calculation Method "SECU" or "BOTH", Security with Financial Instrument Type different from "SOVR"<sup>339</sup> and with the related Common MIC equal to the MIC informed in the update.</p> <p>For each Penalty selected:</p> <ul style="list-style-type: none"> <li>  The Penalty Reason Code is set to Updated "UPDT";</li> </ul>

339 When the Financial Instrument Type is SOVR, the SME growth market is not relevant for the Calculation of the Penalty, hence the SME attribute is updated but without changing the Reason code of the affected Penalty, neither recalculating nor flagging the Penalty as "to be reported"

Update Type	Selection and Actions on the Penalty
	<ul style="list-style-type: none"><li data-bbox="813 353 1423 427">  The Penalty Amount is recalculated with the new Reference Data; and</li><li data-bbox="813 450 1423 517">  It is flagged as "to be reported", so it is included in the next List of Modified Penalties Report.</li></ul>

### 1 **Example - Insertion of Security Subject to Cash Penalties**

2 One Penalty (SEFP) is generated with the following data:

3 | Detection Date: 23rd September 2021;

4 | Penalty Type: SEFP;

5 | Underlying DVP Settlement Instruction Security: ISIN - ES0113211835;

6 | The Penalty Status is set to Not Computed "NCOM", because the Security with ISIN: ES0113211835, was  
7 not subject to penalties on 23rd September 2021.

8 A second Penalty (LMFP) is generated with the following data:

9 | Detection Date: 23rd September 2021;

10 | Penalty Type: "LMFP";

11 | Underlying DVP Settlement Instruction ISD is 21st September 2021;

12 | Underlying DVP Settlement Instruction Security: ISIN - ES0113211835;

13 | The Penalty applies to 21st, 22nd and 23rd September 2021, as it was matched on the 23rd September  
14 2021 after the DVP cut-off, and the three business days are not closing days for the currency of the Set-  
15 tlement Instruction. Hence, the Penalty is composed of 3 sub-amounts, one for each of the applicable  
16 business days.

17 | The Penalty Status is set to Not Computed "NCOM", because the Security with ISIN: ES0113211835 was  
18 not subject to penalties in any of the applicable business days (21st, 22nd and 23rd September 2021).

19 On the 29th September 2021, the relevant CSD defines the Security as subject to penalties from the 22nd  
20 September 2021 onwards.

21 Insert of Securities Subject to Cash Penalties with the following data:

22 | Business days impacted:

23 – 22nd September 2021; 23rd September 2021; 24th September 021; 27th September 2021.

24 | Security: ISIN - ES0113211835.

25 The first Penalty (SEFP) of the example is affected because it has the related Security and applicable busi-  
26 ness day (23rd September 2021) equal to the ones of the update.

27 The second Penalty (LMFP) of the example is affected because it has the related Security and applicable  
28 business days (22nd and 23rd September 2021) equal to the ones of the update.

29 T2S therefore, performs the following action on both Penalties:

30 | Updates the Status from Not Computed "NCOM" to Active "ACTV"

1 Note that the LMFP is set to Active "ACTV", because now the Security is subject to penalties in at least one  
2 of the applicable business days, in this case, in two business days : 22nd and 23rd September 2021 (the  
3 Security is just not subject to penalties on 21st September 2021).

- 4 | Sets the Reason Code to New penalty "NEWP";
- 5 | Recalculates the Penalty amount with the new Reference data; and
- 6 | Flags them as "to be reported", so they are included in the next List of Modified Penalties Report, where  
7 the "TransactionDetails" in block "RelatedTransaction" will be reported, given that these penalties have  
8 Reason "NEWP".

### 9 **Example – Update on Attributes of a Security Subject to Penalties**

10 One Penalty (SEFP) is generated with the following data:

- 11 | Detection Date: 23rd September 2021;
- 12 | Penalty Type: SEFP;
- 13 | Underlying DVP Settlement Instruction Security: ISIN - DE0113211836;
- 14 | The Penalty Status is set to Active "ACTV", because the Security with ISIN: DE0113211836, is subject to  
15 penalties since its issuance in March 2021.

16 A second Penalty (LMFP) is generated with the following data:

- 17 | Detection Date: 23rd September 2021;
- 18 | Penalty Type: "LMFP";
- 19 | Underlying DVP Settlement Instruction ISD is 21st September 2021;
- 20 | Underlying DVP Settlement Instruction Security: ISIN - DE0113211836;
- 21 | The Penalty applies to 21st, 22nd and 23rd September 2021, as it was matched on the 23rd September  
22 2021 after the DVP cut-off, and the three business days are not closing days for the currency of the Set-  
23 tlement Instruction. Hence, the Penalty is composed of 3 sub-amounts, one for each of the applicable  
24 business days.
- 25 | The Penalty Status is set to Active "ACTV", because the Security with ISIN: DE0113211836, is subject to  
26 penalties in the 3 applicable business days (21st, 22nd and 23rd September 2021).

27 On the 29th September 2021, the relevant CSD updates the value of the Liquidity Indicator (from "Liquid" to  
28 "Illiquid") of the existing instance of the Security Subject to Cash Penalties for DE0113211836 that has "valid  
29 from" in November 2020.

30 Accordingly the update impacts:

- 31 | All business days from November 2020 until the 27th September 2021;
- 32 | The security: ISIN - DE0113211836.

33 The first Penalty (SEFP) of the example is affected because it has the related Security and applicable busi-  
34 ness day (23rd September 2021) equal to the ones of the update.

35 The second Penalty (LMFP) of the example is affected because it has the related Security and applicable  
36 business days (21st, 22nd and 23rd September 2021) equal to the ones of the update.

1 T2S therefore, performs the following action on both Penalties:

- 2 | Sets the Reason Code to Updated "UPDT";
- 3 | Recalculates the Penalty amount with the new value of the Liquidity Indicator; and
- 4 | Flags them as "to be reported", so they are included in the next List of Modified Penalties Report.

5

6 It is worth mentioning that, on the 29th September 2021, it would have been possible for the relevant CSD  
7 to change the Liquidity indicator of the Security without triggering any recalculation.

8 For this purpose, instead of updating the value of the Liquidity Indicator of the existing instance of the Secu-  
9 rity Subject to Cash Penalties for DE0113211836, the CSD should have:

- 10 | Closed the existing instance of the Security Subject to Cash Penalties for DE0113211836 defining it as  
11 "Liquid" (i.e. setting the "Valid to" to 29th September), and
- 12 | Opened a new instance of the Security Subject to Cash Penalties for DE0113211836 defining it as "Illiq-  
13 uid" (i.e. creating it with "Valid from" 30th September).

14 Example – Updated in a Reference Price

15 One Penalty (SEFP) is generated with the following data:

- 16 | Detection Date: 23rd September 2021;
- 17 | Penalty Type: SEFP;
- 18 | Underlying DVP Settlement Instruction Security: ISIN - IT0113211838;
- 19 | Calculation method "SECU"
- 20 | The Penalty Status is set to Active "ACTV", because the Security with ISIN: IT0113211838, is subject to  
21 penalties since its issuance in March 2021.

22 A second Penalty (LMFP) is generated with the following data:

- 23 | Detection Date: 23rd September 2021;
- 24 | Penalty Type: "LMFP";
- 25 | Underlying DVP Settlement Instruction ISD is 21st September 2021;
- 26 | Underlying Settlement Instruction Security: ISIN - IT0113211838;
- 27 | Calculation method "SECU"
- 28 | The Penalty applies to 21st, 22nd and 23rd September 2021, as it was matched on the 23rd September  
29 2021 after the DVP cut-off, and the three business days are not closing days for the currency of the Set-  
30 tlement Instruction. Hence, the Penalty is composed of 3 sub-amounts, one for each of the applicable  
31 business days.
- 32 | The Penalty Status is set to Active "ACTV", because the Security with ISIN: IT0113211838, is subject to  
33 penalties in the 3 applicable business days (21st, 22nd and 23rd September 2021).

34 On the 29th September 2021, the relevant CSD updates the Price of the Security for the business day 22nd  
35 of September. Accordingly the update impacts:

1 | Business day: 22nd September 2021;

2 | Security: ISIN - IT0113211838.

3 The first Penalty (SEFP) of the example is not affected because it has the related Security but its applicable  
4 business day (23rd September 2021) is different from the one of the update.

5 The second Penalty (LMFP) of the example is affected because it has the related Security and an applicable  
6 business day (22nd September 2021) equal to the one of the update.

7 T2S therefore, performs the following action only on the second Penalty (i.e. on the LMFP):

8 | Sets the Reason Code to Updated "UPDT";

9 | Recalculates the Penalty amount with the new value of the Price for the 22nd September; and

10 | Flags it as "to be reported", so it is included in the next List of Modified Penalties Report.

### 11 **Example – Changes on Cash Discount Penalty**

12 One Penalty (SEFP) is generated with the following data:

13 | Detection Date: 24th September 2021;

14 | Penalty Type: SEFP;

15 | Underlying RVP Settlement Instruction Security: ISIN - IT0113211838;

16 | Calculation method "MIXE"

17 | The Penalty Status is set to Active "ACTV", because the Security with ISIN: IT0113211838, is subject to  
18 penalties since its issuance in March 2021.

19 One Penalty (SEFP) is generated with the following data:

20 | Detection Date: 24th September 2021;

21 | Penalty Type: SEFP;

22 | Underlying FOP Settlement Instruction Security: ISIN - IT0113211838;

23 | Calculation method "SECU"

24 | The Penalty Status is set to Active "ACTV", because the Security with ISIN: IT0113211838, is subject to  
25 penalties since its issuance in March 2021.

26 On the 29th September 2021, the ECB updates the Cash Discount Penalty Rate of the EUR for the business  
27 day 24th of September. Accordingly the update impacts:

28 | Business day: 24th September 2021;

29 | Currency: EUR.

30 The first Penalty (SEFP) of the example is affected because it has Calculation Method "MIXE" and the related  
31 Currency and applicable business day (24th September 2021) equal to one of the update.

32 The second Penalty (SEFP) of the example is not affected because it has Calculation Method "SECU" (hence  
33 no use of a Cash Discount Penalty Rate of a Currency).

34 T2S therefore, performs the following action only on the first Penalty (i.e. on the SEFP with Calculation  
35 method "MIXE"):

- 1 | Sets the Reason Code to Updated "UPDT";
- 2 | Recalculates the Penalty amount with the new value of the Price for the 24th September; and
- 3 | Flags it as "to be reported", so it is included in the next List of Modified Penalties Report.

#### 4 | **1.6.1.14.8 End of Appeal Period**

5 | T2S shall only allow the modification or update of a Penalty during its Appeal Period.

6 | For this purpose, the End of the Appeal Period process updates the Penalties detected on the previous  
7 | month to flag them as not modifiable any longer and to prevent them from being updated or modified.

8 | Once a month, on the business day defined in Reference Data to trigger the End of Appeal Period process,  
9 | i.e. on the Appeal Period End Day (currently the 13th business day of the month <sup>340</sup>, meaning, for example,  
10 | the 19th of February 2020), and after the Penalties Calculation and Recalculation processes have finished,  
11 | the End of the Appeal Period process selects all the Penalties that have a Detection Date within the previous  
12 | calendar month (i.e. a Detection date in January 2020 in the example) and sets them as not modifiable.

#### 13 | **1.6.1.14.9 Penalty Reporting**

14

15 | Every business day, T2S will generate the Daily Penalty List to report the Penalties detected on the previous  
16 | business day, after they have been calculated, and the List of Modified Penalties to report the Penalties mod-  
17 | ified or updated after they have been recalculated.

18 | Once a month, on the business day defined in Reference Data to trigger the Monthly Reporting, i.e. on the  
19 | Monthly Reporting Day (currently the 14th business day of the month <sup>341</sup>, meaning, for example, the 20th of  
20 | February 2020), T2S will generate the Monthly Aggregated Amounts to report the summary of the Penalties  
21 | detected on the previous month (i.e. with a Detection date in January 2020 in the example).

22 | The Penalty reports are only available in full mode, not as a delta version.

23 | T2S shall allow a T2S Actor to receive Penalties information under its default data scope, accordingly:

- 24 | In case of a CSD, the Penalty report shall include the Penalties that are either imposed or credited to the  
25 | CSD itself, and to all the parties belonging to the CSD data scope (i.e.: CSD Participants or External  
26 | CSDs)
- 27 | In case of a CSD Participant (or an External CSD), the Penalty report shall include the Penalties that are  
28 | either imposed or credited to this CSD Participant (or External CSD).

29 | A comprehensive explanation on the content of each report can be found in Securities Management (semt)

30 | The Penalty Lists comply with the ISO 20022 standards and are reported in the relevant semt.044 message  
31 | format. Alternatively, the Penalty Lists can be reported in a flat file format. Only CSDs can opt for getting the  
32 | Penalty reports in flat file, as an alternative to semt.044 message.

---

340 | Considering business days as T2S opening days

341 | Considering business days as T2S opening days

1 **1.6.1.14.10 Parameter Synthesis**

2 No specific configuration from T2S Actor is needed. The following parameters are specified by the T2S Oper-  
3 ator.  
4

Concerned	Parameter	Created by	Updated by	Mandato-ry/Optional	Standard or De-fault Value
End of Appeal Period	Appeal Period End Day	T2S Operator	T2S Operator	M	13
Penalty Reporting	Monthly Reporting Day	T2S Operator	T2S Operator	M	14

5 **1.6.2 Liquidity Management**

6 1.6.2.1 Liquidity Transfer

7 **1.6.2.1.1 Concept**

8 Liquidity Transfer is the process of transferring central bank money between accounts denominated in the  
9 same currency within T2S, from T2S to an RTGS System or vice versa from an RTGS System to T2S. This  
10 process is initiated via Liquidity Transfers to be executed either immediately or at future point(s) in time.

11 **1.6.2.1.2 Overview**

12 Liquidity can be transferred either between T2S Dedicated Cash Accounts or between T2S Dedicated Cash  
13 Accounts and RTGS accounts. Liquidity Transfers can be distinguished by the time they are executed. They  
14 can be submitted to T2S either for immediate execution ("Immediate Liquidity Transfer") or for future exe-  
15 cution ("Predefined Liquidity Transfer Orders" and "Standing Liquidity Transfer Order"). For more details on  
16 the difference between Immediate Liquidity Transfers, Predefined Liquidity Transfer Orders and Standing  
17 Liquidity Transfer Order please refer to the "Liquidity Transfer Process" section below.

18 Liquidity Transfer between T2S Dedicated Cash Accounts or from T2S Dedicated Cash Accounts to RTGS  
19 accounts have to be initiated via a request by the Account holder of the debited T2S Dedicated Cash Ac-  
20 count (Payment bank/ CB) or by another T2S Actor that was authorised to act on behalf of the Account  
21 holder. For liquidity transfers from RTGS accounts to T2S Dedicated Cash Accounts, the transfers have to be  
22 initiated in the RTGS system by the RTGS account holder of the debited RTGS Account (or any other author-  
23 ised party). Provided that both the RTGS account and the T2S dedicated cash account are denominated in  
24 the same currency and that the RTGS system is connected to T2S (and known to T2S), it is possible to  
25 transfer from any RTGS account to any T2S dedicated cash account. Liquidity Transfer from T2S Dedicated  
26 Cash Accounts to any RTGS account are also possible, provided the RTGS account is identified as active in  
27 T2S. Before submitting the Liquidity Transfers to a settlement attempt, T2S submits the Liquidity Transfers  
28 to different validation checks.

29 Once validated, Liquidity transfers are submitted to settlement execution according to the process described  
30 below.

1 During the Liquidity Transfer processing, T2S creates different notification messages and provides them to  
 2 the relevant T2S Actors according to their subscription preferences. For further information on notification  
 3 messages please refer to section [Liquidity Monitoring](#) [▶ 706], section Send immediate liquidity transfer,  
 4 section Send RTGS answer, section Execution of Liquidity Transfer from RTGS to T2S and section Execution  
 5 of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS.

6 **1.6.2.1.3 Liquidity Transfer Process**

7 T2S processes different Liquidity Transfer types, which can be distinguished according to the direction of the  
 8 Liquidity Transfer (Internal, Outbound, Inbound) as well as depending on the moment in time they are exe-  
 9 cuted (Immediate, Predefined and Standing Liquidity Transfers)

10 Internal, Outbound and Inbound Liquidity Transfers

11 Depending on the direction of the liquidity Transfer Orders, they can be either Internal (between two T2S  
 12 Dedicated Cash Accounts), Outbound (from a T2S Dedicated Cash Account to an RTGS account) or Inbound  
 13 (from an RTGS account to a T2S Dedicated Cash Account).

14 **DIAGRAM 141 - INTERNAL, OUTBOUND AND INBOUND LIQUIDITY TRANSFERS**

15  
 16 Internal Liquidity Transfers

17 T2S Actors can transfer cash between two T2S Dedicated Cash Accounts via Immediate Liquidity Transfers.  
 18 Internal Liquidity Transfers are only possible if the accounts involved belong to the same payment bank or  
 19 the T2S Dedicated Cash Accounts are linked to the same RTGS account or if one or both of the involved  
 20 accounts is a T2S Central Bank account. This rule is not applicable if one of the involved accounts is a Dedi-  
 21 cated Transit Account i.e. if one of the involved accounts is a Dedicated Transit Account Internal Liquidity  
 22 Transfers are always possible.

23 Outbound Liquidity Transfers

1 Outbound Liquidity Transfers allow T2S Actors to transfer cash from T2S Dedicated Cash Accounts to any  
 2 RTGS accounts (provided they are denominated in the same currency and the RTGS account is known in  
 3 T2S).

4 Inbound Liquidity Transfers

5 Inbound Liquidity Transfers provide the possibility to transfer liquidity from any RTGS accounts to T2S Dedi-  
 6 cated Cash Accounts provided the RTGS account and T2S Dedicated Cash Accounts are denominated in the  
 7 same currency. Inbound Liquidity Transfers have to be initiated by the RTGS account holder (or any author-  
 8 ised third party) in the relevant RTGS system (i.e. Inbound Liquidity Transfers cannot be triggered in T2S).

9 Immediate, Predefined and Standing Liquidity Transfers

10 Liquidity Transfers are differentiated by the time they are executed:

- 11 | Immediate Liquidity Transfers are submitted by T2S Actors for immediate execution in T2S;
- 12 | Predefined Liquidity Transfer Orders and Standing Liquidity Transfer Orders are submitted by T2S Actor  
 13 for future execution in T2S (i.e. either at a predefined point in time or at the occurrence of a defined  
 14 business event). Predefined Liquidity Transfer Orders are executed only once when reaching the speci-  
 15 fied time or business event, whereas Standing Liquidity Transfer Orders are repetitively executed every  
 16 time the business or time event is reached.

17 While all Inbound-, Outbound- and Internal Liquidity Transfers can be executed as Immediate Liquidity  
 18 Transfers, the use of Predefined- or Standing Liquidity Transfer Orders is only possible for the execution of  
 19 Outbound Liquidity Transfers.

20 **TABLE 145 - POSSIBLE COMBINATIONS OF LIQUIDITY TRANSFER TYPES**

	INBOUND LIQUIDITY TRANS- FER	OUTBOUND LIQUIDITY TRANSFER	INTERNAL LIQUIDITY TRANSFER
Immediate Liquidity Transfer	Yes	Yes	Yes
Predefined Liquidity Transfer Orders	No	Yes	No
Standing Liquidity Transfer Orders	No	Yes	No

22 Immediate Liquidity Transfer

23 The initiation of an Immediate Liquidity Transfer is either coming from a T2S Actor (for Internal and Out-  
 24 bound Liquidity Transfers) or from an RTGS System (for Inbound Liquidity Transfers).

25 In case of an Internal or Outbound Liquidity Transfer the Liquidity Transfer has to be initiated in T2S in Ap-  
 26 plication-to-Application mode (A2A) using the LiquidityCreditTransferV05 (camt.050.001.05) message or via  
 27 using the GUI functionality (User-to-Application mode (U2A)). In case of an Inbound Liquidity Transfer the  
 28 transfer has to be initiated by an RTGS Actor in the RTGS system, which forwards the Liquidity Transfer to  
 29 T2S in A2A.

- 1 In case of an Immediate Liquidity Transfer, T2S executes the transfer after validating it on the basis of the  
2 following list of validations (for any further information please see section Index of Business Rules and Error  
3 Codes):
- 4 | The combination of accounts entered in the Liquidity Transfer should correspond to the combination of  
5 Inbound, Outbound or Internal Liquidity Transfers; otherwise it is rejected;
  - 6 | The Source Account (debit account) of an immediate Internal or Outbound Liquidity Transfer should be  
7 an existing and active T2S Dedicated Cash Account (neither blocked nor logically deleted and for an  
8 Outbound Liquidity Transfer no RTGS Dedicated Transit Account); otherwise the incoming Internal or  
9 Outbound Liquidity Transfer is rejected;
  - 10 | The Target Account (credit account) of an Internal or Outbound Liquidity Transfer should be an existing  
11 and active T2S Dedicated Cash Account (neither blocked nor logically deleted) or an active RTGS account  
12 known within T2S; otherwise the incoming Liquidity Transfer is rejected;
  - 13 | The Target Account (credit account) of an Inbound Liquidity Transfer should be an existing and active  
14 T2S Dedicated Cash Account (no RTGS Dedicated Transit Account); otherwise the incoming Inbound Li-  
15 quidity Transfer is rejected;
  - 16 | The currency of an Inbound, Outbound or Internal Liquidity Transfer should be eligible as T2S settle-  
17 ment currency; otherwise the Liquidity Transfer is rejected;
  - 18 | The currency of the incoming flow should be the same as the currency of the Target Account; otherwise  
19 the incoming Internal, Outbound or Inbound Liquidity Transfer is rejected;
  - 20 | If the incoming Internal, Outbound or Inbound Liquidity Transfer from a T2S Actor has the same Order  
21 Reference, refers to the same Debit and Credit Account and has the same instructed Amount as another  
22 Internal, Outbound or Inbound Liquidity Transfer from the same T2S Actor, then it is a duplicate submis-  
23 sion; the second and any further submission is rejected;
  - 24 | Internal Liquidity Transfers are possible between T2S Dedicated Cash Accounts:
    - 25 – linked to the same RTGS account or
    - 26 – belonging to the same payment bank or
    - 27 – if one or both of the involved accounts is a T2S Central Bank account. This rule is not applicable if one  
28 of the involved accounts is a Dedicated Transit Account i.e. if one of the involved accounts is a Dedi-  
29 cated Transit Account Internal Liquidity Transfers are always possible.
  - 30 | If this is not the case the Internal Liquidity Transfer is rejected;
  - 31 | Any Liquidity Transfer arriving in T2S after the Business date change and prior to the Liquidity Transfer  
32 cut-off is processed; otherwise the incoming Liquidity Transfer is rejected;
  - 33 | In case of delays in the Start of Day, incoming Inbound Liquidity Transfers will be parked until the new  
34 business date is reached.
  - 35 | The Value Date of the incoming Inbound, Internal or Outbound Liquidity Transfer should be identical to  
36 the current Business Day;
  - 37 | In case of a currency specific closing date the incoming Inbound Liquidity Transfers will be parked until  
38 the next currency specific opening date is reached.

- 1 | I The amount of the incoming flow should only contain the maximum number of digits after the decimal
- 2 | point as foreseen for the respective currency; otherwise the incoming Liquidity Transfer is rejected;
- 3 | I The incoming Inbound Liquidity Transfer should contain an RTGS Id; otherwise it is rejected;
- 4 | I The amount must be greater than zero;
- 5 | I The currency of the Source Account should be the same as the currency of the Target Account; other-
- 6 | wise the incoming Internal or Outbound Liquidity Transfer is rejected.

7 The validation also includes the permission check for the following Privileges:

8

	PRIVILEGE	PRIVILEGE TYPE	OBJECT TYPE
Immediate Liquidity Transfer (Internal-, Outbound- and Inbound Liquidity Transfers)	Send New Liquidity Transfer	Object	Party T2S Dedicated Cash Account

9 In case the validation failed the Liquidity Transfer is rejected (for more details please see section [Privilege](#)

10 [\[▶ 146\]](#)).

11 Because of this immediate execution, a T2S Actor can neither update nor delete this Liquidity Transfer once

12 it has been submitted to T2S.

13 Depending on the submitter of the Immediate Liquidity Transfer (Outbound- or Internal), the transfer can

14 either be submitted to partial settlement or not. More specifically, in case the Outbound- or Internal Liquidity

15 Transfer is submitted by the holder of the T2S Dedicated Cash Account to be debited, the Liquidity transfer

16 is executed on an all or nothing basis, i.e. partial execution is not possible in case of insufficient liquidity. In

17 this case, the liquidity transfer is not stored for further settlement attempts. On the contrary, if the request

18 is initiated by a third party authorised (i.e. with the relevant privileges) by the T2S Dedicated Cash Account

19 holder (CSD or any other authorised third party, e.g. central bank operating an RTGS system), the liquidity

20 transfer can be executed partially if the liquidity available on the T2S Dedicated Cash Account is insufficient.

21 The remainder of a partially settled Liquidity Transfer is not stored for further settlement attempts. For addi-

22 tional information on the immediate execution of Liquidity Transfers and the respective dialogue between

23 T2S and T2S Actors, please refer to section Send immediate liquidity transfer and section Execution of Li-

24 quidity Transfer from RTGS to T2S.

25 The execution of an Immediate Liquidity Transfer is possible during Night-time Settlement period (in the

26 relevant settlement sequence) and during the realtime-settlement period. For details in respect of T2S avail-

27 ability for Liquidity Transfers, please refer to section [Settlement Day](#) [\[▶ 237\]](#).

28 Predefined and Standing Liquidity Transfer Orders

29 Predefined and Standing Liquidity Transfer Orders allow the automatic triggering of Outbound Liquidity

30 Transfers. To this purpose, Liquidity Transfer Orders have to be configured in T2S beforehand by the T2S

31 Actor and are executed as soon as the defined point in time is reached or a business event occurs (for de-

32 tails please refer to table EventTypeCode\_T2S\_2 in section T2S proprietary codes. Unlike Immediate Liquidi-

33 ty Transfers, which cannot be maintained once submitted to T2S, Predefined and Standing Liquidity Transfer

34 Orders can be maintained or deleted by T2S Actors CRDM (See section [Reference data maintenance process](#)

35 [\[▶ 712\]](#)).

1 In order to execute a Liquidity Transfer only once at a specific time or on the occurrence of a particular  
 2 business event, the T2S Actor has to define a Predefined Liquidity Transfer Order. A T2S Actor can only set  
 3 up one Predefined Liquidity Transfer Order at a specific time or on the occurrence of a particular business  
 4 event per T2S Dedicated Cash Account. Accordingly, during a T2S Settlement Day the T2S Actor can define  
 5 (per T2S Dedicated Cash Account) an infinite number of predefined orders, provided each of them is execut-  
 6 ed at different points in time or upon the occurrence of different business events (e.g. end-of-day, start-of-  
 7 day).

8 Unlike Predefined Liquidity Transfer Orders, which are executed only once, Standing Liquidity Transfer Or-  
 9 ders are executed on a repetitive basis (i.e. every time the event occurs during each settlement day) until  
 10 the T2S Actor changes or removes the transfer order in CRDM. Unlike Predefined Liquidity Transfer Orders,  
 11 several Standing Liquidity Transfer Orders can be set up upon the occurrence of a certain business event or  
 12 at a certain point in time.

13 The amount to be transferred via each Predefined Liquidity Transfer Order and Standing Liquidity Transfer  
 14 Order can either be a specified amount, "all cash" or a "dedicated amount". In the first case the amount of  
 15 cash to be transferred is stored within the Standing or Predefined Order. In case of "all cash" the whole  
 16 available amount on the T2S Dedicated Cash Account at the moment the Liquidity Transfer is transferred  
 17 (see Parameter Synthesis). For some Predefined Liquidity Transfer Orders and Standing Liquidity Transfer  
 18 Orders (e.g. in case of Corporate Actions or by using the multi-liquidity provider functionality) the order can  
 19 be stored in CRDM with the parameter "dedicated amount" set as "true" which means that the amount cal-  
 20 culated and generated by T2S is transferred. If there is no liquidity available on the T2S Dedicated Cash  
 21 Account to be debited, the Liquidity Transfer is unsettled. In case of insufficient liquidity, Predefined and  
 22 Standing Liquidity Transfer Orders are partially executed, i.e. the whole available amount on the account is  
 23 transferred even if this amount is lower than the amount specified in the liquidity transfer order. The liquidi-  
 24 ty transfer is not recycled for further settlement for the part that could not be settled on first attempt.

25 For additional information on Liquidity Transfer Orders and the respective dialogue between T2S and T2S  
 26 Actors, please refer to Execution of Standing and Predefined Liquidity Transfer Orders from T2S to RTGS.

27  
28

**TABLE 146 - UNDERLYING TRANSFER TYPE CHARACTERISTICS**

transfer orders				Date/Time Event, then immediate	erated as an Imme- diate Liquidity Trans- fer)	basis

1 **1.6.2.1.4 Parameter Synthesis**

2 The following parameters are specified by the T2S Actor for each Standing Liquidity Transfer Order or Prede-  
3 fined Liquidity Transfer Order.  
4

CONCERNED PRO- CESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VAL- UE
Setup Liquidity Transfer Order	Order Type	T2S Actor	T2S Actor	M	Standing Order / Predefined Order	N/A
Setup of Liquidity Transfer Order	Is triggered by	T2S Actor	T2S Actor	M	Time Event/Business Event	N/A
Setup of date for predefined Liquidity Transfer	Is executed at	T2S Actor	T2S Actor	O <sup>342</sup>	Date	N/A
Setup of Liquidity Transfer Order	External RTGS account	T2S Actor	T2S Actor	M	External RTGS ac- count reference	N/A
Setup of Liquidity Transfer Order	Amount	T2S Actor	T2S Actor	M	Amount	N/A
Setup of Liquidity Transfer Order	All cash	T2S Actor	T2S Actor	M	True/False	N/A
Setup of Liquidity Transfer Order	Dedicated Amount	T2S Actor	T2S Actor	M	True/False	N/A
Setup of Liquidity Transfer Order	T2S DCA to be debited	T2S Actor	T2S Actor	M	T2S DCA Account Number	N/A

5 Additional system parameters also exist relating to duplicate check. No specific configuration by the T2S  
6 Actor is required.

342 The parameter Setup of date for predefined Liquidity Transfer is mandatory for Predefined Liquidity Transfers however not allowed for Standing Liquidity Transfer Orders.

1

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Immediate Liquidity Transfer Process / Duplicate Check	Number of business days in the past for duplicate check on liquidity transfers	T2S Operator	T2S Operator	M	3 days	Immediate Liquidity Transfer Process / Duplicate Check

## 2 1.6.2.2 Limit Management

### 3 **1.6.2.2.1 Concept**

4 The intraday credit limits represent the maximum net amount of intraday credit that a T2S Party can use to  
5 settle its Settlement Instructions in T2S. This intraday credit is subject to the provision of guarantees, in T2S  
6 through auto-collateralisation, or outside T2S.

7 Intraday credit, secured in T2S against eligible collateral, is capped by the auto-collateralisation limits. It is  
8 provided through the auto-collateralisation process:

- 9 | Between central bank and payment/settlement bank, also referred hereafter as central bank collateralisation;
- 10 |
- 11 | Or between payment/settlement bank and its clients, also referred hereafter as client-collateralisation.

12 Intraday credit, not secured in T2S, is provided by payment/settlement bank to their clients for the settle-  
13 ment in T2S. It is capped in T2S by the external guarantee limit and the unsecured credit limit.

14 Limits are configured by the T2S Actors (central bank or payment/settlement bank) which act as credit pro-  
15 vider. They are then monitored during the settlement of any Settlement Instruction (See auto-  
16 collateralisation process in section [Auto-collateralisation](#) [▶ 430]).

### 17 **1.6.2.2.2 Overview**

18 T2S supports the set-up and maintenance of different limit types as described below:

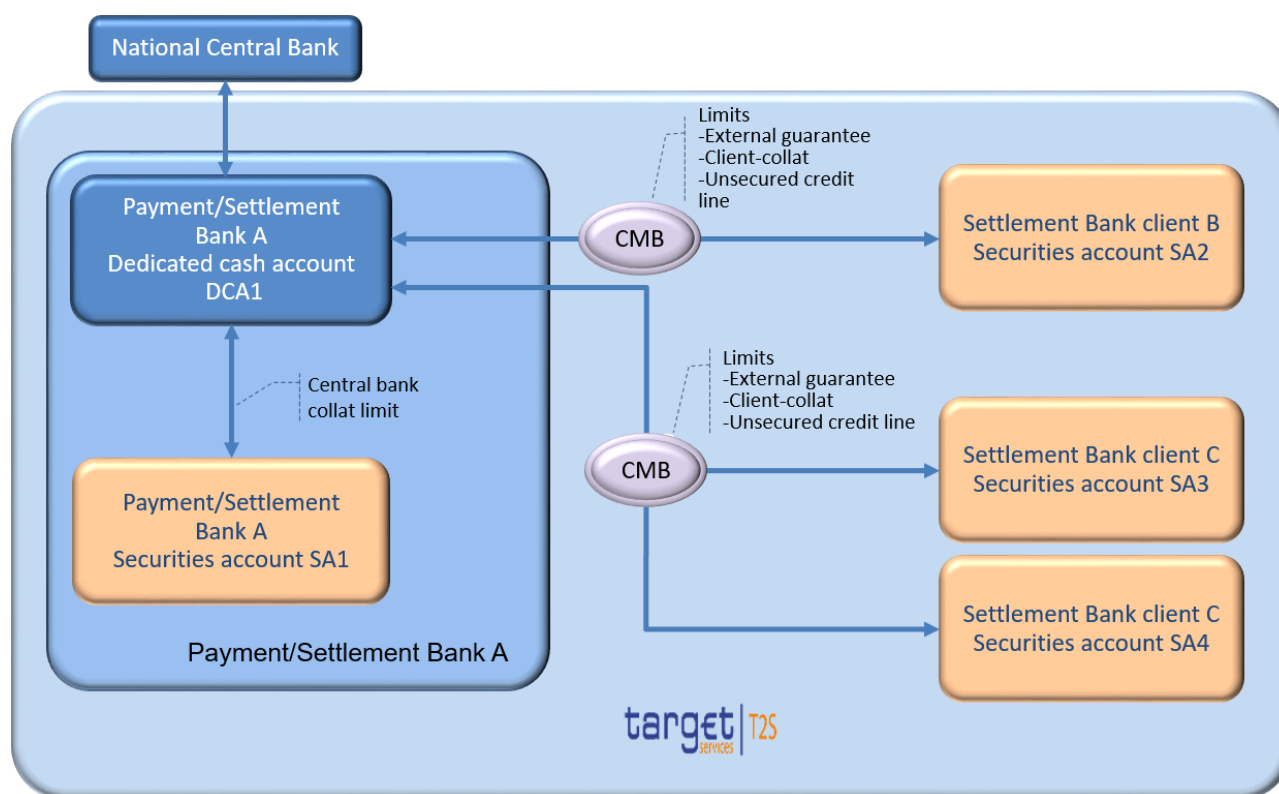

- 19 | The auto-collateralisation limit, set by a central bank (also referred hereafter as central bank collateralisation limit), to cap the intraday credit provided by a central bank to a payment/settlement bank owning the T2S Dedicated Cash Account;
- 20 |
- 21 |
- 22 | The external guarantee limit, set by a payment/settlement bank, to cap the intraday credit provided to its clients and secured outside T2S before any client-collateralisation in T2S;
- 23 |
- 24 | The auto-collateralisation limit, set by a payment/settlement banks (also referred hereafter as client-collateralisation limit), to cap the intraday credit provided to its clients and secured in T2S. This limit is used once the external guarantee limit is fully used. It is limited to the capacity of the client to provide
- 25 |
- 26 |

1 eligible collateral in T2S. It is achieved through a client-collateralisation operation automatically generat-  
2 ed by T2S during the provision check process;

3 | The unsecured credit limit, to cap the intraday credit provided by a payment/settlement bank to its cli-  
4 ents, and secured outside T2S. This limit is used once both the external guarantee limit and the client  
5 collateralisation limit are fully used.

6 **DIAGRAM 142 - LIMITS OVERVIEW**

7  
8 T2S monitors each limit per settlement day through the following indicators:

- 9 | The limit amount which is the maximum amount of intraday credit which can be provided. It is set by  
10 the credit provider in the static data and can be increased or decreased at any time of the settlement  
11 day;
- 12 | The limit utilisation which is the amount of intraday credit already provided. It is initialised to zero at  
13 each start of day and updated by T2S as a result of the settlement of a Settlement Instruction;
- 14 | The limit headroom which is the remaining amount of available intraday credit. It is initialised to the limit  
15 amount at each start of day and updated by T2S as a result of either the settlement of a Settlement In-  
16 struction or a static data update on the limit amount.

17 The limit utilisation and limit headroom then vary according to rules depending on the limit types.

### 18 **1.6.2.2.3 Central bank collateralisation limit management process**

19 At the creation of a T2S Dedicated Cash Account of payment/settlement bank by the National Central Bank,  
20 a central bank collateralisation limit can be configured by the central bank. T2S proposes a default limit  
21 amount value set to zero which may be updated by the central bank to provide intraday credit.

1 The limit utilisation and limit headroom of the central bank collateralisation limit are updated at the booking  
2 of any:

- 3 | Collateral Settlement Instructions generated by T2S for the provision of intraday credit;
- 4 | Reverse collateral Settlement Instructions generated by T2S and released by the payment/settlement  
5 bank or T2S for the reimbursement of already provided intraday credit.

6 Following such updates (and not for updates following a limit amount decrease), the limit utilisation cannot  
7 increase higher than the limit amount. It can neither be negative when decreasing following each reim-  
8 bursement of the collateralised securities.

9 **DIAGRAM 143 - LIMIT VARIATION 1**

10  
11 Limit amount increase

12 The central bank can increase the limit amount of the central bank collateralisation limit during the settle-  
13 ment day.

14 If the limit amount is increased, the limit headroom is increased accordingly. T2S then automatically recycles  
15 Settlement Instructions, which are pending due to a lack of cash, and attempts their settlement under the  
16 new limit amount.

17 Limit amount decrease

18 The central bank can decrease the limit amount of the central bank collateralisation limit during the Settle-  
19 ment Day.

20 If the limit amount is decreased, under the amount of intraday credit already provided by the central bank,  
21 then:

- 22 | The limit utilisation may become higher than the new limit amount;
- 23 | The limit headroom, as the difference between the limit amount and the limit utilisation, may become  
24 negative.

1 In such a case:

- 2 | The limit utilisation is automatically decreased accordingly by T2S, through the settlement of automatic
- 3 reimbursement;
- 4 | The limit headroom is negative until the limit utilisation becomes again lower than the modified limit
- 5 amount, following the related automatic reimbursement.

6 **DIAGRAM 144 - LIMIT VARIATION 2**

7 **Illustration for central bank collateralisation limit management process**

9 The following example illustrates the process for the management of the central bank collateralisation limit.

10 Set-up of a central bank collateralisation limit by a central bank for a settlement bank

11 For T2S Dedicated Cash Account of the payment/settlement bank, the central bank collateralisation limit (CBL12345) set-up by the central bank is EUR 5,000.00.

13 All limit indicators of this central bank collateralisation limit are initialised each settlement day with the following values:

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
1	Limit indicators setup	CBL12345	5,000.00	0.00	5,000.00	Before any settlement for a settlement day, the limit headroom is equal to the limit amount.

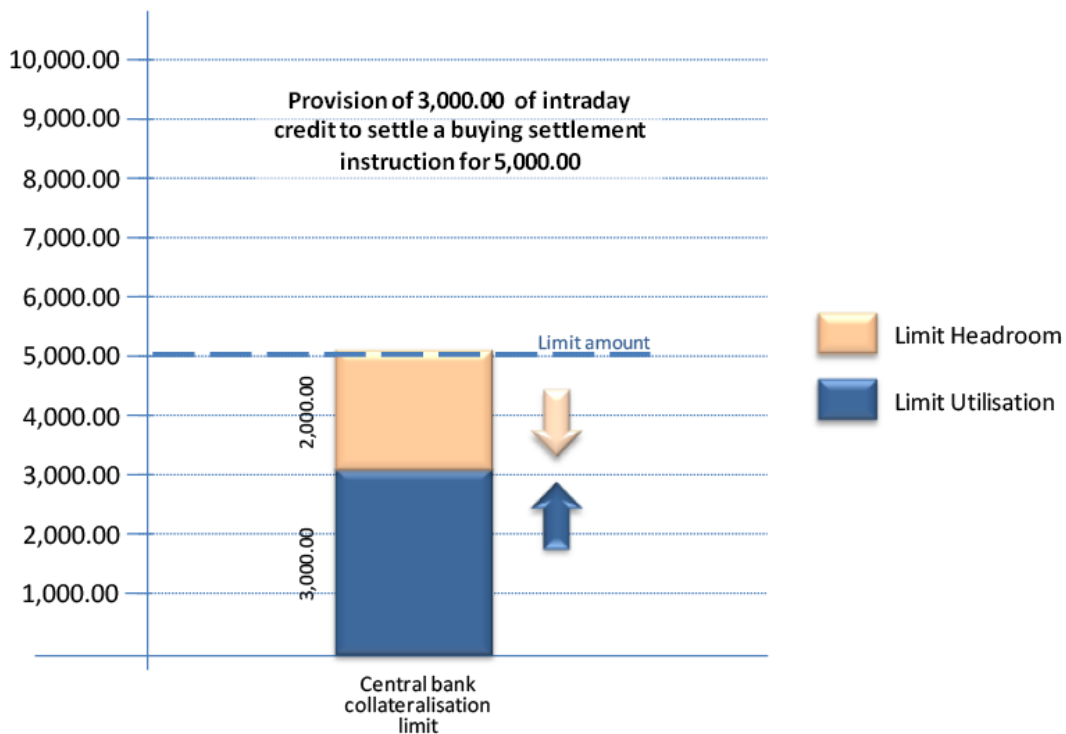

16 Use of central bank collateralisation limits to settle buying Settlement Instructions

1 A buying Settlement Instruction against EUR 5,000.00 debits the T2S Dedicated Cash Account of Bank A  
 2 which has a cash balance equal to EUR 2,000.00. A lack of cash for EUR 3,000.00 has to be filled in through  
 3 a central bank collateralisation for the provision of intraday credit by the central bank.

4 Since the limit headroom of the central bank collateralisation limit CBL12345 of the T2S Dedicated Cash Ac-  
 5 count of Bank A with a lack is currently equal to EUR 5,000.00, the intraday credit can be provided for EUR  
 6 3,000.00 if all conditions for the central bank collateralisation are fulfilled.

7 The settlement of the Settlement Instruction generated by T2S for the central bank collateralisation opera-  
 8 tion results in the following updates of the limit indicators:

9 **EXAMPLE 174 - LIMIT VARIATION FOLLOWING A BUYING**

10

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
2	Buying instruction for EUR 5,000.00 with lack of cash EUR 3,000.00	CBL12345	5,000.00	3,000.00	2,000.00	The limit headroom is decreased accordingly to the intraday credit provision.

12 A new buying Settlement Instruction against EUR 4,500.00 debiting the T2S Dedicated Cash Account of Bank  
 13 A is pending. The limit headroom of the central bank collateralisation limit CBL12345 (EUR 2,000.00) is in-  
 14 sufficient to fill in the lack of cash (EUR 2,500.00).

15 Increase of the limit amount of the central bank collateralisation limit

16 Central bank increases the limit amount of the central bank collateralisation limit CBL12345 to EUR 9,000.00.

17 T2S updates automatically the limit headroom as follows:

1

**EXAMPLE 175 - LIMIT INCREASE**

2

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
3	Increase the limit amount (+EUR 4,000.00)	CBL12345	9,000.00	3,000.00	6,000.00	The increase of limit amount results in the increase of the limit headroom.

4 T2S immediately triggers the recycling of potential pending Settlement Instruction due to lack of cash. If the  
 5 new limit headroom allows the provision of intraday credit through a central bank collateralisation process (if  
 6 all conditions are fulfilled), the limit indicators are updated accordingly:

1

**EXAMPLE 176 - LIMIT VARIATION FOLLOWING THE RECYCLING OF A BUYING SETTLEMENT INSTRUCTION**

2  
3

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
4	Settlement of the pending buying instruction	CBL12345	9,000.00	7,500.00	1,500.00	The limit headroom is now sufficient to trigger an central bank collateralisation process allowing the settlement of the pending Settlement Instruction.

4 Decrease of limit amount of the central bank collateralisation limit under the limit headroom

5 Central bank decreases the limit amount of the central bank collateralisation limit CBL12345 to EUR  
6 6,000.00.

7 T2S updates accordingly the limit headroom and limit utilisation.

8 Since the limit utilisation value (EUR 7,500.00) is higher than the new limit amount (EUR 6,000.00), the limit  
9 headroom, as the difference of the limit amount and the limit utilisation, becomes negative (EUR -1,500.00).

10 No new intraday credit is allowed until it becomes again positive.

1

**EXAMPLE 177 - LIMIT DECREASE**

2  
3

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
5	Decrease the current limit (-3,000.00)	CBL12345	6,000.00	7,500.00	-1,500.00	Limit utilisation exceeds the new limit amount.

4 T2S then triggers an automatic reimbursement of the exceeding intraday credit. The reverse collateral Settlement Instructions existing on the considered T2S Dedicated Cash Account are then automatically released.

5

6 If the cash balance of the T2S Dedicated Cash Account of Bank A is equal to EUR 3,500.00, only the reverse collateral Settlement Instruction corresponding to the intraday credit provision for EUR 3,000.00 can be settled. It results in the following updates of the limit indicators of the central bank collateralisation limit

7

8

9 CBL12345:

1

**EXAMPLE 178 - LIMIT VARIATION FOLLOWING REVERSE COLLATERAL**

2  
3

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
6	Settlement of reverse collateral instruction automatically released (EUR 3,000.00)	CBL12345	6,000.00	4,500.00	1,500.00	The limit headroom becomes positive, allowing new intraday credit provision.

4 **1.6.2.2.4 Limits set by payment/settlement banks management process**

5 At the creation of a settlement bank client which uses a T2S Dedicated Cash Account of a pay-  
 6 ment/settlement bank, a credit memorandum balance with the three limits (external guarantee limit, client-  
 7 collateralisation limit and unsecured credit limit) is created. T2S proposes default limit amount values set to  
 8 zero which may be updated by the payment/settlement bank to provide intraday credit.

9 External guarantee limit

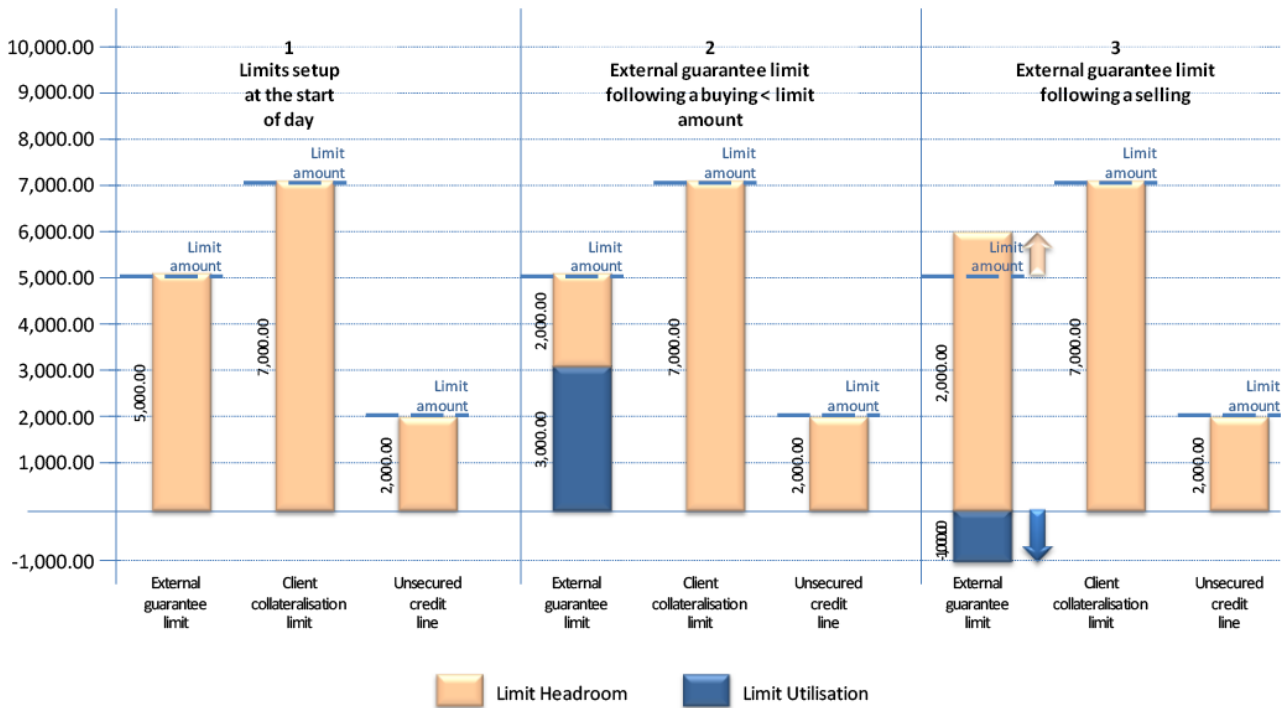

10 For the external guarantee limit, the limit utilisation cannot increase higher than the limit amount which caps  
 11 the allowed intraday credit against guarantees managed outside T2S.

12 The limit headroom is initially equal to the limit amount and decreases following each buying Settlement  
 13 Instruction that impacts the external guarantee limit. It cannot be negative.

- 1 However the limit headroom is increased upon selling Settlement Instructions and therefore:
- 2 | The limit headroom may become higher than the limit amount when, during the current settlement day,
- 3 the value of the selling Settlement Instructions of a client is higher than the value of its buying Settle-
- 4 ment Instructions;
- 5 | The limit utilisation, as the difference between the limit amount and the limit headroom, may become
- 6 negative.

DIAGRAM 145 - LIMIT VARIATION 3

- 8
- 9 Client-collateralisation limit
- 10 The limit utilisation and limit headroom of the client-collateralisation limit are updated at the booking of any:
- 11 | Collateral Settlement Instructions generated by T2S for the provision of intraday credit;
- 12 | Reverse collateral Settlement Instructions generated by T2S and released by the payment/settlement
- 13 bank for the reimbursement of already provided intraday credit.

14 Following such updates (and not for updates resulting from a limit amount decrease), if all reverse collateral

15 Settlement Instructions are reimbursed before the end of day, the limit utilisation does not increase higher

16 than the limit amount. It is neither negative when decreasing following each reimbursement of the collateral-

17 alised securities.

18 The limit headroom is not higher than the limit amount. It is neither negative when decreasing accordingly

19 to the increase of the limit utilisation.

20 When reverse collateral Settlement Instructions from previous settlement days are reimbursed during a set-

21 tlement day, the limit headroom may increase higher than the limit amount and the limit utilisation may

22 become negative.

23 Unsecured credit limit.

- 1 For the unsecured credit limit, the limit utilisation cannot be higher than the limit amount. It can neither be  
 2 negative.  
 3 The limit headroom can neither be higher than the limit amount, nor negative if the limit amount is not mod-  
 4 ified during the current T2S settlement day.  
 5 However selling Settlement Instructions:  
 6 | Decrease the limit utilisation but not lower than zero. If the value of the selling Settlement Instructions is  
 7 higher than the limit utilisation, the residual value updates the external guarantee limit indicators but not  
 8 the client collateralisation limit as explained below;  
 9 | Increase the limit headroom but not higher than the limit amount, as the maximum of intraday credit  
 10 provided

**DIAGRAM 146 - LIMIT VARIATION 4**

12  
 13 Limit amount increase

14 The payment/settlement bank can increase the limit amount of all limit types during the settlement day.  
 15 It results, accordingly, in the increase of the limit headroom. T2S then automatically recycles Settlement  
 16 Instructions, which are pending due to an insufficient limit headroom, and attempts their settlement under  
 17 the new limit amount.

18 Limit amount decrease

19 The payment/settlement bank can decrease the limit amount of all limit types during the settlement day.  
 20 If the new limit amount is lower than the intraday credit already provided by the payment/settlement bank,  
 21 then:

- 22 | The limit utilisation may become higher than the new limit amount;  
 23 | The limit headroom, as the difference between the limit amount and the limit utilisation, may become  
 24 negative.

1 In this case, no automatic recycling is triggered. The considered limit cannot be used to settle Settlement  
2 Instruction as long as the limit headroom is negative.

3 Intraday credit is granted through client-collateralisation with the limits checked in the following order: ex-  
4 ternal guarantee limit, auto collateralisation limit, unsecured credit limit (See section [Overview](#) [▶ 640]).  
5 Therefore when a payment bank intends to decrease the credit limit granted to its client it is more efficient  
6 and recommended to decrease:

- 7 | First the limit amount of the unsecured credit limit
- 8 | Second the limit amount of the auto-collateralisation limit
- 9 | Third the limit amount of the external guarantee limit.

10 For each limit type, with their limit indicators and variation rules, the management of the limits are illustrat-  
11 ed in the sections below.

### 12 Illustration for Client Collateralisation Limits management process

13 The following example illustrates the process for the management of the limits set by the pay-  
14 ment/settlement bank to cap the use of its T2S Dedicated Cash Account by its client.

#### 15 Set-up of limits by a payment/settlement bank for one of its clients

16 SB-CLIENT C is a settlement bank client of the payment/settlement bank A.

17 Bank A sets-up the credit memorandum balance with the three limits (the external guarantee limit  
18 EGL12345, the client-collateralisation limit CCL67890 and the unsecured credit limit UCL24680) to cap the  
19 different level of guarantee provided to SB-CLIENT C out of T2S or in T2S.

20 All limit indicators are initialised each settlement day with the following values:

21  
22

#### EXAMPLE 179 - LIMIT SET UP

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
1	Limit indicators setup	EGL12345	5,000.00	0.00	5,000.00	Before any settlement for a settlement day, the limit headrooms are equal to the limit amounts. This initialisation is performed even if reverse collateral Settlement Instructions related to previous settlement day remain unsettled.
		CCL67890	4,000.00	0.00	4,000.00	
		UCL24680	3,000.00	0.00	3,000.00	

#### 23 Limits updates following a buying Settlement Instruction

24 SB-CLIENT C sends a buying Settlement Instruction against EUR 10,000.00 debiting the T2S Dedicated Cash  
25 Account of Bank A which has sufficient cash to settle the instruction.

26 During the provision check process, T2S checks if the limits headrooms of the limits associated to the credit  
27 memorandum balance allow the settlement.

28 Since the limit headroom (EUR 5,000.00) of the external guarantee limit is insufficient to settle the Settle-  
29 ment Instruction, T2S checks the limit headroom of the client-collateralisation limit (EUR 4,000). The sum of

1 those limits headrooms (EUR 9,000.00) remains insufficient to settle the Settlement Instruction. T2S then  
 2 checks the limit headroom of the unsecured credit limit (EUR 3,000.00).

3 Since the sum of all limits headrooms is sufficient to settle the Settlement Instruction, the client-  
 4 collateralisation operation is possible (i.e. all necessary conditions are fulfilled):

5 **EXAMPLE 180 - LIMIT VARIATION FOLLOWING A BUYING**

6  
7

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
1	Buying instruction for EUR 10,000.00	EGL12345	5,000.00	5,000.00	0.00	The use of the different limit type allows the settlement of the Settlement Instruction.
		CCL67890	4,000.00	4,000.00	0.00	
		UCL24680	3,000.00	1,000.00	2,000.00	

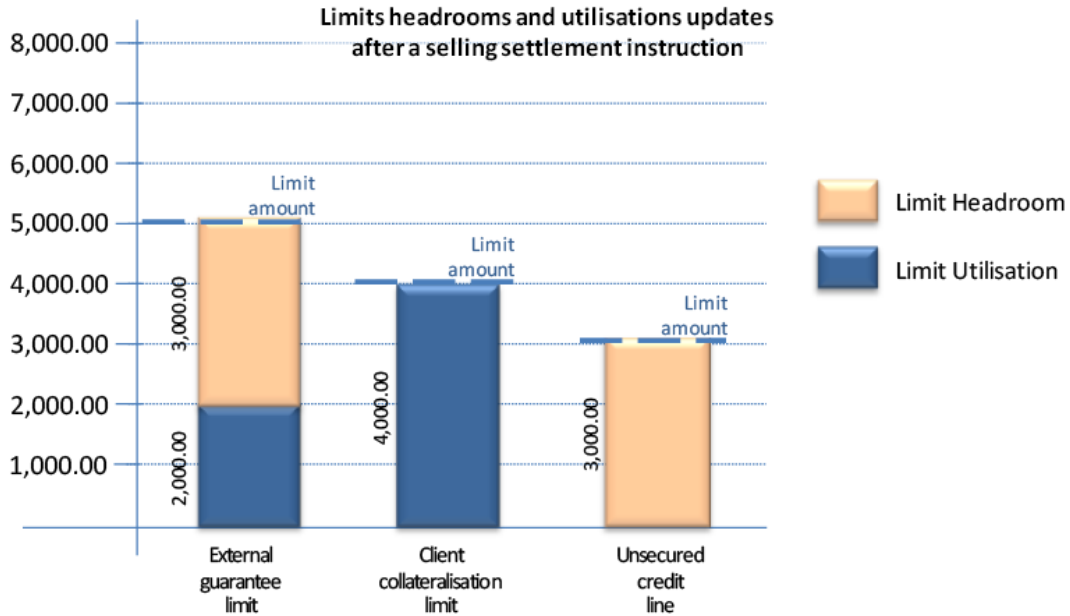

8 Limits updates following selling Settlement Instructions

9 SB-CLIENT C sends a selling Settlement Instruction against EUR 4,000.00 crediting the T2S Dedicated Cash  
 10 Account of Bank A.

11 The settlement of the selling Settlement Instruction results in the following updates of the limit headrooms  
 12 and limit utilisations:

1

**EXAMPLE 181 - LIMIT VARIATION FOLLOWING A SELLING (A)**

2

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
2	Selling Settlement Instruction for EUR 4,000.00	EGL12345	5,000.00	2,000.00	3,000.00	The selling increases the limit headroom of the unsecured credit limit first and then the limit headroom of the external guarantee limit for the remaining amount.  The client-collateralisation limit is not impacted by a selling but only by the settlement of the reverse collateral Settlement Instruction after the release by the payment/settlement bank.
		CCL67890	4,000.00	4,000.00	0.00	
		UCL24680	3,000.00	0.00	3,000.00	

4 SB-CLIENT C sends another selling Settlement Instruction against EUR 3,000.00 crediting the T2S Dedicated  
5 Cash Account of Bank A.

6 The settlement of the selling Settlement Instruction results in the following updates of the limit headrooms  
7 and limit utilisations:

1

**EXAMPLE 182 - LIMIT VARIATION FOLLOWING A SELLING (B)**

2  
3

#	EVENT	LIMIT ID	LIMIT AMOUNT	LIMIT UTILISATION	LIMIT HEADROOM	COMMENT
3	Selling Settlement Instruction for EUR 3,000.00	EGL12345	5,000.00	-1,000.00	6,000.00	When unsecured credit limit is not used, a selling updates only the external guarantee limit.  This updates may increase the limit headroom of the external guarantee limit, higher than the limit amount.
		CCL67890	4,000.00	4,000.00	0.00	
		UCL24680	3,000.00	0.00	3,000.00	

4 **1.6.2.2.5 Limit utilisation journaling process**

5 For each defined limit, T2S records following each limit update the updated value of the limit utilisation and  
6 the limit headroom.

7 It also keeps track of every Settlement Instruction and the relevant amount which has impacted the limit  
8 utilisation and the limit headroom in a journaling of limit utilisation.

9 These records are created per settlement day as of the first utilisation of the limit since the start of the T2S  
10 settlement day.

1  
2

**1.6.2.2.6 Parameters Synthesis**

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	DEFAULT VALUE
Central bank collat limit management	central bank collateralisation limit	T2S Actor (central bank)	T2S Actor (central bank)	M	Amount	0
Client collat limit management	External guarantee limit	T2S Actor (payment/settlement bank)	T2S Actor (payment/settlement bank)	M	Amount	0
Client collat limit management	Client-collateralisation limit	T2S Actor (payment/settlement bank)	T2S Actor (payment/settlement bank)	M	Amount	0
Client collat limit management	Unsecured credit limit	T2S Actor (payment/settlement bank)	T2S Actor (payment/settlement bank)	M	Amount	0

3 **1.6.2.3 End of Day Cash Management**

4 **1.6.2.3.1 Concept**

5 End of day (EOD) Cash Management is the process of releasing unused cash restrictions, reimbursing pending intraday credits and transferring each balance deviating from zero at the end of a Settlement Day to a pre-defined RTGS account also referred to as “automated cash sweep” <sup>343</sup>.

8 Starting with the go live of CLM T2S will not initiate an “automated cash sweep” for Euro denominated Dedicated Cash Accounts. T2S Users have the possibility to make use of a second optional cash sweep for their Euro denominated Dedicated Cash Accounts. <sup>344</sup>

11 **1.6.2.3.2 Overview**

12 At the realtime settlement closure period T2S considers two cash aspects on a T2S Dedicated Cash Account, whether there are still pending credits to be reimbursed and if there is available cash on the T2S Dedicated Cash Account.

---

343 Additionally the T2S user has the possibility to store standing orders in CRDM and opt for triggering optional cash sweep which will take place prior to the End of Day Cash Management “automated cash sweep”. For Euro denominated Dedicated Cash Accounts T2S Users have the possibility to make use of a second optional cash sweep. The set up and execution of the optional cash sweeps is not described in this chapter, but in section [Liquidity Transfer](#) [p 632].

344 Please note that the described functionality won’t be available before CSLD go-live.

- 1 The situation on the accounts at the end of a settlement day can be one of the following:
- 2 | No intraday credit was provided by an CB during the settlement day;
  - 3 | Intraday credit was provided by an CB during the settlement day and the cash on the T2S Dedicated
  - 4 Cash Account is sufficient to fully reimburse the pending intraday credit provided by the CB;
  - 5 | Intraday credit was provided by a CB during the settlement day but there is insufficient or no cash on
  - 6 the T2S Dedicated Cash Account to reimburse the pending intraday credit provided by the CB.
- 7 As all T2S Dedicated Cash Accounts must have a balance of zero <sup>345</sup> at the end of any settlement day, via
- 8 the EOD Cash Management process ("automated cash sweep"):
- 9 | All the unused cash restrictions (i.e. blocking, CoSD blocking or reservation) are released;
  - 10 | All pending intraday credits provided by a central bank are reimbursed;
  - 11 | If there is a balance deviating from zero on the T2S Dedicated Cash Account the balance is transferred
  - 12 to the respective RTGS accounts. T2S Central Bank cash accounts may have a negative balance <sup>346</sup>.

### 13 **1.6.2.3.3 EOD Cash Management Process**

14 At the realtime settlement closure period, T2S automatically transfers liquidity of all T2S Dedicated Cash

15 Accounts to the relevant RTGS accounts in the RTGS system (e.g. TARGET2) (via "automated cash sweep").

16 In order to empty all cash balances of each T2S Dedicated Cash Account, the following three steps are pro-

17 cessed successively in the context of EOD Cash Management (see relevant flows in section End-of-Day Cash

18 Management):

- 19 | Release of all unused cash restrictions;
- 20 | Reimbursement of pending intraday credits provided by central banks;
- 21 | Transfer of the cash balances to the respective RTGS accounts.

#### 22 Release of all unused cash restrictions

23 For additional information on the management of restricted cash balances quoted below please refer to pro-

24 cess [Cash Blocking and Reservation](#) [▶ 670].

25 T2S automatically releases the unused cash restrictions by:

- 26 | Releasing all unused cash restrictions;
- 27 | Cancelling all cash reservations having a pending part;
- 28 | Generating increase of cash CoSD blocking for the next settlement day.

#### 29 Releasing all unused cash restrictions

---

345 In contingency scenarios, when a T2S dedicated cash account balance cannot be swept to the RTGS system, T2S shall close the end-of-day period and change the business day with liquidity remaining on the respective cash accounts. On the next business day the T2S dedicated cash accounts shall start with the end-of-day balance of the previous business day.

346 T2S Central Bank cash accounts are the only cash accounts that may have a negative amount.

1 All restricted cash balances are emptied by transferring the restricted cash to the deliverable cash balance of  
2 the considered T2S Dedicated Cash Account. This automatic rebalancing is performed for all existing re-  
3 striction references and if the following condition is fulfilled:  
4

CONDITION	RULES
Existence of an unused amount	The "Remaining amount" of the restriction reference is different from zero at the realtime settlement closure period.

5 T2S then generates a Settlement Restriction for each restriction reference which fulfills this condition (See  
6 section [Cash Blocking and Reservation](#) [▶ 670]).

7 These T2S generated Settlement Restrictions are then processed by the Posting application process (See  
8 section [Posting](#) [▶ 381]). In case of cash CoSD blocking, the reason code associated to the settlement status  
9 of the related Settlement Instruction on which a CoSD rule applied is updated from the "CoSD release await-  
10 ing from Administering Party" reason code into "CoSD blocking of the referenced Settlement Instruction not  
11 settled yet". It avoids any CoSD release until the Settlement Restriction increasing again the cash CoSD  
12 blocking (see below) is settled. (See section [Conditional Settlement](#) [▶ 510])

13  cancelling cash reservations having a pending part

14 For cash reservation, T2S cancels the pending part related to partially settled Settlement Restrictions.

15 This cancellation is performed for existing restriction references if the following conditions are fulfilled:  
16

CONDITIONS	RULES
Reservation restriction processing	The restriction reference is in a restricted cash balance with a restriction type related to the "Reservation" restriction processing.
Existence of pending filling	The "To be filled" of the restriction reference is different from zero at the end of the settlement day.

17 For those restriction references, T2S generates a Cancellation Instruction for all the associated partially set-  
18 tled Settlement Restrictions (See section [Instruction Cancellation](#) [▶ 360]).

19  Generating increase of cash CoSD blocking for the next settlement day

20 In case of cash CoSD blocking, the amount rebalanced to empty the T2S Dedicated Cash Account at the end  
21 of day has to be re-blocked on the next settlement day.

22 This additional increase is performed for existing restriction references if the following conditions are ful-  
23 filled:  
24

CONDITIONS	RULES
CoSD blocking restriction processing	The restriction reference is in a restricted cash balance with a restriction type related to the "CoSD blocking" restriction processing.
Released restricted cash for end of day	The restriction reference is subject to the release of unused cash restriction during the initial step.

1 For the restriction references which meet these conditions, T2S generates the Settlement Restriction for the  
 2 increase (See section [Cash Blocking and Reservation](#) [▶ 670]). These T2S generated Settlement Restrictions  
 3 are processed at the next settlement date by the posting application process (See section [Posting](#) [▶ 381]).  
 4 When they settle the reason code associated to the settlement status of the Settlement Instruction, on  
 5 which a CoSD rule applied, is updated into "CoSD release pending from Administering Party". This reason  
 6 code allows again the administering party to send their CoSD release. (See section [Conditional Settlement](#)  
 7 [▶ 510])

8 *Reimbursement of pending intraday credit provided by central banks*

9 All intraday credit provided by central banks in T2S through auto-collateralisation has to be reimbursed dur-  
 10 ing the real time settlement closure after the release of unused cash restrictions and upon a time-event (see  
 11 section [Settlement Day](#) [▶ 237]). In case the liquidity available on the T2S dedicated cash accounts is insuffi-  
 12 cient to reimburse all the auto-collateralisation operations with the central banks, then the intraday credit  
 13 still pending is transferred to the RTGS.

14 This is handled through:

- 15 | The release of hold reverse collateral Settlement Instructions;
- 16 | Complemented for the reverse collateral Settlement Instructions, still pending due to insufficient cash for  
 17 their reimbursement, with:
  - 18 – the rebalancing of liquidity between T2S Dedicated Cash Accounts of the credit consumer (i.e. the  
 19 payment/settlement bank);
  - 20 – The relocation, if any, of the collateral used for the provision of the missing liquidity by the central  
 21 bank.

22 The settlement confirmation of these relocation instructions allows the collateral management system to  
 23 trigger the necessary operations for the reimbursement of the intraday credit in the RTGS system.

24 Release of hold reverse collateral Settlement Instructions

25 T2S selects all reverse collateral Settlement Instructions related to a central bank collateralisation operation  
 26 which fulfills the following rule:  
 27

CONDITION	RULE
Instruction on hold	The T2S Party Hold indicator is set to Yes.

28 T2S updates the hold indicator of those reverse collateral Settlement Instructions to "No".

29 It results in a settlement attempt with:

- 30 | A full reimbursement, if the available liquidity in the T2S Dedicated Cash Account which received the in-  
 31 traday credit is sufficient;
- 32 | No reimbursement otherwise.

33 At the end of this step no reverse collateral Settlement Instruction related to a central bank collateralisation  
 34 operation remains on hold.

35 Management of non reimbursed reverse collateral Settlement Instructions

1 For the reverse collateral Settlement Instructions, related to a central bank collateralisation operation, pend-  
2 ing due to lack of cash for their reimbursement, T2S resorts:

- 3 | To the rebalancing of the potential available liquidity between T2S Dedicated Cash Account of the credit  
4 consumer (i.e. payment/settlement bank);
- 5 | And, if necessary, to the relocation of collateral in the central bank securities account for regular collat-  
6 eral.

7 **Liquidity rebalancing between T2S Dedicated Cash Accounts**

8 T2S identifies the T2S Dedicated Cash Accounts potentially involved in the liquidity rebalancing as follows:  
9

CONDITIONS	RULES
Same account owner	The T2S Dedicated Cash Account is owned by the same payment/settlement bank than the T2S Dedicated Cash Account with a pending intraday credit.
Same CB books	The T2S Dedicated Cash Account is managed in the books of the same central bank than the T2S Dedicated Cash Account with a pending intraday credit.

10 For each of the identified T2S Dedicated Cash Accounts, the available amount for rebalancing is calculated:  
11

Available amount in the deliv- erable cash balance	-	Pending intraday credit provided by a central bank on the deliv- erable cash balance	=	Available amount for rebalancing between T2S Dedicated Cash Accounts
---	---	--	---	--

12 T2S then generates the liquidity transfers to rebalance the requested amount:

- 13 | From the T2S Dedicated Cash Accounts with positive available liquidity for rebalancing;
- 14 | To the T2S Dedicated Cash Accounts with negative available liquidity for rebalancing.

15 Once possible rebalancing is generated, the final end of day amount is calculated:  
16

Available amount in the deliverable cash balance	+	Rebalanced amount to/from other T2S Dedi- cated Cash Account	-	Pending intraday credit provided by a central bank	=	Final end of day amount
--	---	--	---	---	---	----------------------------

17 If the final end of day amount is equal to zero or positive, all reverse collateral Settlement Instructions can  
18 be settled.

19 If the final end of day amount is negative, the generated rebalancing is not sufficient to reimburse all the  
20 reverse collateral Settlement Instructions and a relocation of collateral is necessary.

21 **Relocation of collateral**

22 For all T2S Dedicated Cash Accounts for which a negative final end of day amount is identified, T2S auto-  
23 matically applies a relocation of collateral. This collateral relocation aims at guaranteeing the credit extension  
24 processed in the RTGS to cover the missing cash.

1 T2S generates a collateral relocation for each reverse collateral Settlement Instruction which remains pend-  
2 ing after the rebalancing. These collateral relocation Settlement Instructions contain the following infor-  
3 mation:  
4

INFORMATION	DESCRIPTION
Debited Cash Account	Reference Id of the central bank cash account credited in the pending matched reverse collateral Settlement Instructions.
Credited Cash Account	Reference Id of the T2S Dedicated Cash Account debited in the pending matched reverse collateral Settlement Instructions
Settlement Amount	Missing amount to settle the pending matched reverse collateral Settlement Instructions. The minimum amount for auto-collateralisation is not considered during relocation.
Debited Securities Account	Reference Id of the securities account credited in the pending matched reverse collateral Settlement Instructions.
Debited Securities Position	Restriction Type Id of the securities position credited in the pending matched reverse collateral Settlement Instructions.
Credited Securities Account	Reference Id of the securities account previously set by the central bank in the static data as the regular collateral securities account.
Credited Securities Position	Restriction Type Id of the deliverable securities position of the credited securities account.
Securities	ISIN of the collateral released in the pending matched reverse collateral Settlement Instructions. When the reimbursed ISINs are unavailable alternative ISINs from those defined as eligible for collateral are used <sup>347</sup> . Relocation then occurs using the combination that most closely covers the missing cash.

5 No reverse collateral is generated for the collateral relocation as the purpose is to extend the credit outside  
6 T2S.

#### 7 Final reimbursement of pending intraday credit

8 Once all the necessary collateral relocations are generated (i.e. all pending reverse collateral Settlement  
9 Instructions can now be reimbursed), T2S submits to settlement:

- 10 | The pending reverse collateral Settlement Instructions (and linked reverse collateral Settlement Re-  
11 | striction in case of sub-pledge);
- 12 | The T2S generated liquidity transfer for liquidity rebalancing;
- 13 | The T2S generated collateral relocation Settlement Instructions.

14 It results in the reimbursement of all central bank collateralisation operations within T2S. The relocation  
15 results in a central bank negative cash balance which is transferred to the RTGS with the automated cash

---

347 ISIN may be unavailable when under intraday restriction or when not allowed for cross-border settlement between the payment bank securities account and the central bank regular securities account in another CSD.

1 sweep. When the central bank is reimbursed by the payment bank outside T2S, the central bank can trans-  
2 fer back the securities to the payment bank in T2S with FOP Settlement Instructions.

### 3 Illustrations of the management of pending intraday credit at the end of day

4 The following examples illustrate the management of intraday credit provided by a central bank pending at  
5 the end of day, according to the available liquidity in the T2S Dedicated Cash Account of the credit consumer  
6 (i.e. the payment/settlement bank):

- 7 | Case 1 – The reimbursement is possible with the liquidity available in the T2S Dedicated Cash Account  
8 which received the intraday credit;
- 9 | Case 2 – The reimbursement is possible after the generation of a liquidity rebalancing from another T2S  
10 Dedicated Cash Account of the credit consumer;
- 11 | Case 3 – The reimbursement needs to perform a collateral relocation for the provision of additional li-  
12 quidity by the central bank.

### 13 **Case 1 – Possible reimbursement with available liquidity in the T2S Dedicated Cash Account**

14 At the end of the day, the following reverse collateral Settlement Instructions remains on hold:  
15

OPERATION ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRDT DBIT IND.	AMOUNT	T2S PARTY HOLD INDICATOR
SI5	SA1	ISIN X	AWAS	DELI	100	DCA1	EUR	CRDT	8,000.00	NO
SI6	SA2		EEUR	RECE	100	DCA2		DBIT	8,000.00	YES

16 T2S selects the reverse collateral Settlement Instruction SI6 which is on hold and updates its T2S Party Hold  
17 Indicator to "No". It results in the submission of both reverse collateral Settlement Instructions SI5|SI6 to  
18 the posting application process for their settlement attempt.

19 Their provision check result is the following:  
20

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1 <sup>348</sup>	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X EEUR	DCA1 DLVR	DCA2 DLVR
SI5	-100		+8,000.00	
SI6		+100		-8,000.00

348 The central bank cash account provided the intraday credit is allowed to have negative cash balance. It is then exempted of the provision check.

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1 <sup>348</sup>	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X EEUR	DCA1 DLVR	DCA2 DLVR
Provision net flow	-100	+100	+8,000.00	-8,000.00
Availability	100	15	-100,000.00	10,000.00
Provision check execution	0 OK	+115 OK	-92,000.00 Exempted	+2,000.00 OK

1 Since the provision check is positive, SI5|SI6 are booked reimbursing the pending intraday credit.

2 **Case 2 – Possible reimbursement with a liquidity rebalancing from another T2S Dedicated Cash**  
3 **Account**

4 At the end of the day, the following reverse collateral Settlement Instructions remain on hold:  
5

OP ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDI- CATED CASH ACCOUNT	CUR.	CRDT DBIT IND.	AMOUNT	T2S PARTY HOLD IN- DICATOR
SI5	SA1	ISIN X	AWAS	DELI	100	DCA1	EUR	CRDT	8,000.00	NO
SI6	SA2		EEUR	RECE	100	DCA2		DBIT	8,000.00	YES

6 T2S selects the reverse collateral Settlement Instruction SI6 which is on hold and updates its T2S Party Hold  
7 Indicator to "No". It results in the submission of both reverse collateral Settlement Instructions SI5|SI6 to  
8 the posting application process for their settlement attempt.

9 Their provision check result is the following:  
10

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1 <sup>349</sup>	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X EEUR	DCA1 DLVR	DCA2 DLVR
SI5	-100		+8,000.00	
SI6		+100		-8,000.00

349 The central bank cash account provided the intraday credit is allowed to have negative cash balance. It is then exempted of the provision check.

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1 <sup>349</sup>	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X EEUR	DCA1 DLVR	DCA2 DLVR
Provision net flow	-100	+100	+8,000.00	-8,000.00
Availability	100	15	-100,000.00	5,000.00
Provision check execution	0 OK	+115 OK	-92,000.00 Exempted	-3,000.00 LACK

1 Since the provision check is negative, SI5|SI6 cannot be settled. T2S then checks if a liquidity rebalancing is  
 2 possible. A second T2S Dedicated Cash Account DCA3 is owned by the credit consumer on the books of the  
 3 central bank acting as credit provider.

4 For both T2S Dedicated Cash Accounts owned by the credit consumer, the calculations of the available li-  
 5 quidity for rebalancing are the following:  
 6

T2S Dedicated Cash Account Id	Available amount in the deliverable cash balance	-	Pending intraday credit provided by a central bank on the deliverable cash balance	=	Available amount for rebalancing between T2S dedicated cash accounts
DCA2	5,000.00	-	8,000.00	=	-3,000.00
DCA3	4,000.00	-	0	=	4,000.00

7 Since the second T2S Dedicated Cash Account DCA3 has a positive available amount for rebalancing, T2S  
 8 generates the following liquidity transfer to rebalance the cash necessary to settle SI5|SI6:  
 9

OPE ID	DEBITED T2S DEDICATED CASH ACCOUNT	CREDITED T2S DEDICATED CASH ACCOUNT	CUR.	AMOUNT
LT1	DCA3	DCA2	EUR	3,000.00

10 The calculation of the final end of day amount on both T2S Dedicated Cash Accounts taken into account the  
 11 liquidity rebalancing is the following:  
 12

T2S Dedicated Cash Account Id	Available amount in the deliverable cash balance	+	Rebalanced amount to/from other T2S dedicated cash account	-	Pending intraday credit provided by a central bank	=	Final end of day amount
DCA2	5,000.00	+	3,000.00	-	8,000.00	=	0
DCA3	4,000.00	+	-3,000.00	-	0	=	1,000.00

1 Since all the calculated final end of day amounts are positive, the pending intraday credit can be reimbursed  
2 through the settlement of SI5|SI6 and LT1.

### 3 **Case 3 – Possible reimbursement with a rebalancing and a collateral relocation**

4 At the end of the day, the following reverse collateral Settlement Instructions remains on hold:  
5

OPE ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRDT DBIT IND.	AMOUNT	T2S PARTY HOLD INDICATOR
SI5	SA1	ISIN X	AWAS	DELI	100	DCA1	EUR	CRDT	8,000.00	NO
SI6	SA2		EEUR	RECE	100	DCA2		DBIT	8,000.00	YES

6 T2S selects the reverse collateral Settlement Instruction SI6 which is on hold and updates its T2S Party Hold  
7 Indicator to "No". It results in the submission of both reverse collateral Settlement Instructions SI5|SI6 to  
8 the posting application process for their settlement attempt.

9 Their provision check result is the following:  
10

OPERATION	SECURITY SIDE		CASH SIDE	
	SECPOS1	SECPOS2	CASHBAL1 <sup>350</sup>	CASHBAL2
	SA1 ISIN X AWAS	SA2 ISIN X EEUR	DCA1 DLVR	DCA2 DLVR
SI5	-100		+8,000.00	
SI6		+100		-8,000.00
Provision net flow	-100	+100	+8,000.00	-8,000.00
Availability	100	15	-100,000.00	5,000.00
Provision check execution	0 OK	+115 OK	-92,000.00 Exempted	-3,000.00 LACK

11 Since the provision check is negative, SI5|SI6 cannot be settled. T2S then checks if a liquidity rebalancing is  
12 possible. A second T2S Dedicated Cash Account DCA3 is owned by the credit consumer on the books of the  
13 central bank acting as credit provider.

14 For both T2S Dedicated Cash Accounts owned by the credit consumer, the calculations of available liquidity  
15 for rebalancing are the following:

350 The central bank cash account provided the intraday credit is allowed to have a negative cash balance. It is then exempted of the provision check.

1

T2S Dedicated Cash Account Id	Available amount in the deliverable cash balance	-	Pending intraday credit provided by a central bank on the deliverable cash balance	=	Available amount for re-balancing between T2S dedicated cash accounts
DCA2	5,000.00	-	8,000.00	=	-3,000.00
DCA3	1,000.00	-	0	=	1,000.00

2 Since the second T2S Dedicated Cash Account DCA3 has a positive available amount, T2S generates the  
3 following liquidity transfer to rebalance the cash necessary to settle SI5|SI6:

4

OPÉ ID	DEBITED T2S DEDICATED CASH ACCOUNT	CREDITED T2S DEDICATED CASH ACCOUNT	CUR.	AMOUNT
LT1	DCA3	DCA2	EUR	1,000.00

5 The calculations of the final end of day amount on both T2S Dedicated Cash Accounts taken into account the  
6 liquidity rebalancing are the following:

7

T2S Dedicated Cash Account Id	Available amount in the deliverable cash balance	+	Rebalanced amount to/from other T2S dedicated cash account	-	Pending intraday credit provided by a central bank	=	Final end of day amount
DCA2	5,000.00	+	1,000.00	-	8,000.00	=	-2,000.00
DCA3	1,000.00	+	-1,000.00	-	0	=	0

8 Since the calculated final end of day amount of the T2S Dedicated Cash Account DCA2 is negative, the re-  
9 verse collateral Settlement Instruction SI5|SI6 cannot be settled with the liquidity received through LT1.

10 T2S then triggers a relocation of collateral in a way to cover the missing resources (2,000.00) through the  
11 provision of additional liquidity by the central bank. Based on a unitary collateral valuation for the security  
12 ISIN X of EUR 80.00, T2S generates the following matched collateral relocation Settlement Instructions:

13

OPÉ ID	SECURITIES ACCOUNT	ISIN CODE	IMPACTED BALANCE	SEC MVT TYPE	QTY	T2S DEDICATED CASH ACCOUNT	CUR.	CRDT DBIT IND.	AMOUNT
SI7	SA3	ISIN X	AWAS	RECE	+25	DCA1	EUR	DBIT	-2,000.00
SI8	SA2		EEUR	DELI	-25	DCA2		CRDT	+2,000.00

14 The T2S generated matched collateral relocation Settlement Instructions SI7|SI8 cover the missing cash in  
15 the T2S Dedicated Cash Account DCA2. They can be settled together with the pending reverse collateral  
16 Settlement Instructions SI5|SI6 and the T2S generated liquidity transfer LT1 for liquidity rebalancing.

17 Ultimately, the intraday credit provided by the central bank in T2S through auto-collateralisation is reim-  
18 bursed. The additional liquidity is then managed by the owner of the RTGS account assisted where appropri-

1 ate by the central bank, possibly through a collateral management system (See messages sese.024,  
2 sese.025, sese.032, camt.050 and camt.051).

### 3 *Transfer of the cash balances to the respective RTGS accounts "automated cash sweep"*

4 After the completion of the "optional cash sweep", T2S checks the balances of T2S Dedicated Cash Ac-  
5 counts. If there is still liquidity on an account, the balance is automatically transferred via the "automated  
6 cash sweep" as a Credit Transfer to the RTGS account which is linked to the respective T2S Dedicated Cash  
7 Account. In case of CB cash accounts there might also be a negative balance on the account. In this case  
8 T2S creates a Debit Transfer to transfer the missing balance (please see also End-of-Day Cash Manage-  
9 ment).

10 In both cases T2S notifies the T2S Actor via an Information message (Credit/Debit Notification) depending  
11 on the T2S Actor's Message Subscription preferences. For further details on Message Subscription please see  
12 section [Message subscription](#) [▶ 203].

### 13 **1.6.2.3.4 Parameters Synthesis**

14 No specific configuration from T2S Actor is needed.

## 15 1.6.2.4 Proceeds resulting from Corporate Actions or monetary policy operations

### 16 **1.6.2.4.1 Concept**

17 Corporate Actions Cash is the process of automatically transferring the cash proceeds of corporate actions  
18 from a T2S Dedicated Cash Account to an RTGS account, whenever a T2S Actor has opted for this automat-  
19 ed transfer. The cash proceeds to be transferred are stemming from the settlement of a certain type of Set-  
20 tlement Instruction (identified as corporate actions) and are initially crediting a T2S Dedicated Cash Account.  
21 The aim of this process is to provide T2S Actors with the possibility to transfer and centralise on an RTGS  
22 account the liquidity resulting from corporate actions, hence avoiding that this liquidity is used in T2S for  
23 other settlement purposes.

24 In addition to the retransfer of cash proceeds resulting from corporate actions, the current application pro-  
25 cess is also used for rebalancing the cash stemming from the settlement in T2S of monetary policy opera-  
26 tions. However, as far as monetary policy operations are concerned, the automatic retransfer of cash is  
27 compulsory and hence the liquidity transfer from T2S to the relevant RTGS account is performed automati-  
28 cally as soon as the monetary policy operation settles in T2S (unlike what is done for corporate actions cash  
29 proceeds, for which the retransfer is optional).

### 30 **1.6.2.4.2 Overview**

31 T2S allows T2S Actors receiving cash proceeds stemming from Corporate Actions on their T2S Dedicated  
32 Cash Accounts to determine if these cash proceeds must be automatically transferred to an RTGS account. If  
33 this automatic transfer is used, T2S credits the T2S Dedicated Cash Account with the corporate actions cash  
34 proceeds and debits it by transferring the corresponding amount of cash to the linked RTGS account. The  
35 rebalancing of liquidity stemming from monetary policy operations is also ensured by T2S, but does not re-  
36 quire specific configuration from the T2S Actor.

### 1.6.2.4.3 Corporate actions / monetary policy operations cash process

The three steps for the execution of the rebalancing of Corporate Actions Cash process are the following:

- I First, a T2S Actor has to set up a Standing Liquidity Transfer Order for the T2S Dedicated Cash Account which is designated to receive corporate actions cash proceeds; as far as liquidity rebalancing is concerned for monetary policy operations, T2S Actors do not need to set up any Standing Liquidity Transfer Order, since the retransfer is executed automatically by T2S for countries using repo for this kind of operations;
- I Afterwards, when T2S settles a Settlement Instruction related to Corporate Actions, the T2S Dedicated Cash Account is credited with the cash proceeds; similarly, when settling a monetary policy operation, the T2S dedicated cash account is credited with liquidity stemming from monetary policy operations (in countries using repos);
- I T2S simultaneously creates a Liquidity Transfer transferring the cash proceeds from the credited T2S Dedicated Cash Account to the linked RTGS account.

Each of these steps is detailed below.

#### Set up of Standing Liquidity Transfer Order

The Standing Liquidity Transfer Order related to cash resulting from corporate action for a T2S Dedicated Cash Account is defined in the reference data by the T2S Actor with the following characteristics:

- I Linked RTGS account where the liquidity (i.e. cash proceeds stemming from the corporate action) has to be transferred to;
- I No predefined amount specified by the T2S Actor. The amount of the Corporate Action is automatically used (i.e. when the "Dedicated Amount" parameter is set to "true", as detailed in section "Parameter Synthesis" below).
- I Once defined, the Standing Liquidity Transfer Order applies to each cash proceed resulting from Corporate Action crediting the T2S Dedicated Cash Account for which the order is configured. For general rules regarding the setup of a Standing Liquidity Transfer Order, please refer to section [Liquidity Transfer](#) [▶ 633].

#### Receipt of Settlement Instructions related to Corporate Actions

Settlement Instructions are identified as corporate actions on stock or on flow by the respective ISO transaction code. The settlement of these corporate action Settlement Instructions results in a credit of the corresponding cash proceeds on the T2S Dedicated Cash Account of the relevant T2S Actor. The same process applies for the settlement of monetary policy operations, when settling via repo on a T2S Dedicated Cash Account (please see section [Provision check process](#) [▶ 391]).

#### Creation of Liquidity Transfer

The existence of Corporate Actions is checked in T2S at any time of the Settlement Day, during Night-time or Real-time Settlement periods. For details in respect of this checking process, please refer to section [Provision check process](#) [▶ 391].

For any Settlement Instruction related to Corporate Actions (leading to a credit posting on the Dedicated Cash Account), T2S checks whether a Standing Liquidity Transfer Order related to Corporate Action was

1 defined for the T2S Dedicated Cash Account to be credited. If such an Order exists, T2S automatically gen-  
2 erates a Liquidity Transfer which immediately and always transfers the respective cash proceeds from the  
3 T2S Dedicated Cash Account to the linked RTGS account (in a way avoiding that the cash may be used for  
4 any other purpose in the meantime). Within T2S this automatic Liquidity Transfer generation is triggered by  
5 the business event "CARL"<sup>351</sup>.

6 Based on the ISO transaction code (CNCB) of monetary policy operations, the liquidity stemming from the  
7 settlement of such monetary policy operations is automatically and immediately transferred by T2S to the  
8 linked RTGS account, via the generation of a Liquidity Transfer.

9 In the following example T2S Actor A sends a Corporate Action to T2S (Step 1) which credits T2S Dedicated  
10 Cash Account A with a EUR 100 cash proceed (Step 2a). It is assumed that a Standing Order related to Cor-  
11 porate Action already exists for this account. Therefore, the credited amount is simultaneously debited on  
12 T2S Dedicated Cash Account A (Step 2b) and transferred as a Liquidity Transfer (Step 3) to the linked RTGS  
13 account A (Step 4) via the RTGS and T2S transit accounts.

1

**EXAMPLE 183 - CORPORATE ACTION PROCEEDS AUTOMATED TRANSFER**

2

**1.6.2.4.4 Parameters Synthesis**

The following parameters are specified by the T2S Actor for each Standing Liquidity Transfer Order applying to Corporate Actions Cash.

3

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup of Liquidity Transfer Order	Dedicated Amount	T2S Actor	T2S Actor	M	"true"	N/A
Setup of Liquidity Transfer Order	Order type	T2S Actor	T2S Actor	M	Standing Order	N/A
Setup of Liquidity Transfer Order	Is triggered by	T2S Actor	T2S Actor	M	Business Event CARL	N/A

4

5

6

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup of Liquidity Transfer Order	Valid From	T2S Actor	T2S Actor	M	Date	N/A
Setup of Liquidity Transfer Order	Valid To	T2S Actor	T2S Actor	M	Date	N/A
Setup of Liquidity Transfer Order	External RTGS account	T2S Actor	T2S Actor	M	External RTGS account reference	N/A
Setup of Liquidity Transfer Order	T2S DCA to be debited	T2S Actor	T2S Actor	M	T2S DCA Account Number	N/A

1 1.6.2.5 Cash Blocking and Reservation

2 **1.6.2.5.1 Concept**

3 Blocking and reservation on cash, allow a T2S Actor, to move an amount of cash in a specific cash balance  
4 of a T2S Dedicated Cash Account, and make it available for a specific purpose (e.g. reserved/blocked cash to  
5 be used by a Settlement Instruction for a specific aim).

6 Blocking and reservation are referred together as cash restriction processing. Their settlement processes  
7 differ for the set up of a new restricted cash balance, the increase or decrease of cash in an existing restrict-  
8 ed cash balance and the way to use the restricted cash for a Settlement Instruction.

9 A T2S Actor instructs T2S:

- 10 | With a Settlement Restriction to set-up, increase, and decrease a restricted cash balance (see section  
11 Send Settlement Restriction on Cash Balance);
- 12 | With a Settlement Instruction to use a restricted cash balance (see section Send Settlement Instruction).

13 **1.6.2.5.2 Overview**

14 Main features of restricted cash balance

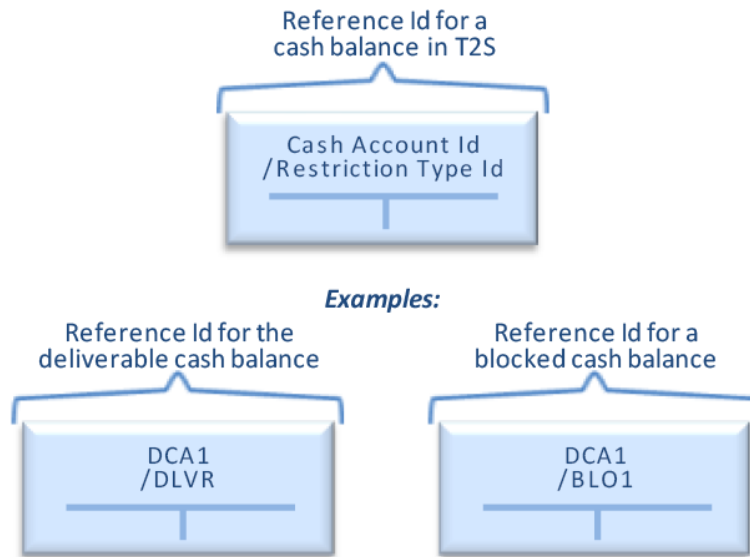

15 Identification of a cash balance

16 A settlement in T2S leads to move cash from a cash balance to another cash balance. T2S identifies the cash  
17 balance to update with the combination of the following identifiers:

- 18 | The *cash account* Id;
- 19 | The *restriction type* Id.

20 The following diagrams illustrate the reference Id used by T2S for the identification of a cash balance.

1

**DIAGRAM 147 - REFERENCE ID USED FOR THE IDENTIFICATION OF A CASH BALANCE**

2

3 Therefore, T2S identifies the cash balance involved in the settlement of a Settlement Instruction or a Set-  
4 tlement Restriction, on the basis of their content regarding the identifiers above.

#### 5 Actions applicable on restricted cash balances

6 A T2S Actor can perform <sup>352</sup> the following actions on blocked or reserved cash balances:

- 7 | Set-up: action to create (i) a restricted cash balance and a restriction reference or (ii) to create only a  
8 restriction reference when the restricted cash balance already exists;
- 9 | Increase: action to restrict an additional amount of cash in an existing blocking or reservation;
- 10 | Decrease: action to free an amount of cash held in an existing blocking or reservation;
- 11 | Use: action to use restricted cash for the settlement of a Settlement Instruction.

12 The set-up, increase and decrease are instructed with a Settlement Restriction (See section Send Settlement  
13 Restriction on Cash Balance. They are allowed to the owner of the T2S Dedicated Cash Account: central  
14 bank or payment/settlement bank and to any Instructing Party having the privilege to operate on the T2S  
15 dedicated cash account (see section [Business Validation](#) [▶ 301]).

16 The use is instructed with a Settlement Instruction (See section Send Settlement Instruction) mentioning the  
17 restriction reference. It is allowed both to the owner of T2S Dedicated Cash Accounts and to the clients of  
18 payment/settlement bank.

19 If after a decrease or a use the restricted cash balance becomes equal to zero, this restricted cash balance  
20 and its restriction reference are not deleted.

21 The following diagram illustrates the identification of restrictions in T2S following their set-up.

---

352 provided he has the privileges to instruct the requested settlement restrictions (See section [Privilege](#) [▶ 146])

1

**DIAGRAM 148 - IDENTIFICATION OF CASH RESTRICTIONS IN T2S**

## Identification of cash restrictions in T2S

***Blocking and reservation  
in cash balances are identified  
through the restriction reference  
generated at each set-up.***

2

Blocking versus reservation main features

Blocking and reservation on cash balance differ as follows:

- 5 | For blocking, it is not possible to block an amount of cash higher than the amount in deliverable cash
- 6 | balance. The Settlement Restriction is not partially settled; it is recycled with additional incoming cash
- 7 | and is eventually settled only when sufficient cash is available to ensure full settlement of the blocking;
- 8 | For reservation, it is possible to reserve an amount of cash higher than the amount in deliverable cash
- 9 | balance. The Settlement Restriction is partially settled and all incoming cash is automatically pre-empted
- 10 | until the amount of the reservation is filled.

Configuration of restricted cash balancesConfiguration of restriction types

The restriction type allows identifying the impacted cash balance with the combination: cash account  
Id/restriction type Id.

It must be configured in the static data before setting up any blocking or reservation on a cash balance.

The restriction type is configured by:

- 17 | | The T2S Operator when the purpose applies to every T2S Party whatever their central bank;
- 18 | | A central bank when the purpose applies only to the T2S Parties of this central bank and their cash bal-
- 19 | | ances;

Data used to configure the restriction types are the following among the restriction type attributes:

1

ATTRIBUTE	DESCRIPTION	DATA CONFIGURED BY T2S ACTOR	DATA CONFIGURED BY T2S OPERATOR ONLY
Restriction type Id	Code for the identification of the restriction type.	For example: "BLOd" for blocking "RESd" for reservation d : reference number from 1 to 9	For example: "DLVR": for deliverable cash balance "COCB": for cash balance to block for conditional settlement
Restriction description	Description of the restriction purpose.	RT for blocking RT for reservation	RT for deliverable cash balance RT for conditional delivery
Object restriction type	Object type on which the restriction type applies.	"Cash balance"	"Cash balance"
Restriction Processing Type	Processing type in T2S applicable to the restriction type.	"Blocking" "Reservation"	"Deliverable" "CoSD Blocking"
Valid from	Date from which the restriction type can be set up in a cash account.	All admitted value in compliance with attribute description.	unlimited
Valid To	Date to which the restriction type can be set up in a cash account.	All admitted value in compliance with attribute description.	unlimited

2 Configuration of cash balances

3 Once the cash account (See section [T2S dedicated cash accounts in T2S](#) [▶ 95]) and the restriction type  
4 (See section [Restriction types](#) [▶ 45]) are configured in the static data, the T2S Actor has to create the cash  
5 balance for the related cash account and restriction type.

6 Only the cash balances to be debited need to be configured, including the cash balance for the restriction  
7 type corresponding to deliverable cash balance.

8 The cash balances to be credited, if they do not exist yet, are automatically created by T2S during the set-  
9 tlement process, with the relevant account and restriction type.

10 Since cash balances are segregated by restriction type, several cash balances related to the same restriction  
11 processing can exist for a cash account (several blockings, several reservations) but each of them having a  
12 different restriction type Id.

13 The following diagram illustrates the configuration of cash balances used for blocking and reservation on a  
14 cash account.

1

**DIAGRAM 149 - POSSIBLE CASH BALANCES CONFIGURATION FOR A CASH ACCOUNT**

2

3 **1.6.2.5.3 Cash blocking process**

4 This section details the actions a T2S Actor can perform with a blocking:

5 | Only as a owner of the T2S Dedicated Cash Account:

- 6 – Set-up a new restriction reference in a blocked cash balance;
- 7 – Increase an existing restriction reference in a blocked cash balance;
- 8 – Decrease an existing restriction reference in a blocked cash balance;

9 | As a owner of the T2S Dedicated Cash Account or as a client of a payment/settlement bank:

- 10 – Use of an existing restriction reference in a blocked cash balance, complemented if needed with an
- 11 amount from the deliverable cash balance.

12 Set-up a new restriction reference in a blocked cash balance

13 Process

14 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Cash Balance) with

15 the following information in order to set-up a new restriction reference in a blocked cash balance:

16

INFORMATION	DESCRIPTION
Cash Account	Common T2S Dedicated Cash Account Id of both involved cash balances.
Balance From	Restriction type Id of the deliverable cash balance from which the cash is debited.
Balance To	Restriction type Id of the blocked cash balance where the cash is credited.
Settlement Amount	Amount to block.

17 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)

18 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Has a restriction processing type equal to "deliverable" configured by the T2S Operator (i.e. its restriction processing type cannot be "reservation" or "blocked": it is not allowed to block cash from a reserved or blocked cash balance).</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the central bank which manages the T2S Dedicated Cash Account or by the owner of the T2S Dedicated Cash Account.</li> </ul>
	See section <a href="#">Specific restriction validation process</a> [ 321]	<p>The set up of a blocked cash balance is allowed only if its release at the end of day is as well allowed by the Specific restriction validation.</p>
Posting		<p>If the cash balance, referred in the Balance From, does not exist, T2S considers the amount equal to zero.</p>
		<p>If the cash balance, referred in the Balance To, does not exist, T2S creates the cash balance.</p>
		<p>If the amount of the cash balance referred in the Balance From is not sufficient to fully settle the Settlement Restriction, the Settlement Restriction is unsettled It is recycled with additional incoming cash and is eventually settled only when sufficient cash is available to ensure full settlement of the blocking.</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p>
		<p>When the Settlement Restriction is booked, T2S updates the involved cash balances and generates a new restriction reference.</p>
<p>T2S sends the restriction reference created for the new blocking.</p>		

1 This process is illustrated by the example below.

2 **EXAMPLE 184 - SET-UP OF A NEW CASH BLOCKING**

3 To set-up a new blocking, A T2S Actor sends to T2S a Settlement Restriction SR1 with the following infor-  
4 mation:

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT
SR1	DCA1	DLVR	BLO1	60

6 If the amount of the deliverable cash balance (i.e. the balance from) allows a full settlement, T2S settles the  
7 Settlement Restriction SR1 with the following updates on the involved cash balances and amounts of the  
8 restriction reference related to the blocking:

**Full Settlement**  
-i.e. cash balance identified as Balance From amount (100) >= settlement amount (60)-

9  
10 T2S generates the restriction reference (RRF12345) in the blocked cash balance (DCA1/BLO1) and sends it  
11 back to the T2S Actor with the settlement confirmation of the Settlement Restriction. T2S Actors can use this  
12 reference –available through the ad-hoc cash restriction detail screen - for future increase, decrease or use.

13 If the amount of the deliverable cash balance (i.e. the balance from) does not allow a full settlement the  
14 Settlement Restriction SR1 is unsettled. It is recycled with additional incoming cash and is eventually settled  
15 only when sufficient cash is available to ensure full settlement of the blocking.

16 Increase an existing restriction reference in a blocked cash balance

17 Process

18 A T2S Actor sends a Settlement Restriction (see section Send Settlement Restriction on Cash Balance) with  
19 the following information in order to increase an existing restriction reference in a blocked cash balance:  
20

INFORMATION	DESCRIPTION
Cash Account	Common T2S Dedicated Cash Account Id of both involved cash balances.
Balance From	Restriction type Id of the deliverable cash balance from which the cash is debited.

INFORMATION	DESCRIPTION
Balance To	Restriction type Id of the blocked cash balance to which the cash is credited.
Settlement Amount	Amount to increase.
Restriction Reference	Single restriction reference to increase in the blocked cash balance.

1 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

2  
3

PROCESS	INFORMATION	RULES
Business Validation	Balance From	The restriction type Id indicated in the Balance From: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Has a restriction processing type equal to "deliverable" configured by the T2S Operator (i.e. its restriction processing type cannot be "reservation" or "blocked": it is not allowed to block cash from a reserved or blocked cash balance).</li> </ul>
	Balance To	The restriction type Id indicated in the Balance To: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the central bank which manages the T2S Dedicated Cash Account or by the owner of the T2S Dedicated Cash Account.</li> </ul>
	Restriction reference	The indicated restriction reference exists in the cash balance indicated as Balance To.
	See section <a href="#">Specific restriction validation process</a> [▶ 321]	The increase of a blocked cash balance is allowed only if its release at the end of day is as well allowed by the Specific restriction validation.
Posting		If the amount of the cash balance referred in the Balance From is not sufficient to fully settle the Settlement Restriction, the Settlement Restriction is unsettled. It is recycled with additional incoming cash and is eventually settled only when sufficient cash is available to ensure full settlement of the blocking.
		If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement

PROCESS	INFORMATION	RULES
		Instruction).
		When the Settlement Restriction is booked, T2S updates the involved cash balances and amounts of the restriction reference.

1 This process is illustrated by the example below.

2 **EXAMPLE 185 - INCREASE OF AN EXISTING CASH BLOCKING**

3 To increase an existing blocking, a T2S Actor sends to T2S a Settlement Restriction SR2 with the following  
4 information:

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
SR2	DCA1	DLVR	BLO1	30	RRF12345

6 If the amount of the deliverable cash balance allows a full settlement, T2S settles the Settlement Restriction  
7 with the following updates on the involved cash balances and amounts of the restriction references related  
8 to the blocking:

**Full Settlement**  
-i.e. cash balance identified as Balance From amount (100) >= settlement amount (30)-

9  
10 If the amount of the deliverable cash balance does not allow a full settlement, the Settlement Restriction  
11 SR2 is unsettled. It is recycled with additional incoming cash and is eventually settled only when sufficient  
12 cash is available to ensure full settlement of the blocking.

13 Decrease an existing restriction reference in a blocked cash balance

14 Process

15 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Cash Balance) with  
16 the following information in order to decrease an existing restriction reference in a blocked cash balance:  
17

INFORMATION	DESCRIPTION
Cash Account	Common T2S Dedicated Cash Account Id of both involved cash balances.
Balance From	Restriction type Id of the blocked cash balance from which the cash is debited.

INFORMATION	DESCRIPTION
Balance To	Restriction type Id of the deliverable cash balance to which the cash is credited.
Settlement Amount	Amount to decrease.
Restriction Reference	Single restriction reference to decrease in the blocked cash balance.

1 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

2  
3

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the central bank which manages the T2S Dedicated Cash Account or by the owner of the T2S Dedicated Cash Account.</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Has a restriction processing type equal to "deliverable" configured by the T2S Operator (i.e. its restriction processing type cannot be "reservation" or "blocked": it is not allowed to remove blocked cash into another reserved or blocked cash balance).</li> </ul>
	Restriction reference	The indicated restriction reference exists in the cash balance indicated as Balance From.
Posting		If the remaining amount of the restriction reference is not sufficient to fully settle the Settlement Restriction, the Settlement Restriction is unsettled. It is recycled with additional incoming cash and is eventually settled only when sufficient cash is available to ensure full settlement of the blocking.
		If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).
		When the Settlement Restriction is booked, T2S updates the involved cash balances and amounts of the restriction reference (not deleted

PROCESS	INFORMATION	RULES
		when the remaining quantity following the booking is equal to zero).

1 This process is illustrated by the example below.

2 **EXAMPLE 186 - DECREASE OF AN EXISTING CASH BLOCKING**

3 To decrease an existing blocking, a T2S Actor sends to T2S a Settlement Restriction SR3 with the following  
4 information:  
5

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	QUANTITY	RESTRICTION REFERENCE
SR3	DCA1	BLO1	DLVR	50	RRF12345

6 If the remaining amount in the restriction reference allows a full settlement, T2S settles the Settlement Re-  
7 striction SR3 with the following updates on the involved cash balances and amounts of the restriction refer-  
8 ences related to the blocking:

**Full Settlement**  
-i.e. remaining amount in the restriction reference (90) >= settlement amount (50)-

9  
10 If the remaining amount in the restriction reference does not allow a full settlement, the Settlement Re-  
11 striction SR2 is unsettled. It is recycled with additional incoming cash and is eventually settled only when  
12 sufficient cash is available to ensure full settlement of the blocking.

13 Use of an existing restriction reference in a blocked cash balance with possible complement

14 Process (indirect debit)

15 A T2S Actor sends a Settlement Instruction (See section Send Settlement Instruction) with the following  
16 information in order to use an existing restriction reference in a blocked cash balance:  
17

INFORMATION	DESCRIPTION
Cash Account	T2S Dedicated Cash Account Id of the impacted cash balance.
Original Settlement Amount	Amount to debit.
Credit/Debit Indicator	Debit
Restriction Reference(s)	Restriction reference(s) to be used to settle the Settlement Instruction.

INFORMATION	DESCRIPTION
	(can belong to several blocked/reserved cash balances)

1 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):  
 2  
 3

PROCESS	INFORMATION	RULES
Business Validation	Restriction reference	All the indicated restriction reference(s) exist in the cash balances of the same T2S Dedicated Cash Account Id.
Posting		<p>For the provision check, T2S considers:</p> <ul style="list-style-type: none"> <li>▮ The sum of the remaining amount of all the restriction reference(s) indicated in the Settlement Instruction;</li> <li>▮ Complemented, if necessary, with amount from the deliverable Impacted Balance.</li> </ul> <p>The provision check fails if the calculated sum is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [▶ 381]).</p> <p>The settlement status of the Settlement Instruction is set to "Unsettled".</p> <p>The provision check is successful if the calculated sum is sufficient to fully settle or to partially settle (if applicable) the Settlement Instruction.</p> <p>The settlement status of the Settlement Instruction is set to "Settled" or "Partially Settled".</p> <p>In case of successful provision check, T2S generates one additional Settlement Restriction per involved blocked cash balance, in a way to transfer the blocked cash to the impacted cash balance.</p> <p>The transferred amount of cash is equal to the cash needed for the settlement of the Settlement Instruction.</p> <p>The Settlement Restrictions, generated by T2S to transfer the blocked cash, are settled in T2S on an all-or-none basis with the Settlement Instruction.</p> <p>In case of successful provision check, T2S updates the involved cash balances and the amounts of the restriction reference(s) that have been used (not deleted when the remaining quantity following the booking is equal to zero).</p> <p>In case several restriction references are used, their amounts are up-</p>

PROCESS	INFORMATION	RULES
		dated according to their order indicated in the Settlement Instruction.

1 Validity of Settlement Restrictions generated by T2S for the use of a blocked cash balance

2 Once generated, the T2S Settlement Restrictions are subject to other T2S processes as any other Settlement  
3 Instruction. Furthermore in order to ensure the consistency of the process for the use of blocked balance,  
4 the following principles are implemented:

5 | Validation: When T2S validates the set up and the increase of a blocked cash balance, T2S validates also  
6 the Settlement Restriction for the release of the cash in order to ensure the end of day automatic re-  
7 lease. Hence, the Settlement Restriction generated for the use of a blocked cash balance is always valid  
8 as this is the same Settlement Restriction as for the release.

9 | Revalidation: The Settlement Restrictions generated for the use of a blocked cash balance are generated  
10 only if they can settle immediately. As a consequence, they are not subject to revalidation. (See section  
11 [Revalidation process](#) [▶ 342])

12 | Intraday Restriction: T2S does not generate the Settlement Restriction for the use of a blocked cash bal-  
13 ance if it would be subject to intraday restriction. Instead, T2S sets the underlying Settlement Instruc-  
14 tion under intraday restriction. Furthermore, once generated, the Settlement Restriction for the use of a  
15 blocked cash balance is immediately settled and hence, cannot be subject to intraday restriction. (See  
16 section [Eligibility check process](#) [▶ 383]).

17 | Cancellation or amendment: Once generated, the T2S generated Settlement Restrictions for the use of a  
18 blocked cash balance are immediately settled, hence, they cannot be cancelled or amended by any of  
19 the involved T2S Actors.

20 The use of a blocked cash balance with possible complement is illustrated by the example below.

21 **EXAMPLE 187 - USE OF A BLOCKED CASH BALANCE COMPLEMENTED BY ANOTHER POSITION**

22 To use blocked restriction references in a T2S Dedicated Cash Account in a buying Settlement Instruction a  
23 T2S Actor sends to T2S a Settlement Instruction SI2 which is matched with the counterpart's Settlement  
24 Instruction SI1:  
25

OPE ID	T2S DEDICATED CASH ACCOUNT	CREDIT/DEBIT INDICATOR	AMOUNT	RESTRICTION REFERENCE(S)
SI1	DCA 4	CRDT	50	
SI2	DCA 1	DBIT	50	RRF12345; RRF98765

26 T2S performs the provision check with the possible following results:

27 | A failure when the sum of the remaining amount of all indicated restriction references, complemented if  
28 needed with the amount of the deliverable cash balance, is not sufficient to settle the Settlement In-  
29 struction. No update of cash balances or amounts of restriction reference is performed and the settle-  
30 ment status of the Settlement Instruction is set to "Unsettled":

**Case A – Failed provision-check**

-i.e. remaining amount in the indicated restriction references (30) complemented with amount in the deliverable cash balance (5) < original settlement amount (50)-

1

2 | A success when the sum of the remaining amount of all indicated restriction references, complemented if  
3 needed with the amount of the deliverable cash balance, is sufficient to settle the Settlement Instruction.

4 In case of success, T2S generates the Settlement Restrictions needed to rebalance the blocked cash used for  
5 the settlement to the deliverable cash balance:  
6

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
T2SgSRa	DCA1	BLO1	DLVR	15	RRF12345
T2SgSRb	DCA1	BLO6	DLVR	15	RRF98765

7 The T2S generated Settlement Restriction T2SgSRa and T2SgSRb are then settled in an all-or-none basis  
8 with the Settlement Instruction:

**Case B – Successful provision-check**

-i.e. remaining amount in the indicated restriction references (30) complemented with amount in the deliverable cash balance (20) > settlement amount (50)-

9

10 Informing the instructing party:

11 The settlement confirmation of the settlement instruction using restriction references does not provide the  
12 restriction references that have been effectively used. In the case of indirect debit, the instructing party is

1 informed of these references through the intra balance movement confirmation received for each T2S gen-  
2 erated settlement restriction.

3 In the above example, the instructing party of SI2 receives two intra balance movement confirmations: one  
4 for the reference RRF12345 for restriction type BLO1 and one for the reference RRF98765 for the restriction  
5 type BLO6.

#### 6 **1.6.2.5.4 Cash reservation process**

7 This section details the actions a T2S Actor can perform with a reservation:

8 | As the owner of the T2S Dedicated Cash Account only:

- 9 – Set-up a new restriction reference in a reserved cash balance which already exists or not;
- 10 – Increase an existing restriction reference in a reserved cash balance;
- 11 – Decrease an existing restriction reference in a reserved cash balance;

12 | As the owner of the T2S Dedicated Cash Account or as the client of a payment/settlement bank:

- 13 – Use of an existing restriction reference in a reserved cash balance with complement with amount from  
14 the deliverable cash balance.

15 The section then provides features of the pre-emption process that applies following the partial settlement of  
16 a reservation.

#### 17 Set-up a new restriction reference in a reserved cash balance

##### 18 Process

19 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Cash Balance) with  
20 the following information in order to set-up a new restriction reference in a reserved cash balance:  
21

INFORMATION	DESCRIPTION
Cash Account	Common T2S Dedicated Cash Account Id of both involved cash balances.
Balance From	Restriction type Id of the deliverable cash balance from which the cash are debit- ed.
Balance To	Restriction type Id of the reserved cash balance to which the cash are credited.
Settlement Amount	Amount to reserve.

22 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)  
23 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Has a restriction processing type equal to "deliverable" configured by the T2S Operator (i.e. its restriction processing type cannot be "reservation" or "blocked": it is not allowed to reserve cash from a reserved or blocked cash balance).</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the central bank which manages the T2S Dedicated Cash Account or by the owner of the T2S Dedicated Cash Account.</li> </ul>
	See section <a href="#">Specific restriction validation process</a> [ 321]	<p>The set up of a reserved cash balance is allowed only if its release at the end of day is as well allowed by the Specific restriction validation.</p>
Posting		<p>If a cash balance, referred in the Balance From, does not exist, T2S creates the cash balance and considers the amount equal to zero.</p>
		<p>If a cash balance, referred in the Balance To, does not exist, T2S creates the cash balance.</p>
		<p>If the amount of the cash balance, referred in the Balance From, is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the amount in deliverable cash balance. Such partial settlement is not subject to any condition (such as window, threshold...) and is complemented with future pre-emption.</p>
		<p>In case of partially settlement, a reservation is complemented through the pre-emption of any incoming cash.</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p>
		<p>Even if the amount in the cash balance referred in the Balance From is equal to zero: the Settlement Restriction is partially settled for a zero</p>

PROCESS	INFORMATION	RULES
		amount, the restriction reference is generated and the pre-emption mechanism is implemented.
		When the Settlement Restriction is (partially) settled, T2S updates the involved cash balances and generates the restriction reference.
		T2S sends the restriction reference created for the new reservation.

1 This process is illustrated by the example below.

2 **EXAMPLE 188 - SET-UP OF A NEW CASH RESERVATION**

3 To set-up a new reservation, A T2S Actor sends to T2S a Settlement Restriction SR4 with the following in-  
4 formation:

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT
SR4	DCA1	DLVR	RES6	60

6 T2S settles the Settlement Restriction SR4 with the following updates on the involved cash balances and  
7 amounts of the restriction references related to the reservation:

8 | If the amount of the deliverable cash balance (i.e. the balance from) allows a full settlement:

**Case A - Full Settlement**  
-i.e. cash balance identified as Balance From amount (100) >= settlement amount (60)-

9

10 | If the amount of the deliverable cash balance (i.e. the balance from) does not allow a full settlement:

**Case B – Partial settlement**

-i.e. cash balance identified as Balance From amount (40) < settlement amount (60)-

1

2 T2S generates the restriction reference (RRF54321) in the reserved cash balance (DCA1/RES6) and sends it  
 3 back to the T2S Actor with the settlement confirmation of the Settlement Restriction. T2S Actors can use this  
 4 reference for future increase, decrease or use.

5 In case of partial settlement, any further credited amount in the deliverable cash balance associated to the  
 6 reserved cash balance is pre-empted until the reservation is fully filled:

**Additional settlement of a partially settled settlement restriction related to a reservation**

-i.e. credited amount in the cash balance associated to the Balance From and to be pre-empted amount > 0-

7

8 Increase an existing restriction reference in a reserved cash balance

9 Process

10 A T2S Actor sends a Settlement Restriction (see section Send Settlement Restriction on Cash Balance) with  
 11 the following information in order to increase an existing restriction reference in a reserved cash balance:  
 12

INFORMATION	DESCRIPTION
Cash Account	Common T2S Dedicated Cash Account Id of both involved cash balances.
Balance From	Restriction type Id of the deliverable cash balance from which the cash are debited.

INFORMATION	DESCRIPTION
Balance To	Restriction type Id of the reserved cash balance to which the cash are credited.
Settlement Amount	Amount to increase.
Restriction Reference	Single restriction reference to increase in the reserved cash balance.

1 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

2  
3

PROCESS	INFORMATION	RULES
Business Validation	Balance From	The restriction type Id indicated in the Balance From: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Has a restriction processing type equal to "deliverable" configured by the T2S Operator (i.e. its restriction processing type cannot be "reservation" or "blocked": it is not allowed to reserve cash from a reserved or blocked cash balance).</li> </ul>
	Balance To	The restriction type Id indicated in the Balance To: <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the central bank which manages the T2S Dedicated Cash Account or by the owner of the T2S Dedicated Cash Account.</li> </ul>
	Restriction reference	The indicated restriction reference exists in the cash balance indicated as Balance To.
	See section <a href="#">Specific restriction validation process</a> [ 321]	The increase of a reserved cash balance is allowed only if its release at the end of day is as well allowed by the Specific restriction validation.
Posting		If a cash balance, referred in the Balance From, does not exist, T2S creates the cash balance and considers the amount equal to zero.
		If the amount of the cash balance, referred in the Balance From, is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the amount in deliverable cash balance. Such partial settlement is not subject to any condition (such as window, threshold...) and is complemented with future pre-emption.

PROCESS	INFORMATION	RULES
		In case of partial settlement, a reservation is complemented through the pre-emption of any incoming cash.
		If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).
		When the Settlement Restriction is (partially) settled, T2S updates the involved cash balances and updates the amounts of the restriction reference.

1 This process is illustrated by the example below.

2 **EXAMPLE 189 - INCREASE OF A CASH RESERVATION**

3 To increase an existing reservation, a T2S Actor sends to T2S a Settlement Restriction with the following  
4 information:  
5

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
SR5	DCA1	DLVR	RES6	20	RRF54321

6 T2S settles the Settlement Restriction with the following updates on the involved cash balances and amounts  
7 of the restriction references related to the reservation:

8 | If the amount of the deliverable cash balance (i.e. the balance from) allows a full settlement:

**Case A - Full Settlement**  
-i.e. cash balance identified as Balance From amount (100) >= settlement amount (20)-

9  
10 | If the amount of the deliverable cash balance (i.e. the balance from) does not allow a full settlement:

**Case B – Partial settlement**

-i.e. cash balance identified as Balance From amount (5) < settlement amount (20)-

1

2 In case of partial settlement, any further credited amount in the deliverable cash balance associated to the  
3 reserved cash balance is pre-empted until the reservation is fully filled:

**Additional settlement of a partially settled settlement restriction related to a reservation**

-i.e. delivered cash in the cash balance associated to the Balance From and to be pre-empted amount > 0-

4

5 *Decrease an existing restriction reference in a reserved cash balance*

6 **Process**

7 A T2S Actor sends a Settlement Restriction (See section Send Settlement Restriction on Cash Balance) with  
8 the following information in order to decrease an existing restriction reference in a reserved cash balance:  
9

INFORMATION	DESCRIPTION
Cash Account	Common T2S Dedicated Cash Account Id of both involved cash balances.
Balance From	Restriction type Id of the reserved cash balance from which the cash is debited.
Balance To	Restriction type Id of the deliverable cash balance to which the cash are credited.
Settlement Amount	Amount to decrease.
Restriction Reference	Restriction reference to decrease in the reserved cash balance.

10 T2S applies on this Settlement Restriction the following rules in the business validation (See section [Business](#)  
11 [Validation](#) [▶ 301]) and in the posting processes (See section [Posting](#) [▶ 381]):

1

PROCESS	INFORMATION	RULES
Business Validation	Balance From	<p>The restriction type Id indicated in the Balance From:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Is configured in the Static Data by the central bank which manages the T2S Dedicated Cash Account or by the owner of the T2S Dedicated Cash Account.</li> </ul>
	Balance To	<p>The restriction type Id indicated in the Balance To:</p> <ul style="list-style-type: none"> <li>  Exists;</li> <li>  Is valid for the Intended Settlement Date of the Settlement Restriction;</li> <li>  Has a restriction processing type equal to "deliverable" configured by the T2S Operator (i.e. its restriction processing type cannot be "reservation" or "blocked": it is not allowed to remove cash into a reserved or blocked cash balance).</li> </ul>
	Restriction reference	<p>The restriction reference indicated exists in the cash balance referred as Balance From.</p>
Posting		<p>If a cash balance, referred in the Balance To, does not exist, T2S creates the cash balance.</p>
		<p>If the remaining amount of the restriction reference in the cash balance referred in the Balance From is not sufficient to fully settle the Settlement Restriction, T2S books the Settlement Restriction for the remaining amount.</p>
		<p>Such partial settlement is not subject to any condition (such as window, threshold...) and is not complemented with a further settlement.</p> <p>The Settlement Restriction is "settled" (i.e. instead of being "unsettled" or "partially settled").</p>
		<p>If the Settlement Restriction is linked to Settlement Instruction(s), the Settlement Restriction can settle (including partially as for any restriction) only if the linked Settlement Instruction(s) can fully settle (since partial not allowed on linked Settlement Instruction).</p>
		<p>If the remaining amount of the restriction reference in the cash balance referred in the Balance From is equal to zero, the Settlement Restriction is "settled" for a zero amount (i.e. instead of being "unsettled" or "partially settled").</p>

PROCESS	INFORMATION	RULES
		When the Settlement Restriction is booked for an amount different from zero, T2S updates the involved cash balances and amounts of the restriction reference (not deleted when the remaining quantity following the booking is equal to zero).

1 It has to be noted that a decrease in a reserved cash balance impacts only the remaining amount of the  
 2 restriction reference to decrease (i.e. the amount actually reserved, not yet used, and not waiting for a pre-  
 3 emptio). For the cancellation of the part still waiting for a pre-emptio, the T2S Actor has to cancel the  
 4 pending part of the Settlement Restriction (See section Send Cancellation Instruction of a Settlement Re-  
 5 striction on cash balance) that initially sets-up or increases the reservation.

6 This process is illustrated by the example below.

7 **EXAMPLE 190 - DECREASE OF AN EXISTING CASH RESERVATION**

8 To decrease an existing reservation, a T2S Actor sends to T2S a Settlement Restriction SR6 containing the  
 9 following information:  
 10

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
SR6	DCA1	RES6	DLVR	50	RRF54321

11 T2S settles the Settlement Restriction with the following updates on the involved cash balances and amounts  
 12 of the restriction references related to the reservation:

13 | If the remaining amount in the restriction reference allows a full settlement:

**Case A - Full Settlement**  
 -i.e. remaining amount in the restriction reference (80) >= settlement amount (50)-

14  
 15 | If the remaining amount in the restriction reference does not allow a full settlement:

**Case B – Partial settlement**  
 -i.e. remaining amount in the restriction reference (30) < settlement amount (50)-

1  
2  
3  
4  
5  
6  
7

*Use of an existing restriction reference in a reserved cash balance with possible complement*

Process (indirect debit)

A T2S Actor (payment/settlement bank owner of the cash account or client of the payment/settlement bank) sends a Settlement Instruction (See section Send Settlement Instruction) with the following information to use an existing restriction reference in a reserved cash balance for a settlement:

INFORMATION	DESCRIPTION
Cash Account	Cash account Id of the impacted cash balance.
Original settlement Amount	Amount to debit.
Credit/Debit Indicator	Indicates that it is a debit
Restriction Reference(s)	Restriction reference(s) to use to settle the Settlement Instruction (can belong to several reserved/blocked cash balances)

8 T2S applies on this Settlement Instruction the following rules in the business validation (See section [Business Validation](#) [ ▶ 301]) and in the posting processes (See section [Posting](#) [ ▶ 381]):

9  
10

PROCESS	INFORMATION	RULES
Business Validation	Restriction reference	All the indicated restriction reference exist in the cash balances related to the same T2S Dedicated Cash Account Id.
Posting		For the provision check, T2S considers: <ul style="list-style-type: none"> <li>  The sum of the remaining amount of all the restriction reference(s) indicated in the Settlement Instruction;</li> <li>  Complemented, if necessary, with amount from the Impacted Balance</li> </ul> The provision check fails if the calculated sum is not sufficient to fully settle the Settlement Instruction, and partial settlement is not applicable (See section <a href="#">Posting</a> [ ▶ 381]).

PROCESS	INFORMATION	RULES
		The settlement status of the Settlement Instruction is set to "Unsettled".
		The provision check is successful if the calculated sum is sufficient to fully settle or to partially settle (if applicable) the Settlement Instruction.
		The settlement status of the Settlement Instruction is set to "Settled" or "Partially Settled".
		In case of successful provision check, T2S generates one additional Settlement Restriction per involved reserved cash balance, in a way to transfer the reserved cash to the impacted cash balance.
		The transferred amount of cash is equal to the cash needed for the settlement of the Settlement Instruction.
		The Settlement Restrictions generated by T2S to transfer the reserved cash are settled in T2S on an all-or-none basis with the Settlement Instruction.
		In case of successful provision check, T2S updates the involved cash balances and the amounts of the restriction reference(s) that have been used (not deleted when the remaining quantity following the booking is equal to zero).
		In case several used restriction references are used, their amounts are updated according to their indication order in the Settlement Instruction.

1 Validity of Settlement Restrictions generated by T2S for the use of a reserved cash balance

2 Once generated, the T2S Settlement Restrictions are subject to other T2S processes as any other Settlement  
 3 Instruction. Furthermore in order to ensure the consistency of the process for the use of reserved balance,  
 4 the following principles are implemented:

- 5 | Validation: When T2S validates the set up and the increase of a reserved cash balance, T2S validates  
 6 also the Settlement Restriction for the release of the cash in order to ensure the end of day automatic  
 7 release. Hence, the Settlement Restriction generated for the use of a reserved cash balance is always  
 8 valid as this is the same Settlement Restriction as for the release.
- 9 | Revalidation: The Settlement Restrictions generated for the use of a reserved cash balance are generat-  
 10 ed only if they can settle immediately. As a consequence, they are not subject to revalidation. (See sec-  
 11 tion [Revalidation process](#) [▶ 342])
- 12 | Intraday Restriction: T2S does not generate the Settlement Restriction for the use of a reserved cash  
 13 balance if it would be subject to intraday restriction. Instead, T2S sets the underlying Settlement In-  
 14 struction under intraday restriction. Furthermore, once generated, the Settlement Restriction for the use

1 of a reserved cash balance are immediately settled and hence, cannot be subject to intraday restriction.  
 2 (See section [Eligibility check process](#) [▶ 383]).

3 | Cancellation or amendment: Once generated, the T2S generated Settlement Restrictions for the use of a  
 4 reserved cash balance are immediately settled, hence they cannot be cancelled or amended by any of  
 5 the involved T2S Actors.

6 The use of reserved cash balance with possible complement is illustrated by the example below.

7 **EXAMPLE 191 - USE OF A CASH RESERVATION COMPLEMENTED BY ANOTHER BALANCE**

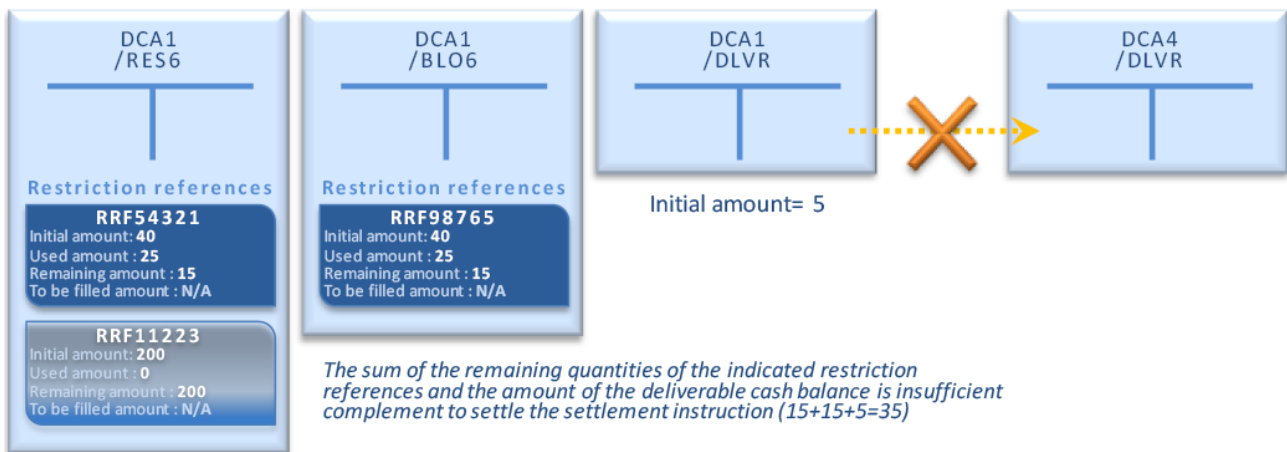

8 To use reserved restriction references in a T2S Dedicated Cash Account (possibly in combination with  
 9 blocked restriction references), a T2S Actor sends to T2S a Settlement Instruction SI4 which is matched with  
 10 the counterpart's Settlement Instruction SI3:  
 11

OPE ID	T2S DEDICATED CASH ACCOUNT	CREDIT/DEBIT INDICATOR	AMOUNT	RESTRICTION REFERENCE(S)
SI3	DCA4	CRDT	50	
SI4	DCA1	DBIT	50	RRF54321; RRF98765

12 T2S performs the provision check with the possible following results:

13 | A failure when the sum of the remaining amount of all indicated restriction references, complemented if  
 14 needed with the amount of the deliverable cash balance, is not sufficient to settle the Settlement In-  
 15 struction. No update of cash balance or amounts of the restriction reference is performed and the set-  
 16 tlement status of the Settlement Instruction is set to "Unsettled":

**Case A – Failed provision-check**  
 -i.e. remaining amount in the indicated restriction references (30) complemented with  
 amount in the deliverable cash balance (5) < settlement amount (50)-

17  
 18 | A success when the sum of the remaining amount of all indicated restriction references complemented if  
 19 needed with the amount of the deliverable cash balance, is sufficient to settle the Settlement Instruction.

20 In case of success, T2S generates the Settlement Restrictions needed to rebalance the blocked cash used for  
 21 the settlement to the deliverable cash balance:

1

OPE ID	T2S DEDICATED CASH ACCOUNT	BALANCE FROM	BALANCE TO	AMOUNT	RESTRICTION REFERENCE
T2SgSRc	DCA1	RES6	DLVR	15	RRF54321
T2SgSRd	DCA1	BLO6	DLVR	15	RRF98765

2 The T2S generated Settlement Restriction T2SgSRa and T2SgSRb are then settled in an all-or-none basis  
 3 with the Settlement Instruction:

**Case B – Successful provision-check**  
 -i.e. remaining amount in the indicated restriction references (30) complemented with amount in the deliverable cash balance (20) > settlement amount (50)-

4

5 Pre-emption features following a partially settled reservation

6 If the holding of the cash balance debited for the set-up or the increase of a reservation is not sufficient to  
 7 fully settle such reservation then T2S books the reservation for the available amount. Such partial settlement  
 8 is not subject to any condition (such as window, threshold...) and is complemented with future pre-emption.

9 When booking a settlement instruction T2S verifies if incoming resources can complement the settlement of  
 10 a cash reservation that has been partially settled during a previous Booking process. The pre-emption is  
 11 performed with the net amount actually delivered in the cash balance as determined by the Provision check  
 12 (see section [Booking process](#) [▶ 403]).

13 The pre-emption is performed prior any other settlement instruction that may use the incoming resources  
 14 since it is booked on an all or none basis with the settlement instruction delivering the necessary cash.

15 If several reservations are not fully filled, the pre-emption mechanism fills firstly the oldest one.

16 The cancellation of a partially settled Settlement Restriction results in the cancellation of the pre-emption  
 17 mechanism associated to the pending part of such a reservation.

18 Informing the instructing party

19 The settlement confirmation of the settlement instruction using restriction references does not provide the  
 20 restriction references that have been effectively used. In the case of indirect debit, the instructing party is  
 21 informed of these references through the intra balance movement confirmation received for each T2S gen-  
 22 erated settlement restriction.

1 In the above example, the instructing party of SI2 receives two intra balance movement confirmations: one  
2 for the reference RRF54321 for restriction type RES6 and one for the reference RRF98765 for the restriction  
3 type BLO6.

4 **1.6.2.5.5 Actions synthesis per restriction processing**

5 The following tables summarize the actions to be performed by T2S Actors for the management of each  
6 restriction processing.

7 Set-up or increase

8 **TABLE 147 - SET-UP OR INCREASE OF BLOCKING OR RESERVATION ON CASH**

	CASES	
CASES	BLOCKING	RESERVATION
Intended action	The T2S Actor intends to block cash.	The T2S Actor intends to reserve cash.
<b>Settlement Restriction Content</b>		
Balance From	Mandatory. Restriction type of the deliverable cash balance.	Mandatory. Restriction type of the deliverable cash balance.
Balance To	Mandatory. Restriction type of the blocked cash balance.	Mandatory. Restriction type of the reserved cash balance.
Restriction Reference for increase only	Mandatory for increase. Without indication of the restriction reference to increase, a new blocking is set-up with a new restriction reference	Mandatory for increase. Without indication of the restriction reference to increase, a new reservation is set-up with a new restriction reference
<b>Specific T2S settlement processing</b>		
Provision check scope	The provision check considers the availability of the deliverable cash balance identified as Balance From.	The provision check considers the availability of the deliverable cash balance identified as Balance From.
Partial settlement	No	Yes. At any moment of the settlement day with additional pre-emption of any incoming cash in the deliverable cash balance.

10 Decrease

11 **TABLE 148 - DECREASE OF BLOCKING OR RESERVATION ON CASH**

	CASES	
CASES	BLOCKING	RESERVATION
Intended action	The T2S Actor intends to release cash currently blocked.	The T2S Actor intends to release cash currently reserved.

CASES		
CASES	BLOCKING	RESERVATION
<b>Settlement Restriction Content</b>		
Balance From	Mandatory. Restriction type of the blocked cash balance.	Mandatory. Restriction type of the reserved cash balance.
Balance To	Mandatory. Restriction type of the deliverable cash balance.	Mandatory. Restriction type of the deliverable cash balance.
Restriction Reference	Mandatory. Restriction reference to decrease.	Mandatory. Restriction reference to decrease.
<b>Specific T2S settlement processing</b>		
Provision check scope	The provision check only considers the remaining amount in the indicated restriction reference.	The provision check only considers the remaining amount in the indicated restriction reference.
Partial settlement	No	Yes. At any moment of the settlement day without additional pre-emption.

**TABLE 149 - CASES OF USES OF BLOCKED OR RESERVED FOR THE SETTLEMENT OF A BUYING SETTLEMENT INSTRUCTION**

CASES	
CASES	USE OF A BLOCKING/RESERVATION WITH POTENTIAL COMPLEMENT
Intended action	The T2S Actor intends to use cash blocked/reserved in some restriction reference(s) for a buying.  If the blocked/reserved cash is not sufficient, it is complemented with the availability in the deliverable cash balance.
<b>Settlement Instruction Content</b>	
Restriction Reference(s)	Mandatory. Without indication of restriction references, blocking or reservations are not used for the settlement.
<b>Specific T2S settlement processing</b>	
Automatic rebalancing through T2S generated Settlement Restriction(s)	Blocked/reserved cash is automatically rebalanced from the blocked/reserved cash balance to the deliverable cash balance through T2S generated Settlement Restrictions.
Provision check scope	The provision check considers the blocked/reserved cash rebalanced in addition of the availability in the deliverable cash balance.

1  
2

1 **1.6.2.5.6 Parameters Synthesis**2 The following parameters are specified by the T2S Operator or by the T2S Actor.  
3

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Settlement Restriction	Restriction Processing Type	T2S Operator	T2S Operator	M	Deliverable	N/A
Settlement Restriction	Restriction Processing Type	T2S Operator	T2S Operator	M	Blocking CoSD Blocking	N/A
Settlement Restriction	Restriction Processing Type	T2S Operator	T2S Operator	M	Reservation	N/A
Settlement Restriction	Restriction type	T2S Operator	T2S Operator	M	DLVR	N/A
Settlement Restriction	Restriction type	T2S Operator	T2S Operator	M	COCB	N/A
Settlement Restriction	Restriction type	T2S Actor	T2S Actor	M	BLOd	d= reference number from 1 to 9
Settlement Restriction	Restriction type	T2S Actor	T2S Actor	M	RESd	d= reference number from 1 to 9

4 **1.6.2.6 Multiple Liquidity Provider**5 **1.6.2.6.1 Concept**

6 This process ensures the automatic retransferring of the liquidity remaining at the end of the Night-time  
7 Settlement period on the T2S Dedicated Cash Account of a T2S Actor to the RTGS accounts of its liquidity  
8 providers. These liquidity providers are reimbursed according to the order defined by the T2S Actor. The  
9 amount to be transferred is calculated by T2S and executed according to the order defined for reimburse-  
10 ment. This automatic retransferring process is triggered at the end of the Night-time Settlement period only.

11 **1.6.2.6.2 Overview**

12 T2S enables its T2S Actors to receive liquidity from different RTGS accounts (i.e. from different liquidity pro-  
13 viders) in a single T2S Dedicated Cash Account. The Multiple Liquidity Provider functionality can be used to  
14 automatically retransfer the liquidity remaining at the end of the Night-time settlement phase from the T2S  
15 Dedicated Cash Accounts of the T2S Actor to the RTGS accounts of its liquidity providers, provided that li-

1 liquidity had initially been transferred to the T2S Dedicated Cash Account from these RTGS Accounts. This  
2 feature is restricted to Night-time settlement window.

3 To use the Multiple Liquidity Provider functionality, the needed data has to be configured in CRDM by the  
4 T2S Actor in advance, in particular in order to determine the order according to which the liquidity providers  
5 have to be reimbursed.

6 The automatic retransfer functionality starts with a calculation of the amounts of liquidity to be transferred  
7 to the RTGS accounts. T2S takes into account the liquidity transferred by the liquidity providers onto the  
8 relevant T2S Dedicated Cash Account at the beginning of the Night-time Settlement period (Settlement se-  
9 quence 0 - see section [First night-time settlement cycle schedule](#) [▶ 251]) as well as all Liquidity Transfers  
10 between the T2S Dedicated Cash Account and the respective RTGS account (and vice versa) which occurred  
11 during the Night-time Settlement period before the sequence for the reimbursement. Afterwards, liquidity is  
12 transferred according to a predefined sequence determined by the T2S Actor in the reference data. The last  
13 RTGS account taken into account for the reimbursement (i.e. the last in the sequence) is the main liquidity  
14 provider.

### 15 **1.6.2.6.3 Multiple liquidity provider process**

16 T2S processes the Multiple Liquidity Provider functionality to reimburse liquidity at the end of the Night-time  
17 Settlement period to liquidity providers according to the steps detailed below.

18 **DIAGRAM 150 - CHRONOLOGICAL ORDER FOR THE MULTIPLE LIQUIDITY PROVIDER FUNCTIONALITY**

19

#### 20 Configuration of Standing Liquidity Transfer Orders for the Multiple Liquidity Provider functionality

21 T2S Actors resorting to the Multiple Liquidity Provider functionality have to define Standing Liquidity Transfer  
22 Orders from their T2S Dedicated Cash Account to the RTGS accounts of their different Liquidity Providers as

1 well as the sequence according to which these Liquidity Transfers have to be executed. For each RTGS ac-  
2 count to be reimbursed a separate Liquidity Transfer Order has to be created. The Standing Liquidity Trans-  
3 fer Orders and the corresponding sequence of execution have to be set up by the T2S Actors in the refer-  
4 ence data indicating that the calculated amount (dedicated amount) or in case of the main liquidity provider  
5 all cash available is transferred. For additional information regarding the set-up of Standing Liquidity Trans-  
6 fer Orders, please refer to section [Liquidity Transfer](#) [▶ 633].

### 7 Retrieval of Liquidity Transfer Orders and Calculation of amount

#### 8 Retrieval of Liquidity Transfer Orders

9 At the end of the Night-time Settlement (in sequence Y of the last Night-time Settlement cycle) the Multiple  
10 Liquidity Provider functionality manages the reimbursement of the remaining liquidity from the T2S Dedicat-  
11 ed Cash Account to the RTGS accounts. In a first step, the set of Standing Liquidity Transfer Orders are re-  
12 trieved from the reference data.

#### 13 Calculation of amount

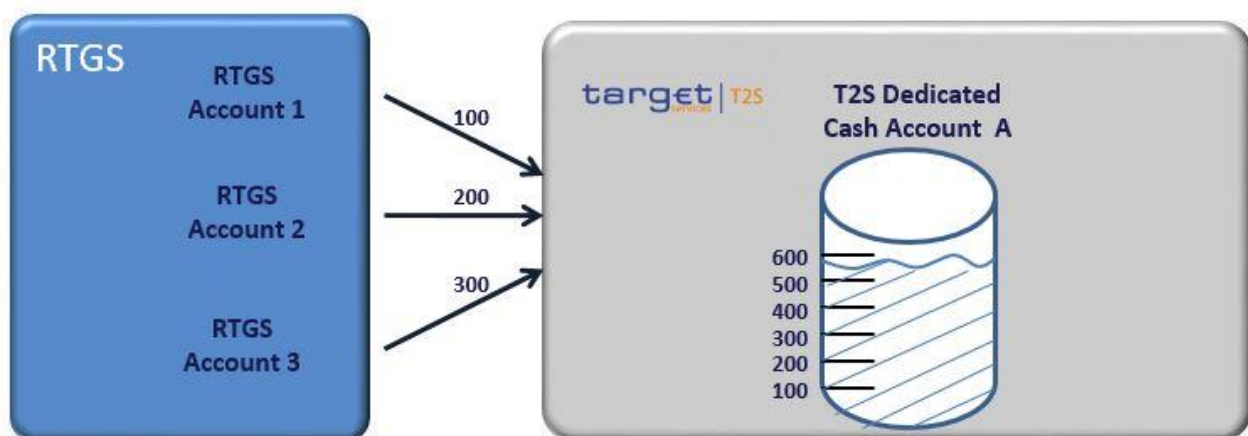

14 Once the Liquidity Transfer Orders have been retrieved, T2S calculates the amount of liquidity to be retrans-  
15 ferred to each RTGS account. For this calculation, all Liquidity Transfers between the T2S Dedicated Cash  
16 Account and each Liquidity Provider are considered. Therefore all Liquidity Transfers at the beginning of the  
17 Night-time Settlement period and during the Night-time Settlement period are taken into account.

18 The following examples illustrate transactions taken into account for calculating the amount:

#### 19 Beginning of the Night-time Settlement period (Settlement Sequence 0)

20 During Settlement Sequence 0 liquidity is transferred from several RTGS accounts (liquidity providers) via  
21 Liquidity Transfers to the T2S Dedicated Cash Account ("A") of a T2S Actor (liquidity receiver). These Liquidi-  
22 ty Transfers have to be initiated from the RTGS system. They are carried out during the Settlement Se-  
23 quence 0 in the Night-time Settlement period. In the example below, EUR 100, 200 and 300 are transferred  
24 to T2S Dedicated Cash Account A from RTGS accounts 1, 2 and 3 respectively.

#### 25 **EXAMPLE 192 - LIQUIDITY TRANSFERS DURING SEQUENCE 0 OF THE NIGHT-TIME SETTLEMENT PERIOD**

26

#### 27 During the Night-time Settlement period

28 The liquidity received on T2S Dedicated Cash Account A is used during the Night-time Settlement period for  
29 settlement purposes.

1 All transactions – including night-time liquidity exchanges – between one of the RTGS accounts and the T2S  
 2 Dedicated Cash Account are taken into account for calculating the amount to be retransferred at the end of  
 3 the Night-time Settlement period. In the following example, only bookings between RTGS account 1 and T2S  
 4 Dedicated Cash Account A took place during the Night-time Settlement period (i.e. T2S Actor A transferred  
 5 EUR 50 from its T2S Dedicated Cash Account to RTGS account 1 and received EUR 100 from the latter).

6 **EXAMPLE 193 - LIQUIDITY TRANSFERS DURING THE NIGHT-TIME SETTLEMENT PERIOD**

7  
 8 The amount to be transferred to each of the relevant RTGS accounts is calculated according to the liquidity  
 9 transferred <sup>353</sup> between each RTGS account and the T2S Dedicated Cash Account (please see schema above)  
 10 as well as according to the remaining liquidity on the T2S Dedicated Cash Account.

11 According to the example above:

12 RTGS Account 1

- 13 | originally transferred (from RTGS to T2S) + 100
- 14 | Transfer during Night-time (from T2S to RTGS) - 50
- 15 | Transfer during Night-time (from RTGS to T2S) + 100

16 \_\_\_\_\_  
 17 | Amount to be retransferred by Multiple Liquidity Provider functionality 150

18 RTGS Account 2

- 19 | Originally transferred (from RTGS to T2S) 200
- 20 | Amount to be retransferred by Multiple Liquidity Provider functionality 200

21 RTGS Account 3

- 22 | Originally transferred (from RTGS to T2S) 300
- 23 | Amount to be retransferred by Multiple Liquidity Provider functionality 300

24 In this case we assume that no further liquidity transfers took place between RTGS accounts 2 or 3 and the  
 25 T2S Dedicated Cash Account A.

353 These liquidity can result from all types of liquidity transfers, e.g. including corporate action liquidity rebalancing.

- 
- 1 *Reimbursement of Liquidity from the T2S Dedicated Cash Account to the RTGS account*
- 2 When the relevant amounts are calculated, T2S generates the respective (Outbound) Liquidity Transfers to
- 3 transfer the amounts from the T2S Dedicated Cash Account to the RTGS accounts (steps 1-6).
- 4 The Liquidity Transfers are created with the help of the former selected Liquidity Transfer Orders. For all
- 5 liquidity providers (but the main liquidity provider) the parameter « dedicated amount » should have the
- 6 value "True" and the parameter « all cash » should have the value "False", so that the amount to be retrans-
- 7 ferred is calculated by T2S. On the contrary, for the main liquidity provider, which is the last provider to be
- 8 reimbursed with the remaining liquidity, the parameter « dedicated amount » should have the value "False
- 9 "and the parameter « all cash » should have the value "True", so that T2S retransfers all the remaining cash
- 10 to its RTGS account.
- 11 For the sake of this example, it is assumed that the amount remaining on the T2S Dedicated Cash Account A
- 12 at the end of the Night-time settlement period is EUR 400.

1

**EXAMPLE 194 - LIQUIDITY TRANSFERS TO REIMBURSE THE REMAINING LIQUIDITY**

2

3 In the example above, the liquidity remaining on the T2S Dedicated Cash Account at the end of the Night-  
 4 time settlement period allows a full reimbursement of RTGS accounts 1 and 2, but is insufficient to fully re-  
 5 imburse RTGS account 3. Since EUR 350 are used to reimburse RTGS Accounts 1 and 2, only EUR 50 remain  
 6 available for reimbursing RTGS account 3 (out of the EUR 300 initially transferred from RTGS account 3 to  
 7 T2S Dedicated Cash Account A) <sup>354</sup>.

8 If on the contrary, the remaining amount on the T2S Dedicated Cash Account before the reimbursement of  
 9 the main liquidity provider exceeds the calculated reimbursement amount, the main liquidity provider re-  
 10 ceives all remaining cash, i.e. he receives more liquidity than he has provided.

354 In case partially settlement occurs, the remaining part will not be recycled (as it is always the case for Liquidity Transfers)

1 **1.6.2.6.4 Parameters Synthesis**

2 The following parameters are specified by the T2S Actor.  
3

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup of Liquidity Transfer Order	Order type	T2S Actor	T2S Actor	M	Standing Order	N/A
Setup of Liquidity Transfer Order	Is triggered by	T2S Actor	T2S Actor	M	Sequence related to Multiple Liquidity Provider	N/A
Setup of Liquidity Transfer Order	External RTGS Account	T2S Actor	T2S Actor	M	External RTGS account reference	N/A
Setup of Liquidity Transfer Order	Dedicated Amount	T2S Actor	T2S Actor	M <sup>355</sup>	True <sup>356</sup> /False	N/A
Setup of Liquidity Transfer Order	All Cash	T2S Actor	T2S Actor	M <sup>357</sup>	True <sup>358</sup> /False	N/A
Setup of Liquidity Transfer Order	Valid From	T2S Actor	T2S Actor	M	Date	N/A
Setup of Liquidity Transfer Order	Valid To	T2S Actor	T2S Actor	M	Date	N/A
Setup of Liquidity Transfer Order Link	Is reimbursed by	T2S Actor	T2S Actor	M	Sequence	N/A
Setup of Liquidity Transfer Order Link Set	Valid From	T2S Actor	T2S Actor	M	Date	N/A
Setup of Liquidity Transfer Order Link Set	Valid To	T2S Actor	T2S Actor	M	Date	N/A

355 For all liquidity providers but the main liquidity provider, the parameter « dedicated amount » should have the value "True" and the parameter « all cash » should have the value "False". On the contrary, for the main liquidity provider, the parameter « dedicated amount » should have the value "False" and the parameter « all cash » should have the value "True".

356 For all liquidity providers but the main liquidity provider, the parameter « dedicated amount » should have the value "True" and the parameter « all cash » should have the value "False". On the contrary, for the main liquidity provider, the parameter « dedicated amount » should have the value "False" and the parameter « all cash » should have the value "True".

357 For all liquidity providers but the main liquidity provider, the parameter « dedicated amount » should have the value "True" and the parameter « all cash » should have the value "False". On the contrary, for the main liquidity provider, the parameter « dedicated amount » should have the value "False" and the parameter « all cash » should have the value "True".

358 For all liquidity providers but the main liquidity provider, the parameter « dedicated amount » should have the value "True" and the parameter « all cash » should have the value "False". On the contrary, for the main liquidity provider, the parameter « dedicated amount » should have the value "False" and the parameter « all cash » should have the value "True".

## 1 1.6.2.7 Liquidity Monitoring

### 2 **1.6.2.7.1 Concept**

3 Liquidity Monitoring is the process of providing business related information to T2S Actors concerning their  
4 own accounts as well as accounts of their clients.

### 5 **1.6.2.7.2 Overview**

6 The Liquidity Monitoring process of T2S provides information on settled amounts, cash balances, blocking,  
7 reservations and break of thresholds to T2S Actors related to their own T2S Dedicated Cash Accounts. Addi-  
8 tional data is available concerning limits for auto-collateralisation and the collateral value of securities in the  
9 associated securities accounts. To get accordant information on T2S Dedicated Cash Accounts of other par-  
10 ties (e.g. clients), T2S Actors need respective privileges.

11 **DIAGRAM 151 - T2S LIQUIDITY MONITORING FEATURES**

12

#### 13 Notifications

14 T2S provides information regarding the liquidity situation. They are automatically generated as soon as  
15 changes of the liquidity position occur.

#### 16 Reports

17 The T2S Actor can choose predefined cash reports, e.g. the Statement of Accounts or the Current Settle-  
18 ment Day Cash Information Report. Depending on the T2S Actor's decision those reports are generated,  
19 when a certain point in time or a specific business event is reached during the T2S Settlement day (e.g. End  
20 of Day). The T2S Actor has to subscribe to these reports beforehand, i.e. he has to set up a report configu-  
21 ration as reports are never created on ad-hoc basis. In case of need for ad-hoc information he can always  
22 use a respective query that provides the same information when used with the corresponding parameters

#### 23 Queries

24 In the context of Liquidity Monitoring queries are real time requests concerning cash related items such as  
25 cash balances or limits. T2S uses the latest business data available in the system to answer those requests.  
26 For further details refer to "Processing queries" section.

### 27 **1.6.2.7.3 Liquidity monitoring process**

#### 28 Notifications

29 T2S provides notifications, which are automatically generated. The notifications are available in A2A context  
30 only and are sent if required from the T2S Actor. These messages are forwarded to a T2S Actor, if the latter

- 1 is allowed to receive the information and according to his message subscription rules stored in CRDM. In the  
2 field of Liquidity Monitoring the following notifications are available:
- 3 | Debit/Credit Notification: T2S generates Debit Notifications and Credit Notifications reflecting the respec-  
4 tive movements on T2S Dedicated Cash Accounts, i.e. which account was credited/ debited by which  
5 amount. These notifications are sent to the owners of the respective accounts as soon as the settlement  
6 within T2S takes successfully place. For further details please refer to sections [Liquidity Transfer](#) [▶ 633],  
7 Send immediate liquidity transfer, Execution of Liquidity Transfer from RTGS to T2S and Execution of  
8 Standing and Predefined Liquidity Transfer Orders from T2S to RTGS;
  - 9 | Floor/Ceiling notification: In order to monitor a T2S Dedicated Cash Account balance the T2S Actor can  
10 set limits which are to be stored in the reference data , i.e. a specific floor (minimum amount) and / or a  
11 ceiling (maximum amount) referring to a specific account. In case a posting results in a balance exceed-  
12 ing the defined ceiling limit or the balance falls under the defined floor limit, T2S sends an appropriate  
13 notification to the T2S Actor concerned stating the balance. <sup>359</sup>
- 14 No notification is sent when cash balances exactly meet the floor or ceiling amount.

---

359 The floor and ceiling notification functionality is ignored by settlement when the corresponding value is equal to 0. In case a customer would like to receive a floor/ceiling notification for amounts that are slightly below/above zero the T2S Actor has to define a value of 0.01 € instead.

1 **DIAGRAM 152 - FLOOR CEILING NOTIFICATION**

2

3 Reports

4 Reports provide predefined information to the T2S Actor as the content of the reports is standardised. Re-  
5 ports are available in A2A and in U2A. The T2S Actor can configure a report in reference data. This configu-  
6 ration includes the trigger option for the report, either an event –e.g. End of Day- or a certain point in time.  
7 For the report configuration the T2S Actor needs the respective privileges. For more details please refer to  
8 section [Report generation](#) [ ▶ 788]. The following reports are available for Liquidity Monitoring.

9 Statement of Accounts

10 It provides information on the start-of-day and end-of-day cash balances (if already available) of T2S Dedi-  
11 cated Cash Accounts as well as on the cash postings of the current settlement day up to the point of report  
12 creation. For each cash posting, the movement type (liquidity transfer or Settlement Instruction), the In-  
13 structing Party reference and the transaction reference of the underlying Settlement Instruction respectively  
14 liquidity transfer as well as the settlement time are provided.

15 For Settlement Instructions, the following information is provided additionally:

- 16 | Securities Account Number
- 17 | ISIN

1 | Settled Quantity (= quantity, which settled with the respective cash posting.

2 | Corporate Action Event Id (if applicable)

3 | Corporate Action Event Type (in case Corporate Action Event Id is given; will always be "OTHR")

#### 4 Current Settlement Day Cash Information Report

5 The Current Settlement Day Cash Information Report provides information on cash needs for the current  
6 settlement day on aggregated level. The forecast is based on the current T2S Dedicated Cash Account bal-  
7 ance (aggregated over all restriction types), debiting liquidity transfer orders and debiting and crediting Set-  
8 tlement Instructions still to be settled (aggregated over all restriction types) as well as the amount of out-  
9 standing intraday credit from auto-collateralisation valid for a T2S Dedicated Cash Account. Settlement In-  
10 structions still to be settled comprise:

11 | SI with ISD = current business day and ISO Settlement Status = Pending

12 | SI with ISD before the current business day and ISO Settlement Status = Failing and last failing date is  
13 also before the current business day

#### 14 Following Settlement Day Cash Forecast Report

15 This report provides a forecast of the cash needs for the following cash settlement day, i.e. for the next  
16 business day where the currency is again eligible for cash settlement. It provides information on the same  
17 fields as the above mentioned Current Settlement Day Cash Information Report, in order to enable the T2S  
18 Actor to prepare and dedicate in advance sufficient cash on the T2S Dedicated Cash Account for the follow-  
19 ing night-time settlement period, or in case the next settlement day is a cash holiday for the currency in  
20 scope, for the night time settlement period of the first settlement day on which the currency is again eligible  
21 for cash settlement. Settlement Instructions to be settled on the following business day comprise:

22 | SI with ISD = following business day

23 | SI with ISD on or before the current business day and ISO Settlement Status = Failing and last failing  
24 date is the current business day

#### 25 Processing Queries

26 T2S provides queries in order to give the T2S Actor an overview of the liquidity available for the respective  
27 party. Please refer also to section [Access rights](#) [▶ 145] in this context. The T2S Actor can send queries in  
28 A2A mode or in U2A mode. A2A queries can be sent at any point in time during the business day. These  
29 queries are answered by T2S in real-time, unless the balance queries are received during a night time set-  
30 tlement sequence. In such a case, they are queued and processed after the sequence. Balance queries in  
31 U2A are rejected during the night time sequences. For details on the schedule during the settlement day  
32 please refer to section [Settlement Day](#) [▶ 237]

33 The following queries are deemed most useful for Monitoring of Liquidity (non exhaustive list):

#### 34 T2S Dedicated Cash Account Balance Query

35 T2S allows T2S Actors to query the current balance of T2S Dedicated Cash Accounts. This query does not  
36 only give information on the available cash balance but also on restricted cash balances (including restriction  
37 type and restriction processing type) set-up for the account when such restricted balances exist.

#### 38 T2S Dedicated Cash Account Posting Query

1 T2S provides T2S Actors with the possibility to query the postings, which were booked at a specific date on  
2 T2S Dedicated Cash Accounts. For each posting, the Instructing Party reference, the transaction reference of  
3 the underlying Settlement Instruction or liquidity transfer, as well as the settlement time are provided.

#### 4 Immediate Liquidity Transfer List Query

5 The query request is responded with all liquidity transfers having been settled on either one or all cash ac-  
6 counts of a party taking into account the selection parameters specified by the T2S Actor.

#### 7 Immediate Liquidity Transfer Order Detail Query

8 T2S provides the details of the Immediate Liquidity Transfer Order having been referenced in the query re-  
9 quest with the Immediate Liquidity Transfer Order Identifier.

#### 10 Outstanding Auto-Collateralisation Credit Query

11 This query returns information regarding the auto-collateralisation limit defined for the accounts for a party  
12 set by the responsible NCB and its utilisation by the party.

#### 13 T2S Overall Liquidity Query

14 This query returns overall liquidity information aggregated over all T2S Dedicated Cash Accounts of one  
15 party. It includes information about the auto-collateralisation limit, the limit utilisation, the available liquidity,  
16 the collateral value of eligible securities on stock, the available cash, the blocked cash and the reserved  
17 cash. Liquidity information for RTGS accounts have to be queried within the respective RTGS and are not  
18 available via T2S.

#### 19 Cash Forecast Query

20 The Cash Forecast Query provides information on cash needs for a specific party for the (current or follow-  
21 ing) settlement day. The forecast is based on the current T2S Dedicated Cash Account balance, pending  
22 liquidity transfer orders and Settlement Instructions as well as the amount of outstanding intraday credit  
23 from auto-collateralisation. The projected balance may vary during the T2S Settlement Day.

#### 24 Limit Query

25 The Limit Query returns information on all the limits the requester has defined or on limits that have been  
26 defined for him in T2S.

#### 27 Limit Utilisation Journal Query

28 CBs, payment/settlement banks and clients of payment/settlement banks (i.e. CSD Participants) are able to  
29 request the T2S limit utilisation journal. This query provides detailed information regarding the limit utilisa-  
30 tion changes during a specific Settlement Day.

#### 31 Limit Utilisation Query

32 CBs, payment/settlement banks and clients of payment/settlement banks are able to request the current  
33 utilisation of limits they have defined in T2S for parties to which they provide credit in central bank money.

#### 34 Total collateral value per T2S Dedicated Cash Account Query

35 This query enables T2S System users of CBs, payment/settlement banks and clients of payment/settlement  
36 banks to receive information on the current collateral value of securities on stock per T2S Dedicated Cash  
37 Account.

## 1 Collateral Value per T2S Dedicated Cash Account Query

2 This query informs about the collateral value of securities on stock for T2S Dedicated Cash Accounts which  
3 are eligible for auto-collateralisation.

## 4 Collateral Value of a Security Query

5 This query provides information about the collateral value of a security. It considers securities on stock only.  
6 Securities on flow are not taken into consideration.

7 The query provides a breakdown of the collateral value for a combination of T2S Dedicated Cash Account  
8 and securities account.

### 9 **1.6.2.7.4 Parameters Synthesis**

#### 10 Parameter synthesis for Notifications

11 The following parameters are specified by the T2S Actor.  
12

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup Floor Notification Amount	Amount	T2S Actor	T2S Actor	O	Amount	N/A
Setup Ceiling Notification Amount	Amount	T2S Actor	T2S Actor	O	Amount	N/A

#### 13 Parameter synthesis for Reports

14 Please refer to section [Report generation](#) [▶ 788].

#### 15 Parameter synthesis for Queries

16 Please refer to section [Query management](#) [▶ 819].

## 17 **1.6.3 Reference Data Management**

### 18 ~~1.6.3.1 Concept~~

19 ~~T2S relies on the Common Reference Data Management (CRDM) component to allow duly au-~~  
20 ~~thorised users to create and maintain reference data objects. Reference data objects specify~~  
21 ~~reference data for the configuration of parties, securities, securities accounts, T2S dedicated~~  
22 ~~cash accounts and T2S rules and parameters. (Split book approach)~~

### 23 ~~1.6.3.2 Overview~~

24 ~~The CRDM Data Management is in charge of executing reference data maintenance instructions~~  
25 ~~for the creation or the maintenance of reference data objects in T2S.~~

26 ~~Duly authorised users belonging to CSDs, CBs, CSD participants, payment banks and to the T2S~~  
27 ~~Operator can trigger the CRDM Data Management application process according to their own~~

1 ~~specific access rights, i.e. using the functions and maintaining the reference data objects they~~  
2 ~~have been granted.~~

3 ~~Duly authorised users of the T2S Operator are responsible for system configuration tasks and~~  
4 ~~for the management of reference data for CSDs and CBs (See section Possible actions of T2S~~  
5 ~~Operator). These users can also act on behalf of other T2S Actors in order to perform some spe-~~  
6 ~~cific actions or within some pre-defined contingency scenarios.~~

7 ~~The CRDM data Management application process executes immediately all reference data~~  
8 ~~maintenance instructions. However, this process takes place in slightly different ways during~~  
9 ~~the day-time settlement and the night-time settlement, both in terms of response time and of~~  
10 ~~response messages generated by T2S. More precisely, the processing of some reference data~~  
11 ~~maintenance instructions submitted to T2S during a night-time settlement sequence may be~~  
12 ~~provisionally stopped and then resumed after the end of night-time settlement sequence, in~~  
13 ~~order to impede any possible impact of reference data changes on the ongoing settlement pro-~~  
14 ~~cess. In this case, T2S sends two different responses, an immediate provisional response in~~  
15 ~~order to inform the relevant T2S Actor that the reference data maintenance instruction has~~  
16 ~~been queued, and a final response after the end of the night-time settlement sequence to re-~~  
17 ~~port on the final status of the processing (See section Reference data maintenance instructions~~  
18 ~~processing for more information).~~

19 ~~All reference data objects can be created and maintained in U2A mode, whereas only a sub-set~~  
20 ~~of them can be maintained in A2A mode (See section Reference data maintenance types). All~~  
21 ~~reference data changes performed in U2A mode can be executed either in Two-Eyes or in Four-~~  
22 ~~Eyes mode. Duly authorised users can specify the applicable mode for the functions and the~~  
23 ~~reference data objects they manage (See section Access rights).~~

24 ~~Versioning facilities and validity periods allow the implementation of data revision and data~~  
25 ~~history features, in order to keep track of all past data changes, to enter changes meant to be-~~  
26 ~~come effective as of a future date and to define reference data objects with limited or unlimited~~  
27 ~~validity. (Split book approach)~~

#### 28 ~~1.6.3.3 Reference data maintenance process~~

29 ~~The rest of this section is organised as follows. Section Reference data objects defines the con-~~  
30 ~~cept of reference data object (including classes of information and attributes) and describes~~  
31 ~~the difference between data revision and data history of classes of information. Then, section~~  
32 ~~Reference data maintenance types defines all the possible maintenance types that can be ap-~~  
33 ~~plied to a reference data object, whereas sections Validity of reference data objects and Refer-~~  
34 ~~ence data archiving and purging introduces the time dimension, in order to define reference~~  
35 ~~data objects with limited or unlimited validity periods and to describe the peculiarities of ar-~~  
36 ~~chiving and purge processes for reference data objects. Section Lifecycle of reference data ob-~~  
37 ~~jects puts all the previous concepts together and provides a general description of the lifecycle~~  
38 ~~of reference data objects in T2S. Finally, section Reference data maintenance instructions pro-~~  
39 ~~cessing and Reference data status management illustrate the processing of reference data~~  
40 ~~maintenance instructions during the real-time settlement and the night-time settlement and~~

1 ~~the underlying status management. All sections include explanatory examples.~~ (Split book ap-  
2 ~~proach}~~)

3 **1.6.3.3.1 Reference data objects**

4 ~~Duly authorised users manage reference data in T2S by creating and maintaining reference~~  
5 ~~data objects. A reference data object is a set of logically related, self-consistent information.~~  
6 ~~Parties, securities, securities accounts and T2S dedicated cash accounts are examples of refer-~~  
7 ~~ence data objects. The following table provides the exhaustive list of reference data objects~~  
8 ~~defined in T2S and the T2S Actors that are responsible for their management, i.e. for creating~~  
9 ~~and maintaining them in T2S:~~

10 **TABLE 150 - REFERENCE DATA OBJECTS (SPLIT BOOK APPROACH)**

AREA	OBJECT	RESPONSIBLE T2S ACTORS <sup>360</sup>
<del>Party</del>	<del>Party</del>	<del>T2S Operator, CSD, CB</del>
	<del>Eligible counterpart CSD link</del>	<del>CSD</del>
<del>Securities</del>	<del>Securities</del>	<del>CSD <sup>361</sup></del>
	<del>Securities valuation</del>	<del>CB, Payment Bank</del>

1 ~~A reference data object consists of one or more classes of information. For example, a party is a~~  
 2 ~~reference data object, consisting of the following classes of information:~~

- 3 | ~~Party;~~
- 4 | ~~Party code;~~
- 5 | ~~Party name;~~
- 6 | ~~Party address;~~
- 7 | ~~Party technical address.~~

8 ~~Each class of information includes a defined set of attributes. For example, the class of infor-~~  
 9 ~~mation party name of the reference data object party includes the following attributes:~~

- 10 | ~~The long name of the party;~~
- 11 | ~~The short name of the party;~~
- 12 ~~The starting validity date of the party name.~~

~~CRDM provides functions to maintain all reference data objects (See section Reference data maintenance types). Each maintenance operation on a reference data object results in a new version of the same reference data object. Each version of a reference data object is called a revision of the reference data object. Consequently, at any point in time, T2S stores one or many revisions of each reference data object, more precisely only one revision for newly created reference data objects that were never maintained after their creation and N revisions for reference data objects that were maintained N-1 times after they were created. The first revision of each reference data object includes all the attribute values provided at creation time. After that, each maintenance request successfully processed creates a new revision for the reference data object. This means that each revision may entail changes of many attributes of the same reference data object at the same time. A new revision is also created when deleting and restoring a reference data object.~~

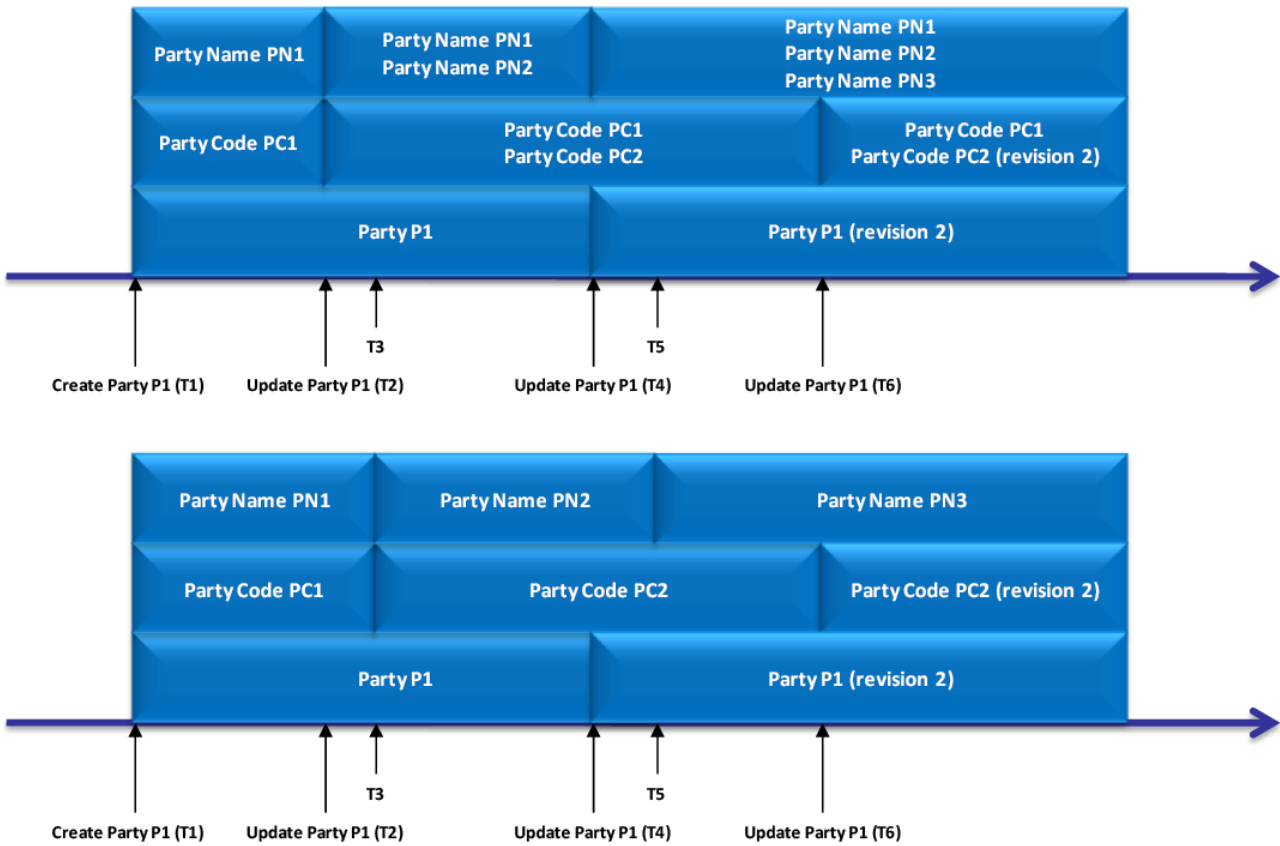

~~Some classes of information are subject to data history, i.e. classes of information having multiple occurrences with continuous and non overlapping validity periods. For example, the classes of information party name and party code of the reference data object party can be subject to data history. In fact, they include a Valid From attribute which determines the valid value of these classes of information at any given point in time.~~

~~The rest of this section provides two examples, the first one showing the difference between data revision and data history of reference data objects, the latter putting together all the concepts described so far.~~

~~**EXAMPLE 195 - EFFECT OF REFERENCE DATA MAINTENANCE INSTRUCTIONS ON PARTY, PARTY NAME AND PARTY CODE (SPLIT BOOK APPROACH)**~~

1

**DIAGRAM 153 - DATA REVISION AND DATA HISTORY (SPLIT BOOK APPROACH)**

2

3

4

5

6

7

8

9

**During business day T1, a duly authorised user creates a new party P1, named PN1 and with party code PC1.**

**Then, on business day T2, a duly authorised user updates party P1, specifying a new party name PN2 and a new party code PC2 meant to be valid as of a future date (T3). As a consequence, both party names PN1 and PN2 and both party codes PC1 and PC2 are valid, but their validity periods, from T1 to T3 and from T3 on respectively, do not overlap. This implies, for example, that from business day T2:**

- | Any given query or report including reference data of party P1, shows the values PN1 and PC1 for party name and party code if the query or the report refers to the time period between T2 and T3, PN2 and PC2 otherwise.**

- | All Settlement Instructions related to party P1 are validated against the party code PC1 during the time period between T2 and T3, against PC2 otherwise.**

**On business day T4, a duly authorised user updates again party P1, specifying a new party name PN3 meant to be valid as of a future date (T5) and amending the party class of information. As a consequence, the three party names PN1, PN2 and PN3 are all valid, but without any overlap in their validity periods, whereas the amendment performed on P1 just results in a new revision of this class of information. This implies that from business day T4:**

- | T2S starts immediately using the values of the new revision of party P1 for processing.**
- | T2S considers PN2 as valid party name for party P1 from T4 to T5, PN3 from T5 on.**

20

21

1 ~~Finally, during business day T6, a duly authorised user updates again party P1, amending the~~  
 2 ~~party code PC2, already existing. As a consequence, the same party codes as before are valid,~~  
 3 ~~with the same validity periods, the only difference being a new value for the party code PC2.~~  
 4 ~~This results in T2S starting immediately using the new value of PC2 for processing.~~

5 **EXAMPLE 196 - CREATION OF A FINANCIAL INSTRUMENT (SPLIT BOOK APPROACH)**

6  
7 **DIAGRAM 154 - CREATION OF A SECURITY (SPLIT BOOK APPROACH)**

8  
9 ~~This results in the creation of three classes of information for the new financial instrument, i.e.~~  
 10 ~~two classes of information storing the attributes of the financial instrument not subject to data~~  
 11 ~~history (one related to the Security and another related to the Securities Code):~~

12 **TABLE 151 - SECURITIES (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	ISSUE DATE	FINAL MATURITY OR EXPIRY DATE	SETTLEMENT TYPE	APPROVAL STATUS
S1	1	2015-02-04	-	Units	Active

14 **TABLE 152 - SECURITIES CODE (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	VALID FROM	SECURITIES MNE-MONIC	APPROVAL STATUS
SC1	1	2015-02-04	ABC	Active

16 ~~And one class of information for attributes of the financial instrument subject to data history~~  
 17 ~~concerning the securities name:~~

18 **TABLE 153 - SECURITIES NAME (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	VALID FROM	SECURITIES SHORT NAME	APPROVAL STATUS
SN1	1	2015-02-04	Dummy Name	Active

20 ~~Then, a duly authorised user updates the financial instrument S1, creating a new name SN2,~~  
 21 ~~valid as of June 15th 2014, and three deviating settlement units DSU1, DSU2 and DSU3:~~

1

**DIAGRAM 155 - FIRST UPDATE OF THE SECURITY (SPLIT BOOK APPROACH)**

2

3 **This results in the creation of four new classes of information for the financial instrument S1,**  
 4 **i.e. a class of information storing the new name for the financial instrument:**

5

**TABLE 154 - SECURITIES NAME (SPLIT BOOK APPROACH)**

6

TECHNICAL IDENTIFIER	REVISION	VALID FROM	SECURITIES SHORT NAME	APPROVAL STATUS
SN2	1	2015-06-15	Dummy-Name	Active

7 **and three classes of information storing the newly defined deviating settlement units:**

8

**TABLE 155 - DEVIATING SETTLEMENT UNIT (SPLIT BOOK APPROACH)**

9

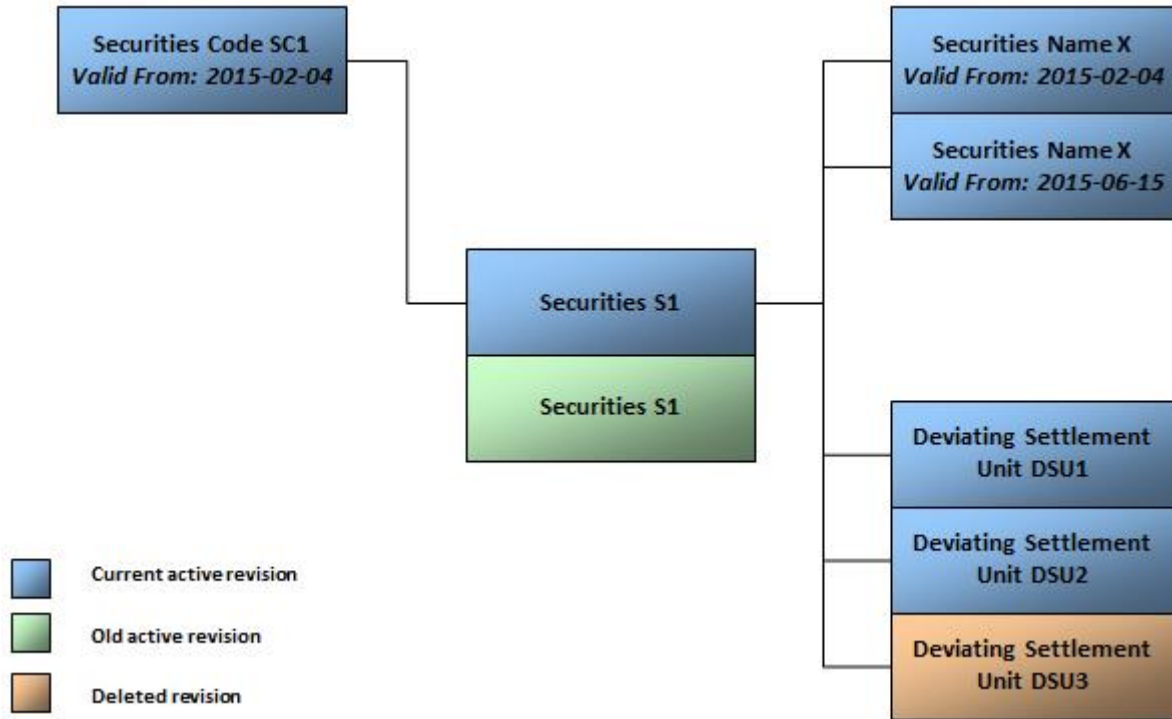

TECHNICAL IDENTIFIER	REVISION	DEVIATING SETTLEMENT UNIT	APPROVAL STATUS
DSU1	1	13	Active
DSU2	1	17	Active
DSU3	1	23	Active

10 **All these new classes of information are linked to the same class of information S1 for the fi-**  
 11 **ancial instrument.**

12 **Finally, a duly authorised user updates again the financial instrument S1, updating the expiry**  
 13 **date and deleting the deviating settlement unit DSU3:**

1

**DIAGRAM 156 - ~~SECOND UPDATE OF THE SECURITY~~ (SPLIT BOOK APPROACH)**

2

3 **This results in the update of the class of information related to the financial instrument S1:**

4

S1	2	2015-02-04	2015-08-04	Units	Active

6 **and the deletion of the class of information related to the deviating settlement unit DSU3:**

7

**TABLE 157 - ~~DEVIATING SETTLEMENT UNIT~~ (SPLIT BOOK APPROACH)**

8

TECHNICAL IDENTIFIER	REVISION	DEVIATING SETTLEMENT UNIT	APPROVAL STATUS
DSU1	1	13	Active
DSU2	1	17	Active
DSU3	1	23	Active
DSU3	2	23	Deleted (Split book approach)

**1.6.3.3.2 Reference data maintenance types**

T2S allows a duly authorised user to perform the following types of reference data maintenance operations on reference data objects:

- | **Create.** It creates a new reference data object in T2S.
- | **Update.** It updates a reference data object already defined in T2S. It is possible, with a single update, to create, update or delete one or many classes of information of a reference data object at the same time.
- | **Delete.** It deletes a reference data object already defined in T2S. Deletion is always logical and not physical. Physical deletion is performed automatically by T2S when performing the purge process following the archiving process (See section Reference data archiving and purging).
- | **Restore** <sup>365</sup>. It reactivates a previously deleted reference data object defined in T2S, i.e. it updates the approval status of this reference data object from deleted to active.

Besides these operations, T2S provides some specific types of reference data maintenance operations for the configuration of access rights in T2S (See section Access rights for a detailed description of these operations) and for the set-up of intra-day Settlement Restrictions on parties, securities, securities accounts and T2S dedicated cash accounts (See section Restriction types).

T2S allows all reference data maintenance types on all reference data objects in U2A mode, whereas it allows them only on a sub-set of reference data objects in A2A mode. The following table shows the exhaustive list of all the available static maintenance types that are possible in A2A mode:

**TABLE 158 - MANAGEMENT OF REFERENCE DATA OBJECTS IN A2A MODE (SPLIT BOOK APPROACH)**

AREA	OBJECT	A2A FUNCTION
Party	Party	Create, Update, Delete
	Eligible-counterpart-CSD-link	Create
Securities	Securities	Create, Update, Delete
	Securities-CSD-link	Create, Update
	Securities-valuation	Create
	Close-link	Create, Delete
	Auto-collateralisation-eligibility-link	Create, Delete
Securities-account	Securities-account	Create, Update, Delete

<sup>365</sup> This function is available in U2A mode only and it is granted with a single system privilege, which allows the grantee user to restore all the logically deleted reference data objects within the data scope of the same user. (Split book approach)

AREA	OBJECT	A2A-FUNCTION
	CMB Securities-account-link	Create
T2S-dedicated-cash-account	T2S-dedicated-cash-account	Create, Update, Delete
	Liquidity transfer order	Create, Update, Delete
	Limit	Update, Delete

1 ~~T2S allows the management of all the other static objects listed in Reference Data Objects (see~~  
 2 ~~section Reference data objects) in U2A mode only. (Split book approach)~~

3 ~~1.6.3.3 Validity of reference data objects~~

4 ~~Some reference data objects include attributes limiting the validity period of these objects. For~~  
 5 ~~example, each CSD account link, which defines the configuration of securities accounts for~~  
 6 ~~cross-CSD settlement between two given CSDs (See section Configuration of securities ac-~~  
 7 ~~counts for cross-CSD settlement and external CSD settlement), includes two attributes specifying~~  
 8 ~~the date from which and the date to which the link is valid, i.e. the period in which T2S can~~  
 9 ~~use it for cross-CSD settlement between the two interested CSDs. Between the creation date~~  
 10 ~~and the deletion date of the link, but outside the validity period just defined, T2S cannot use~~  
 11 ~~the link for cross-CSD settlement, even though it is active and it can be queried and maintained~~  
 12 ~~by a duly authorised user.~~

13 ~~T2S makes a distinction between the following two categories of reference data objects:~~

- 14 | ~~Reference data objects with unlimited validity period,~~
- 15 | ~~Reference data objects with limited validity period.~~

16 ~~The following table shows the exhaustive list of all the reference data objects with unlimited~~  
 17 ~~validity period:~~

18 **TABLE 159 - REFERENCE DATA OBJECTS WITH UNLIMITED VALIDITY PERIOD (SPLIT BOOK APPROACH)**

AREA	OBJECT	USAGE BY OTHER PROCESSES
Securities	Auto-collateralisation-eligibility-link Close-link	Taken into account by Settlement application process Realignment, CoSD, Optimising, Posting as of the next business date
Securities penalty data	SME Growth Market	Taken into account by T2S Penalty Mechanism: <ul style="list-style-type: none"> <li>19   on the current business day if provided before the deadline</li> <li>20   as of the next business date if provided after the deadline</li> </ul>

AREA	OBJECT	USAGE-BY-OTHER-PROCESSES

<del>Market specific attribute configuration</del>	<del>Market specific attribute</del>	<del>Taken into account by all processes upon creation or update</del>
<del>Billing configuration</del>	<del>Service item</del>	<del>Taken into account by all processes upon creation or update</del>
<del>Configuration parameters</del>	<del>Country Currency Partial settlement threshold System entity</del>	<del>Taken into account by all processes upon creation or update</del>

- 1 ~~T2S uses for processing a reference data object with unlimited validity period immediately after~~
- 2 ~~a duly authorised user has created it. Consequently, this type of reference data object starts~~

366 ~~The Credit Memorandum Balance itself has an unlimited validity period, but it contains links to Receiving and Regular Securities Accounts which have a limited validity period. These links can only be created or updated as of a future date. (Split book approach)~~

1 ~~being valid immediately after it has been created in T2S. Similarly, T2S stops using for pro-~~  
2 ~~cessing a reference data object with unlimited validity period immediately after a duly author-~~  
3 ~~ised user has deleted it.~~

4 ~~Not having a validity period, all reference data objects with unlimited validity period can only~~  
5 ~~be updated intraday, i.e. changes on these reference data objects are immediately valid and it~~  
6 ~~is not possible to update them as of a future date. However, some T2S processes may use cer-~~  
7 ~~tain reference data objects taking into account their successful maintenance only as of the SoD~~  
8 ~~phase of the following settlement day <sup>367</sup>, as described in the column "Usage by Other Process-~~  
9 ~~es" above. This list is valid both for daylight and night-time processing.~~

10 ~~Reference data objects with limited validity period are used by T2S processes taking into ac-~~  
11 ~~count the start and the end of the validity period. More precisely, many T2S processes (e.g. the~~  
12 ~~settlement process) rely on reference data objects that are valid on the current settlement day.~~  
13 ~~This implies that these processes only consider reference data objects having a validity period~~  
14 ~~with start date earlier than or equal to the current date and end date later than or equal to the~~  
15 ~~current date. Some other T2S processes, instead, may have to consider also reference data ob-~~  
16 ~~jects that are not valid on the current settlement day. For example, when validating settlement~~  
17 ~~instructions with Intended Settlement Date other than the Current Business Day (e.g.: valida-~~  
18 ~~tion of future dated instructions), the business validation process has to consider reference~~  
19 ~~data objects having a validity period with start date earlier than or equal to the Intended Set-~~  
20 ~~tlement date and end date later than or equal to the Intended Settlement Date, which means~~  
21 ~~some of these reference data objects may be not yet valid. For more information on the revali-~~  
22 ~~dation triggered by Reference Data updates see section Revalidation process.~~

23 ~~Regardless of the way the different T2S processes use a given reference data object with lim-~~  
24 ~~ited validity period, between the creation date and the deletion date of this reference data ob-~~  
25 ~~ject, it is active and it can be queried and maintained by a duly authorised user.~~

26 ~~Reference data objects with limited validity period can be updated either intraday, i.e. while~~  
27 ~~they are in their validity period or as of a future date, i.e. before they become valid and T2S~~  
28 ~~starts using them for processing.~~

29 ~~The following table shows the exhaustive list of all the reference data objects with limited va-~~  
30 ~~lidity period, with the columns on the right specifying the possible maintenance operations de-~~  
31 ~~pending on the validity period:~~

---

367 This means, for example, that the creation of a new close link during the settlement day T will have an effect on the auto-collateralisation process as of T+1. Similarly, an update on day T of any configuration parameter stored in an attribute domain (e.g. the recycling period) will be considered by the settlement processes (e.g. the recycling process) as of day T+1. (Split book approach)

**TABLE 160 - REFERENCE DATA OBJECTS WITH LIMITED VALIDITY PERIOD** <sup>368</sup> {SPLIT BOOK APPROACH}

AREA	OBJECT	CREATION	UPDATE	DELETION	USAGE BY OTHER PROCESSES
Party	Party	Validity date may take the value of the current date.	May take effect on the current date <sup>369</sup> .	May be performed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update.
	Auto-collateralisation Rule <sup>370</sup>	Validity date may take the value of the current date.	May take effect on the current date.	May be performed only on objects that are not valid on the current date.	Taken into account by Settlement application process, Re-alignment, CoSD, Optimising, Posting as of the next business date.
	Eligible counterpart CSD link	Validity date may take the value of the current date.	May take effect only as of a future date.	May be performed only on objects that are not valid on the current date.	Taken into account by the settlement application process Optimising as of the next business day  Taken into account by all other processes upon creation or update.
Securities	Securities	Validity date may take the value of the current date.	May take effect on the current date <sup>371</sup>	May be performed only on objects that	Taken into account by all processes upon creation or update.

368 In the following table, the columns 'Creation/Update/Deletion' clarify whether it is possible to perform a given maintenance operation on each object with immediate effect. For example, if a user updates an object on which updates "may take effect on the current date", they are able, should they wish to do so, to perform changes that become immediately valid. On the contrary, if the update "may take effect only as of a future date" then it is not possible to perform intraday changes on the object. The possibilities described in the table represent the level of flexibility offered to the user. Within these limitations, the user decides exactly when a specific modification should take effect. (Split book approach)

369 This is not applicable to the Party Code, which cannot be updated if it is currently active. (Split book approach)

370 Note that Auto-Collateralisation Rule is not a stand-alone Reference Data object but rather a class of information belonging to the Party object. It is included in this table for clarity with reference to its usage by other T2S processes. For more information on Reference Data objects and classes of information see section Reference data objects. (Split book approach)

AREA	OBJECT	CREATION	UPDATE	DELETION	USAGE-BY-OTHER PROCESSES
			Maturity date may take the value of the next business date at the earliest. <sup>372</sup>	are not valid on the current date. A matured Security can only be deleted if the transformation detection period following the maturity date has passed.	
	Securities Valuation	Validity date may take the value of the current date.	n/a	n/a	Taken into account by the settlement application process Realignment, CoSD, Optimising, Posting as of the next business date
	Securities Valuation Party <sup>373</sup>	Validity date may take the value of the current date.	n/a	n/a	Taken into account by the settlement application process Realignment, CoSD, Optimising, Posting as of the next business date
	Security CSD	Validity date may	May take effect	May be per-	Taken into account

371 In order to ensure the reimbursement of the intraday credit and prevent the cancellation of reverse collateral on the same day of its creation, any update of Securities attributes Issue Date, Minimum Settlement Unit, Settlement Unit Multiple, Deviating Settlement Unit or Settlement Type is allowed only under one of the two following conditions:

- | the update applies to a security created on the current settlement day;
- | the update applied to a security created before the current settlement day and not eligible for auto-collateralisation since the start of day.

The second condition implies that, in case of securities eligible for auto-collateralisation, T2S will queue the security update and only apply it during EOD procedure of the current day. (Split book approach)

372 Note that Securities Valuation Party is not a stand-alone Reference Data object but rather a class of information belonging to the Securities Valuation object. It is included in this table for clarity with reference to its usage by other T2S processes. For more information on Reference Data objects and classes of information see section Reference data objects. (Split book approach)

373 When creating a Restriction type on date d, if the specified Restriction Processing Type is 'Rejection' or 'CSD Validation Hold', the validity date can take the value of d+2 at the earliest. In all other cases it can take the value of d+1 at the earliest. (Split book approach)

					provided-after the deadline
	Cash discount penalty rate	Validity date may take the value of the current date.	May take effect on the current date.	May be performed on objects that are valid on the current date.	Taken into account by T2S Penalty Mechanism: <ul style="list-style-type: none"> <li>  on the current business day if provided before the deadline</li> <li>  as of the next business date if provided after the deadline</li> </ul>
	Daily price	Validity date may take any value.	May take effect on the current date.	May be performed on objects that are valid on the current date.	Taken into account by T2S Penalty Mechanism: <ul style="list-style-type: none"> <li>  on the current business day if provided before the deadline</li> <li>  as of the next business date if provided after the deadline</li> </ul>
	Euro foreign exchange reference rate	Validity date may take any value.	May take effect on the current date.	May be performed on objects that are valid on the current date.	Taken into account by T2S Penalty Mechanism: <ul style="list-style-type: none"> <li>  on the current business day if provided before the deadline</li> <li>  as of the next business date if provided after the deadline</li> </ul>
Securities	Securities	Validity date may	May take effect	May be per-	Taken into account

AREA	OBJECT	CREATION	UPDATE	DELETION	USAGE-BY-OTHER PROCESSES
account	account	take the value of the current date.	on the current date. <sup>374</sup>	formed only on objects that are not valid on the current date.	by all processes upon creation or update.
	CSD account link	Validity date may take the value of the current date.	May take effect only as of a future date.	May be performed only on objects that are not valid on the current date.	Taken into account by the settlement application process Optimising as of the next business day Taken into account by all other processes upon creation or update.
	CMB securities account link	Validity date may take the value of the current date.	May take effect only as of a future date.	May be performed only on objects that are not valid on the current date.	Taken into account by the settlement application process Realignment, CoSD Optimising & Posting as of the next business day Taken into account by all other processes upon creation or update.
T2S dedicated cash account	T2S dedicated cash account	Validity date may take the value of the current date.	May take effect on the current date.	May be performed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update.
	Liquidity	Validity date may	May take effect	May be per-	Taken into account

374 In order to avoid undue negative securities positions and cash balances, any update of Securities Accounts "Negative Position" attribute is allowed only under one of the two following conditions:

- | updates applied to a securities account inside the End of Day period take effect immediately;
- | updates applied to a securities account outside the End of Day period are queued and executed at the start of the following End of Day period; (Split book approach)

AREA	OBJECT	CREATION	UPDATE	DELETION	USAGE-BY-OTHER PROCESSES
	transfer order	take the value of the current date.	on the current date.	formed only on objects that are not valid on the current date.	by all processes upon creation or update
	Liquidity transfer order link set	Validity date may take the value of the current date.	May take effect on the current date.	May be performed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update
	Limit	Validity date may take the value of the current date.	May take effect on the current date.	May be performed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update, with the exception of new Limits created for combinations of BIC+ BIC Branch Code, T2S DCA and Limit Type for which a Limit already exists. In the latter case, the new Limit will be taken into account at the start of the business day following the creation. To modify an existing limit with immediate effect, the user should use the Update function.
Message subscription	Message subscription rule set	Validity date may take value of the next business day at the earliest.	May take effect only as of a future date.	May be performed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update

AREA	OBJECT	CREATION	UPDATE	DELETION	USAGE-BY-OTHER PROCESSES
	Message-subscription-rule	Validity-date-may take-value-of-the next-business-day at-the-earliest.	May take-effect only-as-of-a-future-date.	May-be-performed-only-on-objects-that-are-not-valid-on-the-current-date.	Taken-into-account-by-all-processes-upon-creation-or-update
Report-configuration	Report-configuration	Validity-date-may take-value-of-the next-business-day at-the-earliest.	May take-effect only-as-of-a-future-date.	May-be-performed-only-on-objects-that-are-not-valid-on-the-current-date.	Taken-into-account-by-all-processes-upon-creation-or-update
Restriction type-management	Restriction type	Validity-date-may take-value-of-the next-business-day at-the-earliest. <sup>375</sup>	May take-effect only-as-of-a-future-date.	May-be-performed-only-on-objects-that-are-not-valid-on-the-current-date.	Taken-into-account-by-all-processes-upon-creation-or-update
	Restriction type-rule	Validity-date-may take-value-of-the next-business-day at-the-earliest.	May take-effect only-as-of-a-future-date.	May-be-performed-only-on-objects-that-are-not-valid-on-the-current-date.	Taken-into-account-by-all-processes-upon-creation-or-update
Conditional securities-delivery-configuration	Conditional securities-delivery-rule-set	Validity-date-may take-value-of-the next-business-day at-the-earliest.	May take-effect only-as-of-a-future-date.	May-be-performed-only-on-objects-that-are-not-valid-on-the-current-date.	Taken-into-account-by-all-processes-upon-creation-or-update
	Conditional securities-delivery-rule	Validity-date-may take-value-of-the next-business-day at-the-earliest.	May take-effect only-as-of-a-future-date.	May-be-performed-only-on-objects-that-are-not-valid-on-the-current-date.	Taken-into-account-by-all-processes-upon-creation-or-update

375 In case of Securities expressed in units, if the requested update implies an increase of the number of decimal positions for the Settlement Unit Multiple value, T2S will queue the securities update and only apply it during the EOD procedure of the current day. (Split book approach)

AREA	OBJECT	CREATION	UPDATE	DELETION	USAGE-BY-OTHER PROCESSES
		at the earliest.		are not valid on the current date.	
Configura- tion-param- eters	Tolerance amount	Validity date may take the value of the current date.	May take effect only as of a future date.	May be per- formed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update
	T2S-BIC Direc- tory	Validity date may take the value of the current date.	May take effect on the current date.	May be per- formed only on objects that are not valid on the current date.	Taken into account by all processes upon creation or update

- 1 ~~These lists are valid both for daylight and night time processing.~~
- 2 ~~For parties, securities accounts and T2S dedicated cash accounts the validity period is defined~~
- 3 ~~by an Opening Date and a Closing Date attribute. Between these two dates the reference data~~
- 4 ~~object, i.e. the party, the securities account or the T2S dedicated cash account, is valid, mean-~~
- 5 ~~ing that T2S can use it for settlement purpose. Outside this period, the reference data object~~
- 6 ~~can only be queried or maintained by a duly authorised user.~~
- 7 ~~A similar situation occurs for securities, where the validity period is defined by an Issue Date~~
- 8 ~~attribute and a Final Maturity or Expiry Date attribute. Between these two dates T2S can use~~
- 9 ~~the relevant securities for settlement purpose. Outside this period, the same securities can only~~
- 10 ~~be queried or maintained by a duly authorised user.~~
- 11 ~~Securities valuations have normally a validity period of one day, specified by a Securities Valua-~~
- 12 ~~tion Date attribute. In case the relevant CB or payment bank is not able to provide securities~~
- 13 ~~valuations in due time, i.e. before the T2S valuation process starts (see section Settlement day~~
- 14 ~~high level processes), on a given settlement day, then T2S uses for the valuation process the~~
- 15 ~~last available securities valuations that were sent on one of the previous days. In this case, the~~
- 16 ~~validity period of these securities valuations last for several days, i.e. until the relevant CB or~~
- 17 ~~payment bank sends in due time for the T2S valuation process for the next settlement day a~~
- 18 ~~new feed for these securities valuations. (Split book approach)~~
- 19

#### 1.6.3.3.4 Reference data archiving and purging

T2S archives static and transactional data three calendar months<sup>376</sup> after they have reached their final status. After archiving, T2S can purge, i.e. physically delete, these data from the production data base. These two processes, i.e. the archiving and the purge processes, present some specificities when they are applied to reference data objects. This section provides a detailed description of such specificities.

The archiving process ensures consistency of static and transactional data both in the production data base and in the archiving data base. This implies what follows:

- When T2S archives data related to a given Settlement Instruction, it also archives all the relevant reference data, even if they are still active in the production data base, i.e. even if T2S still uses these reference data for processing.
- When T2S archives a reference data object that is still used for processing in the production data base, T2S cannot purge this reference data object.

As a consequence of what explained so far, the archiving process ensures consistency of static and transactional data by archiving each revision of each reference data object three calendar months after the business day the revision was created.

The purge process applies in different ways, depending on the type of reference data object. More precisely:

- Some reference data objects have to be deleted by a duly authorised user before T2S can purge them. For example, a party has to be deleted before T2S can purge it. This implies that a party is never purged, unless a duly authorised user makes the decision to delete it. In this case, the condition triggering the purge process is the deletion of the reference data object and T2S purges this party three calendar months after it has been deleted.
- T2S can purge some reference data objects without the need for these objects to be deleted by a duly authorised user. For example, T2S can purge an eligible counterpart GSD link, a daily price or a securities valuation even if they have not been deleted. More precisely, T2S purges these reference data objects three calendar months after the end of their validity period<sup>377</sup>. In this case the triggering condition is the expiration of the validity period. In the specific case of daily prices, data is retained if still relevant for penalty calculations (i.e. if no newer applicable prices covering the retention period have been provided for the same ISIN).

The following table shows the condition triggering the purge process for each reference data object in T2S:

<sup>376</sup> This means, for a securities valuation, three calendar months after the business day which this securities valuation refers to. (Split book approach)

<sup>377</sup> This is the duration of the retention period, application configuration parameter set up by the T2S Operator (See section Business application configuration). (Split book approach)

1  
2

**TABLE 161 - PURGE TRIGGERING CONDITIONS (SPLIT BOOK APPROACH)**

AREA	OBJECT	TRIGGERING CONDITION
Party	Party	Deletion
	Eligible-counterpart-CSD-link	End-of validity period
Securities	Securities	Deletion
	Securities-valuation	End-of validity period
	Close-link	Deletion
	Security-CSD-link	End-of validity period
	Auto-collateralisation-eligibility-link	Deletion
Securities-penalty-data	Securities-subject-to-cash-penalties	Deletion
	Security-penalty-rate	Deletion
	Cash-discount-penalty-rate	Deletion
	Daily-price	End-of validity period and applicability <sup>378</sup>
	SME-Growth-Market	Deletion
	Euro-Foreign-Exchange-Reference-Rate	Deletion
Securities-account	Securities-account	Deletion
	CSD-account-link	End-of validity period
	GMB-securities-account-link	End-of validity period
T2S-dedicated-cash-account	T2S-dedicated-cash-account	Deletion
	Credit-memorandum-balance	Deletion
	Liquidity-transfer-order	End-of validity period
	Liquidity-transfer-order-link-set	End-of validity period
	External-RTGS-account	Deletion
	Limit	Deletion
Access-rights-management	User	Deletion
	Role	Deletion
	Privilege	Deletion

378 A Daily Price is considered no longer applicable when its value is not used for dates within the three months prior to the current business date. Since Daily Price data is replicated daily if newer values are not provided, a single Daily Price would remain applicable for a given ISIN until a newer one also covering at least the three-month period prior to the current business date is created. (Split book approach)

	Currency	Deletion
	Partial-settlement-threshold	Deletion
	System-entity	Deletion
	Tolerance-amount	Deletion
	T2S-BIC-directory	Deletion

1 ~~To ensure data consistency is preserved, a special case is represented by the purge of Securities~~  
2 ~~and Securities Accounts. For securities, the system automatically purges also all link ob-~~

~~jects (i.e. Close Links, Eligible Counterpart CSD Links, Auto-collateralisation Eligibility Links and Security CSD Links with Maintenance Flag = False) that reference the purged Security, regardless of whether the links themselves have been logically deleted. For Securities Accounts, the system purges also all the CMB Securities Account Links that reference the purged Securities Account, regardless of whether the links themselves have been logically deleted.~~

~~The following two examples illustrate how T2S archives and purges the different revisions of a generic reference data object whose triggering condition are its deletion and the end of its validity period, respectively.~~

**EXAMPLE 197 - ARCHIVING AND PURGING AFTER DELETION OF A REFERENCE DATA OBJECT (SPLIT BOOK APPROACH)**

~~In this example, a duly authorised user creates intra-day, on business day  $T_{X1}$ , a reference data object X. This results in the creation of the first revision of the reference data object X.~~

~~During business day  $T_{X2}$  (with  $T_{X2} < T_{X1} +$  three calendar months) a duly authorised user updates the reference data object X changing one (or many) of its attribute(s). This results in the creation of a new revision (2) for X.~~

~~On business day  $T_{X1} +$  three calendar months, the archiving process copies the first revision of the reference data object X into the archiving data base. It is worth mentioning that:~~

- ~~| T2S does not purge the archived revision, as it still refers to a period of time that expired on  $T_{X2}$ , i.e. since less than three calendar months;~~
- ~~| T2S does not archive the second revision of the reference data object X, as it was created on  $T_{X2}$ , i.e. since less than the duration of the retention period.~~

~~During business day  $T_{X3}$  (with  $T_{X3} < T_{X2} +$  three calendar months), a duly authorised user deletes the reference data object X. This results in the creation of a new revision (3) for the same object.~~

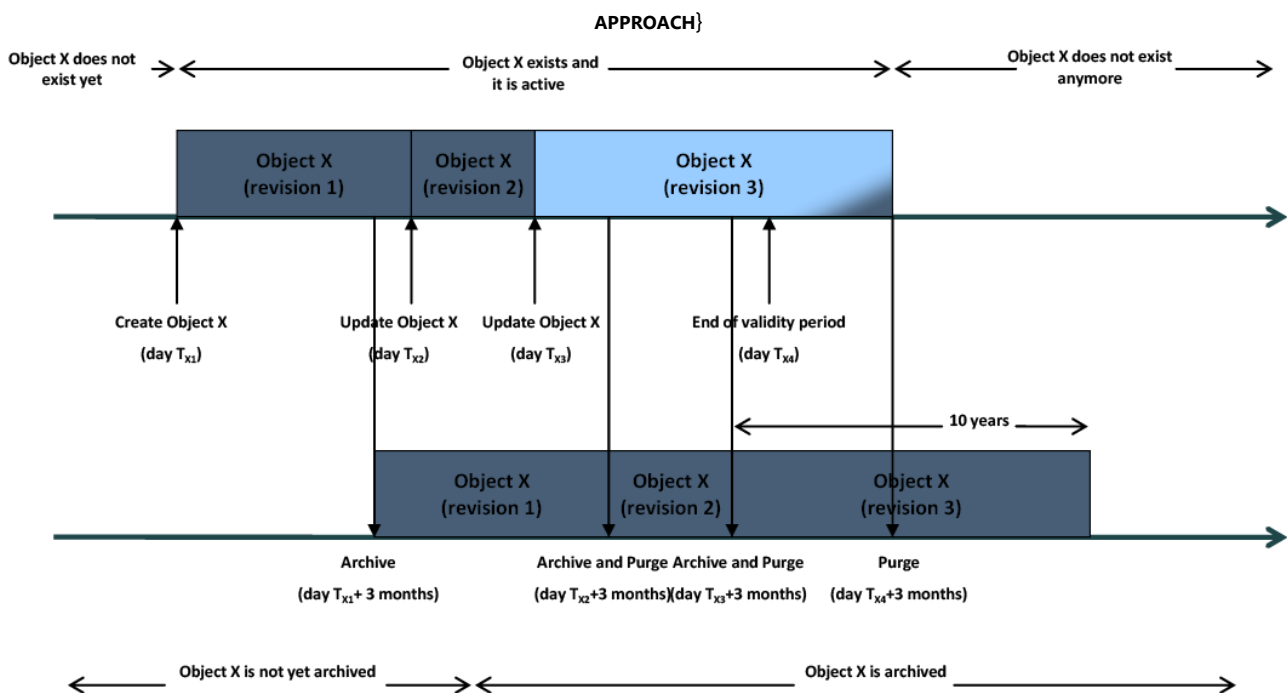

1 ~~On business day TX2 + three calendar months, the archiving process copies the second revision~~  
 2 ~~of the reference data object X into the archiving data base. In this case:~~

- 3 | ~~T2S does not purge this second revision, as it still refers to a period of time that expired on~~  
 4 ~~TX3, i.e. since less than three calendar months;~~
- 5 | ~~T2S does not archive the third revision of the reference data object X, as it was created on~~  
 6 ~~TX3, i.e. since less than three calendar months;~~
- 7 | ~~T2S purges the first revision of the reference data object X, as it refers to a period of time~~  
 8 ~~that expired exactly since three calendar months.~~

9 ~~Finally, on business day TX3 + three calendar months, the archiving process copies the third~~  
 10 ~~and final revision of the reference data object X into the archiving data base. On the same day,~~  
 11 ~~just after the archiving process has been successfully performed, T2S purges the reference data~~  
 12 ~~object X, by physically deleting the last two revisions of the reference data object X that are~~  
 13 ~~still present in the production data base.~~

14 ~~From this moment on, all revisions of the reference data object X are available only in the ar-~~  
 15 ~~chiving data base, where T2S keeps them for a period of ten years.~~

16 **EXAMPLE 198 - ARCHIVING AND PURGING AFTER THE END OF VALIDITY PERIOD OF A REFERENCE DATA OBJECT (SPLIT BOOK**

18 ~~In this example, a duly authorised user creates intra-day, on business day TX1, a reference da-~~  
 19 ~~ta object X. This results in the creation of the first revision of the reference data object X.~~

20 ~~On business day TX1 + three calendar months, the archiving process copies the first revision of~~  
 21 ~~the reference data object X into the archiving data base. T2S does not purge the archived revi-~~  
 22 ~~sion, as it is still the valid (and only) revision of the reference data object X in the production~~  
 23 ~~data base.~~  
 24

1 ~~During business day TX2, a duly authorised user updates the reference data object X changing~~  
2 ~~one (or many) of its attribute(s). This results in the creation of a new revision (2) for X.~~  
3 ~~Then, during business day TX3 (with TX3 < TX2 + three calendar months), a duly authorised user~~  
4 ~~updates again the reference data object X. This results in the creation of a new revision (3) for~~  
5 ~~the same object.~~  
6 ~~On business day TX2 + three calendar months, the archiving process copies the second revision~~  
7 ~~of the reference data object X into the archiving data base. In this case:~~  
8  ~~| T2S does not purge this second revision, as it still refers to a period of time that expired on~~  
9 ~~TX3, i.e. since less than three calendar months;~~  
10  ~~| T2S does not archive the third revision of the reference data object X, as it was created on~~  
11 ~~TX3, i.e. since less than three calendar months;~~  
12  ~~| T2S purges the first revision of the reference data object X, as it refers to a period of time~~  
13 ~~that expired exactly since three calendar months.~~  
14 ~~On business day TX3 + three calendar months, T2S archives the third revision of the reference~~  
15 ~~data object X and it purges its second revision, as it refers to a period of time that expired ex-~~  
16 ~~actly since three calendar months.~~  
17 ~~Finally, on business day TX4 + RP, i.e. three calendar months after the end of the validity period~~  
18 ~~of the reference data object X, T2S purges the reference data object X, by physically deleting~~  
19 ~~the last revision that is still present in the production data base.~~  
20 ~~From this moment on, the reference data object X is available only in the archiving data base,~~  
21 ~~where T2S keeps it for a period of ten years. {Split book approach}~~  
22 ~~*1.6.3.3.5 Lifecycle of reference data objects*~~  
23 ~~This section puts together all the concepts described so far and provides a general description~~  
24 ~~of the lifecycle of reference data objects in T2S.~~  
25 ~~Lifecycle of reference data objects with unlimited validity period~~  
26 ~~The following diagram illustrates the lifecycle of a reference data object with unlimited validity~~  
27 ~~period both in the production data base and in the archiving data base:~~

1 **DIAGRAM 157 - LIFECYCLE OF REFERENCE DATA OBJECTS WITH UNLIMITED VALIDITY PERIOD (SPLIT BOOK APPROACH)**

- 2
- 3 **When a duly authorised user submits to T2S a reference data maintenance instruction to create a reference data object with unlimited validity period, T2S processes it and, in case of successful processing, it creates the relevant reference data object in T2S. This reference data object is valid and it exists in the production data base only (transition 1).**
- 4
- 5
- 6
- 7 **From this moment on, a duly authorised user may submit to T2S one or many reference data maintenance instructions to update the reference data object. Regardless of the result of the T2S processing, i.e. whether the reference data maintenance instruction is successfully or unsuccessfully processed, the reference data object remains valid (transition 2).**
- 8
- 9
- 10
- 11 **When a duly authorised user submits to T2S a reference data maintenance instruction to delete a reference data object, T2S processes it and, in case of successful processing, it deletes the relevant reference data object in T2S. This reference data object is deleted (transition 3), i.e. it is still physically present in the production data base, but T2S does not use it for processing anymore.**
- 12
- 13
- 14
- 15
- 16 **From this moment on and within a period of three calendar months, if a duly authorised user submits to T2S a reference data maintenance instruction to restore a previously deleted reference data object, T2S processes it and, in case of successful processing, it restores the relevant**
- 17
- 18

reference data object in T2S. As a result, the reference data object becomes valid again (transition 4).

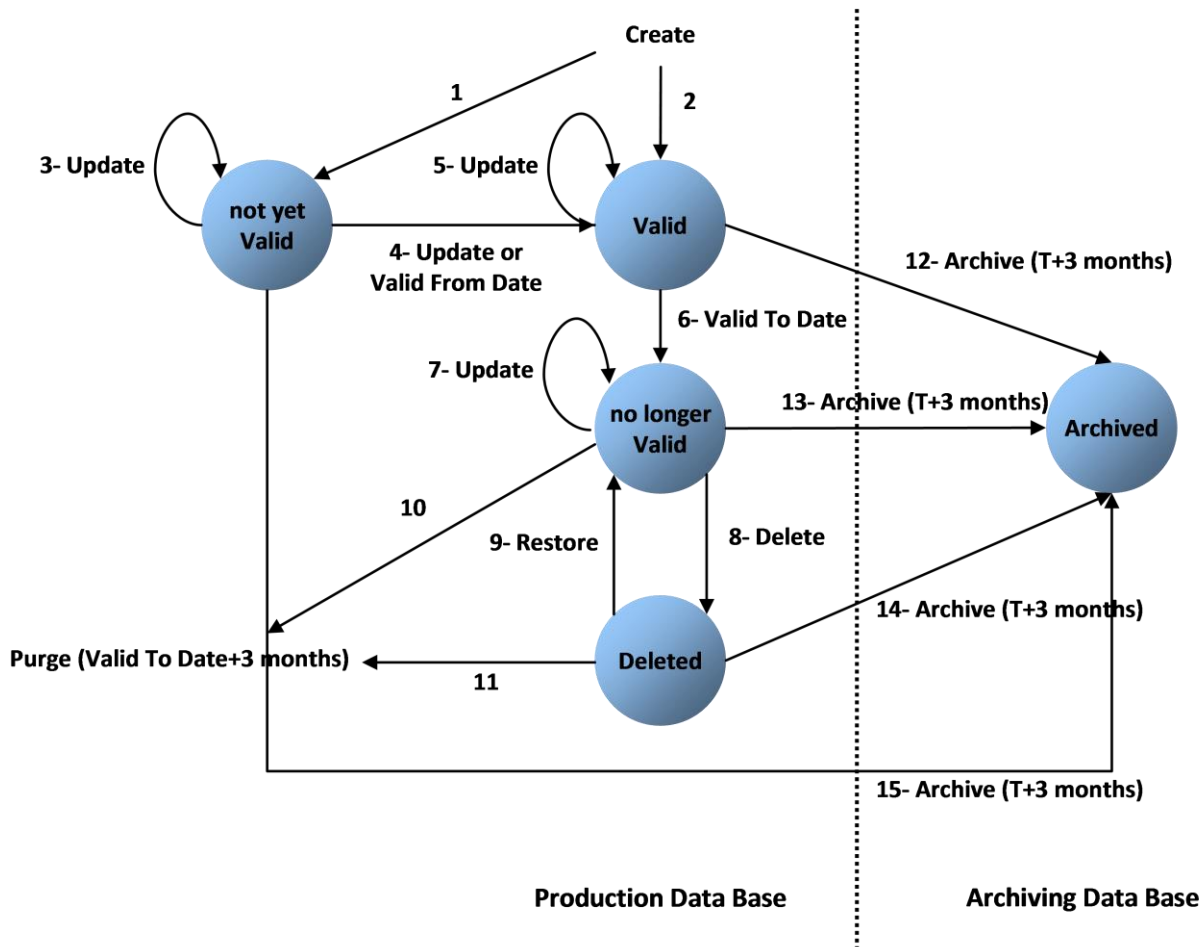

Three calendar months after a reference data object has been deleted, just after the archiving process, T2S physically deletes the reference data object from the production data base. This results in the reference data object being purged by the production data base (transition 5), i.e. it exists only in the archiving data base.

Three calendar months after a reference data object has been either created, updated or deleted, T2S copies the revision of the reference data object resulting from this reference data maintenance instruction from the production data base to the archiving data base. As a result the reference data object is both in the production data base, either as a valid or deleted reference data object, and archived in the archiving data base (transitions 6 and 7).

**Lifecycle of reference data objects with limited validity period**

The following diagram illustrates the lifecycle of a reference data object with limited validity period both in the production data base and in the archiving data base:

DIAGRAM 158 - LIFECYCLE OF REFERENCE DATA OBJECTS WITH LIMITED VALIDITY PERIOD (SPLIT BOOK APPROACH)

When a duly authorised user submits to T2S a reference data maintenance instruction to create a reference data object with limited validity period, T2S processes it and, in case of successful processing, it creates the relevant reference data object in T2S. This reference data object is

1 ~~either valid or not yet valid, depending on the starting date of its validity period, and it exists in~~  
2 ~~the production data base only (transitions 1 and 2).~~

3 ~~From this moment on, a duly authorised user may submit to T2S one or many reference data~~  
4 ~~maintenance instructions to update the reference data object. If the reference data object is~~  
5 ~~valid, then it remains valid, regardless of the result of the T2S processing, i.e. whether the ref-~~  
6 ~~erence data maintenance instruction is successfully or unsuccessfully processed (transition 5).~~  
7 ~~If the reference data object is not yet valid, two sub-cases are possible:~~

8 | ~~If the reference data maintenance instruction also updates the starting date of the validity~~  
9 ~~period to the current business date and it is successfully processed, then the reference data~~  
10 ~~object becomes valid (transitions 4).~~

11 | ~~In all other cases, whether the reference data maintenance instruction is successfully or un-~~  
12 ~~successfully processed, the reference data object remains not yet valid (transition 3).~~

13 ~~A reference data object becomes valid from the starting business date of the validity period~~  
14 ~~(transition 4).~~

15 ~~A reference data object is valid until the end of day of the final date of the validity period (tran-~~  
16 ~~sition 6).~~

17 ~~When a duly authorised user submits to T2S a reference data maintenance instruction to delete~~  
18 ~~a reference data object, T2S processes it and, in case of successful processing, it deletes the~~  
19 ~~relevant reference data object in T2S. This reference data object is deleted (transition 8), i.e. it~~  
20 ~~is still physically present in the production data base, but T2S does not use it for processing~~  
21 ~~anymore.~~

22 ~~From this moment on and within a period of three calendar months, if a duly authorised user~~  
23 ~~submits to T2S a reference data maintenance instruction to restore a previously deleted refer-~~  
24 ~~ence data object, T2S processes it and, in case of successful processing, it restores the relevant~~  
25 ~~reference data object in T2S. As a result, the reference data object becomes no longer valid~~  
26 ~~again (transition 9).~~

27 ~~Three calendar months after a reference data object has reached the end of its validity period,~~  
28 ~~just after the archiving, T2S physically deletes the reference data object from the production~~  
29 ~~data base. This takes place both whether the reference data object is no longer valid or deleted,~~  
30 ~~and it results in the reference data object being purged by the production data base (transi-~~  
31 ~~tions 10 and 11), i.e. it exists only in the archiving data base.~~

32 ~~Three calendar months after a reference data object has been either created, updated or delet-~~  
33 ~~ed, T2S copies the revision of the reference data object resulting from this reference data~~  
34 ~~maintenance instruction from the production data base to the archiving data base. As a result~~  
35 ~~the reference data object is both in the production data base (as a not yet valid, valid, no long-~~  
36 ~~er valid or deleted reference data object) and archived in the archiving data base (transitions~~  
37 ~~12, 13, 14 and 15).~~

38 ~~Lifecycle of reference data objects dependent on other reference data objects~~

1 ~~Some reference data objects depend on other reference data objects (e.g. a securities account~~  
 2 ~~cannot exist before the CSD participant it belongs to, a payment bank cannot exist before its~~  
 3 ~~central bank, a liquidity transfer order cannot exist before the T2S dedicated cash account it is~~  
 4 ~~referring to). In these cases, some status transitions of the dependent reference data objects~~  
 5 ~~are possible only if the reference data object they depend on is in a specific status, and vice~~  
 6 ~~versa. More precisely:~~

- 7 | ~~a dependent reference data object can be created / become valid only after all the reference~~  
 8 ~~data objects it depends on have been created / become valid;~~
- 9 | ~~a reference data object which other reference data objects depend on can become no longer~~  
 10 ~~valid / be deleted / be archived only after all the reference data objects depending on it~~  
 11 ~~have become no longer valid / been deleted / been archived.~~
- 12 | ~~The dependency relationship between two reference data objects stems directly from the~~  
 13 ~~hierarchical party model (see section Hierarchical party model).~~

14 ~~For example, a securities account cannot be created before the party it belongs to has been~~  
 15 ~~created; in addition, the opening date of this securities account cannot be before the opening~~  
 16 ~~date of the party it belongs to.~~

17 ~~Similarly, a T2S dedicated cash account cannot be deleted before all the liquidity transfer or-~~  
 18 ~~ders debiting this account have been deleted.~~

19 ~~The following table shows the list of dependencies related to parties, securities, securities ac-~~  
 20 ~~counts and T2S dedicated cash accounts:~~

21 **TABLE 162 - DEPENDENCIES BETWEEN REFERENCE DATA OBJECTS (SPLIT BOOK APPROACH)**  
 22

OBJECT	DEPENDENT OBJECTS
<b>Party</b>	<del>Securities Account, T2S Dedicated Cash Account, External RTGS Account, Security CSD Link, CSD Account Link.</del>
<b>Security</b> <sup>379</sup>	<del>Close Link, Securities CSD Link, Auto-collateralisation Eligibility Link, Eligible Counterpart CSD Link.</del>
<b>Securities Account</b> <sup>380</sup>	<del>CSD Account Link, CMB</del> <sup>381</sup>
<b>T2S Dedicated Cash Account</b>	<del>Liquidity Transfer Order, Liquidity Transfer Order Link Set, Credit Memorandum Balance.</del>

379 ~~The dependencies for Securities are only enforced throughout an initial period following its maturity date, set to an agreed value by the T2S Operator. Following this standard period, Securities can be deleted even if they are referenced in active links, which will be purged along with the Security after three calendar months. (Split book approach)~~

380 ~~Securities Accounts can be deleted even if they are referenced in active CMB Securities Account links, which will be purged along with the Securities Account after three calendar months. (Split book approach)~~

381 ~~A CMB is dependent on a Securities Account if this Securities Account is defined as Regular or Receiving Account in the CMB. (Split book approach)~~

1 ~~The following table presents a list of relationships between objects that do not trigger any pri-~~  
 2 ~~ority checks upon deletion or closure of the dependent object. In other words, if an instance of~~  
 3 ~~the referenced object is deleted, the existence of a related instance in the referencing object~~  
 4 ~~does not impede this deletion. For instance, a Credit Memorandum Balance can be deleted even~~  
 5 ~~if there are Limits referencing it.~~

1 **The rest of this section provides some examples illustrating the typical lifecycle of some refer-**  
 2 **ence data objects with limited and unlimited validity period in T2S.**

3 **EXAMPLE 199 - LIFECYCLE OF A REFERENCE DATA OBJECT WITH UNLIMITED VALIDITY PERIOD (SPLIT BOOK APPROACH)**

4

5 **DIAGRAM 159 - LIFECYCLE OF AN EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

6

7 **In this example, a duly authorised user creates intra-day, on business day TX1, an external**  
 8 **RTGS account X. This results, under the assumption of successful processing, in the creation of**  
 9 **the first revision of the external RTGS account X.**

10 **TABLE 164 - EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

TECHNICAL-IDENTIFIER	REVISION	RTGS-EXTERNAL-ACCOUNT-REFERENCE	RTGS-ACCOUNT STATUS	RTGS-SYSTEM-NAME
20101968	1	NL123456789	Open	TARGET2

12 **The approval status of X is active and this implies that T2S can immediately use this external**  
 13 **RTGS account for processing, i.e. it can be used by any relevant process in T2S (e.g. business**  
 14 **validation, settlement, etc.), it can be displayed and updated, it can be included in reports and**  
 15 **so forth.**

~~During business day TX2, a duly authorised user updates the external RTGS account X. This results in the creation of a new revision (2) for X.~~

**TABLE 165 - EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	RTGS-EXTERNAL-ACCOUNT-REFERENCE	RTGS-ACCOUNT STATUS	RTGS-SYSTEM NAME	APPROVAL STATUS
20101968	1	NL123456789	Open	TARGET2	Active
20101968	2	NL123456779	Open	TARGET2	Active

~~Its approval status is still active, but some of its attributes are now different, as the user updated both the RTGS External Account Reference attribute and the RTGS Account Status attribute, and T2S immediately starts using the new values of these attributes for processing. The old revision of the external RTGS account X is still stored in T2S and its status is still active. However, it can just be displayed, but T2S is no longer using this revision for processing.~~

~~At business day TX3, a duly authorised user updates again the external RTGS account X. This results again in the creation of a new revision (3) for X, again with approval status set to active and with some other new values that T2S immediately starts using for processing.~~

**TABLE 166 - EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	RTGS-EXTERNAL-ACCOUNT-REFERENCE	RTGS-ACCOUNT STATUS	RTGS-SYSTEM NAME	APPROVAL STATUS
20101968	1	NL123456789	Open	TARGET2	Active
20101968	2	NL123456779	Open	TARGET2	Active
20101968	3	NL123456779	Closed	TARGET2	Active

~~The old revisions of the external RTGS account X are still stored in T2S and they can be displayed. However, T2S is no longer using them for processing.~~

~~During business day TX4, a duly authorised user deletes the external RTGS account X. This results in the creation of a new revision (4) for the same object.~~

**TABLE 167 - EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	RTGS-EXTERNAL-ACCOUNT-REFERENCE	RTGS-ACCOUNT STATUS	RTGS-SYSTEM NAME	APPROVAL STATUS
20101968	1	NL123456789	Closed	TARGET2	Active
20101968	2	NL123456779	Open	TARGET2	Active
20101968	3	NL123456779	Closed	TARGET2	Active
20101968	4	NL123456779	Closed	TARGET2	Deleted

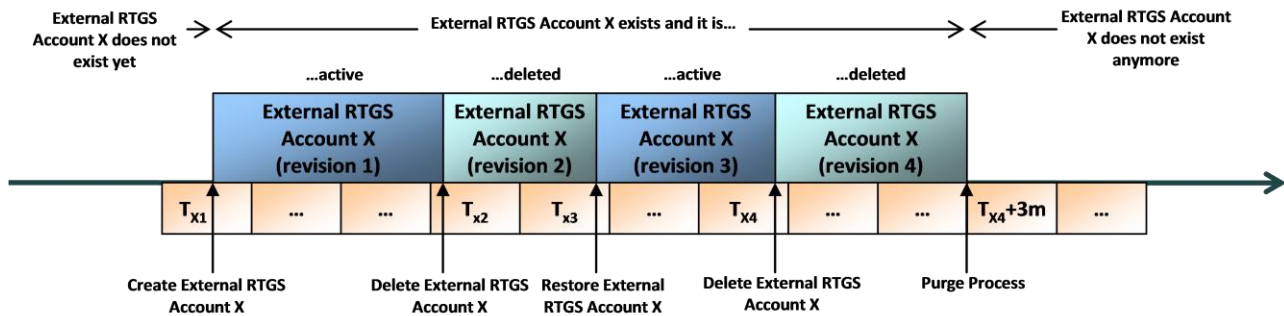

1 ~~Its approval status is deleted. Consequently, T2S stops immediately using it for processing, i.e.~~  
 2 ~~the external RTGS account X is not used anymore by T2S processes, it cannot be updated, it is~~  
 3 ~~not included in reports and queries referring to a time period following the moment of its dele-~~  
 4 ~~tion and so forth.~~

5 ~~On business day TX4+three calendar months, the purge process physically deletes the external~~  
 6 ~~RTGS account X from the production data base. From this moment on, reference data related to~~  
 7 ~~this external RTGS account can only be retrieved from the archiving data base.~~

8 **EXAMPLE 200 - RESTORING A REFERENCE DATA OBJECT (SPLIT BOOK APPROACH)**

9  
 10 ~~The following diagram illustrates an example of lifecycle for an external RTGS account under-~~  
 11 ~~going a restore operation.~~

12 **DIAGRAM 160 - LIFECYCLE OF A RESTORED EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

13  
 14 ~~In this example, a duly authorised user creates intra-day, on business day TX1, an external~~  
 15 ~~RTGS account X. On business day TX2, X is deleted by mistake. For this reason, on business day~~  
 16 ~~TX3, a duly authorised user restores it, so that T2S can use again the external RTGS account X~~  
 17 ~~for processing. Finally, during business day TX4, a duly authorised user eventually deletes the~~  
 18 ~~external RTGS account X. All these actions result in the creation of the following revisions for~~  
 19 ~~the external RTGS account X:~~

20 **TABLE 168 - EXTERNAL RTGS ACCOUNT (SPLIT BOOK APPROACH)**

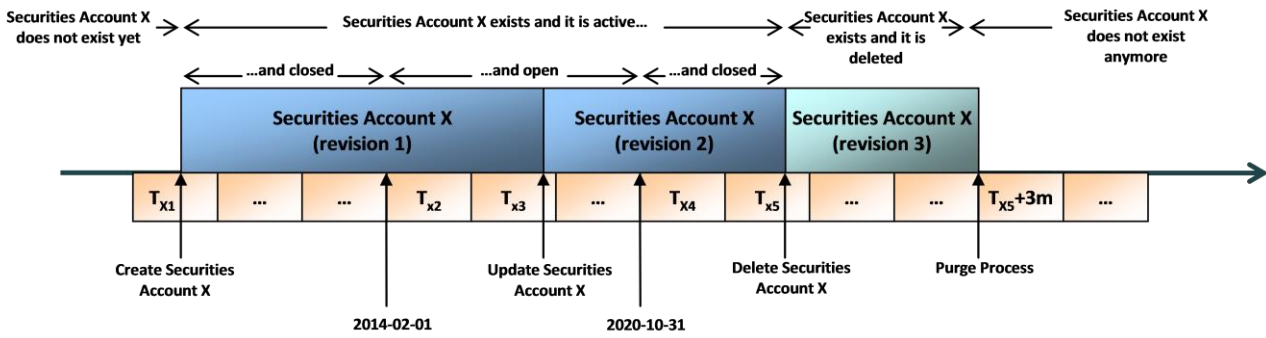

21

TECHNICAL IDENTIFIER	REVISION	RTGS-EXTERNAL-ACCOUNT-REFERENCE	RTGS-ACCOUNT STATUS	RTGS-SYSTEM NAME	APPROVAL STATUS
20101968	1	NL123456789	Closed	TARGET2	Active
20101968	2	NL123456789	Closed	TARGET2	Deleted
20101968	3	NL123456789	Closed	TARGET2	Active
20101968	4	NL123456789	Closed	TARGET2	Deleted

22 ~~As already described in the previous example, on business day TX4+three calendar months, the~~  
 23 ~~purge process physically deletes the external RTGS account X from the production data base.~~

**EXAMPLE 201 - LIFECYCLE OF A REFERENCE DATA OBJECT WITH A LIMITED VALIDITY PERIOD (SPLIT BOOK APPROACH)**

**DIAGRAM 161 - LIFECYCLE OF A SECURITIES ACCOUNT (SPLIT BOOK APPROACH)**

In this example, a duly authorised user creates intra-day, on business day TX1, a securities account X. This results, under the assumption of successful processing, in the creation of the first revision of the securities account X.

**TABLE 169 - SECURITIES ACCOUNT (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	OPENING DATE	CLOSING DATE	SECURITIES ACCOUNT TYPE	APPROVAL STATUS
37914062	1	2014-02-01	-	CSD-participant account	Active

The approval status of X is active, however this does not imply that T2S can immediately and fully use this securities account for processing. More precisely, this securities account can be displayed or even maintained, but no Settlement Instructions can settle on this securities account as its opening date is still in the future.

As of TX2 (i.e. as of 1st of February 2014), the opening date, the securities account starts being open and from this business day on T2S can settle Settlement Instructions on this securities account. It is worth mentioning that the securities account switched from closed to open simply owing to the business date change occurred during the End-of-Day period and that T2S does not perform any automatic operation on the securities account during this period. This is valid for all reference data objects having a validity period.

During business day TX3, a duly authorised user updates the securities account X setting its closing date. This results in the creation of a new revision (2) for X.

**TABLE 170 - SECURITIES ACCOUNT (SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	OPENING DATE	CLOSING DATE	SECURITIES ACCOUNT TYPE	APPROVAL STATUS
37914062	1	2014-02-01	-	CSD-participant account	Active
37914062	2	2014-02-01	2020-10-31	CSD-participant account	Active

T2S immediately starts using the newly set closing date of the securities account for processing. For example, it starts rejecting Settlement Instructions with Intended Settlement Date after the closing date. The old revision of the securities account X is still stored in T2S and its status is still active. However, it can just be displayed, but T2S is no longer using this revision for processing.

As of TX4 plus one (i.e. as of 1st of November 2020), the day after the closing date, the securities account is closed and from this business day on T2S cannot settle Settlement Instruction on this securities account anymore. As already mentioned for the opening date, the securities account switched from open to closed simply owing to the business date change occurred during the End-of-Day period, during which T2S did not perform any automatic operation on the securities account.

During business day TX5, a duly authorised user deletes the securities account X. This results in the creation of a new revision (3) for the same object.

TABLE 171 - SECURITIES ACCOUNT(SPLIT BOOK APPROACH)

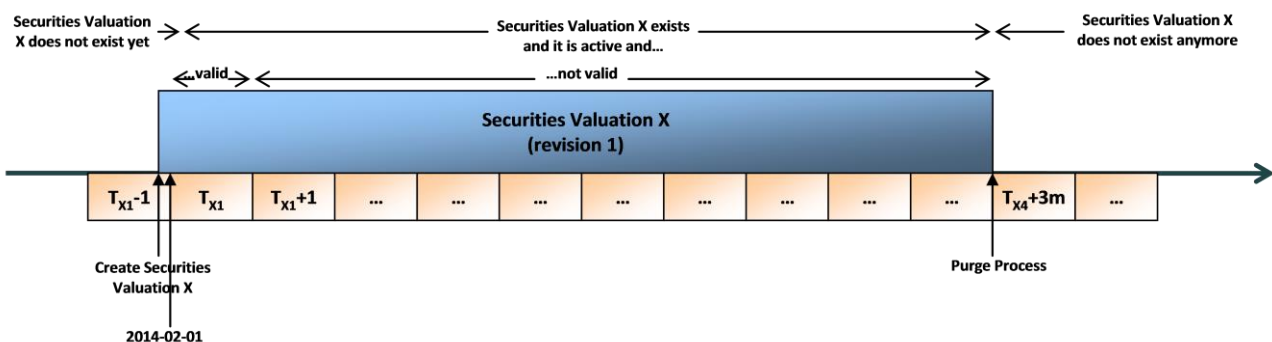

TECHNICAL IDENTIFIER	REVISION	OPENING DATE	CLOSING DATE	SECURITIES ACCOUNT TYPE	APPROVAL STATUS
37914062	1	2014-02-01	-	CSD-participant account	Active
37914062	2	2014-02-01	2020-10-31	CSD-participant account	Active
37914062	3	2014-02-01	2020-10-31	CSD-participant account	Deleted

Its approval status is deleted. Consequently, T2S stops immediately using it for processing, i.e. the securities account X is not used anymore by T2S processes, it cannot be updated, it is no longer included in reports and so forth.

On business day TX5 + three calendar months, the purge process physically deletes the securities account X from the production data base. From this moment on, reference data related to this securities account can only be retrieved from the archiving data base.

EXAMPLE 202 - LIFECYCLE OF A REFERENCE DATA OBJECT WITH A ONE-DAY VALIDITY PERIOD(SPLIT BOOK APPROACH)

DIAGRAM 162 - LIFECYCLE OF A SECURITIES VALUATION(SPLIT BOOK APPROACH)

1 **In this example, on business day TX1-1 a collateral management system sends to T2S prices**  
 2 **applicable for business day TX1. This results under the assumption of successful processing in**  
 3 **the creation of many securities valuation objects. The diagram refers to one of these securities**  
 4 **valuation, X.**

5 **TABLE 172 - SECURITIES VALUATION(SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	SECURITIES VALUATION DATE	PRICE	CURRENCY	APPROVAL STATUS
13021972	1	2014-02-01	1.21	EUR	Active

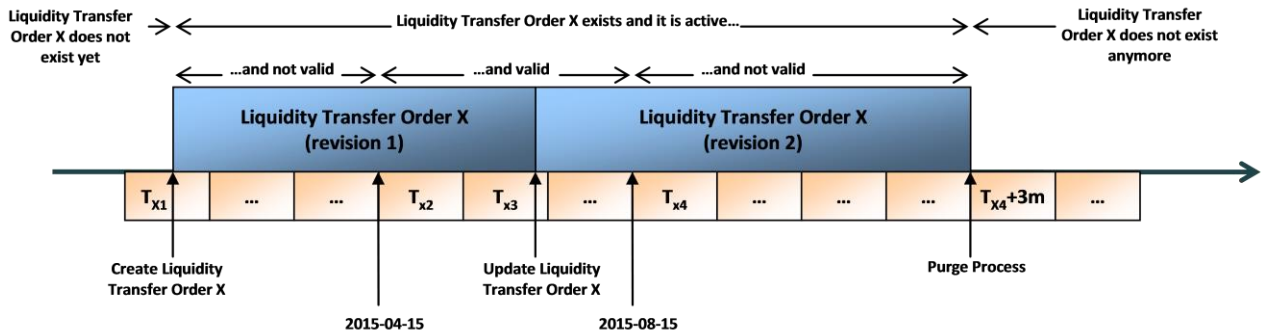

7 **The approval status of X is active and this implies that T2S can use this securities valuation for**  
 8 **processing on the following business day, i.e. on TX1 (1st of February 2014).**

9 **From business day TX1+1, T2S does not take into account the securities valuation X, as it is not**  
 10 **valid anymore, even though still active.**

11 **On business day TX1+three calendar months, the purge process physically deletes the securi-**  
 12 **ties valuation X from the production data base. From this moment on, reference data related to**  
 13 **this securities valuation can only be retrieved from the archiving data base.**

14 **EXAMPLE 203 - LIFECYCLE OF A REFERENCE DATA OBJECT WITH A LIMITED VALIDITY PERIOD NOT REQUIRING MANUAL DELE-**  
 15 **TION(SPLIT BOOK APPROACH)**

17 **DIAGRAM 163 - LIFECYCLE OF A STANDING LIQUIDITY TRANSFER ORDER(SPLIT BOOK APPROACH)**

18 **In this example, a duly authorised user creates intra-day, on business day TX1, a liquidity**  
 19 **transfer order X. This results, under the assumption of successful processing, in the creation of**  
 20 **the first revision of the liquidity transfer order X.**

22 **TABLE 173 - STANDING LIQUIDITY TRANSFER ORDER(SPLIT BOOK APPROACH)**

TECHNICAL IDENTIFIER	REVISION	LTO REFERENCE	AMOUNT	VALID FROM DATE	VALID TO DATE	APPROVAL STATUS
89918092	1	REF001	1.21	2015-04-15	-	Active

24 **The approval status of X is active; however this does not imply that T2S can immediately and**  
 25 **fully use this liquidity transfer order for processing. More precisely, this liquidity transfer order**

can be displayed or even maintained, but T2S does not trigger the execution of any liquidity transfer, as the valid from date of the liquidity transfer order is still in the future.

As of TX2 (i.e. as of the 15th of April 2015), the valid from date, the liquidity transfer order starts being valid and from this business day on T2S triggers a liquidity transfer for it, so that it can be executed and settled. It is worth mentioning that the liquidity transfer order switched from not valid to valid simply owing to the business date change occurred during the End-of-Day period and that T2S does not perform any automatic operation on the liquidity transfer order during this period.

During business day TX3, a duly authorised user updates the liquidity transfer order X setting its valid to date. This results in the creation of a new revision (2) for X.

TABLE 174 - ~~STANDING LIQUIDITY TRANSFER ORDER~~ (SPLIT BOOK APPROACH)

TECHNICAL IDENTIFIER	REVISION	LTO REFERENCE	AMOUNT	VALID FROM DATE	VALID TO DATE	APPROVAL STATUS
89918092	1	REF001	1.21	2015-04-15	-	Active
89918092	2	REF001	1.21	2015-04-15	2015-08-15	Active

T2S immediately starts using the newly set valid to date of the liquidity transfer order for processing. For example, it does not include anymore this liquidity transfer order in the result of the query on liquidity transfer orders that are valid after the 15th of August 2015. The old revision of the liquidity transfer order X is still stored in T2S and its status is still active. However, it can just be displayed, but T2S is no longer using this revision for processing.

As of TX4 (i.e. as of August 16th 2015, since the valid to date of August 15th is included in the validity period), the liquidity transfer order is not valid anymore and from this business day on T2S does not trigger a liquidity transfer for it anymore. As already mentioned for the valid from date, the liquidity transfer order switched from valid to not valid simply owing to the business date change occurred during the End-of-Day period, during which T2S did not perform any automatic operation on the liquidity transfer order. (Split book approach)

#### 1.6.3.3.6 Reference data maintenance instructions processing

This section describes how T2S processes reference data maintenance requests during the real-time settlement and the night-time settlement, as the processing during these two phases takes place in slightly different ways, both in terms of response time and of response messages generated by T2S.

For a detailed description of the dialogue between T2S and T2S Actors during the processing of reference data maintenance instructions, please refer to sections Maintain Reference Data Object and Restrict Reference Data Object.

#### Real-time processing

During the real-time period, T2S processes each reference data maintenance request immediately.

1 **DIAGRAM 164 - REAL-TIME PROCESSING OF REFERENCE DATA MAINTENANCE INSTRUCTIONS (SPLIT BOOK APPROACH)**

2

3 ~~This diagram shows how, during the real-time settlement period, T2S immediately processes~~  
4 ~~every reference data maintenance request. Consequently, if T is the point in time in which T2S~~  
5 ~~receives a given reference data maintenance request X, the point in time T' in which T2S pro-~~  
6 ~~vides the related static maintenance response X' is given by:~~

7 
$$T' = T + \delta$$

8 ~~where  $\delta$  is the T2S processing time for the reference data maintenance request X. This is valid~~  
9 ~~both for successful and unsuccessful static data maintenance requests.~~

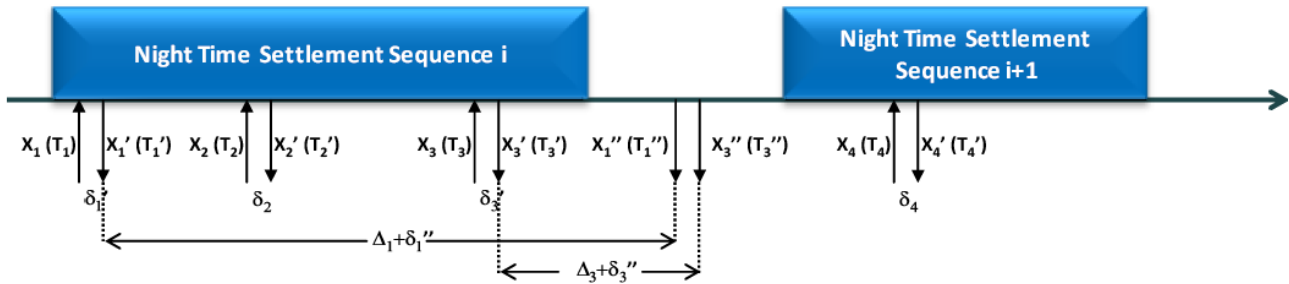

10 ~~In the specific case of updates of Securities concerning the Minimum Settlement Unit, the Set-~~  
11 ~~tlement Unit Multiple, the Deviating Settlement Units, the Settlement Type or the Final Maturi-~~  
12 ~~ty/Expiry Date, or update of Securities Accounts concerning the Negative Position flag, the ref-~~  
13 ~~erence data maintenance request is queued and then resumed and completed during the End-~~  
14 ~~of-Day phase, by using the same queuing mechanism described below for reference data~~  
15 ~~maintenance requests that may have an impact on the settlement process and that are submit-~~  
16 ~~ted while a night-time settlement sequence is running.~~

17 **Night-time processing**

18 ~~The main peculiarity of the night-time processing, when compared to the real-time processing,~~  
19 ~~consists in the fact that T2S preserves the same reference data image for the entire duration of~~  
20 ~~each settlement sequence within each cycle. This means that T2S does not make active any~~  
21 ~~new revision of any reference data object that may have an impact on the settlement process.~~  
22 ~~On the contrary, if a reference data maintenance instructions does not imply any possible im-~~  
23 ~~port on the settlement process, i.e. if the relevant changes concern attributes of reference data~~  
24 ~~objects that T2S does not use for settlement or if the reference data maintenance instruction is~~  
25 ~~not valid, then T2S processes and completes this reference data maintenance instruction im-~~  
26 ~~mediately.~~

27 ~~The following diagram shows some examples of reference data maintenance requests submit-~~  
28 ~~ted while a night-time sequence is running, which cover all the possible scenarios.~~

1 **DIAGRAM 165 - NIGHT-TIME PROCESSING OF REFERENCE DATA MAINTENANCE INSTRUCTIONS (SPLIT BOOK APPROACH)**

2

3 **At time T1 a duly authorised user sends a valid reference data maintenance request X1 to block**  
 4 **a T2S dedicated cash account, i.e. to restrict it from settlement. This request may have an impact**  
 5 **on the settlement process, because some pending Settlement Instructions may reference**  
 6 **this T2S dedicated cash account. Consequently, T2S provides immediately a provisional refer-**  
 7 **ence data maintenance response (i.e. with status queued) at time**

8  **$T1' = T1 + \delta 1'$**

9 **where  $\delta 1'$  is the processing time for T2S to create the relevant blocking intraday restriction**  
 10 **with approval status set to queued. The processing of this reference data maintenance instruc-**  
 11 **tion resumes after the end of the current night-time settlement sequence.**

12 **At time T2 a duly authorised user sends a valid reference data maintenance instruction X2 to**  
 13 **create a new securities account. This request cannot have an impact on the settlement process,**  
 14 **because it refers to the creation of the new securities account which, by definition, cannot be**  
 15 **already referenced in any pending Settlement Instruction. Consequently, T2S provides immedi-**  
 16 **ately a positive response at time**

17  **$T2' = T2 + \delta 2$**

18 **where  $\delta 2$  is the processing time for the creation of the new securities account.**

19 **At time T3 a duly authorised user sends a valid reference data maintenance request X3 to up-**  
 20 **date a limit. Also this request, like request X1, may have an impact on the settlement process of**  
 21 **the pending Settlement Instructions referencing the T2S dedicated cash account on which the**  
 22 **limit is defined. Consequently, T2S provides immediately a provisional reference data mainte-**  
 23 **nance response (i.e. with status queued) at time**

24  **$T3' = T3 + \delta 3'$**

25 **where  $\delta 3'$  is the processing time for T2S to update the relevant limit with approval status set to**  
 26 **queued. The processing of this reference data maintenance instruction resumes after the end of**  
 27 **the current night-time settlement sequence.**

28 **After the end of the current night-time settlement sequence and before the beginning of the**  
 29 **following one, T2S resumes the processing of all the reference data maintenance instructions**  
 30 **that were queued during the previous night-time settlement sequence. This results in the pro-**  
 31 **cessing resumption and completion of the requests X1 (to block a T2S Dedicated Cash Account)**  
 32 **and X3 (to update a limit). T2S sends the related final reference data maintenance responses**  
 33 **(i.e. with status completed) at time**

1  ~~$T1'' = T1 + \delta1' + A1 + \delta1''$~~

2 ~~where  $\delta1' + \delta1''$  is the overall processing time for the request X1 and D1 is the time between~~

3 ~~the first and the second processing of request X1, and at time~~

4  ~~$T3'' = T3 + \delta3' + D3 + \delta3''$~~

5 ~~where  $\delta3' + \delta3''$  is the overall processing time for the request X3 and D3 is the time between~~

6 ~~the first and the second processing of request X3.~~

7 ~~When the following night-time settlement sequence  $i+1$  begins, T2S starts again processing~~

8 ~~reference data maintenance instructions differentiating between those having a potential im-~~

9 ~~act on the settlement process, which T2S queues and resumes after the end of the night-time~~

10 ~~settlement sequence, and those that do not have impact on the settlement process, which T2S~~

11 ~~completes immediately.~~

12 ~~At time T4 a duly authorised user sends an invalid reference data maintenance instruction X4 to~~

13 ~~update a party that does not exist in T2S. This request cannot even be processed, as it does not~~

14 ~~fulfil all the applicable business rules, so it cannot have an impact on the settlement process by~~

15 ~~definition. Consequently, T2S provides immediately a negative reference data maintenance~~

16 ~~response at time~~

17  ~~$T4' = T4 + \delta4'$~~

18 ~~where  $\delta4'$  is the processing time for the rejection of the reference data maintenance instruc-~~

19 ~~tion.~~

20 ~~To summarise all the examples just described, T2S provides an immediate reference data~~

21 ~~maintenance response also during a night-time settlement sequence. In addition, when this~~

22 ~~reference data maintenance response is only provisional, as the request is queued owing to its~~

23 ~~possible impact on the ongoing night-time settlement process, then T2S provides an additional,~~

24 ~~final reference data maintenance response during the period between the current night-time~~

25 ~~settlement sequence and the next one.~~

26 ~~The following tables provide a synopsis of all the possible scenarios that may occur in the pro-~~

27 ~~cessing of reference data maintenance instructions during the night-time settlement phase and~~

28 ~~a list of reference data objects that can be maintained immediately when a night-time se-~~

29 ~~quence is running.~~

1  
2

**TABLE 175 - NIGHT-TIME PROCESSING OF REFERENCE DATA MAINTENANCE INSTRUCTIONS (SPLIT BOOK APPROACH)**

CONSISTENCY CHECK	NIGHT-TIME SEQUENCE RUNNING	POSSIBLE IMPACT ON SETTLEMENT	RESULT
Negative	Any	Any	T2S provides immediately a negative reference data maintenance response (status rejected).
Positive	Yes	No	T2S provides immediately a positive reference data maintenance response (status completed).
Positive	Yes	Yes	T2S provides immediately a provisional reference data maintenance response (status queued) and provides the final maintenance response after the end of the current sequence and before the beginning of the next one (status completed or rejected).
Positive	No	Any	T2S provides immediately a positive reference data maintenance response (status completed).

4

5

6

**TABLE 177 - REFERENCE DATA MAINTENANCE INSTRUCTION PROCESSING STATUS (SPLIT BOOK APPROACH)**

STATUS VALUE	DEFINITION
Queued	The reference data maintenance instruction is queued. This status can be sent to the T2S Actor only if a valid reference data maintenance instruction is received by T2S during a night-time settlement sequence and it is related to a reference data change possibly impacting the settlement process (status transition 2).
Rejected	An invalid reference data maintenance instruction has been rejected due to one (or many) business validation error(s). This status can be received by the T2S Actor either immediately (status transition 3) or while T2S is processing a reference data maintenance instruction that has been queued during the previous night-time settlement sequence (status transition 5).
Completed	The reference data maintenance instruction has been successfully completed. This status can be received by the T2S Actor either immediately, in case the reference data maintenance instruction is processed during the real-time settlement or if it is processed during the night-time settlement and it does not have an impact on the settle-

## 1 1.6.4 Information Management

### 2 1.6.4.1 Status Management

#### 3 1.6.4.1.1 Concept

4 T2S informs T2S Actors of the results of the processing of Settlement Instructions, Settlement Restrictions,  
5 Maintenance Instructions, Liquidity transfers and Reference Data updates. This information is provided to  
6 T2S Actors through a status reporting which is managed by the Status Management process. The communi-  
7 cation of statuses to T2S Actors is complemented by the communication of reason codes in case of negative  
8 result of a T2S process.

#### 9 1.6.4.1.2 Overview

10 The Status Management process manages the status updates of Settlement Instructions, Settlement Re-  
11 strictions, Maintenance Instructions and Liquidity Transfers existing in T2S in order to communicate these  
12 status updates through Status Advice messages to the T2S Actors throughout the lifecycle of the instruction.  
13 This process manages as well the status updates related to the processing of incoming reference data  
14 maintenance instructions. The Status Management process also manages the reason codes to be sent to T2S  
15 Actors in case of negative result of a T2S process (e.g. to determine the reason why an instruction is unsuc-  
16 cessfully validated, executed or settled).

17 The status of an instruction is indicated through a value, which is subject to change through the lifecycle of  
18 the instruction. This value provides T2S Actors with information about the situation of this instruction with  
19 respect to a given T2S process at a certain point in time. For instance, the Settlement Status' value of a  
20 Settlement Instruction provide T2S Actors with information on whether the Settlement Instruction is unset-  
21 tled, partially or fully settled.

22 Since each instruction in T2S can be submitted to several processes, each instruction in T2S has several  
23 statuses. For instance, since a Settlement Instruction can be submitted to matching and settlement, this  
24 Settlement Instruction has both a Match status and a Settlement status. However, each of these statuses  
25 has one single value at a certain moment in time that indicates the instruction's situation at the considered  
26 moment (e.g. Match Status "Unmatched" and Settlement Status "Unsettled"). Depending on its instruction  
27 type, i.e. Settlement Instruction, Settlement Restriction or Maintenance Instruction, an instruction is submit-  
28 ted to different processes in T2S. Consequently, the statuses featuring each instruction depend on the con-  
29 sidered instruction type.

30 In a similar way, reference data maintenance instructions can undergo different types of processing, de-  
31 pending on the given type of reference data object to be updated and the current phase of the settlement  
32 day. For example, T2S can process and complete immediately a reference data update of a party address

submitted during a night-time settlement sequence, because this update cannot have an impact on the ongoing settlement process. Contrariwise, T2S can start processing but cannot complete immediately a reference data update aimed at blocking a T2S dedicated cash account and attempted during a night-time settlement sequence, as this would imply an impact on the ongoing settlement process. In both cases, the Status Management process provides the relevant T2S Actor with all the status updates conveyed via specific Status Advice Messages throughout the lifecycle of the given reference data object.

The following sections provide:

- | The generic principles for the communication of statuses and reason codes to T2S Actors;
- | The list of statuses featuring each instruction type as well as the possible values for each of these statuses
- | An overview of the reason codes management;

However, reason codes are not exhaustively detailed below but are provided in section T2S proprietary codes.

For a detailed description of the possible status values and status transitions related to reference data updates, please refer to section [Reference data status management](#) [▶ 756].

### **1.6.4.1.3 Status management process**

#### Communication of Statuses and Reason Codes to T2S Actors

T2S informs the T2S Actor through the sending of status advice messages if:

- | There is change in a status value of an instruction in T2S;
- | There is no change in a status value of an instruction in T2S but there is a change in the reason code or in the business rule associated to the status value <sup>388</sup>.

Every time a status update occurs and its value is changed, the Status Management process informs the T2S Actors of the status change through the sending of Status Advice messages <sup>389</sup> (according to their message subscription configuration). Additionally, T2S can inform through a single Status Advice message about multiple status values depending on the lifecycle of the instruction. (e.g. at the acceptance of the instruction, the "accepted" status will be reported together with any other relevant status applicable to the instruction at the moment of its creation in T2S as for instance "matched" or "Party Hold").

If the instruction is matched, T2S also informs the counterpart of the instruction on the status updates with the exception of the status changes related to any of the Hold statuses (which are communicated to the counterpart on the Intended Settlement Day).

The updated statuses can be classified into two different types, common to all type of instructions:

---

<sup>388</sup> Whenever the ISO Code to be reported is a PRCY, if there is no change in the reason code but there is a change in the business rule (compared with the previous communication sent to the relevant T2S Actor), T2S won't send the corresponding Status Advice (i.e. if the previous reason code reported to the user was a PRCY, T2S won't send the Status Advice no matter if the business rule applicable is the same or not).

<sup>389</sup> The only exception is the communication of the Match Status "Matched" for Cancellation Instructions, where T2S only informs on the execution of both matched Cancellation Instructions and on the Cancellation of the referenced Settlement Instructions but not on the update of the Match status of the Cancellation Instruction.

1 | "Intermediate Status". There is a change occurred in any of the statuses of the instruction, but it does  
2 | not imply the end of the processing of the instruction in T2S (e.g. Match Status "Matched"). Further sta-  
3 | tus updates are to be communicated to the T2S Actor until an "end status" is sent.

4 | "End status". This is the last status of an instruction (i.e. the status that an instruction has when pro-  
5 | cessing for that instruction ends). If the status of an instruction is not of an "end status" type, then the  
6 | instruction is still under process in T2S. At a point in time, any instruction in T2S reaches a "end status",  
7 | as any instruction is settled, executed, cancelled or denied in the end.

8 | During the whole day the communication to the T2S Actors is sent in real time, if the T2S Actor has not opt-  
9 | ed for the optional file bundling. In case the T2S Actors are using the optional file bundling T2S sends all  
10 | messages bundled into files considering the elapse time or maximum number of messages. There are two  
11 | exceptions during the business day: the maintenance window and the period close to the DVP cut off. Dur-  
12 | ing this time the optional file bundling is deactivated and messages are sent in real time. During the Night-  
13 | time period, T2S only sends settlement related messages (e.g. settlement confirmations and settlement  
14 | failure notifications) bundled into one or more files depending on the size (maximum volume of 32 MB). At  
15 | the end of every Night-time sequence, T2S sends the latest valid statuses values together with the associat-  
16 | ed reason codes to the T2S Actors. T2S sends messages to T2S Actors in a consistent order.

17 | T2S Actors can query, at any point in time, the status values and reason codes of their instructions.

18 | The potential T2S Actors that may receive the messages from T2S are known as Interested Parties. All the  
19 | possible Interested Parties of messages sent by T2S may choose those messages they want to receive by  
20 | configuring the Message Subscription service according to their preferences (see section [Message subscrip-](#)  
21 | [tion](#) [▶ 203]).

## 22 | *Statuses and status values in T2S*

23 | As previously mentioned, the statuses of an instruction depend on the considered instruction type. The fol-  
24 | lowing paragraphs provide the list of statuses of Settlement Instructions, Settlement Restrictions and  
25 | Maintenance Instructions. The possible values of each of these statuses are depicted in the diagrams below.  
26 | For each of the three instruction types, a status transition diagram is provided to illustrate the corresponding  
27 | status updates T2S communicates to the T2S Actors.

## 28 | *Settlement Instruction statuses and statuses values*

29 | According to the multiple-status principle adopted for instructions' statuses, Settlement Instructions are fea-  
30 | tured by the following statuses:

31 | | Settlement Status;

32 | | Match Status;

33 | | Cancellation Status;

34 | | CSD Hold Status;

35 | | Party Hold Status;

36 | | CSD Validation Hold Status;

37 | | CoSD Hold Status.

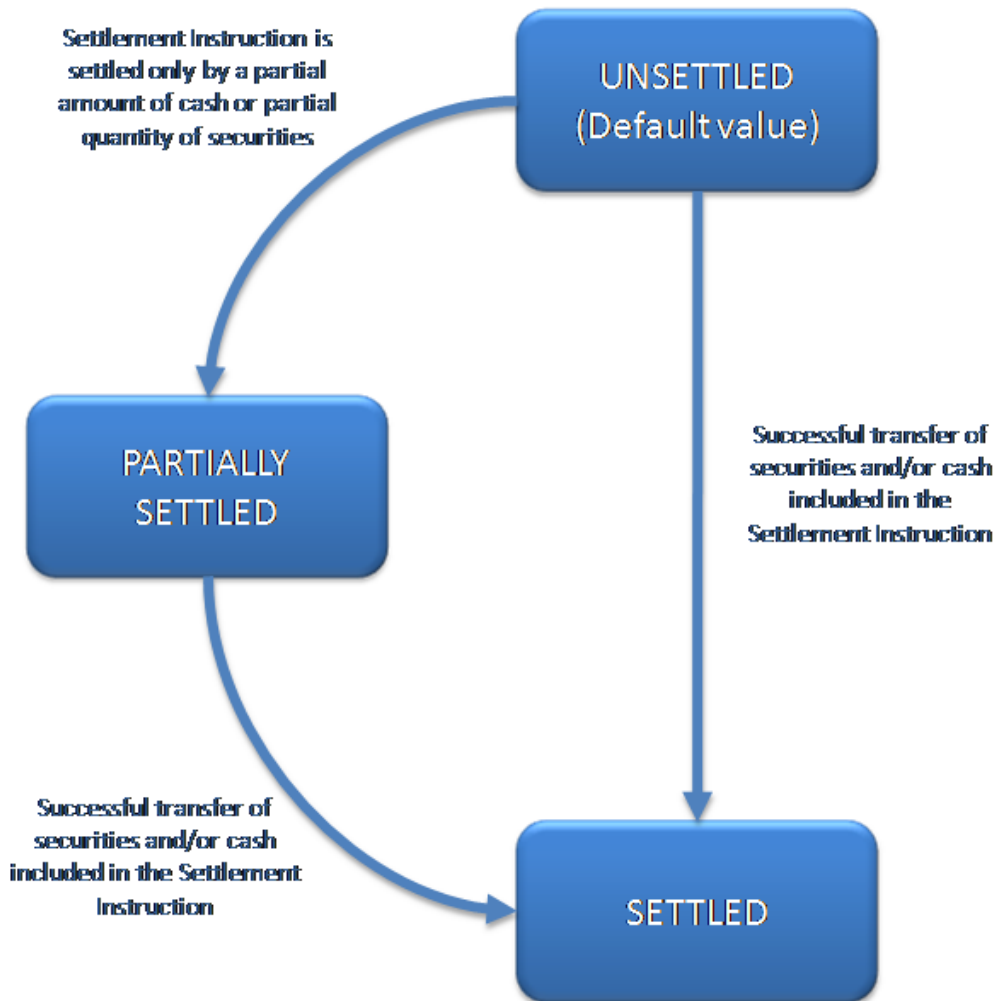

1 The possible values of each of these statuses are depicted in the status diagrams and tables below. The  
 2 Settlement Instruction status transition diagram complements these individual status diagrams with an over-  
 3 view of the possible status updates that can be communicated to T2S Actors for a Settlement Instruction.

4 Settlement Status

5 Indicates the Settlement Status of the Settlement Instruction. Each status value reflects in which step of the  
 6 settlement process a Settlement Instruction can be.

7 **DIAGRAM 167 - SETTLEMENT INSTRUCTION – SETTLEMENT STATUS DIAGRAM**

8

1  
2

**TABLE 178 - SETTLEMENT INSTRUCTION – SETTLEMENT STATUS VALUES DEFINITIONS**

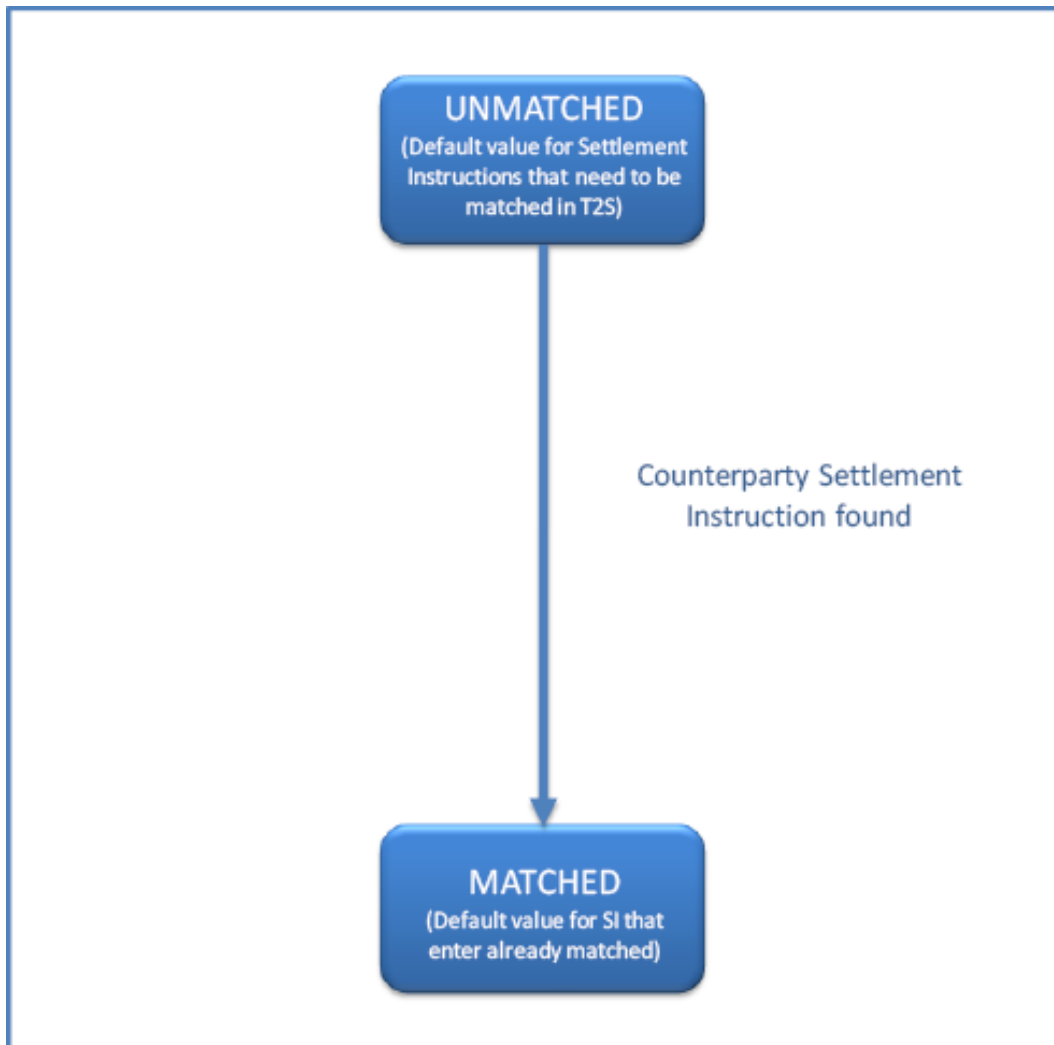

STATUS VALUES	DEFINITION
Unsettled	Default value. The Settlement Instruction is not settled.
Partially Settled	T2S settled a partial quantity of securities and/or amount of cash. T2S continues to attempt settlement of the Settlement Instruction until it fulfils full quantity and/or amount.
Settled	T2S transferred the full quantity of securities and/or amount of cash. T2S performs no further processing on the Settlement Instruction.

3 Match Status

4 Indicates the Match Status of the Settlement Instruction. There are only two possible Match Status values  
5 that indicate whether a Settlement Instruction is matched in T2S or not.

6

**DIAGRAM 168 - SETTLEMENT INSTRUCTION – MATCH STATUS DIAGRAM**

7

1  
2

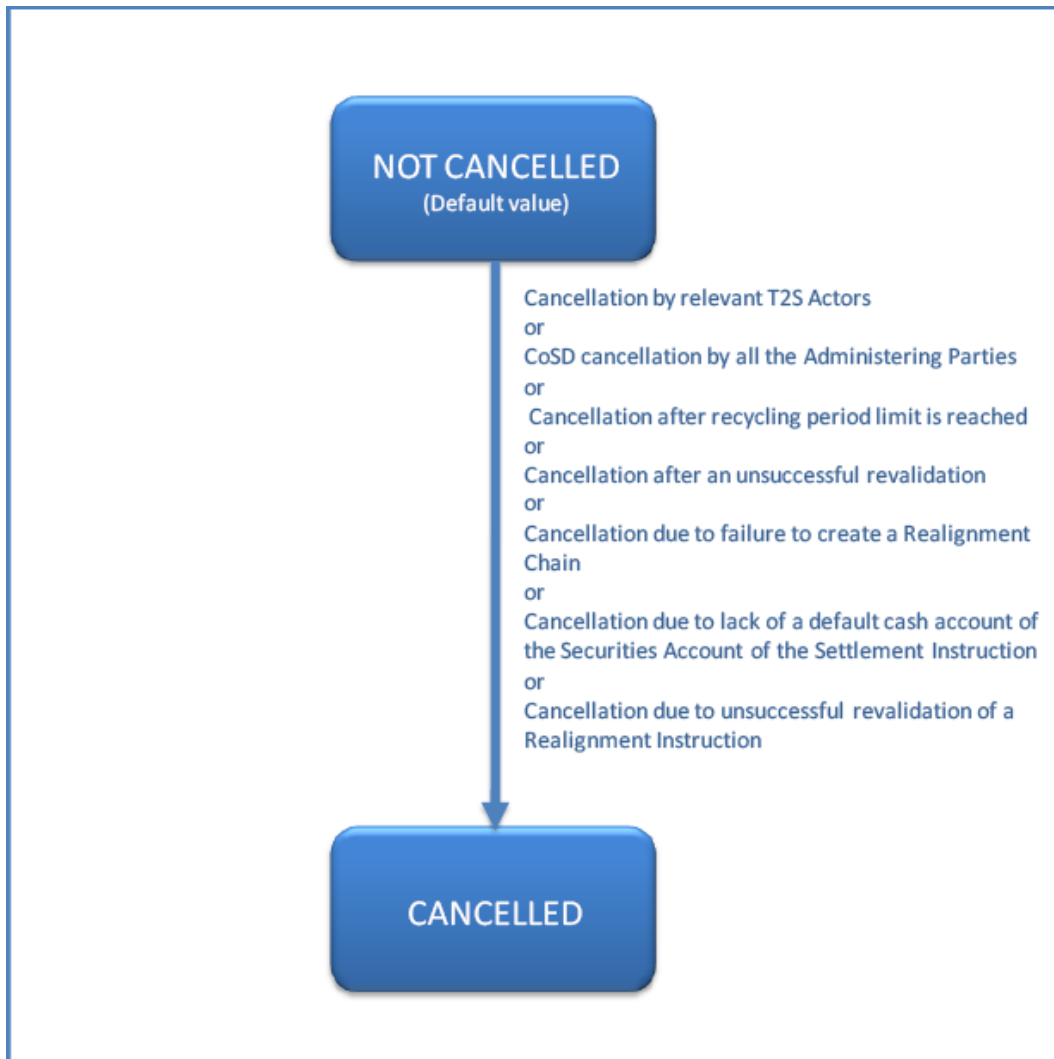

**TABLE 179 - SETTLEMENT INSTRUCTION – MATCH STATUS VALUES DEFINITIONS**

STATUS VALUES	DEFINITION
Unmatched	Default value when T2S receives a Settlement Instruction that needs to be matched. The Settlement Instruction has no corresponding counterpart instruction identified in T2S.
Matched	Default value when a Settlement Instruction enters T2S as already matched. The Settlement Instruction has a corresponding counterpart instruction identified in T2S.

3 Cancellation Status

4 Indicates the Cancellation Status of the Settlement Instruction. In case the Settlement Instruction is cancelled, it cannot be further processed for settlement in T2S.  
5

6 **DIAGRAM 169 - SETTLEMENT INSTRUCTION – CANCELLATION STATUS DIAGRAM**

7

1  
2

**TABLE 180 - SETTLEMENT INSTRUCTION – CANCELLATION STATUS VALUES DEFINITIONS**

STATUS VALUES	DEFINITION
Not Cancelled	Default value. Settlement Instruction is available for further processing.
Cancelled	Settlement Instruction is cancelled and cannot be further processed. The Settlement Instruction was cancelled upon request from the relevant T2S Actors, or The CoSD Settlement Instruction was cancelled upon request by all the involved Administering Parties, or The Settlement Instruction was cancelled due to an excess of the recycling period, or The Settlement Instruction was cancelled after an unsuccessful revalidation, or Cancellation due to failure to create a Realignment Chain, or Cancellation due to lack of a default cash account of the Securities Account of the Settlement Instruction, or Cancellation due to unsuccessful revalidation of a Realignment Instruction.

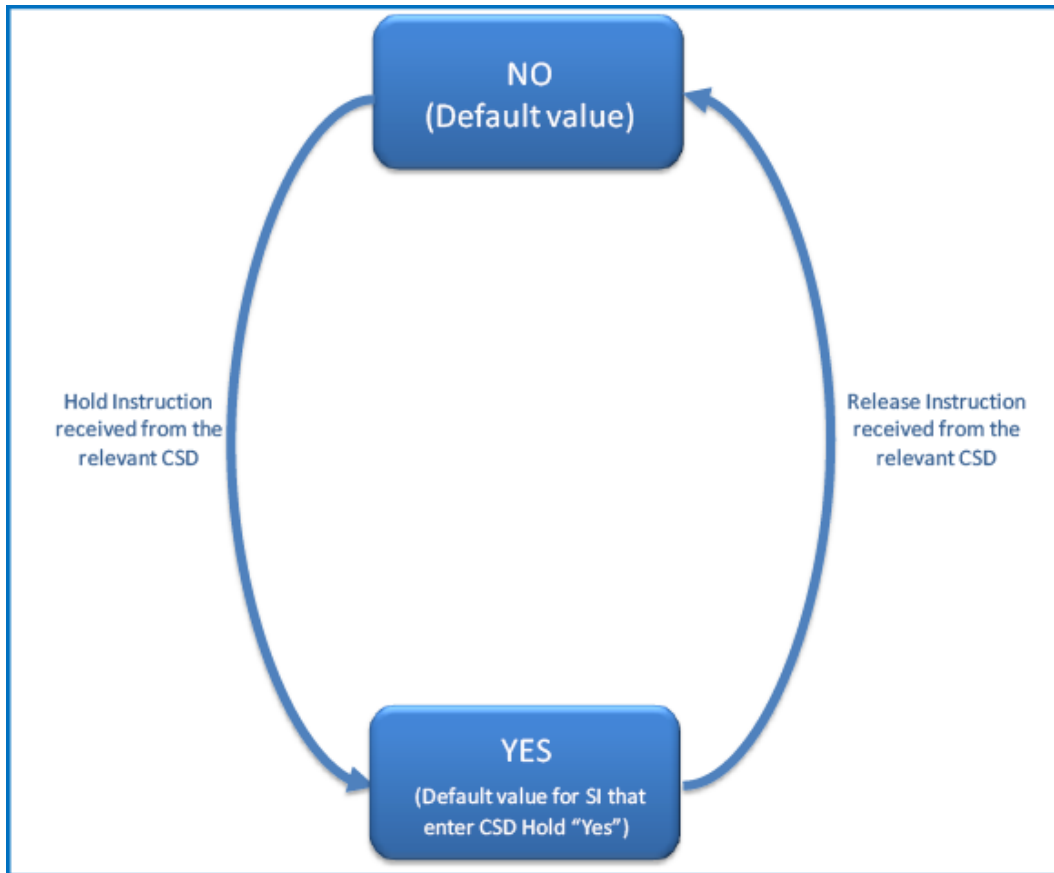

3 CSD Hold Status

4 Indicates if the Settlement Instruction is set On Hold or Released by the corresponding CSD. Settlement

5 Instructions with the CSD Hold Status "Yes" are not submitted for settlement.

1

**DIAGRAM 170 - SETTLEMENT INSTRUCTION – CSD HOLD STATUS DIAGRAM**

2

3

4

**TABLE 181 - SETTLEMENT INSTRUCTION – CSD STATUS VALUES DEFINITIONS**

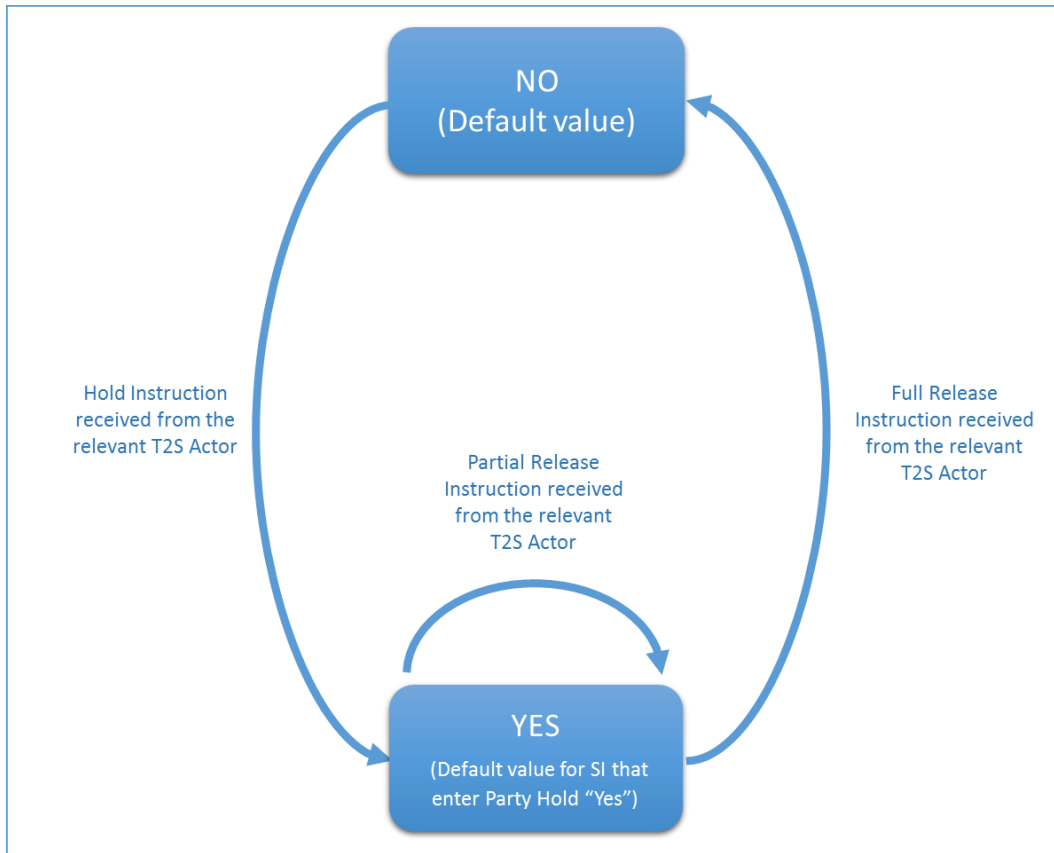

STATUS VALUES	DEFINITION
No	Default value. The relevant CSD has not instructed the Settlement Instruction On CSD Hold. The value is also set when a Settlement Instruction, which had been previously set On CSD Hold by the relevant CSD, is released by this CSD.
Yes	Default value when the relevant CSD has instructed the Settlement Instruction On CSD Hold. When a CSD Hold request, originated from the relevant CSD, on the Settlement Instruction is executed.

5 Party Hold Status

6 Indicates if the Settlement Instruction is set On Hold or Released by the corresponding T2S Actor. Settle-  
 7 ment Instructions with the Party Hold Status "Yes" are not submitted for settlement with the exception of  
 8 those Settlement Instructions Partially Released which are submitted for partial settlement.

1

**DIAGRAM 171 - SETTLEMENT INSTRUCTION – PARTY HOLD STATUS DIAGRAM**

2

3

4

**TABLE 182 - SETTLEMENT INSTRUCTION – PARTY HOLD STATUS VALUES DEFINITIONS**

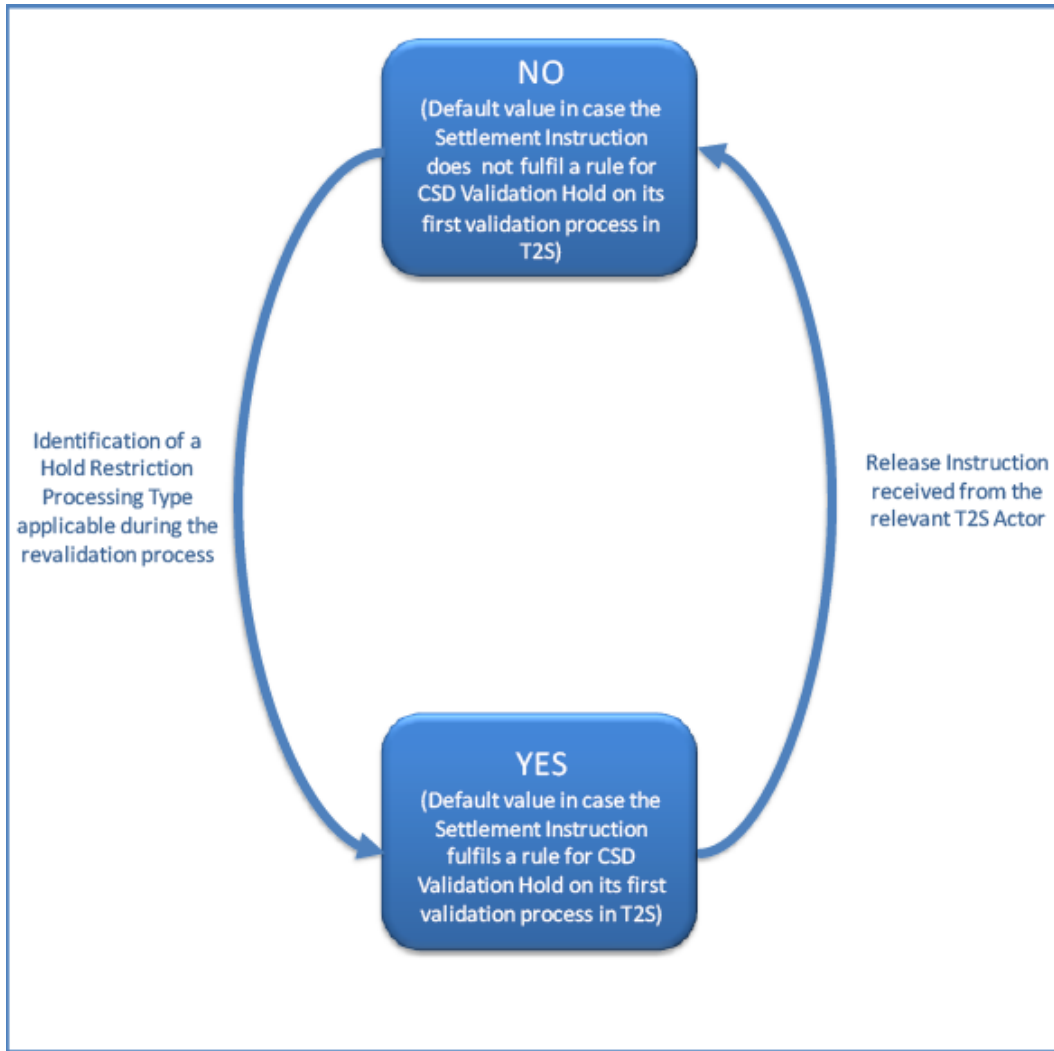

STATUS VALUES	DEFINITION
No	Default value. The relevant T2S Actor has not instructed the Settlement Instruction On Party Hold. The relevant T2S Actor releases the corresponding Settlement Instruction which was previously On Party Hold.
Yes	Default value when the relevant T2S Actor has instructed the Settlement Instruction On Party Hold. When a Party Hold request on the Settlement Instruction, originated by the relevant T2S Actor, is executed. The relevant T2S Actor instructs the Settlement Instruction without specifying the Party Hold Indicator and the "hold Release default" value of the Securities Account included in the Instruction is set to "Yes". When a Party Release request to partially release the Settlement Instruction, originated by the relevant T2S Actor, is executed.

5

CSD Validation Hold Status

1 Indicates if the Settlement Instruction fulfills predefined conditions set by a CSD and if the relevant CSD has  
 2 released it. Settlement Instructions with the CSD Validation Hold Status "Yes" are not submitted for settle-  
 3 ment.

4 **DIAGRAM 172 - SETTLEMENT INSTRUCTION – CSD VALIDATION HOLD STATUS DIAGRAM**

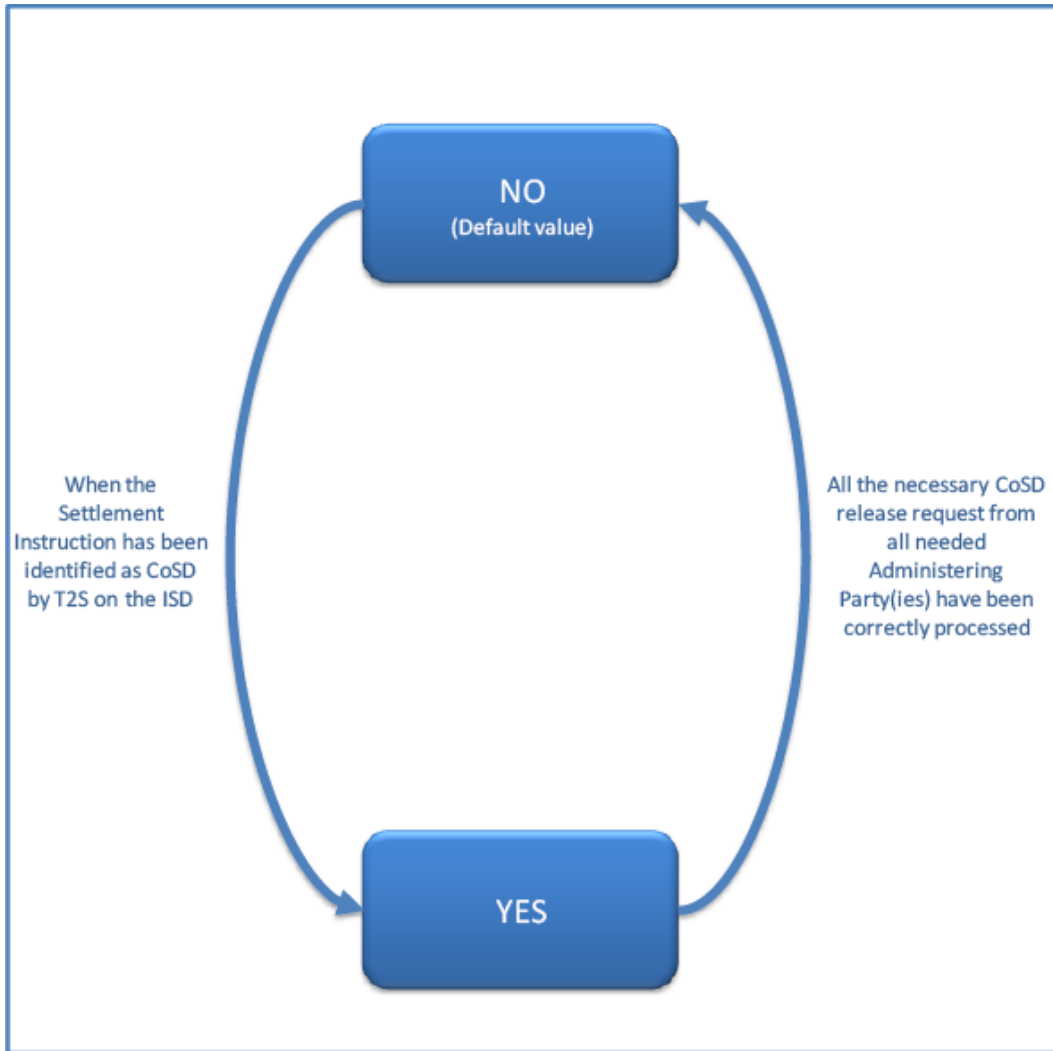

5  
 6 **TABLE 183 - SETTLEMENT INSTRUCTION – CSD VALIDATION HOLD STATUS VALUES DEFINITIONS**

STATUS VALUES	DEFINITION
No	Default value in case there is no Restriction Processing Type "CSD Validation Hold" applicable for the Settlement Instruction during its validation.  The relevant CSD has released the Settlement Instruction, which had been previously on CSD Validation Hold.
Yes	Default value in case there is a Restriction Processing Type "CSD Validation Hold" applicable for the Settlement Instruction during its validation.

8 CoSD Hold Status

1 Indicates if the Settlement Instruction has been identified as a CoSD instruction by T2S and if it has been  
 2 released by all the Administering Parties involved or the relevant CSD. Settlement Instructions with the CoSD  
 3 Hold Status "Yes" are not submitted for settlement.

4 **DIAGRAM 173 - SETTLEMENT INSTRUCTION – CoSD HOLD STATUS DIAGRAM**

5  
 6 **TABLE 184 - SETTLEMENT INSTRUCTION – CoSD HOLD STATUS VALUES DEFINITION**  
 7

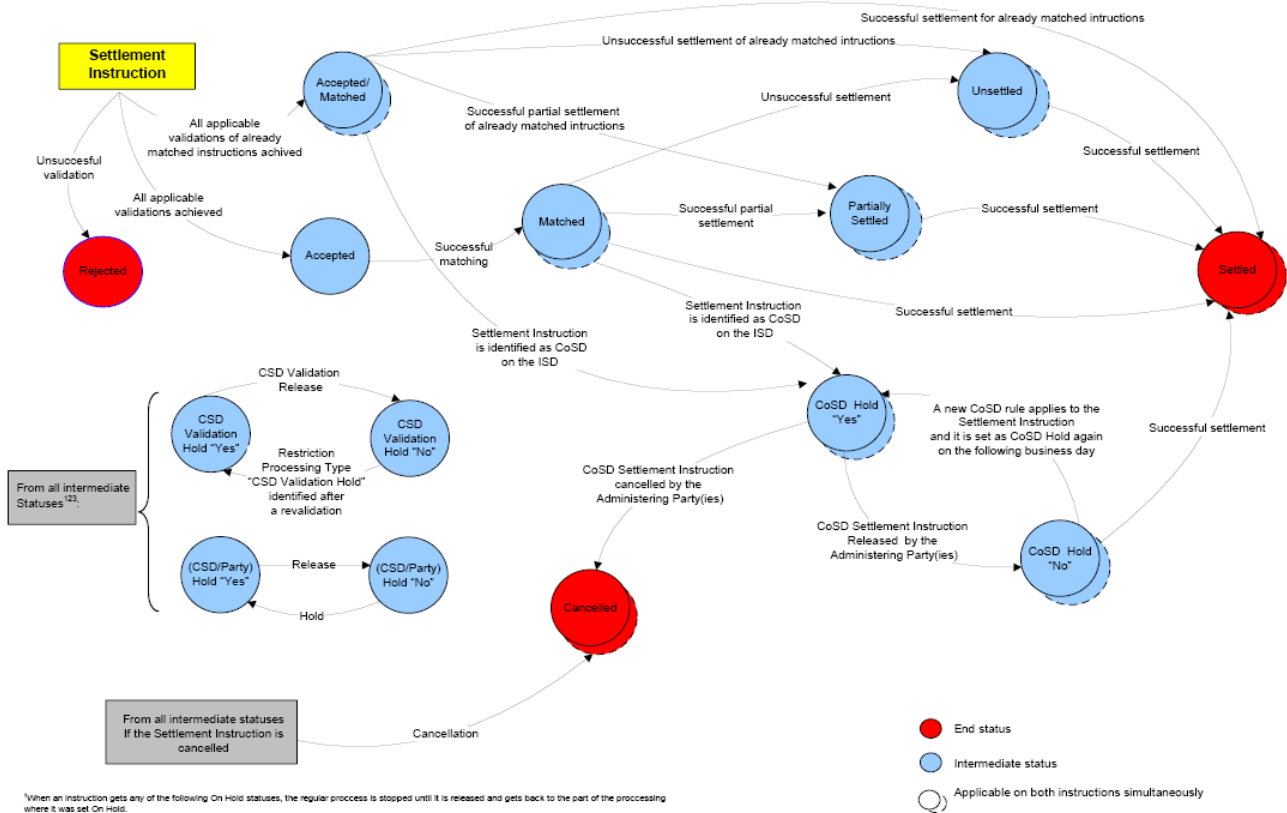

STATUS	DEFINITION
No	Default value. Settlement Instruction has not been identified as a CoSD instruction by T2S on the ISD.  T2S sets the value to "No" when the CoSD Hold has been released by all the Administering Parties involved.
Yes	Settlement Instruction has been identified as a CoSD instruction by T2S on the ISD and the CoSD Hold has taken place successfully,  It remains unchanged while there is no release from all the Administering Parties involved.

8 Settlement Instructions status transitions

1 The diagram and explanatory text below illustrates and describe the possible status transitions that can be  
 2 reported to T2S Actors for a Settlement Instruction.  
 3 T2S Actors are informed of these status changes through the corresponding Status Advice messages. The  
 4 description of these Status Advice messages is reflected in the dialogue included in section Send Settlement  
 5 Instruction and the content of the messages in SecuritiesSettlementTransactionStatusAdvice and Securities-  
 6 SettlementTransactionConfirmation.

7 **DIAGRAM 174 - SETTLEMENT INSTRUCTIONS STATUS TRANSITION DIAGRAM**

8  
 9 When a Settlement Instruction submitted by a T2S Actor is successfully validated, T2S informs the T2S Actor  
 10 that the instruction is accepted. If the validation is not successful, T2S informs on the rejection of the Set-  
 11 tlement Instruction. Instructions could be subject to additional validation rules set by the CSDs that may lead  
 12 to set them on hold or to reject them.

13 Once a Settlement Instruction is accepted, if it is matched in T2S, gets the Match status value set to  
 14 "Matched".

15 Depending on the result of the settlement process, the Settlement status of the instruction is set to "Partially  
 16 settled" or "Settled". Otherwise, if settlement is unsuccessful, the Settlement Instruction keeps its Settle-  
 17 ment Status value set to "Unsettled".

18 A Settlement Instruction can be set on hold and be released in T2S under the following conditions:

- 19 I Can be set on hold during its lifecycle in T2S by the T2S Party (Party Hold Status value is set to "Yes") or  
 20 by a CSD (Party Hold Status value is set to "Yes" or CSD Hold value is set to "Yes"), and be released by

1 the T2S Party for a "Party Hold" and by the CSD for a "CSD Hold" or "Party Hold", as described in section  
2 [Hold and Release](#) [▶ 364].

3 | Can be set on hold automatically at its validation (CSD Validation Hold Status value is set to "Yes") and  
4 only be released by the CSD that defined the applicable rule, as described in section [Business Validation](#)  
5 [▶ 301].

6 | Can be set on CoSD Hold automatically on its Intended Settlement Date (CoSD Hold Status value is set  
7 to "Yes") and be released by all the Administering Parties involved or by the relevant CSD, as described  
8 in section [Conditional Settlement](#) [▶ 510].

9 T2S Actors can cancel their Settlement Instructions under specific conditions. If the cancellation is success-  
10 fully executed, then the Settlement Instruction's Cancellation Status is set to "Cancelled". Settlement In-  
11 structions can also be cancelled automatically by the system as described in section [Instruction Cancellation](#)  
12 [▶ 360]. In the case of an Administering Party cancelling a Settlement Instruction identified as a CoSD, its  
13 Cancellation status is set to "Cancelled" once all the needed CoSD Cancellation Instructions from all Adminis-  
14 tering Parties involved and the Counterparty's Cancellation Instruction have been received and successfully  
15 processed.

#### 16 *Settlement Restriction status and statuses values*

17 Settlement Restrictions are featured by the following statuses: Settlement Status and Cancellation Status.  
18 The possible values of each of these statuses are depicted in the status diagrams and tables below. The  
19 Settlement Restriction status transition diagram complements these individual status diagrams with an over-  
20 view of the possible status updates that can be communicated to T2S Actors for a Settlement Restriction.

#### 21 Settlement Status

22 Indicates the Settlement Status of a Settlement Restriction. Each status value reflects in which step of the  
23 settlement process a Settlement Restriction can be.

1

**DIAGRAM 175 - SETTLEMENT RESTRICTION – SETTLEMENT STATUS DIAGRAM**

2

3

4

**TABLE 185 - SETTLEMENT RESTRICTION – SETTLEMENT STATUS VALUES DEFINITIONS**

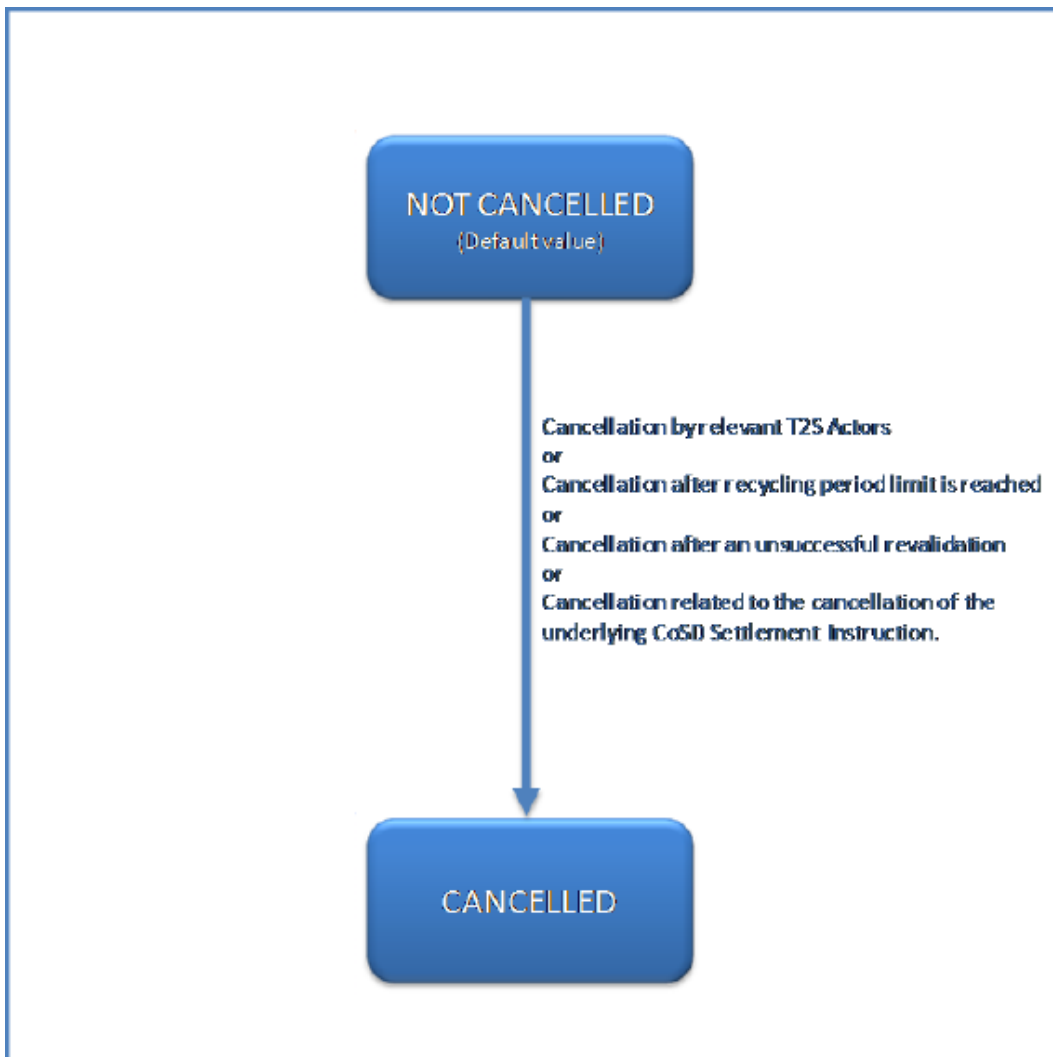

STATUS VALUES	DEFINITION
Unsettled	Default value. Blocking/reservation/earmarking of securities and/or blocking/reservation of cash included in the Settlement Restriction has not yet taken place.
Partially Settled	Reservation of securities and/or reservation of cash included in the Settlement Restriction has partially taken place. Additional settlement attempts occur to fulfil the original quantity and amount of the Reservation.
Settled	Earmarking of securities included in the Settlement Restriction has taken place (partially or fully). No additional settlement attempts occur even if the Settlement Restriction has not been fully settled. or

STATUS VALUES	DEFINITION
	Reservation/Blocking of securities and/or cash included in the Settlement Restriction has been fully settled. The Settlement Restriction has been successfully settled and does not require further processing.

1 Cancellation Status

2 Indicates the Cancellation Status of the Settlement Restriction. If the Settlement Restriction is cancelled, it  
 3 cannot be further processed in T2S.

4 **DIAGRAM 176 - SETTLEMENT RESTRICTION – CANCELLATION STATUS DIAGRAM**

5

1  
2

**TABLE 186 - SETTLEMENT RESTRICTION – CANCELLATION STATUS VALUES DEFINITIONS**

STATUS VALUES	DEFINITION
Not Cancelled	Default value. Settlement Restriction is available for further processing.
Cancelled	Settlement Restriction is cancelled and cannot be further processed. The Settlement Restriction was cancelled upon request from the relevant T2S Actor prior to its settlement, or The Settlement Restriction was cancelled after the recycling period limit is reached, or Settlement Restriction was cancelled after an unsuccessful revalidation, or Cancellation related to the cancellation of the underlying CoSD Settlement Instruction.

3 Settlement Restriction status transitions

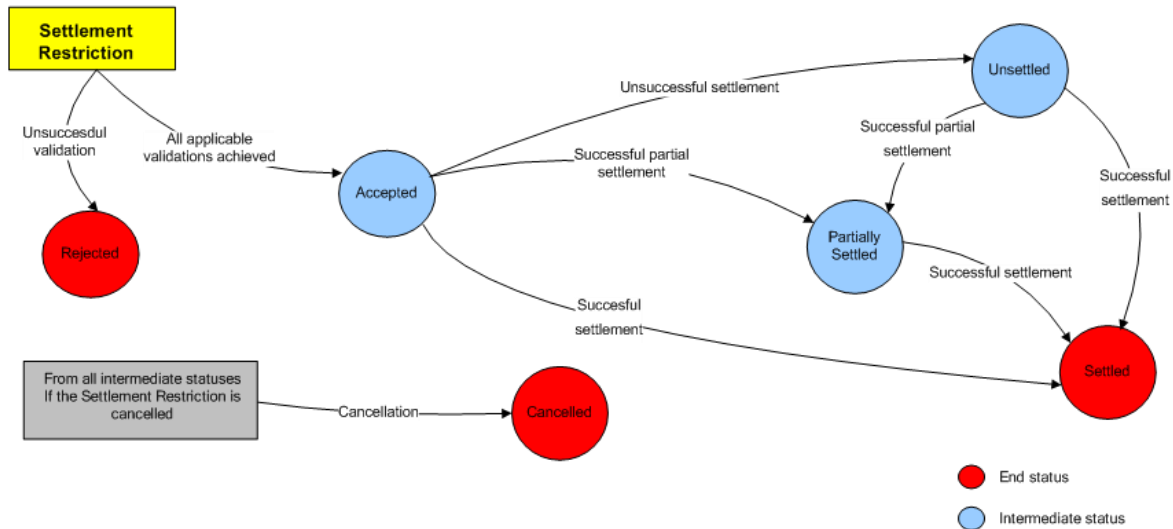

4 The diagram and explanatory text below illustrates and describe the possible status transitions that can be  
 5 reported to T2S Actors for a Settlement Restriction.

6 T2S Actors are informed of these status changes through the corresponding Status Advice messages. The  
 7 description of these Status Advice messages is reflected in the dialogue included in section Send Settlement  
 8 Restriction on Securities Position, section Send Settlement Restriction on Cash Balance and the content of  
 9 the following messages in Chapter 3:

- 10 | IntraPositionMovementStatusAdvice;
- 11 | IntraBalanceMovementStatusAdvice;
- 12 | IntraPositionMovementConfirmation;
- 13 | IntraBalanceMovementConfirmation.

1

**DIAGRAM 177 - SETTLEMENT RESTRICTIONS STATUS TRANSITION DIAGRAM**

2

3 When a Settlement Restriction is successfully validated, T2S informs the T2S Actor that it is accepted. If the  
 4 validation is not successful, T2S informs on the rejection of the Settlement Restriction. Restrictions could be  
 5 subject to additional validation rules set by the CSDs that may lead to their rejection. Depending on the re-  
 6 sult of the settlement process and the restriction processing type, the Settlement status of the restriction is  
 7 set to "Partially settled" (only for Reservations) or "Settled". Otherwise, if settlement is unsuccessful, the  
 8 Settlement Restriction keeps its Settlement Status value set to "Unsettled".

9 T2S Actors can cancel their Settlement Restrictions. When the cancellation is executed, the Settlement Re-  
 10 striction gets the Cancellation Status "Cancelled". Settlement Restrictions can also be cancelled automatically  
 11 by the system (See section [Instruction Cancellation](#) [▶ 360]).

12 Pending and Failing Instructions

13 Settlement Instructions and Settlement Restrictions can be classified as "Pending" or as "Failing" instructions  
 14 depending on whether their settlement is still possible in T2S on their Intended Settlement Date or not:

- 15 | Pending Instructions: Settlement Restrictions, unmatched and matched Settlement Instructions for which  
 16 settlement is still possible on their Intended Settlement Date.
- 17 | Failing Instructions: Settlement Restrictions, unmatched and matched Settlement Instructions for which  
 18 T2S has identified that they cannot settle on their Intended Settlement Date.

19 This classification is linked to the T2S settlement status, but it does not represent a T2S status as such (i.e.  
 20 the "Failing" and "Pending" are ISO statuses for the reporting in relevant messages but both relate to the  
 21 Settlement Status in T2S). Therefore, this information will be a complement to the Settlement status values  
 22 "Unsettled" and "Partially settled".

23 As described below, instructions can change from "Pending" to "Failing", as well as be created directly as  
 24 "Failing" at its acceptance. However, it is important to note that once T2S identifies a Settlement Instruction  
 25 or a Settlement Restriction as "Failing", the instruction will no longer be classified as "Pending" again.

26 Once an instruction is identified as "Failing", all the status advices of the instruction will no longer report  
 27 "Pending" but "Failing".

- 1 T2S identifies as "Failing" a Settlement Instruction or Settlement Restriction, which is already in the system,  
2 in the following scenarios:
- 3 | In processing of each cut-off, for Settlement Restrictions or Matched Settlement Instructions applicable  
4 to such cut-off:  
5 All Settlement Restrictions or Matched Settlement Instructions, which are eligible to the cut-off and  
6 therefore have had at least one settlement attempt, having an Intended Settlement Date equal to the  
7 current business day remain unsettled after the completion of the cut-off, will be identified as "Failing".
  - 8 | After the completion of the processing of the last cut-off (FOP cut-off), for all Unmatched Settlement In-  
9 structions:  
10 Upon completion of the FOP cut-off, all unmatched settlement instructions having Intended Settlement  
11 Date equal to the current business day will be identified as "Failing".
  - 12 | After unsuccessful eligibility check of a Settlement Instruction or Settlement Restriction because its appli-  
13 cable cut-off has been reached.  
14 Any matched settlement instruction and settlement restriction that, having an Intended Settlement Date  
15 equal to the current business day, fails its eligibility check because its applicable cut-off has been  
16 reached, will be identified as "Failing".
- 17 Additionally, T2S identifies as "Failing" any new incoming Settlement Instruction or Settlement Restriction,  
18 directly upon their successful validation, in the following scenarios:
- 19 | During the whole Settlement Day except for the End of day phase <sup>390</sup>: T2S will identify as "Failing" all  
20 incoming Settlement Instructions and Settlement Restrictions having their Intended Settlement Date be-  
21 fore the Current Business Day.
  - 22 | During the End of Day phase <sup>391</sup>: T2S will identify as "Failing" all incoming Settlement Instructions and  
23 Settlement Restrictions having their Intended Settlement Date before or equal to the Current Business  
24 Day.
- 25 Once a Settlement Instruction has been identified as "Failing" upon completion of its cut-off, the Penalty  
26 Mechanism Module will retrieve the Settlement Instruction status and reasons causing the settlement failure  
27 in order to identify if the instruction is eligible for a Penalty.
- 28 The following high level diagram summarises how T2S identifies Settlement Instructions or Settlement Re-  
29 strictions as "Failing":

---

390 Excluding also the Maintenance Window when the business validation service is not available.

391 After the completion of the processing of the last cut-off of the Real Time closure period.

1

**DIAGRAM 178 - IDENTIFICATION OF SETTLEMENT INSTRUCTIONS AND RESTRICTIONS AS FAILING**

2

3 In case an existing instruction (Settlement Instruction or Settlement Restriction already in the system) is  
 4 identified as "Failing", either in the processing the relevant cut-off, or upon completion of the processing of  
 5 the last cut-off for unmatched Settlement Instructions, T2S does not send a status advice to the T2S Actor  
 6 to inform about this update (unless this status advice is also informing about the end of a partial release  
 7 process, in which case it is sent by T2S). Additionally, upon the identification of an instruction as "Failing"  
 8 T2S performs a Settlement Eligibility Check triggering the relevant status advice messages if applicable (i.e.  
 9 change from the last business rule or reason code communicated).

10 In case an existing instruction is identified as "Failing" through an unsuccessful eligibility check because its  
 11 applicable cut-off has been reached, the T2S Actor is informed through a message communicating the "Fail-  
 12 ing" ISO settlement status together with the relevant reason code.

13 In case an incoming instruction is identified as directly "Failing" in its validation, T2S informs the T2S Actor  
 14 that the instruction is accepted and "Failing" through a message communicating the "Failing" ISO settlement  
 15 status together with the relevant T2S status and/or reason codes as described in sections Send Settlement  
 16 Instruction, Send Settlement Restriction on Securities Position and Send Settlement Restriction on Cash Bal-  
 17 ance.

18 Interested parties can also be informed depending on their message subscription preferences (see Section  
 19 [Status Management](#) [▶ 758] and Section [Message subscription](#) [▶ 203]).

20 Penalty statuses and statuses values

21 Penalties are featured with a single status. The possible values for the status are depicted in the Penalties  
 22 status transition diagram below.

1 **DIAGRAM 179 - PENALTIES STATUS TRANSITION**

- 2
- 3 The Penalty Eligibility process creates a Penalty with an intermediate status until is processed in Calculation.
- 4 The Calculation process checks whether the Security of the Underlying Settlement Instruction is subject to
- 5 penalties or not on each of the applicable business days of the Penalty:
- 6 | If the Security is subject to penalties at least in one of the applicable business days, the Penalty Status is
- 7 updated to Active ("ACTV") and without any Reason;

- 1 | If the Security is not subject to penalties in any of the applicable business days, the Penalty Status is  
2 | updated to Not Computed ("NCOM") and without any Reason.
- 3 | During the Appeal Period of the Penalty, it can be subject to modifications and recalculations.
- 4 | The Penalty Modification process can update the Status of the Penalty depending on the type of the Penalty  
5 | Modification executed:
- 6 | In case of a removal, the Penalty Status is updated to Removed ("REMO") with the corresponding Rea-  
7 | son ("INSO", "SEMP", "SESU", "SUSP", "TECH" or "OTHR") indicated in the Penalty Modification;
- 8 | In case of a re-inclusion (which can only be performed on Penalties with Status "REMO" and a Reason  
9 | different from Re-allocated "RALO"), the Penalty Status is updated to Active ("ACTV") with Reason Up-  
10 | dated ("UPDT");
- 11 | In case of a switch, the Penalty Status remains as Active ("ACTV") but the Reason is changed to  
12 | Switched ("SWIC"); and
- 13 | In case of a re-allocation, the Status of the Penalty is updated to Removed ("REMO") with Reason Re-  
14 | allocated ("RALO"), and a new re-allocated Penalty is generated with Status Active ("ACTV") and Reason  
15 | Re-allocated ("RALO").
- 16 | The Recalculation process can update the Status of the Penalty depending on the type of the Reference Data  
17 | update received:
- 18 | In case an insertion of Securities subject to Cash Penalties impacts a Penalty with Status Not Computed  
19 | ("NCOM"), the Penalty Status is updated to Active ("ACTV") with Reason New Penalty ("NEWP"); and
- 20 | In any other case, the Penalty Status remains as Active ("ACTV") but the Reason is changed to Updated  
21 | ("UPDT")<sup>392</sup>.
- 22 | The statuses depicted in red in the above diagram are possible final statuses. They become final upon the  
23 | end of their appeal period, i.e.: when the End of Appeal Period process updates the Penalty Modifiable Flag  
24 | to "False". The Status that the Penalty has at this point in time becomes its final Status.
- 25 | In case an instruction is identified as "Failing", the T2S Actor is informed through a message communicating  
26 | the "Failing" ISO settlement status together with the relevant T2S status and/or reason codes as described  
27 | in sections Send Settlement Instruction, Send Settlement Restriction on Securities Position and Send Settle-  
28 | ment Restriction on Cash Balance. Additionally, upon the identification of an instruction as "Failing" in the  
29 | processing of the relevant cut-off, T2S performs an additional Settlement Eligibility Check triggering the rele-  
30 | vant status advice messages if applicable (i.e. change from the last business rule or reason code communi-  
31 | cated).

---

392 Finally, penalties can have Status Active ("ACTV") and Reason New Penalty ("NEWP") when they are created and calculated in a contingency scenario, i.e. when:

- | The Reason for failing of the Penalty underlying Settlement Instruction was not included in the Failing Reasons Dictionary. Once the Reason for failing is included in the dictionary on a subsequent business day, the corresponding Penalty Eligibility can identify a penalty has to be calculated, and if so, it is calculated by the Recalculation
- | The Calculation function is skipped and run at a later business day. Outstanding penalties are calculated by the Recalculation on the later date

1 Interested parties can also be informed depending on their message subscription preferences (see Section  
2 [Status Management](#) [▶ 758] and Section [Message subscription](#) [▶ 203]).

### 3 Maintenance Instruction statuses and status values

4 Maintenance Instruction is the generic term used for Amendment Instructions, Cancellation Instructions and  
5 Hold/Release Instructions. Maintenance Instructions are featured by the following statuses:

- 6 | Execution Status;
- 7 | Cancellation Status.

8 In addition to these two statuses, Cancellation Instructions are also featured by a Match Status (that does  
9 not apply to Amendment Instruction and Hold/Release Instructions). The possible values of each of these  
10 statuses are depicted in the status diagrams and tables below. Three status transition diagrams complement  
11 these individual status diagrams with an overview of the possible status updates that can be communicated  
12 to T2S Actors for Amendment Instructions, Cancellation Instructions and Hold/Release Instructions.

### 13 Execution Status

14 Indicates whether a Maintenance Instruction has been successfully executed in T2S or not.

15 **DIAGRAM 180 - MAINTENANCE INSTRUCTION – EXECUTION STATUS DIAGRAM**

16

1  
2

**TABLE 187 - SETTLEMENT RESTRICTION – EXECUTION STATUS VALUES DEFINITIONS**

STATUS VALUES	DEFINITION
Not Executed	Default value. Maintenance instruction can be further processed.
Executed	The Maintenance Instruction has been successfully executed.

3 Cancellation Status

4 Indicates the Cancellation Status of the Maintenance Instruction. Depending on the status, the instruction  
5 can be further processed in T2S or not.

6

**DIAGRAM 181 - MAINTENANCE INSTRUCTION – CANCELLATION STATUS DIAGRAM**

7

1  
2

**TABLE 188 - MAINTENANCE INSTRUCTION – CANCELLATION STATUS VALUES DEFINITIONS**

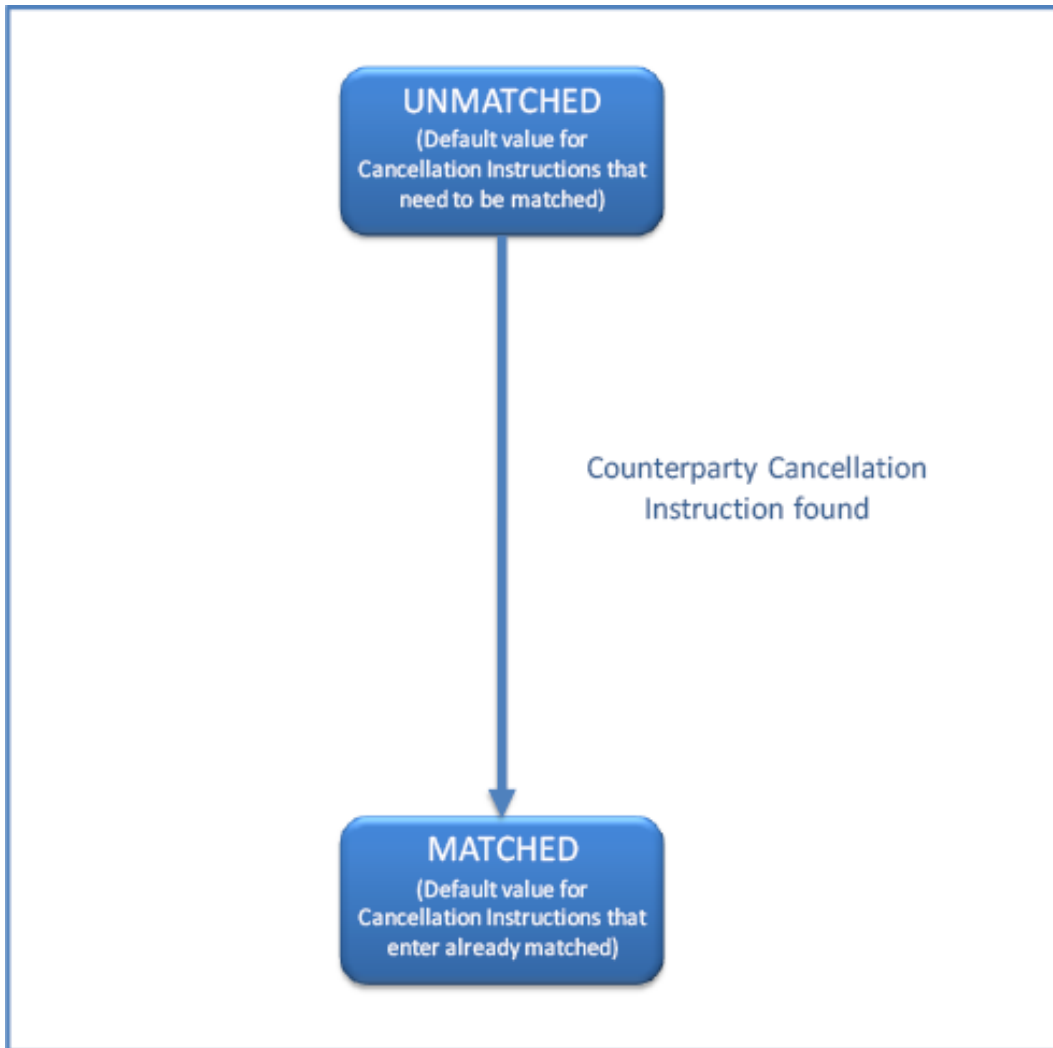

STATUS VALUES	DEFINITION
Not Denied	Default value. Maintenance instruction is available for further processing.
Denied	Maintenance instruction is cancelled and cannot be further processed.  The Cancellation Instruction was denied due to the status of the referenced instruction, Or The Cancellation Instruction was denied after the recycling period limit is reached, Or The Cancellation Instruction was denied after unsuccessful revalidation

3 Match Status (Only for Cancellation Instructions)

4 Indicates the Match Status of the Cancellation Instruction. There are only two possible Match Status values  
 5 that indicate whether a Cancellation Instruction is matched in T2S or not.

1

**DIAGRAM 182 - CANCELLATION INSTRUCTION – MATCH STATUS DIAGRAM**

2

3

4

**TABLE 189 - CANCELLATION INSTRUCTION – MATCH STATUS VALUES DEFINITIONS**

STATUS VALUES	DEFINITION
Unmatched	Default value when T2S receives an unmatched Cancellation Instruction. The Cancellation Instruction has no corresponding counterpart instruction identified in T2S.
Matched	Default value when a Cancellation Instruction enters T2S as already matched. The Cancellation Instruction has a corresponding counterpart instruction identified in T2S.

5 Amendment Instruction status transitions

6 The diagram and explanatory text below illustrates and describe the possible status transitions that can be  
7 reported to T2S Actors for an Amendment Instruction.

8 T2S Actors are informed of these status changes through the corresponding Status Advice messages. The  
9 description of these Status Advice messages is reflected in the dialogue included in section Send Amendment  
10 Instruction of a Settlement Instruction or of a Settlement Restriction on Securities Position, in section Send

1 Amendment Instruction of a Settlement Restriction on Cash Balance and the content of the following mes-  
2 sages in Chapter 3:

- 3 | SecuritiesSettlementConditionModificationStatusAdvice
- 4 | IntraBalanceMovementModificationRequestStatusAdviceV01 (camt.073.001.01)

5 **DIAGRAM 183 - AMENDMENT INSTRUCTIONS STATUS TRANSITION DIAGRAM**

6  
7 A T2S Actor may amend Settlement Instructions or Settlement Restrictions until they are settled or cancelled  
8 (See section [Instruction Amendment](#) [▶ 357]).

9 When an Amendment Instruction is successfully validated, the T2S Actor is informed on its acceptance. If  
10 the validation is not successful, the Amendment Instruction is rejected and the T2S Actor is informed accord-  
11 ingly. If the Amendment Instruction can be processed, the Execution Status of the instruction is set to "Exe-  
12 cuted" and the referenced Settlement Instruction or Settlement Restriction is amended. If the Amendment  
13 Instruction is not valid for its processing due to the status of the Settlement Instruction or Settlement Re-  
14 striction, the Cancellation Status of the Amendment Instruction is set to "Denied".

15 Cancellation Instruction status transitions

16 The diagram and explanatory text below illustrates and describe the possible status transitions that can be  
17 reported to T2S Actors for a Cancellation Instruction.

18 T2S Actors are informed of these status changes through the corresponding Status Advice messages. The  
19 description of these Status Advice messages is reflected in the dialogue included in section Send Cancellation  
20 Instruction of a Settlement Instruction or a Settlement Restriction on Securities Position, in section Send  
21 Cancellation Instruction of a Settlement Restriction on cash balance and the content of the following mes-  
22 sages in:

- 23 | SecuritiesTransactionCancellationRequestStatusAdvice;
- 24 | IntraBalanceMovementCancellationRequestStatusAdvice.

1

**DIAGRAM 184 - CANCELLATION INSTRUCTIONS STATUS TRANSITION DIAGRAM**

2

3 A T2S Actor may send a Cancellation Instruction to cancel a Settlement Instruction or Settlement Restriction  
4 already in T2S until they are settled or cancelled (See section [Instruction Cancellation](#) [▶ 360]).

5 When a Cancellation Instruction is successfully validated, the T2S Actor is informed of its acceptance. If the  
6 validation is not successful, the Cancellation Instruction is rejected and the T2S Actor is informed according-  
7 ly.

8 If the Cancellation Instruction can be processed, the Execution status of the instruction is set to "Executed"  
9 and the referenced Settlement Instruction or Settlement Restriction is cancelled. If the Cancellation Instruc-  
10 tion needs to be matched to cancel both legs of a matched Settlement Instruction (See section [Instruction](#)  
11 [Cancellation](#) [▶ 360]) but its counterparty has not sent its Cancellation request, the T2S Actor is informed  
12 through a "Pending Cancellation" message (see section [Allegement](#) [▶ 351]). When the Cancellation Instruc-  
13 tions get matched their Match status is set to "matched" but it is not communicated to the T2S Actor since it  
14 is executed instantaneously once matched.

15 If the Cancellation Instruction is not valid for its processing, the Cancellation Status of the Cancellation In-  
16 struction is set to "Denied".

17 Hold/Release Instruction status transitions

18 The diagram and explanatory text below illustrates and describe the possible status transitions that can be  
19 reported to T2S Actors for a Hold/Release Instruction.

20 T2S Actors are informed of these status changes through the corresponding Status Advice messages. The  
21 description of these Status Advice messages is reflected in the dialogue included in section Send  
22 Hold/Release Instruction and the content of the message in SecuritiesSettlementConditionModificationSta-  
23 tusAdvice.

1

**DIAGRAM 185 - HOLD/RELEASE INSTRUCTIONS STATUS TRANSITION DIAGRAM**

2

3 T2S Actors may hold and release their Settlement Instructions until they are settled or cancelled (See section  
4 [Hold and Release](#) [▶ 364]).

5 When a Hold/Release Instruction is successfully validated, the T2S Actor is informed on its acceptance. If the  
6 validation is not successful, the Hold/Release Instruction is rejected and the T2S Actor is informed accord-  
7 ingly.

8 If the Hold/Release Instruction can be processed, the Execution Status of the instruction is set to "Executed"  
9 and the referenced Settlement Instruction is set on hold or released, accordingly.

10 If the Hold/Release Instruction is not valid for its processing, the Cancellation Status of the Hold/Release  
11 Instruction is set to "Denied".

12 Reason code(s)

13 The communication of statuses to T2S Actors is complemented by the communication of reason codes in  
14 case an instruction does not successfully pass a given process. The reason codes provide the relevant infor-  
15 mation on the reason why the instruction could not be successfully processed.

16 For instance, the negative status "Rejected" indicates the rejection of an instruction in T2S during the Busi-  
17 ness Validation process and it is communicated to the T2S Actor together with a reason code informing on  
18 the validation error encountered (See section [Business Validation](#) [▶ 301]). Some other negative statuses  
19 such as "Denied" and "Cancelled" are communicated linked to a specific reason code in order to provide  
20 further information about the referenced cause of the status update.

21 In addition, T2S may send Status Advice messages including a specific reason code to the T2S Actors even  
22 when no status update has occurred to inform about an unsuccessful processing of the instruction (e.g. an  
23 unsuccessful settlement attempt in a Settlement Instruction due to lack of securities is communicated to the  
24 T2S Actor through a Settlement Status "Unsettled" Status Advice message with a reason code "Lack of secu-  
25 rities").

26 The exhaustive list of reason codes linked to its corresponding status is detailed in section Index of Status  
27 Values and Codes.

28 Liquidity Transfer statuses and statuses values

29 Liquidity Transfers can have the the following statuses:

1 | Settlement Status

2 | RTGS Status

3 The possible values of each of these statuses are depicted in the status diagrams and tables below. The  
4 Liquidity Transfer status transition diagram complements these individual status diagrams with an overview  
5 of the possible status updates for a Liquidity Transfer.

6 Settlement Status

7 Indicates the Settlement Status of the Liquidity Transfer. Each status value reflects in which step of the set-  
8 tlement process a Liquidity Transfer can be.

9 **DIAGRAM 186 - LIQUIDITY TRANSFER – SETTLEMENT STATUS DIAGRAM**

10

11 **TABLE 190 - LIQUIDITY TRANSFER – SETTLEMENT STATUS VALUES DEFINITIONS**

12

STATUS VALUES	DEFINITION
Not Executed	Liquidity Transfer has been initiated but not yet settled. (initial status)
Unsettled	Liquidity Transfer is not settled, due to unsuccessful booking attempts.
Partially Settled	Liquidity Transfer is only settled for partial amount.
Settled	Liquidity Transfer is successfully settled.

13 RTGS Status

14 Indicates the result of communication (via network and RTGS Answer from the RTGS system) of the Out-  
15 bound Liquidity Transfer to the RTGS system. Each status value reflects in which stage of the processing  
16 with the RTGS systems the Outbound Liquidity Transfer is.

1

**DIAGRAM 187 - RTGS STATUS DIAGRAM**

2

3

4

**TABLE 191 - RTGS STATUS VALUES DEFINITIONS**

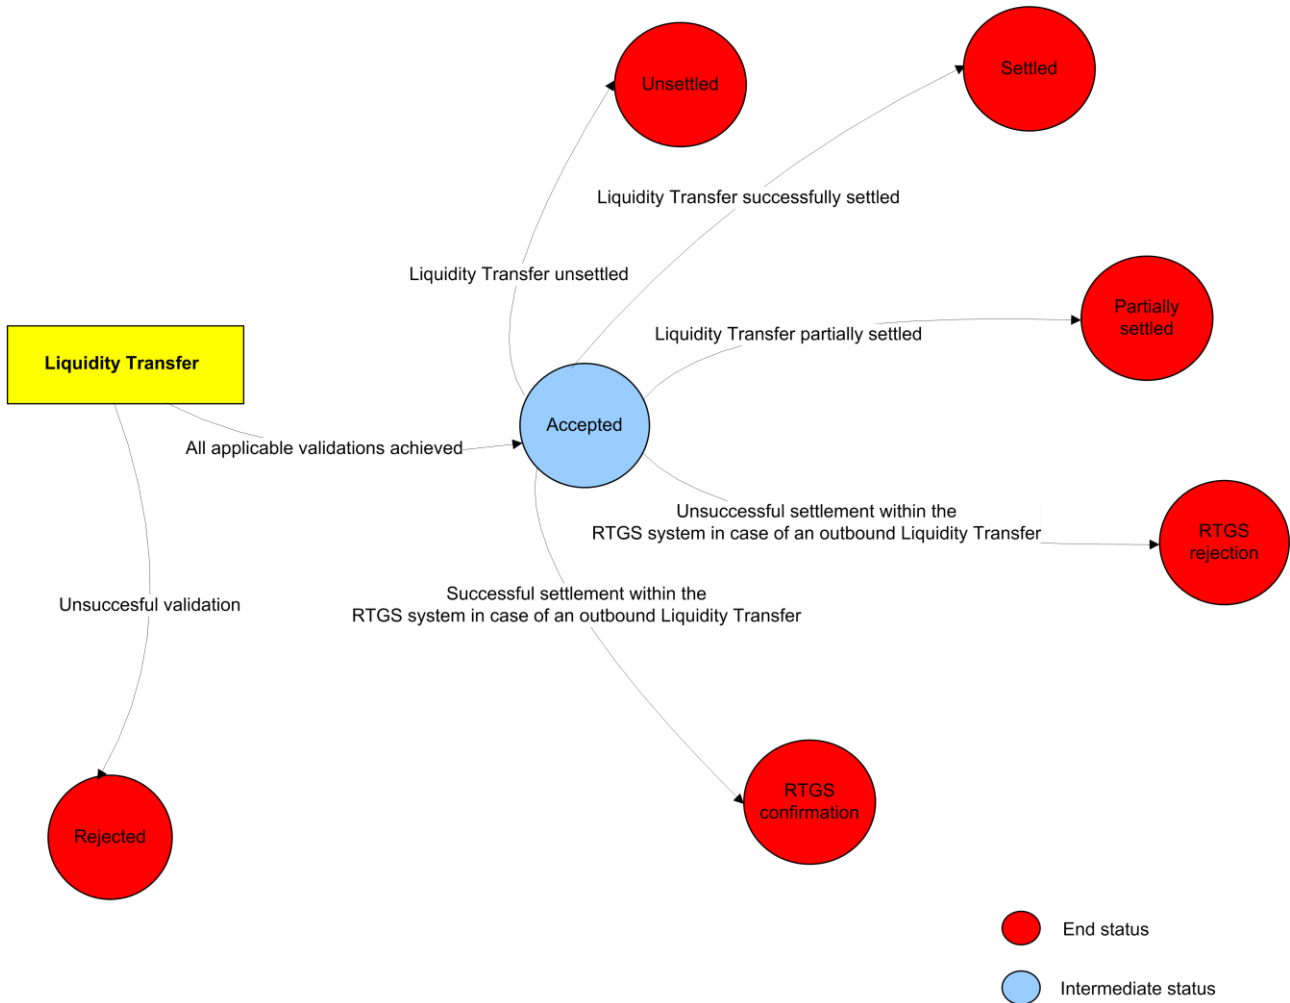

STATUS VALUES	DEFINITION
Not executed	The Outbound Liquidity Transfer has been initiated but not yet communicated to the RTGS system (initial status).
RTGS Rejection	Via RTGS Answer T2S receives the information that the Outbound Liquidity Transfer is not booked in the RTGS system.
RTGS Confirmation	Via RTGS Answer T2S receives the information that the Outbound Liquidity Transfer is successfully booked in the RTGS system.
RTGS Rebooking	Via RTGS Answer T2S receives the information that the Outbound Liquidity Transfer is not booked in the RTGS system. The Outbound Liquidity Transfer was reversed.

5 Liquidity Transfers status transitions

6 The diagram and explanatory text below illustrates and describe the possible status transitions for a Liquidity  
7 Transfer.

1

**DIAGRAM 188 - LIQUIDITY TRANSFER STATUS TRANSITION DIAGRAM**

2

3 **1.6.4.1.4 Parameters Synthesis**

4 No specific configuration from T2S Actor is needed.

5 **1.6.4.2 Report generation**

6 **1.6.4.2.1 Concept**

7 T2S periodically informs T2S Actors with a set of predefined reports which deliver information specifically  
 8 about Settlement Instructions, balances or reference data. They contain information which are based on the  
 9 data available for a specific party and which are in line with the privileges of the report receiving party. T2S  
 10 triggers the generation of a report based on a business event, e.g. End of Day, or at a predefined time.

11 Please see section T2S proprietary codes for the list of configurable business events. Depending on the T2S  
 12 parties' preferences the report is either sent out directly after creation or stored for later retrieval via the  
 13 report query.

14 A general description of the process of report creation can be found in section Receive Report.

#### 1 **1.6.4.2.2 Overview**

2 The report types generated by T2S and the sort of information provided are described below.

3 In general all reports differ in and are defined by the following characteristics: the concerned party, the sort  
4 of information collected, the moment of data extraction during the business day and the reporting period.

#### 5 **DIAGRAM 189 - CHARACTERISTICS OF A REPORT**

6

7 All information about the necessary attributes in each named category is stored as reference data in T2S and  
8 influences the generation of the report. The privilege to configure these reference data or subscribe to a  
9 certain report can be granted to the T2S System Users by their party administrator.

#### 10 **1.6.4.2.3 Report generation process**

11 A generated report is available for download until it is replaced by the next, new generation of it, i. e. a re-  
12 port that is created at the End of Day of the current business day replaces the report that was created at the  
13 End of Day of the previous business day. The replaced report is no longer available for download. Nonethe-  
14 less, as any other message, a report can be resent if the report message was sent in A2A mode before.

15 Please note that the last generated version of a report is available for three calendar months after its crea-  
16 tion according to the general timeline for accessibility of data.

#### 17 Sort of Information - Report Types

18 T2S provides the following report types:

1

REPORT TYPES
Statement of Holdings
Statement of Transactions
Statement of Pending Instructions
Statement of Settlement Allegements
Statement of Accounts
Current Settlement Day Cash Information Report
Following Settlement Day Cash Forecast Report
Daily Penalty List
List of Modified Penalties
Monthly Aggregated Amounts
Statement of executed Amendment Instructions for Intra-Balance Movements
Statement of executed Amendment Instructions for Intra-Position Movements and Settlement Instructions
Statement of executed Cancellation Instructions for Intra-Balance Movements
Statement of executed Cancellation Instructions for Intra-Position Movements and Settlement Instructions
Statement of pending Amendment Instructions for Intra-Balance Movements
Statement of pending Amendment Instructions for Intra-Position Movements and Settlement Instructions
Statement of pending Cancellation Instructions for Intra-Balance Movements
Statement of pending Cancellation Instructions for Intra-Position Movements and Settlement Instructions
Statement of pending Intra-Balance Movements
Statement of pending Intra-Position Movements
Statement of settled Intra-Balance Movements
Statement of settled Intra-Position Movements

## 2 Concerned Party

3 Each report type provides information on a certain scope of data. The data scope is indicated by the party  
4 for which it is configured. For example: a Statement of Accounts reports on all T2S Dedicated Cash Accounts  
5 of the indicated party. CSDs and CBs as well as CSD Participants and Payment Banks can configure reports  
6 on party level, e.g. a CSD can configure a report for its own; a Payment Bank can configure a report for its  
7 own. In addition to reports on party level, CSDs and CBs can also opt for reports on system entity level, i.e.  
8 reports providing the CSD with information relating to all its CSD participants or providing the CB with infor-  
9 mation relating to all its Payment Banks. CSDs and CBs can only configure reports on system entity level for

1 themselves. It is not possible to configure reports on system entity level for CSD Participants or Payment  
2 Banks.

3 The concerned party has to be specified, when the report is configured for the first time.

4 Moment of Data Extraction

5 **DIAGRAM 190 - MOMENT OF DATA EXTRACTION**

6

7 The creation of a report is always triggered at a certain point in time by T2S. This point in time can be a  
8 specific time, e. g. 10:00 or a specific event of the T2S Settlement Day, e. g. End of Day. T2S Scheduling  
9 functionality will be provided by BDM. For the following list of reports for which a currency specific configura-  
10 tion is possible and that are configured for a currency-specific event the data extraction starts when the  
11 event for the currency specified in the report configuration is triggered.

12 Reports for which a currency specific configuration is possible are (ISO-only reports; equivalent flat-file re-  
13 ports are not currency-configurable):

- 14 | Statement of Accounts
- 15 | Statement of settled intra-position movements
- 16 | Statement of Transactions
- 17 | Statement of Pending Instructions
- 18 | Current Settlement Day Cash Information Report
- 19 | Following Settlement Day Cash Forecast Report
- 20 | Statement of settled intra-balance movements
- 21 | Statement of pending intra-balance movements
- 22 | Statement of pending amendment instructions for Intra-Balance Movements
- 23 | Statement of executed amendment instructions for Intra-Balance Movements
- 24 | Statement of pending cancellation instructions for Intra-Balance Movements
- 25 | Statement of executed cancellation instructions for Intra-Balance Movements

26 In case no currency is specified in the report configuration or any other report not contained in the list above  
27 is configured for such an event, the data extraction starts when the last event of the configured type is trig-

1 gered. In case a currency is specified, it only affects the time of data extraction, not the content of the re-  
2 port.

3 The configuration of penalty reports is only possible with an event-based configuration including the proper  
4 business event.

5 Please refer to chapter T2S proprietary codes for the list of configurable business events. It is recommended  
6 to use these business events for those reports which shall be created during night-time settlement. For time-  
7 triggered reports, the restrictions described in chapter [Application processes involved during night-time set-  
8 tlement](#) [▶ 250] apply. For every report configuration the report configuring T2S System User can either  
9 define the "Valid From" date only (meaning that the validity period of the report configuration is unlimited),  
10 or define both the "Valid From" date and the "Valid To" date for the report (meaning that the report is cre-  
11 ated for the Party only during this predefined validity period). A new report configuration can be set-up at  
12 the earliest for the next business day. The moment of data extraction as well as possible validity limitations  
13 have to be specified when the report is configured for the first time. T2S only creates those reports, for  
14 which the underlying report configurations is valid at the current business day.

#### 15 Accuracy of data on positions and balances

16 The architectural concept of T2S foresees an operational database (ODB) and an informational database  
17 (IDB) in order to provide high performance settlement processes and accuracy of data. Report management  
18 extracts information on Dedicated Cash Account balances and Securities Accounts positions from the IDB  
19 which is synchronised with the ODB periodically <sup>393</sup>. This may result in reports not containing the very latest  
20 information from the ODB according to the end of the reporting period (meaning that changes in balances or  
21 positions shortly before the time of data extraction might not be contained in the report). Reports created at  
22 the end of NTS sequences and at End of Day contain the information from ODB databases available at that  
23 time since settlement processes are then halted.

#### 24 Reporting Period

25

**DIAGRAM 191 - REPORTING PERIOD**

26

27 T2S distinguishes between two different report classifications - complete reports and delta reports, which are  
28 all based on the latest available data. The difference between both is the time scope which is considered:

393 The associated values can be subject to minor changes and are monitored by the T2S Service Desk via alarms. In case of problems the Settlement Managers are informed immediately and the Operations Managers Group is informed.

- 1 | Complete reports cover the current business day and provide the current values of all selected items at
- 2 | the time of the creation of the report;
- 3 | Delta reports also consider the current business day but provide only information on the selected items
- 4 | which values changed since the previous report was created, i.e. it includes cancellations, modifications
- 5 | and new items. The previous report can likewise be a complete report or a delta report. Therefore, the
- 6 | creation timestamp of the previous report is considered as the starting point in time for the reporting pe-
- 7 | riod. If there is no previous report for the current business day, the SoD is considered as the starting
- 8 | point in time for the reporting period.

9 T2S provides all predefined report types in a complete version, some of them also in a delta version.

**TABLE 192 - PREDEFINED REPORTS AVAILABLE**

REPORT TYPES	COMPLETE REPORT	DELTA REPORT
Statement of Holdings	x	x
Statement of Transactions	x	x
Statement of Pending Instructions	x	x
Statement of Settlement Allegements	x	x
Statement of Accounts	x	
Current Settlement Day Cash Information Report	x	
Following Settlement Day Cash Forecast Report	x	
Statement of executed Amendment Instructions for Intra-Balance Movements	x	x
Statement of executed Amendment Instructions for Intra-Position Movements and Settlement Instructions	x	x
Statement of executed Cancellation Instructions for Intra-Balance Movements	x	x
Statement of executed Cancellation Instructions for Intra-Position Movements and Settlement Instructions	x	x
Statement of pending Amendment Instructions for Intra-Balance Movements	x	x
Statement of pending Amendment Instructions for Intra-Position Movements and Settlement Instructions	x	x
Statement of pending Cancellation Instructions for Intra-Balance Movements	x	x
Statement of pending Cancellation Instructions for Intra-Position	x	x

REPORT TYPES	COMPLETE REPORT	DELTA REPORT
Movements and Settlement Instructions		
Statement of pending Intra-Balance Movements	x	x
Statement of pending Intra-Position Movements	x	x
Statement of settled Intra-Balance Movements	x	x
Statement of settled Intra-Position Movements	x	x

1 Possible recipients of a report

2 All reports are available for directly connected parties of T2S, such as CSDs and their participants as well as  
3 CBs and their participating Payment Banks.

4 A created report can be received by one or several T2S Actors. Each T2S Actor can decide, if it wishes to  
5 receive a report directly after its creation or if it wants to query it ad-hoc.

6 If a T2S Actor wishes to receive a report directly after its creation, this has to be stored in the reference data  
7 configuration of the report. That means the subscription of a report is independent from the Message Sub-  
8 scription.

9 If a T2S Actor does not wish to receive a report directly after its creation but to query it afterwards, this  
10 behaviour of T2S has to be stored in the reference data configuration of the report as well. Also this T2S  
11 Actor is stored as recipient of a report.

12 As a general principle the recipient(s) of a report can be different from the concerned party. For Information  
13 about the setup of report configuration for specific concerned parties and recipients of a report please see  
14 UHB chapters related to report configuration setup.

15 Preconditions for Report creation

16 In order to avoid unnecessary processing and storage T2S does not create reports automatically. So, to initi-  
17 ate the creation of a Report, the requiring T2S Actor has to configure the report in advance. The configura-  
18 tion of the report has to be done via the Graphical User Interface of T2S, which is described in the UHB. The  
19 T2S System User who configures the report has to be equipped with the appropriate privilege to do this  
20 setup. The T2S System User is granted with this privilege by his party administrator.

21 This configuration is then stored as reference data and is valid until the T2S Actor decides that the Report  
22 has not to be created anymore or until the "Valid To" date stored within the report configuration is reached.

23 Communication Channel

1 **DIAGRAM 192 - COMMUNICATION CHANNEL**

2  
3 T2S offers direct communication to applications via XML-messages in Application-to-Application mode (short-  
4 ly A2A mode) as well as screen-based online access for connected T2S System Users in User-to-Application  
5 mode (U2A mode).

6 All reports that are offered by T2S are available both in A2A and U2A mode.

7 In A2A mode the T2S System User gets the specific report pushed, provided that the push preference for the  
8 report is stored for the receiving T2S Actor in reference data. Otherwise the report is just stored after gen-  
9 eration. All reports pushed in A2A mode which exceed the minimum compression size of 2 kb are com-  
10 pressed since the compression for such reports is mandatory. Please refer to sections [Compression](#) [▶ 899]  
11 and [Store and Forward Communication \(Reports, Notifications\)](#) [▶ 900] for additional information.

12 For some of these reports a message splitting at business level may occur in order to avoid exceeding the  
13 size limitation of 32 MB. Please refer to section Outbound traffic exceeding given size limitations for addi-  
14 tional information.

15 To pull formerly created reports, a Report Query has to be sent either via the Graphical User Interface to  
16 T2S or via A2A mode with the specification of the report instance asking for. In case the T2S System User  
17 has the respective privilege to obtain the requested report, it is sent out to the inquirer. Please see section  
18 Send Query.

### 19 *Parameter synthesis*

20 The following parameters are specified for the Setup of a Report.

1

CON- CERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATO- RY/ OP- TIONAL	POSSIBLE VALUES	STAND- ARD OR DEFAULT VALUE
Setup of a Report	Report Type	T2S Actor	T2S Actor	Mandatory	Statement of Holdings Statement of Transactions Statement of Pending Instructions Statement of Settlement Allegements Statement of Accounts Current Settlement Day Cash Information Report Following Settlement Day Cash Forecast Report Statement of executed Amendment In- structions for Intra-Balance Movements Statement of executed Amendment In- structions for Intra-Position Movements and Settlement Instructions Statement of executed Cancellation In- structions for Intra-Balance Movements Statement of executed Cancellation In- structions for Intra-Position Movements and Settlement Instructions Statement of pending Amendment In- structions for Intra-Balance Movements Statement of pending Amendment In- structions for Intra-Position Movements and Settlement Instructions Statement of pending Cancellation In- structions for Intra-Balance Movements Statement of pending Cancellation In- structions for Intra-Position Movements and Settlement Instructions Statement of pending Intra-Balance Movements Statement of pending Intra-Position Movements	N/A

CON- CERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATO- RY/ OP- TIONAL	POSSIBLE VALUES	STAND- ARD OR DEFAULT VALUE
					Statement of settled Intra-Balance Movements Statement of settled Intra-Position Movements	
Setup of a Report	Concerned Party	T2S Actor	T2S Actor	Mandatory	N/A	N/A
Setup of a Report	System Entity Wide Reporting Flag <sup>394</sup>	T2S Actor	T2S Actor	Mandatory	Yes, No	N/A
Setup of a Report	Moment of Data Extraction	T2S Actor	T2S Actor	Mandatory	Time Event, Business Event	N/A
Setup of a Report	Reporting Period	T2S Actor	T2S Actor	Mandatory	Complete Report, Delta Report	N/A
Setup of a Report	Possible Recipient of a Report	T2S Actor	T2S Actor	Mandatory	N/A	N/A
Setup of a Report	Communication Channel	T2S Actor	T2S Actor	Mandatory	Push Mode, Pull Mode	N/A
Setup of a Report	Valid From	T2S Actor	T2S Actor	Mandatory	ISO-Date	N/A
Setup of a Report	Valid To <sup>395</sup>	T2S Actor	T2S Actor	Optional	ISO-Date	N/A

1 *Detailed information on the Sort of information - Report types*

2 This section provides comprehensive information for each report type which is offered by T2S and clarifies  
3 differences of complete and delta version. For detailed information on the reporting period of delta reports,  
4 please see section [Report generation process](#) [▶ 789] paragraph "Reporting Period".

5 *Statement of Holdings*

6 This report is available in both versions - complete and delta versions. The complete version informs the T2S  
7 Actor about the different securities positions per Securities Account at the moment of the report's creation.

394 This flag can only be set to "Yes" for concerned parties that are eligible for System Entity Wide Reports, i.e. CSDs and CBs.

395 The field „Valid To“ is the only field that can be amended **after** the report configuration has been stored.

1 The complete version includes securities positions, with a quantity different from zero as well as securities  
2 positions with a quantity of zero that have been subject to settlement on the current business day. This in-  
3 cludes those positions <sup>396</sup> which either turn zero or remain zero but were subject to settlement on the cur-  
4 rent business day.

5 The delta version reflects the current securities positions within a security account, which were either newly  
6 created or changed or turned zero. The reflected period starts at the creation of the previous Statement of  
7 Holdings of the current settlement day, or by default since the start of day if such report was not already  
8 created since the start of the current settlement day.

9 In case the resulting report message is expected to exceed the network maximum message volume of 32  
10 MB it is split at business level and sent in several messages.

11 If opted for by a CSD, this report can be delivered as flat file instead of an xml-file. Please see section [Flat](#)  
12 [File Report Generation for CSDs](#) [▶ 804] and Receive Flat File Report for additional information.

### 13 Statement of Transactions

14 This report is available in both versions – complete and delta versions. The complete version informs the  
15 T2S Actor about those Settlement Instructions that reached "settled" status or "partially settled" status (that  
16 means the quantity and amount that settled (so far) on the current business day are returned) since the SoD  
17 of the current settlement day. It provides information on their latest status and current attribute values at  
18 the time of the report generation.

19 The delta version contains the same kind of information since the creation point in time of the previous  
20 Statement of Transactions of the current settlement day, or by default since the start of day if such report  
21 was not already created since the start of the current settlement day.

22 In case the resulting report message is expected to exceed the network maximum message volume of 32  
23 MB it is split at business level and sent in several messages.

24 If opted for by a CSD, this report can be delivered as flat file instead of an xml-file. Please see section [Flat](#)  
25 [File Report Generation for CSDs](#) [▶ 804] and Receive Flat File Report for additional information.

### 26 Statement of Pending Instructions

27 This report is available in both in versions – complete and delta versions. The complete version informs the  
28 T2S Actor about pending Settlement Instructions that expect settlement at the current settlement day (in-  
29 cluding also recycled Settlement Instructions). They must not have a final status (e.g. "partially settled" sta-  
30 tus (here the unsettled amount and unsettled quantity are returned)) at the time of the report generation.  
31 The Statement provides information on the latest status and current attribute values of the reported Settle-  
32 ment Instructions.

33 The delta version returns new pending Settlement Instructions or pending Settlement Instructions which  
34 were modified as well as a list of Settlement Instructions which were formerly pending but are now can-  
35 celled.. All these Settlement Instructions have to expect settlement at the current settlement day (including  
36 also recycled Settlement Instructions). The delta version encompasses changes within the timeframe since

---

396 PFOD settlement instructions do not impact securities positions and are not considered when determining the inclusion of zero positions within the report.

1 the creation of the previous Statement of Pending Instructions of the current business day, or by default  
2 since the start of day if such report was not already created since the start of the current settlement day.

3 In case the resulting report message is expected to exceed the network maximum message volume of 32  
4 MB it is split at business level and sent in several messages.

5 If opted for by a CSD, this report can be delivered as flat file instead of an xml-file. Please see section [Flat  
6 File Report Generation for CSDs](#) [▶ 804] and Receive Flat File Report for additional information.

#### 7 Statement of Settlement Allegements

8 This report is available in both versions – complete and delta versions. The complete version informs the  
9 T2S Actor about all Settlement Instructions as received from other T2S Actors which are currently missing a  
10 corresponding Settlement Instruction from him. A Settlement Instruction which was reported in the last  
11 Statement of Settlement Allegements and is now no longer reported indicates that this Settlement Instruc-  
12 tion is no longer alleged. I.e. it has been matched or cancelled.

13 The delta version returns newly alleged Settlement Instructions, alleged Settlement Instructions which were  
14 modified as well as a list of Settlement Instructions which were formerly alleged but are now cancelled or  
15 removed. The delta version encompasses the timeframe since the creation of the previous Statement of  
16 Settlement Allegements of the current business day, or by default since the start of day if such report was  
17 not already created since the start of the current settlement day.

#### 18 Statement of Accounts

19 This report is available in complete version only. T2S Actors receive information on all T2S Dedicated Cash  
20 Accounts of a dedicated party for which they subscribed. It provides information about the Start-of-Day bal-  
21 ance and current cash balance as well as the cash movements of the current settlement day.

22 This report may be subject to currency specific routing.

23 In case the resulting report message is expected to exceed the network maximum message volume of 32  
24 MB it is split at business level and sent in several messages.

#### 25 Current Settlement Day Cash Information Report

26 This report is available in complete version only and provides information on the cash balances of the T2S  
27 Dedicated Cash Account, the amount of outstanding intraday credit from auto-collateralisation as well as the  
28 projected cash balance. For the calculation of the projected balance, the following debiting and crediting  
29 Settlement Instructions are taken into account:

- 30 | SI with ISD = current business day and ISO Settlement Status = Pending
- 31 | SI with ISD before the current business day and ISO Settlement Status = Failing and last failing date is  
32 also before the current business day

33 The cash forecast does not cover a breakdown of the different restricted balances although: for the projec-  
34 tion of the cash information, they are consolidated and returned per T2S Dedicated Cash Account.

35 In case the Default Dedicated Cash Account is changed (please see section [Links between securities ac-  
36 counts and T2S dedicated cash accounts](#) [▶ 104]) this change only affects the calculated cash needs for  
37 those Settlement Instructions still to be settled, that were accepted by T2S after the change of the Default  
38 Dedicated Cash Account. All Settlement Instructions accepted by T2S before this change will be included in

- 1 the cash forecast of the "old" Default Dedicated Cash Account even though they will be settled through the  
2 new account.
- 3 This report may be subject to currency specific routing.
- 4 For Statement of reference data for Securities and Statement of reference data for Securities Accounts, in  
5 case the resulting report message is expected to exceed the network maximum message volume of 32 MB, it  
6 is split at business level and sent in several messages.
- 7 Following Settlement Day Cash Forecast Report
- 8 This report is available in complete version only and provides T2S Actors the same information as the Cur-  
9 rent Settlement Day Cash Report just only for the following cash settlement day, i.e. for the next T2S set-  
10 tlement day where cash settlement in the affected currency is possible again. In case the next T2S settle-  
11 ment day is a cash holiday, this is the first settlement day after the cash holiday. For the calculation of the  
12 projected balance, the following debiting and crediting Settlement Instructions are taken into account:
- 13 | SI with ISD = following business day
  - 14 | SI with ISD on or before the current business day and ISO Settlement Status = Failing and last failing  
15 date is the current business day
- 16 Settlement Instructions sent to T2S with no T2S DCA specified will be considered for Following Settlement  
17 Day Cash Forecast Report according to the same rules as for Current Settlement Day Cash Information Re-  
18 port.
- 19 This report may be subject to currency specific routing.
- 20 Statement of Executed Amendment Instructions for Intra-Balance Movements
- 21 This report is available in both versions – complete and delta versions. The complete version informs the  
22 T2S Actor about executed amendment instructions on intra-balance movements. It covers a reporting period  
23 beginning at the SoD of the current settlement day and ending at the moment of report creation.
- 24 The delta version returns all newly executed amendment instructions. It encompasses changes within the  
25 timeframe since the creation of the previous Statement of Executed Amendment Instructions for Intra-  
26 Balance Movements of the current business day, or by default since the start of day if such report was not  
27 already created since the start of the current settlement day.
- 28 Both versions consider the latest status and provide information on the current attribute values of the re-  
29 ported amendment instructions.
- 30 This report may be subject to currency specific routing.
- 31 Statement of Executed Amendment Instructions for Intra-Position Movements and Settlement Instructions
- 32 This report is available in both versions – complete and delta versions. The complete version provides the  
33 T2S Actor with information on the executed amendment instructions on intra-position movements and set-  
34 tlement instructions, as well as on the executed hold/release instructions on settlement instructions. It co-  
35 vers a reporting period beginning at the SoD of the current settlement day and ending at the moment of  
36 report creation.
- 37 The delta version informs the T2S Actor about all newly executed amendment instructions and newly exe-  
38 cuted hold/release instructions. It encompasses the timeframe since the creation of the previous Statement

1 of Executed Amendment Instructions for Intra-Position Movements and Settlement Instructions of the cur-  
2 rent business day, or by default since the start of day if such report was not already created since the start  
3 of the current settlement day.

4 Both versions consider the latest status and provide information on the current attribute values of the re-  
5 ported amendment instructions.

#### 6 Statement of Executed Cancellation Instructions for Intra-Balance Movements

7 This report is available in both versions – complete and delta versions. The complete version informs the  
8 T2S Actor about executed cancellation instructions acting on intra-balance movements which settled in T2S  
9 since the SoD of the current settlement day until the moment of report creation.

10 The delta version returns all executed cancellation instructions which have newly reached this status since  
11 the creation of the previous Statement of Executed Cancellation Instructions for Intra-Balance Movements,  
12 or by default since the start of day if such report was not already created since the start of the current set-  
13 tlement day.

14 Both versions consider the latest status and provide information on the current attribute values of the re-  
15 ported cancellation instructions.

16 This report may be subject to currency specific routing.

#### 17 Statement of Executed Cancellation Instructions for Intra-Position Movements and Settlement Instructions

18 This report is available in both versions – complete and delta versions. The complete version informs the  
19 T2S Actor about executed cancellation instructions for Intra-Position Movements and Settlement Instructions  
20 from the SoD of the current settlement day until the moment of report creation.

21 The delta version returns all executed cancellation instructions which have newly reached this status since  
22 the creation of the previous Statement of Executed Cancellation Instructions for Intra-Position Movements  
23 and Settlement Instructions, or by default since the start of day if such report was not already created since  
24 the start of the current settlement day.

25 Both versions consider the latest status and provide information on the current attribute values of the re-  
26 ported cancellation instructions.

#### 27 Statement of Pending Amendment Instructions for Intra-Balance Movements

28 This report is available in both versions – complete and delta versions. The complete version informs the  
29 T2S Actor about pending amendment instructions for intra-balance movements to be executed during the  
30 current business day but that have not reached a final status (i.e. "executed" or "denied") at the time of the  
31 report's creation.

32 The delta version returns newly pending amendment instructions expecting settlement at the current busi-  
33 ness day and a list of amendment instructions which were formerly pending but have now expired or were  
34 cancelled by T2S. The delta version encompasses changes within the timeframe since the creation of the  
35 previous Statement of Pending Amendment Instructions for Intra-Balance Movements of the current busi-  
36 ness day, or by default since the start of day if such report was not already created since the start of the  
37 current settlement day.

1 Both versions consider the latest status and provide information on the current attribute values of the re-  
2 ported amendment instructions.

3 This report may be subject to currency specific routing.

#### 4 Statement of Pending Amendment Instructions for Intra-Position Movements and Settlement Instructions

5 This report is available in both versions – complete and delta version. The complete version provides the T2S  
6 Actor with information on amendment instructions on intra-position movements and settlement instructions,  
7 as well as on hold/release instructions on settlement instructions to be executed during the current business  
8 day but that are still pending at the end of the reporting period.

9 The delta version informs the T2S Actor about amendment instructions and hold/release instructions which  
10 are newly pending at the end of the reporting period or which were formerly pending but have now expired  
11 or were cancelled by T2S. It encompasses the timeframe since the creation of the previous Statement of  
12 Pending Amendment Instructions for Intra-Position Movements and Settlement Instructions of the current  
13 business day, or by default since the start of day if such report was not already created since the start of the  
14 current settlement day.

15 Both versions consider the latest status and provide information on the current attribute values of the re-  
16 ported amendment instructions.

#### 17 Statement of Pending Cancellation Instructions for Intra-Balance Movements

18 This report is available in both versions – complete and delta versions. The complete version informs the  
19 T2S Actor about cancellation instructions acting on intra-balance movements which do not have a final sta-  
20 tus at the time of the report creation.

21 The delta version returns new pending cancellation instructions as well as a list of cancellation instructions  
22 which were formerly pending but have expired or were cancelled by T2S. The delta version contains the  
23 same kind of information within the timeframe since the creation of the previous Statement of Pending Can-  
24 cellation Instructions for Intra-Balance Movement of the current business day, or by default since the start of  
25 day if such report was not already created since the start of the current settlement day.

26 Both versions consider the latest status and provide information on the current attribute values of the re-  
27 ported cancellation instructions.

28 This report may be subject to currency specific routing.

#### 29 Statement of Pending Cancellation Instructions for Intra-Position Movements and Settlement Instructions

30 This report is available in both versions – complete and delta versions. The complete version informs the  
31 T2S Actor about pending cancellation instructions for intra-position movements and settlement instructions,  
32 i.e. the cancellation instructions that have not reached final status (i.e. "executed" or "denied") at the time  
33 of report creation.

34 The delta version returns new pending cancellation instructions as well as a list of cancellation instructions  
35 which were formerly pending but have now expired or were cancelled by T2S. The delta version encom-  
36 passes changes within the timeframe since the creation of the previous Statement of Pending Cancellation  
37 Instructions for Intra-Position Movements and Settlement Instructions of the current business day, or by

1 default since the start of day if such report was not already created since the start of the current settlement  
2 day.

3 Both versions consider the latest status and provide information on the current attribute values of the re-  
4 ported cancellation instructions.

#### 5 Statement of Pending Intra-Balance Movements

6 This report is available in both versions – complete and delta versions. The complete version informs the  
7 T2S Actor about intra-balance movements that are intended to settle at the current business day but that  
8 are not settled yet.

9 The delta version informs the T2S Actor about newly pending intra-balance movements for the current set-  
10 tlement day. Moreover, it lists intra-balance movements which were formerly pending but modified during  
11 the reporting period and are still pending. Last but not least it provides the list of intra-balance movements  
12 which were formerly pending for the current settlement day but have been cancelled during the reporting  
13 period. The delta version encompasses changes within the timeframe since the creation of the previous  
14 Statement of Pending Intra-Balance Movements of the current business day, or by default since the start of  
15 day if such report was not already created since the start of the current settlement day.

16 Both versions consider the latest status and provide information on the current attribute values of the re-  
17 ported intra-balance movements.

18 This report may be subject to currency specific routing.

#### 19 Statement of Pending Intra-Position Movements

20 This report is available in both versions – complete and delta versions. The complete version informs the  
21 T2S Actor about pending intra-position movements that are intended to settle at the current business day  
22 but that have not reached a final status (e.g. “unsettled” or “partially settled”) at the time of the report gen-  
23 eration.

24 The delta version returns new pending intra-position movements and pending intra-position movements  
25 which were modified during the reporting period. Moreover, it lists intra-position movements which were  
26 formerly pending but have expired during the reporting period, i.e. the intra-position movements which sta-  
27 tus has been updated to “cancelled” in the meantime. The delta version encompasses changes within the  
28 timeframe since the creation of the previous Statement of Pending Intra-Position Movements of the current  
29 settlement day, or by default since the start of day if such report was not already created since the start of  
30 the current settlement day.

31 Both versions consider the latest status and provide information on the current attribute values of the re-  
32 ported intra-position movements.

33 If opted for by a CSD, this report can be delivered as flat file instead of an xml-file. Please see section [Flat](#)  
34 [File Report Generation for CSDs](#) [▶ 804] and Receive Flat File Report for additional information.

#### 35 Statement of Settled Intra-Balance Movements

36 This report is available in both versions – complete and delta versions. The complete version informs the  
37 T2S Actor about intra-balance movements that reached “settled” or “partially settled” status during the re-  
38 porting period between the SoD of the current business day and the moment of report creation.

1 The delta version informs the T2S Actor about intra-balance movements that are newly “settled” or newly  
2 “partially settled”. It also lists intra-balance movements which were formerly partially settled but modified  
3 during the reporting period and are still “partially settled”. Moreover, it provides an overview of cancelled  
4 intra-balance movements which were formerly partially settled (the cancellation taking place on the remain-  
5 ing unsettled part). The delta version encompasses changes within the timeframe since the creation of the  
6 previous Statement of Settled Intra-Balance Movements of the current settlement day, or by default since  
7 the start of day if such report was not already created since the start of the current settlement day.

8 Both versions consider the latest status and provide information on the current attribute values of the re-  
9 ported intra-balance movements.

10 This report may be subject to currency specific routing.

#### 11 Statement of Settled Intra-Position Movements

12 This report is available in both versions – complete and delta versions. The complete report informs the T2S  
13 Actor about those intra-position movements that reached “settled status” or “partially settled” status during  
14 the reporting period between the SoD of the current business day and the moment of report creation. The  
15 cumulative quantity which was settled on the current business day/during the reporting period will be re-  
16 ported.

17 The delta version contains information about intra-position movements that are newly “settled” or “partially  
18 settled”. This report gives an overview of intra-position movements which were modified during the report-  
19 ing period and are still “partially settled”. The delta version encompasses changes within the timeframe since  
20 the creation of the previous Statement of Settled Intra-Position Movements of the current settlement day, or  
21 by default since the start of day if such report was not already created since the start of the current settle-  
22 ment day.

23 Both versions consider the latest status and provide information on the current attribute values of the re-  
24 ported intra-position movements.

25 If opted for by a CSD, this report can be delivered as flat file instead of an xml-file. Please see section [Flat](#)  
26 [File Report Generation for CSDs](#) [▶ 804] and Receive Flat File Report for additional information.

### 27 1.6.4.3 Flat File Report Generation for CSDs

#### 28 **1.6.4.3.1 Concept**

29 CSDs can choose to receive a set of predefined critical reports as flat files as an alternative to the standard  
30 report generation as described within section [Report generation](#) [▶ 788]. These flat file versions contain  
31 equivalent information to their counterparts delivered by A2A. These files are generated with limited format-  
32 ting and additional processing in the interest of improving the performance of T2S during their creation and  
33 reducing their generation time. As for the flat file reports, they contain information which are based on the  
34 data available for a specific party.

35 A general description of the process of flat file report creation can be found in section Receive Flat File Re-  
36 port.

### 1 **1.6.4.3.2 Overview**

2 The flat file report types generated by T2S and the sort of information provided are described below.

3 In general all reports differ in and are defined by the following characteristics: the concerned party, the sort  
4 of information collected, the moment of data extraction during the business day and the reporting period.

5

6 Each of the characteristics of a report is described in the following section, but it is worth highlighting the  
7 following:

8 For Instructions and Holdings related reports, the moment of data extraction is determined by existing busi-  
9 ness events:

- 10 | The business event that triggers the generation of the full reports is the end of the Night time Settle-  
11 ment. In case of processing peak during this time window, the generation of the flat file report will con-  
12 tinue till completion.
- 13 | The delta reports are always triggered at the EoD with the same timing than the ISO reports in order to  
14 ensure the same data scope for both modes. Additionally, CSDs can opt for receiving, at some or at all of  
15 additional triggering business events, intraday delta reports i.e. in addition to the delta reports triggered  
16 at the End of day. Therefore, the moment of data extraction for the intraday delta reports is determined  
17 by the following business events <sup>397</sup>:
  - 18 – End of Day for Delta reports, and additionally,
  - 19 – End of First Night Time Settlement Cycle,
  - 20 – End of Second Night Time Settlement Cycle.

---

397 It is not possible to opt to receive this reports at the end of none of the NTS Short Cycles.

1 For Penalty Mechanism related reports, the moment of data extraction is determined by the end of the Cal-  
 2 culation, the Recalculation or the End of the Appeal Period process. The business events that triggers the  
 3 generation of the full reports are, respectively, the DAPL (Daily Penalty List Report – Reporting of new penal-  
 4 ties), MDPL (Modified Penalties List Report) and the MAGG (Monthly Aggregated Amounts Report), that are  
 5 triggered after the related data extraction.

6 All the other information about the necessary attributes in each named category that is relevant for the  
 7 characteristics of the report is stored as an attribute domain in static data. All this information influences the  
 8 generation of the flat file report. T2S Operator is responsible for configuring and maintaining this infor-  
 9 mation.

10 **1.6.4.3.3 Flat File Report Generation process**

11 A generated flat file report is not available for download.

12 Sort of Information - Report Types

13 T2S provides the following subset of report types as flat files:  
 14

INSTRUCTIONS AND HOLDINGS FLAT FILE REPORT TYPES
Statement of Holdings
Statement of Transactions
Statement of Pending Instructions
Statement of pending Intra-Position Movements
Statement of settled Intra-Position Movements
Penalties Flat File Report Types
Daily Penalty List
List of Modified Penalties
Monthly Aggregated Amounts

15 Concerned Party

16 Each flat file report type provides information on the default data scope of the concerned party (i.e. CSD).  
 17 The data scope is indicated by the party for which it is configured and is limited to CSDs. For example: a  
 18 Statement of Holdings reports on all Securities Accounts of the indicated party. Flat file reports can only be  
 19 configured at a system entity level, i.e. reports providing the CSD with information relating to i) its accounts  
 20 and to the accounts of all its participants for Instructions and Holdings related reports or ii) the CSD itself  
 21 and to all its participants for the Penalty Mechanism related reports <sup>398</sup>. The concerned party has to be speci-  
 22 fied, when the flat file report is configured for the first time. A party (e.g. CSD) configured to receive flat file

398 For a further description on the scope and information provided in the Penalty Mechanism related reports please see section 1.6.1.14.9 Penalty Reporting.

1 reports cannot receive the equivalent reports through other channels. This does not, however, prevent other  
 2 parties (e.g. CSD participants under that CSD) from receiving those reports through such channels.

3 **DIAGRAM 193 - MOMENT OF DATA EXTRACTION FOR INSTRUCTIONS AND HOLDINGS RELATED REPORTS**

4  
 5 The creation of flat files for Instructions and Holdings related reports is always triggered by the following  
 6 business events:

- 7 | For full reports, the end of the Night Time Settlement
- 8 | For delta reports, the End of Day. Additionally, for delta reports available intraday:

- 1 – The end of First Night Time Settlement Cycle
- 2 – The end of Second Night Time Settlement Cycle

**DIAGRAM 194 - MOMENT OF DATA EXTRACTION AND GENERATION FOR PENALTY RELATED REPORTS**

Reporting Period

The creation of flat files for Penalty Mechanism related reports is triggered by the end of the Calculation process for the Daily Penalty List and by the end of the Recalculation process for the List of Modified Penalties, whereas the report creation for the monthly aggregated Amounts is triggered once the Monthly Aggregated amounts have been calculated, which is triggered by the End of Appeal Period process on the 13th business day of each month.

**DIAGRAM 195 - REPORTING PERIOD FOR INSTRUCTIONS AND HOLDINGS RELATED REPORTS**

T2S distinguishes between two different flat file report classifications - full reports and delta flat file reports, which are all based on the latest available data, the difference between them is the time scope which is considered:

- I Full versions for Instructions and Holdings related reports cover the previous business day and provide the values of all selected items at the EoD of previous business day. Full versions can be scheduled for generation either for each T2S business day, or on a weekly or monthly basis. The full version flat file reports are generated at the end of Night Time Settlement and include no activity records.

- 
- 1 – For the statement of holdings, when generated during the next business day, it informs the CSD of  
2 the EOD securities positions from the previous business day per Securities Account. This includes non  
3 zero positions where no activity has occurred and zero positions <sup>399</sup> changed or turned zero during the  
4 previous business day. The “full” report for Statement of Holdings should provide the EoD securities  
5 positions [D] despite being sent after NTS (i.e. during the next business day [D+1]).
- 6 – For the statement of settled intra-position movements, as it is generated during the next business  
7 day, it informs the CSD of the intra position movements that reached the status settled or partially  
8 settled during the previous business day. The values of the intra-position movements are the ones at  
9 the EoD of the previous business day.
- 10 – For the statement of transactions, as it is generated during the next business day, it informs the CSD  
11 of the settlement instructions that reached the status settled or partially settled during the previous  
12 business day. The values of the settlement instructions are the ones at the EoD of the previous busi-  
13 ness day.
- 14 – For the statement of pending instructions, as it is generated during the next business day, it informs  
15 the CSD of the pending settlement instructions that were intended to be settled during previous busi-  
16 ness day (ISD <= previous business day) but its status is still partially settled or unsettled at the EoD  
17 (EoD report extraction) of the previous business day. The values of the settlement instructions are the  
18 ones at the EoD of the previous business day.
- 19 – For the statement of pending intra-position movements, as it is generated during the next business  
20 day, it informs the CSD of the pending intra-position movements that were intended to be settled dur-  
21 ing previous business day (ISD <= previous business day) but its status is still partially settled or un-  
22 settled at the EoD (EoD report extraction) of the previous business day. The values of the intra-  
23 position movements are the ones at the EoD of the previous business day.
- 24 | Delta versions for Instructions and Holdings related reports consider information on the selected items  
25 whose values changed i.e. it includes cancellations, modifications and new items since:
- 26 – The Start of Day, for the first delta flat file report generated for a CSD in a given day, and  
27 – The last intraday delta flat file report generated, for the following delta reports for a CSD in a given  
28 day
- 29 Concretely:
- 30 – For the statement of holdings the delta flat file report reflects the current securities positions within a  
31 security account, which were either newly created, changed or turned zero since the Start of Day, or  
32 since the last intraday delta statement of holdings report generated for the same CSD. Contrary to the  
33 A2A version, the flat file delta version will not contain accounts where no activity has occurred. No ac-  
34 tivity, in this case, signifies that no change in securities positions has occurred since the end of the  
35 previous business day, or since the last intraday delta statement of holdings report generated for the  
36 same CSD.

---

399 PFOD settlement instructions do not impact securities positions and are not considered when determining the inclusion of zero positions within the report.

- 1 – For the statement of settled intra-position movements it reflects the intra position movements that  
2 reached the status settled or partially settled from the Start of Day for every securities account of a  
3 given CSD, or since the last intraday delta statement of settled intra-position movements report gener-  
4 ated for the same CSD.
- 5 – For the statement of transactions, it reflects the settlement instructions that reached the status settled  
6 or partially settled from the Start of Day for every securities account of a given CSD, or since the last  
7 intraday delta statement of transactions report generated for the same CSD.
- 8 – For the statement of pending instructions it reflects the changes on the unsettled or partially settled  
9 settlement instructions from the Start of Day for every securities account of a given CSD, or since the  
10 last intraday delta statement of pending instructions report generated for the same CSD. I.e. it reports  
11 all the newly pending instructions from the Start of Day or since the last intraday delta statement of  
12 pending instructions report generated for the same CSD, all pending instructions that were amended  
13 from the Start of Day or since the last intraday delta statement of pending instructions report gener-  
14 ated for the same CSD, or instructions that were formerly pending but have been cancelled since the  
15 Start of Day or since the last intraday delta statement of pending instructions report generated for the  
16 same CSD. Settlement instructions that were pending but did not suffer any modification during the  
17 reporting period are not shown in the statement (changes on reason code for unsettled are consid-  
18 ered as variations).
- 19 – For the statement of pending intra-position movements it reflects the changes on the unsettled or  
20 partially settled intra-position movements from the Start of Day for every securities account of a given  
21 CSD, or since the last intraday delta statement of pending intra-position movements report generated  
22 for the same CSD. I.e., it reports all newly pending intra position movements from the Start of Day or  
23 since the last intraday delta statement of pending intra-position movements report generated for the  
24 same CSD, all pending intra position movements that were amended from the Start of Day or since  
25 the last intraday delta statement of pending intra-position movements report for the same CSD, or in-  
26 tra position movements that were formerly pending but have been cancelled since the Start of Day or  
27 since the last intraday delta statement of pending intra-position movements report generated for the  
28 same CSD. Intra position movements that were pending but did not suffer any modification during the  
29 reporting period are not shown in the statement (changes on reason code for unsettled are consid-  
30 ered as variations).

### 31 **Examples– Reporting period for Instructions and Holdings related reports depending on the** 32 **delta flat file reports configurations**

33 A CSD configures a statement of pending instructions (i.e. semt.018) as delta flat file at End of Day. Then,  
34 the CSD will receive the following report and the information contained in them will be as follows:

- 35 | The first and only delta flat file semt.018 report will be received at the End of Day on business day "D",  
36 and it will include changes on the unsettled or partially settled settlement instructions from the Start of  
37 Day for every securities account of the given CSD.

38 A CSD configures a statement of pending instructions (i.e. semt.018) as delta flat file at End of Day and,  
39 additionally, configures intraday delta flat file reports in two of the available business events:

- 40 1. at the end of First Night Time Settlement Cycle

1 2. at the end of the Second Night Time Settlement Cycle

2 When a CSD configures a report as delta flat file, the End of Day report is subscribed by default <sup>400</sup>. Then,  
3 the CSD will receive the following reports and the information contained in them will be as follows:

4 | The first intraday delta flat file semt.018 report will be received at the end of the first NTS Cycle on busi-  
5 ness day "D", and it will include changes on the unsettled or partially settled settlement instructions from  
6 the Start of Business Day "D" until the end of the first NTS Cycle, for every securities account of the giv-  
7 en CSD.

8 | The second intraday delta flat file semt.018 report will be received at the end of the second NTS Cycle  
9 on the business day "D", and it will include changes on the unsettled or partially settled settlement in-  
10 structions from the end of the first NTS Cycle until the end of the second NTS Cycle, for every securities  
11 account of the given CSD.

12 | The third intraday delta flat file semt.018 report will be received at the End of Day on business day "D",  
13 and it will include changes on the unsettled or partially settled settlement instructions from the end of  
14 the second NTS Cycle until the End of Day, for every securities account of the given CSD.

15 T2S provides all flat file report types for Instructions and Holdings related reports in full and delta versions.  
16 Delta versions are also available intraday, in the business events already defined in the previous section.

17 **TABLE 193 - PREDEFINED INSTRUCTIONS AND HOLDINGS FLAT FILE REPORTS**  
18

REPORT TYPES	FULL REPORT	DELTA REPORT (INCLUDING INTRADAY DELTA RE- PORTS)
Statement of Holdings	x	x
Statement of Transactions	x	x
Statement of Pending Instructions	x	x
Statement of pending Intra-Position Movements	x	x
Statement of settled Intra-Position Movements	x	x

19 Penalty Mechanism related reports are only available in full mode, not as a delta version.

20 | Full versions for Penalty Mechanism related reports cover the information since the previous reporting.  
21 These flat file reports are generated during the Real Time Settlement.

22 – For the Daily Penalty List sent on each settlement day, it informs the CSD about the newly computed  
23 penalties for the previous settlement day.

400 This is necessary in order to avoid missing information about changes occurred since the last intraday flat file report configured and the EoD, as the first delta report generated of the day includes changes only from the Start of Day, not from the previous business day.

- 1 – For the List of Modified Penalties sent on each settlement day, it informs the CSD about the modifica-
- 2 tions in penalties that occurred since the previous reporting, i.e. penalties for days before the previous
- 3 settlement day, that have been removed, re-included, re-allocated, switched by a CSD or automatical-
- 4 ly updated after the recalculation of the penalty triggered by a change in the relevant reference data.
- 5 – For the Monthly Aggregated Amounts Report sent on a monthly basis, it informs the CSD about the
- 6 aggregated amounts of penalties computed per currency, party and counterparty for the business
- 7 days of a given period, i.e. the previous month.

**TABLE 194 - PREDEFINED PENALTY FLAT FILE REPORTS**

REPORT TYPES	FULL REPORT	DELTA REPORT
Daily Penalty List	x	
List of Modified Penalties	x	
Monthly Aggregated Amounts	x	

10

11 Possible Recipients of a Flat File Report

12 All flat file reports are available solely to CSDs.

13 If a CSD wishes to receive a flat file report this has to be stored by the T2S Operator in the reference data  
14 configuration of the report. That means the subscription of a report is independent from the Message Sub-  
15 scription.

16 As a general principle the recipient(s) of a report can be different from the concerned party. In any case the  
17 recipient(s) of a report have to be specified by the T2S Operator in the reference data configuration of the  
18 report.

19 Preconditions for Flat File Report Creation

20 In order to avoid unnecessary processing and storage T2S does not create flat file reports automatically. So,  
21 to initiate the creation of a Report, the requiring CSD has to request the T2S Operator to configure the re-  
22 port in advance.

23 This configuration is then stored as an attribute domain in reference data and is valid until the "Valid To"  
24 date stored within the report configuration is reached.

25 Communication Channel

1 **DIAGRAM 196 - COMMUNICATION CHANNEL**

2  
3 All flat file versions of reports are delivered solely as flat files. When a CSD elects to receive a report as a flat  
4 file it may not be received in any other manner by that CSD.

5 All flat file reports are pushed in A2A mode and when they exceed the minimum compression size of 2 kb  
6 are compressed since the compression for such reports is mandatory. Please refer to sections [Compression](#)  
7 [▶ 899] and [Store and Forward Communication \(Reports, Notifications\)](#) [▶ 900] for additional information.

8 For some of these flat file reports a message splitting at business level may occur in order to avoid exceed-  
9 ing the size limitation of 32 MB. Please refer to section Outbound traffic exceeding given size limitations for  
10 additional information.

11 Parameter synthesis

12 The following parameters are specified for the Setup of a Flat File Report.

13

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup of a Report	Report Type	T2S Operator	T2S Operator	Mandatory	semt.002, semt.016, semt.017, semt.018, semt.034, semt.144, semt.244, semt.344	N/A
Setup of a Report	Report Name	T2S Operator	T2S Operator	Mandatory	"Statement of Holdings", "Settled Restrictions"	N/A

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
					on Securities", "Statement of Transactions", "Statement of Pending Instructions", "Pending Restrictions on Securities", "Daily Penalty List", "List of Modified Penalties", "Monthly Aggregated Amounts".	
Setup of a Report	System Entity	T2S Operator	T2S Operator	Mandatory	System Entity of the relevant Concerned Party (i.e.CSD)	N/A
Setup of a Report	Technical Address	T2S Operator	T2S Operator	Mandatory	Technical address of the receiving CSD	N/A
Setup of a Report	Technical Service Identification	T2S Operator	T2S Operator	Mandatory	Network service used to send the report.	N/A
Setup of a Report	Compression	T2S Operator	T2S Operator	Mandatory	ZIP NONE	ZIP
Setup of a Report	Valid From	T2S Operator	T2S Operator	Mandatory	Format "yyyy-mm-dd"	N/A
Setup of a Report	Valid To	T2S Operator	T2S Operator	Mandatory	Format "yyyy-mm-dd"	N/A
Setup of a Report	Delta Mode	T2S Operator	T2S Operator	Mandatory	T/F <sup>401</sup>	N/A

401 If selected value is T, then by default the EoD delta flat file report is configured.

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup of a Report	Intraday Delta Mode	T2S Operator	T2S Operator	Optional <sup>402</sup>	C1R4 <sup>403</sup> C2RZ C1DP C2DP	EMPTY
Setup of a Report	Full Mode Frequency <sup>404</sup>	T2S Operator	T2S Operator	Mandatory	DAIL WEEK MONT NONE	MONT
Setup of a Report	Full Mode Day	T2S Operator	T2S Operator	Mandatory	LAST NONE	N/A

1 Detailed information on the Sort of information - Flat File Report types

2 For comprehensive information for each report type which is offered by T2S as a flat file please see the section [Report generation process](#) [ ▶ 789] paragraph "Detailed information on the Sort of information - Report types". Contrary to the normal reports, the delta versions of the flat file reports will not contain records where no activity has occurred. Also, each flat file report will be split as described in this section but sent in several files instead of several messages.

7 1.6.4.4 Flat File Report Generation for ECMS

8 **1.6.4.4.1 Concept**

9 T2S allows ECMS to receive, exclusively in flat file format, the full version of a predefined set of critical reports for each CSD in which ECMS is defined as CSD participant. Each set of reports is generated on securities accounts relevant to ECMS <sup>405</sup> that may belong to different CSD Participants within the same CSD.

402 If previous parameter Delta Mode has a value T, CSDs can opt for receiving intraday delta flat file reports, on top of the EoD delta flat file report, by selecting all or some of the available business events. Configuration for each report is independent of the other reports (i.e. events chosen for one type of intraday flat file report may differ from the events chosen for other type of intraday flat file report).

403 C1R4 ("End of First NTS cycle"), C2RZ ("End of Second NTS cycle"), C4R4 ("End of Fourth NTS cycle"), C5RZ ("End of Fifth NTS cycle") events are used to configure intraday Delta Flat File reports semt.016, semt.017, semt.018, semt.034. C1DP ("End of First NTS cycle"), C2DP ("End of Second NTS cycle"), C4DP ("End of Fourth NTS cycle"), C5DP ("End of Fifth NTS cycle") events are used to configure intraday Delta Flat File report semt.002.

404 The Full Mode Frequency parameter for the Daily Penalty List and the List of Modified Penalties should only be set up with value "DAIL", while the Monthly Aggregated Amounts should have value "MONT".

405 The concept of relevant securities account to ECMS is defined in section 1.2.6.5 Securities Accounts.

#### 1 **1.6.4.4.2 Overview**

2 The flat file reporting for ECMS relies on the existing configuration parameters (necessary attributes) used  
3 by the flat file reporting functionality for CSDs. Nevertheless, both differ in the report generation process,  
4 having the ECMS reporting a reduced data scope of the concerned party and a reduced set of report types  
5 and versions.

6 The structure and sorting of the information contained in the reports is the same in both reporting function-  
7 alities.

#### 8 **1.6.4.4.3 Flat File Report Generation process**

##### 9 Sort of Information - Report Types

10 T2S provides the full version of the following subset of report types for ECMS in every CSD in which is de-  
11 fined as CSD Participant:

- 12 | Statement of Holdings (semt.002);
- 13 | Statement of Transactions (semt.017), and
- 14 | Statement of Pending Instructions (semt.018).

15 Each of these reports needs to be independently configured within every relevant System Entity.

##### 16 Concerned Party

17 Like the flat file reporting for CSDs, the ECMS reporting is system entity wide, meaning that the reports con-  
18 tain information on Securities Accounts belonging to different CSD Participants within the same CSD. Never-  
19 theless, in the ECMS reporting, the data scope of the concerned party (i.e. CSD) is limited to a specific set of  
20 securities accounts rather than to the default data scope of the CSD. These securities accounts need to have  
21 the ECMS MSA <sup>406</sup> assigned in order to be eligible for reporting. This means that each report type provides  
22 information only on flagged Securities Accounts within the default data scope each CSD.

##### 23 Moment of Data Extraction

24 The moment of data extraction is determined by the existing business event at the End of Day while the  
25 reporting is determined by the end of Night Time Settlement.

26 The data extraction for the semt.017 and semt.018 reports is triggered by two dedicated events. And the  
27 same applies to the reporting. These four events are independent from the ones of the CSD reporting. On  
28 the contrary, the data extraction and reporting for the semt.002 are triggered by the same events used for  
29 CSD reporting.

##### 30 Reporting Period

31 T2S provides only the full versions of the relevant flat file reports to ECMS, which means that no delta re-  
32 ports are provided. The full versions can be scheduled for generation either for each T2S business day, or on  
33 a weekly or monthly basis and the time scope considered follows the same criteria defined for the CSD re-  
34 porting.

---

406 Please refer to 1.2.6.5 Securities Accounts for further information about the MSA.

## 1 Recipient of a Flat File Report

2 These flat file reports are exclusive to ECMS.

## 3 Parameter synthesis

4 The ECMS reporting uses the same configuration parameters specified for the setup of a Flat File Report for  
5 CSDs. Nevertheless, due to the specific characteristics of the ECMS reporting, some of the parameters are  
6 not applicable, while others have ad-hoc values exclusively defined for ECMS reporting.

7 Within the list of not applicable parameters are:

- 8 | Delta Mode: as ECMS receives only full version reports, this parameter is not taken into account for the  
9 report generation, meaning that no delta report is generated regardless of the values specified ("F","T").  
10 For consistency reasons, it is recommended to use the parameter value "F".
- 11 | Compression: as the reports are delivered via the internal channel, no compression applies regardless of  
12 the value specified for this parameter ("ZIP","NONE"). For consistency reasons, it is recommended to  
13 use the value "NONE".
- 14 | Full Mode Frequency: the ECMS reports are delivered just on daily basis. Therefore the daily basis apply  
15 to all reports regardless of the parameter value set ("DAIL", "WEEK", "MONT", "NONE"). It is recom-  
16 mended to use "DAIL" for consistency reasons.
- 17 | Full Mode Day: as the frequency is daily this parameter is always "NONE" regardless of the value config-  
18 ured ("NONE", "LAST"). Therefore for consistency reasons it should be configured accordingly.

19 In the list of parameters with specific values are the following:

- 20 | Report type: the values need to be set in accordance to the format semt.EXX, where "E" (in capitals)  
21 should replace the first figure of the report type. According to this the semt.002, semt.017 and semt.018  
22 for ECMS become semt.E02, semt.E17 and semt.E18 respectively.
- 23 | Report Name: the word "ECMS" need to be added at the beginning of the report name. The correct bill-  
24 ing of the reports depend on the proper set up of this parameter.

25 The possible values of the remaining parameters are the same than the ones used in the flat file reporting  
26 for CSDs.

27 Each set of reports types (i.e. semt.E02, semt.E17 and semt.E18) needs to be set up for every CSD in which  
28 ECMS is defined as CSD Participant. This implies that there should be as many set of report configurations as  
29 system entities in which ECMS is configured as participant. To this purpose the System Entity parameter  
30 should be defined with the system entity of the CSD for which the set of ECMS flat file reports is being con-  
31 figured.

32 This is the extensive list of parameters that should be configured by the T2S Operator in order to configure  
33 the flat files for ECMS.

1

PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VAL- UES	STANDARD OR DEFAULT VALUE
Setup of a Re- port	Report Type	T2S Operator	T2S Operator	Mandatory	semr.E02, semr.E17, semr.E18	N/A
Setup of a Re- port	Report Name	T2S Operator	T2S Operator	Mandatory	"ECMS State- ment of Hold- ings ", "ECMS Statement of Transactions", "ECMS State- ment of Pending Instructions "	N/A
Setup of a Re- port	System Entity	T2S Operator	T2S Operator	Mandatory	System Entity of the relevant Concerned Party (i.e.CSD)	N/A
Setup of a Re- port	Technical Ad- dress	T2S Operator	T2S Operator	Mandatory	Technical ad- dress of ECMS	N/A
Setup of a Re- port	Technical Ser- vice Identifica- tion	T2S Operator	T2S Operator	Mandatory	Network service used to send the report.	N/A
Setup of a Re- port	Compression	T2S Operator	T2S Operator	Mandatory	ZIP NONE (NONE recommended)	ZIP
Setup of a Re- port	Valid From	T2S Operator	T2S Operator	Mandatory	Format "yyyy- mm-dd"	N/A
Setup of a Re- port	Valid To	T2S Operator	T2S Operator	Mandatory	Format "yyyy- mm-dd"	N/A

PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/ OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
Setup of a Report	Delta Mode	T2S Operator	T2S Operator	Mandatory	T / F (F recommended)	N/A
Setup of a Report	Full Mode Frequency	T2S Operator	T2S Operator	Mandatory	DAIL WEEK MONT NONE	MONT
Setup of a Report	Full Mode Day	T2S Operator	T2S Operator	Mandatory	LAST NONE	N/A

1 Preconditions for Flat File Report Creation

2 Like the CSD reporting, T2S does not create flat file reports for ECMS automatically. In order to initiate the  
3 creation of an ECMS Report, CSDs needs to request the T2S Operator to configure the report in advance.

4 This configuration is then stored as an attribute domain in reference data with validity period specified in the  
5 "Valid To" date stored within the report configuration.

6 Communication channel

7 T2S will route the reports to the ECMS through the internal channel.

8 All flat file reports for ECMS are sent in push A2A mode and no compression applies to any of the messages  
9 regardless of their size.

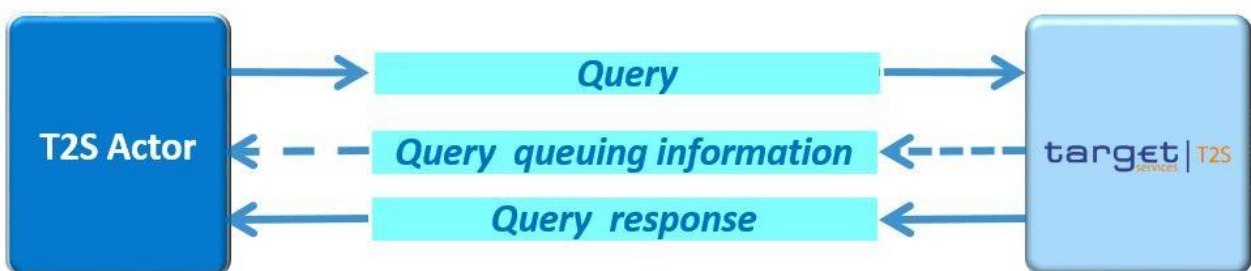

10 For some of these flat file reports a message splitting at business level may occur in order to avoid exceed-  
11 ing the size limitation of 32 MB.

12 1.6.4.5 Query management

13 **1.6.4.5.1 Concept**

14 Queries are provided by T2S to the T2S Actor as a means of satisfying his information needs on demand. He  
15 can obtain information on different business items by submitting query requests to T2S. These are answered  
16 on the basis of the latest data available in T2S.

17 **DIAGRAM 197 - INITIATING A QUERY AND RECEIVE THE QUERY RESPONSE**

18

**1.6.4.5.2 Overview**

T2S provides a range of predefined query types from different categories (e.g. T2S Dedicated Cash Account queries, Securities Account queries, Settlement Instruction queries, static data queries, dynamic data queries), which the T2S Actor can use to request information on T2S business items, such as Liquidity Transfers, Securities Positions or Settlement Instructions and many more.

All user queries are available for all directly connected parties of T2S, such as CSDs and their participants as well as CBs and their participating Payment Banks.

They can send queries to T2S in A2A mode or in U2A mode. Generally, all queries are processed in real time. Exceptions occur during the maintenance window and during the night-time period. Queries sent in A2A mode during the maintenance window are queued and notice of the queued status is given immediately to the requesting T2S Actor. The query request is answered after the end of maintenance window. It is not possible to send queries in U2A mode during the maintenance window. Balance queries sent in A2A mode during sequences of the night-time period are queued and notice of the queued status is given immediately to the requesting T2S Actor. The query request is answered after the end of the sequence. It is not possible to send balance queries in U2A mode during a sequence.

**1.6.4.5.3 Query management process*****Initiating queries***

In order to obtain the desired information the T2S Actor needs to submit a query to T2S. For the communication with T2S in A2A mode all query and response messages are set up as XML messages compliant with the ISO20022 standard. For the communication with T2S in U2A mode a Graphical User Interface based on a standard browser application is provided.

In general a T2S Actor can send each query in A2A mode as well as in U2A mode. However, there are some queries which are only accessible via U2A mode. Query availability in the respective communication mode is shown in the table below (and the list of query types with the corresponding messages is provided in chapter 2, see section Inbound and outbound messages).

**TABLE 195 - AVAILABILITY OF QUERIES IN A2A AND U2A MODE**

QUERY TYPE	INITIATION VIA GUI (U2A MODE)	INITIATION VIA XML MESSAGES (A2A MODE)
Settlement Instruction Query	x	x
Settlement Instruction Current Status Query	x	x
Settlement Instruction Status Audit Trail Query	x	x
Settlement Instruction Audit Trail Query	x	x
Settlement Instruction Matched and Accepted Status Query	x	
Securities Account Position (History) Query	x	x

QUERY TYPE	INITIATION VIA GUI (U2A MODE)	INITIATION VIA XML MESSAGES (A2A MODE)
T2S Dedicated Cash Account Balance Query	x	x
T2S Dedicated Cash Account Posting Query	x	x
Immediate Liquidity Transfer Order List Query	x	x
Immediate Liquidity Transfer Order Detail Query	x	x
Outstanding Auto-Collateralisation Credit Query	x	x
T2S Overall Liquidity Query	x	x
Cash Forecast Query	x	x
Limit Utilisation Journal Query	x	x
Limit Utilisation Query	x	x

1 The different types of queries in T2S are static regarding the set of selection parameters, which can be  
2 mandatory, optional or conditional. T2S does not offer dynamic queries.

3 A brief outline of the purpose of each query and the exact description of its respective selection and return  
4 parameters are given:

5 | In the relevant part of Chapter 3 for queries available in A2A mode;

6 | In the relevant section of the UHB for queries available in U2A mode.

7 *Preconditions for successful processing of queries*

8 T2S validates the plausibility of the search criteria that were specified by the T2S Actor. In addition, T2S  
9 ensures that the sender of the query is allowed to retrieve the requested information by checking, whether  
10 the T2S Actor has been granted the necessary privilege.

11 Only if the T2S Actor possesses the necessary privilege to use the initiated query, the requested business  
12 information is provided. The privilege has to be granted in advance. Please refer to section [Configuration of  
13 Parties, Securities and Accounts](#) [▶ 33] for further information.

14 *Providing Data for queries*

15 If all checks performed by T2S were successful, T2S extracts the requested business information from the  
16 production data. If one of the plausibility and privilege checks performed by T2S fails, the T2S Actor receives  
17 a response indicating the error that has occurred.

18 The architectural concept of T2S foresees an operational database (OBD) and an informational database  
19 (IDB) in order to provide high performance settlement processes and accuracy of data. Query management  
20 extracts information from the IDB which is synchronised with the ODB periodically <sup>407</sup>. This may result in  
21 query responses not containing the very latest information from ODB (meaning that changes in balances or  
22 positions shortly before the time of data extraction might not be contained in the query response).

23 *Retrieving the query response*

24 In case the extraction of the query data is successful, T2S sends a query response containing the requested  
25 business information back to the requesting T2S Actor. In case the extraction of the query data returns a  
26 zero result, the requesting T2S Actor receives an appropriate information. (For details please refer to the  
27 query response message-specific chapter in section List of Messages.) If a retrieval of the query result fails,  
28 then an error response is provided to the T2S Actor.

407 The associated values can be subject to minor changes and are monitored by the T2S Service Desk via alarms. In case of problems the Settlement Managers are informed immediately and the Operations Managers Group is informed.

1 If the T2S Actor has sent the query via U2A mode, the response is given to the same T2S Actor in U2A  
2 mode. The U2A dialogue is described in more detail in the UHB.

3 If the T2S Actor has sent the query via A2A mode, the response is given to the same T2S Actor in A2A  
4 mode. T2S does not allow the routing of the query response to a dedicated technical address. The A2A dia-  
5 logue is described in more detail section Send Query.

#### 6 *Parameter Synthesis*

7 No specific configuration from T2S Actor is needed.

## 8 **1.6.5 Operations and Support**

### 9 1.6.5.1 Business application configuration

10 The T2S Operator is responsible for configuring the rules and parameters based on which the T2S business  
11 application operates. Examples include the configuration of system entities, reference data for countries and  
12 currencies, the loading of the T2S BIC directory and the configuration of network services available in T2S.

13 The data related to these rules and parameters is stored in the form of Reference Data objects on which the  
14 T2S Operator has exclusive creation, modification and deletion rights. The T2S Operator can therefore create  
15 and manage these rules and parameters as any other Reference Data object, depending on the desired con-  
16 figuration.

17 For a comprehensive description of the Reference Data maintenance process involved in the manipulation of  
18 these rules and parameters, see section [Reference Data Management](#) [▶ 711]. For a detailed list of the rules  
19 and parameters the T2S Operator may configure, see section [Possible actions of T2S Operator](#) [▶ 297].

### 20 1.6.5.2 T2S calendar management

#### 21 **1.6.5.2.1 Concept**

22 The T2S calendar defines the days on which the system is open for settlement, as well as possible currency-  
23 specific closing days. Through the Business Day Management (BDM) Common Component, T2S provides a  
24 single harmonised timeframe for centralised securities settlement, but – in line with the multi-currency ap-  
25 proach – allows for the existence of closing days by currency which are days on which there is no cash set-  
26 tlement in said currency.

27 This section focuses on the tools at the disposal of the T2S Operator for the management of the T2S Calen-  
28 dar. For a detailed description of the T2S Calendar concept, see section [T2S calendar](#) [▶ 238].

#### 29 **1.6.5.2.2 Overview**

30 T2S works with an internal business date, which is updated automatically by the system at each Start of  
31 Day. In general, the T2S business date corresponds to the current calendar date or, after the business date  
32 change process at Start of Day, to the next available opening date for the system (See section [T2S calendar](#)  
33 [▶ 238]) for details on the business date change process).

1 The T2S Operator can manage the T2S Calendar by defining closing days. These items are defined by the  
 2 T2S Operator as Reference Data objects, linked to the relevant date, and stored in the Common Reference  
 3 Data Management (CRDM) Component database. The T2S Operator can create, update and delete closing  
 4 days. For a detailed description of the Reference Data Maintenance process, see section [Reference Data  
 5 Management](#) [▶ 711].

6 Closing days can be defined by currency or for all currencies. A closing day defined for all currencies, or  
 7 "system-wide" closing day, determines a day on which T2S is not open for business. Closing days by curren-  
 8 cy are defined according to the opening days of the relevant Central Bank, and determine days on which a  
 9 specified currency is not allowed to settle. For more details see section [T2S calendar](#) [▶ 238].

10 **1.6.5.2.3 T2S calendar maintenance process**

11 In general, T2S is open for settlement from Monday to Friday. The T2S business date is based on automatic  
 12 updates calculated daily by the system which ignore Saturdays, Sundays and system-wide closing days.

13 Both system-wide and currency-specific closing days are managed by the T2S Operator. The latter are de-  
 14 fined based on the respective Central Bank's closing day calendar. Both types of closing days are created,  
 15 updated and deleted as any other Reference Data object. See section [Reference Data Management](#) [▶ 711]  
 16 for more details.

17 **EXAMPLE 204 - T2S CALENDAR**

Calendar Date	24/12/2019 (Tuesday)	25/12/2019 (Wednesday)	26/12/2019 (Thursday)	27/12/2019 (Friday)	28/12/2019 (Saturday)	29/12/2019 (Sunday)
T2S Business Date	24/12/2019	27/12/2019	27/12/2019	27/12/2019	30/12/2019	30/12/2019
System-wide closing day		YES	YES			
Currency-specific closing day(s)				XYZ Closed		

18 **RED** boxes represent days on which T2S is not open for settlement.

19 In the example above, December 25th and 26th are defined as system-wide closing days. As a result, upon  
 20 End of Day on December 24th, the business date is automatically set to the first available date, i.e. Decem-  
 21 ber 27th. December 28th and 29th are respectively a Saturday and a Sunday, so they are automatically  
 22 skipped with no need of being defined as closing days. As a result, T2S remains closed for settlement on  
 23 December 25th, 26th, 28th and 29th. Supposing a participating Central Bank has a national holiday on De-  
 24 cember 27th, the latter date is defined as a currency-specific closing day for the hypothetical currency XYZ,  
 25 which means that on that date T2S is open for settlement but it is not possible to settle cash transactions in  
 26 currency XYZ.

1  
2

**1.6.5.2.4 Parameters synthesis**

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
T2S Calendar Management	Closing Day date	T2S Operator	T2S Operator	M	Any business date	N/A
T2S Calendar Management	Closing Day currency	T2S Operator	T2S Operator	M	Any T2S settlement currency, or "XXX" for all currencies.	XXX

3 **1.6.5.3 T2S settlement day management**

4 **1.6.5.3.1 Concept**

5 The T2S settlement day is handled within the Business Day Management (BDM) component and made up of  
6 a series of scheduled events. These events define the various processing steps and cut-offs which are to be  
7 carried out during the system’s operation. Usually, an event corresponds to an internal T2S process which is  
8 to be carried out at a scheduled time.

9 The default schedule for each business day is loaded automatically by the system upon each business date  
10 change. The basis for this default schedule is a series of Reference Data objects stored in the database by  
11 the T2S Operator. It is then possible for the T2S Operator to perform manual changes on the current busi-  
12 ness day schedule at run-time in exceptional situations.

13 **1.6.5.3.2 Overview**

14 The event schedule for the current business day is visible to all T2S users <sup>408</sup> within BDM, but modifications  
15 can only be performed by the T2S Operator.

16 Once the business date is set, the system then searches for the relevant operating day type and loads the  
17 new day’s event schedule based on the events contained in the operating day type.

18 Each event is categorized into an event type. Event Types are registered as Reference Data. An Event Type  
19 identifies the basic set of information necessary to define an event before it is inserted in a time schedule;  
20 specifically, what kind of internal process or cut-off it should trigger, whether it can be defined as currency-  
21 specific, and other parameters relevant to the single instance. The definition of an Event Type as “currency-  
22 specific” leaves the possibility, e.g. intended for contingency situations, to differentiate between occurrences  
23 of the same Event Type in the same business day schedule for different currencies (See section [Event](#)  
24 [maintenance process](#) [▶ 832]).

25 Event Types may also be defined as currency-specific, meaning that the related scheduled events only apply  
26 to individual settlement currencies in T2S. During normal operations, the business day schedule is harmo-

---

408 For each event, users can retrieve its type and currency, plus all its relevant timestamps (planned time, revised time, effective time, end time), as defined in section [Event scheduling process](#) [▶ 828].

1 nised for the entire system; however, this feature allows the T2S Operator to change, in exceptional circum-  
 2 stances, the scheduled times for certain events of the current business day only for a specific currency,  
 3 based on a request from the relevant Central Bank. For more details, see the section Event maintenance  
 4 process below, and see section T2S calendar.

5 For any given business date, the T2S Operator is able to define an operating day type which encompasses  
 6 the default set of events which are loaded for that business date. Specifically, the operating day type is a  
 7 collection of event types characterized by the relevant details which define their position in the daily sched-  
 8 ule. These details are:

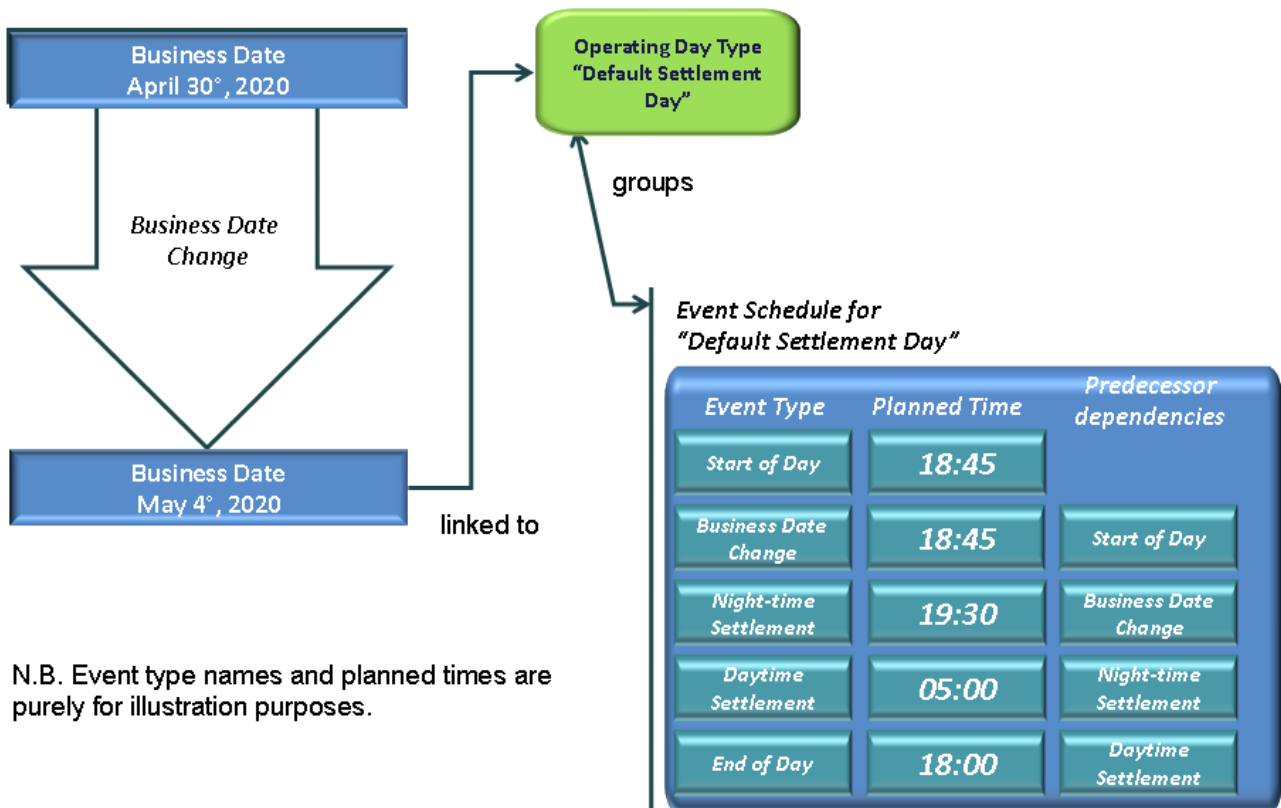

- 9 | The event’s scheduled time
- 10 | The event’s mutual dependencies with other events of the same business day schedule.

11 These two characteristics are defined by the T2S Operator when creating the schedule for each operating  
 12 day type.

13 The example below illustrates the relationships between the business date, the operating day type and the  
 14 default business day schedule. Once the new business date is set, the system searches for the relevant op-  
 15 erating day type, which contains the default schedule (i.e. collection of events with the relevant planned  
 16 time and dependencies). The event schedule for the new business day is subsequently set up according to  
 17 the default data.

18

**EXAMPLE 205 - OPERATING DAY TYPE**

N.B. Event type names and planned times are purely for illustration purposes.

19

20 In this example, the event "Night-time settlement" has a predecessor dependency with "Business Date  
 21 Change", meaning that "Night-time settlement" cannot be triggered unless "Business Date Change" is com-  
 22 plete. Similarly, "Business Date Change" is scheduled for 18:45 but so is its predecessor "Start of Day".

1 Therefore "Business Date Change" is triggered as soon as Start of Day is complete. For details refer to sec-  
2 tion "Event Scheduling process" below.

3 The T2S Business Date Change process is triggered via an event in the business day schedule. Since there  
4 are no predefined constraints on how events may be scheduled and/or managed during a specific business  
5 day, one implication of this aspect is that the T2S Business Date can in fact be made independent from the  
6 calendar date.

7 The following sections describe different processes involved in the T2S Settlement Day Management, specifi-  
8 cally:

- 9 | "Event Type Maintenance process" refers to the definition of standard Event Types, i.e. the basic ele-  
10 | ments that make up each business day schedule;
- 11 | "Chain of Events maintenance process" refers to the definition of chains of events, i.e. standard groups  
12 | of events inside an Operating Day Type which can be replanned or deactivated dynamically with a single  
13 | maintenance operation;
- 14 | "Operating Day Type Maintenance process" refers to the definition of Operating Day Types, i.e. groups  
15 | of Events which define the schedule for each business day;
- 16 | "Event Scheduling process" describes how the system manages the schedule for the current business  
17 | day;
- 18 | "Event Maintenance process" describes the interventions the T2S Operator can perform at run-time on  
19 | the current business day schedule in abnormal (emergency) situations.

#### 20 **1.6.5.3.3 Event type maintenance process**

21 As stated above, Event Types are maintained by the T2S Operator in the CRDM database. The T2S Operator  
22 is allowed to create, update and delete Event Types for later use in preparing the default schedules for each  
23 Operating Day Type.

24 Event Types may also be defined as currency-specific, meaning that the related scheduled events only apply  
25 to individual settlement currencies in T2S. During normal operations, the business day schedule is harmo-  
26 nised for the entire system; however, this feature allows the T2S Operator to change, in exceptional circum-  
27 stances, the scheduled times for certain events of the current business day only for a specific currency,  
28 based on a request from the relevant Central Bank. For more details, see the section [Event maintenance  
29 process](#) [▶ 832] below, and see section [T2S calendar](#) [▶ 238].

30 Event Types which are not previously defined as currency-specific cannot be treated in this way. For exam-  
31 ple, key deadlines such as End of Day or Start of Day are always kept harmonised at system level, ensuring  
32 that there always is a common T2S schedule for all currencies and participants.

#### 33 **1.6.5.3.4 Chain of Events maintenance process**

34 The T2S Operator is allowed to replan and deactivate a chain of events dynamically in the current business  
35 day schedule. Replannings and deactivations can be performed by the Operator with single maintenance  
36 operations in the BDM GUI.

### 1 **1.6.5.3.5 Operating day type maintenance process**

2 The T2S Operator manages Operating Day Types as Reference Data objects. See section [Reference Data Management](#) [▶ 711] for more details.

4 Each business date has its own Operating Day Type, which allows the automatic generation of the business day schedule upon Start of Day.

6 Modifications to the Operating Day Type structure may only be made effective on future dates; for the management of intra-day modifications, the T2S Operator relies on the Event maintenance process described below.

### 9 **1.6.5.3.6 Event scheduling process**

10 The schedule for each business day is generated by the BDM component at each Start of Day. This automatic process draws from the reference data previously set up by the T2S Operator in CRDM, i.e. the Operating day type for the new business date and all related scheduled events.

13 The schedule is created by taking into account the events' scheduled times and the various possible dependencies between them.

15 Regarding the scheduled time, each planned event in the current business day schedule is detailed according to the following timestamps:

- 17 | The planned time corresponds to the standard schedule applied by default by T2S for every settlement day. The T2S Operator can update this planned time in case of a permanent change in the regular schedule;
- 20 | The revised time is the foreseen time for the current settlement day, which usually coincides with the planned time except when a delay has occurred. In contingency situations, the T2S Operator updates the revised time while the planned time remains unchanged;
- 23 | The effective time is the time of the actual occurrence of the event during the current settlement day.
- 24 | The end time is the time at which the system registers the successful processing of an event. An event marked with an end time is considered "complete". For example, an event representing a cut-off is considered "passed" once the end time is set. This is also relevant in the management of predecessor constraints: when dealing with a dependency between a predecessor event A and a successor event B, a necessary condition for triggering B is that A is complete; in other words, that A has an end time. See also example below.

30 The example below illustrates the moments in which the various timestamps are registered for a theoretical event "X".

1

**EXAMPLE 206 - EVENT TIMESTAMPS**

2

3 The following diagram illustrates the concept of Event dependencies. It shows five events, each with its own  
 4 planned times and predecessor dependencies. Specifically, in the example, A is a predecessor to B and E and  
 5 B is a predecessor to D. The diagram shows the events setup as well as a graphical representation of the  
 6 predecessor dependencies (depicted as red arrows) with the events represented in chronological order by  
 7 planned time.

1

**EXAMPLE 207 - EVENT DEPENDENCIES (A)**

Event Type	Planned Time	Predecessors	Effective Time	End Time
A	16:15	none		
B	16:30	A		
C	16:45	none		
D	17:00	B		
E	17:00	A		

In the diagram to the right, the red arrows represent predecessor dependencies.

2

3 Event A is triggered at 16:15, but there is a problem in the internal processing which causes a one-hour  
 4 delay. Without any intervention by the T2S Operator, this results in the following:

- 5 | Event A is triggered at 16:15.
- 6 | At 16:30, Event B cannot be triggered as Event A is not yet completed.
- 7 | At 16:45, Event C is triggered and completed normally as it has no predecessor dependencies.
- 8 | At 17:00, Events D and E cannot be triggered as their respective predecessors B and A are not yet completed (with B yet to be started);
- 9
- 10 | At 17:15, the problem is solved and Event A is completed. Upon completion of A, Events B and E are
- 11 triggered and completed. Upon completion of B, the same happens for D (which therefore is executed
- 12 after E despite having the same scheduled time).

13 The following diagram shows how the above list affects the effective and end timestamps for each event, as  
 14 well as the sequence the events are actually triggered in. The actual sequence of events is represented be-  
 15 low.

1

**EXAMPLE 208 - EVENT DEPENDENCIES (B)**

Event Type	Planned Time	Predecessors	Effective Time	End Time
A	16:15	none	16:15	17:15
B	16:30	A	17:15	17:16
C	16:45	none	16:45	16:45
D	17:00	B	17:16	17:17
E	17:00	A	17:15	17:16

The actual sequence of the events will therefore be as follows: (red arrows represent predecessor dependencies)

2

**1.6.5.3.7 Event maintenance process**

In normal operating conditions, each event is triggered upon reaching its planned or revised time and, if applicable, once all predecessor events have been successfully completed.

In addition, the T2S Operator has at its disposal several options to modify the current business day event schedule. The possible interventions are listed below, and are generally intended for use in contingency situations:

- | Insert a new event instance in the current business day schedule
- | Change the revised time for one event which has not yet been triggered
- | Change the revised time for several events which have not yet been triggered <sup>409</sup>
- | Force completion of an event
- | Force completion of a chain of events

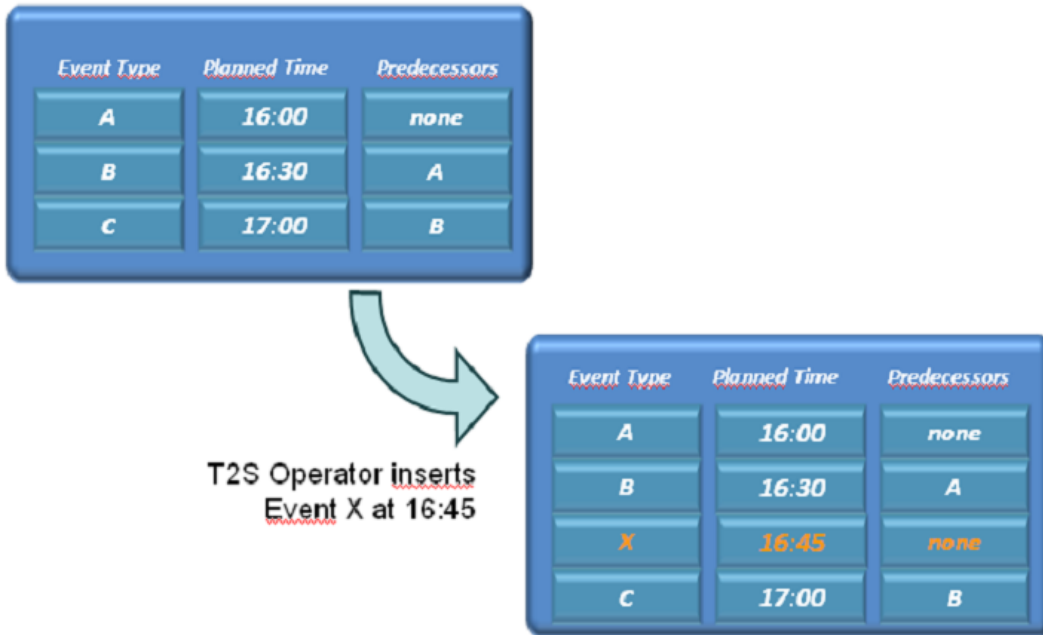

A previously unplanned event may be inserted in the current business day schedule by specifying an existing Event type with a planned time, which must be greater than the current time (in other words, events cannot be scheduled in the past). In the following example, the T2S Operator inserts an Event X at 16:45.

<sup>409</sup> It is possible to time-shift an entire portion of the business day schedule (i.e. one event and all others that come after it), a single chain of events or a subset of events identified by the same event currency.

1

**EXAMPLE 209 - EVENT INSERTION**

2

3 It is furthermore possible to insert a new event by defining it for a specific currency, following a request  
 4 from the relevant central bank. This can only be done on events of an Event Type which allows this option;  
 5 for instance, on specific events that are not related to centralised T2S deadlines (See section [Event type](#)  
 6 [maintenance process](#) [▶ 828] for further details). In the following example, the Operator splits event B for  
 7 DKK and for all other currencies by inserting it again at 16:45.

8

**EXAMPLE 210 - EVENT INSERTION (CURRENCY-SPECIFIC) FOR EMERGENCY SITUATIONS**

9

10 In the example above, B is scheduled twice, once for "all" currencies (code XXX) and once for Danish Krone  
 11 alone. In order to reach this situation, the T2S Operator only needs to insert a new event specifically for  
 12 DKK. Upon reaching the event with currency code "XXX", T2S acknowledges the existence of another event

1 of the same type with a different currency code (DKK) in the system and automatically applies the "XXX"  
2 event for all currencies except DKK.

3 The procedure described above is applicable only in emergency situations, and only on events in the current  
4 business day schedule (i.e. one cannot plan to have currency-specific events in future dates).

5 An event which is already in the current day schedule may undergo a change in its scheduled time due to  
6 particular requirements, e.g. in emergency situations. Such a change may only be performed on events  
7 which have not yet been triggered. If the T2S Operator changes the scheduled time for a specific event, the  
8 new planned time is registered as "revised time" (see above). The change is valid only for the current busi-  
9 ness day. The change in planned time may not violate the existing predecessor constraints; a single event  
10 may not be moved past another event of which it is a predecessor. In the following example the T2S Opera-  
11 tor changes the time for Event B to 16:45; due to predecessor dependencies, the revised time for B can only  
12 be moved between 16:01 and 16:59.

13 **EXAMPLE 211 - EVENT TIME CHANGE (A)**

T2S Operator changes the time for Event B to 16:45

14 **Due to predecessor dependencies, the revised time for B can only be moved between 16:01 and 16:59.**

15  
16 If necessary, an entire string of events can be moved, introducing an equal variation for an event and all the  
17 events that follow it. The string of events can be identified as part of the same chain of events, as subset of  
18 currency dependent events, or as subset of events for which the planned time is later than the selected  
19 event. In the following example the operator changes the time for B and all subsequent events by introduc-  
20 ing a 1-hour delay:

1 **EXAMPLE 212 - EVENT TIME CHANGE (B)**

By delaying all subsequent events along with B, it is possible to move B past 17:00 without violating its predecessor dependencies.

3

4 Forcing completion of an event means that the event is automatically “completed” by setting the Effective

5 Time and End Time to the current system time. If the event is already started (and therefore has already a

6 value for Effective Time) only the End Time is filled in. The result is that BDM ignores the result of the relat-

7 ed process, which has to be monitored by the T2S Operator. This action may be performed on any event

8 which is not yet completed. It can be used in a situation where an event’s execution is to be skipped for the

9 current business day. The same action can be performed on a chain of events.

10 For example, the scenario described in examples 4 and 5 can be reused. An event A starts at 16:15 as

11 planned, but an internal problem causes a long delay. At 17:01, with A still running, it is agreed that events

12 A and D are no longer necessary for the current business day. Therefore the T2S Operator forces completion

13 of A and D, resulting in the following timestamps being applied:

1 **EXAMPLE 213 - EVENT FORCED COMPLETION**

Event Type	Planned Time	Predecessors	Effective Time	End Time
A	16:15	none	16:15	17:01
B	16:30	A	17:01	17:02
C	16:45	none	16:45	16:45
D	17:00	B	17:01	17:01
E	17:00	A	17:01	17:02

2 T2S Operator forces completion of Events A (running) and D (not yet started) at 17:01.

3 **1.6.5.3.8 Parameters synthesis**

CONCERNED PROCESS	PARAMETER	CREATED BY	UPDATED BY	MANDATORY/OPTIONAL	POSSIBLE VALUES	STANDARD OR DEFAULT VALUE
T2S Settlement Day Management	Event Type	T2S Operator	T2S Operator	O	N/A	N/A
T2S Settlement Day Management	Event Planned Time	T2S Operator	T2S Operator	M	00:00–23:59	N/A
T2S Settlement Day Management	Event Revised Time	T2S Operator	T2S Operator	O	00:00–23:59	N/A
T2S Settlement Day Management	Event Currency	T2S Operator	T2S Operator	M	Any T2S Settlement Currency, or "XXX" for all currencies	XXX
T2S Settlement Day Management	Event Predecessors	T2S Operator	T2S Operator	O	Any other Event in the same business day schedule	N/A

5 **1.6.5.4 Business and operations monitoring**

6 The Business and operations monitoring integrates information coming from different sources (e.g. the operational data base and the short-term statistical information data base) in order to monitor the business  
7 and operational status, to detect possible problems in real-time and to provide up-to-date information for  
8 crisis management scenarios.  
9

1 More into detail, Business and operations monitoring gives the T2S Operator the possibility to perform a  
2 real-time monitoring of the platform in terms of:

- 3 | Performances;
- 4 | Transactions transit and response times;
- 5 | Ongoing fulfilment of SLA commitments and expectations;
- 6 | Volumes and values exchanged;
- 7 | Actors activity on the system;
- 8 | Usage of liquidity.

9 The scope is to allow an early detection of possible system anomalies through the continuous comparison of  
10 reported data with standard patterns. Besides that, the data can be used to improve the system behaviour  
11 or its usage through a better understanding of the relevant dynamics.

12 The Business and operations monitoring application process extracts, merges and organizes the data in  
13 forms of tables, grids and graphs to ensure both the depth of the underlying information and its prompt  
14 usability.

15 In order to exclude any even remote impact on the system performances, the module makes use of a differ-  
16 ent set of data which are replicated from the original ones.

17 Business and operations monitoring interfaces are available in U2A mode only.

#### 18 1.6.5.5 Archiving management

19 The archiving management application process copies inbound and outbound messages and specific internal  
20 messages, mentioned hereafter, from the operational data base and store them in their original format into  
21 a centralised archive for audit and regulatory purposes. Archiving management is scheduled on daily basis  
22 and it archives data for a period of ten years.

23 In addition, archiving management provides the T2S Operator with the possibility to extract previously ar-  
24 chived data either for its own purpose or on behalf of a CSD, a CB or a directly connected participant.

25 The internal Liquidity Transfers messages exchanged between T2S, CLM, RTGS and TIPS: camt.050 and  
26 camt.025 are archived in LeA.

27 Moreover, concerning the Legal assessment on T2S - ECMS interaction and messages exchanged in the in-  
28 ternal network (European market infrastructure network), the following list of business cases lead to an ad-  
29 ditional set of internal messages that are archived in LeA:

- 30 | Case 1 – Collateral Settlement Instruction from ECMS to T2S (both for CSDs and NCBs) and related sta-  
31 | tus updates/confirmations
- 32 | Case 2 – T2S relocation notification to ECMS (both for CSDs and NCBs) – these messages will be sent  
33 | from ECMS to LeA
- 34 | Case 3 – Cancellation collateral Settlement Instruction from ECMS to T2S (both for CSDs and NCBs)
- 35 | Case 4 – Flat files report exchanged between T2S and ECMS (only for NCBs)

- 1 | Case 5 – Referenced data related to auto-col from ECMS to T2S (only for NCBs) - these messages will be  
 2 sent from CRDM for T2S to LeA  
 3

Message	INBOUND/OUTBOUND (FROM T2S PERSPECTIVE)	SERVICE SENDING TO LEA	BUSINESS CASE
SecuritiesSettlementTransactionInstruction (sese.023)	Inbound	T2S	Case 1

Flat files holdings, transactions and pending instructions and related response	Outbound	T2S	Case 4
Flat file instead of CollateralValueCreationRequest (reda.024)	Inbound	T2S (CRDM)	Case 5
EligibleSecuritiesCreationRequest (reda.025)	Inbound	T2S (CRDM)	Case 5
CloseLinkCreationRequest (reda.027)	Inbound	T2S (CRDM)	Case 5
EligibleSecuritiesDeletionRequest (reda.075)	Inbound	T2S (CRDM)	Case 5
CloseLinkDeletionRequest (reda.077)	Inbound	T2S (CRDM)	Case 5

4 1.6.5.6 Trouble management

5 **1.6.5.6.1 Concept**

6 The Trouble Management System (TMS) is a tool where the T2S Operator tracks all interactions with the  
 7 entitled T2S Actors. Following the naming convention of the Information Technology Infrastructure Library  
 8 (ITIL) used in T2S, events captured in the TMS can be

- 9 | Incidents,
- 10 | Problems and
- 11 | Service requests

12 T2S Actors have read-only access to the TMS.

1 **1.6.5.6.2 Overview**

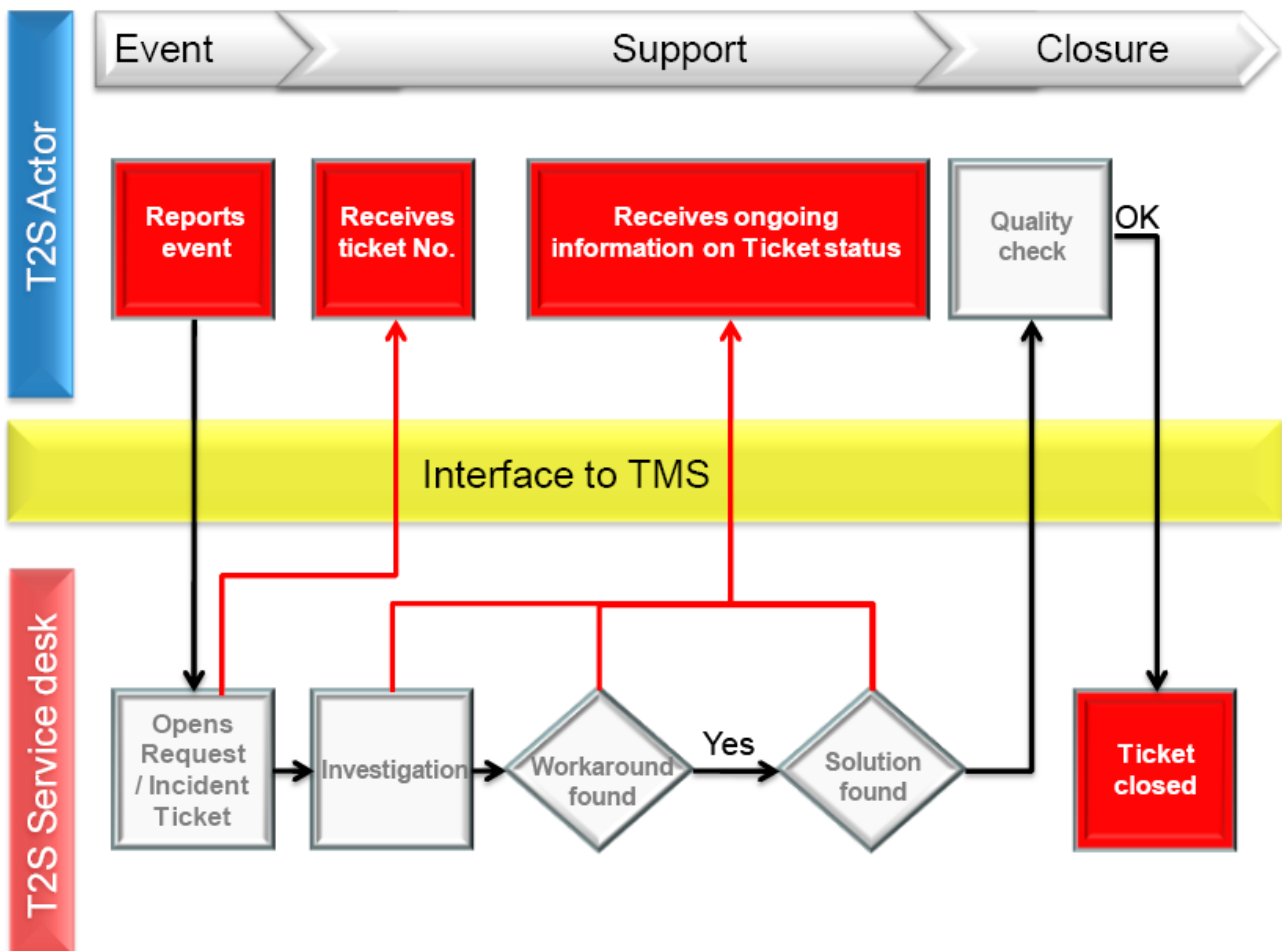

2 The entitled T2S Actors are able to report any event or to submit a request via telephone or e-mail to the  
 3 T2S Service Desk. They receive an identifier through which they have the possibility to get updates on the  
 4 case through its interface. The final agreement to close a ticket which was opened upon request of a T2S  
 5 Actor must be given by the latter.

6 **1.6.5.6.3 Trouble management process**

7 The T2S Actor in whose name the case is opened, is entitled to access the related item in the TMS through a  
 8 dedicated interface which is made available to it. The key to retrieve the information is the case number  
 9 which the reporting actor is provided immediately when calling or via a return e-mail, should the latter be  
 10 the way of getting in touch with the T2S Service Desk.

11 Each item within the TMS has a life cycle from the opening until the closure through updates and status  
 12 changes. Every time the case is impacted by one of such events, the concerned T2S Actor receives a notifi-  
 13 cation where it is invited to have a look at the case to be informed about the occurrence. The closure of a  
 14 TMS case needs always the reporting T2S Actor agreement to be performed.

15 **DIAGRAM 198 - OVERALL VIEW OF THE TMS**

16

## 1 1.6.5.7 Invoicing

### 2 **1.6.5.7.1 Concept**

3 The Billing common component (BILL) provides the functionalities for the management of the T2S invoices,  
4 in particular for the aggregation of the daily billable items, its enrichment into invoice data and the central-  
5 ised creation and management of invoices.

6 The involved actors and their relevant activities are:

- 7 | The Operator monitors the correct functioning of BILL and is responsible for the invoice creation and  
8 sending and, in exceptional circumstances, for the cancellation of the invoices;
- 9 | The ECB actor manages the invoices to be issued to the CSDs and CBs – including the possibilities to in-  
10 sert manual corrections at System Entity level and querying the invoices via U2A at System Entity level;
- 11 | The CSDs actor receives via A2A their invoice data and invoices and can access BILL via U2A in order to  
12 view and/or download their invoices in PDF format;
- 13 | The CB actor can:
  - 14 – optionally receive consumption messages;
  - 15 – receive its own invoices via A2A;
  - 16 – access the system and query invoice data of its participants via U2A and manage manual corrections  
17 for the participants' invoices;
  - 18 – access the system and view/download the created invoices (its own as System Entity and the ones of  
19 its participants) in PDF format;
  - 20 – optionally configure direct invoicing (i.e. managing of participant invoice inside BILL)
  - 21 – optionally configure direct debiting (i.e. automatic sending of a debit liquidity transfer for the amount  
22 of the invoice) for the payments of its participants' invoices.
- 23 | Each CB participant (Payment Bank or Ancillary System) can, if configured by the relevant CB, receive its  
24 invoices via A2A and receive a direct debit on its account in order to pay the fees. They can, moreover,  
25 access BILL via U2A to query their invoices.

26 BILL creates a separate invoice for each service, T2S included.

### 27 **1.6.5.7.2 Overview**

28 The BILL requires as input a daily gathering of the billable items. Each service (T2S included), service com-  
29 ponent and common component identifies the respective billable items and communicates them to the BILL.

30 The daily communication of the billable items has a twofold purpose:

- 31 | gathering all the information on the usage of the services, service component and common components  
32 and on the billable events related to the participants; these pieces of information (billable items) are the  
33 basis for the invoice data calculation;
- 34 | enriching the billable items with information valuable for the invoice creation (e.g. party to be charged).

1 The daily gathering and enriching allows the BILL to generate invoices on flexible billing periods in case of  
2 need and under exceptional circumstances.

3 On the basis of the daily enriched data, at the end of the monthly billing period, the BILL aggregates the  
4 billable items into consumption data.

5 The generated consumption data are, then, enriched with the relevant prices on the basis of the service  
6 items configured in CRDM.

7 The service items are assigned a unit price to be applied in a specific billing period.

8 The consumption data can be packed into messages and sent to the relevant CBs if they have opted for  
9 receiving it. This functionality is available for the CBs only: CSDs are not allowed to opt for the reception of  
10 the consumption message.

11 The consumption data in the billing period, enriched with the charged amounts and aggregated per service,  
12 billing period, party to be charged, System Entity of the party to be charged and service item are called in-  
13 voice data. The invoice data are the foundation of the monthly invoice and they are stored and frozen after  
14 their creation. If needed, e.g. in case of an error in the unit price, the Operator can regenerate the invoice  
15 data.

16 In exceptional cases, the Operator can exceptionally rerun the process of generation of the consumption  
17 data. In this case, also the invoice data are generated again.

18 Before the creation of the invoices, the invoice data can be complemented with additional service items in-  
19 serted as manual corrections for both CBs and CB Participants. The fees of the additional service items can  
20 be positive or negative.

21 On the invoice creation date, the invoices are created on the basis of the invoice data and the related manu-  
22 al correction:

- 23 | Invoices for System Entities (CBs and CSDs), including a cumulative overview of fees for the participants  
24 within its community of a given service and its own fees for the usage of a given service, issued by the  
25 ECB. T2S CSD invoices are System Entity only;
- 26 | Invoices for CB participants (for CB who opted for sending the invoices to their Participants in the CRDM  
27 Invoice configuration), comprising of the fees of an individual participant of a given service, issued by  
28 their System Entity.

29 Each invoice is assigned a unique number and stored as PDF file. These PDF Invoice files can be, depending  
30 on the proper authorisation and data visibility, retrieved by the Operator, ECB users, CB users, CB-  
31 Participant users and CSD users.

32 Additionally, if properly configured, the party to be charged can receive the invoices via A2A message.

33 If the party to be charged is a CB Participant and its responsible CB has configured it for direct debiting, the  
34 BILL creates a direct debit message to debit the account of the CB Participant. The accounts involved in the  
35 direct debiting must be properly configured in CRDM, otherwise the direct debiting is not generated and the  
36 Operator is alerted. <sup>410</sup>

---

410 The direct debit functionality will only work when CLM goes live in Nov 2022.

1 In exceptional circumstances, the Operator can request the cancellation of an invoice. The cancelled invoice  
2 remains stored in the BILL repository and its unique number cannot be used again. After invoice cancella-  
3 tion, a new invoice for the same service, party and billing period can be generated.

#### 4 **1.6.5.7.3 Invoice creation process**

5 In preparation for the creation of an invoice, BILL daily gather the billable items on T2S that CSD, CB or CB  
6 participants used during a billing period.

7 The aggregation and enrichment phase is triggered by BILL after the reception of the data. During this  
8 phase, BILL enriches it with additional information stemming from CRDM, necessary for the correct execu-  
9 tion of the further BILL process steps, and it performs a daily aggregation.

10 The gathering of data and the aggregation of data must be executed independently so that any delay or  
11 error on one service/component does not affect the management of the data/invoices of the others. The  
12 process on Common Components could have an impact on the overall process, since Common Components  
13 information is relevant for the overall computation. Furthermore, closed/deleted CRDM entities (e.g. parties,  
14 accounts) are taken into consideration in the enrichment phase, if needed.

15 In the first business day of the month BILL triggers the generation of the consumption data and subsequent-  
16 ly of the invoice data for the previous month. The consumption and invoice data generation triggered by  
17 default is always related to the whole previous month: in exceptional circumstances deviations could be in-  
18 serted by the Operator to define shorter periods.

19 The consumption and invoice data generation is performed in two sub-steps.

20 In the first sub-step the gathered billable items are aggregated into consumption data by System Entity of  
21 party to be charged, party to be charged and billing period.

22 In the second sub-step the BILL enriches the consumption data with the pricing information of the service  
23 items configured in CRDM and valid in the given billing period.

24 When creating the invoice data, the BILL aggregates all the consumption data for the parties including the  
25 billable items related to service items with a price of zero.

26 As a general approach, the aggregation of the invoice data has two levels of details:

- 27 | cumulative billing data: aggregated information - for a specified period - for each service item;
- 28 | itemised billing data: billing data information on party and account level - for a specified period - for  
29 each service item.
- 30 | The invoice data is the baseline to produce the invoices for a given billing period. The invoice data are  
31 stored and cannot be amended, unless the Operator performs the invoice data regeneration. It is not  
32 possible to regenerate invoice data if the related invoices have been created and are valid (not can-  
33 celled).

34 If configured in the Invoice Configuration in CRDM, Central Banks can opt to receive a consumption mes-  
35 sage, which can be used as raw data for the CBs' internal billing processes. A consumption message contains  
36 aggregated consumption data by party to be charged and billing period, regarding the set of chargeable  
37 items used by the CB and its Participants.

- 1 The consumption message includes the following list of attributes:
- 2 | Service (T2S);
  - 3 | BIC of the relevant CB;
  - 4 | billing period;
  - 5 | billable item code;
  - 6 | billable item category (Settlement Service, Account Management Service, Information Services);
  - 7 | cash account (if relevant);
  - 8 | party to be charged;
  - 9 | total number of the billable item.
- 10 Prices are not included. In case a CB opts in or opts out for the consumption message of T2S, the changes  
11 are valid only from the following billing period on.
- 12 The consumption message is sent in push mode based on the message subscription and routing configura-  
13 tion set up for the CB for the camt.077 message. In case the computation of monthly consumption data of a  
14 billing period is recalculated/regenerated due to the operational procedure under exceptional circumstances,  
15 BILL could re-send the consumption message to the respective CBs.
- 16 After the creation of the invoice data and before the expiration of the manual correction timeframe, defined  
17 in CRDM for T2S (i.e. manual correction period), the BILL allows the insertion of additional service items on  
18 top of already calculated invoice data, through the U2A mode. However, details on how to apply manual  
19 corrections are described in the UHB.
- 20 This process involves:
- 21 | the ECB actor that can manually correct the invoice data of CSDs, CBs and CB Participants. When insert-  
22 ing a manual correction in a System Entity invoice, the ECB can specify if that correction impacts also  
23 specific Participant(s). In this case, the relevant Participant(s) invoice(s) is/are impacted. The ECB is al-  
24 lowed to perform changes on the System Entity invoices only until the CBs are eligible to start the cor-  
25 rection of Participant invoices.
  - 26 | the CB actors that can manually correct the invoice data of their Participants. Corrections performed on  
27 CB Participants invoice data do not affect the CB invoice data.
- 28 The manual correction step can be performed on invoice data related to a Party and a given billing period.  
29 The manual correction is allowed only if the relevant invoice has not been created yet, or if it has been al-  
30 ready cancelled.
- 31 During the manual correction step, the involved responsible actor can identify the invoice data by System  
32 Entity, party to be charged and billing period. Once the relevant invoice data has been selected, the respon-  
33 sible actor can insert additional service items specifying:
- 34 | the party to be charged;
  - 35 | the category and the type of fee to apply;
  - 36 | the consumption, the percentage or the fixed amount to be applied.

1 When inserting the service items, the actors can use the ones already available in CRDM for T2S or insert  
2 new ones on their own, along with a description. In case a new service item is inserted, it should differ from  
3 any registered service item code stored in CRDM for T2S and it will be valid only within the invoice that is  
4 being created.

5 If an existing service item is inserted in a manual correction, BILL applies the VAT configured for the respec-  
6 tive service item. In case of a free text manual correction, the user inserting it must specify the VAT rate to  
7 be applied, if any – otherwise 0 is considered.

8 The values, percentages or amounts of the additional service items can be either positive or negative.

9 The ECB and each CB could insert an additional free text as a manual correction which will then be included  
10 in the footer of the PDF invoice.

11 The invoice creation step is triggered as soon as the invoice creation timeframe is reached. Under specific  
12 circumstances, the step can be triggered manually by the Operator. Two different levels of invoices are cre-  
13 ated by BILL:

- 14 | invoices for System Entities (CBs and CSDs), including a cumulative overview of fees for the participants  
15 within its community of a T2S and its own fees for the usage of T2S, issued by the ECB;
- 16 | invoices for CB participants, comprising of the fees of an individual participant of T2S, issued by their  
17 System Entity.

18 If a CB has opted to invoice its participants outside BILL, no participant invoice shall be created for partici-  
19 pants of this System Entity. CSD invoices are System Entity only.

20 BILL creates invoices for each Party to be charged: the usage of common components will be charged  
21 through the above invoices. The invoice is computed on the basis of the invoice data and the manual correc-  
22 tions, taking into consideration also VAT rates configured by CBs and assigned to service items.

23 The invoice creation process foresees that:

- 24 | each calculated invoice is enriched with header information (e.g. a unique invoice number – unique and  
25 sequential for Service (T2S) and Country-, the information on sender and receiver, the relevant billing  
26 period);
- 27 | the BILL assigns the invoice a due date on the basis of the invoice creation date, the T2 calendar and  
28 due date offsets (System Entity and Participant) specified as a number of business days and defined in  
29 CRDM;
- 30 | the calculated invoices are stored as PDF document.

31 Only one valid invoice for the Service (T2S) and Party to be charged over a specific billing period can exist.

32 BILL generates a unique, unambiguous invoice number for each created invoice. The generated invoice  
33 number has a pattern that allows identifying the Service and the Country the invoice is issued for. The Coun-  
34 try and Service are be identified in the first digits of the invoice number, such that invoice numbers within a  
35 country and service are increasing by increments of one, as for the following 35 digit pattern:

36 CCCSXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

37 CCC: country code, in the form of the numeric num-3 code described in the ISO 3166-1:2020. Due to the  
38 fact that the ECB is not included in the standard, then the code 001 will be used.

1 SS: Interested TARGET Service ("02" value is used for T2S)

2 XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX: unique and sequential number for Country and Service, starting

3 from 000000000000000000000000000000001

4 Some examples:

5 38002000000000000000000000000000000001 for IT T2S, 2760200000000000000000000000000001 for DE

6 T2S, etc.

7 Since CSDs are not linked to any Country, the Country will not be considered in the invoice number pattern

8 with the removal of the country code and the enlargement of numeric part to 33 digit.

9 02000000000000000000000000000000000001

10 In case two or more System Entities are configured for a specific Country (each of which refers to a different

11 currency), then the same pattern will be applied: for a specific billing period, each of them will receive an

12 invoice referred to the common country with increment of the sequence number.

13 The duly authorised customers can access the invoices, depending on their datascope:

14 | via A2A query, in order to retrieve invoice data and possible manual corrections: both cumulative billing

15 data (aggregated) and itemised billing data (detailed);

16 | via U2A, in order to retrieve the invoice generated in PDF format. In this case, ECB users can access all

17 System Entity invoices, CB users can access its own Invoice and the ones of Participants under their de-

18 fault datascope, Participants can access their own Invoices. A CB can download all PDF invoices it has is-

19 sued for a billing period. Additional details will be described in the UHB.

20 After the invoice creation, the BILL sends it to the relevant recipient in A2A and it makes the PDF available in

21 U2A.

22 BILL, by default, sends one invoice per System Entity (CBs and CSDs) via push mode in Application-to-

23 Application mode (A2A) using the BillingReport (camt.077) message to the party technical address of the

24 interested CB or CSD and makes available for downloading a PDF version of the invoice in the BILL GUI. A

25 proper message subscription for camt.077 has to be performed in order to receive the message.

26 BILL generates the invoices of the CB participants. Furthermore, CBs are allowed to opt for the direct invoic-

27 ing to their Participants: in this case, all invoices charged by CBs to their CB participants are sent out directly

28 to each Participant. Each CB can then download the invoices related to their participant in the BILL GUI.

29 Central Banks can configure the automatic sending of Direct Debit (DD) for the charging of the invoices sent

30 to their Participants.

31 Billing creates DD orders on the invoice due date and submits them to CLM, to debit the participant prede-

32 fined account for debits and credit the predefined account for credits, as configured in CRDM.

33 The invoice number is referenced in the payload of the message to help involved actors identifying the

34 transactions related to Billing in their records.

35 The account to be debited must be an existing MCA (not necessarily under the CB scope) denominated in

36 euro, while the account to be credited must be any account eligible to be credited by Direct Debit in CLM.

- 1 CSDs and CBs invoices are not charged by means of DD. If a DD is rejected during EoD due to lack of cash,  
2 no further direct debit is automatically created by BILL and the respective CB shall follow-up with the partici-  
3 pant bilaterally.
- 4 The PDF invoices are created on the basis of templates that have a standard structure based on:
- 5 | Invoice header:
    - 6 – Invoice number;
    - 7 – Billing period;
    - 8 – Service (T2S);
    - 9 – Invoice date and due date;
    - 10 – Name, address of invoice issuer;
    - 11 – Logo of the invoice issuer;
    - 12 – VAT ID of the invoice issuer;
    - 13 – name, address and VAT ID of invoice recipient;
    - 14 – Title (possibly different for Invoice/Request for Payment)
  - 15 | The list of the applied service items on the basis of the invoice data, with the indication of line number,  
16 service item code, description (label), service item code, VAT rate (if any and only for participant invoic-  
17 es), quantity, unit price and total amount;
  - 18 | The list of additional service items (manual corrections);
  - 19 | Subtotal per VAT rates (if any);
  - 20 | Subtotal without tax and total tax amount;
  - 21 | Grand total;
  - 22 | A footer containing textual remarks and notes:
    - 23 – legal mentions and means of payment (including values for the MCA to be debited by Direct Debit for  
24 participant invoices (if configured) and the due date);
    - 25 – free text;
    - 26 – a note which specifies if the invoice/request for payment contains at least one service item for which  
27 the prorating is applied due to the participation to a Billing Group
- 28 The ECB and each CB actor can customise the template by adding the legal mentions, the free text and the  
29 means of payment, setting these values (common for all invoices issued for T2S) in their CRDM Invoice Con-  
30 figuration. In addition, the free text in the footer can be customised for each participant invoice using the  
31 manual correction BILL functionality. Finally, the ECB and CBs can request the Operator to memorise a logo  
32 that is then, used respectively for the CBs invoices at System Entity level and for the Participants invoices –  
33 each participant invoice shows the logo linked to its CB.
- 34 If properly configured by the relevant CB, a different template can be used for the PDF in case of partici-  
35 pants which are tax exempt, removing any mention to VAT with the classification of the document as “re-  
36 quest for payment” related to a “reference period”.

- 1 For CSD, no additional CRDM configuration is required, but address and any other invoice data are extracted
- 2 from the already existing Party data.
- 3 Even if present in the invoice data, the PDF invoice does not report service items whose amount is 0.
- 4 Within the PDF invoice, the reported amounts for each service item are rounded to the second decimal digit.
- 5 However, the total amount of the invoice is based on the unrounded figures of the underlying service items
- 6 and therefore the sum of the underlying service items (rounded to two decimal digits) may not match with
- 7 the total amount of the invoice (rounded to two decimal digits).
- 8 Please find below, an example of a PDF invoice.

<sup>2</sup> optional usage, i.e. not demanded by postal authorities  
<sup>3</sup> i.e. city/town/village  
<sup>4</sup> optional usage, i.e. not necessarily used in all countries

2

**3 1.6.5.7.4 Invoice cancellation process**

4 The ECB (for CBs and CSDs) and CBs (for their participants) can request the Operator to cancel a previously  
 5 generated invoice. The invoice cancellation can be executed on the latest created invoices – it is not possible  
 6 to cancel an invoice related to the billing period x if the BILL has already created invoice data for the billing  
 7 period x+1.

1 The invoice cancellation consists in marking the current invoice as cancelled; the related PDF is stored with  
2 specific information in the header of the file ("invoice cancelled").

3 When an invoice is cancelled, it is possible to regenerate the relevant invoice data or to add manual correc-  
4 tions to the already existing invoice data.

5 The invoice can, then, be generated again.

6 Upon invoice cancellation, the relevant CSD or CB is informed about the cancellation. The PDF version of the  
7 cancelled invoice is stored in the BILL and the relevant actor can download it.

8 In case the invoice is cancelled before generating the Direct Debit, the BILL does not proceed with the Direct  
9 Debit execution.

10 If the Direct Debit has been already produced and settled, the invoice cancellation is not allowed.

#### 11 **1.6.5.7.5 Information provisioning process**

12 CSDs and CBs have the possibility to receive information on data collected for invoicing through the execu-  
13 tion of queries. The data provide information on charged service items and the number of their usage.

14 The data for delivery can either be itemised or cumulative billing data.

- 15 | Itemised billing data provide information on the level of a single CSD- or CB client, i.e. on the level of  
16 single accounts or parties. It includes data on a client's usage of T2S services and the resulting invoicing  
17 amount.
- 18 | Cumulative billing data are data aggregated for one CSD or CB. Therefore, they are not as detailed as  
19 the itemised billing data.

20 All information can be requested by the CSDs or CBs in A2A or User-to-Application mode (U2A) via BILL  
21 screens. For further details on the GUI functionality and the respective screens, please refer to the UHB.

#### 22 **1.6.5.7.6 Billing data collection process**

23 On a daily basis, BILL collects data for the creation of invoices. This data refer to the following service cate-  
24 gories:

- 25 | Settlement services (e.g. DVP-, FOP-, PFOD settlements);
- 26 | Account management services (e.g. securities account);
- 27 | Information services (e.g. generated Queries, Reports).

28 The invoicing characteristics of each service category and the associated data are explained in the following  
29 sections.

30 The data BILL counts are defined as "service items". The different service items are either charged per a  
31 securities account, a T2S dedicated cash account or a party.

- 32 | Items charged to securities accounts are assigned to CSD invoices;
- 33 | Items charged to T2S dedicated cash accounts are assigned to CB invoices;

1 | In case of items charged to parties the assignment to a CSD or CB invoice depends on whether the  
 2 | charged party is linked to a CSD or to a CB. In T2S CSD participants are linked to a CSD and payment  
 3 | banks are linked to a CB.

4 | The tables below provide an exhaustive list of T2S service items to which a charge may apply, i.e. not all of  
 5 | the listed service items are subject to pricing. In addition, the tables include information on each service  
 6 | item’s counting and charging as well as further information. Detailed information about the prices for each  
 7 | service item is part of a separate pricing list and is not included in this document. The pricing list also shows  
 8 | which items are charged with a price of zero at the moment. If the price of a service item or the number of  
 9 | counted events during a billing period is zero, this service item does not appear on the invoice.

10 | To ease the understanding of the columns, two service items (i.e. DVP full and Settlement Modification -  
 11 | Amendment) are exemplary explained in detail:

- 12 | | In case of a DVP full transaction, both counterparties sending the respective instructions are charged,  
 13 | i.e. the owner of the credited as well as the owner of the debited securities account. Cash legs of DVP  
 14 | full transactions, i.e. credited and debited T2S dedicated cash accounts, are not object of the charging  
 15 | process. With reference to the column “Counted Events”, the table illustrates that each successful set-  
 16 | tlement of a DVP Settlement Instruction during a billing period is charged. Accordingly, for each settled  
 17 | DVP transaction two accounts are charged;
- 18 | | In case of “Settlement Modification – Amendments”, it is possible that each Settlement Instruction of a  
 19 | settlement transaction is amended on its own (e.g. by a partial settlement indicator). Each amendment  
 20 | to an already existing Settlement Instruction is charged to the account of the initiating party. This can ei-  
 21 | ther be the credited- or the debited securities account. Accordingly, for each Settlement Modification –  
 22 | Amendment only one account is charged. If both instructions are amended, both are charged.

Account Allocation (DVP account allocation) last partial (daytime – congestion period) <sup>432</sup>	X	X	Each partially settled DVP transaction completing the settlement: <ul style="list-style-type: none"> <li>  settled during the congestion period of the daytime cycle</li> <li>  booked on at least one account with a "DVP/FOP account allocations" flag</li> <li>  settled during the billing period</li> </ul>	Both accounts are charged. Even if only one account is marked with a "DVP/FOP account allocations" flag, the price for Account Allocations applies for both parts of the DVP transaction. The charge applied is an additional surcharge to the daytime surcharge.  DWPs are charged in the same way like DVPs.  Realignment Instructions are not charged.
Account Allocation (FOP account allocation) matched	X	X	Each FOP transaction: <ul style="list-style-type: none"> <li>  booked on at least one account with a „DVP/FOP account allocations" or a „FOP account allocations" flag <sup>433</sup></li> <li>  successfully matched in T2S</li> <li>  during the billing period</li> </ul>	Both accounts are charged. Even if only one account is marked with a "DVP/FOP account allocations" or "FOP account allocations" flag, the price for Account Allocations applies for both parts of the transaction. The charge applied is a standard matching charge.

432 The congestion period will be determined by the event RTCL.

433 In case an Account Allocation settles on two accounts which are differently flagged (i.e. one account with 'DVP/FOP account allocations flag' and one with 'FOP account allocations flag'), it is allocated according to the underlying instruction. FOP instruction triggers Service Item (FOP account allocation) and DVP/DWP trigger Service Item (DVP account allocation).

434 In case of an Account Allocation both accounts are charged, although only one of these accounts is flagged for Account Allocation.

## 1.7 Limitations of the system

### 1.7.1 Timeout management

Due to a timeout limit of the connectivity services provider the execution time of a query request is limited.

If the execution is not finished within a certain period of time, the network communication is interrupted.

In order to heal the timeout limit of the connectivity services provider, T2S applies an effective protocol. T2S defines a timeout limit that anticipates the timeout limit of the connectivity services provider. If the processing takes longer than the T2S timeout limit the transfer mode of the response changes from real-time to store and forward. The store and forward mode delivers all requested data properly.

The T2S timeout limit is considerably lower than the timeout limit of the connectivity services provider.

The following sequence illustrates the timeout management protocol:

- 1 | The customer client sends a query request in real-time mode to T2S. The timer is up with the reception of the message in T2S.
- 2 | T2S processes the query request but the processing time exceeds the T2S timeout limit.
- 3 | If T2S cannot respond to the query request within the timeout limit, an "Oversize and timeout" ReceiptAcknowledgement is sent as query response to the T2S actor (sender) indicating that a T2S timeout occurred. The related reference indicates "NONREF". The correlation to the query has to be identified on network layer.
- 4 | T2S continues to prepare the response. When the data is available, the data is sent in store and forward mode to the T2S actor (sender) according to the default routing rule for the message channel. If in addition the response is oversized it is sent according to the default routing rule for the file channel (see below).

The timeout value on network layer is fixed by the specification of the connectivity services provider. The T2S timeout value is variable and is tuned to the maximum.

### 1.7.2 Oversized Data Management

Depending on the channel that is used the size of a message is limited by the connectivity services provider.

Messages that exceed the size limitation are blocked by the network.

The size limitation has consequences for messages that are received and sent by T2S.

Messages sent by a T2S actor that may breach the size limit have to be checked for their size before transmission. If the size limit would be breached, the request has to be set-up in a way by the T2S actor (sender) to obey the size limits. This might lead to several independent requests, where each of them is respecting the size limitation.

The T2S actor may send the request using one of the two channels:

- 1 | Message channel
- 2 | File channel

The table below shows the size limits for the various channels for data sent by a T2S actor.

**TABLE 205 - SIZE LIMITS FOR THE VARIOUS CHANNELS**

	MINIMUM LENGTH	MAXIMUM LENGTH
Message channel	0	32 kB
File channel	0	32 MB

If compression is arranged with T2S the decisive size is the size of the message after compression. The size of a file after decompression must not exceed 100MB. If the file size limitation is breached T2S sends an error information on network layer to the T2S actor (sender). For the outbound processing the maximum file size of uncompressed communication must not exceed 99 MB.

The size limits are referring to the XML business data including business application header (BAH) or file header (FH), i.e. data of the network layer (DEP ExchangeHeader) is not included with respect to the size limits.

For further information please see section Outbound traffic exceeding given size limitations.

### 1.7.3 Timeout management in combination with oversized data

If T2S cannot respond to the query request within the timeout limit, an "Oversize and timeout" ReceiptAcknowledgement is sent as query response to the T2S actor (sender) indicating that a T2S timeout occurred. The related reference indicates "NONREF". The correlation to the query has to be identified on network layer. No additional message indicating the breach of the size limit is sent.

### 1.7.4 Compression

A global compression size limit of 2 kb is defined valid over all networks. Only the messages sent by T2S which exceed this limit will be compressed due to the overhead for the compression of small messages.

All the XML business data has to be compressed including BAH or FH. Data belonging to the network protocol (DEP ExchangeHeader) is not compressed. That is valid for messages sent by a T2S actor as well as sent out by T2S.

The compression algorithm supported by T2S is the ZIP algorithm (i.e. ZIP deflate and the BASE64 RFC 2045).

If the decompression of inbound communication is not successful, T2S sends an error information on network layer to the T2S actor indicating the decompression failure. The correlation to the original inbound message has to be identified on network layer.

### 1.7.5 Real-Time Communication (Query Responses)

The channel for query responses and the communication mode depends on the size of the response and the channel that was used for the query request.

1  
2

**TABLE 206 - QUERY RESPONSES AND THE COMMUNICATION MODE DEPENDING ON THE SIZE OF THE RESPONSE**

REQUEST	RESPONSE SIZE < 32 KB	RESPONSE 32 MB > SIZE > 32 KB	RESPONSE SIZE > 32 MB
Message channel Real-time	Message channel Real-time	File channel Store and forward	No transmission
File channel Real-time	File channel Real-time	File channel Real-time	No transmission

3 When the size of the response is suitable the same channel that was used for the query request is used.

4 | The query response is sent in real-time mode.

5 When the request is sent via the message channel and the size of the response is too large for a transfer via  
6 the message channel the file Store and forward channel is used.

7 | T2S sends an "Oversize and timeout" ReceiptAcknowledgement in real-time mode to the T2S actor  
8 (sender) indicating the change of the transfer mode. The related reference indicates the Business Mes-  
9 sages Identifier of the request.

10 | The query response is sent in store and forward mode according to the default routing rule for the file  
11 Store and forward channel.

12 In general, if the size of the response is too large for a transfer via the file channel the transmission is  
13 aborted.

14 | T2S sends an "Oversize and timeout" ReceiptAcknowledgement in real-time mode to the T2S actor  
15 (sender) indicating the abortion. The related reference indicates the Business Message Identifier of the  
16 request.

17 | The query response is not sent.

18 In case a certain response exceeds the maximum size of 32 MB for a transfer via the file channel, this T2S  
19 outbound message may be split into several parts. For the list of the relevant messages and further details  
20 please see section Outbound traffic exceeding given size limitations.

21 It depends on the settings in Static Data and the global compression limit whether the response is com-  
22 pressed or not.

23 **1.7.6 Store and Forward Communication (Reports, Notifications)**

24 | The channel for the transmission of push messages can be configured by the receiver via dedicated rout-  
25 ing rules. These routing rules have to follow the technical restrictions for the various channels, i. e. it is  
26 not possible to configure a rule for the message channel for messages larger than 32 kB, while a routing  
27 rule for the file channel for messages with a lower size than 32 kB would be valid.

28 | If no routing rule is configured for a present communication, the default routing rules are applied. The  
29 default rules foresee a routing via the message channel for all messages up to 32 kB and a routing via  
30 the file channel for all larger messages.

- 1 | Unless the user has subscribed to the optional bundling of messages into files, it depends on the settings  
2 | in Static Data and the global compression limit whether the response is compressed or not.
- 3 | As sequence reporting in the NTS T2S sends to the T2S Actors a bundled file including settlement status  
4 | advices, posting notification, etc resulting from the execution of the settlement sequence. The file size is  
5 | up to 32 MB. If the file size limitation would be breached, T2S sends several files.
- 6 | In case the T2S Actors opt to receive outbound messages bundled into files T2S sends nearly all mes-  
7 | sages bundled into files considering the elapse time or maximum number of messages (see section  
8 | [Common rules for messages and files addressing](#) [▶ 120]).
- 9 | For reports that would breach the size limitation of 32 MB, please see section Outbound traffic exceeding  
10 | given size limitations.

### 11 | **1.7.7 Rule-based configurations**

12 | ~~The T2S application allows T2S Actors to configure in a flexible way the following Static Data~~  
13 | ~~features:~~

- 14 | ~~| Message subscription (See section Message subscription)~~
- 15 | ~~| Restriction types (See section Restriction types)~~
- 16 | ~~| Conditional securities delivery rules (See section Conditional Securities Delivery Configura-~~  
17 | ~~tion)~~

18 | ~~Each T2S Actor can have many active rule sets at any given point in time. Each rule set can in-~~  
19 | ~~clude many rules. Each rule can include many groups of parameters.~~

20 | ~~The maximum overall number of groups of parameters for the active rule sets is:~~

- 21 | ~~| 5000 for restriction types configurations;~~
- 22 | ~~| 1500 for message subscription configurations;~~
- 23 | ~~| 1000 for conditional securities delivery configurations.~~

24 | ~~Each rule can include many parameters. Within each rule, each parameter can be linked to~~  
25 | ~~many distinct values. The maximum overall number of distinct values for the active rule sets is:~~

- 26 | ~~| 100 for restriction types configurations;~~
- 27 | ~~| 100 for message subscription configurations;~~
- 28 | ~~| 50 for conditional securities delivery configurations.~~

29 | ~~Only the parameters for restriction types configuration can also include market specific attrib-~~  
30 | ~~utes. In this case, the maximum number of market specific attributes, applicable for restriction~~  
31 | ~~types configurations, is 10 for all the restriction types of any given CSD and a maximum of five~~  
32 | ~~per restriction type rule. These two limits cover all types of market specific attributes (i.e. par-~~  
33 | ~~ty market specific attributes, securities market specific attributes and securities account mar-~~  
34 | ~~ket specific attributes). So, for example, if a CSD selects three party market specific attributes~~  
35 | ~~to configure its restriction types, then the same CSD can select no more than 7 (i.e. 10-3) secu-~~  
36 | ~~rity or securities account market specific attributes to configure its restriction types. Similarly,~~

1 ~~if a CSD selects two party market specific attributes to configure one specific restriction type~~  
2 ~~rule, then the same CSD can select no more than three security or securities account market~~  
3 ~~specific attributes to configure the same restriction type rule.~~ (Split Book Approach)

#### 4 1.7.8 Settlement Configuration

5 The T2S application allows for the configuration of several technical parameters regarding the settlement  
6 process. They are set internally to support the system's stable behaviour and avoid technical issues which  
7 would otherwise impact the proper functioning of the T2S platform. No specific configuration by the T2S  
8 Actor is required.

9 The table below summarises the parameters relating to the settlement process:

10 **TABLE 207 - TECHNICAL PARAMETERS RELATING TO THE SETTLEMENT PROCESS**

11

PARAMETER	PARAMETER DESCRIPTION	VALUE FOR PRODUCTION
Maximum number of settlement transactions <sup>458</sup> in a settlement collection <sup>459</sup> (applicable for real-time window only)	Specifies the maximum number of settlement transactions held in a settlement collection taking into account the initial business settlement transactions (including the link sets) and the potential additional settlement transactions like auto-collateralisation transactions, reverse auto-collateralisation transactions, realignment, build up chains, etc ... Beyond this limit, the concerned collection would be processed during the following night time settlement cycle.	2500
Maximum number of earmarked security positions used in an auto-collateralisation solution	Specifies the maximum number of earmarked security positions that can be used by the auto-collateralisation process in order to solve a lack of cash. This is applicable both in the context of auto-collateralisation on flow and auto-collateralisation on stock. Beyond this limit, the potential auto-collateralisation solution is processed with a limited number of selected security positions	100

458 A Settlement Transaction corresponds to two matched Settlement Instructions or a Settlement Restriction

459 A Settlement Collection is the container used to present all linked instructions that need to be settled in the all-or none basis

PARAMETER	PARAMETER DESCRIPTION	VALUE FOR PRODUCTION
	(the solution might then be sub-optimal).	
Maximum number of potential lacks to be solved for a single settlement collection	Specifies the maximum number of lacks (cash, security, CMB) which can be analysed in a settlement collection during the real time settlement cycle. This limit is not applicable during the night time settlement cycle. Beyond this limit, the concerned collection would end up without an Autocollateralisation solution and an unsettled status.	1000
Maximum number of restriction references for settlement transactions with use of restrictions	Specifies the maximum number of restrictions references held in a single settlement transaction. Beyond this limit the additional restriction references are not taken into account for the settlement of the settlement transactions using these references.	10 for security restrictions, 10 for cash restrictions
Maximum size of a realignment chain (number of realignment settlement transactions created for a pair of matched settlement instructions).	Specifies the maximum number of realignment settlement transactions which can be generated in the realignment chain analyser context. Beyond this limit the realignment chain cannot be built. The business instructions are cancelled as per the standard behaviour when the chain cannot be built.	12

### 1 1.7.9 Retention Period for outbound messages

2 Outbound messages are purged three calendar months after the successful transmission. Exceptions are  
3 settlement status/notification messages. For these messages sequencing applies (See section Application  
4 Header). To ensure the business order for these messages the previous messages are needed. These out-  
5 bound messages are only purged three calendar months after the underlying instruction reached the final  
6 status.

## 2 Dialogue between T2S and T2S Actors

### 2.1 Introduction

#### 2.1.1 Objective

Chapter 2 of the UDFS provides a formalised description of the application-to-application interfaces, which allow the business applications of T2S Actors to interact with T2S. This chapter describes the behaviour of T2S regarding the interactions with T2S users, i.e. when sending/receiving messages to/from the latter. This chapter 2 does not enter into any description of the behaviour of users' systems interacting with T2S, since it is not the purpose of this document to predicate the conduct of business of future T2S users.

#### 2.1.2 Structure of the chapter

##### 2.1.2.1 General Approach

The following rules apply:

- | This chapter describes the messages for a given business scenario, exchanged between T2S and the business application of a T2S Actor, directly connected to T2S.
- | This chapter uses UML activity diagrams to present the processes and actions in T2S that result in messages exchanges with the relevant T2S Actor(s).
- | This chapter describes the behaviour of T2S from the perspective of the technically directly connected T2S Actor. The descriptions in this chapter document only the T2S processing steps that trigger a possible outgoing communication to a T2S Actor, e.g. through the sending of status information. The chapter does not document internal processing steps, i.e. those processing steps that do not lead to the disclosure of information (sending of messages) to users.
- | The descriptions in this chapter do not provide the detail provided into the GFS and limit themselves to those descriptions required to understand the context in which T2S would trigger a possible outbound communication to the T2S Actor. Furthermore, the descriptions are not providing the detailed business rules that chapter 3 presents.

##### 2.1.2.2 Breakdown

This chapter describes application-to-application interfaces, which allow the business applications of T2S Actors to interact with T2S to perform the various end-to-end business processes, defined as distinct T2S use cases. Each use case is to be described in a dedicated section of this chapter.

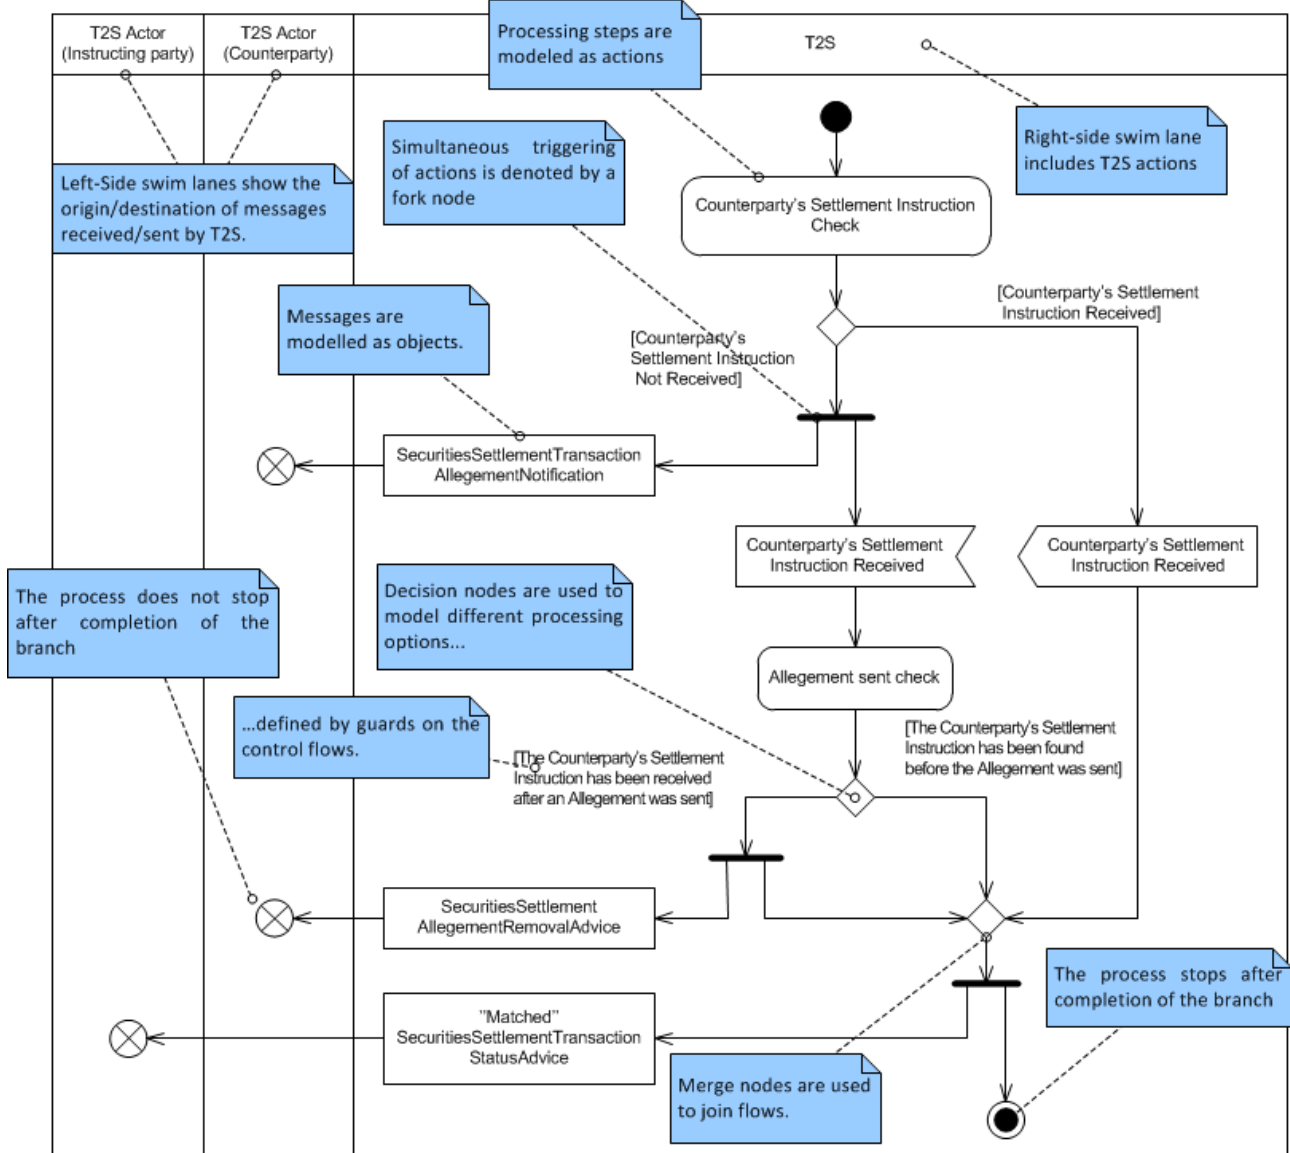

1 **2.1.3 Conventions used**

2 2.1.3.1 UDFS Activity Diagram

3 **2.1.3.1.1 General presentation**

4 For a given Use Case, UML activity diagrams are used to describe the interaction between T2S and the rele-  
 5 vant T2S Actor(s), as per the following example:

6  
 7 Each use case is formalised by one diagram, initially. However, this approach may lead to very complex dia-  
 8 grams when a given use case covers many possible process variations.

9 In such case, the following approaches are used:

- 10 | The decomposition in sub-diagrams;
- 11 | The usage of a universal diagram to cover several use cases of the same type (e.g. securities static data  
 12 update and party static data update as static data update).

1 **2.1.3.1.2 Decomposing a complex diagram**

2 The following example illustrates the possible decomposition of a complex diagram, having two main groups  
 3 of processes (Blocks 1 and 3). The Block 1 requires the further decomposition into an additional sub-process  
 4 (Block 2).

5  
 6 This example assumes the use of four diagrams. The level one diagram shows both elementary activities (1,  
 7 7 and 8) and the aggregated activities (Block 1 and Block 3), marked with the "fork" symbol:

- 1
- 2 On the second level, two diagrams show the decomposition of Blocks 1 and 3 into their elementary activities:
- 3

- 1
- 2 On the third level, one diagram shows the decomposed structure of Block 2:

- 3

- 1 The representation of the diagram complies with the following rules:
- 2 | Only the level 1 diagram depicts the main flow, triggering the activities and ending with a "Final Node" symbol. The other sub-diagrams start with the "Initial Node" symbol and should end systematically with a "Flow Final".
  - 3 | In an activity diagram, it is possible to use both granular actions (those not requiring further decomposition) and aggregated actions (those requiring further decomposition in another diagram).
  - 4 | Each diagram is complemented by a short textual description.

8 **2.1.3.1.3 Using a universal diagram**

9 The UDFS use universal diagrams in cases where the same logic of processing applies for several business scenarios, but the messages T2S receives and sends differ <sup>460</sup>. In these cases, the activity diagram refers to generic messages with the mapping to actual messages documented in a separate mapping table.

12 **2.1.3.2 Reference to messages**

13 **2.1.3.2.1 Definitive activity diagram**

14 A definitive diagram describes the processing triggered by a specific message and shows the resulting sending of specific messages. The processing of Settlement Instructions is an example of such a definitive activity diagram. In these cases, the activity diagram defines all messages explicitly as flows:

- 17
- 18 The name used on the diagram is the ISO name of the message. The same ISO name, in italics, is used
- 19 when referring to the message into the text description of the diagram.

460 This is the case for Queries, Reports and Static Data Management.

1 **2.1.3.2.2 Universal activity diagram**

2 A universal diagram describes a process that applies for several different sets of inbound and outbound  
 3 messages. Query or Report use cases are examples where the same process applies to different inbound  
 4 messages, each one resulting in a different outbound message.

5 In such cases, the diagram uses generic references to the messages and a table provides the mapping be-  
 6 tween the generic message description and the actual names of the inbound and outbound messages (See  
 7 section [Input/Output section](#) [▶ 910]).

8  
 9 The same generic reference, in italics, is used when referring to the message into the text description of the  
 10 diagram.

11 **2.1.3.3 Input/Output section**

12 **2.1.3.3.1 Definitive activity diagrams**

13 The Input/Output section lists all the messages possibly exchanged during the processing of the use-case,  
 14 as well as the Message Usage <sup>461</sup> for the message. Each sub-section (Input / Output) is formatted as follows:

461 When a message can be used for several purposes, one "Message usage" can be defined to specify each particular purpose.

ISO Message / Message Usage	ISO Code
SecuritiesSettlementTransactionInstruction	sese.023.001.xx
SecuritiesSettlementTransactionStatusAdvice / "Provisioning Failure"	sese.024.001.xx

One line for each message of the definitive activity diagram

ISO Message Code, including variant and version.

ISO Message name

When relevant, specific message usage can be specified.

1

2 **2.1.3.3.2 Universal activity diagrams**

3 In this case, the Input/Output section allows mapping between the generic message names used on the  
4 activity diagram and the actual names of the inbound and outbound messages.

5 For the following diagram:

6

7 The Input/Output section is presented as follows:

**A.B.C.1 Inputs**

One line for each possible use of the universal diagram

Two columns for each incoming generic message

Query Type	Query Message	
	ISO MESSAGE	ISO CODE
T2S Dedicated Cash Account Balance Query	GetAccount	camt.003.001.05
T2S Dedicated Cash Account Posting Query	GetTransaction	camt.005.001.05

ISO Message name

ISO Message Code, including variant and version.

1

**A.B.C.2 Outputs**

One line for each possible use of the universal diagram

Two columns for each outgoing generic message

QUERY TYPE	QUERY RESPONSE MESSAGE FOR OPERATIONAL ERROR		QUERY RESPONSE MESSAGE FOR BUSINESS DATA	
	ISO MESSAGE / MESSAGE USAGE	ISO CODE	ISO MESSAGE / MESSAGE USAGE	ISO CODE
T2S Dedicated Cash Account Balance Query	<i>ReturnAccount / "T2S Dedicated Cash Account Balance query response"</i>	camt.004.001.05	<i>ReturnAccount / "T2S Dedicated Cash Account Balance query response"</i>	camt.004.001.05
T2S Dedicated Cash Account Posting Query	<i>ReturnTransaction / "T2S Dedicated Cash Account Posting Query Response"</i>	camt.006.001.05	<i>ReturnTransaction / "T2S Dedicated Cash Account Posting Query Response"</i>	camt.006.001.05

ISO Message name

When relevant, specific message usage should be specified.

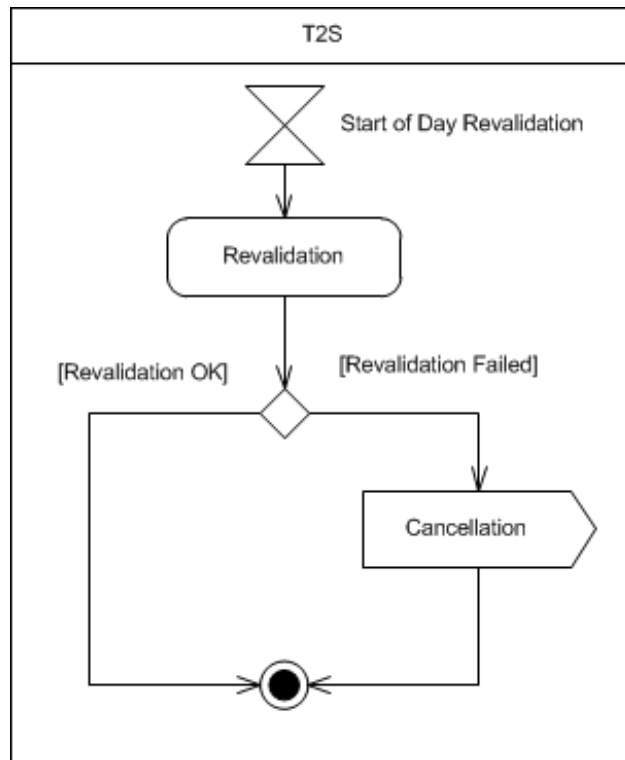

ISO Message Code, including variant and version.

2

3 2.1.3.4 Time-triggered events

4 A time event, represented by an "Event Time Action" symbol, can trigger an activity.

1

2 2.1.3.5 Formalisation of interrupted and resumed processing step

3 In order to represent a situation where a processing step can be interrupted and resumed, a simplified ap-  
 4 proach is used. For example, in order to represent the fact that an unmatched instruction still needs to be  
 5 matched after a first unsuccessful matching attempt and the sending of an allegation, the following ap-  
 6 proach is used:

7

1 The diagram means "If the instruction is unmatched, then possible allegation is processed". In order to  
 2 illustrate that matching can occur after a first unsuccessful matching attempt, matching of the instruction  
 3 occurs upon reception of a signal triggered by the matching of the counterpart's instruction.

4 2.1.3.6 Representing the impact of a process on another process

5 This situation can occur e.g. when the processing of a Maintenance Instruction affects the underlying Set-  
 6 tlement Instruction, or when a static data update triggers the re-validation of affected Settlement Instruc-  
 7 tions, possibly resulting in the rejection of previously accepted Settlement Instructions. The UDFS does not  
 8 model such dependencies between use cases to avoid unnecessary complexities. The only exception to this  
 9 rule is the cancellation of the Settlement Instruction (either due to a Cancellation Instruction or due to a  
 10 static data update). The underlying principle is that interrupts for Maintenance Instructions and Hold/Release  
 11 Instructions may postpone settlement, but they do not terminate the use case.

12 The UDFS models the cancellation of an instruction using UML activity diagramming convention for the possi-  
 13 ble interruption of a process when a given event occurs:

- 14 | The part of the process that may be interrupted is surrounded by a dashed, round-cornered rectangle
- 15 | drawn around the "interruptible" actions;
- 16 | A lightning-bolt arrows starting from the interrupting event figures the interruption by pointing to the
- 17 | action to be triggered.

18 Interruptions are represented on all relevant diagrams, i.e. including the sub-diagrams used for the decom-  
 19 position of complex diagrams.

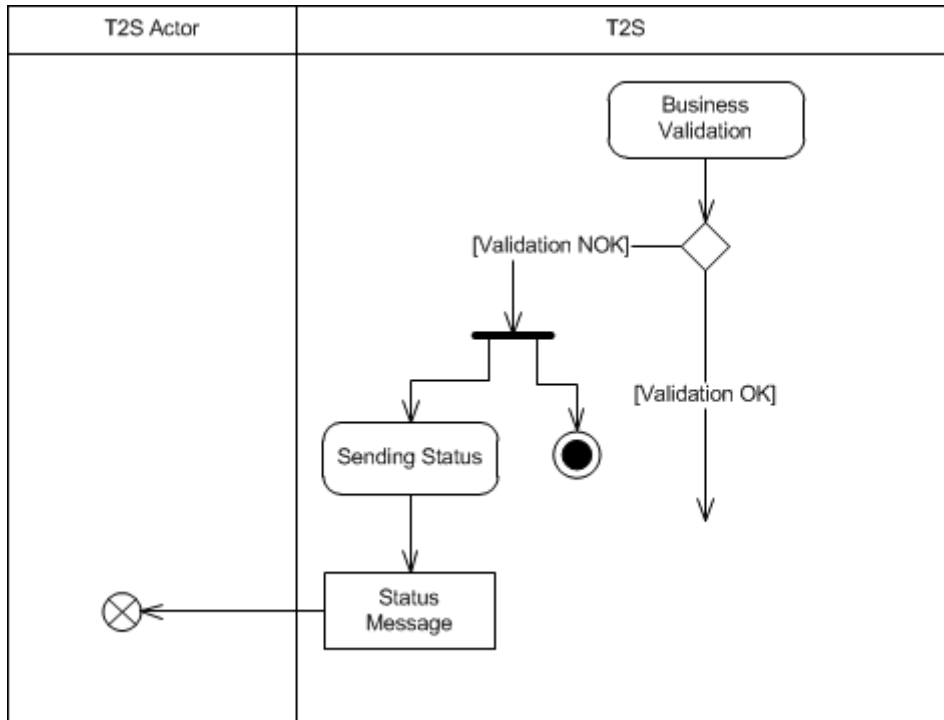

20  
 21 Apart from the cancellation cases (due to Cancellation Instructions and static data updates), the impact of a  
 22 process on another process should not unduly increase the complexity of the diagram representation. To  
 23 that purpose, the impact of a Maintenance Instruction such as hold/release on an underlying Settlement  
 24 Instruction should not be represented on the diagram of a Settlement Instruction. Messages depicting the

1 impact on the underlying Settlement Instructions should only be represented on the diagram of the Maintenance Instruction, as a consequence of the processing of this Maintenance Instruction.

3 2.1.3.7 Representing that the processing stops in T2S, but may continue for the T2S Actor

4 For example, this situation occurs when the validation of an instruction in T2S leads to the rejection of the  
 5 instruction by T2S. T2S completes the processing for the Settlement Instruction, but the T2S Actor must  
 6 undertake corrective action. Such situation is formalised as follows:

7  
 8 The "Flow Final" symbol into the swim lane of T2S Actor indicates that processing may continue in the busi-  
 9 ness application of the T2S Actor, whereas the "Final State" symbol in the T2S swim lane indicates that the  
 10 processing terminates.

11 **2.2 Communication processing**

12 **2.2.1 Introduction**

13 This decomposed diagram describes the generic technical entry check and therefore covers all general as-  
 14 pects of the communication between a T2S Actor (via technical sender) and T2S, where the T2S Actor (via  
 15 technical sender) sends a communication to T2S via A2A. The exceptional handling for securities valuation  
 16 communication via flat files is described in the dedicated use case (See section [Bulk Load Securities Valua-  
 17 tions](#) [▶ 1061]). The network infrastructure authenticates the technical sender and authorises the technical  
 18 sender to connect to T2S.

1 **2.2.2 Activity Diagram**

2 The following steps are performed during technical entry check for every communication received in A2A  
 3 mode.

4  
 5 **2.2.2.1 Technical Acknowledgement**

6 | A technical acknowledgement is send at infrastructure level confirming to the T2S Actor (via technical  
 7 sender) that the message is persistent and the message transfer complete. It may include technical error  
 8 conditions which prevent further processing of the inbound communication. The technical acknowle-  
 9 dgement also communicates the timestamp when the message was received and guarantees that the mes-

1        sage is processed by the T2S business application if T2S is identified into the message as the receiving  
2        system and if the communicated timestamp is before cut-off time.

3 All A2A communication, whether it is received in a single message or in file form, has to be encrypted (See  
4 section Security) and can be compressed. Encryption and compression is handled on communication level.

#### 5 2.2.2.2 Sender Authentication and Decryption

6 | The technical sender is defined in T2S as "Party Technical Adress" which allows an individual or applica-  
7 tion to initiate the communication to T2S (See section User). The business sending user is linked to the  
8 sending party of the communication. In the T2S application, when interacting with T2S in A2A mode, the  
9 T2S Actor includes both the certificate DN and the system user reference for individual messages in the  
10 business application header (See section BusinessApplicationHeaderV01 (head.001.001.01)) or for multi-  
11 messages in the business file header (See section BusinessFileHeaderV01 (head.002.001.01)). On the  
12 basis of these two pieces of information, the T2S application is able to authenticate the business sending  
13 user, i.e. to query settlement data and to identify one system user. The business sending user authenti-  
14 cation process performed by the T2S application on the basis of the system user reference which refers  
15 to the check that the T2S Actor creating the business payload is authorised to submit this business pay-  
16 load (e.g. a settlement instruction, a query) for processing in T2S.

17 The result of the Sender Authentication and Decryption can be:

18 | **[Sender Authentication and Decryption NOK]** In case the Sender Authentication and Decryption  
19 was not successful a "Missing Authentication" ReceiptAcknowledgement is sent to the T2S Actor (Send-  
20 er) indicating the error which occurred.

21 | **[Sender Authentication and Decryption OK]** In case the Sender Authentication and Decryption was  
22 successful, the Inbound Communication is stored and the Technical Validation is performed.

23 T2S can not receive messages or files during weekends and closing days. Sender Authentication and Decryp-  
24 tion and the subsequent Technical Validation are not available during these periods. In case of real time  
25 communication the T2S Actor (via technical sender) is informed directly about the unavailability of T2S by  
26 the network provider. Store-and-forward messages are forwarded by the network provider when T2S is  
27 available again.

#### 28 2.2.2.3 Technical Validation

29 A file has to be delivered with a File Header. A message has to be delivered including a Business Application  
30 Header, independent of its delivery as single message or within a file.

31 The system reaction on errors during Technical Validation differentiates between "Technical Validation until  
32 Schema Validation" and "Technical Validation after Schema Validation":

33 | Technical Validation until Schema Validation includes the File Validation (including consistency and com-  
34 pleteness checks based on File Header information and splitting of the file itself) and the Schema Valida-  
35 tion.

1 | I Technical Validation after Schema Validation includes Message Parsing (additional technical validations  
2 | and duplicate check) and the Privilege Check on system level i.e. not specifically related to secured ob-  
3 | jects or secured groups (See section Privilege).

4 | The result of the Technical Validation can be different depending on the state of the Schema Validation:

5 | I **[Technical Validation until Schema Validation NOK]** In case the Technical Validation until Schema  
6 | Validation was not successful an "Inbound Processing Rejections" ReceiptAcknowledgement is sent to  
7 | the T2S Actor (via technical sender) indicating the error which occurred.

8 | I **[Technical Validation until Schema Validation OK]** In case the Technical Validation until Schema  
9 | Validation was successful, T2S performs the Technical Validation after Schema Validation.

10 | I **[Technical Validation after Schema Validation NOK]** In case the Technical Validation after Schema  
11 | Validation was not successful, T2S sends the respective ISO Message according to the Business Rules  
12 | (see section Index of Business Rules and Error Codes). If the according reply message cannot be found  
13 | an "Inbound Processing Rejections" ReceiptAcknowledgement is sent.

14 | I **[Technical Validation after Schema Validation OK]** In case the Technical Validation after Schema  
15 | Validation was successful, T2S checks if the A2A request can be business validated or if it has to be  
16 | queued (Queuing is relevant for all requests during maintenance window and balance queries during  
17 | night time sequence):

18 | – **[No Queuing Necessary]:** A2A request can be validated and processing can resume.

19 | – **[Queuing Necessary]:** Processing differs according to the original A2A request:

20 | ▪ **[Queued Request is no Query]:** A2A request can be queued without specific notification to us-  
21 | er.

22 | ▪ **[Queued Request is a Query]:** In this case the real-time communication is closed by sending a  
23 | "Query Queuing Information" ReceiptAcknowledgement to the T2S System User (to avoid real-  
24 | time timeout) and the A2A request is queued. The processing is resuming when the "End of  
25 | Maintenance Window or Night-time cycle" occurs.

26 | The above mentioned rules do not apply, if the whole T2S is not available. T2S is not available on a regular  
27 | basis during weekends and on closing days. During weekends and closing days T2S is only available when  
28 | required, based on specific needs (e.g. migration, issuance in direct holding countries).

## 29 | 2.2.3 Inbound and outbound messages

### 30 | 2.2.3.1 Inbound messages

31 | No inbound message.

## 2.2.3.2 Outbound messages

ISO MESSAGE / MESSAGE USAGE	ISO CODE
ReceiptAcknowledgement / "Missing Authentication"	admi.007.001.01
ReceiptAcknowledgement / "Inbound Processing Rejections"	admi.007.001.01
Respective ISO Message / "Inbound Processing Rejections"	Respective ISO code
ReceiptAcknowledgement / "Query Queuing Information"	admi.007.001.01

## 2.3 Send Settlement Instruction

### 2.3.1 Introduction

This section describes, based on a use case, the outbound messages resulting from the processing of a Settlement Instruction received in T2S via the inbound message SecuritiesSettlementTransactionInstruction.

This use case covers all the situations where a T2S Actor wants to send a Settlement Instruction to T2S (See section Settlement).

The following actors are potentially involved in this use case:

- | T2S Actor - Instructing party of the Settlement Instruction;
- | T2S Actor - Counterparty of the Settlement Instruction;
- | T2S Actor - CSDs involved in the settlement chain;
- | T2S Actor - Administering Party for the CoSD condition.

### 2.3.2 Activity Diagram

This diagram provides an overview of the processing of a Settlement Instruction, which is composed of three main activities from the entry of the instruction message into T2S until its settlement.

In addition the last two activities may be interrupted in case the instruction is cancelled.

1

2 2.3.2.1 Communication processing

3 Detailed description can be found at section [Communication processing](#) [▶ 915].

4 2.3.2.2 Settlement Instruction Lifecycle Processing

5 The Settlement Instruction Lifecycle Processing is in charge of validation and matching (if required) of the  
6 Settlement Instruction.

7 The related decomposed diagram and detailed description can be found at section [Settlement Instruction  
8 Lifecycle Processing](#) [▶ 921].

9 2.3.2.3 Settlement Instruction Settlement Processing

10 The Settlement Instruction Settlement Processing is in charge of realignment and conditional settlement  
11 identification, if any, and of the actual settlement of the Settlement Instruction.

12 The related decomposed diagram and detailed description can be found at section [Settlement Instruction  
13 Settlement Processing](#) [▶ 925].

14 2.3.2.4 Settlement Instruction Cancellation Processing

15 The Settlement Instruction Cancellation Processing is in charge of informing the relevant actors of the can-  
16 cellation of a Settlement Instruction.

- 1 The related decomposed diagram and detailed description can be found at section [Settlement Instruction Cancellation Processing](#) [▶ 947].

### 2.3.3 Settlement Instruction Lifecycle Processing

#### 2.3.3.1 Business Validation

- 6 T2S checks whether the Settlement Instruction passes the Business Validation including privilege check (See section Business Validation). The result of this check can be:

- 1 | **[Business Validation NOK]** If the Settlement Instruction is not valid, the instruction is rejected and  
2 | T2S sends a "Rejected" SecuritiesSettlementTransactionStatusAdvice with the corresponding reason code  
3 | to inform the T2S Actor (Instructing party) <sup>462</sup> that its Settlement Instruction has been rejected;
- 4 | **[Business Validation OK]** If the Settlement Instruction passes the Business Validation, T2S continues  
5 | with its processing.

### 6 | 2.3.3.2 Specific Restriction Validation

7 | T2S checks whether the Settlement Instruction is under a rejection restriction or a CSD Validation Hold re-  
8 | striction set by the relevant CSD (See section Specific restriction validation process). For this purpose, T2S  
9 | verifies first whether a rejection restriction applies, the result of the check can be:

- 10 | **[Rejection Restriction applied]** T2S rejects the Settlement Instruction and sends a "Rejected" Secu-  
11 | ritiesSettlementTransactionStatusAdvice with the corresponding reason code to inform the T2S Actor  
12 | (Instructing party) that its Settlement Instruction has been rejected together with the relevant rule ID of  
13 | a positive rejection restriction that has been fulfilled;
- 14 | **[No Rejection Restriction applied]** If no rejection restriction is applied, then T2S checks whether a  
15 | CSD Validation Hold restriction applies. The result of the check can be:
- 16 | – **[CSD Validation Hold Restriction applied]** T2S sets the instruction on CSD Validation Hold and  
17 | sends an "Accepted with CSD Validation Hold" SecuritiesSettlementTransactionStatusAdvice to inform  
18 | the T2S Actor (Instructing party) that its Settlement Instruction has been accepted and automatically  
19 | put on CSD Validation Hold together with the relevant rule ID of a positive CSD Validation Hold re-  
20 | striction that has been fulfilled and continues with its processing.
  - 21 | – If the Settlement Instruction has fulfilled a rule of a negative rejection restriction, T2S also informs on  
22 | the rule ID fulfilled.
  - 23 | – If the Settlement Instruction fulfils any of the three conditions stated below to be put on hold at its  
24 | acceptance in T2S, T2S also informs of the different hold types that apply to the Settlement Instruc-  
25 | tion together with the CSD Validation Hold.
  - 26 | – If the Settlement Instruction is already matched, T2S also informs on the same message that the Set-  
27 | tlement Instruction is matched, together with the T2S Matching Reference assigned to both Settle-  
28 | ment Instructions conveying the already matched and the T2S Reference and Account Owner Refer-  
29 | ence of the counterparty's instruction;
  - 30 | – **[No CSD Validation Hold applied]** If no CSD Validation Hold restriction is applied, then T2S sends  
31 | either an "Accepted" SecuritiesSettlementTransactionStatusAdvice to inform the T2S Actor (Instructing  
32 | party) that its Settlement Instruction has been accepted, or an "Accepted with Hold" SecuritiesSettle-  
33 | mentTransactionStatusAdvice to inform the T2S Actor (Instructing party) that its Settlement Instruc-  
34 | tion has been accepted and put on hold at its acceptance in T2S, depending on whether the Settle-

---

462 As explained in section Common rules for messages and files addressing the reaction on an erroneous inbound message (i.e. "rejected" status advice) will be send to the relevant Technical address instead of to the Instructing Party.

1       ment Instruction fulfils any of the three conditions stated below to be put on hold. In any case, T2S  
2       continues processing the Settlement Instruction.

- 3       – If the Settlement Instruction has fulfilled a rule of a negative rejection restriction and/or a rule of a  
4       negative CSD Validation Hold restriction, T2S also informs on the rule ID(s) fulfilled.
- 5       – If the Settlement Instruction is already matched, T2S also informs on the same message that the Set-  
6       tlement Instruction is matched together with the T2S Matching Reference assigned to both Settlement  
7       Instructions conveying the already matched and the T2S Reference and Account Owner Reference of  
8       the counterparty 's instruction.

9       Since the communication to the user of all the different Hold types that apply to the Settlement Instruction is  
10      performed in a single message (instead of an individual message per hold type), T2S also checks if any of  
11      the following conditions is fulfilled by the Settlement Instruction in order to identify if the Settlement Instruc-  
12      tion should be put on hold at its acceptance:

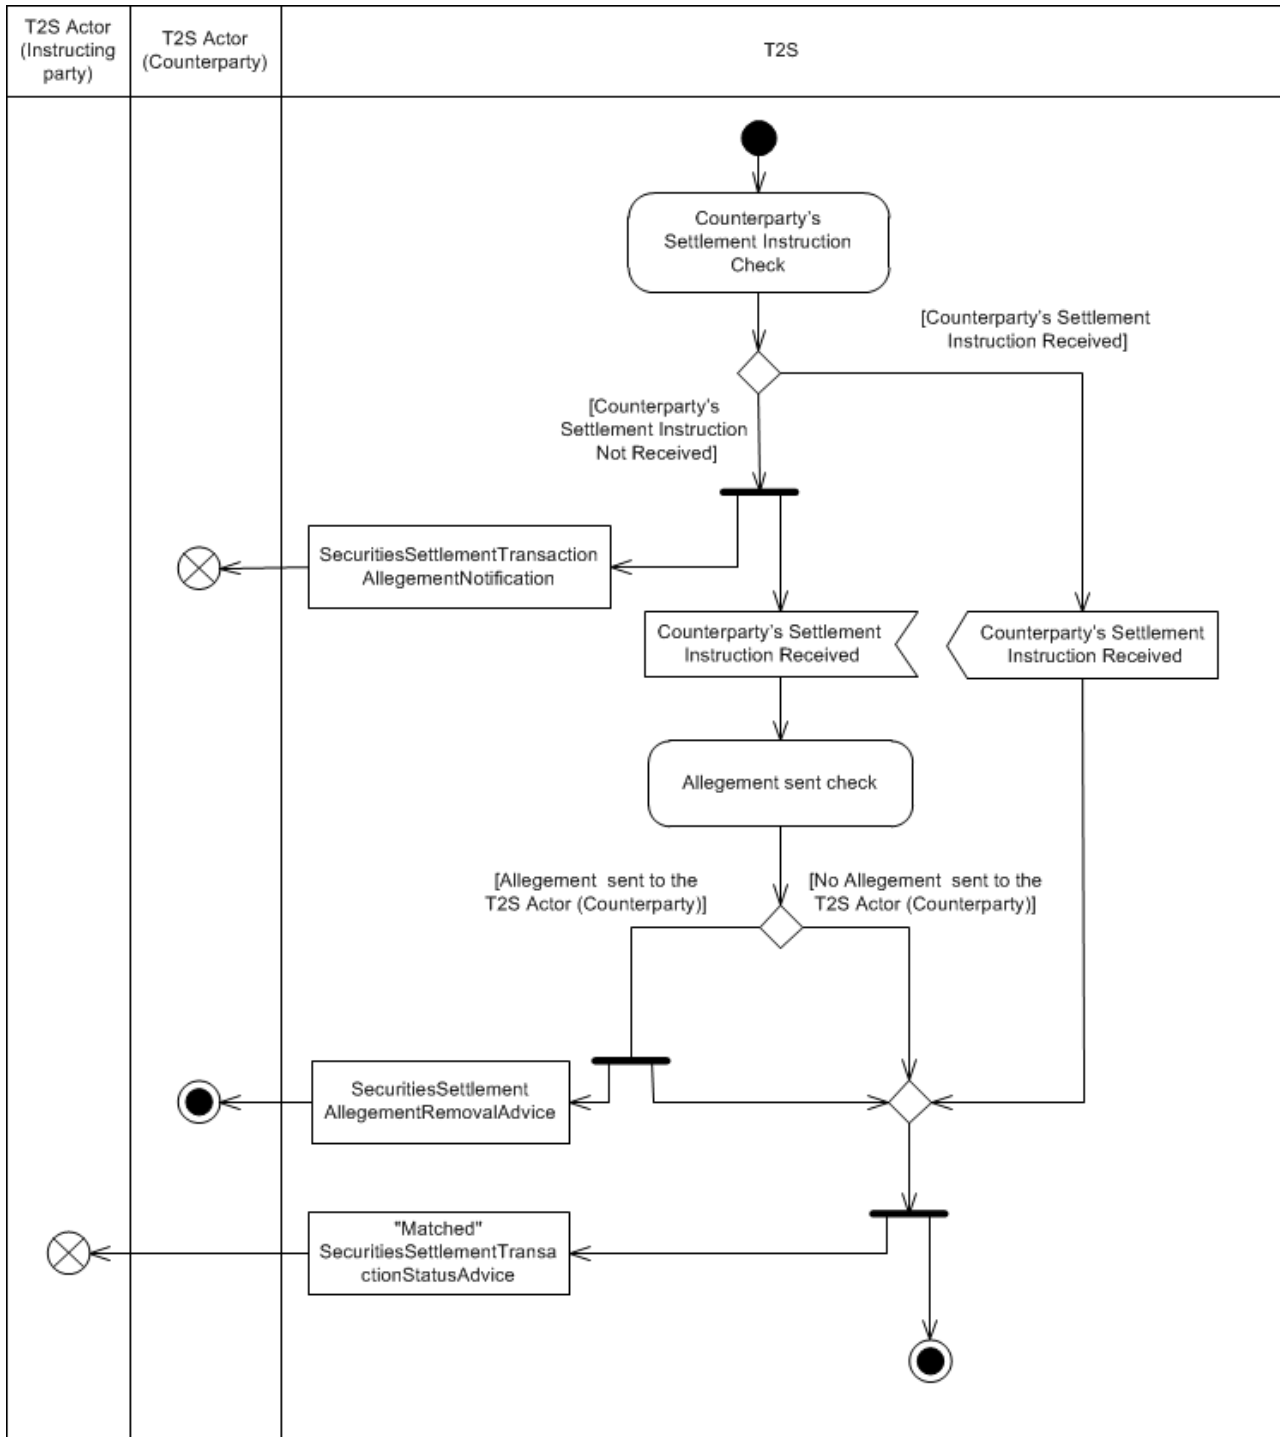

- 13      | The T2S Actor (Instructing Party) has sent the Settlement Instruction with the Party Hold status set to  
14      "Yes";
- 15      | The T2S Actor (Instructing Party) has sent the Settlement Instruction with the CSD Hold status set to  
16      "Yes";
- 17      | The T2S Actor (Instructing Party) has instructed the Settlement Instruction without the Party Hold status  
18      set (i.e. neither Party Hold status "Yes" nor "No" have been specified) but the "Hold Release default"  
19      value of the Securities Account included in the Instruction is set to "Yes".

#### 20   2.3.3.3 Match Status Check

21   T2S checks the Match Status of the Settlement Instruction to identify if it needs to be matched in T2S or not  
22   (See section Matching). The result of this check can be:

- 23      | **[Already Matched Settlement Instruction]** T2S continues with its processing and forwards the Set-  
24      tlement Instruction to the Settlement Instruction Settlement Processing since its status "Matched" has al-  
25      ready been communicated to the T2S Actor in the "Accepted" SecuritiesSettlementTransactionStatusAd-  
26      vice;
- 27      | **[Unmatched Settlement Instruction]** T2S continues with the Matching processing.

1 2.3.3.4 Matching Processing

2  
3 Counterparty's Settlement Instruction Check

4 T2S checks if the Counterparty's Settlement Instruction is already in T2S:

- 5 | **[Counterparty's Settlement Instruction Received]** T2S matches the Settlement Instruction with its
- 6 | Counterpart and sends a "Matched" SecuritiesSettlementTransactionStatusAdvice to inform the T2S Actor
- 7 | (Instructing party) that its Settlement Instruction has been matched together with the T2S Matching

1 Reference assigned to both Settlement Instructions that have been matched by T2S and the T2S Refer-  
2 ence and Account Owner Reference of the counterparty 's instruction;

3 | **[Counterparty's Settlement Instruction Not Received]** In this case, after a certain period of time  
4 known as "Allegement delay period", T2S sends a SecuritiesSettlementTransactionAllegementNotification  
5 to inform the T2S Actor (Counterparty) that the T2S Actor (Instructing party) has instructed against it,  
6 according to the Allegement process (See section Allegement).

7 Once the Counterparty's Settlement Instruction is received in T2S, both Settlement Instructions are matched  
8 and T2S sends a "Matched"SecuritiesSettlementTransactionStatusAdvice to inform the T2S Actor (Instructing  
9 party) that its Settlement Instruction has been matched, together with the T2S Matching Reference assigned  
10 to both Settlement Instructions that have been matched by T2S and the T2S Reference and Account Owner  
11 Reference of the counterparty 's instruction, and continues with the Settlement Instruction Settlement Pro-  
12 cessing.

### 13 Allegement Sent Check

14 Additionally, upon the matching with the Counterparty's Settlement Instruction, T2S checks if an Allegement  
15 has been previously sent to the T2S Actor (Counterparty) in order to remove it (See section Allegement).

16 The result of this check can be:

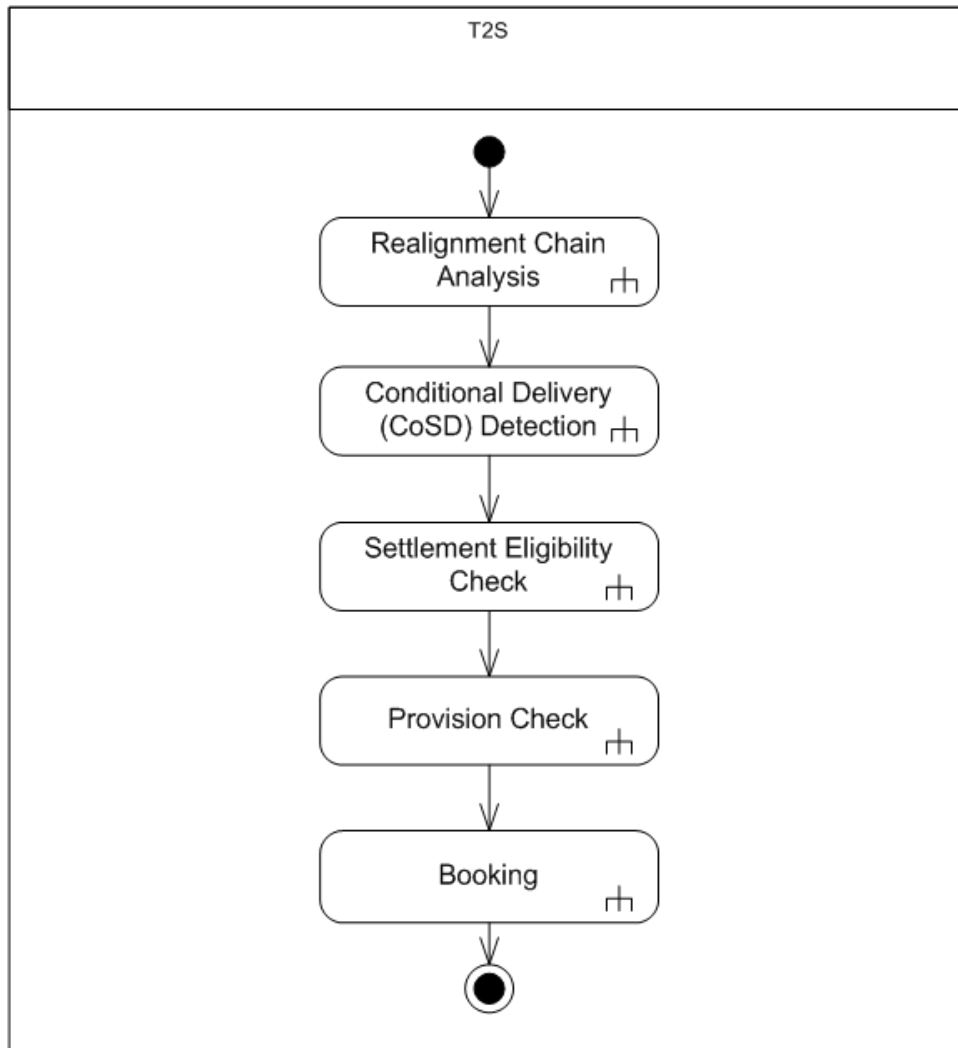

17 | **[Allegement sent to the T2S Actor (Counterparty)]** In this case, T2S sends a SecuritiesSettlement-  
18 tAllegementRemovalAdvice message to inform the T2S Actor (Counterparty) that the former Allegement  
19 message is no longer valid;

20 | **[No Allegement sent to the T2S Actor (Counterparty)]** In this case no information on Allegement  
21 is sent to the T2S Actor (Counterparty) and the Settlement Instruction continues with its processing in  
22 T2S.

## 23 **2.3.4 Settlement Instruction Settlement Processing**

24 The Settlement Instruction Settlement Processing firstly detects the necessary realignments, if any.

25 When the Intended Settlement Date is reached, the Settlement Instruction Settlement Processing checks  
26 first a potential conditional delivery. It then performs the actual settlement processing, which is carried out  
27 via a final eligibility check, the provision check and the actual booking.

1

2 2.3.4.1 Realignment Chain Analysis

3 T2S identifies the necessary realignments, if any, according to the settlement context of the matched Set-  
 4 tlement Instruction (See section Realignment). It can results in the generation of additional Settlement In-  
 5 structions and the notification to the involved T2S Actors.

1  
2 This analysis may result in the detection of the following settlement contexts:

- 3 | **[Cross-CSD contexts]** When the settlement context is a cross-CSD context (including external-CSD  
4 context):
- 5 – **[Unsuccessful generation of realignment]** If T2S cannot create the necessary realignment due to  
6 erroneous links or accounts configuration or to unsuccessful validation on potential T2S generated  
7 realignment Settlement Instructions (See section Realignment), the inbound Settlement Instruction is  
8 cancelled (See section [Settlement Instruction Cancellation Processing](#) [▶ 947]);
  - 9 – **[Successful generation of realignment]** If T2S can create the necessary realignment:
    - 10 ▪ T2S creates the additional T2S generated realignment Settlement Instructions corresponding to  
11 the necessary securities realignment and links these additional instructions to the inbound Settle-  
12 ment Instruction for a settlement on an all-or-none basis.  
13 For each T2S generated realignment Settlement Instruction, a “Realignment” SecuritiesSettle-  
14 mentTransactionGenerationNotification is sent to the CSD involved in the realignment chain to no-  
15 tify the creation of additional instructions to be settled on their accounts; these realignment in-  
16 structions inform the corresponding cross-border business instructions that caused their genera-  
17 tion as well as the T2S Matching Reference assigned to all realignment and business instructions  
18 conveying a transaction.
    - 19 ▪ The Settlement Instruction is processed further;
- 20 | **[Intra-CSD context]** When the settlement context is an intra-CSD context, the Settlement Instruction  
21 is processed further.

1 2.3.4.2 Conditional Delivery (CoSD) Detection

2 Once the inbound Settlement Instruction's Intended Settlement Date is reached, T2S checks if an external  
 3 condition (CoSD condition) has to be handled before the actual settlement of the Settlement Instruction (See  
 4 section Conditional Settlement).

5  
 6 It may result in:

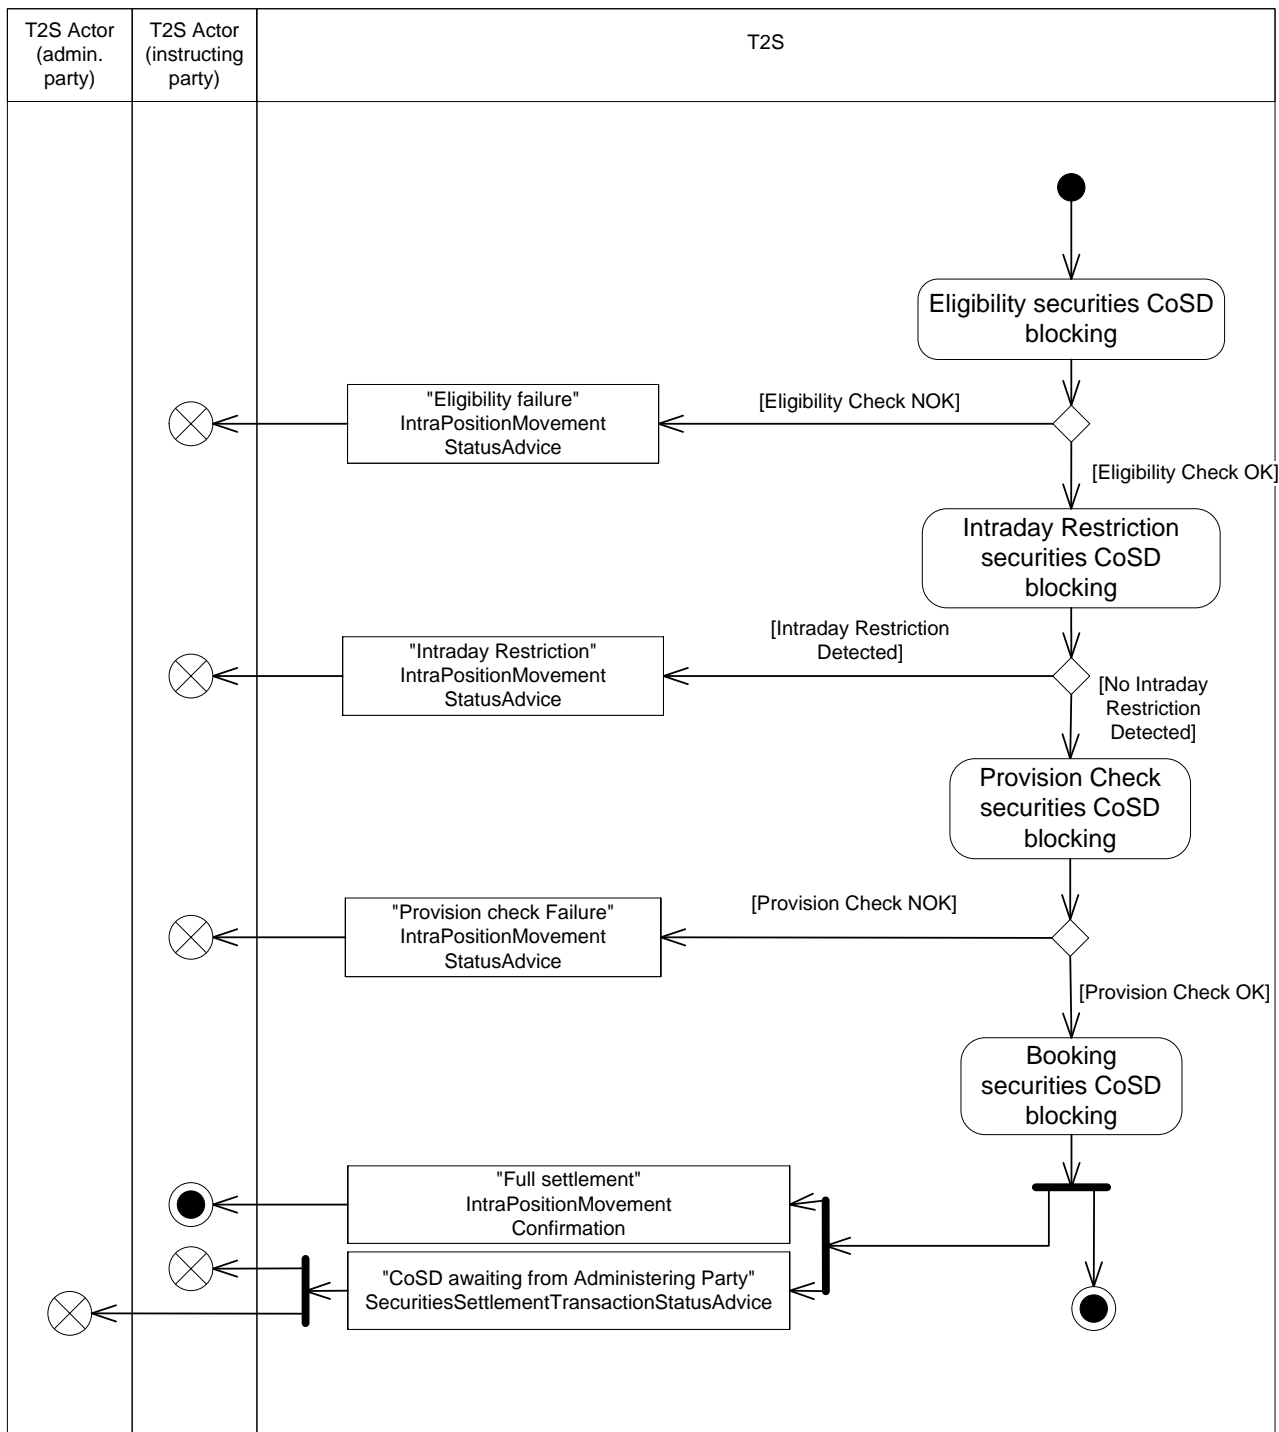

- 7 **I [Detected CoSD Activation]** If the activation of a CoSD is detected:
- 8 – The Settlement Instruction is put on CoSD hold. The instructing T2S Actor and each involved adminis-
- 9 tering party receives:
- 10 ▪ A "Executed" SecuritiesSettlementConditionModificationStatusAdvice, per applicable rule, for the
  - 11 notification of the execution of the generated maintenance request;

- 
- 1 – For the update notification in the inbound Settlement Instruction a "CoSD Hold" SecuritiesSettle-  
2 mentTransactionStatusAdvice for all applicable rules;
- 3 – The counterparty is also notified with a "Counterparty's Settlement Instruction On Hold" Securities-  
4 SettlementTransactionStatusAdvice;
- 5 – Simultaneously, T2S creates a T2S generated CoSD Blocking Settlement Restriction to block securities,  
6 cash or both. To identify to which Settlement Instruction this Settlement Restriction relates, the corre-  
7 sponding status advices and confirmations will contain the T2S Reference of the related Settlement  
8 Instruction. In addition, if the Settlement Instruction uses restriction references, T2S has to move the  
9 securities from the blocked or reserved position to the deliverable:
- 10 – If the Settlement Instruction uses restriction references in direct debit, T2S generates in addition a  
11 pair of matched Settlement Instructions.
- 12 – If the Settlement Instruction uses restriction references in indirect debit, T2S generates in addition  
13 one or several Settlement Restriction(s).
- 14 Each T2S generated CoSD blocking Settlement Restriction is then processed for a settlement attempt.  
15 T2S then waits for the release by all administering parties;
- 16 **I [No applicable CoSD]** If no applicable CoSD is detected, the Settlement Instruction is processed fur-  
17 ther.

#### 18 **2.3.4.2.1 Settlement Securities CoSD blocking**

19 When the inbound Settlement Instruction is subject to a conditional settlement, the Settlement Restriction  
20 corresponding to the securities CoSD blocking that has been generated is submitted to settlement, i.e. to an  
21 eligibility criteria check, an intraday restriction check, a provision check, and, a booking.

1

2 Eligibility securities CoSD blocking

3 T2S checks if the securities CoSD blocking is eligible for a settlement attempt according to the fulfilment of  
 4 an applicable securities Settlement Restriction cut-off. If the Settlement Instruction under CoSD uses re-  
 5 striction references, T2S generates several Settlement Instructions or Settlement Restrictions for the securi-  
 6 ties CoSD blocking. These Settlement Instructions or Settlement Restrictions are submitted in all or none to  
 7 the eligibility check. This check may result in:

1 | **[Eligibility Check NOK]** If at least one eligibility criterion is not fulfilled, the instructing T2S Actor is  
2 | provided with one or several "Eligibility Failure" IntraPositionMovementStatusAdvice with the applicable  
3 | reason for failure. To identify to which Settlement Instruction this Settlement Restriction relates, the Set-  
4 | tlement Restriction status advice will contain the T2S Reference of the related Settlement Instruction.  
5 | The processing of the securities CoSD blocking is stopped till its further eligibility;

6 | **[Eligibility Check OK]** If all eligibility criteria are fulfilled, the CoSD blocking is processed further.

#### 7 | Intraday Restriction securities CoSD blocking

8 | T2S checks if the securities CoSD blocking is under an intraday Settlement Restriction on involved T2S Ac-  
9 | tors, involved accounts or the involved security. This check may result in:

10 | **[Intraday Restriction Detected]** If at least one intraday Settlement Restriction is detected, the in-  
11 | structing T2S Actor is provided with one or several "Intraday Restriction" IntraPositionMovementSta-  
12 | tusAdvice with the applicable reason for failure. To identify to which Settlement instruction this Settle-  
13 | ment Restriction relates, the Settlement Restriction Status Advice contains the T2S Reference of the re-  
14 | lated Settlement Instruction. The processing of the securities CoSD blocking is stopped till all applicable  
15 | intraday Settlement Restrictions are removed;

16 | **[No Intraday Restriction Detected]** If no intraday Settlement Restriction is detected, the CoSD  
17 | blocking is processed further.

#### 18 | Provision Check securities CoSD blocking

19 | If the Settlement Restriction successfully passes the validity checks upfront, then T2S performs the Provision  
20 | Check on the involved securities position from which the resources are debited, resulting in:

21 | **[Provision Check NOK]** In case of unsuccessful provision check to fully settle the securities CoSD  
22 | blocking, the settlement attempt is considered as failed since the provision check cannot be fulfilled. No  
23 | partial settlement is allowed on a CoSD blocking.  
24 | The instructing T2S Actor involved in the considered CoSD blocking are provided with "Provision check  
25 | failure" IntraPositionMovementStatusAdvice. To identify to which Settlement instruction this Settlement  
26 | Restriction relates, the Settlement Restriction Status Advice contains the T2S Reference of the related  
27 | Settlement Instruction. The processing of the securities CoSD blocking is stopped until a further success-  
28 | ful provision check;

29 | **[Provision Check OK]** In case of successful provision check for a full settlement, the securities CoSD  
30 | blocking is processed further.

#### 31 | Booking securities CoSD blocking

32 | The booking is performed when all the preceding checks on the securities CoSD blocking are successful.  
33 | When the securities CoSD blocking is fully settled, the instructing T2S Actor is provided with one or sever-  
34 | al "Full settlement" IntraPositionMovementConfirmation confirming the set-up of the securities CoSD block-  
35 | ing. To identify to which Settlement instruction this Settlement Restriction relates, the Settlement Restriction  
36 | confirmation contains the T2S Reference of the related Settlement Instruction.

37 | In addition, the instructing T2S Actor and each involved administering party are provided with a "CoSD  
38 | awaiting from Administering Party" SecuritiesSettlementTransactionStatusAdvice related to the incoming Set-

1 tlement Instruction on which applied the CoSD rules. In case of an instruction requiring both Securities CoSD  
 2 blocking and Cash CoSD blocking, this status advice is sent only once.

3 **2.3.4.2.2 Settlement Cash CoSD blocking**

4 When the inbound Settlement Instruction is subject to a conditional settlement, the Settlement Restriction  
 5 corresponding to the cash CoSD blocking that has been generated is submitted to settlement, i.e. to an eli-  
 6 gibility criteria check, an intraday restriction check, a provision check, and, a booking.

7  
 8 *Eligibility cash CoSD blocking*

1 T2S checks if the cash CoSD blocking is eligible for a settlement attempt according to the fulfilment of an  
2 applicable cash Settlement Restriction cut-off. If the Settlement Instruction under CoSD uses restriction ref-  
3 erences, T2S generates several Settlement Instructions or Settlement Restrictions for the cash CoSD block-  
4 ing. These Settlement Instructions or Settlement Restrictions are submitted in all or none to the eligibility  
5 check. This check may result in:

- 6 | **[Eligibility Check NOK]** If at least one eligibility criterion is not fulfilled, the instructing T2S Actor is  
7 provided with one or several "Eligibility Failure" IntraBalanceMovementStatusAdvice with the applicable  
8 reason for failure. To identify to which Settlement instruction this Settlement Restriction relates, the Set-  
9 tlement Restriction Status Advice contains the T2S Reference of the related Settlement Instruction.  
10 The processing of the cash CoSD blocking is stopped till its further eligibility;
- 11 | **[Eligibility Check OK]** If all eligibility criteria are fulfilled, the CoSD blocking is processed further.

#### 12 Intraday Restriction cash CoSD blocking

13 T2S checks if the cash CoSD blocking is under an intraday restriction on involved T2S Actors, involved ac-  
14 counts or the involved security. This check may result in:

- 15 | **[Intraday Restriction<sup>SEP</sup> Detected]** If at least one intraday restriction is detected, the instructing T2S  
16 Actor is provided with one or several "Intraday Restriction" IntraBalanceMovementStatusAdvice with the  
17 applicable reason for failure. To identify to which Settlement instruction this Settlement Restriction re-  
18 lates, the Settlement Restriction Status Advice contains the T2S Reference of the related Settlement In-  
19 struction. The processing of the cash CoSD blocking is stopped till all applicable intraday restrictions are  
20 removed;
- 21 | **[No Intraday Restriction<sup>SEP</sup> Detected]** If no intraday restriction is detected, the CoSD blocking is pro-  
22 cessed further.

#### 23 Provision check cash CoSD blocking

24 If the Settlement Restriction successfully passes the validity checks upfront, then T2S performs the Provision  
25 Check on the involved cash balance from which the resources are debited, resulting in:

- 26 | **[Provision Check NOK]** In case of unsuccessful provision check to fully settle the cash CoSD blocking,  
27 the settlement attempt is considered as failed since the provision check cannot be fulfilled. No partial  
28 settlement is allowed on a CoSD blocking.  
29 The instructing T2S Actor involved in the considered CoSD blocking are provided with "Provision check  
30 failure" IntraBalanceMovementStatusAdvice. To identify to which Settlement instruction this Settlement  
31 Restriction relates, the Settlement Restriction Status Advice contains the T2S Reference of the related  
32 Settlement Instruction. The processing of the cash CoSD blocking is stopped until a further successful  
33 provision check;
- 34 | **[Provision Check OK]** In case of successful provision check for a full settlement, the cash CoSD block-  
35 ing is processed further.

#### 36 Booking cash CoSD blocking

37 The booking is performed when all the preceding checks on the cash CoSD blocking are successful. When  
38 the cash CoSD blocking is fully settled, the instructing T2S Actor is provided with one or several "Full Settle-  
39 ment" IntraBalanceMovementConfirmation confirming the set-up of the cash CoSD blocking To identify to

1 which Settlement instruction this Settlement Restriction relates, the Settlement Restriction confirmation con-  
2 tains the T2S Reference of the related Settlement Instruction..

3 In addition, the instructing T2S Actor and each involved administering party are provided with a "COSD  
4 Awaiting from Administering Party" SecuritiesSettlementTransactionStatusAdvice related to the incoming  
5 Settlement Instruction on which applied the CoSD rules. In case of an instruction requiring both Securities  
6 CoSD blocking and Cash CoSD blocking, this status advice is sent only once.

7 **2.3.4.3 Settlement Eligibility Check**

8 When the Settlement Instruction is submitted to a settlement attempt, T2S performs several last settlement  
9 validity checks related to eligibility criteria and intraday restrictions before performing the provision check  
10 (See section Eligibility check process).

11

12 Eligibility Criteria Check

13 T2S checks if the Settlement Instruction is eligible for a settlement attempt according to the fulfilment of  
14 indicated link(s), potential hold or reaching an applicable settlement cut-off. This check may result in:

- 15 | **[Eligibility Check NOK]** If at least one eligibility criterion is not fulfilled, the instructing T2S Actor is  
16 provided with an "Eligibility Failure" SecuritiesSettlementTransactionStatusAdvice with the applicable rea-  
17 son(s) for failure.  
18 The processing of the Settlement Instruction is stopped till its further eligibility;
- 19 | **[Eligibility Check OK]** If all eligibility criteria are fulfilled, the Settlement Instruction is processed fur-  
20 ther.

21 Intraday Restriction Check

1 T2S checks if the Settlement Instruction is under an intraday restriction on involved T2S Actors, involved  
 2 accounts or the involved securities. This check may result in:

3 **I [Intraday Restriction<sup>SEP</sup> Detected]** If at least one intraday restriction is detected, the instructing T2S  
 4 Actor is provided with an "Intraday Restriction" SecuritiesSettlementTransactionStatusAdvice with the  
 5 applicable reason(s) for failure. The processing of the Settlement Instruction is stopped till all applicable  
 6 intraday restrictions are removed;

7 **I [No Intraday Restriction<sup>SEP</sup> Detected]** If no intraday restriction is detected, the Settlement Instruc-  
 8 tion is processed further.

9 2.3.4.4 Provision check

10 T2S performs the provision check on the involved accounts and associated credit memorandum balance  
 11 before any booking, i.e. T2S checks that the delivering party has sufficient securities and/or cash and receiv-  
 12 ing party has sufficient liquidity to settle before posting the settlement (See section Provision check process).

13 If necessary, and according to specific application rules, T2S performs an auto-collateralisation in order to  
 14 allow the settlement of underlying securities-related instructions that would fail to be settled due to a lack of  
 15 cash on a T2S Dedicated Cash Account and/or insufficient external guarantee headroom on a credit memo-  
 16 randum balance or due to a lack of securities on a Securities Account.

17  
 18 Provision Check

19 T2S checks if the cash and/or securities are available on the involved accounts (including potential uses of  
 20 restricted resources if mentioned in the inbound Settlement Instruction). It may result in:

1 | **[Provision Check NOK]** In case of failed provision check an auto-collateralisation attempt is triggered  
2 | (See section Auto-collateralisation);

3 | **[Provision Check OK]** In case of successful provision check, the Settlement Instruction is processed  
4 | further.

#### 5 | Auto-collateralisation Attempt

6 | The auto-collateralisation attempt may result in:

7 | **[Auto-collateralisation NOK]** If the auto-collateralisation cannot fill the identified missing resources,  
8 | the settlement attempt is considered as failed since the provision check cannot be fulfilled. The instruct-  
9 | ing T2S Actor is provided with a "Provision check failure" SecuritiesSettlementTransactionStatusAdvice.  
10 | The processing of the Settlement Instruction is stopped for this settlement attempt;

11 | **[Auto-collateralisation OK]** If the auto-collateralisation fills the identified missing resources the Set-  
12 | tlement Instruction is processed further.

#### 13 | 2.3.4.5 Booking

14 | The booking results in the actual update of the involved accounts and in the irrevocable settlement (full or  
15 | partial) of the Settlement Instruction (See section Booking process).

16 | According to the additional settlement processes necessary for the settlement of the inbound Settlement  
17 | Instruction (i.e. realignment, auto-collateralisation, use of restrictions, pre-emption, rebalancing of liquidity,  
18 | overridden floor/ceiling in a cash account), one or several T2S generated Settlement Instructions can be  
19 | settled simultaneously on an all-or-none basis.

20 | As a result several types of T2S Actors (Instructing party, CSD involved in the settlement chain, intraday  
21 | credit provider, collateral supplier, owner of the T2S Dedicated Cash Account) may be provided with an out-  
22 | bound message, as detailed in the diagrams below.

1

2 Updating position and balance

3 The booking is achieved with the updating of the involved securities positions and cash balances and the  
 4 notification of the messages related to the booking of the Settlement Instruction itself, which may result in:

- 5 | **[Full Settlement]** When a Settlement Instruction is fully settled (in one time), the instructing T2S Actor  
 6 is provided with a "Full settlement" SecuritiesSettlementTransactionConfirmation;

- 1 | **[Last Partial Settlement]** When a Settlement Instruction is fully settled (after several partial settle-
- 2 | ments), the instructing T2S Actor is provided with a "Last partial settlement" SecuritiesSettlementTrans-
- 3 | actionConfirmation;
- 4 | **[Partial Settlement]** When a Settlement Instruction is partially settled (i.e. settles for a quantity not
- 5 | equal to zero and a quantity remains to settle), the instructing T2S Actor is provided with:
- 6 | – A "Partial settlement (unsettled part)" SecuritiesSettlementTransactionStatusAdvice message corre-
- 7 | sponding to the unsettled part;
- 8 | – A "Partial Settlement (settled part)" SecuritiesSettlementTransactionConfirmation corresponding to the
- 9 | settled part.

10 | Additional notification realignment

11 | In case of realignment, additional messages are sent, related to the booking of T2S generated realignment  
 12 | Settlement Instruction created in a Cross-CSD settlement context (See section Realignment). These Rea-  
 13 | lignment Instructions inform the corresponding cross-border business instructions that caused their genera-  
 14 | tion as well as the T2S Matching Reference assigned to all the realignment and business instruction convey-  
 15 | ing a transaction.

16 |

17 | These messages are linked to the inbound Settlement Instructions and therefore settled in an all-or-none  
 18 | basis, according to the settlement of the inbound Settlement Instruction, it may result in:

- 19 | **[Full Settlement]** When a T2S generated realignment Settlement Instruction is fully settled (in one  
 20 | time), the CSDs involved in the realignment chain are provided with a "Full settlement" SecuritiesSettle-  
 21 | mentTransactionConfirmation;

- 1 | **I [Last Partial Settlement]** When a T2S generated realignment Settlement Instruction is fully settled  
2 | (after several partial settlements), the CSDs involved in the realignment chain are provided with a "Last  
3 | partial settlement" SecuritiesSettlementTransactionConfirmation;
- 4 | **I [Partial Settlement]** When a T2S generated realignment Settlement Instruction is partially settled (i.e.  
5 | settles for a quantity not equal to zero and a quantity remains to settle), the CSDs involved in the rea-  
6 | lignment chain are provided with:
- 7 | – A "Partial settlement (unsettled part)" SecuritiesSettlementTransactionStatusAdvice message corre-  
8 | sponding to the unsettled part;
  - 9 | – A "Partial settlement (settled part)" SecuritiesSettlementTransactionConfirmation corresponding to the  
10 | settled part.

11 | *Additional notification auto-collateralisation*

12 | In case of auto-collateralisation, additional messages are sent, related to the booking of T2S generated Set-  
13 | tlement Instruction created for a new auto-collateralisation operation (See section Auto-collateralisation).  
14 | These messages reference the T2S Matching Reference of the corresponding auto-collateralisation instruc-  
15 | tions. They may also contain the T2S Reference, using an INFO link, of any related messages generated  
16 | corresponding to the auto-collateralisation instructions as per the relevant procedure.

1

2 All involved T2S Actors (i.e. the central bank/Payment Bank which provides the intraday credit and blocks  
3 the collateral <sup>463</sup>, the collateral supplier and T2S Dedicated Cash Account owner, the CSDs involved in the  
4 settlement chain in case of cross-border mobilisation of collateral), according to the impact on their ac-  
5 counts, are provided with:

6 **I [Repo auto-collateralisation]** In case of Repo auto-collateralisation procedure (for central bank col-  
7 lateralisation and client-collateralisation):

8 – A "Collateral" SecuritiesSettlementTransactionGenerationNotification for the notification of the genera-  
9 tion of the collateral Settlement Instruction corresponding to:

- 10 ▪ The intraday credit provision and the receipt of the collateral for the intraday credit provider;

463 The Collateral Management System of the related central bank is provided with a copy of the outbound messages received by the central bank.

- 1       ▪ The credit of the intraday credit for the T2S Dedicated cash account owner;
- 2       ▪ The delivery of collateral to the intraday credit provider for the collateral supplier.
- 3       – A "Full settlement" SecuritiesSettlementTransactionConfirmation for the confirmation of the full set-  
4       tlement of the generated collateral Settlement Instruction;
- 5       – A "Hold Reverse Collateral" SecuritiesSettlementTransactionGenerationNotification for the notification  
6       of the creation of the hold reverse collateral Settlement Instruction which corresponds to the reverse  
7       operation and which should be used for the reimbursement of the intraday credit and the release of  
8       the collateral;
- 9       **I [Pledge auto-collateralisation]** In case of Pledge auto-collateralisation procedure (for central bank  
10       collateralisation only):
  - 11       – A "Collateral" SecuritiesSettlementTransactionGenerationNotification for the notification of the genera-  
12       tion of the collateral Settlement Instruction corresponding to:
    - 13       ▪ The cash debit of the intraday credit provider for the amount of intraday credit provided;
    - 14       ▪ The cash credit of the T2S Dedicated cash account owner for the amount of intraday credit pro-  
15       vided;
    - 16       ▪ The transfer of collateral from the initial securities account to a pledged securities account for the  
17       collateral supplier.
  - 18       – A "Full settlement" SecuritiesSettlementTransactionConfirmation for the confirmation of the full set-  
19       tlement of the generated collateral Settlement Instruction;
  - 20       – A "Hold Reverse Collateral" SecuritiesSettlementTransactionGenerationNotification for the notification  
21       of the creation of the hold reverse collateral Settlement Instruction which corresponds to the reverse  
22       operation and which should be used for the reimbursement of the intraday credit and the release of  
23       the collateral;
- 24       **I [Pledge-sub auto-collateralisation]** In case of Pledge-sub auto-collateralisation procedure (for cen-  
25       tral bank collateralisation only):
  - 26       – A "Collateral" SecuritiesSettlementTransactionGenerationNotification for the notification of the genera-  
27       tion of the collateral Settlement Instruction corresponding to:
    - 28       ▪ The intraday credit provision for the intraday credit provider;
    - 29       ▪ The credit of the intraday credit for the T2S Dedicated cash account owner;
  - 30       – A "Full settlement" SecuritiesSettlementTransactionConfirmation for the confirmation of the full set-  
31       tlement of the generated collateral Settlement Instruction;
  - 32       – A "Hold Reverse Collateral" SecuritiesSettlementTransactionGenerationNotification for the notification  
33       of the creation of the hold reverse collateral Settlement Instruction which corresponds to the reverse  
34       operation and which should be used for the reimbursement of the intraday credit;
  - 35       – A "Full settlement" IntraPositionMovementConfirmation for the confirmation of the full settlement of  
36       the generated collateral Settlement Restriction corresponding to the blocking of the collateral in the  
37       initial securities account.

1 Additional notification reverse collateral

2 In case of dynamic reimbursement, or in case of an automated substitution achieved with the collateralisa-  
 3 tion operation, additional messages are sent, related to the booking of the associated released reverse col-  
 4 lateral (See section Auto-collateralisation). These messages reference the T2S Matching Reference of the  
 5 corresponding reverse collateral instructions. They may also contain the T2S Reference, using an INFO link,  
 6 of any related messages generated corresponding to the reverse collateral instructions as per the relevant  
 7 procedure.

8  
 9 As for the initial auto-collateralisation operation, all involved T2S Actors are provided with:

- 10 | In case of Repo or Pledge auto-collateralisation procedure:
- 11 – A "No hold remain(s)" SecuritiesSettlementTransactionStatusAdvice for the notification of the update
  - 12 of the released reverse collateral Settlement Instruction;
  - 13 – A "Full settlement" SecuritiesSettlementTransactionConfirmation for the confirmation of the full set-
  - 14 tlement of the released reverse collateral Settlement Instruction;
- 15 | In case of Pledge-sub auto-collateralisation procedure:
- 16 – A "No hold remain(s)" SecuritiesSettlementTransactionStatusAdvice for the notification of the update
  - 17 of the released reverse collateral Settlement Instruction;
  - 18 – A "Full settlement" SecuritiesSettlementTransactionConfirmation for the confirmation of the full settle-
  - 19 ment of the released reverse collateral Settlement Instruction;

- 1 – A "Full settlement" IntraPositionMovementConfirmation for the confirmation of the full settlement of
- 2 the released reverse collateral Settlement Restriction.

3 Additional notification restrictions

- 4 In case of use of a restriction reference in the inbound Settlement Instruction, to trigger an indirect debit,
- 5 additional messages are sent, related to the booking of the associated T2S generated Settlement Restriction
- 6 (See sections Securities Blocking/Reservation/Earmarking and Cash Blocking and Reservation).

- 7
- 8 According to the type of restricted resources used (i.e. cash or securities), the instructing T2S Actor is pro-
- 9 vided with:

- 10 | In case of use of blocked or reserved cash only:
  - 11 – A "Full Settlement" IntraBalanceMovementConfirmation for the booking confirmation of the generated
  - 12 intra-balance movement;
- 13 | In case of use of blocked or reserved securities only:
  - 14 – A "Full settlement" IntraPositionMovementConfirmation for the booking confirmation of the generated
  - 15 intra-position movement;
- 16 | In case of use of blocked or reserved cash and blocked or reserved securities:
  - 17 – A "Full Settlement" IntraBalanceMovementConfirmation;
  - 18 – A "Full settlement" IntraPositionMovementConfirmation.

19 Additional notification pre-emption

- 20 In case the resources, credited by the inbound Settlement Instruction, are pre-empted to complement an
- 21 already partially filled cash or securities reservation, additional messages are sent, related to the booking of
- 22 the complementary Settlement Restrictions (See sections Securities Blocking/Reservation/Earmarking and
- 23 Cash Blocking and Reservation).

1

2 The instructing T2S Actor which has initially sent the partially settled Settlement Restriction is provided with:

- 3 **I** If the complemented reservation is for cash, the instructing T2S Actor which initially sends the reserva-
- 4 tion is provided with:
- 5 – **[Full Settlement]** A "Full Settlement" IntraBalanceMovementConfirmation when the related Settle-
- 6 ment Restriction is fully settled in one time;
- 7 – **[Last Partial Settlement]** A "Last Partial Settlement" IntraBalanceMovementConfirmation when the
- 8 related Settlement Restriction is fully settled after one or several partial settlement(s);
- 9 – **[Partial Settlement]** When the related Settlement Restriction is partially settled (i.e. an amount re-
- 10 mains to settle):
- 11     ▪ A "Partial settlement (unsettled part)" IntraBalanceMovementStatusAdvice corresponding to the
- 12     unsettled part;
- 13     ▪ A "Partial settlement (settled part)" IntraBalanceMovementConfirmation corresponding to the set-
- 14     tled part;

- 1 | I If the complemented reservation is for securities, the instructing T2S Actor which initially sends the res-  
2 | reservation is provided with:
- 3 | – **[Full Settlement]** A "Full settlement" IntraPositionMovementConfirmation when the related Settle-  
4 | ment Restriction is fully settled in one time;
  - 5 | – **[Last Partial Settlement]** A "Last partial settlement" IntraPositionMovementConfirmation when the  
6 | related Settlement Restriction is fully settled after one or several partial settlement(s);
  - 7 | – **[Partial Settlement]** When the related Settlement Restriction is partially settled (i.e. a quantity re-  
8 | mains to settle):
    - 9 | ▪ A "Partial settlement (unsettled part)" IntraPositionMovementStatusAdvice corresponding to the  
10 | unsettled part;
    - 11 | ▪ A "Partial settlement (settled part)" IntraPositionMovementConfirmation corresponding to the set-  
12 | tled part;
- 13 | I If the complemented reservations are for cash and securities, instructing T2S Actors which initially sends  
14 | the reservation is provided with:
- 15 | – **[Full Settlement]:**
    - 16 | ▪ A "Full Settlement" IntraBalanceMovementConfirmation;
    - 17 | ▪ A "Full settlement" IntraPositionMovementConfirmation;
  - 18 | – **[Last Partial Settlement]:**
    - 19 | ▪ A "Last Partial Settlement" IntraBalanceMovementConfirmation;
    - 20 | ▪ A "Last partial settlement" IntraPositionMovementConfirmation;
  - 21 | – **[Partial Settlement]:**
    - 22 | ▪ A "Partial settlement (unsettled part)" IntraBalanceMovementStatusAdvice;
    - 23 | ▪ A "Partial settlement (settled part)" IntraBalanceMovementConfirmation;
    - 24 | ▪ A "Partial settlement (unsettled part)" IntraPositionMovementStatusAdvice;
    - 25 | ▪ A "Partial settlement (settled part)" IntraPositionMovementConfirmation.

#### 26 | Additional notification cash rebalancing

27 | In case a rebalancing liquidity is settled with the booking of the inbound Settlement Instruction, an addition-  
28 | al message is sent related to the booking of the associated T2S generated rebalancing Liquidity Transfer  
29 | (See section Proceeds resulting from Corporate Actions or monetary policy operations).

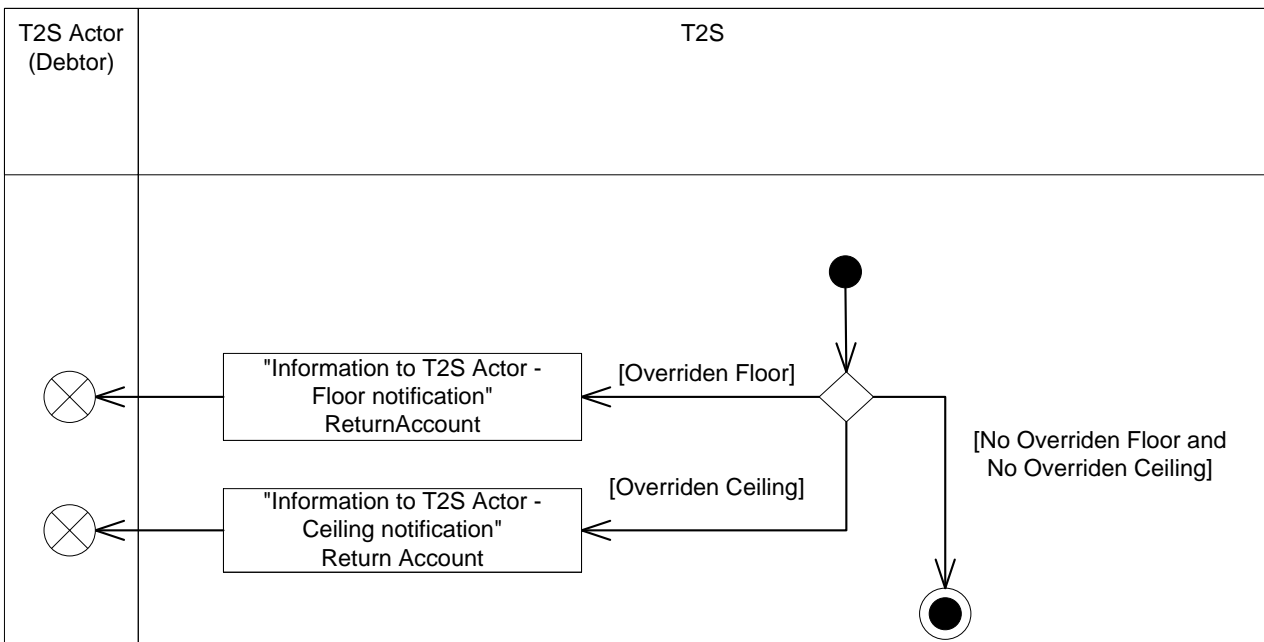

1

2 The T2S Actor which owns the T2S Dedicated Cash Account is then provided with a "Information to T2S  
 3 Actor Debit Notification" BankToCustomerDebitCreditNotification to confirm the additional movement (as well  
 4 as the RTGS for the associated movement: see section [Execution of Standing and Predefined Liquidity  
 5 Transfer Orders from T2S to RTGS](#) [▶ 1016]).

6 *Additional notification floor/ceiling*

7 In case a floor or a ceiling has been overridden following the booking process, a message is sent to the  
 8 owner of the impacted T2S Dedicated Cash Account (See section Liquidity Monitoring).

9

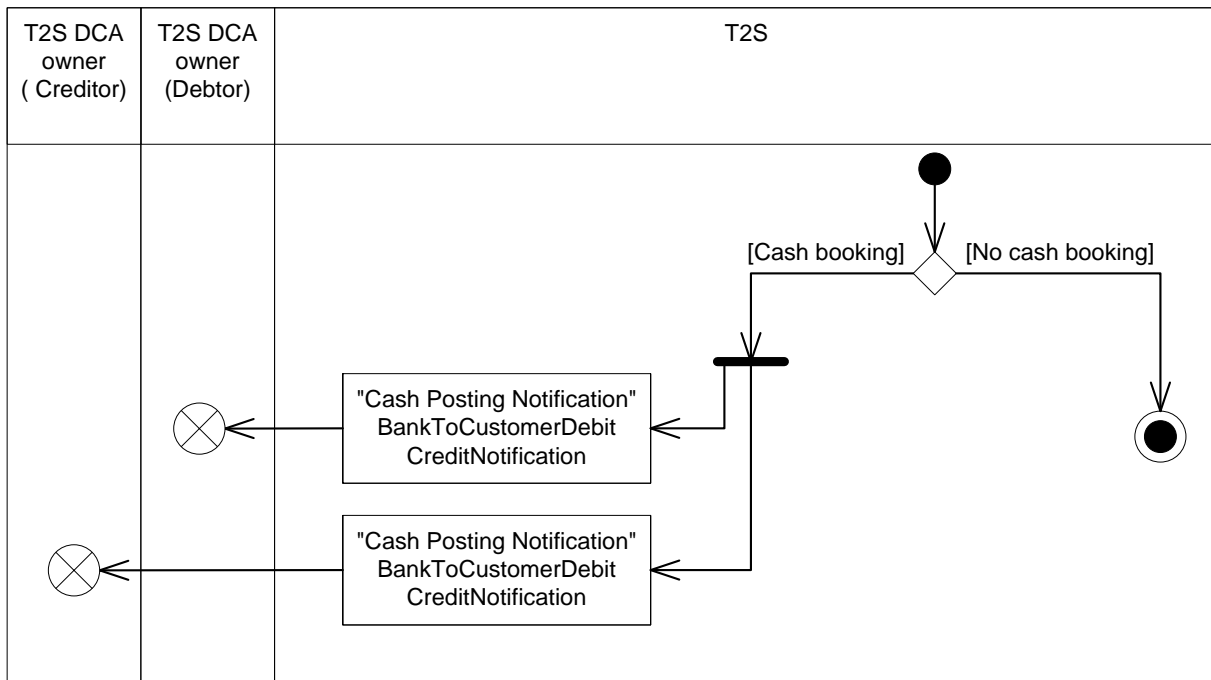

10 The T2S Actor which owns the T2S Dedicated Cash Account is provided with:

- 1 | **[Overridden floor]** A "Information to T2S Actor - Floor Notification" ReturnAccount in case of overridden floor;
- 2 |
- 3 | **[Overridden ceiling]** A "Information to T2S Actor - Ceiling Notification" ReturnAccount in case of overridden ceiling.
- 4 |

5 | Additional notification cash posting

6 | In case a cash balance is credited/debited with the booking of the inbound Settlement Instruction, an additional message is sent related to the booking of the associated T2S dedicated Cash Account.

7 |

8 |

9 | The T2S Actor which owns the T2S Dedicated Cash Account is then provided with a "Cash Posting Notification" BankToCustomerDebitCreditNotification to confirm the additional movement.

10 |

11 | Additional notification settlement of partial release

12 | Upon settlement of a Partial Release Process, T2S performs a Settlement Eligibility Check, triggering the relevant status advice messages if applicable (i.e. change from the last business rule or reason code communicated).

13 |

14 |

15 | **2.3.5 Settlement Instruction Cancellation Processing**

16 | A Settlement Instruction can be cancelled in T2S anytime during its processing due to any of the following conditions (See section Instruction Cancellation):

17 |

- 18 | | Cancellation requested by the relevant T2S Actor;
- 19 | | CoSD Cancellation by all the Administering Parties;
- 20 | | Cancellation related to the recycling period;
- 21 | | Cancellation due to an unsuccessful revalidation;
- 22 | | Cancellation due to failure to create a Realignment Chain;

- 1 | Cancellation due to lack of a default cash account of the Securities Account of the Settlement Instruction;
- 2 |
- 3 | Cancellation due to an unsuccessful validation of a linked T2S generated realignment Settlement Instruction.
- 4 |
- 5 | When any of these conditions is fulfilled, T2S sends a "Cancelled" SecuritiesSettlementTransactionStatusAdvice with its corresponding reason code to inform the T2S Actor (Instructing party) that its Settlement Instruction has been cancelled.
- 6 |
- 7 |

8

9 2.3.5.1 Related Realignment(s) Instructions Check

10 When a Settlement Instruction is cancelled, T2S checks if there is any Realignment Instruction(s) related to  
 11 the cancelled Settlement Instruction:

- 12 | **[Related Realignment(s)]** T2S cancels all the related Realignment instructions and sends a "Cancelled" SecuritiesSettlementTransactionStatusAdvice per each Realignment Instruction to inform all the  
 13 | CSDs involved in the settlement chain on the cancellation of the Realignment instruction(s) related to the  
 14 | Settlement Instruction;
- 15 |
- 16 | **[No related Realignment(s)]** no information on Realignment(s) is sent.

1 2.3.5.2 Allegement Sent Check

2 When a Settlement Instruction is cancelled, T2S checks if an Allegement has been sent (See section Al-  
3 legement) to identify if it needs to be cancelled or not:

- 4 | **[An Allegement has been sent and it has not been removed yet]** In this case, T2S sends a Secu-  
5 ritiesMessageCancellationAdvice to inform the T2S Actor (Counterparty) on the cancellation of the Al-  
6 legement due to the cancellation of the Settlement Instruction that originated the Allegement sending;
- 7 | **[No Allegement has been sent or it has been removed already]** no information on Allegement is  
8 sent.

9 **2.3.6 Reporting of Matched Settlement Instructions identified as failed in their cut-**  
10 **off**

11 During the Real Time closure Period, in the processing of each cut-off, T2S identifies as "Failing" the Settle-  
12 ment Instructions that can no longer settle at their Intended Settlement Date, and informs the T2S Actor if  
13 T2S has not already communicated the "Failing" before.

14 2.3.6.1 Time / Business Event

15 The Time / Business Event relates to the processing of a settlement cut-off (i.e.: DVP, BATM, CBO or FOP  
16 cut-off). It triggers the identification of failed Matched Settlement instructions

17

### 1 2.3.6.2 Identification of failed Matched Settlement Instructions

2 When the identification of failed Matched Settlement Instructions is triggered, T2S identifies the matched  
3 Settlement Instructions that need to be updated to "Failing".

4 | **[Failing Matched Settlement Instructions]** Matched Settlement Instructions eligible to the cut-off,  
5 which have reached their Intended Settlement Date and are not settled, are identified as "Failing".

6 – **[Matched Settlement Instructions not identified as "Failing" before]** The instructing T2S Ac-  
7 tor is provided with the relevant "[Eligibility Failure](#) [▶ 966]" or "[Intraday Restriction](#) [▶ 967]" or a  
8 "[Provision check failure](#) [▶ 967]" SecuritiesSettlementTransactionStatusAdviceV10 (sese.024.001.10)  
9 including the "Failing" ISO settlement status with the applicable reason(s) for failure.

10 – **[Matched Settlement Instructions already identified as "Failing" before]** T2S updates the in-  
11 struction but no action is performed in terms of communication towards the T2S Actor.

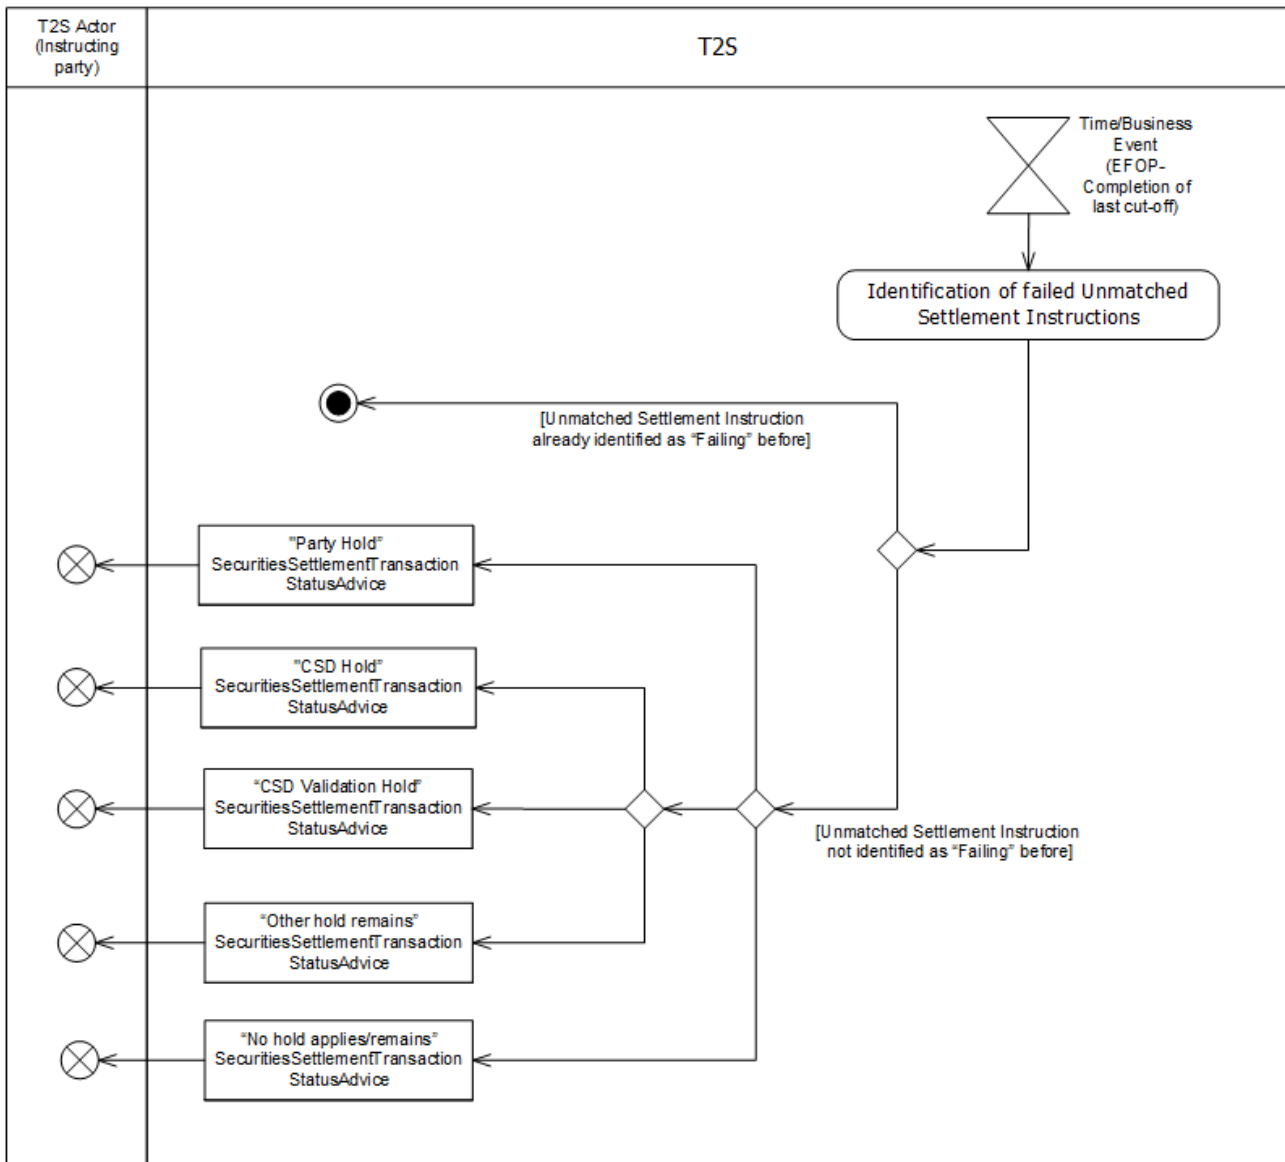

12 Upon identification of a Failing Matched Settlement Instruction, T2S performs a Settlement Eligibility Check  
13 over all failing instructions eligible to the cut-off, triggering the relevant status advice messages commu-  
14 nication if applicable (i.e. change from the last business rule or reason code communicated).

### 15 **2.3.7 Reporting of Unmatched Settlement Instructions identified as failed after the** 16 **last cut-off of the settlement day**

17 Upon completion of the last settlement cut-off (FOP cut-off), T2S identifies as "Failing" the Unmatched Set-  
18 tlement Instructions that can no longer settle at their Intended Settlement Date, and informs the T2S Actor  
19 if T2S has not already communicated the "Failing" before.

#### 20 2.3.7.1 Time / Business Event

21 The Time / Business Event relates to the completion of the last cut-off for Settlement Instructions ("end of  
22 FOP cut-off" event - EFOP). It triggers the identification of failed Unmatched Settlement Instructions

1  
2 2.3.7.2 Identification of failed Unmatched Settlement Instructions

3 When the identification of failed instructions is triggered, T2S identifies the Unmatched Settlement Instruc-  
4 tions that need to be updated to "Failing".

5 | **[Failing Unmatched Settlement Instructions]** Unmatched Settlement Instructions, which have  
6 reached their Intended Settlement Date, are identified as "Failing".

7 – **[Unmatched Settlement Instructions not identified as "Failing" before]** The instructing T2S  
8 Actor is provided with the relevant "Party Hold" [], "CSD Hold" [], "CSD Validation Hold"[], "Other  
9 Hold remains[], "No hold remain/exist"[] SecuritiesSettlementTransactionStatusAdviceV10  
10 (sese.024.001.10) including the "Failing" ISO settlement status with the applicable reason(s) for fail-  
11 ure.

12 – **[Unmatched Settlement Instructions already identified as "Failing" before]** No action is per-  
13 formed.

## 1 2.4 Send Settlement Restriction on Securities Position

### 2 2.4.1 Introduction

3 This section describes, based on a use case, the outbound messages resulting from the processing of a Set-  
4 tlement Restriction on Securities Position received in T2S via the inbound message IntraPositionMovemen-  
5 tInstruction.

6 This use case covers all the situations where a T2S Actor wants to manage restriction on a securities position  
7 (See section Securities Blocking/Reservation/Earmarking) which can be:

- 8 | A securities blocking;

- 1 | A securities reservation;
- 2 | A securities earmarking.
- 3 | Only the T2S Actor – Instructing party, sender of the Settlement Restriction on Securities Position, is involved in the use case.
- 4 |

5 | **2.4.2 Activity Diagram**

6 | This diagram provides an overview of the processing of an inbound Settlement Restriction on Securities Position, which is composed of three main activities from the entry of the message into T2S until its settlement:

7 | Communication Processing, Securities Settlement Restriction Lifecycle Processing and Securities Settlement Restriction Settlement Processing.

8 |

9 |

10 | In addition the last two activities may be interrupted in case the Settlement Restriction is cancelled.

11 |

12 | 2.4.2.1 Communication Processing

13 | Detailed description can be found at section [Communication processing](#) [▶ 915].

14 | 2.4.2.2 Securities Settlement Restriction Lifecycle Processing

15 | The Securities Settlement Restriction Lifecycle Processing is in charge of validation of the Settlement Restriction on Securities Position.

16 |

1 The related decomposed diagram and detailed description can be found at section [Securities Settlement](#)  
2 [Restriction Lifecycle Processing](#) [▶ 956].

### 3 2.4.2.3 Securities Settlement Restriction Settlement Processing

4 The Securities Settlement Restriction Settlement Processing is in charge of the actual booking of the Settle-  
5 ment Restriction on Securities Position.

6 The related decomposed diagram and detailed description can be found at section [Securities Settlement](#)  
7 [Restriction Settlement Processing](#) [▶ 957].

### 8 2.4.2.4 Securities Settlement Restriction Cancellation Processing

9 The Securities Settlement Restriction Cancellation Processing is in charge of informing the relevant actors of  
10 the cancellation of a Settlement Restriction on Securities Position.

11 The related decomposed diagram and detailed description can be found at section [Securities Settlement](#)  
12 [Restriction Cancellation Processing](#) [▶ 960].

1 **2.4.3 Securities Settlement Restriction Lifecycle Processing**

2

3 **2.4.3.1 Business Validation**

4 T2S checks whether the Settlement Restriction on securities passes the business validation including privi-  
5 lege check (See section Business Validation). The result of this check can be:

6 | **[Business Validation NOK]** If the Settlement Restriction is not valid, the instruction is rejected and  
7 T2S sends a "Rejected" IntraPositionMovementStatusAdvice with the corresponding reason code to in-  
8 form the T2S Actor (Instructing party) that its Settlement Restriction has been rejected;

9 | **[Business Validation OK]** If the Settlement Restriction passes the business validation, T2S continues  
10 with its processing.

11 **2.4.3.2 Specific Restriction Validation**

12 T2S checks whether the Settlement Restriction on securities is under a rejection restriction set by the rele-  
13 vant CSD (See section Specific restriction validation process). The result of this check can be:

- 1 | **[Rejection Restriction applied]** T2S rejects the Settlement Restriction on securities and sends a “Re-
- 2 | jected” IntraPositionMovementStatusAdvice with the corresponding reason code to inform the T2S Actor
- 3 | (Instructing party) that its Settlement Restriction has been rejected together with the relevant rule ID of
- 4 | a positive rejection restriction that has been fulfilled;
- 5 | **[No Rejection Restriction applied]** If no rejection restriction is applied, then T2S sends an “Accept-
- 6 | ed” IntraPositionMovementStatusAdvice to inform the T2S Actor (Instructing party) that its Settlement
- 7 | Restriction has been accepted and continues with the processing of the instruction.
- 8 | **[If the Settlement Restriction on Securities has fulfilled a rule of a negative rejection restriction, T2S also**
- 9 | **informs on the rule ID fulfilled.**

#### 10 | **2.4.4 Securities Settlement Restriction Settlement Processing**

11 | Once the inbound Settlement Restriction has been processed by Securities Settlement Restriction Lifecycle

12 | Processing and its Intended Settlement Date is reached, the Securities Settlement Restriction Settlement

13 | Processing performs an ultimate validity check (Eligibility Criteria Check processing and Intraday Restriction

14 | Check processing), the provision check (Provision Check processing) and the actual booking (Booking pro-

15 | cessing).

1

2 At its Intended Settlement Date, the Settlement Restriction is submitted to a settlement attempt, starting  
3 with an ultimate validity checks related to eligibility criteria and intraday restrictions before performing the  
4 provision check.

5 2.4.4.1 Eligibility Criteria Check

6 T2S checks if the Settlement Restriction is eligible for a settlement attempt according to the fulfilment of  
7 indicated link(s) with other Settlement Restriction or Settlement Instruction or according to the applicability  
8 of the relevant settlement cut-off (See section Eligibility check process). This check may result in:

1 | **[Eligibility Check NOK]** If at least one eligibility criterion is not fulfilled, the instructing T2S Actor is  
2 | provided with an "Eligibility failure" IntraPositionMovementStatusAdvice. The processing of the Settle-  
3 | ment Restriction is stopped until its further eligibility;

4 | **[Eligibility Check OK]** If all eligibility criteria are fulfilled, the Settlement Restriction is processed fur-  
5 | ther.

#### 6 | 2.4.4.2 Intraday Restriction Check

7 | T2S checks if the Settlement Restriction is under an intraday restriction on the involved Securities Accounts  
8 | or parties which own the Securities Accounts or security. This check may result in:

9 | **[Intraday Restriction Detected]** If at least one intraday restriction is detected, the instructing T2S  
10 | Actor is provided with a "Intraday restriction" IntraPositionMovementStatusAdvice. The processing of the  
11 | Settlement Restriction is stopped until all applicable intraday restrictions are removed;

12 | **[No Intraday Restriction Detected]** If no intraday restriction is detected, the Settlement Restriction  
13 | is processed further.

#### 14 | 2.4.4.3 Provision Check

15 | T2S performs the Provision Check on the involved securities position from which the resources are debited  
16 | (See section Provision check process), which may result in:

17 | **[Provision Check NOK]** The provision check of a Settlement Restriction can fail when it is a blocking  
18 | or when it is linked to another Settlement Instruction that fails to settle. The instructing T2S Actor is  
19 | provided with a "Provision check failure" IntraPositionMovementStatusAdvice. The processing of the Set-  
20 | tlement Restriction is stopped until a further successful provision check;

21 | **[Provision Check OK]** Otherwise the Settlement Restriction is processed further.

#### 22 | 2.4.4.4 Booking

23 | The booking results in the actual update of the involved securities positions and in the irrevocable settlement  
24 | (full or partial) of the Settlement Restriction (See section Booking process).

25 | The outbound messages resulting from the booking can be:

26 | **[Full Settlement]** When an inbound Settlement Restriction (whatever the related restriction processing  
27 | type) is fully settled, the instructing T2S Actor is provided with a "Full settlement" IntraPositionMove-  
28 | mentConfirmation;

29 | **[Partial settlement of reservation]** When an inbound Settlement Restriction related to the reserva-  
30 | tion restriction processing type is partially settled (i.e. a quantity remains to fill through the pre-emption  
31 | mechanism), the instructing T2S Actor is provided with:

32 | – A "Partial settlement (unsettled part)" IntraPositionMovementStatusAdvice message corresponding to  
33 | the unsettled part;

34 | – A "Partial settlement (settled part)" IntraPositionMovementConfirmation message corresponding to the  
35 | settled part.

1 The complementary filling is then handled through the pre-emption of any further incoming resources;

2 | **[Partial settlement of earmarking]** When an inbound Settlement Restriction related to the earmarking restriction processing types is partially settled (i.e. the quantity actually booked is lower than the requested quantity or equal to zero but no complement shall be booked later), the instructing T2S Actor is provided with a "Partial execution" IntraPositionMovementConfirmation indicating the quantity actually settled and no pending part.

7 **2.4.5 Securities Settlement Restriction Cancellation Processing**

8 A Settlement Restriction on Securities Position can be cancelled in T2S anytime during its processing due to  
9 any of the following conditions (See section Instruction Cancellation):

- 10 | Cancellation request by the relevant T2S Actor (the messages involved in the cancellation request process are detailed at section [Send Cancellation Instruction of a Settlement Instruction or a Settlement Restriction on Securities Position](#) [▶ 998]);
- 13 | Cancellation related to the recycling period;
- 14 | Cancellation due to an unsuccessful revalidation;
- 15 | Cancellation related to the cancellation of the underlying CoSD Settlement Instruction.

16 When any of these conditions is fulfilled, T2S sends a "Cancelled" IntraPositionMovementStatusAdvice with  
17 the corresponding reason code to inform the T2S Actor (Instructing party) that its Settlement Restriction has  
18 been cancelled.

19

1 **2.4.6 Reporting of Securities Settlement Restriction identified as failed in their cut-off**  
 2

3 During the Real Time closure Period, in the processing of the Securities Settlement Restriction cut-off, T2S  
 4 identifies as "Failing" the Settlement Restrictions on Securities that can no longer settle at their Intended  
 5 Settlement Date, and informs the T2S Actor if T2S has not already communicated the "Failing" before.

6 **2.4.6.1 Time / Business Event**

7 The Time / Business Event relates to the processing of the settlement cut-off SSRC. It triggers the identifica-  
 8 tion of failed Settlement Restriction on Securities.

9

10 **2.4.6.2 Identification of failed instructions**

11 When the identification of failed Instructions is triggered, T2S identifies the Settlement Restriction on Securi-  
 12 ties that need to be updated to "Failing".

13 **I [Failing Settlement Restrictions on Securities]** Settlement Restriction on Securities eligible to the  
 14 cut-off, which have reached their Intended Settlement Date and are not settled, are identified as "Fail-  
 15 ing".

16 – **[Settlement Restrictions on Securities not identified as "Failing" before]** The instructing T2S  
 17 Actor is provided with the relevant "[Eligibility Failure](#) [▶ 966]", "[Intraday Restriction](#) [▶ 967]" or

1 "Provision check failure [▶ 967]" IntraPositionMovementStatusAdviceV06 (semt.014.001.06) including  
2 the "Failing" ISO settlement status with the applicable reason(s) for failure.

## 10 2.5 Send Settlement Restriction on Cash Balance

### 11 2.5.1 Introduction

12 This section describes, based on a use case, the outbound messages resulting from the processing of a Set-  
13 tlement Restriction on Cash Balance received in T2S via the inbound message IntraBalanceMovemen-  
14 tInstruction.

15 This use case covers all the situations where a T2S Actor wants to manage restriction on a cash balance  
16 which can be:

- 17 | A cash blocking;
- 18 | A cash reservation.

1 Only the T2S Actor – Instructing party, sender of the Settlement Restriction on Cash Balance, is involved in  
2 the use case.

3 **2.5.2 Activity Diagram**

4 This diagram provides an overview of the processing of an inbound Settlement Restriction on Cash Balance,  
5 which is composed of three main activities from the entry of the instruction message into T2S until its set-  
6 tlement: Communication Processing, Cash Settlement Restriction Lifecycle Processing and Cash Settlement  
7 Restriction Lifecycle Settlement Processing.

8 In addition the last two activities may be interrupted in case the instruction is cancelled.

9

10 **2.5.2.1 Communication Processing**

11 Detailed description can be found at section [Communication processing](#) [▶ 915].

12 **2.5.2.2 Cash Settlement Restriction Lifecycle Processing**

13 The Cash Settlement Restriction Lifecycle Processing is in charge of validation of the Settlement Restriction  
14 on Cash Balance.

15 The related decomposed diagram and detailed description can be found at section [Cash Settlement Re-](#)  
16 [striction Lifecycle Processing](#) [▶ 964].

1 2.5.2.3 Cash Settlement Restriction Settlement Processing

2 The Cash Settlement Restriction Settlement Processing is in charge of the actual booking of the Settlement  
3 Restriction on Cash Balance.

4 The related decomposed diagram and detailed description can be found at section [Cash Settlement Re-](#)  
5 [striction Settlement Processing](#) [▶ 965].

6 2.5.2.4 Cash Settlement Restriction Cancellation Processing

7 The Cash Settlement Restriction Cancellation Processing is in charge of informing the relevant actors of the  
8 cancellation of a Settlement Restriction on Cash Balance.

9 The related decomposed diagram and detailed description can be found at section [Cash Settlement Re-](#)  
10 [striction Cancellation Processing](#) [▶ 968].

11 **2.5.3 Cash Settlement Restriction Lifecycle Processing**

12

### 1 2.5.3.1 Business Validation

2 T2S checks whether the Settlement Restriction on cash passes the business validation including privilege  
3 check (See section Business Validation). The result of this check can be:

4 | **[Business Validation NOK]** If the Settlement Restriction is not valid, the instruction is rejected and  
5 T2S sends a "Rejected" IntraBalanceMovementStatusAdvice with its corresponding reason code(s) to in-  
6 form the T2S Actor (Instructing party) that its Settlement Restriction has been rejected;

7 | **[Business Validation OK]** If the Settlement Restriction passes the business validation, T2S continues  
8 with its processing.

### 9 2.5.3.2 Specific Restriction Validation

10 T2S checks whether the Settlement Restriction on cash is under a rejection restriction set by the relevant CB  
11 (See section Specific restriction validation process). The result of this check can be:

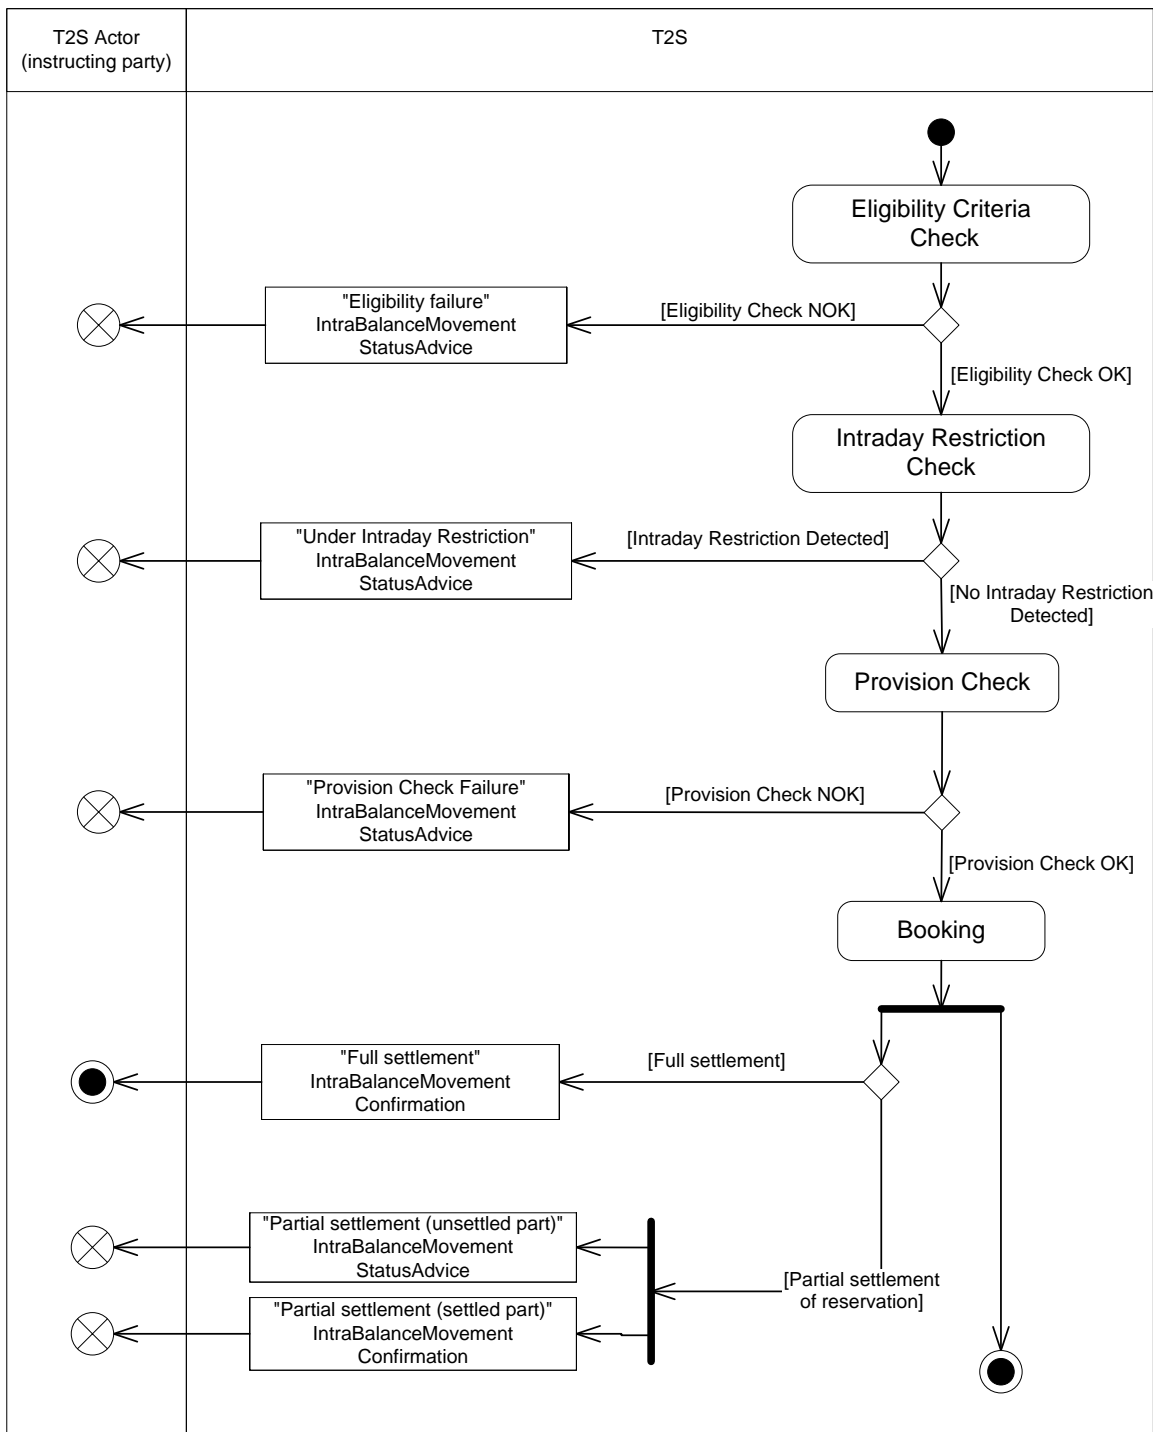

12 | **[Rejection Restriction applied]** T2S rejects the Settlement Restriction on cash and sends a "Reject-  
13 ed" IntraBalanceMovementStatusAdvice with the corresponding reason code to inform the T2S Actor (In-  
14 structing party) that its Settlement Restriction has been rejected together with the relevant rule ID of a  
15 positive rejection restriction that has been fulfilled;

16 | **[No Rejection Restriction applied]** If no rejection restriction is applied, then T2S sends an "Accept-  
17 ed" IntraBalanceMovementStatusAdvice to inform the T2S Actor (Instructing party) that its Settlement  
18 Restriction has been accepted and continues with the processing of the instruction.

19 | If the Settlement Restriction on cash has fulfilled a rule of a negative rejection restriction, T2S also in-  
20 forms on the rule ID fulfilled.

### 21 **2.5.4 Cash Settlement Restriction Settlement Processing**

22 Once the Intended Settlement Date of the inbound Settlement Restriction is reached, the Cash Settlement  
23 Restriction Settlement Processing performs an ultimate validity check (Eligibility Criteria Check processing  
24 and Intraday Restriction Check processing), the provision check (Provision Check processing) and the actual  
25 booking (Booking processing).

1

2 At its Intended Settlement Date, the Settlement Restriction is submitted to a settlement attempt, starting  
3 with an ultimate validity check related to eligibility criteria and intraday restrictions, before performing the  
4 provision check.

5 2.5.4.1 Eligibility Criteria Check

6 T2S checks if the Settlement Restriction is eligible for a settlement attempt according to the fulfilment of  
7 indicated link(s) with other Settlement Restriction(s) or Settlement Instruction(s) or according to the ap-  
8 plicability of the relevant settlement cut-off (See section Eligibility check process). This check may result in:

- 1 | **[Eligibility Check NOK]** If at least one eligibility criterion is not fulfilled, the instructing T2S Actor is  
2 | provided with an "Eligibility failure" IntraBalanceMovementStatusAdvice. The processing of the Settle-  
3 | ment Restriction is stopped until its further eligibility;
- 4 | **[Eligibility Check OK]** If all eligibility criteria are fulfilled, the Settlement Restriction is processed fur-  
5 | ther.

#### 6 | 2.5.4.2 Intraday Restriction Check

7 | T2S checks if the Settlement Restriction is under an intraday restriction on the involved T2S Dedicated Cash  
8 | Accounts or parties which owns the T2S Dedicated Cash Accounts. This check may result in:

- 9 | **[Intraday Restriction Detected]** If at least one intraday restriction is detected, the instructing T2S  
10 | Actor is provided with an "Intraday Restriction" IntraBalanceMovementStatusAdvice. The processing of  
11 | the Settlement Restriction is stopped until all applicable intraday restrictions are removed;
- 12 | **[Intraday Restriction Detected]** If no intraday restriction is detected, the Settlement Restriction is  
13 | processed further.

#### 14 | 2.5.4.3 Provision Check

15 | T2S performs the provision check on the involved cash balance from which the resources are debited (See  
16 | section Provision check process), which may result in:

- 17 | **[Provision Check NOK]** The provision check of a Settlement Restriction can fail when it is a blocking  
18 | or when it is linked to another Settlement Instruction that fails to settle. The instructing T2S Actor is  
19 | provided with a "Provision check failure" IntraBalanceMovementStatusAdvice. The processing of the Set-  
20 | tlement Restriction is stopped until a further successful provision check;
- 21 | **[Provision Check OK]** Otherwise the Settlement Restriction is processed further.

#### 22 | 2.5.4.4 Booking

23 | The booking is performed when all the preceding checks are successful. It results in the actual update of the  
24 | involved cash balances and in the irrevocable settlement (full or partial) of the Settlement Restriction (See  
25 | section Booking process).

26 | The outbound messages resulting from the booking can be:

- 27 | **[Full Settlement]** When an inbound Settlement Restriction (whatever the related restriction processing  
28 | type) is fully settled, the instructing T2S Actor is provided with a "Full Settlement" IntraBalanceMove-  
29 | mentConfirmation;
- 30 | **[Partial settlement of reservation]** When an inbound Settlement Restriction related to the reserva-  
31 | tion restriction processing type is partially settled (i.e. a amount remains to fill through the pre-emption  
32 | mechanism), the instructing T2S Actor is provided with:
- 33 | – A "Partial settlement (unsettled part)" IntraBalanceMovementStatusAdvice message corresponding to  
34 | the unsettled part;
- 35 | – A "Partial settlement (settled part)" IntraBalanceMovementConfirmation corresponding to the settled  
36 | part.

1 | The complementary filling is then handled through the pre-emption of any incoming resources (See section Booking process);  
2

3 | **2.5.5 Cash Settlement Restriction Cancellation Processing**

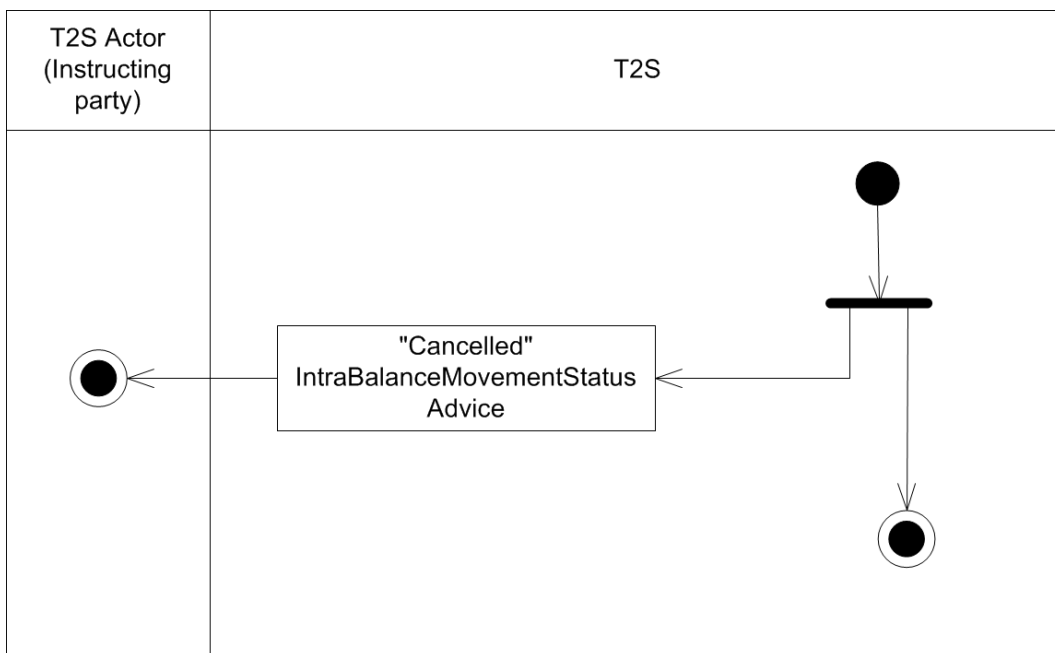

4 | A Settlement Restriction on cash balance can be cancelled in T2S anytime during its processing due to any  
5 | of the following conditions (See section Instruction Cancellation):

6 | | Cancellation request by the relevant T2S Actor (the messages involved in the cancellation request process are detailed at section [Send Cancellation Instruction of a Settlement Restriction on cash balance \[▶ 1004\]](#));  
7  
8

9 | | Cancellation related to the recycling period;

10 | | Cancellation due to an unsuccessfully revalidation.

11 | When any of these conditions is fulfilled, T2S sends a "Cancelled" IntraBalanceMovementStatusAdvice with its  
12 | corresponding reason code to inform the T2S Actor (Instructing party) that its Settlement Restriction has  
13 | been cancelled.

14

15 | **2.5.6 Reporting of Cash Settlement Restriction identified as failed in their cut-off**

16 | During the Real Time closure Period, in the processing of the Cash Settlement Restriction cut-off, T2S identifies as "Failing" the Settlement Restrictions on Cash that can no longer settle at their Intended Settlement  
17 | Date, and informs the T2S Actor if T2S has not already communicated the "Failing" before.  
18

19 | **2.5.6.1 Time / Business Event**

20 | The Time / Business Event relates to the processing of the settlement cut-off CSRC. It triggers the identification of failed Settlement Restriction on Cash.  
21

1

2 2.5.6.2 Identification of failed Settlement Restriction on Cash

3 When the identification of failed Settlement Restriction on Cash is triggered, T2S identifies the Settlement  
4 Restriction on Cash that need to be updated to "Failing".

5 | **[Failing Settlement Restrictions on Cash]** Settlement Restriction on Cash eligible to the cut-off,  
6 which have reached their Intended Settlement Date and are not settled, are identified as "Failing".

7 – **[Settlement Restrictions on Cash not identified as "Failing before]** The instructing T2S Actor  
8 is provided with the relevant "[Eligibility Failure](#) [▷ 966]" , "[Intraday Restriction](#) [▷ 967]" or "[Provision  
9 check failure](#) [▷ 967]" [ ] IntraBalanceMovementStatusAdvice including the "Failing" ISO settlement  
10 status with the applicable reason(s) for failure.

11 – **[Settlement Restrictions on Cash already identified as "Failing" before]** No action is per-  
12 formed.

## 6 2.6 Send Release Instruction for CoSD by Administering Party

### 7 2.6.1 Introduction

8 This section describes, based on a use case, the outbound messages resulting from the processing of a  
9 CoSD Release Instruction received in T2S via the inbound message SecuritiesSettlementConditionModifica-  
10 tionRequest.

11 This use case covers the situation where an Administering Party wants to send a CoSD Release Instruction  
12 (See section Conditional Settlement and section Hold and Release) to release a Settlement Instruction identi-  
13 fied as CoSD. In order to release a CoSD Settlement Instruction, each Administering Party must send one  
14 CoSD Release Instruction per its CoSD rule that applies to such Settlement Instruction.

15 The following actors are potentially involved in this use case:

- 16 | T2S Actor – Instructing party: The T2S Actor that instructed the Settlement Instruction identified as  
17 | CoSD in T2S;
- 18 | T2S Actor - CoSD Administering Party: The Administering Party that instructs the CoSD Release Instruc-  
19 | tion;

1 **2.6.2 Activity Diagram**

2 The following diagram details all the processing steps for the release of a Settlement Instruction identified as  
3 CoSD triggered by the sending of a CoSD Release Instruction by an Administering Party.

4  
5 For the execution of a CoSD Release Instruction the following steps are performed by T2S.

6 **2.6.2.1 Communication Processing**

7 Detailed description can be found at section [Communication processing](#) [▶ 915].

8 **2.6.2.2 CoSD Release Lifecycle Processing**

9 Detailed description can be found at section [CoSD Release Lifecycle Processing](#) [▶ 972].

1 **2.6.3 CoSD Release Lifecycle Processing**

2

3 **2.6.3.1 Business Validation**

4 T2S checks whether the CoSD Release Instruction passes the business validation, including privilege check  
 5 (See section Business Validation). The result of this check can be:

- 6 | **[Business Validation NOK]** If the Release Instruction is not valid, it is rejected and T2S sends a “Re-  
 7 | jected” SecuritiesSettlementConditionModificationStatusAdvice with the corresponding reason code(s) to  
 8 | inform the T2S Actor (CoSD Administering Party) that its CoSD Release Instruction has been rejected.
- 9 | **[Business Validation OK]** If the CoSD Release Instruction passes the business validation, then T2S  
 10 | sends an “Accepted” SecuritiesSettlementConditionModificationStatusAdvice to inform the T2S Actor

1 (CoSD Administering Party) that its CoSD release Instruction has been accepted and continues with its  
2 processing.

### 3 2.6.3.2 CoSD Group of instructions status check

4 T2S checks that the status of the instructions involved in the CoSD process allows the processing of the  
5 CoSD release. The result of this check can be:

6 | **[Instructions status check NOK]** If any of the instructions involved in the CoSD process fulfil any of  
7 the following conditions:

8 – The Settlement Status of the Referenced Settlement Instruction is "Settled";

9 – The Cancellation Status of the Referenced Settlement Instruction is "Cancelled";

10 – The Administering Party has already released the CoSD Rule for the referenced Settlement Instruc-  
11 tion;

12 – The relevant Settlement Restrictions related to the CoSD blocking of securities / cash have not been  
13 settled yet.

14 The Release Instruction for a CoSD is rejected and T2S sends a "Denied" SecuritiesSettlementCondi-  
15 tionModificationStatusAdvice with the relevant Reason Code to inform the T2S Actor (CoSD Adminis-  
16 tering Party) that its CoSD Release Instruction has been denied.

17 | **[Instructions status check OK]** If none of the instructions involved in the CoSD process fulfil the pre-  
18 viously mentioned conditions, T2S executes the CoSD Release Instruction and sends an "Executed" Se-  
19 curitiesSettlementConditionModificationStatusAdvice to inform the T2S Actor (CoSD Administering party)  
20 that its CoSD Release Instruction has been executed.

### 21 2.6.3.3 Pending CoSD Rules Check

22 T2S checks if there is any applicable CoSD Rule pending for the Referenced Settlement Instruction. The  
23 result of this check can be:

24 | **[Pending CoSD Rules Check NOK]** If there is still at least an applicable CoSD Rule pending to be re-  
25 leased, T2S sends a "CoSD Rule Release, Other rule(s) remain(s)" SecuritiesSettlementTransactionSta-  
26 tusAdvice to inform the T2S Actor (Instructing party) that its Settlement Instruction is still on Hold to-  
27 gether with the corresponding CoSD Rules pending.

28 | **[Pending CoSD Rules Check OK]** If all the applicable CoSD Rules have been already released, T2S  
29 sends a "No Hold remain(s)" SecuritiesSettlementTransactionStatusAdvice to inform the T2S Actor (In-  
30 structing party) that its Settlement Instruction has been released for further processing.

31 Once all the CoSD Rules have been released, the Referenced Settlement Instruction is released and con-  
32 tinues with the Settlement Processing as described in section [Conditional Delivery \(CoSD\) Detection](#)  
33 [[▶ 928](#)] (The sending signal "CoSD Release" connects with the receiving signal "CoSD Release" of the di-  
34 agram detailed in section [Conditional Delivery \(CoSD\) Detection](#) [[▶ 928](#)]).

## 6 2.7 Send Cancellation Instruction for CoSD by Administering Party

### 7 2.7.1 Introduction

8 This section describes, based on a use case, the outbound messages resulting from the processing of a  
9 CoSD Cancellation Instruction received in T2S via the inbound message SecuritiesTransactionCancellationRe-  
10 quest.

11 This use case covers the situation where an Administering Party wants to send a CoSD Cancellation Instruc-  
12 tion (See section Conditional Settlement and section Instruction Cancellation) to cancel a Settlement Instruc-  
13 tion identified as CoSD.

14 The following actors are potentially involved in this use case:

- 15 | T2S Actor – Instructing party: The T2S Actor that instructed the Settlement Instruction identified as  
16 CoSD in T2S;
- 17 | T2S Actor - CoSD Administering Party: The Administering Party that instructs the CoSD Cancellation In-  
18 struction;
- 19 | T2S Actor - Administering Parties related to the Instructing Party's Settlement Instruction: All the Admin-  
20 istering Parties that have set a rule applicable to the Settlement Instruction;
- 21 | T2S Actor – Counterparty: The T2S Actor that instructed the Settlement Instruction's Counterpart.

1 **2.7.2 Activity Diagram**

2 The following diagram details all the processing steps for the cancellation of a Settlement Instruction identi-  
3 fied as CoSD triggered by the sending of a CoSD Cancellation Instruction by an Administering Party.

4  
5 For the execution of Cancellation Instruction the following steps are performed by T2S.

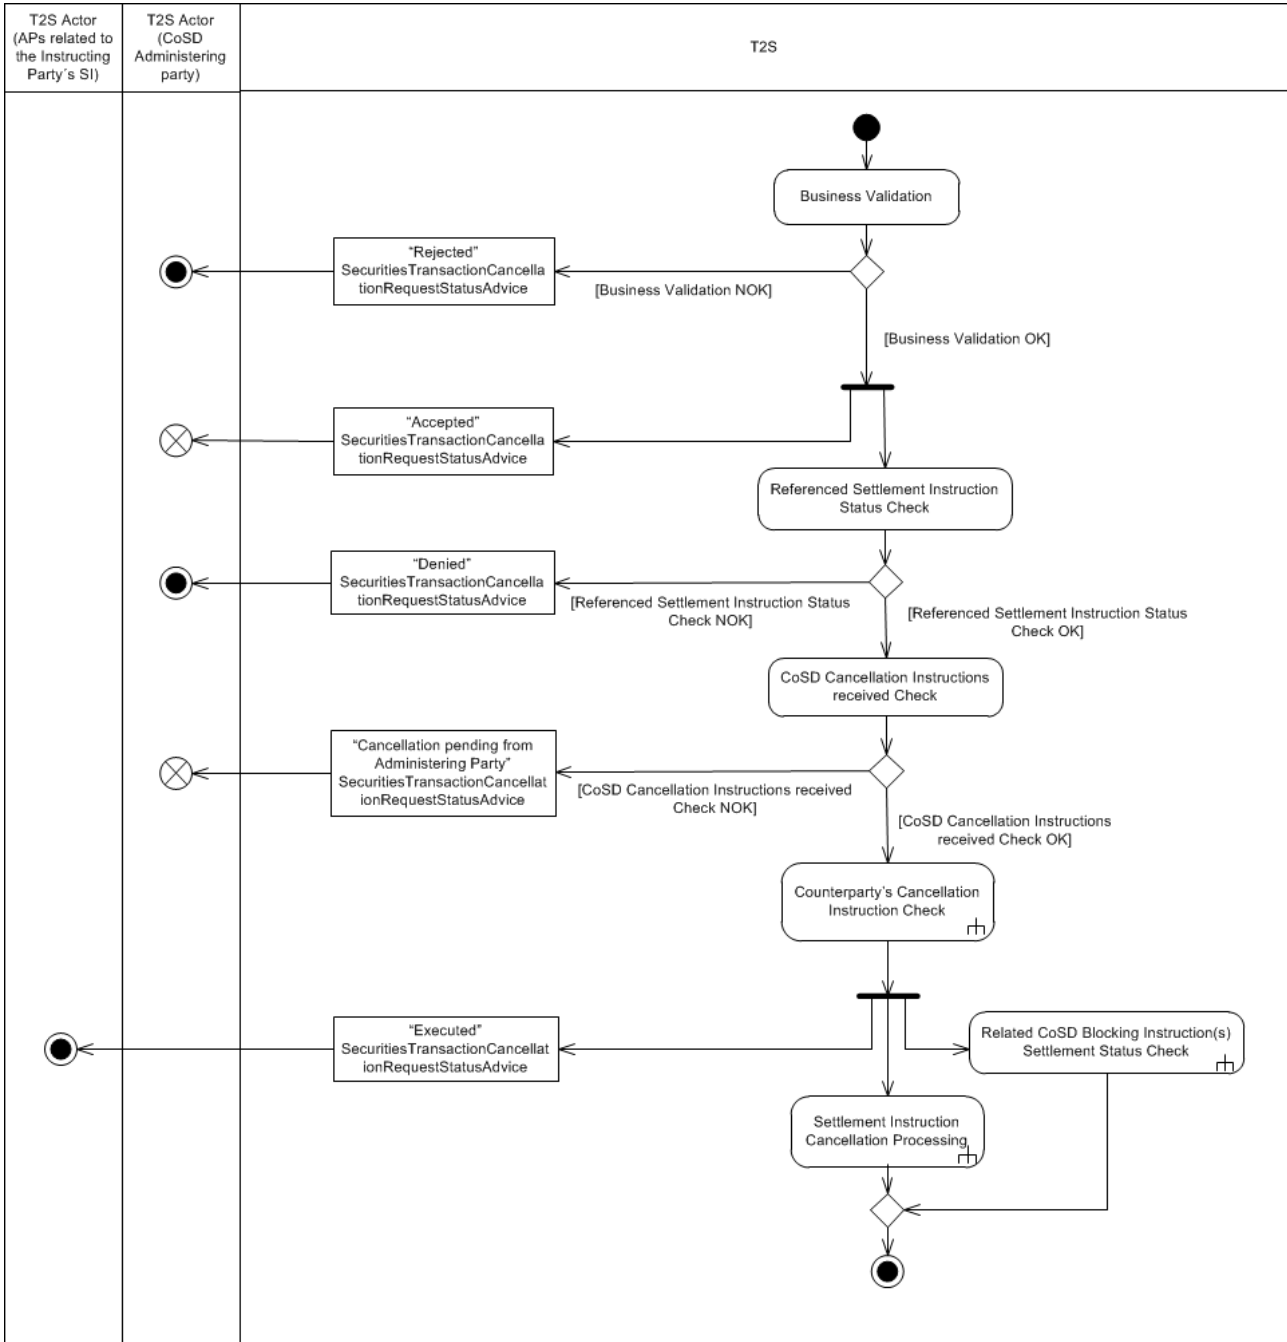

6 **2.7.2.1 Communication Processing**

7 Detailed description can be found at section [Communication processing](#) [▶ 915].

8 **2.7.2.2 CoSD Cancellation Instruction Lifecycle Processing**

9 Detailed description can be found at section [CoSD Cancellation Instruction Lifecycle Processing](#) [▶ 976].

1 **2.7.3 CoSD Cancellation Instruction Lifecycle Processing**

2

3 **2.7.3.1 Business Validation**

4 T2S checks whether the CoSD Cancellation Instruction passes the business validation, including privilege  
 5 check (See section Business Validation). The result of this check can be:

- 6 | **[Business Validation NOK]** If the CoSD Cancellation Instruction is not valid, the instruction is rejected  
 7 and T2S sends a "Rejected" SecuritiesTransactionCancellationRequestStatusAdvice with the correspond-  
 8 ing reason code(s) to inform the T2S Actor (CoSD Administering Party) that its CoSD Cancellation In-  
 9 struction has been rejected.

1 | **[Business Validation OK]** If the CoSD Cancellation Instruction passes the business validation, then  
2 | T2S sends an "Accepted" SecuritiesTransactionCancellationRequestStatusAdvice to inform the T2S Actor  
3 | (CoSD Administering Party) that its CoSD Cancellation Instruction has been accepted and continues with  
4 | its processing.

#### 5 | 2.7.3.2 CoSD Group of instructions status check

6 | T2S checks that the status of the Referenced Settlement Instruction allows the processing of the CoSD Can-  
7 | cellation Instruction. The result of this check can be:

8 | **[Referenced Settlement Instruction Status Check NOK]** If the Referenced Settlement Instruction  
9 | fulfils any of the following conditions:

- 10 | – The Settlement Status of the Referenced Settlement Instruction is "Settled";
- 11 | – The Cancellation Status of the Referenced Settlement Instruction is "Cancelled";
- 12 | – There is a pending CoSD Cancellation Instruction from the same Administering Party for the Refer-  
13 | enced Settlement Instruction;
- 14 | – There is a Realignment Instruction related with the Referenced Settlement Instruction that fulfils a  
15 | CoSD Rule.

16 | The CoSD Cancellation Instruction is rejected and T2S sends a "Denied" SecuritiesTransactionCancellation-  
17 | RequestStatusAdvice with the relevant Reason Code to inform the T2S Actor (CoSD Administering Party) that  
18 | its CoSD Cancellation Instruction has been denied.

19 | **[Referenced Settlement Instruction Status Check OK]** If the Referenced Settlement Instruction  
20 | does not fulfil any of the conditions, T2S continues with its processing.

#### 21 | 2.7.3.3 CoSD Cancellation Instructions received Check

22 | T2S checks if all the necessary CoSD Cancellation Instructions for the Instructing Party's Settlement Instruc-  
23 | tion sent by the T2S Actors (Administering Parties related to the Instructing Party's Settlement Instruction)  
24 | have been received. In case there is only one Administering Party involved in the CoSD process of the refer-  
25 | enced Instructing Party's Settlement Instruction, this check is not performed and processing continues to the  
26 | next step.

27 | The result of this check can be:

28 | **[CoSD Cancellation Instructions received Check NOK]** If at least one T2S Actor (CoSD Administer-  
29 | ing Party) has not sent yet its CoSD Cancellation Instruction, the CoSD Cancellation cannot be executed  
30 | and T2S sends a "Cancellation pending from Administering Party" SecuritiesTransactionCancellationRe-  
31 | questStatusAdvice to inform the T2S Actor (CoSD Administering Party) that the CoSD Cancellation is still  
32 | pending.

33 | **[CoSD Cancellation Instructions received Check OK]** If all the T2S Actors (Administering Parties  
34 | related to the Instructing Party's Settlement Instruction) have sent their CoSD Cancellation Instructions,  
35 | T2S continues with the following check.

1 2.7.3.4 Counterparty's Cancellation Instruction Check

2  
3 T2S checks if the Counterparty has already sent its Cancellation Instruction (The CoSD process could also  
4 apply for the Counterparty's Settlement Instruction and therefore the same cancellation process would have  
5 to be applied. If it is not a CoSD Settlement Instruction the same process is as described in section [Send](#)  
6 [Cancellation Instruction of a Settlement Instruction or a Settlement Restriction on Securities Position](#)  
7 [[998](#)]). This check can result in:

- 8 | **[Counterparty's Cancellation Instruction Not Received]** T2S sends a "Pending Cancellation,  
9 awaiting confirmation from the Counterparty" SecuritiesTransactionCancellationRequestStatusAdvice to  
10 the T2S Actors (Administering Parties related to the Instructing Party's Settlement Instruction) and a  
11 "Cancellation Requested"SecuritiesSettlementTransactionStatusAdvice to the T2S Actor (Counterparty)  
12 (See section Allegement).
- 13 | **[Counterparty's Cancellation Instruction Received]** T2S matches the Cancellation Instructions,  
14 continues with the Execution of the Cancellation Instruction.

1 2.7.3.5 Execution of the Cancellation Instruction(s)

2 If T2S receives and successfully processes all the relevant Cancellation Instructions(s) for both legs of the  
3 Settlement Instruction, T2S executes (all) the CoSD Cancellation Instruction(s) and sends an "Executed"  
4 SecuritiesTransactionCancellationRequestStatusAdvice to inform the T2S Actor (Administering Parties related  
5 to the Instructing Party's Settlement Instruction) that its (their) CoSD Cancellation Instruction(s) have been  
6 executed.

7 2.7.3.6 Settlement Instruction Cancellation Processing

8 The execution of all the CoSD Cancellation Instructions triggers the Instruction Cancellation Processing of  
9 the referenced Settlement Instruction as described at section [Settlement Instruction Cancellation Processing](#)  
10 [[▶ 947](#)].

1 2.7.3.7 Related CoSD Blocking Instruction(s) Check

2  
3 Settlement Status CoSD Settlement Restriction(s)

4 Simultaneously to the Settlement Instruction Cancellation Processing, T2S checks whether a securities, cash  
5 or a securities and cash blocking has taken place successfully (Detailed description of the process can be  
6 found at section Conditional Settlement):

- 7 | **[Settlement Status CoSD Settlement Restriction(s) NOK]** If the related CoSD Blocking Settlement  
8 Restriction(s) has not been created yet, T2S does not perform any communication. If created but re-  
9 mains unsettled, T2S will inform the T2S Actor that its (their) unsettled CoSD Settlement Restriction(s)  
10 has been cancelled.
- 11 | **[Settlement Status CoSD Settlement Restriction(s) OK]** If the related CoSD Blocking Settlement  
12 Restriction(s) is (are) settled T2S continues with the following check.

1 CoSD Settlement Restriction(s) movement type Check

2 T2S Checks the movement type of the related CoSD blocking, that can be of only cash, only securities or  
3 both cash and securities in order to generate the necessary Unblocking Settlement Restriction as described  
4 in section [Securities Settlement Restriction Settlement Processing](#) [▶ 957] for a securities position and in  
5 section [Cash Settlement Restriction Settlement Processing](#) [▶ 965] for a cash position.

11 **2.8 Send Amendment Instruction of a Settlement Instruction or of a**  
12 **Settlement Restriction on Securities Position**

13 **2.8.1 Introduction**

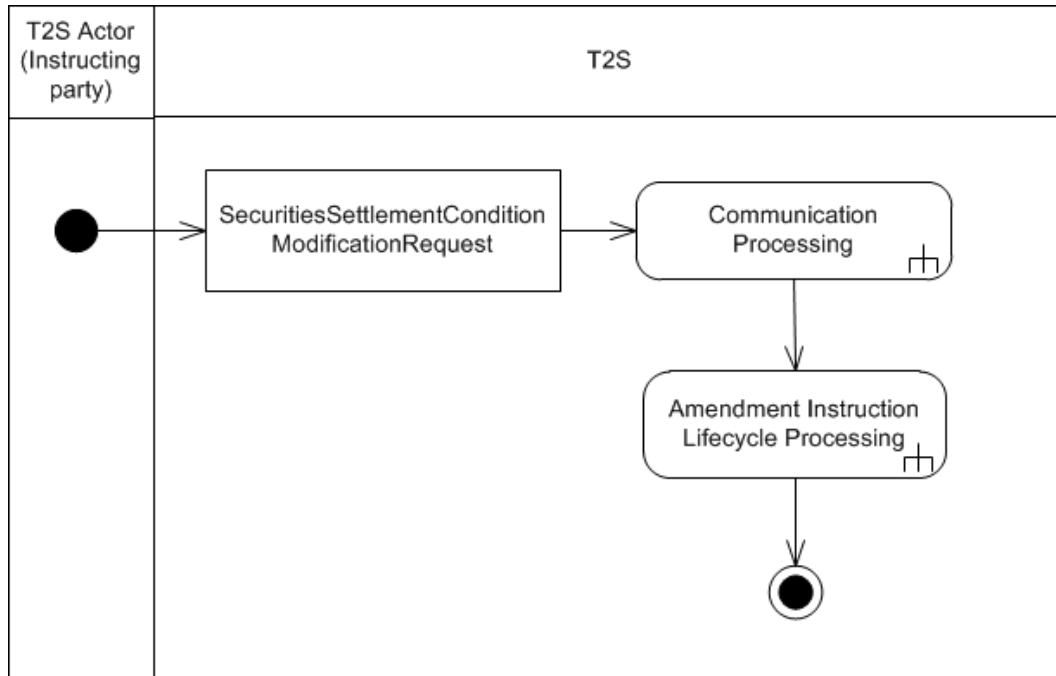

14 This section describes, based on a use case, the outbound messages resulting from the processing of an  
15 Amendment Instruction received in T2S via the inbound message SecuritiesSettlementConditionModification-  
16 Request.

17 This use case covers all the situations where a T2S Actor wants to send an Amendment Instruction (See  
18 section Instruction Amendment) to:

- 19 | Amend a Settlement Instruction;
- 20 | Amend a Settlement Restriction on Securities Position.

1 Only the T2S Actor – Instructing party of the Amendment Instruction, is involved in the use case.
