Monetary analysis

Monetary growth was slow again in January while bank lending to domestic enterprises and individuals continued strong. Due to seasonal factors *bank lending to the private sector* declined by DM 11.0 billion, it is true (compared with a fall of DM 12.6 billion in the same month of the previous year), but if seasonal factors are eliminated it rose at much the same fast pace as in the preceding months. The expansion of both short-term lending and longer-term direct advances was fairly rapid.¹ In the last six months total bank lending to enterprises and individuals went up at a seasonally adjusted annual rate of over 8%.

Domestic non-banks' external payments did not affect the money creation process to any significant extent in January. The *net external assets of the banks and the Bundesbank* decreased by DM 0.1 billion, compared with an increase of DM 0.9 billion in December.

Public sector cash transactions tended to restrain monetary expansion in January. The public sector reduced its debt to banks by DM 3.2 billion. It took up DM 1.3 billion of new loans at the Bundesbank. Its central bank deposits, which are not counted as part of the money stock, remained practically unchanged.

Monetary growth was curbed exceptionally sharply by *monetary capital formation* in January. At DM 11.5 billion, many more longer-term funds were received by the banks than usual in that month (January 1983: DM 1.3 billion). Monetary capital formation – seasonally adjusted – was also much higher than in the preceding months. As interest on capital tended to go down, a large part of the bonus-carrying savings deposits which were released in January was obviously reinvested at long term. Sales of bank bonds (DM 12.2 billion) were the principal source of longer-term funds accruing; a major part of these bonds had fairly short maturities, though. Sizable inflows of funds were also recorded by the banks from sales of bank savings bonds (DM 3.8 billion) and on long-term time accounts (DM 2 billion). Savings deposits at agreed notice dropped by DM 6.9 billion; bonus-carrying savings deposits were responsible for all of the decline.

statutory notice) fell steeply in January, as usual in that month. Seasonally adjusted, it remained virtually unchanged. Among the individual (seasonally adjusted) components of the money stock, cash holdings expanded strongly and sight deposits rose at a moderate pace. Shorter-term time deposits and savings deposits at statutory notice declined somewhat. Over the last six months the money stock M3 grew at a seasonally adjusted annual rate of 2 1/2%. Its year-on-year increase came to 4 1/2% at the end of January, while that in the money stock M2 (M3 excluding savings deposits at statutory notice)

¹ The changes in the level of the banks' domestic lending and external assets have not been adjusted for write-downs of and provisions for loan losses, which are made mostly in the first few months of the year.

Security markets

- 6 amounted to 2%, and that in the money stock in the narrowest definition M1 (currency and sight deposits) to 6½%.

Central bank money stock

The central bank money stock, preliminary data on which for February are already available, grew fairly rapidly in that month (seasonally adjusted and calculated at constant reserve ratios, base: January 1974). It increased by DM 0.8 billion to DM 187.7 billion. The greater part of the increase was accounted for by the minimum reserve component. In the last six months the central bank money stock expanded at a seasonally adjusted annual rate of over 3½%; its trend growth rate thus runs close to the lower limit of this year's target range of 4 to 6%.

In January the German bond market proved to be just as productive as it had been a year before. Domestic issuers sold *fixed interest securities* to the market value of DM 25.0 billion against DM 24.7 billion in January 1983. After deduction of repayments (and additions to issuers' holdings of their own bonds), net sales came to DM 13.5 billion, compared with DM 14.6 billion in the previous year. More than half of the bonds offered net were ones with maturities of over four years.

Bonds issued by *banks* made up the greater part (DM 8.4 billion) of the net sales. Besides communal bonds (DM 2.6 billion) and mortgage bonds (DM 0.7 billion), banks chiefly sold "other" bank bonds (DM 5.6 billion). On the other hand, the sales of the bonds of specialised banks were smaller than repayments and repurchases by issuers (– DM 0.4 billion). The *public sector* also sold large amounts of bonds in January (DM 5.1 billion net). The main emphasis was on issues of the Federal Government (DM 2.9 billion), which floated a loan at the beginning of the month and received DM 1.6 billion from sales of its tap issues. The Länder Governments took up DM 1.6 billion and the Federal Railways DM 0.5 billion. Supplies of *Deutsche Mark bonds issued by foreign borrowers* remained plentiful. In all, non-residents launched ten Deutsche Mark issues, some of them with relatively low yields, to the nominal value of DM 1.3 billion. After deduction of repayments, net sales amounted to DM 0.6 billion; this entire sum was taken up by foreign buyers on balance.

By far the most important group of purchasers on the German bond market in January was *domestic non-banks*, which bought bonds to the record amount of DM 16.8 billion. Three-quarters of this sum was accounted for by bank bonds, which the banks sold on a considerable scale to their domestic and foreign customers, in part from their own investment portfolios. The outcome was that *banks* placed an unusually large amount (DM 5.6 billion) of fixed interest securities (mainly bank bonds) from their own portfolios. *Foreign investors* increased their investment in German bonds by DM 1.8 billion.

On the *share market*, issuing activity remained vigorous in January. Domestic enterprises issued new shares to the market value of DM 0.6 billion, compared with DM 0.3 billion a year earlier. In addition, unusually many foreign shares were sold on the German market (DM 1.2 billion), for the most part portfolio securities. These securities were partic-

Federal finance

The start of 1984 saw the cash situation of the Federal Government already affected by the decrease in the deficit, a gap expected to shrink further in the course of the year. In the first two months of the year the cash deficit of the Federal Government, at DM 10 billion, fell over DM 2 billion short of the amount for the same period last year; cash expenditure grew by not quite 1%, while cash receipts rose by 8%. The improvement in the cash results was more pronounced in February than in January. The deficit came to DM 3.5 billion and was thus almost DM 2 billion smaller than a year previously; cash receipts were 11% up on an annual comparison, whereas cash spending actually remained just below the level of the preceding year.

Public debt

In *January*, when interest rates were rather volatile, the central, regional and local authorities raised DM 4 billion net in the credit markets. The new debt of the *Federal Government* amounted to DM 1.9 billion and was incurred solely by issuing securities. The outstanding amounts of five-year special Federal bonds and standard bonds increased by DM 1.5 billion and DM 1.3 billion respectively. On the other hand, almost DM 1.0 billion of money market paper was repaid on balance. As the Federal Government's deficit was far in excess of net borrowing in the market in January, the Federal Government not only had to draw on its credit balances with the Bundesbank but also needed DM 1.1 billion in advances from the Bundesbank at the end of January; its total debt therefore rose by DM 2.9 billion.

The *other public authorities* obtained over DM 2 billion net in the credit markets in January. This almost exclusively concerned borrowing by the Länder Governments; in January they raised more funds by issuing securities than by placing borrowers' notes, which at other times usually take pride of place.

In *February*, when the credit markets were relaxing perceptibly, the Federal Government borrowed about twice as massively as in January, viz. DM 3.9 billion net. Securities were again predominating in this context. DM 2.0 billion flowed in through sales of special Federal bonds, and the outstanding amount of standard bonds rose by DM 1.4 billion. Sales of Federal savings bonds yielded over DM 0.3 billion. Liabilities deriving from loans grew on bal-

ularly in demand among domestic non-banks, which bought almost the entire amount sold, in part to the detriment of their German share purchases. Their holdings of shares rose by DM 0.7 billion net. Banks acquired DM 0.3 billion of shares. Foreign buyers showed keen interest in German shares, acquiring domestic shares to the value of DM 0.7 billion in January. As for German *investment funds*, those open to the general public recorded an inflow of DM 0.3 billion in January, just as a year before. Demand for the units of bond-based funds and open-end real estate funds was particularly strong, while share-based funds suffered outflows of resources. The sales of units of specialised funds, at DM 0.7 billion, were distinctly higher than a year before.

* The transactions shown as cash receipts and cash expenditure are payments into and out of the accounts kept with the Deutsche Bundesbank by the Federal Government. The cash receipts and cash expenditure differ from the figures of the official financial statistics primarily because they are recorded not at the time they are entered in the budgetary accounts but at the time of the actual receipt or outpayment and because transactions on behalf of the European Communities, which are entered not in the Federal budget but in appendices thereto, are settled through the accounts of the Federal Government. — 1 Deposits with the Bundesbank and other credit balances. — 2 Excluding the receipts for the latest month. — p Provisional.

ance only by DM 0.2 billion. At the end of February the same amount of Bundesbank advances was requested as a month previously.

Economic indicators**Order inflow**

The orders received by the manufacturing sector rose further at the beginning of 1984. In January, seasonally adjusted, they were 2½% higher than in November/December last year and over 7% above the comparable 1983 level, which was itself very high owing to special factors (including the deadline for placing orders under the investment grant scheme). In January *foreign orders* alone were almost one-fifth higher than a year before. In particular, seasonally adjusted exports of capital and consumer goods have continued to gather pace. In the basic goods sector, by contrast, foreign demand has slackened somewhat.

In *domestic business* the domestic business community's persistently greater propensity to invest led in January to noticeably larger orders for capital goods, a number of large-scale orders apparently playing a significant role. In the basic goods sector and the consumer goods industry, however, domestic orders did not quite regain the average level of November/December.

Output

At the beginning of the year, seasonally adjusted *industrial output* (excluding construction) remained at the level of the two preceding months; in January it exceeded the figure for the comparable period of the previous year by about 6½%, after rough adjustment for working-day variations. While seasonally adjusted output declined slightly in January, compared with the preceding months, in mining and in the field of electricity and gas supply, it went on increasing (by about 1%) in the manufacturing sector, although trends differed considerably in individual industries. In the basic goods field the output of the chemical industry rose further in January, while steel production was slightly lower than in the previous months. In the capital goods sector the marked increase in the output of the electrical engineering industry was accompanied by a fall in production in mechanical engineering and road vehicle building, a significant factor apparently being that output in the latter areas had been accelerated towards the end of 1983 to ensure that goods were delivered before the expiry of the delivery deadline under the investment grant scheme (December 31, 1983). In January, seasonally adjusted output in the consumer goods sector was also somewhat lower than in the preceding months.

1 Seasonally adjusted by the Census X-11 Method. - 2 Excluding food, drink and tobacco industry. - 3 Seasonal factors recalculated. - 4 Manufacturing sector, mining, electricity and gas supply, and construction. - 5 Unadjusted figures for 1983 revised by the Federal Statistical Office. - 6 Unemployed as % of the dependent labour force (excluding armed forces). - 7 Unadjusted. - p Provisional.

dependent labour force. The demand for labour tended to increase further; this is suggested by the fact that the number of *vacancies* rose slightly after seasonal adjustment. It is true that the number of *short-time workers* went up again of late; in February, at 644,000, it was 78,000 higher than a month before. It was, however, far (about 500,000) below the level of a year earlier. The increases in short-time working were recorded mainly in mining and – for seasonal reasons – in the construction industry; in many areas of the manufacturing sector, by contrast, short-time working was reduced further.

By contrast, output in the *construction industry* in January was relatively high, even if it is taken into account that at the beginning of the year construction activity was affected comparatively little by bad weather. Against the average level of the months of November/December last year, construction output went up by about 5%, after seasonal adjustment.

Labour market

Developments on the labour market in February were adversely affected by the fact that the weather was worse than in January. The seasonally adjusted *unemployment* figure did not decrease any further; at 2.2 million at the end of February, it corresponded to 7.9% of the entire labour force or 8.9% of the

Balance of payments

10 In January 1984, as a year previously, Germany's *current account* (foreign trade, services and transfer payments combined) ran a small deficit of DM 0.5 billion. In December, however, there had been a surplus of DM 4.8 billion. The deterioration on current account in January was solely attributable to seasonal influences, which were especially marked at the turn of 1983/84; in January, after seasonal adjustment, the current account showed a surplus of over DM 1 billion, which was more than the seasonally adjusted figure for December 1983.

Foreign trade produced a surplus of DM 1.9 billion in January (compared with DM 4.1 billion in December and DM 2.7 billion in January 1983). The strong rise in foreign trade turnover continued in January, exports being 13% and imports 17% above the preceding year's figure. If, in order to eliminate the sharp fluctuations at the turn of the year, the figures for December and January are combined, both exports and imports rose strongly (by 3½% and 4% respectively) over the average figures for the preceding two months. This is also true in seasonally adjusted terms. The seasonally adjusted trade surplus in December and January was on average just as high as in the two previous months.

The *services account* deteriorated in January, in line with the usual seasonal trend; the deficit amounted to DM 1.0 billion, compared with a surplus of DM 2.8 billion in December and a deficit of DM 1.3 billion in January 1983. On investment income account, expenditure exceeded receipts by DM 0.7 billion in January, while in December a surplus of DM 3.3 billion had been achieved in this sector owing to the bunching of interest payments accruing at the end of the year. The deficit on *transfer payments* in January, at DM 1.7 billion, was distinctly smaller than in December (DM 2.6 billion) as receipts and expenditure in payments with the European Communities, which fluctuate sharply from month to month, largely cancelled out.

In the field of *long-term capital transactions* there were net inflows amounting to DM 1.9 billion in January, while DM 1.6 billion net had flowed out in December. The decisive factor here was the swing in securities transactions, which led to DM 2.0 billion (net) of long-term funds being imported in January. Foreign investors acquired DM 1.8 billion worth of German bonds and also bought more German shares (DM 0.7 billion). Residents, too, bought larger amounts of foreign shares (DM 1.0 billion), but

on balance they sold foreign bonds back to other countries (DM 0.4 billion). Net imports of capital also took place in the area of direct investment (DM 0.2 billion). Besides, at DM 1.0 billion net, the banks placed only half as many long-term funds in other countries as in December (DM 1.9 billion). At DM

1.2 billion, the net amount of long-term foreign funds received by public authorities in January was somewhat smaller than in December (DM 1.7 billion).

Statistically recorded *short-term capital transactions* resulted in net exports of funds in January (DM 2.6 billion), in contrast to the usual seasonal trend. Enterprises were the main exporters of short-term funds (DM 1.6 billion), as they were greatly increasing their Euro-DM balances with foreign banks while taking up again only part of foreign banks' Euro-DM loans, which had been run down at the end of the year. DM 1.1 billion (net) flowed out from the banks, whose short-term external assets and liabilities decreased by DM 7.1 billion and DM 8.2 billion respectively in the course of the reduction of positions at the end of 1983.

In January the *net external assets* of the Bundesbank, valued at the balance sheet rates of end-1983, hardly changed at all (– DM 0.2 billion). In February, in connection with the exchange rate tensions in the European Monetary System, net external assets rose by DM 3.5 billion.

12 Overall economic trends and the earnings and self-financing of enterprises in the second half of 1983

The economic recovery that started in the Federal Republic of Germany at the beginning of last year continued to gather pace in the second half of 1983, as can be seen from the national accounts for that period as compiled by the Federal Statistical Office and supplemented in some respects by the Bundesbank. In the second half of last year *real gross national product* was over 1% above the level of the first half of the year, after adjustment for seasonal and working-day variations; it was about 2% higher than a year before. Thus it more or less regained the level of the first half of 1980, i.e. before the last economic slowdown. Calculated at current prices, the gross national product in the second half of 1983 was 5% higher than in the same period of the preceding year.

The strengthening of the economic recovery in Germany owed much to the fact that foreign demand progressively gained momentum in the second half of last year after economic conditions had improved noticeably in major partner countries as well and the products of German manufacturers had become more competitive in price terms as a result of the temporary sharp depreciation of the Deutsche Mark against the U.S. dollar. From the first to the second half of 1983 *exports of goods and services* increased by about 2½%, seasonally adjusted, and thus more than offset the export setback of the first half of the year. At the same time, however, *imports of goods and services* also went up strongly, owing both to the cyclical growth of real demand for foreign products and to rises in the cost of imports, especially those of basic goods and sources of energy, due to exchange rate movements. In value terms, the increase in imports from the first to the second half of 1983, at over 4½% after seasonal adjustment, was far stronger than the growth of exports. The *external surplus* in the national accounts – which roughly corresponds to net goods and services flows in the balance of payments, the results of which for 1983 are discussed below (see the article beginning on page 17 of this Report) – therefore diminished despite the increase in exports; at DM 17.5 billion after seasonal adjustment, it accounted for about 2% of the nominal gross national product in the second half of 1983, compared with 2½% in the first half of last year and on average in the whole of 1982.

The revival of foreign business coincided with a distinct improvement in underlying economic conditions in Germany, with the consequence that the

domestic expansionary forces increasingly made themselves felt. Whereas in the first half of 1983 the main stimuli were imparted by private consumption and housing construction, in the later part of the year investment by trade and industry became the most significant driving force behind the upswing. In the second half of 1983, after seasonal adjustment, about 10% more than in the first half of the year was spent on *capital formation* of all kinds. Besides a sharp increase in *expenditure on stocks* – in view of the rise in output and demand, the existing stocks of primary and finished products not infrequently turned out to be too small – this was partly due to heavier spending on new machinery and equipment and on construction. Especially towards the end of 1983, expenditure on *machinery and equipment* rose substantially, although this was partly because those capital goods for which the investment grant was to be claimed had to be delivered by the end of the year. But even apart from this special factor, the business community was more willing to invest. This is indicated by the fact that the domestic orders received by capital goods producers went up considerably, seasonally adjusted, from last summer onwards. *Construction investment* also grew very strongly in the second half of 1983, partly as a result of the late start of the construction season last year owing to the bad weather, but partly as a consequence of the cyclical upturn in activity in the fields of housing and industrial construction, while the public sector was very slow to embark on construction projects last year.

The *consumption demand* of households and the government did not fuel demand any more strongly in the second half of 1983 than in the first. It is true that *government consumption* expanded slightly more in the second half of the year, seasonally adjusted, partly because most of the wage and salary increases in the public service for 1983 did not become effective until the second half of the year. Against this, *private consumption* no longer grew as strongly as in the first half of 1983, when considerable amounts of bonus-carrying savings deposits had been released and, to a fairly large extent, had not been reinvested but rather had been used for buying consumer durables.

Altogether, in the second half of 1983 the *pattern of the overall use of goods* shifted distinctly in favour of capital formation and to the detriment of consumption expenditure as a result of the develop-

ments described above. Spending on new assets and stocks absorbed about 22½% of the gross national product in the second half of last year, seasonally adjusted, compared with 21% in the preceding half-year and in the whole of 1982 on average. This is admittedly no more than a first step towards a change in the pattern of the use of goods, which is something that a highly industrialised country like Germany needs so as to create new jobs and hold its own vis-à-vis its competitors on international markets. In 1979-80, when economic activity last reached a cyclical peak, total capital formation had made up some 24% of gross national

14 product, and in the early seventies (1970-73), when the economy was also running in high gear, it had accounted for as much as 26 1/2% of GNP.

The economic recovery in the second half of 1983 produced first signs of advances on the *labour market*. Labour-shedding in the economy slowed down markedly from the first half of 1983 to the second, seasonally adjusted; short-time working decreased considerably and the number of unemployed persons has been declining since last August, if seasonal factors are disregarded; however, at 2.2 million (or 8% of the entire labour force) at the end of 1983 and the beginning of 1984, it remained exceptionally high. But a movement in the right direction has now started on the labour market, as is shown not least by the growing number of placements by the employment exchanges and of new vacancies reported.

With the rise in output and sales in the second half of 1983 the growth of income also accelerated. In the second half of last year, seasonally adjusted *gross income from wages and salaries* was about 2 1/2% higher than in the first half of 1983, when it had decreased slightly. Latterly it has accounted for some 71 1/2% of aggregate national income, just as in the first half of 1983. The overall "*wage ratio*" has thus been somewhat lower than in the immediately preceding years (1982: 73 1/2%; 1981: 74 1/2%); but compared over the longer term it has remained very high. After having risen steeply in the first half of 1983 (by 7%, seasonally adjusted), *gross entrepreneurial and property income* expanded by almost another 3% in the second half of the year; it was thus about 10% higher than a year before. However, this must be seen against the background of the very weak growth of such income in preceding years. This weak growth reflected, inter alia, the fundamental sluggishness in the earning power of enterprises which has contributed materially to the adverse course of economic activity since the beginning of the eighties. The strong recovery of entrepreneurial and property income in the course of 1983 was no greater than was needed to correct preceding undesirable developments. However, it did contribute to a revival in capital formation in the enterprise sector, as will be described in more detail below.

¹ Entrepreneurial income generated in Germany and enterprises' property income (excluding letting of dwellings and excluding financial institutions) less net interest paid to other sectors, net rents, etc. - p Provisional.

Earnings and self-financing of enterprises

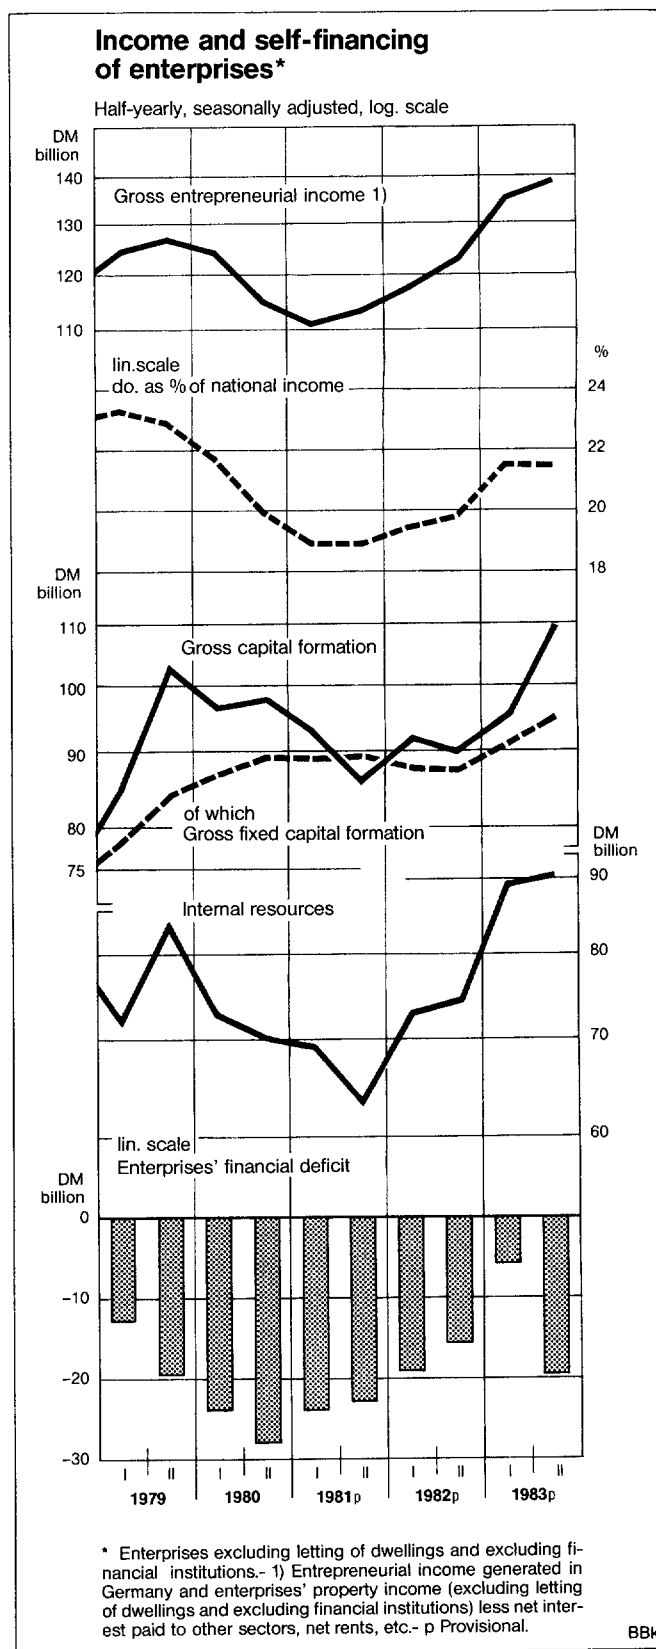

The profitability of enterprises continued to improve in the second half of 1983, although not at such a rapid pace as in the first half of last year. The *gross income of producing enterprises* (this is a narrower definition of entrepreneurial income than "gross entrepreneurial and property income")¹ in the second half of 1983, seasonally adjusted, was about 3% higher than in the first, when it had already risen very strongly (by 10%). At that time, admittedly, various special factors, such as heavier buying by final consumers prior to the increase in value-added tax last July, had had a favourable impact on the outcome. In the second half of last year the gross income of producing enterprises was about 13% higher than in the same period of the previous year. In the second half of 1983, just as in the first, it made up about 21 1/2% of national income, after seasonal adjustment; its share in total distributable income has thus risen by roughly 2 1/2% percentage points since its low in the second half of 1981, but without regaining the level it reached before the last economic slowdown (an average of 23% in 1978-79). In earlier years the ratio of such income to national income had been much higher (e.g. 1970-73: 25%; 1965-69: 29 1/2%). In the second half of 1983 the more favourable operating results were still accompanied by heavy losses of claims due to insolvencies, even though the wave of company failures passed its peak in the middle of last year and the

¹ "Gross income of producing enterprises" comprises the domestically generated entrepreneurial and property income of enterprises, after adjustment for the letting of dwellings and for financial institutions, and after deduction of the interest paid (net) to other sectors, net rents, etc.

financial consolidation of enterprises has apparently made widespread progress in the meantime; such "extraordinary" losses, which result from the depreciation of specific assets, cannot be taken into account in any estimate of the "profit ratio".

With the distinct improvement in earnings, enterprises' scope for self-financing has widened again. According to preliminary calculations, in the second half of 1983 enterprises had *internal resources* — which include net retained earnings, the consumption of fixed capital and investment grants from other sectors — totalling DM 86.5 billion; that was DM 13.5 billion, or almost one-fifth, more than a year before. The progressive improvement in enterprises' self-financing enabled many firms to give up the defensive strategy of adjusting their capital formation to their limited scope for self-financing which they had pursued in the preceding period.

The *overall capital formation* of enterprises (again excluding the housing sector and financial institutions) in the second half of 1983, at about DM 110.5 billion, was one-fifth higher than a year before, after rising by 5% in the first half of the year. As already mentioned, this faster increase in capital formation no doubt owed something to the fact that machinery and equipment for which the investment grant was to be claimed had to be delivered by the end of 1983, but a factor of greater significance and also of more lasting effect was presumably that, following the prior improvements in earnings, expectations about future earnings became distinctly more optimistic, so that more new capital projects were started. Besides the continuing need for greater rationalisation, the pressure to transform technological innovations quickly into marketable products and processes proved to be a powerful inducement to invest. In addition, the fact that the German capital stock has "aged" increasingly during the last few years of low investment activity, so that, for this reason alone, more and more plant is unlikely to have a very much longer service life, acted in the same direction. According to new studies by the Federal Statistical Office, almost 31% of the gross fixed capital tied up in machinery and equipment was older than ten years at the beginning of 1983, compared with 28½% in 1980 and barely 27% in 1970.² A fairly long spell of heavy investment activity is undoubtedly required to make good the omissions of past periods. Even after the upturn in corporate capital formation, that part of the overall use of goods that is accounted for by the net increase in

the capital stock of producing enterprises is still modest. After deduction of the erosion of value due to production and aging, it came to only 3% of the gross national product in the second half of 1983.

² See "Altersaufbau des Anlagevermögens nach Wirtschaftsbereichen" (Age structure of the capital stock by economic sector) in *Wirtschaft und Statistik*, Vol. 4, 1983, p. 285 ff.

* Excluding housing and excluding financial institutions; provisional. - 1 Change in DM billion. Discrepancies in the totals are due to rounding.

This was slightly more than a year earlier, but did not nearly reach the average figure of the seventies (4%), much less that of the sixties, when about 6% of the nominal gross national product was devoted to the growth of the capital stock in the enterprise sector.

In spite of the substantial increase in investment activity, the financing situation of enterprises in the second half of 1983 remained relaxed. In that period the internal resources of enterprises corresponded to 78½% of total capital formation. While this is a slightly lower ratio than in the same period of the preceding year (79½%), it is high on a longer-term comparison. As usual when capital spending is rising sharply, enterprises' net financial requirements increased. After seasonal adjustment, the *financial deficit* of producing enterprises amounted to almost DM 20 billion in the second half of last

year, against DM 5 billion in the first half, when, as already mentioned, the cyclical improvement in financial conditions was exaggerated owing to special factors. The financial deficit was DM 5 billion higher than in the second half of 1982.

The *incurrence of liabilities* by enterprises increased in the second half of 1983, as usual in periods of economic recovery. According to preliminary calculations, enterprises raised about DM 61.5 billion by borrowing and issuing shares; this was almost DM 17 billion or over one-third more than a year earlier. The bulk of the borrowing consisted of short and longer-term loans from domestic banks. In addition, German importers apparently made more use of trade credits from foreign suppliers. On the other hand, enterprises reduced their obligations arising from short and longer-term financial credits granted by foreign lenders to a greater extent than in the same period of the previous year. This presumably owed a good deal to the fact that, given the prevailing interest rate conditions, such borrowing in the Euro-market was no longer very attractive.

At the same time enterprises greatly enlarged their financial reserves. The amount they devoted to the *acquisition of financial assets* in the second half of 1983, at DM 37.5 billion, was some DM 12 billion larger than a year before. They built up their short-term balances with banks by DM 17 billion, which was noticeably less than a year earlier. There was, however, a sharp increase compared with the preceding year in the funds they invested at longer term. It was in the bond market, in particular, that enterprises invested more in the second half of last year. Hence some enterprises appear to have strengthened their financial position further in the second half of 1983. Taken as a whole, the financial account of enterprises in the second half of last year suggests that there is enough room for the expansionary forces to develop further, not only in the light of earnings but also from the financial angle.

The balance of payments of the Federal Republic of Germany in 1983

Current account

17

The results of the 1983 balance of payments indicate that, generally speaking, the Federal Republic of Germany was approaching external equilibrium. It is true that the trade surplus fell noticeably (by a good DM 9 billion to DM 42 billion); but at the same time the traditionally high deficits on services and transfer payments dwindled, so that the current account as a whole showed a small surplus. In 1983 the current account produced a somewhat higher surplus, at about DM 10 billion, than in 1982 (DM 8.5 billion), but this difference should not be over-rated, if only for statistical reasons (see below). Moreover, in 1983, the first year of a new upswing, the export drive may have been stronger, as capacity was underutilised, than it can be in future. As far as the capital account is concerned, in 1983 – when net Bundesbank monetary reserves remained almost unchanged – it necessarily showed a capital outflow of the order of magnitude of the current account surplus; a considerable part of this was accounted for by long-term capital exports, which allowed our trading partners, taken as a whole, adequate financing of the deficit they had incurred in current transactions with Germany. At any rate, the relatively low German current account surplus did not lead to tensions for the world economy as a whole. Judging by events to date in 1984, this will probably also be true for this year, by and large.

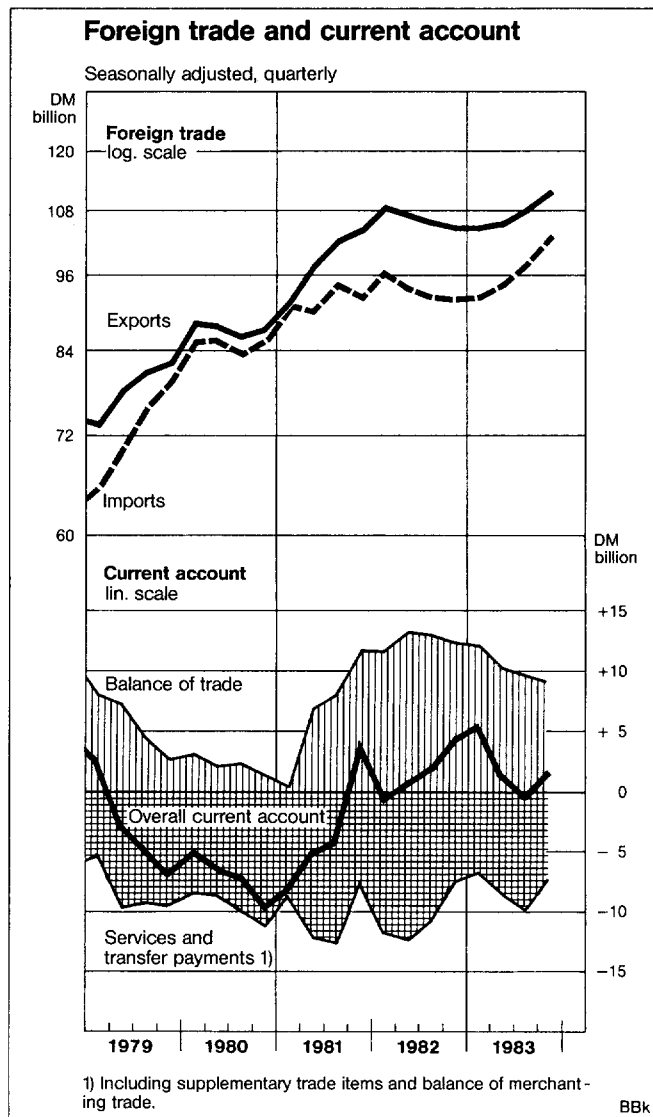

In spite of the fact that the balance of payments was largely in equilibrium, in 1983 the Deutsche Mark was subject to considerable fluctuations. Whereas the Deutsche Mark was quite strong up to the realignment in the European Monetary System (EMS) at the end of March 1983, it tended towards weakness for the rest of the year. The U.S. dollar in particular appreciated considerably against the Deutsche Mark, namely from about DM 2.40 per U.S. dollar in March 1983 to about DM 2.77 in the middle of December 1983, last year's dollar high. As about one-third of German imports are invoiced in U.S. dollars, Deutsche Mark prices for these particular items went up accordingly at once, while the average of all import prices rose by 7%, seasonally adjusted, from April to December. As Deutsche Mark export prices could not nearly be raised to this extent, the terms of trade became worse for Germany. This was part of the reason for Germany's seasonally adjusted trade surplus shrinking from quarter to quarter in 1983. Much the greater part of the surplus on current account shown for the whole of 1983

18 was attained in the first half of the year; in the second half, the surplus was only small; from October 1983 to January 1984, however, a slight improvement seems to have taken shape, after seasonal adjustment. The most recent downward trend of the U.S. dollar against the Deutsche Mark, if it lasts, will support this development.

Foreign trade

German exports have picked up again since mid-1983, after having overcome a stagnation period which lasted for a year. It is true that exports showed only a very small year-on-year rise in 1983, by value and volume (+ 1.1% and + 0.3%, respectively). Nevertheless, in the second half of 1983, seasonally adjusted exports were 5% higher than in the first half of the year, in both nominal and real terms. The decisive factor behind the strong growth which has now started in exports was the recovery in most western industrial countries. Moreover, the fact that the price competitiveness of German exporters had improved in the previous year probably also played a part. The effect of the fairly sharp increase in the central rates for the Deutsche Mark in the EMS in the middle of March 1983 was mitigated by the fact that the market rates of the Deutsche Mark against the other EMS currencies did not change very much at first.¹ In addition, price rises in most of the partner countries in the EMS remained larger than in Germany, and to this extent the appreciation of the Deutsche Mark did not impair the competitiveness of German exporters. In the "dollar zone" the competitiveness of German products was heightened by the rising value of the dollar. The yen is another currency of significance for the competitiveness of German exporters, and the Deutsche Mark depreciated in nominal and real terms against it as well. Overall, the average real external value of the Deutsche Mark in 1983, i.e. the weighted nominal exchange rate, adjusted for the differing movements in consumer prices in Germany and in its principal trading partners, was about as high as in 1982, and noticeably lower than for example in 1980. The fact that German exporters were participating to the full in the expanding volume of world trade from the middle of the year also suggests that Germany was able to hold its competitive position. Price competitiveness even improved in the second half of 1983, so that the competitive disadvantages in the field of high-technology products were more or less made up for.

¹ Before the realignment the Deutsche Mark was the "strongest" and after this, for a longish period of time (up to about the middle of August) it was the "weakest" or at least a "weak" currency in the EMS. As a result, by the middle of August the Deutsche Mark had appreciated against the other EMS currencies by only 1 1/4%, compared with the period before the realignment.

The upsurge in German exports in 1983 derived first and foremost from trade with industrial countries and with a number of developing countries and centrally planned economies in a relatively strong payments position. Exports to the United States (+ 17%), Canada (+ 25 1/2%) and Japan (+ 8 1/2%) showed above-average rises. These were countries where business activity had taken off from its low point earlier than had been the case in other industrial nations. These countries' competitiveness against German exporters had deteriorated owing to the Deutsche Mark's downward trend – at least, as far as price competitiveness was concerned. Leaving aside the admittedly important countries of France and Italy, exports to most western European countries expanded noticeably in the course of the economic revival. Moreover, exports to the USSR, the People's Republic of China and Iran, as well as to a number of already quite strongly industrialised developing countries, particularly in East Asia, in-

creased extraordinarily in some cases. Apparently, these countries have sufficient foreign exchange receipts at their disposal to allow them enough financial scope for additional imports. By contrast, exports to the smaller European centrally planned economies fell by 5%, those to Latin America by 9½% and those to OPEC countries by 17% – not counting Iran, indeed, by as much as 31%. Their high level of hard currency indebtedness forced many of these countries to make adjustments, concentrating primarily on cutting back import demand. Other countries, like the low-population oil exporters, which are not, after all, net debtors to the rest of the world but net creditors on a large scale, felt obliged to adjust their imports more or less to their reduced earnings from oil exports. However, with economic activity in the industrial countries continuing its upswing, as is to be expected, and world market prices for raw materials rising, the pressure on the highly indebted countries should ease and their capacity to absorb imports improve again.

In contrast to exports, which revived only relatively late last year, German demand for foreign products went up strongly from the beginning of the year in the wake of the domestic business recovery. By volume, *imports* rose by 5% in 1983; by value, however, they climbed somewhat less steeply, namely by 3½%. It is true that, as mentioned, import prices moved upwards during the year, together with the dollar rate; but over the year as a whole, they remained slightly lower than a year before, largely owing to the fall in crude oil and petroleum product prices at the outset of the year. The heavier German demand for imports imparted quite strong cyclical stimuli to partner countries: the countries profiting most here were those which export finished goods (by value, imports of such products rose by 8½%). Exports from Japan showed one of the strongest rises (+ 17%), Japan being increasingly able to sell capital goods in Germany, as well as technical consumer products, not least those with especially advanced technology, e.g. in data processing. But many more goods were imported from most Western European countries, too, e.g. by value 13% more from Austria, 12% more from Sweden, 10% more from Italy and from Belgium/Luxembourg, and 7% more from France (excluding aircraft), with some strong depreciations against the Deutsche Mark supporting their push into the German market. Moreover, imports from the most heavily industrialised developing countries, the so-called

threshold countries, went up noticeably, their exports naturally being underpinned by lower wage costs, in so far as these were not offset by disadvantages in other areas, such as production engineering, capital costs, distribution bottlenecks, etc. By contrast, imports from the United States fell slightly (by 1½%), probably because the USA had

20 lost competitive ground owing to the sharp depreciation of the dollar.

Whereas the strong growth in imports was largely attributable to imports of finished products – and to a lesser extent to the increased demand for non-energy raw materials and semi-finished goods (which demand went up with domestic production) – spending on energy imports decreased noticeably in 1983, viz. by 6½% to DM 84.5 billion; that is admittedly still over one-fifth of total German imports. The decisive factor here was that for the first time since 1978 the corresponding import unit values fell (on an annual average by 6%), although energy import prices began to climb again from the middle of the year with the appreciation of the dollar. By volume, energy imports did not fall any further in 1983 but remained at about the level of the previous year. Nevertheless, it must be taken into consideration that at the same time the German gross national product rose in real terms by a good 1%. The input of imported energy per unit of gross national product therefore dropped further, indicating sustained carefulness in using more costly energy. In 1983, total net energy imports (solid, liquid and gaseous fuels as well as electricity) absorbed about 4% of the gross national product, compared to 4½% in 1982 and 5% in 1981, the year which had the highest energy import costs to date. There were substantial shifts among energy imports with respect to the pattern of goods and the regional breakdown. Crude oil imports dropped by 10% in volume. This was largely to the detriment of the OPEC countries, whose share in total crude oil imports shrank to 61% (compared with 84% in 1978). At 60%, the drop in comparison to 1982 was particularly marked in the case of Saudi Arabia, whereas other OPEC countries such as Venezuela, Nigeria and Iraq greatly expanded their oil sales in Germany at times. On the list of countries supplying Germany, Saudi Arabia therefore fell back to the fourth place, with a share of 10½% (below the United Kingdom with 22%, the OPEC members Libya with 16% and Nigeria with 11½%). Non-OPEC countries were able to deliver just as much crude oil by volume to Germany in 1983 as in the previous year; on a volume basis, higher imports from the USSR and Norway were accompanied by somewhat lower imports from British oil fields. More than was previously the case, oil was imported not unprocessed, but in the form of petroleum products (+ 17%). Thus, in 1983 imports of light heating oil went up by 15% and of motor spirits by 20%; the

main suppliers were the Netherlands, the USSR and Belgium.

Services and transfer payments

As mentioned, the effect of the drop in the trade surplus on the current account in 1983 was offset by the fact that the German deficits on invisibles, contrary to the usual pattern, decreased steeply. In particular, the deficit on *service transactions* fell noticeably for the first time since 1978, from DM 16.5 billion in 1982 to DM 10.5 billion. The decisive factor here was the turnaround on investment income account. After a deficit of a good DM 2 billion in 1982, Germany achieved a net surplus of DM 4 billion on investment income. This strong rise can be traced back to a coincidence of particular circumstances which will probably not recur: on the one hand, the increase in the dollar rate pushed up the Deutsche Mark value of interest income from dollar investments; for example, the interest receipts of the Bundesbank from its dollar assets alone went up by about DM 0.5 billion owing to exchange rate movements. On the other hand, Germany's current account surplus meant a corresponding increase in its net external assets and thus in its interest-bearing foreign assets. Moreover, the world-wide pattern of falling interest rates gave Germany more relief on interest due to non-residents for external liabilities than was entailed in the fall in interest income from external assets. The reason was that external assets and liabilities had differing maturities.

Foreign travel featured strongly in the improvement on the services account in 1983, the traditionally high deficit dropping by about DM 2 billion to DM 24.5 billion. 1982 had already seen the expenditure of German travellers abroad stagnating; in 1983, it actually fell by 2½%. Apparently, tourism abroad has been braked by an only modest expansion in "mass income" and by the situation on the labour market. Almost all important tourist countries were hit by the greater reluctance of German tourists to spend, even though there were apparently no dramatic cuts anywhere. On the other hand, German receipts from tourism went up strongly in 1983 (by 6½%). Tourists from the United States in particular spent more money in Germany. Apparently, Germany was a relatively cheap country for U.S. travellers in 1983 as a result of the appreciation of the dollar.

Transfer payments, that is, payments made abroad without a direct quid pro quo, showed a deficit in 1983 which, at DM 26.5 billion, was almost DM 2 billion smaller than in 1982. A small drop in the home

remittances of foreign workers living in Germany was important here, as was the fact that net German payments to the budget of the European Communities went down by DM 1.5 billion to a total of DM 6 billion. Repayments to Germany within the scope of the agricultural market organisations climbed very strongly and made a special contribution here. The reason was that in order to support price levels, largely those of milk and milk products, considerably larger interventions had become necessary.

22 However, this reduction in net payments to the EEC probably only means temporary relief for Germany.

Long-term capital transactions

The net capital outflow in long-term capital transactions persisted in 1983. However, at DM 7.5 billion it was only half as large as in 1982. Long-term capital exports were somewhat lower than the surplus on the current account, while they had exceeded the latter considerably in 1982.

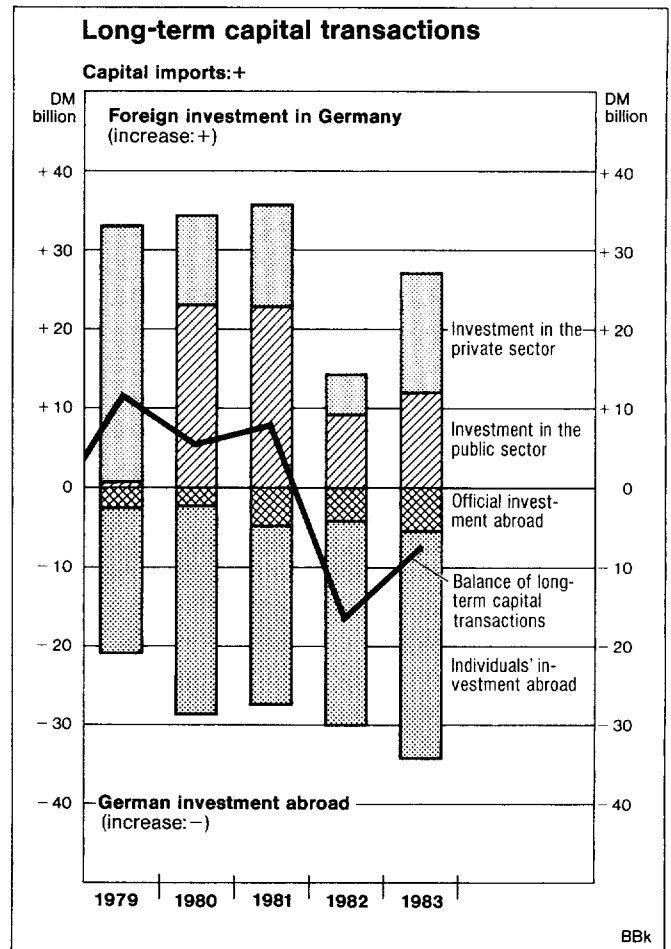

The most significant change in long-term capital transactions in 1983 was that the amount placed in Germany by foreign investors, at DM 27 billion, was almost twice as large as in 1982 (a good DM 14 billion). Although long-term dollar investments showed a yield advantage of almost $3\frac{1}{2}\%$ on average last year,² with the Deutsche Mark falling considerably in value against the dollar, foreign investors – most of them probably from industrial countries – greatly increased their portfolios of fixed interest Deutsche Mark assets. Thus non-residents acquired German *bonds* in 1983 to the value of DM 10.8 billion net – an unprecedented inflow of funds to the German capital market.³ Apparently, as far as foreign investors were concerned, the interest rate disadvantage of Deutsche Mark bonds was increasingly more than offset by the expectation that the Deutsche Mark would appreciate – quite apart from the fact that international large-scale investors always tend to spread their assets among various currencies. As usual, non-residents largely bought public bonds⁴ (DM 6.3 billion), but they also acquired a major amount of bank bonds (DM 4.5 billion), for the first time in years. In addition, foreigners invested about five times as much in German *shares*, at DM 2.8 billion, as in 1982 (excluding share purchases for the purpose of acquiring an interest). In total, capital imports through investments in German securities came to DM 13.6 billion in 1983, compared with DM 2.7 billion in the previous year.

Moreover, non-residents took up a considerable volume of long-term government borrowers' notes – largely from domestic banks. After deduction of redemptions, which had risen again, and reflexes of borrowers' notes to Germany, this type of capital import came to DM 12.1 billion, compared with DM 9.2 billion in 1982.⁵ This is, of course, above all a reflection of foreign investors' investment preferences, as public borrowers, with their credit needs declining, drew on the market to a much smaller

² Measured by the yields on government bonds outstanding in the United States and Germany.

³ On account of the fact that there were restrictions on capital imports in previous years, a longer-term comparison is admittedly of only limited informative value.

⁴ Including Treasury discount paper as well as Federal Railways and Federal Post Office bonds.

degree than before. In view of the improvement in foreign trade and payments, the overall economic situation did not call for any specific raising of foreign loans either. Last year public authority borrowers' notes were mainly acquired by investors from industrial countries – a group of countries whose overall balance of payments situation continued to improve in 1983. By contrast, the OPEC countries, owing to their balance of payments difficulties, sold such paper back on balance for the first time.

In contrast to the capital imports through sales of bonds and public authority borrowers' notes to non-residents, the *banks* on balance borrowed no new long-term foreign funds in 1983 but, as in the preceding year, actually reduced them slightly (by DM 1.7 billion). It seems that foreign investors were no longer giving preference to direct investments with banks but were instead turning to more readily marketable bank bonds, which they bought, as mentioned, on a larger scale than in 1983. Alternatively, they were purchasing public authority borrowers' notes from the banks. *Enterprises*⁶, in con-

⁵ The increase in capital imports over the previous year naturally also owed something to the fact that in 1983 the U.S. Treasury liquidated fewer Federal Government borrowers' note investments than in the previous year, so as to finance the redemption of medium-term notes (so-called "Carter Notes").

⁶ Including financial enterprises belonging to the non-bank sector.

trast to a year earlier, hardly raised any more net long-term loans from foreign banks. This was due not only to the great improvement in the financial situation of the enterprise sector but also to the stagnation of the Euro-DM market. At DM 2.9 billion, foreign *direct investment* in 1983 was roughly at the same level as in 1982.

While non-residents substantially increased their long-term assets in Germany, German private investors last year acquired only slightly more long-term external assets than a year earlier (DM 29 billion against just under DM 26 billion). In view of these figures, the appreciation of the dollar cannot primarily be attributed to higher *private capital exports*, even though larger outflows of long-term funds from Germany were clearly discernible at times when the Deutsche Mark was falling. Although the dollar's interest rate advantage continued to be substantial (fluctuating between 3 and 3½ percentage points in the case of public bonds), according to the available statistical data residents acquired only DM 5.3 billion of *foreign currency bonds* in 1983 compared with DM 10.3 billion in 1982. This seems to have owed something to the fact that German investors bought larger amounts of foreign *shares* in 1983: the statistics reveal that net purchases of foreign shares by residents in 1983 amounted to DM 4.6 billion against only DM 0.5 billion in 1982. Nevertheless, overall capital exports through purchases of foreign securities, at DM 10.4 billion, fell slightly short of the preceding year's figure (DM 11.4 billion). There was also a small decline in the amount flowing out for the purpose of *direct investment* by German enterprises (and banks) last year (DM 7.4 billion, compared with DM 8.0 billion in 1982).

However, the long-term external assets of the *banks*, at DM 8.4 billion in 1983, increased more than twice as fast as a year earlier (DM 3.7 billion); a special factor in 1982 had been that the U.S. Treasury had redeemed large amounts of borrowers' notes issued by German banks. Much of the increase in foreign loans last year seems to be attributable to "involuntary" lending in connection with debt rescheduling agreements, because the expansion of outstanding claims was mainly due to the decline in the volume of repayments, while the banks were exercising much restraint in new lending business in view of the greater risks involved. *Public authorities*, whose capital exports are largely independent of interest rate and exchange rate movements, likewise exported more long-term funds last year than in

1982 (DM 5.6 billion against DM 4.4 billion a year earlier). This was mainly attributable to larger subscription payments to the institutions of the World Bank group, whose capital requirements rose substantially in connection with the debt crisis in the developing countries.

Short-term capital transactions

In short-term capital transactions, there were net exports of funds in 1983. If the "balancing item" of the balance of payments is included in full in short-term capital transactions, DM 7 billion (net) of short-term funds flowed out of Germany, while a good DM 10 billion had flowed in a year before. The inclusion of the "balancing item" is of course an unsatisfactory makeshift in several respects. This item contains "errors and omissions" from *all* items of the balance of payments. It may be influenced by erroneous reports to the current account as well as by failure to report capital transactions. 1983 provides a notable example of the problems posed by

24 current account statistics. The so-called supplementary trade items were adjusted in arrears in the official foreign trade statistics for an over-recording of imports, as some imported goods, such as certain products of the aircraft industry, were earmarked for early re-export, without the ownership passing to a resident, so that they cannot be ascribed to the German economy. Besides, it cannot be assumed that all capital transactions subject to reporting requirements are actually reported in every single case; they may not be, for instance, if the payment is made abroad in cash. If short-term capital transactions are analysed in detail, it becomes necessary, therefore, to disregard the movement of the balancing item, which, for the year 1983, suggests an unrecorded inflow of funds totalling DM 1.8 billion (net), against an outflow of DM 1.2 billion a year earlier.

Statistically recorded short-term capital transactions produced net outflows of DM 8.5 billion in 1983 compared with inflows of DM 11.5 billion in 1982. This swing is due above all to the different exchange market situation in the EMS: around the turn of 1982-83 substantial inflows of short-term funds into the Deutsche Mark began and continued up to the realignment in the EMS of March 1983, but after the exchange rate adjustment the situation on the exchange market was characterised by the sustained weakness of the Deutsche Mark and massive return flows into the other EMS currencies. Quite obviously, in 1983 the link between exchange rate movements and capital movements in short-term capital transactions was much closer than on the long-term capital account.

It was primarily from *enterprises* that short-term funds flowed out last year. For the first time since 1979, financial credits were repaid on balance to non-residents (– DM 1.0 billion). Short-term loans denominated in foreign currencies continued to be raised from foreign banks by German enterprises, which, on the other hand, reduced the much more substantial Euro-DM loans by about DM 3 billion in the course of the year. For one thing, the overall short-term borrowing requirements of the enterprise sector were not very pronounced last year. For another, there was little incentive for the banks to grant Euro-DM loans through their foreign branches instead of domestic loans bearing higher interest rates. The general stagnation of the Euro-DM market was associated with a widening of interest margins on this market, so that the interest rate advantage of Euro-DM loans over domestic loans will not in-

frequently have diminished. On the other hand, enterprises granted substantial credits to non-residents (over DM 6 billion net) in the course of export business. Short-term capital transactions of *public authorities* also led to overall outflows of funds (DM 3.3 billion) in 1983, mainly because the public authorities repaid short-term Euro-DM loans last year on balance. In addition, movements on various clearing accounts for current transactions of the Federal Government with non-residents (e.g. for subscriptions to the EEC) resulted in “exports of funds”. The *banks*, however, were importers of short-term funds last year, though only on a small scale (DM 2 billion). The main reason for this was the rise in German banks’ short-term Deutsche Mark liabilities to non-residents, while there was hardly any change in the corresponding Deutsche Mark assets.

Net external assets of the Bundesbank

It was possible, taken as a whole, to effect Germany’s external payments without having recourse on any larger scale to the monetary reserves of the Bundesbank. Calculated at current balance sheet rates, the net external assets at the end of 1983 were only DM 1.6 billion smaller than at the beginning of the year. Substantial foreign exchange movements took place, however, in the course of the year in

connection with the exchange rate fluctuations. Thus the Bundesbank's net external assets increased by just over DM 17 billion between the beginning of 1983 and the realignment in the EMS in March, as it became necessary to purchase large amounts of partner currencies so as to maintain the level of exchange rates. The outflows of funds that started after the realignment caused the monetary reserves to decline by DM 16 billion within only five weeks. In addition, the Bundesbank at times sold dollars on the exchange market in order to support the Deutsche Mark, but in the main the dollars sold were ones which the Bundesbank regularly receives outside the market, i. e. in the form of interest income and from U.S. troops stationed in Germany. Hence the dollar holdings of the Bundesbank at the end of 1983 were just about as large as a year before.

At the end of 1983 the Bundesbank's dollar assets, which continued to be valued at roughly DM 1.73 per U.S. dollar, amounted to DM 37.3 billion. (Including the dollars provisionally contributed to the European Monetary Cooperation Fund (EMCF) the holdings of the Bundesbank amounted to almost US\$ 27 billion or just over DM 46 billion.) In addition, the Bundesbank had claims on the International Monetary Fund equivalent to DM 14.6 billion and claims on the EMCF within the framework of the European Monetary System totalling DM 15.4 billion. (Excluding the balances resulting from the provisional contribution of gold and dollar reserves, however, the claims on the EMCF amounted to only DM 2.9 billion.) Including the gold holdings with a book value of DM 13.7 billion and small amounts of other foreign exchange, the gross monetary reserves at the end of 1983 thus came to DM 81.6 billion. These reserve assets were accompanied by external liabilities totalling DM 14.1 billion, so that the net monetary reserves amounted to DM 67.5 billion. In addition, there were less liquid external loans and other external assets in the amount of DM 2.5 billion.

IV. Minimum reserves			
1. Reserve ratios	46 *		
2. Reserve maintenance	48 *		
V. Interest rates			
1. Discount and lombard rates of the Deutsche Bundesbank and special interest rate charged for failing to meet the minimum reserve requirements	50 *		
2. Rates of the Deutsche Bundesbank for short-term money market operations	50 *		
3. Rates for sales of money market paper	51 *		
4. Rates for prime bankers' acceptances	51 *		
5. Money market rates in Frankfurt am Main, by month	51 *		
6. Lending and deposit rates	52 *		
7. Central bank discount rates in foreign countries	53 *		
8. Money market rates in foreign countries	53 *		
VI. Capital market			
1. Sales and purchases of securities	54 *		
2. Sales of bonds	55 *		
3. Redemption of bonds	56 *		
4. Bonds outstanding	56 *		
5. Change in share circulation	57 *		
6. Yields on domestic securities	57 *		
7. Liquid funds and investment of insurance enterprises	58 *		
8. Investment companies' sales receipts	59 *		
VII. Public finance			
1. Finances of the public sector	60 *		
2. Finances of the Federal Government, Länder Governments and local authorities	60 *		
3. Federal finance on a cash basis	61 *		
4. Tax revenue of the central, regional and local authorities	61 *		
5. Tax revenue, by type	62 *		
6. Individual taxes of the Federal Government, Länder Governments and local authorities	62 *		
7. Indebtedness of the public sector	63 *		
8. Changes in public sector indebtedness	64 *		
9. Indebtedness of the Federal Government	65 *		
10. Indebtedness of the Federal Railways and Federal Post Office	65 *		
11. Loans against borrowers' notes raised by public authorities	66 *		
12. Equalisation claims	66 *		
13. Cash receipts, expenditure and assets of the wage and salary earners' pension insurance funds	67 *		
14. Cash receipts, expenditure and assets of the Federal Labour Office	67 *		
VIII. General economic conditions			
1. Origin, distribution and use of national product	68 *		
2. Index of net output in the producing sector	69 *		
3. Labour market	69 *		
4. Index of orders received by the manufacturing sector	70 *		
5. Orders received by construction and housing finance	71 *		
6. Retail turnover	71 *		
7. Prices	72 *		
8. Households' income	73 *		
9. Pay rates and actual earnings	73 *		
IX. Foreign trade and payments			
1. Major items of the balance of payments	74 *		
2. Foreign trade (special trade), by country and group of countries	75 *		
3. Services	76 *		
4. Transfer payments	76 *		
5. External capital transactions	77 *		
6. External position of the Deutsche Bundesbank	78 *		
7. External assets and liabilities of domestic banks	79 *		
8. External assets and liabilities of domestic enterprises	79 *		
9. Average official foreign exchange quotations on the Frankfurt Exchange	80 *		
10. External value of the Deutsche Mark	81 *		
11. External value of foreign currencies	82 *

of the remaining items of the consolidated balance sheet of the banking system; changes are chiefly due to fluctuations in intra-bank settlements, in profit and

loss accounts, and in interbank claims and liabilities. — 7 Excluding banks' cash balances, but including DM notes and coins held abroad. — 8 Decrease of

DM 3.7 billion owing to special transactions of the public authorities (contra-entry under "Other factors"). — p Provisional.

I. Overall monetary survey

* Consolidated statistical balance sheet of the banks (excluding assets and liabilities of foreign branches), including the Deutsche Bundesbank. See Tables II, 1 and III, 2 and 3. — 1 As from September 7, 1983 the Weekly Return of the Bundesbank shows the monetary reserves excluding the counterpart in respect of the valuation of gold and dollar reserves provisionally contributed to the EMCF, previously shown on the liabilities side; this method

is employed in this table for earlier dates as well, so that the external assets and liabilities of the Bundesbank are not fully comparable with the figures given in the Monthly Reports from April 1979 to September 1983. — 2 Including Federal Railways and Federal Post Office. Exception: central bank deposits of the Federal Post Office; see footnote 15. — 3 Including Treasury bills and Treasury discount paper of Federal Railways and Federal Post Office. —

4 Including Treasury bills and Treasury discount paper of Federal and Länder Governments, excluding mobilisation and liquidity paper. — 5 For treatment of DM claims payable on demand on foreign banks see Table IX, 7, footnote 2. — 6 As from July 1983 including the working capital put at the disposal of foreign branches (see footnote 7). — 7 Including contra-entry to coin circulation. Up to June 1983 including the working capital put at the disposal of

Bundesbank. — 8 In the current month or last month of the period. — 9 Open market transactions in securities and trade bills under repurchase agreements, foreign exchange swaps and foreign exchange transactions under repurchase agreements, shifts of

Federal Funds under section 17 of the Bundesbank Act and short-term sales of Treasury bills. — 10 At constant reserve ratios (base: January 1974). — 11 Statistically adjusted because of the exclusion of the banks' cash balances of domestic notes and

coins, which as from March 1978 are deductible from the minimum reserves. — 12 Statistically adjusted for Federal balances shifted temporarily to the banks under section 17 of the Bundesbank Act. — p Provisional. — pe Partly estimated.

II. Deutsche Bundesbank

1 As from September 7, 1983 the "Counterpart in respect of the valuation of gold and dollar reserves provisionally contributed to the EMCF", previously shown on the liabilities side of the Weekly Return of the Bundesbank, is directly deducted from the relevant asset item "Claims on the EMCF"; this method is employed in this table for earlier dates as well, so that the presentation of the claims on the EMCF and the monetary reserves is not fully comparable with the figures given in the Monthly Reports from April 1979 to

August 1983. — 2 The Bundesbank's external positions denominated in \$, ECUs or SDRs are shown at the balance sheet rates of the respective end-of-year dates. — 3 For further breakdown see Table IX, 6, and Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank, Series 3, Table 10. — 4 Prime bankers' acceptances and, up to end-1976, agricultural market organisation bills. — 5 Including Equalisation of Burdens Fund and ERP Special Fund. — 6 Resulting from the currency reform of 1948, including non-

interest-bearing debt certificate in respect of currency conversion in Berlin (West); including amounts exchanged for Treasury bills and Treasury discount paper and sold; see also item "Liabilities arising from mobilisation and liquidity paper sold". — 7 Including foreign securities (as from December 31, 1982: DM 52 million). — 8 Including the items "German coins", "Balances on postal giro accounts" and "Other assets". — 9 Including the balancing item in respect of the valuation adjust-

ment of other foreign currency positions. — 10 Excluding deposits of the German Federal Post Office. — 11 Local authorities, local authority associations and social security funds. — 12 For further breakdown see Table VII, 4 in the Monthly Reports of the Deutsche Bundesbank up to and including November 1982. — 13 In addition, there are several minor special facilities (see "Kreditpolitische Regelungen" [monetary policy regulations] published in the German version of the Annual Reports of the

Deutsche Bundesbank). — 14 Increase of DM 1,845 million owing to a valuation adjustment of the external position. — 15 Increase of DM 7.3 billion owing to a valuation adjustment; DM 3.4 billion of this was transferred to the EMCF in connection with the contribution of the dollar reserves. — 16 Increase of DM 4.1 billion owing to a valuation adjustment of the external position (see also "The monetary reserves of the Bundesbank as reflected in its Weekly Return" in Monthly Report of the Deutsche

Bundesbank, Vol. 34, No. 1, Jan. 1982, p. 13). — 17 Special lombard facility. — 18 Decrease of DM 2.5 billion owing to a valuation adjustment. — 19 As from September 7, 1983 liabilities arising from transfers of ECUs to other central banks, previously set off against claims on the EMCF, are shown in the Weekly Return of the Bundesbank as liabilities to the EMCF; this method is employed in this table for earlier dates as well.

III. Banks

1. Principal components of banks' assets and liabilities *

DM million

* Excluding the assets of foreign branches (see Table III, 10) and of building and loan associations; the statistics for credit cooperatives are based on a partial survey, see Tab. III, 12. — Statistical changes of DM 500 million and more are given separately (increase: +, decrease: -) in the notes to the individual tables (here: footnote 14 ff.). — 1 Balance sheet total plus endorsement liabilities from rediscounted bills, own drawings outstanding, discounted and credited to the borrowers in account, and bills sent for collec-

tion prior to maturity from the banks' portfolios. — 2 Excluding claims in respect of savings bonuses. — 3 Including matured bonds, interest and dividend coupons. — 4 Including balances on postal giro account and claims in respect of registered bonds; excluding loans to building and loan associations. — 5 Excluding own issues; excluding registered bonds. — 6 Including securities sold to the Bundesbank in open market transactions under repurchase agreements. — 7 Including loans to building and loan

associations. — 8 Treasury bills and Treasury discount paper (excluding mobilisation and liquidity paper). — 9 The purchase of mobilisation and liquidity paper (under sections 42 and 42a of the Bundesbank Act) does not represent lending by banks. — 10 As from July 1983 including the working capital put at the disposal of foreign branches (see footnote 13). — 11 Including land and buildings, equipment, unpaid capital, own shares and shares of a controlling company. — 12 Including bills sold to the Bun-

III. Banks

* Excluding lending of foreign branches and of building and loan associations; the statistics for credit cooperatives are based on a partial survey, see Table III, 12, footnote 13, and Table III, 22. Including lending to building and loan associations. — Statistical changes of DM 500 million and more are given separately in footnote 14 ff. (increase: +, decrease: —). — 1 Up to first line for December 1980 including mortgage loans secured by real estate used for industrial and agricultural purposes and by ships. — 2 Up to first line for December 1980 excluding mortgage loans. — 3 As from second line for December 1980 including all mortgage loans (also those secured by residential real estate). — 4 Including

mortgage loans secured by other real estate; as from December 1980 only if this represents future residential real estate. — 5 As from second line for December 1980 included in the above-mentioned sectors. — 6 Including all mortgage loans (except those secured by residential real estate). — 7 As from second line for December 1980 including all mortgage loans (except those secured by residential real estate). — 8 Excluding banks (other than building and loan associations); including financial leasing institutions. — 9 According to the basic classification of the Federal Statistical Office "Services, if rendered by enterprises and the professions". — 10 Including production of musical

instruments, sports equipment and jewellery; photographic and film laboratories. — 11 The difference between the two lines for end-1980 is due to the revision of the borrowers statistics (mortgage loans classified by borrower and not by the asset serving as collateral, change in the maturity classification) as well as to (in the case of short-term lending: only to) corrections of previous classifications by the banks. — 12 As from second line for December 1980 excluding medium-term loans on a trust basis and excluding medium-term maturity prolongation loans. — 13 As from second line for December 1980 including medium-term loans on a trust basis and including medium-term maturity prolongation loans. —

1 Including postal giro account balances, claims on building and loan associations and claims arising from registered bonds; excluding Bundesbank balances. — 2 Loans under savings contracts and interim and bridging loans. — 3 Including small amounts of loans for purposes other than building. — 4 Including equalisation and covering claims. — 5 Including liabilities to building and loan associations.

6 Including small amounts of savings deposits. — 7 Total amount covered by the contracts; only contracts newly entered into, for which the contract fee has been fully paid. Increases in the contractual amount count as new contracts. — 8 For outpayments of savings deposits arising from the allocation of contracts see "Capital paid out". — 9 Including housing bonuses credited. — 10 Only

allocations accepted by the beneficiaries; including allocations applied to settlement of interim and bridging loans. — 11 The amounts already credited to the accounts of savers or borrowers are included in "Amounts paid into savings accounts" and "Interest and repayments received on building loans". — p Provisional.

Source: Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V., Bonn. The figures cover the transactions of all credit cooperatives (including those mentioned in footnote 1), whereas the banking statistics collected by the Deutsche Bundesbank only cover the cooperatives required to report (since end-1973 about 2,400, prior to that about 2,000). The figures for June and December are based on a general survey, those for March and September are estimated on the basis of a partial survey by the Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. — 1 Including banks affiliated to Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. and not organised in the form of a cooperative, but excluding central institutions of credit cooperatives. — 2 Excluding loans on a trust basis. — 3 Excluding bank savings bonds. — 4 Including bank savings bonds. — p Provisional.

* Excluding postal giro and postal savings bank offices. Also excluding banks in liquidation which still report for the monthly balance sheet statistics, and excluding deposit-receiving agencies, exchange offices, commission agencies, branches and representations, but including the registered offices for the business activity of transferred banks in the Federal area and second and other registered offices of banks if banking business is conducted there; such registered offices are recorded as branches. — 1 Excluding building and loan associations. — 2 Since end-1972 including legally independent (private and public) building and loan associations and their branches. 9 (end-1972) and 10 (since end-1973) legally dependent public building and loan associations (divisions or institutions of other public-

law banks) with 4 branches are not recorded separately. — 3 Figures revised (304 fewer branches in all) because of unreported closures between 1957 and 1975. — 4 Before allowing for a statistical decrease of 304 branches. — 5 At the end of 1982 and 1983 the monthly balance sheet statistics include, among the instalment sales financing institutions, another 10 and 12 institutions with 423 and 455 branches respectively. In this table, 5 and 7 institutions with 414 and 445 branches have been placed in the group of "Regional banks and other commercial banks", and 5 institutions with 9 and 10 branches in the group of "Private bankers", in accordance with the index of banks (Form 1035). — 6 The first branch established by a foreign bank in the Federal area is considered a bank in accordance

with section 53 (1) of the Banking Act; further branches are recorded as branches. — 7 Including Deutsche Girozentrale — Deutsche Kommunalbank — and the numerous branches of the former Braunschweigische Staatsbank, which are now being conducted as branches of Norddeutsche Landesbank Girozentrale. — 8 Including Deutsche Genossenschaftsbank. — 9 Including other banks not organised in the form of a cooperative but affiliated to Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. — 10 Before allowing for a statistical increase of 46 branches; 46 exchange offices of the Deutsche Verkehrs-Kredit-Bank AG handling inpayments and outpayments have been included as branches for the first time.

3 The ratio of stage 1 on the progressive scale applies to the first DM 10 million of liabilities subject to reserve requirements, the ratio of stage 2 of the next DM 90 million, and the ratio of stage 3

to liabilities exceeding DM 100 million. — 4 From March 1, 1977 to February 28, 1978 the following discounts were in force for liabilities to residents in places without a Bundesbank office: 1 percentage

point for sight liabilities, 0.5 percentage point for savings deposits. — a "Bank Places" are places in which there is an office of the Deutsche Bundesbank.

IV. Minimum reserves

2. Reserve maintenance *

* Excluding minimum reserves kept by the Federal Post Office on behalf of the postal giro and postal savings bank offices, which since the introduction on May 1, 1958 of the optional central maintenance of minimum reserves are in practice no longer distinguishable from the other central bank deposits of the Federal Post Office. — 1 In accordance with sections 5 to 7 of the Minimum Reserves Order. — 2 Liabilities subject to reserve requirements cannot be broken down statistically according to residents and non-residents if the same reserve ratios applied to such liabilities and only overall amounts were reported. — 3 Amount after applying the reserve ratios to

liabilities subject to reserve requirements (section 5 (1) of the Minimum Reserves Order). Owing to the introduction in March 1978 of deductible cash balances, accompanied by a compensatory increase in reserve ratios, the continuity of the series is not assured. — 4 Banks' holdings of German legal tender according to section 5 (2) of the Minimum Reserves Order. — 5 To be maintained as credit balances on giro accounts at the Deutsche Bundesbank. — 6 Average credit balances of banks subject to reserve requirements maintained on giro accounts at the Deutsche Bundesbank. — 7 Actual reserves less required reserves after deduction of deductible cash

balances. — 8 Shortfall in relation to required reserves after deduction of deductible cash balances. — 9 Required reserves prior to deduction of deductible cash balances as % of liabilities subject to reserve requirements. — 10 Between May 1961 and end-December 1966 liabilities to non-residents were exempt from the reserve requirements to an amount equal to credit balances with banks abroad and foreign money market investment. — 11 The exemption of institutions mainly engaged in long-term business and of building and loan associations was abolished with effect from January 1, 1984.

V. Interest rates

1. Discount and lombard rates of the Deutsche Bundesbank and special interest rate charged for failing to meet the minimum reserve requirements

Special interest rate charged for failing to meet the minimum reserve requirements 3 % p.a. above lombard rate 4

1 This is also the rate for cash advances. Until May 1956 lower rates likewise applied to foreign bills and export drafts; fixed special rates were charged for certain credits which had been granted to the Reconstruction Loan Corporation and which ran out

at the end of 1958 (for details see footnotes to the same table in the Report of the Deutsche Bundesbank for the Year 1961, page 91). — 2 An allowance of 3/4 % per annum was granted to banks in respect of the lombard loans taken between December 10,

1964 and December 31, 1964. — 3 Lombard loans were not granted to the banks at the lombard rate during the following periods: from June 1, 1973 to July 3, 1974 and from February 20, 1981 to May 6, 1982. — 4 Unchanged as from January 1, 1951.

* For method of data collection see Monthly Report of the Deutsche Bundesbank, Vol. 35, No. 1, January 1983, page 14 ff. Average rates are calculated as unweighted arithmetical mean from interest rates reported to be within the spread. The spread is ascertained by eliminating 5 % each of the reports containing maximum and minimum interest rates. — 1 Second and third weeks of the months indicated. — 2 Interest rates as % p.a. — 3 Bills of DM 5,000 and

over but less than DM 20,000 eligible for rediscount at the Bundesbank. — 4 Interest rates as % per month of original amount of credit. Besides interest most banks charge a non-recurring processing fee (generally 2 %, in some cases 3 %, of the credit amount). — 5 With maturities of over 24 months but no more than 48 months. — 6 The figures refer to the time when the contract was concluded and not to the entire duration of the contract. The calculation of

the effective interest rate is based on an annual redemption rate of 1 % plus interest saved; the repayment conditions agreed upon in each case by the banks involved are taken into account (mostly quarterly payments with quarterly or annual inclusion or monthly payment and inclusion). — 7 Interest rates for time deposits extending beyond the end of the year. — p Provisional.

* Excluding securities from pre-currency-reform issues and old savers' securities. — 1 Excluding registered bank bonds. — 2 Including ship mortgage bonds. — 3 Including Kommunalschatzanweisungen, Landesbodenbriefe, Bodenkulturschuldverschreibungen, bonds issued to finance shipbuilding and guaranteed by local authorities as well as bonds with other designations, if they were issued under section 8 (2) of the Act on Mortgage Bonds and Similar Bonds of Public-Law Banks as amended on May 8, 1963. — 4 This includes all bearer bonds of the following banks: AKA-Ausfuhrkredit-Gesellschaft mbH, Bayerische Landesanstalt für Aufbaufinanzierung, Deutsche Genossenschaftsbank, Deutsche

Siedlungs- und Landesrentenbank, Industriekreditbank AG — Deutsche Industriebank, Kreditanstalt für Wiederaufbau (RLC), Landwirtschaftliche Rentenbank, Equalisation of Burdens Bank and building and loan associations. — 5 This item principally contains bonds of central giro institutions, the proceeds of which are, in the main, extended as credit to trade and industry. Also including "unsecured" mortgage bonds, bearer bonds (including convertible bonds) issued by banks, and from September 1977 marketable savings bonds. — 6 Including convertible bonds issued by industrial borrowers. — 7 Including Federal Railways and Federal Post Office, but

excluding bonds issued by the Equalisation of Burdens Bank on behalf of the Equalisation of Burdens Fund. — 8 Issued by a German-managed syndicate. — 9 Gross sales means only initial sales of newly issued securities, not however resales of repurchased bonds. The figures include those cases of security sales where the buyer, for reasons connected with printing or for other reasons, has not received physical securities. — 10 Gross sales less redemptions; the minus sign indicates an excess of redemptions over the amount newly sold during the period under review. Discrepancies in the totals are due to rounding.

1 In principle the statistics on yields cover only fully taxed fixed interest bearer bonds with maximum maturities according to the terms of issue of over 4 years. As from 1977 such bonds are included in the calculation of average yields only if their mean remaining maturities exceed 3 years. Convertible bonds and, from January 1973, bank bonds with unscheduled redemption are not included. The yields

of redeemable issues are based on the mean remaining maturities and, from January 1973, on the computed remaining maturities. Group yields for the various types of securities are weighted with the amounts outstanding or (in the case of issue yields) the amounts sold of the bonds included in the calculation. Monthly figures for yields on bonds outstanding are calculated on the basis of the yields

on the four bank week return dates of a month (including the yields on the last day of the preceding month). The annual figures are the unweighted means of the monthly figures. — 2 As far as quoted on German stock exchanges. — 3 Dividend yield; end of year or month. Source: Federal Statistical Office. — 4 Pursuant to the Corporation Tax Reform Act of August 31, 1976.

VI. Capital market

7. Liquid funds and investment of insurance enterprises *

* In the cash definition, which differs from the methods employed for the government account of the national accounts and, in some respects, also from the financial statistics. — 1 Federal Government, Länder Governments, local authorities, municipal special-purpose associations, Equalisation of Burdens Fund and ERP Special Fund. The quarterly figures, unlike the annual figures based on the annual accounts statistics of the Federal Statistical Office, do not include municipal special-purpose associations, hospitals keeping commercial accounts and various special accounts. — 2 Statutory pension insurance

funds, Federal Labour Office, statutory health insurance and accident insurance institutions, agricultural old-age pension funds, and supplementary pension funds for government employees. The annual figures differ from the sum of the quarterly figures as the latter are all provisional. The quarterly figures for some fields of insurance are estimated. — 3 After adjustment for payments by the central, regional and local authorities to the social security funds. — 4 Including tax shares passed on to the European Communities, discrepancies in clearing transactions between the central, regional and local authorities

and special transactions. — 5 Expenditure on investment grants, loans and acquisition of participations. — 6 Including Federal Government liquidity assistance to the Federal Labour Office. — 7 Including differences between the balance of receipts and expenditure and the change in financial assets, which is treated as a cash balance in this context. — 8 Excluding municipal special-purpose associations and excluding supplementary pension insurance funds for government employees. — pe Partly estimated. Discrepancies in the totals are due to rounding.

1 See footnotes to Table VII, 3. — 2 Including Berlin, Bremen, Hamburg. By means of certain changes the figures of the financial statistics were approximated to the cash principle. — 3 The quarterly figures, unlike the annual figures based on the annual accounts

statistics of the Federal Statistical Office, do not include hospitals keeping commercial accounts and various special accounts. Annual figures for local authorities in 1982 are partly estimated. — 4 Calculated on the basis of the change in indebtedness and

cash funds. The cash balance differs from the balance of receipts and expenditure owing, inter alia, to the accumulation of the local authorities' share in income taxes on Länder Government accounts. Discrepancies in the totals are due to rounding.

1 The cash transactions recorded as cash receipts and expenditure concern payments into and out of the account kept with the Deutsche Bundesbank by the Federal Government. The cash receipts and outgoings differ from those shown in the official financial statistics primarily because they are recorded not at the time they are entered in the

budgetary accounts but at the time of the actual receipt or outpayment and because transactions on behalf of the European Communities, which are entered not in the Federal budget but in appendices thereto, are settled through the accounts of the Federal Government. — 2 Including small amounts of special

transactions. — 3 Cash balance = column (a) less (b) less (c) less (d) less (e) less (f). — 4 Deposits with the Bundesbank and other credit balances. — 5 Up to June 1981 only items in course of settlement with the Equalisation of Burdens Fund; thereafter, in general only redemptions in course of settlement.

1 This total, unlike that in Table VII, 4, includes neither the revenue from Equalisation of Burdens levies, trade tax on returns and capital (less Federal and Länder shares in trade tax), tax on total wages paid, the taxes on land and buildings and other local authority taxes, nor the balance of untransferred tax shares. — 2 The yield of wage tax and assessed income tax was distributed among the Federal

Government, the Länder Governments and the local authorities in the ratio of 43:43:14 as from 1970 and in the ratio of 42.5:42.5:15 as from 1980, and the yield of corporation tax and investment income tax between the Federal Government and the Länder Governments in the ratio of 50:50 as from 1970. — 3 The Federal Government's share: 70 % in 1970, 68.25 % in 1975, 69 % in 1976 and 1977, 67.5 % from 1978 to 1982,

66.5 % in 1983, 65.5 % in 1984; the remainder went to the Länder Governments. As from 1975 the EEC share must be deducted from the Federal Government's share stated. — 4 Federal Government and Länder Governments 50 % each. — 5 For breakdown see Table VII, 6. — 6 Including DM 109 million of levies on defence imports. — p Provisional.

6. Individual taxes of the Federal Government, Länder Governments and local authorities

* Excluding public authorities' mutual indebtedness. — 1 Excluding bonds in the issuers' portfolios. — 2 Mainly loans against borrowers' notes. Including loans raised abroad. — 3 Including Debt Register and Federal savings bonds. — 4 Commutation and compensation debt and mainly old debts expressed in foreign currency in accordance with the London Debts Agreement; excluding own holdings. — 5 In this Table (unlike Table VII, 9) the Public Works Corporation and the Equalisation of Burdens Fund are included in the Federal Government debt as from

1970, and not as from 1972 and 1980 respectively. — 6 In 1980 the Federal Government took over the debts of the Equalisation of Burdens Fund. Since then they have been recorded among the Federal Government's figures together with the Federal debt proper; they are shown among the Equalisation of Burdens Fund's figures only as a memorandum item. — 7 Including DM 387 million of special Bundesbank credit to the Federal Government. — 8 In 1970 and 1975 including small amounts of tax

reserve certificates. — 9 From 1978 including net borrowing for the Housing Promotion Institution of the Land of North Rhine-Westphalia. — 10 As from end-1981 including medium-term notes with maturities of over four years, which were previously included in bonds (DM 329 million). — 11 Data other than end-of-year figures have been estimated; including indebtedness of municipal special-purpose associations (as from 1975) and municipal hospitals. — p Provisional. — pe Partly estimated.

1 In contrast with the methods employed in the pension insurance funds' accounts, pension payments and Federal grants were not allocated to the period for which they were made but to the period in which they actually occurred. The annual figures differ from the sum of the quarterly figures as the latter are all provisional. — 2 Payments by pension insurance funds to health insurance institu-

tions under section 183 of the Reich Insurance Order have been deducted from pension payments. — 3 Change in financial assets, which is not identical with the balance of receipts and expenditure. — 4 At the end of year or quarter. — 5 Including cash resources. — 6 Including money market paper held up to 1976. — 7 Excluding the Federal grants deferred with interest in 1974

and 1975 and excluding loans to other social security funds; including participations. — 8 As from 1978 including pension insurance contributions paid for recipients of public financial benefits. — p Provisional.

1 Including employers' other social security expenditure (inter alia on company old age pension schemes) but excluding employers' contributions to social security funds. — 2 After deducting wage tax payable on gross wages and salaries and employees' contri-

butions to social security funds. — 3 Social security pensions, assistance payments and established officials' pensions (net), less households' transfers to government. — 4 "Mass income" plus property income of all households and self-employed persons' with-

drawals from entrepreneurial income, less current transfers to non-residents. — 5 Including claims on company pension funds. — 6 Saving as a percentage of disposable income. — p Provisional. Discrepancies in the totals are due to rounding.

* The Federal Statistical Office corrections for 1983 are not yet available. — 1 Special trade according to the official foreign trade statistics: imports c.i.f., exports f.o.b. — 2 Mainly warehouse transactions for account of residents and deduction of goods returned and of commission processing. — 3 Excluding expenditure on freight and insurance costs included in the c.i.f. import value. — 4 The figure for the last month is provisional and excludes trade credits, changes in which are included in the

balance of unclassifiable transactions until they are recorded under short-term capital transactions. — 5 Net errors and omissions on current and capital accounts (= balancing item). — 6 The figure for the last month includes trade credits. — 7 Counterpart of changes in the Bundesbank's external position which are not due to external current and capital transactions: changes in the Deutsche Mark value of the Bundesbank's assets and liabilities denominated in foreign currencies owing to the valuation adjustment

at the end of the year and the allocation of IMF special drawing rights; as from 1982 also the differences between the transaction values and the changes in the external position shown in the Weekly Return at balance sheet rates. — 8 As from 1982 valued at balance sheet rates; see Monthly Report of the Deutsche Bundesbank, January 1982, p. 13. — p Provisional. Discrepancies in the totals are due to rounding.

1 Excluding expenditure on freight and insurance included in the c.i.f. import value, but including receipts of German seagoing shipping and of German insurance enterprises from services connected with

transactions in goods. — 2 Receipts in respect of goods and services supplied. — 3 Excluding remuneration of foreign workers, who from the economic point of view are considered residents;

wage remittances by foreign workers to their home countries are therefore shown under transfer payments. — p Provisional. Discrepancies in the totals are due to rounding.

4. Transfer payments

* Valuation of the foreign currency positions at the end of the year at balance sheet rates in accordance with the principles of the Companies Act; until end-1981 these levels were updated in the course of the year at transaction values. As from 1982 valuation at balance sheet rates in the course of the year as

well. — 1 Mainly U.S. dollar assets. — 2 For breakdown see Table (b). — 3 European Monetary Cooperation Fund. — 4 Including mobilisation and liquidity paper sold to foreigners by the Bundesbank (see sections 42 and 42 (a) of the Bundesbank Act). — 5 Comprising subscription payments in cash and

Deutsche Mark callings by the IMF to finance its sales of Deutsche Mark (net) to other countries. — 6 Assets resulting from very short-term financing and short-term monetary assistance. Discrepancies in the totals are due to rounding.

7. External assets and liabilities of domestic banks *

(excluding Deutsche Bundesbank)

DM million

* Excluding the external assets and liabilities of the foreign branches of domestic banks. Statistical increases and decreases have not been eliminated; the assets also include banks' long-term external assets changes in which are ascribed to official capital transactions in the balance of payments. To this extent the changes in levels are not comparable with the figures shown in Table IX, 5. Assets and liabilities in foreign currencies are normally valued at

middle rates. — 1 Including the respective international organisations. — 2 For Deutsche Mark claims payable on demand the level at the end of the previous year is used for accounting reasons; including foreign bills acquired as a money market investment. — 3 Including foreign Treasury bills and Treasury discount paper; since November 1972 only a few small holdings have been reported. — 4 As from

June 1982 including the working capital of the foreign branches of domestic banks (DM 1.6 billion). — 5 Including repurchase commitments (which do not have to be shown in the balance sheet); for lack of detailed records they are assigned to the foreign banking sector. — 6 Including the working capital of the branches of foreign banks. — p Provisional. — r Revised.

8. External assets and liabilities of domestic enterprises *

(excluding banks)

* For the method of calculation see the Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank, Series 5, The currencies of the world. — 1 The figures for end-1972 are in principle based on the central rates at the time, but in the case of the pound sterling, the Irish pound and the Canadian dollar, whose exchange rates were floating, the market rates of end-1972 were taken as a

basis. — 2 The indices for the groups of countries are weighted geometric means of bilateral nominal external values. — 3 The United Kingdom has not so far participated in the exchange rate mechanism of the European Monetary System. — 4 Excluding the United Kingdom. The EMS did not come into force until March 13, 1979. For the time prior to this date

the weighted external value vis-à-vis the same group of countries is shown. — 5 Including Greece, which became a full member of the EEC on January 1, 1981. — 6 Weighted external value against the currencies of 14 industrial countries after adjustment for differences in the rate of price rises (geometric mean). — p Provisional.

IX. Foreign trade and payments

11. External value of foreign currencies *

End-1972 = 100 1

Yearly or monthly average	Weighted external value of foreign currencies against 23 countries 2												
	U.S. dollar	Currencies of the countries participating in the European Monetary System (EMS)							Currencies of other countries				
		French franc	Netherlands guilder	Italian lira	Belgian and Luxembourg franc	Danish krone	Pound sterling 3	Japanese yen	Norwegian krone	Austrian Schilling	Swedish krona	Swiss franc	Spanish peseta

* For the method of calculation see the Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank, Series 5, The currencies of the world. — 1 The figures for end-1972 are in principle based on the central rates at the time, but in the case of

the pound sterling, the Irish pound and the Canadian dollar, whose exchange rates were floating, the market rates of end-1972 were taken as a basis. — 2 The indices of the nominal external value of foreign currencies are weighted geometric means and relate

to the same group of countries as the calculation of the external value of the Deutsche Mark. — 3 The United Kingdom has not so far participated in the exchange rate mechanism of the European Monetary System.

List

of the subjects dealt with during the past twelve months in the Monthly Reports of the Deutsche Bundesbank

- March 1983 National product and income in the second half of 1982
The balance of payments of the Federal Republic of Germany in 1982
- April 1983 New domestic and external monetary policy measures
Changes in the minimum reserve regulations
Recent developments in building and loan association business
Expenditure on social assistance since the beginning of the seventies
- May 1983 Overall financial flows and total financial assets and liabilities in 1982
The Bundesbank's transactions in securities under repurchase agreements
The structure of international capital links between enterprises
Security ownership in 1982
- June 1983 The economic scene in the Federal Republic of Germany in the spring of 1983
- July 1983 Reviewing the monetary growth target for 1983
The pattern of capital transactions by region since 1979
Interpreting the balance of payments statistics
- August 1983 The profitability of German banks in 1982
External assets and liabilities of the Federal Republic of Germany at the end of 1982
The finances of the German Federal Railways and the German Federal Post Office since 1980
- September 1983 The economic scene in the Federal Republic of Germany in the summer of 1983
The financing of the International Monetary Fund and multilateral development banks
- October 1983 Enterprises' capital formation and financing in the first half of 1983
The longer-term development of "invisible" transactions between the Federal Republic of Germany and other countries
- November 1983 Enterprises' profitability and financing in 1982
The finances of the local authorities since the beginning of the eighties
- December 1983 The economic scene in the Federal Republic of Germany in the autumn of 1983
- January 1984 The Deutsche Mark as an international investment currency
Recent trends in public debt
The saving ratio of households in the Federal Republic of Germany: an international comparison
- February 1984 The economic scene in the Federal Republic of Germany at the turn of 1983–84

Information on previously published special studies will be found in the index of special studies appended to the Monthly Report of December 1983.
