Commentaries

Monetary analysis

Growth of the money stock accelerated in September. Although the *money stock in the broad definition M3* (currency, sight deposits, time deposits and funds borrowed for less than four years, savings deposits at statutory notice) decreased owing to seasonal factors (by DM 1.6 billion), it did so far less than is typical of that month. Seasonally adjusted, it grew quite considerably. Among the individual (seasonally adjusted) components of the money stock, sight deposits expanded at an exceptionally fast rate. Savings deposits at statutory notice also rose steeply. Shorter-term time deposits and borrowed funds, by contrast, declined. Currency in circulation remained virtually unchanged. Over the last six months the money stock M3 has increased at a seasonally adjusted annual rate of 4 1/2%; at the end of September its year-on-year growth rate was likewise 4 1/2%, while that of the money stock M2 (M3 excluding savings deposits at statutory notice) was 3 1/2%, and that of the money stock in the narrowest definition M1 (currency and sight deposits) was 5 1/2%.

Bank lending to enterprises and individuals remained sluggish in September. *Bank lending to the private sector* rose by DM 9.3 billion, compared with DM 14.8 billion in September 1984. Seasonally adjusted, longer-term direct advances expanded quite sharply, while short-term lending went down. Much as in the two preceding months, non-banks once again seem to have fallen back more heavily on funds accruing from maturing short-term time deposits and bank bonds to finance their expenditure. In the last six months total bank lending to enterprises and individuals has mounted at a seasonally adjusted annual rate of 3 1/2%.

Public sector cash transactions had an expansionary impact on monetary growth in September. While bank lending to the public authorities increased only moderately (by DM 1.1 billion, DM 0.9 billion of which was accounted for by bank purchases of public bonds), the public authorities reduced their debt to the Bundesbank to a smaller extent (by DM 0.7 billion) and increased their central bank deposits which are not counted as part of the money stock less (by DM 2.7 billion) than is customary in a month with a major tax payment date.

In September, there was a reversal in the trend of domestic non-banks' external payments, where sub-

stantial inflows of funds had been registered since the spring. The *net external assets of the banks and the Bundesbank* fell by DM 1.3 billion, reflecting outflows of funds in non-banks' current and capital transactions. The net external assets had grown by DM 2.2 billion in August and by DM 3.4 billion in July.

Monetary capital formation, which had slowed down in August, had no major contractionary effect on monetary growth in September either. In all, DM 1.6 billion of longer-term funds accrued to the banks.

1974). Three-quarters of the increase was accounted for by the growth of the reserve component and one-quarter by the expansion of currency in circulation. In October the central bank money stock exceeded its average level of the fourth quarter of 1984 by $4\frac{3}{4}\%$ (seasonally adjusted annual rate). It was thus close to the top end of this year's 3 to 5% monetary target corridor.

These mainly comprised long-term time deposits and borrowed funds (DM 1.9 billion). Savings deposits at agreed notice and the banks' capital and reserves also increased appreciably (by DM 1.1 billion and DM 0.4 billion respectively). By contrast, domestic non-banks' holdings of bank bonds fell by DM 1.7 billion. As in August, this owed something to large redemptions of short-term bonds, the proceeds of which were not all reinvested in similar paper. Net sales of bank savings bonds also virtually came to a halt in September (- DM 0.1 billion).

Central bank money stock

The central bank money stock, preliminary data on which are already available for October, increased sharply during that month. It went up by DM 1.3 billion to DM 202.9 billion¹ (seasonally adjusted and calculated at constant reserve ratios, base: January

¹ The seasonal factors influencing the central bank money stock have been recalculated; for figures for earlier months see Table I, 3 in the Statistical Section of this Report.

Securities markets

In September issuing activity in the German *bond market* slackened. Domestic borrowers issued bonds to the market value of DM 17.1 billion against DM 19.3 billion in August and DM 19.7 billion a year before. After deduction of redemptions and of the amounts issuers added to their own holdings, net sales worked out at DM 3.1 billion, compared with DM 4.5 billion in August and DM 5.7 billion a year earlier. As in the preceding two months, a larger amount of shorter-term bonds (with maturities of up to and including four years) was redeemed; the amount of such bonds outstanding therefore declined by DM 4.7 billion net in September, while sales of long-term bonds came to DM 7.8 billion (net).

Roughly half of the net sales consisted of bonds of the *public sector* (DM 1.5 billion). The principal public issuer in September was the Federal Post Office, which raised DM 1.2 billion net through a bond issue. The Länder Governments received DM 0.7 billion. The Federal Government, which generally accounts for the greater part of public issuing activity, allowed the outstanding amount of its bonds to go down by DM 0.4 billion on balance. Sales of its tap issues (DM 0.5 billion) and market regulation sales of previously issued bonds were accompanied in the shorter-term field by net redemptions of medium-term notes. *Banks* sold DM 1.6 billion (net) of their own bonds in September, including variable-rate bonds and zero-coupon bonds to the amount of DM 0.3 billion and DM 0.1 billion, respectively. The bulk of sales consisted of communal bonds (DM 1.6 billion) and bonds of specialised banks (DM 1.5 billion). DM 0.7 billion of mortgage bonds were placed. The outstanding amount of "other" bank bonds declined by DM 2.1 billion in connection with heavy redemptions of shorter-term securities.

In the market for *foreign Deutsche Mark bonds* issuing activity picked up somewhat in September. Foreign borrowers issued Deutsche Mark bonds to the nominal value of DM 1.5 billion, against DM 1.2 billion in August and DM 1.0 billion a year before. After deduction of redemptions, net sales came to DM 0.6 billion.

In September *banks* were the principal buyers in the bond market (DM 4.1 billion). They mainly purchased domestic bank bonds and public bonds. Demand from *abroad*, too, remained an important pillar of the market, although, at DM 2.6 billion in September,

it did not quite reach the peak levels of the preceding months. *Domestic non-banks* continued to be primarily interested in foreign bonds, although their purchases, at DM 1.2 billion, fell short of the figures of the previous months. They further reduced their holdings of domestic bonds in September (- DM 3.1 billion); this no doubt owed something to the high redemptions of shorter-term issues.

In the *share market*, sales of new shares in September, at DM 0.3 billion, were slightly lower than in August (DM 0.4 billion). Moreover, DM 0.4 billion of foreign shares were sold in the German market. Foreign investors bought German shares to the same extent. Demand for the units of German *investment funds*, which had picked up perceptibly in August, in connection with the reinvestment of major distributions, remained at a relatively high level in September, too. The funds open to the general public received DM 0.5 billion, virtually all of which accrued to the bond-based funds. In September the specialised funds registered inflows of capital totalling DM 0.4 billion.

8 Federal cash trend

The underlying trend towards smaller deficits was reflected again in the October result. Last month the cash deficit amounted to DM 4.2 billion and was thus DM 0.7 billion smaller than a year earlier. This was mainly due to the fact that cash expenditure was 2% below last year's level. Cash receipts increased by 1 1/2% in October.

From January to October the Federal Government ran a cash deficit totalling almost DM 20 billion; compared with the same period of last year, this represents an improvement of DM 5 billion. Since the beginning of the year cash receipts have risen by over 5%, i.e. more than twice as much as cash expenditure (+ 2 1/4%).¹ The results so far do not permit any definite conclusions to be drawn as to the Federal Government's deficit over the year as a whole, however, because the last two months of the year combined are of more than average significance on both the expenditure and the receipts side.

Public debt

In view of the relatively favourable cash situation in the major tax payment month of *September*, the central, regional and local authorities had no recourse at all to the credit markets on balance; indeed, their credit market indebtedness actually declined by just on DM 2 billion. *Federal* debt alone decreased by DM 1.4 billion. While the outstanding amount of five-year special Federal bonds, Federal savings bonds and standard bonds (only those stemming from market regulation sales) increased by a total of DM 0.8 billion, DM 1.0 billion of medium-term notes had to be redeemed and the liabilities arising from loans against borrowers' notes declined by DM 1.1 billion. The *other public authorities* ran down their credit market indebtedness by roughly DM 0.5 billion. The *Länder Governments* reduced their liabilities by just on DM 1 billion. On the one hand, the *Länder Governments*' debt resulting from bank lending declined sharply; on the other hand, their indebtedness in the form of securities increased, mainly owing to the issue of a loan by the Land of North Rhine-Westphalia. In addition, the *Länder Governments* repaid DM 0.7 billion of the Bundesbank advances they had taken up at the end of August, so that their overall indebtedness actually declined by just over DM 1.5 billion in September. The local authorities, by contrast, raised an estimated DM 0.5 billion (net) of credit in the market.

¹ The year-on-year comparison is now no longer adversely affected by the fact that in 1985 the Federal grants to the pension insurance funds were brought forward to a greater extent than in the previous year, because these differences have meanwhile cancelled out.

* The transactions shown as cash receipts and cash expenditure are payments into and out of the accounts kept with the Deutsche Bundesbank by the Federal Government. The cash receipts and cash expenditure differ from the figures of the official financial statistics primarily because they are recorded not at the time they are entered in the budgetary accounts but at the time of the actual receipt or outpayment and because transactions on behalf of the European Communities, which are entered not in the Federal budget but in appendices thereto, are settled through the accounts of the Federal Government. — 1 Deposits with the Bundesbank and other credit balances. — 2 In the current year excluding the liabilities for the latest month. — p Provisional.

Discrepancies in the totals are due to rounding. BBk

In the month of *October* too, when interest rates were tending to move upwards, the Federal Government's loan repayments exceeded its new borrowing. Massive repayment obligations caused its indebtedness in respect of loans against borrowers' notes, five-year special Federal bonds and medium-term notes to decrease by DM 2.5 billion in all. On the other hand, the amount of bonds outstanding rose by DM 1.0 billion (the new issue was accom-

panied by likewise larger redemptions), and sales of Federal savings bonds yielded DM 0.3 billion. On balance, Federal debt fell by DM 1.3 billion in October. At the end of that month, just as at the end of September, the Federal Government did not need to have recourse to Bundesbank advances.

New orders

After adjustment for seasonal influences, the *orders received by the manufacturing sector* in September were about 2% lower than in August. Taking July-September overall, which is advisable because holiday dates in the individual Länder differ, the seasonally adjusted level of new orders in these months was 1½% higher than in the previous quarter; new orders were thus roughly 9% up on the year. Strong stimuli were generated by *domestic business*, which has expanded by over 2½%, seasonally adjusted, in the last three months compared with April-June. Domestic orders increased by 8½% in the third quarter against the same period of the preceding year. The basic and producer goods sector – particularly steel industry enterprises – was among those to receive considerably more orders from the home market. In the capital goods sector demand for electrical engineering and mechanical engineering products once again rose sharply. By contrast, domestic orders to road vehicle building in the third quarter failed to regain the very high level of the previous three months, seasonally adjusted. Domestic orders to the consumer goods sector went up at a faster pace in the same period.

Trends in *foreign business* in the third quarter were fairly mixed. Whereas the basic and producer goods sector received more seasonally adjusted orders than in the preceding quarter – the consumer goods sector receiving distinctly more – capital goods orders fell short of the very high level at which they had been running previously. In total, foreign orders in the third quarter were about ½% lower than in the second, seasonally adjusted; they nevertheless exceeded their 1984 level by approximately 10%.

Output

Industrial production (excluding construction) in September was somewhat lower than in August, after adjustment for seasonal influences. However, according to information from the Federal Statistical Office, the provisional statistical figures are likely to be revised upwards – as is often the case in September. In the whole of the third quarter output (excluding the correction to be expected) increased by roughly 1½%, seasonally adjusted, against the second quarter. In the third quarter industrial production was 4½% up on the year. Production growth in the manufacturing sector continued to derive its dynamism mainly from enter-

prises in the capital goods sector, among them those in mechanical and electrical engineering especially. In the last three months output in the basic and producer goods sector rose almost as steeply, a result to which both the chemical industry and the iron and steel industry contributed. By contrast, seasonally adjusted production in the consumer goods sector was slightly below the level of the preceding quarter. *Construction output* in the third quarter was over 5½% higher than in the previous three months, seasonally adjusted. It was, however, roughly 5½% lower than in the same period of the preceding year.

Labour market

On the labour market the tendencies towards an improvement continue. This applies above all to the employment situation. On first rough estimates, the average number of *employees* in the third quarter of this year was about 200,000 above its 1984 level (after about 150,000 in the second quarter). Seasonally adjusted, this would be a much stronger rise over the previous quarter, in which the number of employees went up by 40,000. This favourable trend was mainly due to the sharp expansion in the manufacturing and services sectors. The increase in the number of employees in these areas of the economy was moreover not accompanied by any (seasonally adjusted) reduction in construction industry personnel.

After adjustment for seasonal influences, the number of *vacancies* has risen somewhat faster in the last few months, but, at about 125,000 at end-October, it was still running at a relatively low level. The number of employees on *short-time* in October went up for seasonal reasons. Nevertheless, since 1979 the number of short-time workers in any October has never been lower than this year (about 127,000). The construction industry is still among the few sectors which are recording short-time working on any significant scale.

It is, incidentally, encouraging that once again fewer persons were registered as unemployed last month (seasonally adjusted). New entries of persons who had not yet been employed and who were now looking for jobs were still high, which suggests that the inflow of manpower to the labour market is continuing. For that reason the increase in employment cannot be fully reflected in a reduction in unemployment. However, the number of *unemployed persons* registered by the labour exchanges at the end of October, at just on 2.29 million, was about 10,000 lower than in the preceding month, if seasonal influences are eliminated; the number of unemployed men decreased, and that of unemployed women did not rise any further — for the first time this year. In total, 9.2% of the dependent or 8.1% of the total labour force have been registered as unemployed of late.

Balance of payments

In September 1985 the current account of the German balance of payments (foreign trade, services and transfer payments combined) showed a surplus of DM 4.4 billion, compared with a deficit of DM 0.8 billion (mainly because of seasonal factors) in August and near-equilibrium a year earlier. After seasonal adjustment, too, the *surplus on current account* was relatively large. However, the September current account figure was strongly influenced by a special factor: owing to what was presumably a random bunching of payments, Germany received exceptionally large sums from the EEC budget in the context of the agricultural market regulations.

According to calculations by the Federal Statistical Office, the *trade surplus* amounted to DM 7.4 billion in September, against DM 3.3 billion in August and DM 5.3 billion a year earlier. In terms of value, exports increased by over 8% compared with last year and imports went up by 3 1/2%. The differences in growth rates were due entirely to price movements. While export unit values, on a year-on-year comparison, rose by 2.9%, import unit values declined by 1.5%. In terms of volume, both exports and imports were 5% larger in September than a year before. After seasonal adjustment, exports and imports fell in September; if, however, in order to eliminate random fluctuations (which may be very pronounced during the holiday season), the months from July to September are combined, exports and imports each rose by 1% compared with the second quarter.

During the month under review the *services account* produced a deficit of DM 1.6 billion as against DM 1.7 billion in August 1985. Following the end of the main holiday season, foreign travel showed a deficit which, at DM 2.8 billion, was over DM 1 billion smaller than a month earlier, but there was a swing on investment income account from a surplus of approximately DM 1 billion in August to a deficit of DM 0.4 billion in September.

The deficit on *transfer payments account*, by contrast, came to DM 1.3 billion and was thus only half as large as in August (DM 2.6 billion); this was almost entirely due to the above-mentioned large payments received from the EEC budget. While in August German net payments to the EEC amounted to DM 0.8 billion, in September the transfers between Germany and the European Communities resulted in net receipts totalling DM 0.4 billion.

Outflows in the field of *long-term capital transactions* in September, at DM 0.9 billion, were distinctly smaller than in the preceding month (DM 2.0 billion). About half of this decline in net capital exports was

12 attributable to the reversal in securities transactions with non-residents (including the acquisition of official borrowers' notes). In August DM 0.3 billion flowed out in this sector; in September just as large a sum was imported. In connection with the marked decline in the rate of the US dollar on the foreign exchange market in the second half of September, residents invested relatively little (DM 1.2 billion) in foreign currency bonds issued by non-residents. On the other hand, foreigners acquired DM 2.6 billion of German bonds; at the same time, however, they returned DM 0.9 billion of official borrowers' notes to Germany. In the remaining sectors of long-term capital transactions there were net outflows of funds; during the month under review DM 0.7 billion (net) was exported through direct investment and DM 0.3 billion flowed out from public authorities in the form of lending to developing countries. Long-term external lending by banks, in contrast, was nearly in equilibrium.

Statistically recorded *short-term capital transactions* led to exports of funds in the amount of DM 1.4 billion in September, whereas there had been sizeable net imports of funds in August (DM 4.1 billion). The banks received just on DM 2 billion from other countries, but at the same time German enterprises repaid just on DM 2 billion of financial credits raised abroad. In addition, there were official exports of short-term funds amounting to DM 1.1 billion, particularly through the clearing accounts maintained with the European Communities.

The *net external assets* of the Bundesbank, calculated at balance sheet rates, increased by DM 0.4 billion in September. In *October* the net external assets fell by DM 1.3 billion, mainly because of dollar sales on the foreign exchange market.

Enterprises' profitability and financing in 1984

Profitability

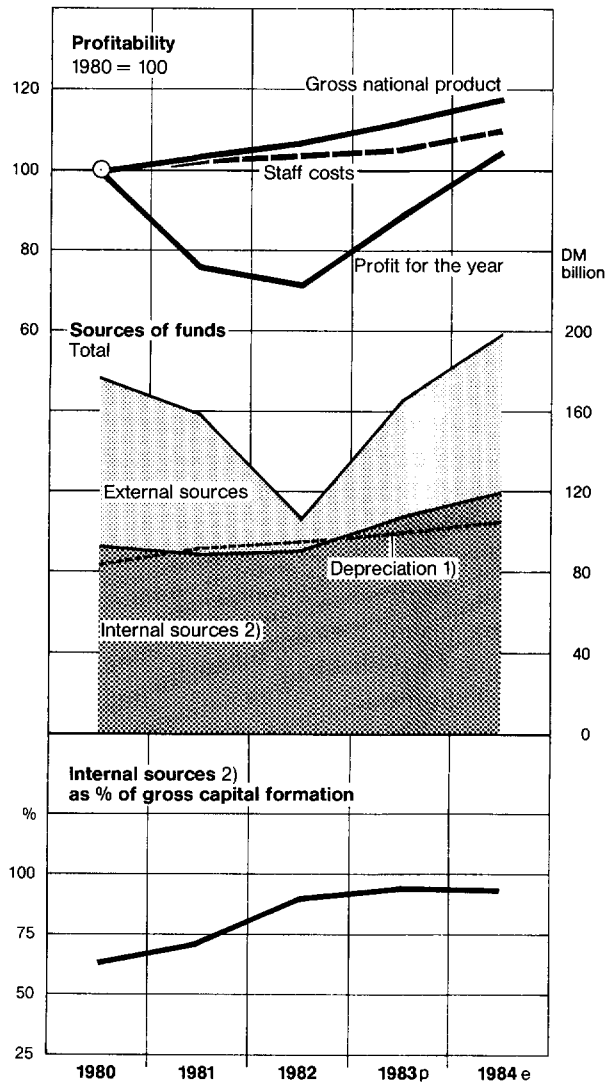

13

The earnings of enterprises in the producing sector and the distributive trades improved markedly overall in 1984 with intensifying business activity. Apparently, production and sales losses caused by the strike in spring 1984 were largely made good later in the year. On a first evaluation of the approximately 25,000 annual accounts available so far — about two-fifths of the balance sheet material to be expected for 1984 — *turnovers* in the enterprise sectors covered here went up last year by about 6%, after having risen by only 2½% each in 1983 and 1982. *Profits for the year*, at about DM 67 billion, were in fact a good sixth above the previous year's level. This is the first time that the 1980 level has been exceeded, in this case by DM 3.5 billion, after having shrunk to DM 46 billion (1982) in the interim. It is true that the earnings gap which arose in 1981-82 has thus largely been closed. However, on an overall comparison, enterprise earnings are far from having made up the ground they have lost since 1980; since 1980, earnings have risen only by 5½%, while the gross national product in 1984, calculated at current prices, was 18% higher than at the beginning of the decade. Staff costs, too, have risen more strongly than profits for the year since 1980, namely by 11% — in spite of the decline in employment registered well into 1984. Relative to turnover and total output (which also includes changes in stocks of own products and plant and machinery produced in-house), pre-tax profit for the year in 1984 was 4½% and after tax about 2%; the profit-turnover ratio has thus improved by half a percentage point, at any rate, against the low in enterprises' earnings in 1982. According to this calculation, too, enterprise earnings have thus reattained the level of 1980.¹ In earlier years, the profit-turnover ratios were, however, markedly higher; after tax, they had averaged about 2½% in the seventies and in the latter half of the sixties 3½%.

Admittedly, enterprise earnings show a very differentiated picture. While the number of annual accounts available for 1984 so far of all legal forms of enterprise does not yet suffice for a detailed cross-section analysis by economic sector and legal form, reference to the total of about 63,000 annual accounts for 1983 reveals that of the 22,660 incorporated enterprises submitting annual accounts to the Deutsche Bundesbank, 30% showed no profit for the year and 10% losses of more than 2% of total output. Only 30% of incorporated enterprises in 1983

¹ See "Enterprises' profitability, financial strength and liquidity" in Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 8, August 1985, p. 30.

had profits for the year of over 1 1/2% of total output. It has to be remembered here of course that for these enterprises corporation tax and property tax constitute operating costs and moreover management costs are contained in staff costs. In the case of partnerships and sole proprietorships, which show profit for the year before income and property taxes and where the work done by the partner or proprietor in managing the enterprises is reimbursed from the profit for the year, profit-turnover ratios for these reasons alone are generally higher. However, 30% of the 38,900 firms not organised as incorporated enterprises which presented 1983 annual accounts to the Bundesbank retained less than 1% of total output

(partnerships) as profit for the year or 1 1/2% (sole proprietorships). Of the partnerships included in this analysis, one-tenth showed losses of more than 2% of total output and of sole proprietorships 10% showed losses of more than 1% of total output. The results of this cross-section analysis cannot indeed be applied directly to all of the approximately 1.1 million enterprises covered in the turnover tax statistics of the sectors included here; however, they will probably accurately reflect the basic pattern of gradations by legal form and economic sector, which experience shows undergoes little change in the short run and which will thus probably have been valid for 1984 as well.²

Expenses on materials and auxiliary materials, which include energy costs, were a relatively heavy burden on enterprises' profit and loss accounts in 1984. What was decisive here, besides the additional real material input associated with the increase in business activity, was the higher cost of imported raw materials and primary products. Thus – and the appreciation of the dollar at the time also played a causal role here – import prices for raw materials and semi-finished products in 1984, calculated in Deutsche Mark, rose by almost 9%; for domestic basic goods, too, considerably – almost 4% – more had to be paid than in the year before, when basic goods of domestic and foreign origin had in fact become cheaper. In total, enterprises spent about 7% more in 1984 on work done at previous stages of production than in 1983. These expenses have thus risen more strongly than turnovers and total output, so that the *gross earnings margin*, i. e. the relation of gross earnings to turnover, fell slightly – to just on 36%.

The extra burdens caused by work done at previous stages of production were, however, more than balanced out by what was generally speaking a fairly moderate rise in other cost elements. It is true that *staff costs* in 1984 increased noticeably more than in the year before, namely by 4% after only 1 1/2% in 1983. This had firstly to do with the fact that the effect of the negotiated wage and salary rises on staff costs in 1984 were compensated to a much lesser degree than in the preceding year by personnel reductions and, secondly, the return from short-time working to normal working hours in many sectors of the economy meant that higher wage and salary payments had to be made. However, enterprises' staff costs in 1984 rose slightly less than proportionate to the expansion in turnover and less, too, than gross

² Overall figures of the cross-section analysis for 1983 are contained in the recently-published Deutsche Bundesbank Special Series No. 6 "Ratios from the annual accounts of enterprises in the Federal Republic of Germany for 1983" which interested parties may obtain free of charge from the Pressestelle (Press Office) of the Deutsche Bundesbank in Frankfurt am Main.

earnings amplified by neutral receipts which grew in 1984 by 5½% (after just on 2% in 1983). Staff costs had a share of 47½% in amplified gross earnings last year. This corresponds roughly to the situation obtaining in 1973 before the first oil price shock. In the interim its share had risen to about 49% in certain years (1975, 1977).

In 1984 enterprises had to spend about DM 52 billion on *interest paid on debts*, about DM 1.5 billion (or 3%) more than in the year before. This increase in interest paid was exclusively due to the expansion in interest-bearing debts. By contrast, the average interest rate which enterprises had to pay in their debt service fell slightly further last year. Enterprises obtained about DM 19 billion in *interest received* in 1984. According to the results of this first extrapolation it has risen much more strongly against the previous year than has interest paid, namely by DM 2.5 billion or 16½%. In this area, too, the growth of interest-bearing holdings was decisive. As will be discussed in greater detail below, considerable amounts of the strongly increased cash flow were apparently invested at interest last year prior to investment decisions being implemented. Offsetting interest paid and interest received, the *net interest burden* of enterprises last year fell by DM 1 billion to DM 33 billion. The share taken by the net interest burden in enterprises' gross earnings thus continued to fall slightly to just on 3%. The net interest burden of enterprises in 1984 was thus barely 5½% of simultaneous expenditure on wages, salaries and fringe benefits.

By contrast, enterprises' tax burden rose strongly last year. In total, their *tax expenses* grew by 6% (to DM 84.5 billion), and thus to about the same extent as total output. The former also includes excise taxes (such as mineral oil tax, tobacco tax and spirits taxes) which the financial statistics show increased in 1984 in total by only about 2½%. The other taxes shown in enterprises' profit and loss accounts will thus probably have gone up much more strongly than the tax item as a whole. The tax burden on enterprises as a percentage of earnings thus clearly reacted to the improvement in the latter, after tax expenses in 1983 rose only fairly weakly, a fact caused inter alia by statutory relief measures in the area of trade tax. "*Other*" expenses, which include among other things expenses on rents and leases, advertising, travel, and research costs, went up fairly strongly last year; at DM 371.5 billion, they were about 6% above the previous year's level. Higher expenses under leasing contracts will not have been the least of factors to have played a role here. Although capital spending on leasing of plant and equipment, according to Ifo Institute data, was for the first time lower in 1984 than in the preceding year (- 2½%), total expenses on rented plant and equipment will have increased, even if at a markedly slower pace. From an overall economic point of

view, leasing costs can be broken down into interest costs, depreciation, and profits (or losses respectively) of the leasing enterprises; however, the balance sheet data do not permit analysis of this type.

In 1984 enterprises spent DM 105.5 billion on *depreciation of fixed assets*. In the previous year, spending here was already fairly high, and in 1984 it was put up again markedly (by 6%). Apparently, improved earnings allowed many enterprises to make very comprehensive use of existing depreciation possibilities. The strong increase in depreciation of fixed assets probably also has to do with the fact that the pace of capital stock modernisation, which slowed down considerably in the 1981-82 economic downturn, has speeded up again in the last two years. This has meant that increasing amounts of older plant and equipment have become economically obsolete and have finally been written off.

By contrast, enterprises did not need to spend the same large amounts on *other depreciation*, affecting mainly claims and financial assets, as they did in the previous year. At DM 15 billion (as opposed to a good DM 16 billion in 1983), depreciation of this type was, however, still fairly significant. Relative to the annual average of claims, it accounted for 2½% in 1984 as against just on 3% the year previously, but 2% in the years 1979-80. The drop in this percentage last year will without doubt primarily have been a consequence of what was in general a more favourable earnings situation and of the associated improvement of enterprise liquidity. In 1983 and in the first half of 1984, at any rate, the number of enterprise insolvencies fell markedly in comparison to the foregoing year. While this trend has turned around again since then and insolvency figures have been increasing recently, this shows that in spite of the improvement in economic conditions now apparent the situation is still very much fraught with risk. There are two major reasons here: the first is the relatively bad situation in the construction industry. The second is that in the last two years, in particular, many new enterprises have been set up, and experience shows that many of them do not survive the difficult start-up phase.

Financing

With the business expansion the *inflow of financial resources* increased strongly at enterprises last year. At just on DM 200 billion, funds on this first extrapolation were DM 33.5 billion (or about a fifth)

above the level of the previous year, in which enterprises had also expanded their use of funds strongly. In additional *internal resources* alone, enterprises had about DM 120 billion at their disposal in 1984, DM 12 billion more than in the year before. At DM 105.5 billion, the most important source of these funds was as usual depreciation, but there was also considerably more additional capital. At DM 10.5 billion, it was about DM 4 billion higher in 1984 than in the previous year. At the same time, total transfers to reserves more than doubled, at DM 4 billion. The total increase in own funds — DM 14.5 billion — thus reached a level that has been exceeded only in a couple of years (1971 and 1976) since 1965, when the Bank began evaluating balance sheets. Firstly, the relatively high increase in own funds was doubtless an immediate consequence of improved earnings, which allow enterprises more financial room for manoeuvre. However, it is probably more important that as a further consequence of the improvement in earnings, many were apparently considering it worth their while again to place funds with enterprises as risk capital or to keep them there instead of investing them in interest-bearing assets on the credit and capital markets. Admittedly, enterprises made only fairly modest use in 1984 of the possibility of mobilising risk capital by issuing shares on the capital market, in spite of the rising share price trend at the time. The market price of shares issued by domestic issuers in 1984 was, at any rate, at a good DM 6 billion, markedly lower than in the previous year (DM 7 billion).

In 1984, enterprises had even more recourse to *external sources* than to internal ones. At DM 52.5 billion, their *debts* rose last year by a good DM 22 billion more than in 1983. In additional short-term credits alone, enterprises took up DM 45 billion on balance, against only DM 17 billion in the previous year. What played a role here was that, with the business expansion and, as will be shown below, relatively high stockbuilding, borrowing from suppliers also increased considerably.

Last year, at DM 7.5 billion, enterprises took up considerably less new long-term debt than in the previous year (DM 13.5 billion). Firstly, not a few companies were apparently hesitating to take up long-term loans because they were reckoning with falling interest rates on the credit markets. Secondly, some long-term financing was probably postponed because the completion of investment projects which had been started was delayed as a result of the

labour dispute in the metal-working industry in spring 1984. Enterprises supplied about DM 27 billion to *provisions* in 1984, this being almost as much as in the preceding year. This method of long-term enterprise financing from cash flow thus retained in 1984 the significance which it has gained in the last few years. The fact that increases in provisions did not rise further has to do not least with a certain caution on the part of enterprises as to the further extension of company old age pension schemes. The existing adjustment requirements under the Company Pension Act and the raising of the calculatory interest rate in the Budget Structure Act of 1981 are probably still playing a role.

Of their total inflow of funds of, as mentioned, just on DM 200 billion, enterprises used nearly two-thirds, about DM 127 billion, in 1984 for investment in plant and stocks. Their *gross capital expenditure* was thus DM 13.5 billion or 12% up on the previous year. What was decisive here was that enterprises were now refilling *stocks* which they had let run down somewhat in 1982 and 1983. This was because both their sales outlook and their liquidity situation had improved markedly. On this first extrapolation, enterprises used about DM 20 billion in 1984 for stock-building. Their *fixed capital formation*, however, was DM 107 billion in 1984 and thus about DM 8 billion below the high level of the previous year, in which large quantities of machinery and equipment ordered towards the end of 1982 under the investment grant scheme were delivered. In addition, many firms started investment projects planned for 1984 only in the second half of the year, after the labour dispute in the metal-working industry had been concluded. Not a few of these projects will show up only in the 1985 accounts because of the relatively long production time for many machinery and equipment items.

In 1984 about 94 1/2% of total gross capital expenditure was financed with internal resources. This percentage fell against the previous year by about half a percentage point; looked at over the longer-term, it is admittedly continuing to run at a fairly high level; in the second half of the seventies, the self-financing ratio had been 81% and on an average for the years 1970-74 in fact only 68%. Even if when comparing these data over time several more structural trends are taken into consideration — e.g. the long-term rise in the importance of plant leasing, which requires the enterprises covered here to spend less on capital formation and to make higher liquidity provision, as well as increased investment risks deriving from very rapid technical progress — enterprises at present are probably fairly well equipped for very strong expansion in capital formation from the self-financing point of view.

Enterprises' *financial assets* rose very strongly in 1984 — by DM 72.5 billion — after already having increased sharply in the year before (by DM 52.5 billion). What was vital here was the rise in short-term claims, which nearly doubled, at just on DM 50 billion, over the previous year. One of the main contributing factors here was that higher sales financing was associated with the expansion in turnover, and in addition some firms were probably also strengthening their position on the markets by more gener-

ous financing terms. Enterprises' liquid reserves in 1984, in contrast to claims, were added to markedly less than in the previous year. The increase in cash, at DM 4.5 billion, was only slightly less than half of the previous year's amount (DM 10.5 billion); enterprises' securities purchases, at about DM 8 billion, were indeed fairly important on a longer-term comparison, but remained DM 1.5 billion below the level of 1983. About DM 7.5 billion, markedly more than in the year before, was spent on participations in other enterprises in 1984 on the first extrapolation now available (which admittedly for this item, in particular, is not very certain).

Balance sheet structure and important ratios

At the end of 1984 enterprises in the producing sector and the distributive trades showed a *balance sheet total* (adjusted by accumulated depreciation reserves and adjustments to capital accounts) of DM 1,850 billion. Compared with the preceding year it rose by about 5 1/2%. Enterprises' liabilities and assets thus went up a little faster than in 1983 (+ 4%) but did not quite keep up with the simultaneous expansion in sales. The above-mentioned delay in investment projects, brought about by the industrial conflict in the metal-working industry, probably played a contributing role, as a consequence of which borrowing for these projects will have been postponed in some cases. In enterprises' *assets structure* this was revealed in the fact that the share of fixed assets in the balance sheet total fell by a good percentage point in 1984 compared with the previous year, in which fixed assets had grown especially strongly under the influence of the investment grant arrangement, whereas the share of financial assets increased by about the same amount. Short-term claims alone in 1984 accounted for 33 1/2% of the total assets shown in the balance sheets, as against 32 1/2% a year before. As in the previous year, stocks accounted for 23 1/2% of the balance sheet total in 1984.

The *liabilities structure* last year did not change significantly. As in the year before, capital and reserves accounted for 18% of total funds used. In spite of improved earnings and the associated higher inflow of risk capital, the figures show that nothing has changed in the unsatisfactory level of own funds, but when the special factors mentioned cease to apply a slight improvement will probably occur in 1985 in this respect. However, differences by sector and legal form are still large. The above-

mentioned cross-section investigation of the 1983 annual accounts available to the Deutsche Bundesbank reveals that 30% of the incorporated enterprises and partnerships which submitted balance

20 sheets in 1983 had an own funds ratio of less than 5%, with an overall average of 18%; 30% of sole proprietorships showed in fact a negative own funds ratio, when the losses carried forward from previous years (as well as some other adjustment items) are offset against the figures for capital and reserves. As may be seen from the table on p. 16, this obtains for no fewer than 14 of the 19 sectors shown there. It should naturally be remembered here that in the case of many sole proprietorships and partnerships, there are the private assets of the partners or proprietors in addition to the operating assets shown on the balance sheet. Mainly for tax reasons, the former are not shown as operating assets on the balance sheet but are also liable for the firms' liabilities.³ The 30% of firms best supplied with capital and reserves showed own funds ratios in 1983 of over 18½% for incorporated enterprises and more than 19% for partnerships. Of sole proprietorships, 30% had own funds ratios of more than 24%; here, incidentally, the dispersion of own funds ratios is considerably wider than for enterprises of other legal forms. For enterprises of all legal forms, provision with own funds increases with the size of the enterprise as measured by turnover (see the table on p. 19).

The *structure of enterprise financing* improved considerably in 1984. As a result of the relatively small rise in fixed assets in comparison to the balance sheet total and own funds, the coverage of fixed assets by own funds, i.e. the "*horizontal own funds ratio*", rose appreciably — from 61½% in 1983 to 64% last year. The relation of total *long-term liabilities*, which apart from own funds also include long-term debts and pension provisions, to long-term assets tied up in the enterprises (fixed assets and participations) has improved markedly. What indicates a considerable rise in self-financing power is the fact that enterprises' *internal resources* (profit for the year, depreciation of fixed assets, increases in provisions) went up strongly. In 1984 they were 14% of borrowed funds (debts and provisions less cash), 2 percentage points more than in 1981, when this ratio, at 12%, had fallen to its lowest point so far. In the seventies, however, it had been an average of a good 16% and in the second half of the sixties over 20%. In spite of the improvement of their financing situation in the two foregoing years, enterprises have thus not been able to reattain their previous level of self-financing. Their liquidity has, however, normalised further in the interim. Their *liquid funds* (cash, short-term claims and securities) at the end of last year corresponded to about 88% of short-term debts, as against 85% in the previous year and

³ The own funds ratio level, as derived from the extrapolation (1983 and 1984, about 18%), is from this point of view possibly somewhat lower than would correspond to the economic facts. This does not

only a good 80% on an average for 1980 to 1982. The liquidity ratio was thus no less than on an average in the seventies.

In total, annual accounts for 1984 show that enterprises, from the financing angle, are fairly well equipped for further business expansion and the plant modernisation and expansion investments necessary for this. With the sustained improvement in earnings, the readiness to take the risk of new capital formation has apparently risen, even if this did not yet show up in the annual accounts for 1984. Investment planning by industry recently made public with the Ifo Institute reckoning on about 16% higher investment spending in 1985 and 10% higher expenditure in 1986, points at any rate in the direction of greater readiness to take risks.

affect, however, the *trend* in this ratio, which by 1984 had fallen to 60% of its level in 1965, the year when balance sheets were evaluated for the first time.

30 Recent trends in securities transactions with foreign countries

The Federal Republic of Germany's securities transactions with foreign countries have notably intensified in the last four years. The expansion of securities turnover, i. e. of purchases and sales¹ of securities between residents and non-residents, started as early as 1982 and has encompassed virtually all types of paper, of both domestic and foreign issuers. So far in the present year, for instance, total purchases and sales of foreign bonds and shares recorded in the balance of payments have been 60% larger than they were a year before; over the whole of 1985 they are likely to reach about DM 390 billion and thus be 4½ times as large as in 1981 (DM 86 billion). The growth of international turnover in domestic securities and borrowers' notes issued by German official agencies was no less considerable:² here the total turnover shown in the balance of payments to date this year is almost 80% up on the 1984 figure; in 1985 it will probably amount to approximately DM 310 billion and thus likewise be 4½ times as much as in 1981 (DM 67 billion). This marked dynamism on both sides of securities transactions far exceeded the growth of the other transactions in the field of long-term capital movements – which growth was also remarkable, taken by itself – so that the share of securities transactions in total turnover in long-term capital movements has risen considerably (to about three-quarters) during the last four years. Altogether, in 1985 frontier-crossing transactions in long-term (documented and undocumented) claims will probably rise to some DM 425 billion on the side of inflows of funds to Germany, and to some DM 430 billion on the side of outflows; thus these transactions are roughly 2½ times as large as in 1981 and 14 times as large as in 1970.

The advance of the security relative to other forms of financing is however an international phenomenon. Major reasons for it were the debt crisis and the banking supervisory authorities' stricter requirements for (undocumented) bank loans. If non-residents met their financial needs through securities issues rather than through bank credits, this was also in the interest of the banks. For one thing, issuing business enables the banks to obtain additional receipts without inflating their balance sheet (which sometimes involves considerable risks because sales guarantees are often assumed vis-à-vis the issuer in the case of revolving placements). For another, the strong expansion of securities business

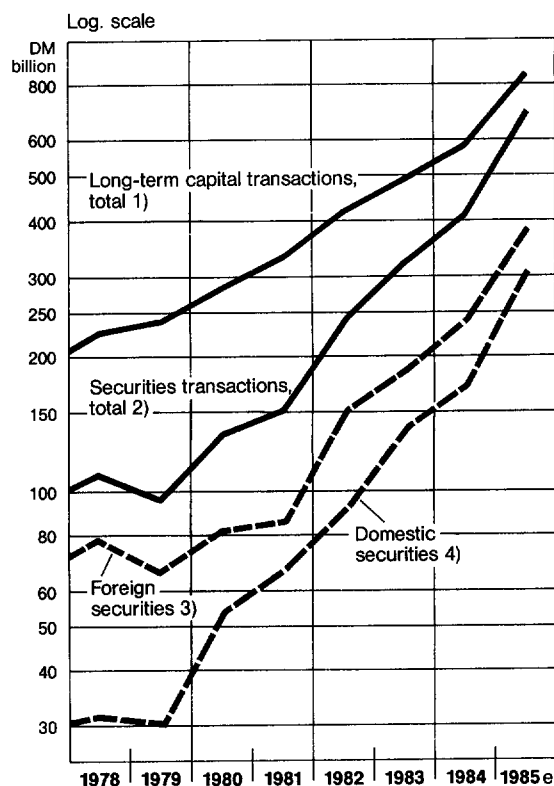

¹ Redemptions of foreign securities owned by residents and of domestic securities owned by non-residents are recorded under sales.

² Here and in the rest of this article, transactions in official borrowers' notes are counted as part of securities transactions. This broader definition of securities transactions is advisable in view of the close substitutive ties between borrowers' notes and public bonds following the abolition of coupon tax. By contrast, transactions in private borrowers' notes (issued by German banks and enterprises), which have decreased in significance in capital transactions in the last few years, are not taken into account, as the characteristics of direct lending are more pronounced in the case of these securities.

makes it possible for the banks, in the context of active portfolio management, to better match interest, liquidity and currency risks on the assets and liabilities sides of the balance sheet. In addition, the acquisition of securities is attractive to domestic banks inasmuch as claims in the form of marketable securities are disregarded when determining the "own funds/assets ratio" (Banking Act Principle I). This policy-motivated behaviour by the banks has been supported by recent shifts in the global pattern of current accounts and thus of international financial flows: the large current account imbalances existing until 1981 between the OPEC countries on the one hand and the industrial and developing countries on the other have given way to imbalances between the industrial countries, especially between the deficit country United States and a number of other countries which – like Japan and the Federal Republic of Germany – are running surpluses on current account. For the United States, a country with highly developed financial markets offering a wide variety of first-class securities, it is easier to meet its external financial requirements by issuing securities than it is for other countries, especially since investors in today's surplus countries seem to be more willing to buy long-term securities than the OPEC countries used to be. The present current account pattern therefore fosters securitisation in international financing; but the great flexibility of the financial markets may also be facilitating in this way the continuation of current account imbalances between the major industrial countries.

In the national financial markets the use of the security was fostered primarily by investors' growing interest, given the rise in financial assets, in fungible and high-yielding investment forms, and it benefited further from the spread of financial innovation. For Germany's securities transactions, in particular, several measures were significant which have recently been taken for the sake of making the German capital market more attractive internationally and strengthening the Deutsche Mark's competitive position among the international investment currencies. Initially, coupon tax on foreigners' interest income from domestic bonds was de facto abolished in October 1984. In addition, the regulation of access to the foreign issues market in Germany was also abolished as from May 1985; until then it had been effected on a private basis, while officially tolerated and observed. Since that date, foreign-owned banks domiciled in this country have likewise been able to act as lead managers in this

business. Moreover, the Bundesbank dropped its objections (which the banks had known and respected) to innovative types of securities, such as, in particular, floating-rate notes and so-called zero-coupon bonds.³ Since the last (and fairly insignificant) restrictions on capital imports were lifted as long ago as 1981, the German capital market is now fully integrated in the international markets. What still remains, however, is the disadvantage of securities transfer tax, which makes securities transactions between banks and non-banks in Germany 1 to 2½‰ more expensive, depending on the type of security (in contrast to other financial centres, where such taxes do not exist). In other countries, too, some obstacles which had hindered the free flow of portfolio capital have been removed in the last few years; of special significance here was the abolition of the US withholding tax on foreign investors' interest income in mid-1984.

³ See "Freedom of Germany's capital transactions with foreign countries" in Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 7, July 1985.

Notwithstanding the various factors encouraging the expansion of international securities transactions, financing through bond issues could hardly have gathered such pace had not the overall economic environment created favourable conditions for a thriving bond market. Success in curbing inflation in industrial countries with internationally used currencies and historically high real interest rates, which raised hopes of further falls in nominal interest rates (and thus price gains for fixed interest securities), have made bonds an attractive form of investment in the past few years and strengthened the propensity to accumulate long-term financial assets. Moreover, since 1982 international investors have shown greater interest in Deutsche Mark assets, as the return to surplus on the German current account and the general improvement in underlying economic conditions in Germany have influenced longer-term exchange rate expectations to the advantage of the Deutsche Mark.

In the last few years the integration of the German capital market in international markets — such as results from securities transactions between resi-

dents and non-residents — has been accompanied by the German long-term interest rate being linked more and more closely to the international interest rate trend, which is largely determined by dollar rates. At a given level of dollar rates and with given exchange rate expectations, the downward margin of fluctuation of the Deutsche Mark rate was determined by “arbitrage” by German and foreign investors (or debtors) between the two capital markets, which was possible at any time. Indeed, recent developments in the domestic capital market go to show that the German long-term interest rate can deviate from the (higher) international interest rate level only to the extent that the interest rate disadvantage of the Deutsche Mark is offset by corresponding expectations of an appreciation of the Deutsche Mark. If the expectations of an appreciation are not stable enough at the given exchange rate level, the international arbitrage link tends to result in an adjustment of the Deutsche Mark interest rate level or a depreciation of the Deutsche Mark or in an — unforeseeable — combination of the two.

German investment in foreign securities

In virtually every month of the last few years, domestic investors have bought more foreign securities than have simultaneously been sold or redeemed; in net terms there has thus been an almost continuous outflow of capital in this sector of securities transactions. True, these capital exports too were subject to substantial fluctuations — not least as a result of the enormous expansion of turnover — but basically the amounts flowing into foreign securities have tended to grow steadily in recent years regardless of the varying attractiveness of these securities to residents. In the third quarter of 1985, for instance, net purchases of foreign bonds and shares climbed to the record figure of DM 9.25 billion; this was more than twice the quarterly average of last year and six times that of 1981. Relative to total turnover in foreign securities (about DM 90 billion), however, actual capital exports in the third quarter of 1985 came to no more than one-tenth. Much the greatest part of the transactions in foreign securities is of course to be ascribed to the international securities dealings of banks and not to domestic ultimate investors.⁴

Within total capital exports through purchases of foreign securities, transactions in *foreign currency bonds* issued by foreign borrowers have been by far the most expansionary component in recent years. During the first three quarters of 1985 turnover in

⁴ Moreover, turnover in foreign securities effected by German banks for the account of foreign investors is statistically included in transactions by residents. On the other hand, turnover in these securities between residents, e.g. between German banks and German private investors, is not included in securities transactions.

these securities (extrapolated to yield an annual rate) was about seven times as large as in 1981. At the same time, more funds were exported through these securities, at DM 15.6 billion net, than in the whole of 1984 (DM 14 billion); in 1981 the outflow had amounted to as little as DM 4 billion. This reflects, firstly, the growth of activity in the international bond markets. The German banks participate in this expansion in keeping with their position in issuing business. In the first half of 1985, for instance, they were represented in the issuing syndicates of 434 foreign currency bond issues, compared with fewer than 300 issues in the whole of 1981. Secondly, German private and institutional investors' rising demand for high-yielding foreign currency bonds also contributed to this development; the placement potential for foreign currency paper in Germany that emerged thereby was not least a major prerequisite for the issue of foreign currency bonds lead managed by German banks; such issues have reached a notable volume in the meantime (see the table on German banks' participation in international issuing business on page 35).

The participation of German banks in international issuing business and securities trading may indeed lead to short-term fluctuations in capital exports (for instance, if issues underwritten cannot be placed for the time being owing to a deterioration in the market climate). But such developments do not have a lasting effect on exchange rates as the banks do their utmost to avoid "open positions", and hence exchange rate risks, by hedging or by taking up foreign currency funds. The elimination of exchange rate risks implies, however, that in general the banks cannot profit from the mostly higher interest rates on foreign currency bonds, since the interest rate advantage is offset by the cost of forward exchange cover. In the last few years, therefore, the net acquisition of foreign currency bonds has been accounted for almost completely by investor groups outside the banking sector who, if it appears advantageous to them, can take unlimited exchange rate risks, viz. private investors, investment funds and enterprises with ample liquidity reserves.

In the context of the total amount raised in the domestic capital market, net purchases of foreign currency bonds issued by non-residents — at no less than DM 45 billion since the beginning of 1982 — have increased considerably in significance in the past few years. During the first three quarters of 1985 about 40% of the total bond purchases of domestic

non-banks (DM 36 billion) was accounted for by foreign currency bonds issued by non-residents; in mid-1985 investors actually "exchanged" German bonds for foreign currency bonds, and the latter bonds made up 18% of total bond sales in the domestic capital market (DM 80 billion). As late as 1983, for instance, the respective shares had been no more than 10% and 5%. At the present time, however, and despite the marked trend towards diversification of bond portfolios, hardly more than 10% (on average) of the total bond holdings of domestic non-banks (estimated at DM 550 billion) appears to consist of foreign currency bonds issued by non-residents.

A key stimulus to the acquisition of foreign currency bonds was provided by the renaissance of the dollar as an international investment currency as from 1980. Not only have dollar-denominated bonds regularly borne higher interest than Deutsche Mark bonds throughout the last few years (with the inter-

34 est rate advantage rarely falling below 3% and sometimes exceeding 5%), the dollar also appreciated almost continuously until the spring of 1985. Because of the sustained strength of the dollar, the higher yields on dollar securities appeared to investors not to be accompanied by any corresponding exchange rate risks for quite a long time. With the dollar rate rising, however, the growing exchange rate risk seemingly prompted German investors to step up their purchases of other high-interest-bearing foreign currency bonds, after their interest had originally been focused on dollar bonds. (Only incomplete statistics are currently available on the currency structure of net purchases of foreign currency bonds, but some inferences on this point can be drawn from the regional pattern of issuers.) Especially securities in Scandinavian currencies were considered to be an alternative to bonds denominated in US (or Canadian) dollars, since the exchange rate risk there was thought easier to assess. However, the supply of these securities – unlike that of dollar bonds – remained relatively limited, particularly as Norway and Finland soon began to take measures to ward off the associated imports of capital. Exchange rate considerations were obviously also responsible for the not insignificant sales of ECU bonds of foreign issuers, which German investors can purchase in unlimited amounts. As the Deutsche Mark's share in the ECU basket is 32% and a further 42% of the basket consists of foreign currencies which participate in the EMS exchange rate mechanism with narrow margins of fluctuation, the exchange rate risk seemed to be more predictable here – and accordingly the interest rate difference vis-à-vis Deutsche Mark bonds was relatively small. In general, private purchases of foreign currency bonds are apparently primarily motivated by the wish to obtain higher interest than in the Deutsche Mark field, but it remains an open question whether investors are always fully aware of the exchange rate risks or whether they are not in part subject to a "coupon illusion".

During the last four years sales and purchases of *foreign Deutsche Mark bonds* between residents and non-residents have on the whole expanded much more slowly than the transactions in foreign currency bonds; since 1981 the frontier-crossing turnover in these securities has risen to only 2 1/2 times the previous level, compared with 7 times for foreign currency bonds. This primarily seems to reflect a fall from just over 8% in 1983 to latterly 5% in the Deutsche Mark's share in international bond issues

(in the form of Euro-bonds and traditional foreign bonds). The volume issued has grown fairly sharply, it is true, but the expansion of the overall market has been stronger, a contributory factor being, however, that the appreciation of the dollar has depressed the above-mentioned Deutsche Mark share in arithmetical terms. Another reason for the overall decline in momentum is probably that the secondary market in foreign Deutsche Mark bonds is less active than that in foreign currency bonds, particularly in the case of bonds with variable interest rates (floating-rate notes). Despite the rise in the volume issued, capital exports in the shape of residents' net purchases of foreign Deutsche Mark bonds remained at a very low level from the beginning of 1982 to October 1984; in all, no more than DM 1.1 billion flowed out during these 2 3/4 years while total net sales of

foreign Deutsche Mark bonds came to DM 11.6 billion.⁵

The de facto abolition of German coupon tax (the 25% withholding tax on non-residents' interest income from domestic bonds) in October 1984 radically changed the underlying conditions in the market for foreign Deutsche Mark bonds. Because of this measure, these securities lost their "comparative advantage", for non-residents, of being exempt from coupon tax, as compared with domestic bonds, which had been subject to coupon tax until that time. Since then the yields on prime foreign Deutsche Mark bonds, which – prior to the abolition – had sometimes been distinctly lower than those in the domestic market, have not only adjusted themselves to the domestic level but have actually exceeded it in many cases, thus making these bonds more attractive to residents. (By contrast, non-residents have had greater recourse to the domestic market, where they have received the interest without any deductions.) As a result, capital exports through the buying of foreign Deutsche Mark bonds went up, namely to DM 6.5 billion in the twelve months from October 1984 to September 1985; with simultaneous net issues totalling DM 16.1 billion, this represented a "domestic placement" of just over 40%.

The opening of the issue market to the German subsidiaries of foreign banks and the authorisation since May 1985 of new types of bonds already current in the international market have also created a new situation in the foreign Deutsche Mark bond market. Since that time the volume of issues has expanded strongly; foreign bond issues amounting to DM 7.5 billion have been announced for November. Between May and October 1985 DM 14.5 billion of foreign Deutsche Mark bonds were issued in all; DM 9.8 billion (or 67%) of them consisted of fixed interest securities (including convertible and option bonds), DM 4.3 billion (or 29%) of variable interest paper and DM 0.5 billion (or just under 4%) of zero-coupon bonds. The rise in issuing activity did not burden the German balance of payments or the German capital market, however, as the major part of the larger supply – especially of bonds with variable interest rates – was seemingly placed abroad.

Until 1982, transactions in foreign *shares and investment fund units* (excluding the acquisition of participations) played a fairly subordinate role in securities dealings; turnover lagged far behind that in bonds, and net purchases by residents were negligible. But

⁵ The relatively low level of capital exports also owes something to the fact that in 1982-83 the US Treasury redeemed a total of DM 4.0 billion in medium-term notes (so-called Carter notes) which had been placed in the German capital market in 1979-80.

in the course of the economic recovery in the industrial countries and the bullish spell which started in the US share market in the autumn of 1982, and which was followed by other major foreign stock exchanges, frontier-crossing share transactions distinctly gathered pace too. For instance, turnover in foreign shares doubled between the second half of 1982 and the first half of 1983, and at the same time residents invested the record amount of DM 3.3 billion net in foreign shares, especially US shares.⁶ Since then, depending on the changes in tone on the stock exchanges inside and outside Germany, capital exports have developed rather inconsistently; in some cases residents have even sold foreign shares on balance, no doubt mainly because of favourable trends on the stock exchanges, attractive

⁶ As share transactions can be recorded in the balance of payments only at current prices, fluctuations in stock exchange quotations and exchange rates are reflected in full in the transaction values or their balances. Deviations are therefore possible between the balance of payments and other accounts containing share transactions at nominal or balance sheet values.

36 new securities issues in Germany and the exchange rate risks involved. Altogether, between 1982 and the third quarter of 1985 German investors purchased DM 5.5 billion of foreign shares and investment fund units. In the past few years investment in foreign shares seems to have been determined more by short-term considerations than have been purchases of foreign currency bonds. (As mentioned before, the acquisition of foreign shares for participation purposes, which came to just under DM 13 billion, is disregarded in this context.)

Given the statistics available, the *regional pattern* of transactions in foreign securities can only be ascertained with respect to the issuers' countries of domicile, which does not necessarily reflect the actual flow of funds. This is because, say, international financing companies normally channel funds raised through bond issues into other countries. The statistics suggest that the industrial countries play a predominant role: in the first half of 1985, for example, issues by these countries accounted for more than 90% of residents' net purchases of foreign securities. Where there were any securities transactions by "developing countries" at all, they mainly involved securities issued by financing companies of international enterprises and banks which are domiciled in offshore centres (such as the Netherlands Antilles) and primarily act as "turntables" for capital. With a few exceptions, the more advanced developing countries, which in earlier years also raised funds through the securities markets, have had no access to these markets since the debt crisis of 1982. In the group of industrial countries, the United States has been by far the most important issuing country in the last few years owing to the size of the US financial markets, the quality of the securities traded there and the attractiveness of the dollar as an investment currency. Of the regionally very widely spread capital exports through net purchases of securities of industrial countries — totalling DM 37.5 billion in 1982-84 — just under one-third (DM 11.2 billion) was made up of US securities, i.e. exclusively foreign currency bonds; in other words, presumably dollar paper.⁷ Significantly, however, in the first half of 1985, when the dollar rate exceeded its peak, sales of US securities were larger than simultaneous purchases, so that capital flowed back into Germany on balance. By contrast, since mid-1984 residents have stepped up their purchases of, for instance, Danish, Norwegian and Finnish foreign currency bonds, and latterly those of British and Australian paper as well. Such shifts in the regional pattern

⁷ This balance cannot be equated with a corresponding inflow of funds to the United States, as US securities may also come from the portfolios of residents of other countries.

point to an increasing diversification of residents' investment in foreign currency bonds, with the attractiveness of the nominal interest rate not infrequently being rated higher by investors than the exchange rate risk involved. At any rate, it is to be assumed that these securities are to a very large extent denominated in the respective national currency.

During the last few years the regional pattern of transactions in foreign currency bonds has been strongly affected by the ruling currency preferences of domestic investors. By contrast, the regional pattern of capital exports through foreign Deutsche Mark bonds has been determined more by the new issues and redemptions of these securities, about 25 to 30% of which (on average) is estimated to be held in residents' portfolios. With foreign countries' indebtedness in Deutsche Mark rising, there were thus corresponding capital outflows from Germany, especially through the acquisition of Deutsche Mark bonds by EEC organisations (including the European Investment Bank) and international organisations (particularly the World Bank) as the most important "regular issuers" of foreign Deutsche Mark bonds. Between end-1981 and mid-1985 residents'

total net purchases of securities issued by such borrowers came to DM 3.6 billion, as against net sales totalling DM 12 billion. Further data on the regional pattern are given in the tables of the appendix accompanying this article.

Foreign investment in German securities

Since 1982 Germany's capital imports through non-residents' purchases of German securities (and official borrowers' notes) — as well as the corresponding capital exports — have been characterised by a marked expansion of turnover and of the net purchases of domestic securities. This has been mainly due to the development of external transactions in *German bonds*. In 1980-81 foreign investors showed little interest in Deutsche Mark bonds in view of Germany's large current account deficit, the weakness of the Deutsche Mark and adverse domestic economic developments. But in the second half of 1982 purchases of German public bonds picked up, apparently in response to the more favourable economic and financial outlook in Germany, and for the first time in a long while foreign funds flowed into Germany in this way. During 1983 net purchases of domestic bonds increased further; by March 1984 a total of DM 18.5 billion had poured in. This influx came to an abrupt halt however in the second quarter of 1984: against the background of labour disputes in Germany, the renewed rise in the dollar and a growing interest rate advantage of dollar assets, the demand for Deutsche Mark assets dried up almost completely for several months. This situation changed when coupon tax was abolished de facto in October 1984, which enabled non-residents to buy in the German bond market on the same terms as residents. From October 1984 onwards, encouraged by expectations of falling Deutsche Mark yields (and thus of price gains for bonds) substantial capital imports through purchases of German bonds started, and reached the record figure of DM 31 billion (just on three-quarters of which consisted of public bonds) in the subsequent twelve months.

As a result, foreign investors have now become the most important market factor in the German bond market. In the first nine months of 1985, more than one-third of the total net sales of German bonds (DM 60 billion) was taken up on balance by foreign buyers, whose purchases thus exceeded those of both domestic banks and domestic non-banks. As recently as 1983 the share of non-residents had come to no more than 12%, and in the preceding

years it had been utterly insignificant. In the market for public bonds, where DM 32 billion of securities were placed between January and September 1985, non-residents' net purchases, at DM 19 billion, accounted for almost 60% of the total.

Non-residents' conspicuously large share of the total amount raised proves that the German bond market is integrated in the international markets. At the same time, this integration has made the German capital market dependent to an unprecedented extent on external factors such as exchange rate movements and interest rate trends abroad — particularly in the United States. What makes this external influence especially powerful is the fact that foreign investors are guided more strongly than domestic investor groups by shorter-term interest rate and exchange rate prospects.

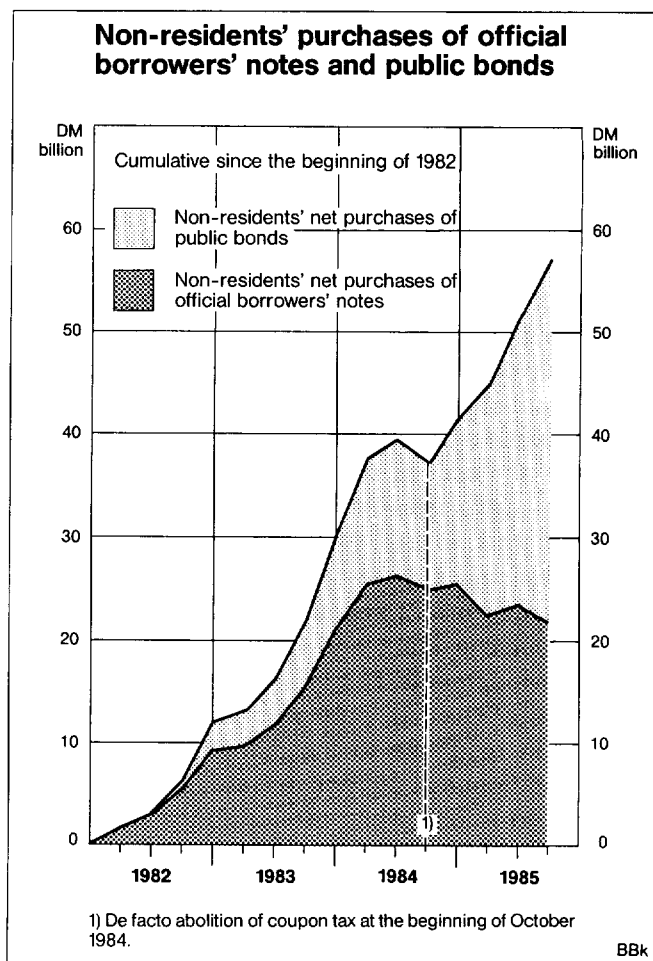

Inversely to public bonds, since the abolition of coupon tax *official borrowers' notes* have lost much of

38 their significance as instruments of capital importation, as non-residents prefer public bonds — for which there is always a receptive market — to borrowers' notes, whose fungibility is limited. Public borrowers have adjusted themselves to this changed pattern of demand by expanding financing through bond issues to the detriment of financing through borrowers' notes. In the first nine months of 1985 DM 3.7 billion more borrowers' notes of German public authorities were returned (or redeemed) by non-residents than were simultaneously purchased; in other words, funds to that amount flowed out of Germany.⁸

Just like foreign investment in German bonds, transactions in *German shares* (excluding the acquisition of participations) and *investment fund units* have been marked by considerable momentum of late. The bullish mood in the domestic share market (with an average price rise of 40% during the first nine months of 1985) was closely associated with the steep rise in non-residents' net purchases of domestic shares. At DM 8.3 billion in the first nine months of this year, these were more than twice as large as in the whole of 1984. This is all the more noteworthy as domestic investors reduced their domestic share holdings on balance (calculated at current market value) by DM 2.6 billion during the same period. In arithmetical terms, the inflow of funds was even somewhat larger than the market value of new issues of listed shares (DM 6 billion). But it is of course not known to what extent foreign investors actually participated in — or were allotted — these new issues.

The *regional structure* of capital imports through securities transactions (the regional classification here is by the foreign purchaser's or seller's country of domicile) has been dominated in the last few years by transactions with industrial countries. They have accounted for the lion's share of total turnover and net purchases, much as in the case of capital exports. Among the industrial countries, the securities transactions were centred on countries like Belgium/Luxembourg, the United Kingdom and Switzerland, whose banking systems act as "turntables" in international capital transactions. In cases like this, the actual source of the funds channelled through these financial centres is not clear. But in the case of countries like the Netherlands and France as well, it remains an open question whether the capital flowing in comes from final investors living there or from

⁸ The aforementioned substitutive ties between borrowers' notes and public bonds as forms of investment for foreign funds are making the distinction between "private" and "public" capital movements in long-term capital transactions increasingly questionable, as borrowers' note transactions are ascribed to capital transactions of the public sector, whereas all securities transactions (including capital movements in public bonds) are included in private long-term capital transactions. The statistical presentation of long-term capital transactions (see table IX, 5 in the Statistical Section of the Monthly Reports and

third countries, as the banks there are also engaged in Euro-business. There can be little doubt, however, that the rising capital imports from the "other European countries" (except Switzerland) mirror the improvement in these countries' balance of payments situation, while the opposite applies to capital imports from OPEC countries, especially the Gulf states. The developing countries' investment in securities, on the other hand, was determined by the transactions with offshore centres, which present the same problems, statistically, as the financial centres in Europe. (Further data on the regional pattern is contained in the tables included in the appendix.)

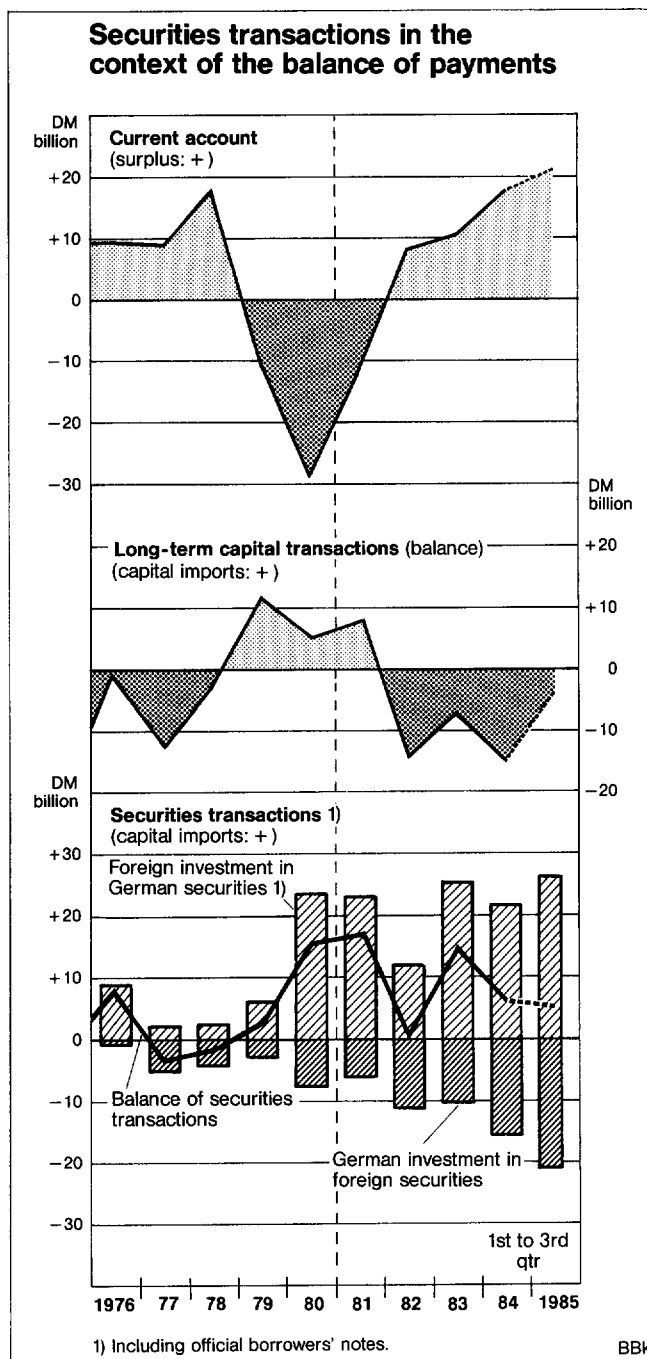

Securities transactions in the context of the balance of payments

In accordance with the customary statistical classification, in the German balance of payments securities transactions constitute part of long-term capital transactions, which basically comprise all transactions in financial assets with an original maturity

tables 5 (a) to 5 (f) in the Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank, Series 3, Balance of payments statistics) was therefore changed as from October 1985. Transactions in long-term capital are now primarily broken down by type of investment (e.g. direct investment, securities, lending, etc.); additionally, a sectoral breakdown of total long-term capital transactions is published in which securities transactions are attributed to the corresponding domestic sector according to the debtor/creditor principle.

of more than twelve months or without a definite maturity (such as shares). This classification of securities transactions does not, however, mean that long-term, stable commitments are always made in this field. As has repeatedly been seen in Germany's capital transactions, it is precisely securities transactions which have often functioned as an instrument of short-term interest rate and exchange rate speculation. In the last few years the trend towards an increase in frontier-crossing securities turnover has led to securities transactions acquiring greater and greater significance among overall long-term capital transactions. While only five years ago net purchases of foreign securities made up less than 30% of Germany's long-term capital exports, in the current year this share has risen to almost 60%. On the capital imports side, securities transactions accounted for a distinctly larger share even before, at not quite 70%; now it has gone up to over 80%. The existence of inflows and outflows, side by side, in securities transactions indicates clearly that Germany, with its completely free capital market, has itself become a turntable for international capital in the meantime. Non-residents' growing investment in German securities must be seen against the background of outflows resulting from residents' purchases of foreign securities (just as, conversely, the large capital exports for portfolio investment abroad would hardly be conceivable without the corresponding inflows from other countries). These capital flows are largely attributable to the desire for greater diversification of investment in securities, i.e. for a wider spread of opportunities for profits and risks of losses. This applies both to domestic and foreign investors and to the debtors who are increasingly taking advantage of international interest rate differences, making use of swap techniques.

For a short period the balance on securities account (including transactions in official borrowers' notes) showed pronounced fluctuations, reflecting interest rate and exchange rate movements – or investors' relevant expectations. In the longer run, however, inflows of funds predominated (just over DM 27 billion from the beginning of 1982 to September 1985); but they made up only a very small part (about 2%) of securities turnover. Moreover, in spite of simultaneous large current account surpluses, these capital imports did not cause any disruption of external equilibrium, unlike the situation at the beginning and towards the end of the seventies, when similar conditions had obtained. The inflows of funds through

securities transactions were accompanied by much larger outflows in the other sectors of long-term capital transactions, so that substantial amounts of capital were exported overall. From the beginning of 1982 to September 1985, for instance, DM 17 billion net was exported for direct investment, DM 22 billion for development aid loans and public sector participations abroad and DM 24 billion for long-term lending by banks and enterprises. During this period Germany's total long-term capital transactions showed outflows of capital amounting to about DM 40 billion, and thus contributed decisively

40 to offsetting the current account surpluses totalling DM 58 billion recorded in those four years. Of course, this more long-term trend did not preclude the possibility of securities transactions with foreign countries also having destabilising effects at times in the short run, which in turn had an adverse impact on exchange rate movements. But by and large such disturbances remained within bounds.

remaining items of the consolidated balance sheet of the banking system; changes are chiefly due to fluctuations in intra-bank items in course of internal settlement, in profit and loss accounts, and in inter-

bank claims and liabilities. — 7 Excluding banks' cash balances, but including DM notes and coins held abroad. — 8 Decrease of DM 3.7 billion owing to

special transactions of the public authorities. Contra-entry under "Other factors". — p Provisional. — r Revised.

* Consolidated statistical balance sheet of the banks (excluding assets and liabilities of foreign branches), including the Bundesbank (see Tables II, 1 and III, 2 and 3). — 1 As from September 7, 1983 the Weekly Return of the Bundesbank shows the monetary reserves excluding the counterpart in respect of the valuation of gold and dollar reserves provisionally contributed to the EMCF, previously shown on the liabilities side; this method is

employed in this table for earlier dates as well, so that the external assets and liabilities of the Bundesbank are not fully comparable with the figures given in the Monthly Reports from April 1979 to September 1983. — 2 Including Federal Railways and Federal Post Office. Exception: central bank deposits of the Federal Post Office; see footnote 15. — 3 Including Treasury bills and Treasury discount paper of Federal Railways and Federal Post Office. —

4 Including Treasury bills and Treasury discount paper of the Federal and Länder Governments, excluding mobilisation and liquidity paper. — 5 For treatment of DM claims payable on demand on foreign banks see Table IX, 7, footnote 2. — 6 As from July 1983 including the working capital put at the disposal of foreign branches (see footnote 7). — 7 Including contra-entry to coin circulation. Up to June 1983 including the working capital put at the

1 As from September 7, 1983 the "Counterpart in respect of the valuation of gold and dollar reserves provisionally contributed to the EMCF", previously shown on the liabilities side of the Weekly Return of the Bundesbank, is directly deducted from the relevant asset item "Claims on the EMCF"; this method is employed in this table for earlier dates as well, so that the presentation of the claims on the EMCF and the monetary reserves is not fully comparable with the figures given in the Monthly Reports from April 1979 to

August 1983. — 2 The Bundesbank's external positions denominated in \$, ECU or SDRs are shown at the balance sheet rates of the respective end-of-year dates. — 3 For further breakdown see Table IX, 6, and Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank, Series 3, Table 10. — 4 Prime bankers' acceptances. — 5 Including Equalisation of Burdens Fund and ERP Special Fund. — 6 Resulting from the currency reform of 1948, including non-interest-bearing debt certificate in respect of the

currency conversion in Berlin (West); including amounts exchanged for Treasury bills and Treasury discount paper and sold; see also item "Liabilities arising from mobilisation and liquidity paper sold". — 7 Including foreign securities (as from December 1984: DM 68 million). — 8 Including the items "German coins", "Balances on postal giro accounts" and "Other assets". — 9 Including the balancing item in respect of the valuation adjustment of other foreign currency positions. —

10 Excluding deposits of the German Federal Post Office. — 11 Local authorities, local authority associations and social security funds. — 12 For further breakdown see Table VII, 4 in the Monthly Reports of the Deutsche Bundesbank up to and including November 1982. — 13 As from September 7, 1983 liabilities arising from transfers of ECUs to other central banks, previously set off against claims on the EMCF, are shown in the Weekly Return of the Bundesbank as liabilities to the EMCF; this method

is employed in this table for earlier dates as well. 14 In addition, there are several minor special refinancing facilities (see "Kreditpolitische Regelungen" [monetary policy regulations] published in the German version of the Annual Reports of the Deutsche Bundesbank). — 15 Increase of DM 1.8 billion owing to a valuation adjustment of the external position. — 16 Increase of DM 4.1 billion owing to a valuation adjustment of the external position (see also "The monetary reserves of the

Bundesbank as reflected in its Weekly Return", Monthly Report of the Deutsche Bundesbank, Vol. 34, No. 1, January 1982, p. 13). — 17 Increase of DM 7.3 billion owing to a valuation adjustment; DM 3.4 billion of this was transferred to the EMCF in connection with the contribution of the dollar reserves. — 18 Special lombard facility. — 19 Decrease of DM 2.5 billion owing to a valuation adjustment. — 20 Increase of DM 1.2 billion owing to a valuation adjustment.

* Excluding the assets of foreign branches (see Table III, 10) and of building and loan associations; the statistics for credit cooperatives are based on a partial survey, see Tab. III, 12. — Statistical changes of DM 500 million and more are given separately (increase: +, decrease: -) in the notes to the individual tables (here: footnote 14 ff.). — 1 Balance sheet total plus endorsement liabilities from rediscounted bills, own drawings outstanding, discounted and credited to the borrowers in account, and bills sent for collection

prior to maturity from the banks' portfolios. — 2 Excluding claims in respect of savings bonuses. — 3 Including matured bonds, interest and dividend coupons. — 4 Including balances on postal giro account and claims in respect of registered bonds; excluding loans to building and loan associations. — 5 Excluding own issues; excluding registered bonds. — 6 Including securities sold to the Bundesbank in open market transactions under repurchase agreements. — 7 Including loans to building and loan associations. —

8 Treasury bills and Treasury discount paper (excluding mobilisation and liquidity paper). — 9 The purchase of mobilisation and liquidity paper (under sections 42 and 42a of the Bundesbank Act) does not represent lending by banks. — 10 As from July 1983 including the working capital put at the disposal of foreign branches (see footnote 13). — 11 Including land and buildings, equipment, unpaid capital, own shares and shares of a controlling company. — 12 Including bills sold to the Bundesbank in open market transactions under

over 1 year	Bills dis-counted	Loans on a trust basis	Treasury bill credits 8	Securities (excluding bank bonds) 6	Equalisa-tion and covering claims	Mobilisa-tion and liquidity paper (Treasury bills and Treasury discount paper) 9	Bonds from own issues	Partici-pations 10	Other assets 11, 13	Memorandum items			End of year or month

* In this table "foreign" means the country of domicile of the branches and other countries. Statistical increases and decreases have not been eliminated. — 1 Excluding securities. — 2 Excluding Treasury bills

and securities. — 3 Excluding transactions with the head office and other branches in the Federal Republic of Germany. Up to November 1983 some institutions had erroneously shown these transactions by

their foreign branches under this heading. — 4 Including certificates of deposit. — 5 Including minor amounts of savings deposits. — p Provisional.

11. Assets and liabilities of foreign banks majority-owned by German banks *

* Excluding lending of foreign branches and of building and loan associations; the statistics for credit cooperatives are based on a partial survey, see Table III, 12, footnote 13, and Table III, 22. Including lending to building and loan associations. — Statistical changes of DM 500 million and more are given separately in footnote 14 ff. (increase: +, decrease: —). — 1 Up to first line for December 1980 including mortgage loans secured by real estate used for industrial and agricultural purposes and by ships. — 2 Up to first line for December 1980 excluding mortgage loans. — 3 As from second line for December 1980 including all mortgage loans (also those secured by residential real estate). — 4 Including

mortgage loans secured by other real estate; as from December 1980 only if this represents future residential real estate. — 5 As from second line for December 1980 included in the above-mentioned sectors. — 6 Including all mortgage loans (except those secured by residential real estate). — 7 As from second line for December 1980 including all mortgage loans (except those secured by residential real estate). — 8 Excluding banks (other than building and loan associations); including financial leasing institutions. — 9 According to the basic classification of the Federal Statistical Office "Services, if rendered by enterprises and the professions". — 10 Including production of musical

instruments, sports equipment and jewellery; photographic and film laboratories. — 11 The difference between the two lines for end-1980 is due to the revision of the borrowers statistics (mortgage loans classified by borrower and not by the asset serving as collateral, change in the maturity classification) as well as to (in the case of short-term lending: only to) corrections of previous classifications by the banks. — 12 As from second line for December 1980 excluding medium-term loans on a trust basis and excluding medium-term maturity prolongation loans. — 13 As from second line for December 1980 including medium-term loans on a trust basis and including medium-term maturity prolongation loans. —

(b) Lending to domestic enterprises, by sector of economic activity

1 Including postal giro account balances, claims on building and loan associations and claims arising from registered bonds; excluding Bundesbank balances. — 2 Loans under savings contracts and interim and bridging loans. — 3 Including small amounts of loans for purposes other than building. — 4 Including equalisation and covering claims. — 5 Including liabilities to building and loan associa-

tions. — 6 Including small amounts of savings deposits. — 7 Total amount covered by the contracts; only contracts newly entered into, for which the contract fee has been fully paid. Increases in the contractual amount count as new contracts. — 8 For outpayments of savings deposits arising from the allocation of contracts see "Capital paid out". — 9 Including housing bonuses credited. — 10 Only

allocations accepted by the beneficiaries; including allocations applied to settlement of interim and bridging loans. — 11 The amounts already credited to the accounts of savers or borrowers are included in "Amounts paid into savings accounts" and "Interest and repayments received on building loans". — p Provisional.

III. Banks

22. Balance sheet total, lending and deposits of credit cooperatives

Source: Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V., Bonn. The figures cover the transactions of all credit cooperatives (including those mentioned in footnote 1), whereas the banking statistics collected by the Deutsche Bundesbank only cover the cooperatives required to report (since end-1973 about 2,400, prior to that about 2,000). The figures for June and December are based on a general survey, those for March and September are estimated on the basis of a partial survey by the Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. — 1 Including banks affiliated to Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. and not organised in the form of a cooperative, but excluding regional institutions of credit cooperatives. — 2 Excluding loans on a trust basis. — 3 Excluding bank savings bonds. — 4 Including bank savings bonds. — p Provisional.

* Excluding postal giro and postal savings bank offices and, up to 1971, excluding building and loan associations; also excluding banks in liquidation, but including banks transferred to the Federal area after 1945. Branches within the meaning of section 24 (1) 7 of the Banking Act handling inpayments and outpayments, i.e. excluding deposit-receiving agencies, exchange offices, commission agencies, branches and representations. Registered offices, second and other registered offices of banks are recorded as branches, if banking business is conducted there. The first branch established by a foreign bank in the

Federal area is recorded as a bank in accordance with section 53 (1) of the Banking Act; all further branches are recorded as branches. Statistical changes have not been noted among the levels, but have already been eliminated among the changes. — 1 In accordance with the List of Banks (form 1035), 12 banks with 455 branches (1983 and 1984) and 457 branches (1984) are recorded after their reclassification in the category of "Commercial banks"; in the Monthly Balance Sheet Statistics they continue to be shown as "Instalment sales financing institutions" (7 regional banks with 445/446 branches and 5 "Private

bankers" with 10/11 branches). — 2 Including Deutsche Girozentrale — Deutsche Kommunalbank. — 3 Including Deutsche Genossenschaftsbank. — 4 Including other banks not organised in the form of a cooperative but affiliated to Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. — 5 Since 1972 including legally independent (private and public) building and loan associations and their branches. 10 (up to 1972: 9) legally dependent public building and loan associations (divisions or institutions of other public-law banks) with 4 branches are not recorded separately.

1 The ratio of stage 1 on the progressive scale applies to the first DM 10 million of liabilities subject to reserve requirements, the ratio of stage 2 to the next

DM 90 million, and the ratio of stage 3 to liabilities exceeding DM 100 million. — 2 From March 1, 1977 to February 28, 1978 the following discounts were in

force for liabilities to residents in places without a Bundesbank office: 1 percentage point for sight liabilities, 0.5 percentage point for savings deposits.

* Excluding minimum reserves kept by the Federal Post Office on behalf of the postal giro and postal savings bank offices, which since the introduction on May 1, 1958 of the optional central maintenance of minimum reserves are in practice no longer distinguishable from the other central bank deposits of the Federal Post Office. — 1 In accordance with sections 5 to 7 of the Minimum Reserves Order. — 2 Liabilities subject to reserve requirements cannot be broken down statistically according to residents and non-residents if the same reserve ratios applied to such liabilities and only overall amounts were reported. — 3 Amount after applying the reserve ratios to

liabilities subject to reserve requirements (section 5 (1) of the Minimum Reserves Order). Owing to the introduction in March 1978 of deductible cash balances, accompanied by a compensatory increase in reserve ratios, the continuity of the series is not assured. — 4 Banks' holdings of German legal tender according to section 5 (2) of the Minimum Reserves Order. — 5 To be maintained as credit balances on giro accounts at the Bundesbank. — 6 Average credit balances of banks subject to reserve requirements maintained on giro accounts at the Bundesbank. — 7 Actual reserves less required reserves after deduction of deductible cash

balances. — 8 Shortfall in relation to required reserves after deduction of deductible cash balances. — 9 Required reserves prior to deduction of deductible cash balances as % of liabilities subject to reserve requirements. — 10 Between May 1961 and end-December 1966 liabilities to non-residents were exempt from the reserve requirements to an amount equal to credit balances with banks abroad and foreign money market investment. — 11 The exemption of institutions mainly engaged in long-term business and of building and loan associations was abolished with effect from January 1, 1984.

1. Discount and lombard rates of the Bundesbank and special interest rate charged for failing to comply with the minimum reserve requirements

Special interest rate charged for failing to comply with the minimum reserve requirements: 3% p.a. above lombard rate 4

1 This is also the rate for cash advances. Until May 1956 lower rates likewise applied to foreign bills and export drafts; fixed special rates were charged for certain credits which had been granted to the Reconstruction Loan Corporation and which ran out

at the end of 1958 (for details see footnotes to the same table in the Report of the Deutsche Bundesbank for the Year 1961, page 91). — 2 An allowance of 1/4% per annum was granted to the banks in respect of the lombard loans taken between December 10,

1964 and December 31, 1964. — 3 Lombard loans were generally not granted to the banks at the lombard rate during the following periods: from June 1, 1973 to July 3, 1974 and from February 20, 1981 to May 6, 1982. — 4 Unchanged since January 1, 1951.

* For method of data collection see Monthly Report of the Deutsche Bundesbank, most recently Vol. 35, No. 1, January 1983, page 13ff. Average rates are calculated as unweighted arithmetical means from interest rates reported to be within the spread. The spread is ascertained by eliminating 5% each of the reports containing maximum and minimum interest rates. — 1 Second and third weeks of the months indicated. — 2 Interest rates as % p.a. — 3 Bills of

DM 5,000 and over but less than DM 20,000 eligible for rediscount at the Bundesbank. — 4 Interest rates as % per month of original amount of credit. Besides interest most banks charge a non-recurring processing fee (generally 2%, in some cases 3%, of the credit amount). — 5 With maturities of over 24 months but not more than 48 months. — 6 The figures refer to the time when the contract was concluded and not to the entire duration of the

contract. The calculation of the effective interest rate is based on an annual redemption rate of 1% plus interest saved; the repayment conditions agreed upon in each case by the banks involved are taken into account (mostly quarterly payment with annual inclusion or monthly payment with monthly or quarterly inclusion). — 7 Interest rates for time deposits extending beyond the end of the year. — p Provisional.

* Discount rates applied by central banks in transactions with banks; excluding special terms for certain refinancing transactions (e.g. rediscount of export bills). — 1 As from May 9, 1985 floating discount rate geared to the rate for 3-month Treasury bills; the rate applying about one month earlier is also stated for

comparative purposes. — 2 Between October 13, 1972 and August 19, 1981 "Minimum lending rate"; the Bank of England generally suspended the publication of the "Minimum lending rate" on August 20, 1981. — 3 From March 13, 1980 floating discount rate (average weekly

Treasury bill tender rate plus 1/4 percentage point); the rate applying about one month earlier is also stated for comparative purposes. — 4 Discount rate of the Federal Reserve Bank of New York. — 5 Rate for advances against government securities.

1 Unless stated otherwise. — 2 Rates in the compensation market, weighted with the amounts lent out. — 3 For monthly and weekly figures the latest rate in each case. — 4 Average of the lowest and highest rate for day-to-day money quoted daily in the Financial Times. — 5 Months: average of the tender rates at

the weekly Treasury bill auctions (New York: Monday, London: Friday); weeks: average of the tender rates on the day of issue. — 6 Weekly average (Thursdays to Wednesdays). — 7 Daily opening rates. — 8 Three-month deposits with big banks in Zurich; months: average of the rates reported on the three return

dates (10th, 20th and last day of the month); figure in the fourth week = last day of the month. — 9 The rates are based on quotations reported by Frankfurt and Luxembourg banks. — 10 Rates for three-month contracts. — p Partly provisional figures.

* Excluding securities from pre-currency-reform issues and old savers' securities. — 1 Excluding registered bank bonds. — 2 Including ship mortgage bonds. — 3 Including Kommunalschatzanweisungen, Landesbodenbriefe, Bodenkulturschuldverschreibungen, bonds issued to finance shipbuilding and guaranteed by local authorities as well as bonds with other designations, if they were issued under section 8 (2) of the Act on Mortgage Bonds and Similar Bonds of Public-Law Banks as amended up to May 8, 1963. — 4 This includes all bearer bonds of the following banks: AKA-Ausfuhrkredit-Gesellschaft mbH, Bayerische Landesanstalt für Aufbaufinanzierung, Deutsche Genossenschaftsbank, Deutsche

Siedlungs- und Landesrentenbank, Industriekreditbank AG — Deutsche Industriebank, Kreditanstalt für Wiederaufbau (RLC), Landwirtschaftliche Rentenbank, Equalisation of Burdens Bank and building and loan associations. — 5 This item principally contains bonds of regional giro institutions, the proceeds of which are, in the main, extended as credit to trade and industry. Also including "unsecured" mortgage bonds, bearer bonds (including convertible bonds) issued by banks, and from September 1977 marketable savings bonds. — 6 Including convertible and option bonds issued by industrial borrowers. — 7 Including Federal Railways and Federal Post Office, but

excluding bonds issued by the Equalisation of Burdens Bank on behalf of the Equalisation of Burdens Fund. — 8 Issued by a German-managed syndicate. — 9 Gross sales means only initial sales of newly issued securities, not however resales of repurchased bonds. The figures include those cases of security sales where the buyer, for reasons connected with printing or for other reasons, has not received physical securities. — 10 Gross sales less redemptions; the minus sign indicates an excess of redemptions over the amount newly sold during the period under review. Discrepancies in the totals are due to rounding.

1 In principle the statistics on yields cover only fully taxed fixed interest bearer bonds with maximum maturities according to the terms of issue of over 4 years. As from 1977 such bonds are included in the calculation of average yields only if their mean remaining maturities exceed 3 years. Convertible bonds and, as from 1973, bank bonds with unscheduled redemption are not included. The yields

of redeemable issues are based on the mean remaining maturities and, as from 1973, on the computed remaining maturities. Group yields for the various types of securities are weighted with the amounts outstanding or (in the case of issue yields) the amounts sold of the bonds included in the calculation. Monthly figures for yields on bonds outstanding are calculated on the basis of the yields

on the four bank week return dates of a month (including the yields on the last day of the preceding month). The annual figures are the unweighted means of the monthly figures. — 2 As far as quoted on German stock exchanges. — 3 Dividend yield; end of year or month. Source: Federal Statistical Office. — 4 Pursuant to the Corporation Tax Reform Act of August 31, 1976.

* As from the Monthly Report of September 1984 this table shows receipts and expenditure no longer at the time of the cash inflows and outflows but under the period for which they are intended, in accordance with budgetary practice. The definition used here differs from the methods employed for the government account of the national accounts and, in the case of the quarterly figures, in some respects also from the financial statistics. — 1 Federal Government, Länder Governments, local authorities, municipal special-purpose associations, Equalisation of Burdens Fund, ERP Special Fund and EEC shares. The quarterly figures, unlike the annual figures based

on the annual accounts statistics of the Federal Statistical Office, do not include municipal special-purpose associations, hospitals keeping commercial accounts and various special accounts. — 2 Statutory pension insurance funds, Federal Labour Office, statutory health insurance and accident insurance institutions, agricultural old-age pension funds, and supplementary pension funds for government employees. The annual figures differ from the sum of the quarterly figures as the latter are all provisional. The quarterly figures for some fields of insurance are estimated. — 3 After adjustment for

payments by the central, regional and local authorities to the social security funds. — 4 Including discrepancies in clearing transactions between the central, regional and local authorities. — 5 Expenditure on investment grants, loans and acquisition of participations. — 6 Including Federal Government liquidity assistance to the Federal Labour Office. — 7 Excluding municipal special-purpose associations and excluding supplementary pension funds for government employees. — pe Partly estimated. Discrepancies in the totals are due to rounding.

1 The cash transactions recorded as cash receipts and expenditure concern payments into and out of the accounts kept with the Bundesbank by the Federal Government. The cash receipts and outgoings differ from those shown in the official financial statistics primarily because they are recorded not at the time they are entered in the

budgetary accounts but at the time of the actual receipt or outpayment and because transactions on behalf of the European Communities, which are entered not in the Federal budget but in appendices thereto, are settled through the accounts of the Federal Government. — 2 Including small amounts of special transactions. — 3 Cash balance = column (a) less

(b) less (c) less (d) less (e) less (f). — 4 Deposits with the Bundesbank and other credit balances. — 5 Up to June 1981 only items in course of settlement with the Equalisation of Burdens Fund; thereafter, in general only redemptions in course of settlement. — r Revised.

1 This total, unlike that in Table VII, 4, includes neither the revenue from Equalisation of Burdens levies, trade tax on returns and capital (less Federal and Länder shares in trade tax), tax on total wages paid, the taxes on land and buildings and other local authority taxes, nor the balance of untransferred tax shares. — 2 The yield of wage tax and assessed income tax was distributed among the Federal

Government, the Länder Governments and the local authorities in the ratio of 43:43:14 as from 1970 and in the ratio of 42.5:42.5:15 as from 1980, and the yield of corporation tax and investment income tax between the Federal Government and the Länder Governments in the ratio of 50:50 as from 1970. — 3 The Federal Government's share: 70% in 1970, 68.25% in 1975, 69% in 1976 and 1977, 67.5% from 1978 to 1982,

66.5% in 1983, 65.5% as from 1984; the remainder went to the Länder Governments. As from 1975 the EEC share must be deducted from the Federal Government's share stated. — 4 Federal Government and Länder Governments 50% each. — 5 For breakdown see Table VII, 6. — 6 Including DM 109 million of levies on defence imports. — p Provisional. — r Revised.

6. Individual taxes of the Federal Government, Länder Governments and local authorities

* Excluding public authorities' mutual indebtedness. —
 1 Excluding bonds in the issuers' portfolios. —
 2 Mainly loans against borrowers' notes. Including loans raised abroad. — 3 Including Debt Register claims and Federal savings bonds. — 4 Commutation and compensation debt and old debt mainly expressed in foreign currency in accordance with the London Debts Agreement; excluding own holdings. —

5 In this table (unlike Table VII, 9) the Public Works Corporation and the Equalisation of Burdens Fund are included in the Federal Government debt as from 1970, and not as from 1972 and 1980 respectively. —
 6 Including DM 387 million of special Bundesbank credit to the Federal Government. — 7 In 1970 and 1975 including small amounts of tax reserve certificates. — 8 From 1978 including net borrowing for the

Housing Promotion Institution of the Land of North Rhine-Westphalia. — 9 As from end-1981 including medium-term notes with maturities of over four years, which were previously included in bonds (DM 329 million). — 10 Data other than end-of-year figures have been estimated. Including indebtedness of municipal special-purpose associations (as from 1975) and municipal hospitals.

1 Special trade according to the official foreign trade statistics: imports c.i.f., exports f.o.b. — 2 Mainly warehouse transactions for account of residents and deduction of goods returned and of commission processing. — 3 Excluding expenditure on freight and insurance costs included in the c.i.f. import value. — 4 The figure for the last month is provisional and excludes trade credits, changes in which are included in the balance of unclassifiable transactions until they

are recorded under short-term capital transactions. — 5 Net errors and omissions on current and capital accounts (= balancing item). — 6 The figure for the last month includes trade credits. — 7 Counterpart of changes in the Bundesbank's external position which are not due to external current and capital trans- actions: changes in the Deutsche Mark value of the Bundesbank's assets and liabilities denominated in foreign currencies owing to the valuation adjustment

at the end of the year and the allocation of IMF special drawing rights; as from 1982 also the differences between the transaction values and the changes in the external position shown in the Weekly Return at balance sheet rates. — 8 As from 1982 valued at balance sheet rates; see Monthly Report of the Deutsche Bundesbank, January 1982, p. 13. — p Provisional. Discrepancies in the totals are due to rounding.

2. Foreign trade (special trade) by group of countries and country *

Group of countries/Country		1982	1983	1984	1985						1984		
					DM million	August	September	January/ September	Percentage change on previous year			Percentage of total exports or imports	
									August	September			January/ September
All countries 1	Exports	427,741	432,281	488,223	38,967	43,899	398,606	+ 2.7	+ 8.2	+ 12.9	100

* Valuation of the foreign currency positions at the end of the year at balance sheet rates in accordance with the principles of the Companies Act; until end-1981 these levels were updated in the course of the year at transaction values. As from 1982 valuation at balance sheet rates in the course of the year as

well. — 1 Mainly US dollar assets. — 2 For breakdown see Table (b). — 3 European Monetary Cooperation Fund. — 4 Including mobilisation and liquidity paper sold to foreigners by the Bundesbank (see sections 42 and 42 (a) of the Bundesbank Act). — 5 Comprising subscription payments in cash and

Deutsche Mark callings by the IMF to finance its sales of Deutsche Mark (net) to other countries. — 6 Assets resulting from the very short-term financing and short-term monetary assistance. Discrepancies in the totals are due to rounding.

7. External assets and liabilities of domestic banks *

* Excluding the external assets and liabilities of the foreign branches of domestic banks. Statistical increases and decreases have not been eliminated; the assets also include banks' long-term external assets changes in which are ascribed to official capital transactions in the balance of payments. To this extent the changes in levels are not comparable with the figures shown in Table IX, 5. Assets and liabilities in foreign currencies are normally valued at

middle rates. — 1 Including the respective international organisations. — 2 For Deutsche Mark claims payable on demand the level at the end of the previous year is used for accounting reasons; including foreign bills acquired as a money market investment. — 3 Including foreign Treasury bills and Treasury discount paper; between November 1972 and August 1983 only a few small holdings were

reported. — 4 As from June 1982 including the working capital of the foreign branches of domestic banks (DM 1.6 billion). — 5 Including repurchase commitments (which do not have to be shown in the balance sheet); for lack of detailed records they are assigned to the foreign banking sector. — 6 Including the working capital of the branches of foreign banks. — p Provisional.

8. External assets and liabilities of domestic enterprises *

(excluding banks)

* Calculated from daily quotations. Figures on average rates for previous years and on daily rates are to be found in the Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank,

Series 5, The currencies of the world. These Supplements include a table on the daily exchange rate movements of the US dollar. — 1 In accordance with a decision of the governing committee of the

Frankfurt stock exchange, the exchange rate of the lira is to be fixed with four digits after the decimal point as from May 1985.

10. External value of the Deutsche Mark *

End-1972 = 100 1

Yearly or monthly average	External value of the Deutsche Mark 2															Real external value of the Deutsche Mark (measured by consumer prices) ⁵	
	against the US dollar	against the currencies of countries participating in the European Monetary System (EMS)							against the currencies of other countries						Total (14 industrial countries)		
		French franc	Netherlands guilder	Italian lira	Belgian and Luxembourg franc	Danish krone	Irish pound	Pound sterling 3	Japanese yen	Canadian dollar	Norwegian krone	Austrian Schilling	Swedish krona	Swiss franc			against the currencies of the countries participating in the EMS 4

* For method of calculation see the article "New calculation of the external value of the Deutsche Mark and foreign currencies", Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 1, January 1985. — 1 The figures for end-1972 are in principle based on the central rates at the time, but in the case of the pound sterling, the Irish pound and the Canadian dollar, whose exchange rates were floating, the market

rates of end-1972 were taken as a basis. — 2 The indices for the groups of countries are weighted geometric means of bilateral nominal external values. — 3 The United Kingdom has not so far participated in the exchange rate mechanism of the European Monetary System. — 4 Excluding the United Kingdom and Greece which are not participating in the

exchange rate mechanism. The EMS did not come into force until March 13, 1979. For the time prior to this date the weighted external value vis-à-vis the same group of countries is shown. — 5 Weighted external value against the currencies of 1

IX. Foreign trade and payments

11. External value of foreign currencies *

End-1972 = 100 1

Yearly or monthly average	Weighted external value of foreign currencies against 14 industrial countries 2

* For method of calculation see the article "New calculation of the external value of the Deutsche Mark and foreign currencies", Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 1, January 1985. — 1 The figures for end-1972 are in principle based on the central rates at the time, but in the case of the

pound sterling, the Irish pound and the Canadian dollar, whose exchange rates were floating, the market rates of end-1972 were taken as a basis. — 2 The indices of the nominal external value of foreign currencies are weighted geometric means and relate

to the same group of countries as the calculation of the external value of the Deutsche Mark. — 3 The United Kingdom has not so far participated in the exchange rate mechanism of the European Monetary System.

List

of the subjects dealt with during the past twelve months in the Monthly Reports of the Deutsche Bundesbank

- November 1984 Enterprises' profitability and financing in 1983
Capital formation, expenditure on loans and other financial aid by the central, regional and local authorities since the mid-seventies
Business finance in the United Kingdom and Germany
- December 1984 The economic scene in the Federal Republic of Germany in the autumn of 1984
- January 1985 The longer-term trend and control of the money stock
Recent trends in the finances of the statutory health insurance institutions
New calculation of the external value of the Deutsche Mark and foreign currencies
- February 1985 The economic scene in the Federal Republic of Germany at the turn of 1984–85
- March 1985 Overall economic trends and the earnings and self-financing of enterprises in the second half of 1984
The balance of payments of the Federal Republic of Germany in 1984
International capital links between enterprises in 1983
Amendment of the Banking Act
- April 1985 The finances of the statutory pension insurance funds since the beginning of the eighties
Annual accounts of small and medium-sized enterprises
- May 1985 Financial flows and total financial assets and liabilities in the Federal Republic of Germany in 1984
The offices of German banks abroad
- June 1985 The economic scene in the Federal Republic of Germany in the spring of 1985
- July 1985 Freedom of Germany's capital transactions with foreign countries
Trends in tax revenue since the beginning of the eighties
- August 1985 The profitability of German banks in 1984
Enterprises' profitability, financial strength and liquidity
The financial relations of the Federal Republic of Germany with the European Communities since the beginning of the eighties
The present state and future development of the automation of cashless payments at the Bundesbank
- September 1985 The economic scene in the Federal Republic of Germany in summer 1985
- October 1985 Enterprises' capital formation and financing in the first half of 1985
Recent developments with respect to the Bundesbank's securities repurchase agreements
The longer-term trend of inflows of funds to banks

Information on previously published special studies will be found in the index of special studies appended to the Monthly Report of December 1984.
