This Annex provides an English translation of the headings and explanatory notes to the data for 2005 contained in the German original, which is the sole authoritative text.

The Statistical Supplement *Capital market statistics* is published at monthly intervals by the Deutsche Bundesbank, Frankfurt am Main, by virtue of section 18 of the Bundesbank Act. It is available to interested parties free of charge.

Further statistical data, supplementing the *Monthly Report*, are to be found in the following Supplements.

|                                       |           |
|---------------------------------------|-----------|
| <i>Banking statistics</i>             | monthly   |
| <i>Balance of payments statistics</i> | monthly   |
| <i>Seasonally adjusted</i>            |           |
| <i>business statistics</i>            | monthly   |
| <i>Exchange rate statistics</i>       | quarterly |

Selected updated statistics are also available on the internet. For a small fee to cover costs, a file which is updated monthly and contains approximately 40,000 time series published by the Bundesbank can also be obtained on magnetic tape cassette or CD-ROM from the Division for Statistical Information Systems and Mathematical Methods.

| 8 Registered bank debt securities   |    |
| (a) Gross sales   | 14 |
| (b) Amounts outstanding   | 14 |
| 9 Deutsche Mark/euro commercial<br>paper issued by domestic non-banks                         | 15 |
| 10 Shorter-term debt securities<br>outstanding  | 15 |

### III Debt securities issued by non-residents

|   |    |
|---|----|
| 1 Sales, redemptions and amounts out-<br>standing of foreign Deutsche Mark/<br>euro bonds issued by German-<br>managed syndicates | 15 |
| 2 Yields on outstanding foreign Deutsche<br>Mark/euro bonds issued by German-<br>managed syndicates, by category of<br>issuer     | 15 |

### IV Shares issued by residents

|  |    |
|--|----|
| 1 Share issues   | 16 |
| 2 Shares in circulation, by category<br>of issuer at market values | 16 |
| 3 Changes in share circulation                                     | 16 |
| 4 Share price indices, by selected<br>sectors                      | 16 |

### V Stock market turnover, options trading and futures contracts

|  |    |
|--|----|
| 1 Stock market turnover                    | 17 |
| 2 Options trading and futures<br>contracts |    |
| (a) Options trading on Eurex               | 17 |
| (b) Futures contracts on Eurex             | 17 |

### VI Mutual funds

|  |    |
|--|----|
| 1 Number, shares outstanding and<br>assets of German mutual funds                              | 18 |
| 2 Net sales receipts, sales receipts and<br>distribution of earnings of German<br>mutual funds | 18 |
| 3 Asset structure of selected types<br>of German funds   | 19 |
| 4 Asset structure of German<br>securities-based funds  | 19 |
| 5 Number, net sales receipts and assets<br>of German specialised funds                         | 20 |

### VII Insurance corporations

|   |    |
|---|----|
| 1 Liquid funds and investments of<br>insurance corporations | 20 |
|---|----|

Explanatory notes

|   |    |
|---|----|
| Debt securities issued by residents                             | 21 |
| Debt securities issued by non-residents                         | 25 |
| Shares issued by residents                                      | 25 |
| Securities indices  | 25 |
| Stock market turnover, options trading<br>and futures contracts | 26 |
| Mutual funds  | 27 |

Abbreviations and symbols

|     |  |
|-----|--|
| p   | Provisional  |
| r   | Revised  |
| ts  | Partly estimated                                       |
| ... | Data available at a later date                         |
| .   | Data unknown, not to be<br>published or not meaningful |
| 0   | Less than 0.5 but more than nil                        |
| -   | Nil  |

Discrepanies in the totals are due to  
rounding.

Notes

Territory

From July 1990 (in the case of share issues  
and shares outstanding, from January 1994),  
the figures relate to the territory of the Fed-  
eral Republic of Germany, including the terri-  
tory of the former GDR and Berlin (East).

Currency definitions

Up to reporting year 1998, foreign currencies  
comprise all currencies other than the  
Deutsche Mark and, from 1999, all non-euro-  
area currencies. Euro-area currencies com-  
prise the euro and all the legacy currency  
units of the euro-area member states (eg DM,  
FF, Lit).

Changes of definitions

Up to the end of 1999, debt securities com-  
prise the bonds and money market paper is-  
sued by domestic banks; from January 2000,  
all debt securities with the exception of com-  
mercial paper issued by non-banks.

NB

Percentages are computed from figures re-  
ported in DM thousand or € thousand.

## I General survey

### 1 Key figures from the capital market statistics

| Debt securities     |            |  |                               |       |   |             |  |                                   |                         |
|---------------------|------------|--|-------------------------------|-------|---|-------------|--|-----------------------------------|-------------------------|
| issued by residents |            |  |                               |       |   |             |  |                                   |                         |
| Gross sales         | Redemption | Net sales before adjusting for changes in issuers' holdings of own debt securities | Debt securities outstanding 1 |       | Net sales after adjusting for changes in issuers' holdings of own debt securities |             |  | Yield on securities outstanding 3 | issued by non-residents |
| Nominal value       |            |  |                               | Total | of which Issuers' holdings of own debt securities                                 |             |  | Market value                      | Issue yield 3           |

|                |                    | Five-year Federal notes (Bobis) | Federal savings notes |                   |   |                        |                  |                 |                  |                  |   |                     |

| Maturities of more than four years |                    |                  |                       |                     | Maturities of up to and including four years |                    |                   |                 |                  |                       |                     |  | Memo item Treasury discount paper (Bubills) <sup>3</sup> |
|------------------------------------|--------------------|------------------|-----------------------|---------------------|--|--------------------|-------------------|-----------------|------------------|-----------------------|---------------------|--|--|
| Total                              | Federal Government | State government | Federal Railways Fund | Federal Post Office | Total  | Federal Government | German Unity Fund | Treuhand agency | State government | Federal Railways Fund | Federal Post Office |  |  |
|                                    |                    |                  |                       |                     |  |                    |                   |                 |                  |                       |                     |  |  |

Stand am Jahres- bzw. Monatsende = End of year or month  
 Mio € = € million

1 Debt securities issued in exchange for equalisation claims arising from German monetary union. — 2 Debt securities issued according to the Indemnification and Compensation Act. — 3 General government; up to

1993, including the Federal Railways; up to 1994, including the Federal Post Office; including Federal Treasury financing paper and Bubills, which were issued for the first time in July 1996. The discounted amounts are shown. From 2000, included in the total figures.

## 5 Gross sales and amounts outstanding of bank debt securities, by category of banks

Up to end-1998, DM million, nominal value; from 1999, € million, nominal value

| All categories of banks |                      |                    |   |                            | Private mortgage banks 1 |                      |                    |                            |
|-------------------------|----------------------|--------------------|---|----------------------------|--------------------------|----------------------|--------------------|----------------------------|
| Total                   | Mortgage Pfandbriefe | Public Pfandbriefe | Debt securities issued by special purpose credit institutions | Other bank debt securities | Total                    | Mortgage Pfandbriefe | Public Pfandbriefe | Other bank debt securities |

| Public mortgage banks and Landesbanken 2 |                      |                    |                            | Other credit institutions |   |                            |                  |               |
|--|----------------------|--------------------|----------------------------|---------------------------|---|----------------------------|------------------|---------------|
| Total                                    | Mortgage Pfandbriefe | Public Pfandbriefe | Other bank debt securities | Total                     | Debt securities issued by special purpose credit institutions | Other bank debt securities |                  |               |
| Total                                    | Mortgage Pfandbriefe | Public Pfandbriefe | Other bank debt securities | Total                     | Debt securities issued by special purpose credit institutions | Total                      | Commercial banks | Savings banks |

Zeit = Period

Mio 2 = € million

Brutto-Absatz = Gross sales

Umlauf = Amounts outstanding

1 Including ship mortgage banks and mixed mortgage banks. — 2 Including DGZ DekaBank Deutsche Kommunalbank and Pfandbriefe issued by public savings banks. — 3 End of year or month.

## 6 Average prices \*

Zeit = Period

Alle Zinssätze = All interest rates

darunter = of which

Festverzinsliche Wertpapiere insgesamt = Debt securities, total

Bankschuldverschreibungen = Bank debt securities

Hypothekenpfandbriefe = Mortgage Pfandbriefe

Öffentliche Pfandbriefe = Public Pfandbriefe

Anleihen der öffentlichen Hand = Public debt securities

\* The figures relate to the range of bonds and notes included in the yield calculation (Table 7(b)). Owing to the continuing shifts in the pattern of circulation, the change in the average prices for all interest rates (or for all categories of securities) may differ significantly from the change in the average prices for individual interest rates (or individual categories of securities).

## 7 (a) Issue yields, by category of securities

% per annum

|       | Bank debt securities |                      |                    |   |                            | Corporate bonds | Public debt securities |   |

### 7 (e) Term structure of interest rates in the bond market – estimated values\*

% per annum

| Interest rate at a residual maturity of ... years |   |   |   |   |   |   |   |   |    |                    | Interest rate differential in the bond market |
|---|---|---|---|---|---|---|---|---|----|--------------------|---|
| 1   | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | Estimated values 1 | Memo item<br>Observed values 2                |

Stand am Jahres- bzw. Monatsende = End of year or month

Parameter zur Berechnung der Zinsstruktur am Rentenmarkt = Parameters for calculating the term structure of interest rates in the bond market

\* Interest rates on (notional) zero coupon bonds without a default risk, estimated according to the procedure outlined in the explanatory notes at the end of this Supplement. The estimates are based on the prices of

Federal bonds, five-year Federal notes (Bobls) and Federal Treasury notes with a residual maturity of at least three months. The interest rates are estimated using a non-linear, parametric approach. — 1 Differential between the interest rates for maturities of ten years and one year. — 2 Differential between the observed yields to maturity of listed Federal securities outstanding in the ten-year and one-year maturity categories.

### 8 (a) Gross sales of registered bank debt securities

From January 1995, breakdown pursuant to the new accounting regulation (*Rech-VersV*). — 1 Including overnight money. — 2 Including lending to affiliated enterprises and to enterprises with which the company is linked by virtue of participating interests, and other loans (including other Debt Register claims which were included in "other investments" up to end-1994). — 3 Including shares in real estate special funds which were included in "real estate and equivalent titles" up to end-1994. — 4 Including shares in affiliated enterprises. — 5 Including transport insurance corporations.

# Explanatory notes

## Debt securities issued by residents

The statistics on debt securities issued by residents cover marketable bearer debt securities and marketable order debt securities forming part of a total issue. Deutsche Mark/euro commercial paper issued by non-banks and registered bank debt securities are not shown in the overall results of the capital market statistics, but in separate tables. Pre-currency-reform debt securities are not included in the results (ie debt securities issued before the currency reform of 1948 and converted into Deutsche Mark or exchanged for new debt securities denominated in Deutsche Mark).

## Categories of securities

Bank debt securities include mortgage Pfandbriefe, public Pfandbriefe, debt securities issued by special purpose credit institutions and other bank debt securities.

Mortgage Pfandbriefe also encompass ship mortgage Pfandbriefe. Comparable debt securities issued by specialised credit institutions are not included.

Public Pfandbriefe comprise communal bonds issued by public credit institutions and similar debt securities (eg "Landesbodenbriefe", "Bodenkulturverschreibungen", debt securities issued to finance shipbuilding and guaranteed by local authorities), provided that they have been issued in accordance with section 8 of the Act on Pfandbriefe and Similar Debt Securities Issued by Public Credit Institutions. Comparable debt securities issued by special purpose credit institutions are not included.

Debt securities issued by special purpose credit institutions include all types of debt securities issued by AKA-Ausfuhrkredit-Gesellschaft mbH, Berliner Industriebank AG (up to August 1994), Deutsche Ausgleichsbank (formerly Lastenausgleichsbank), Deutsche Bau- und Bodenbank AG (up to December 1998), Deutsche Genossenschaftsbank AG (up to September 2001), DZ Bank AG (Deutsche Zentral-Genossenschaftsbank), Deutsche Kreditbank AG (up to June 1995), DSL Bank AG (up to May 2000), Deutsche VerkehrsBank AG (up to December 1998), IKB Deutsche Industriebank AG, Kreditanstalt für Wiederaufbau, Landeskreditbank Baden-Württemberg – Förderbank, Landwirtschaftliche Rentenbank, LfA Förderbank Bayern (formerly Bayerische Landesanstalt für Aufbaufinanzierung), Thüringer Aufbaubank and Staatsbank Ber-

lin (taken over by the Kreditanstalt für Wiederaufbau in September 1994) and by building and loan associations.

Other bank debt securities comprise all bank debt securities which cannot be assigned to any of the above-mentioned categories. They include, for example, "uncovered" debt securities issued by mortgage banks, bearer debt securities issued by credit institutions (including convertible and option debt securities), commercial paper, debt securities equivalent to certificates of deposit and, from September 1977 onwards, marketable savings bonds.

Corporate bonds comprise debt securities issued by enterprises (other than credit institutions), including those in the form of convertible and option debt securities. Debt securities which have been placed directly and are reserved for the issuer's staff members are not included.

Public debt securities comprise bonds, old-style Treasury notes, state government bonds, new-style Treasury notes, and Debt Register claims equivalent to securities issued by the Federal Government, Federal Railways Fund (including Federal Railways and east German Railways), Post Office, German Unity Fund, Currency Conversion Equalisation Fund, Indemnification Fund, ERP Special Fund, Treuhand agency, state governments, local authorities, public special purpose associations and other public associations instituted on a special statutory basis (most recently in 1967), Federal savings notes and five-year Federal notes (Bobls). Up to 1980 this category also included the debt securities and Debt Register claims ("performance bonds") issued by the Equalisation of Burdens Fund (*Ausgleichsfonds*) from April 1964 to recipients of basic compensation under section 252 (3) of the Equalisation of Burden Act (*Lastenausgleichsgesetz*). The debt securities of the Currency Conversion Equalisation Fund are issued in exchange for equalisation claims which came into being at east German credit institutions and foreign trade enterprises in the context of German monetary union. Debt securities of the Indemnification Fund are issued to meet indemnification and compensation payments under the Indemnification and Compensation Act (*Entschädigungs- und Ausgleichsleistungsgesetz*).

"Listed Federal securities" form a major sub-category. They comprise all bonds and Treasury notes issued by the Federal Government, its special funds and the Treuhand agency.

Registered bank debt securities include order debt securities not forming part of an issue. They do not, however, include registered paper handed to the lender merely as collateral for loans.

Floating rate notes are debt securities whose interest rate is reset during their life on the basis of a certain reference variable. Debt securities which, at the time of their issue, are provided with different interest rates at different times, such as Federal savings notes, are not included among floating rate notes.

Zero coupon bonds are debt securities on which interest is not paid regularly but only at the time of redemption, ie discounted paper and accrued interest paper.

Commercial paper normally comprises discounted debt securities with maturities of a few days to less than two years which are issued on tap through credit institutions in tranches with varying terms, in the context of an agreed programme volume, which sets the limits of the amount which may be outstanding.

### Sales, redemptions, amounts outstanding

Gross sales means only initial sales of newly issued securities, but not resales of paper temporarily repurchased by the issuer. Securities are deemed to have been sold if the purchase price has been paid or the account of the buyer has been debited.

The debt securities are considered to have been redeemed if they have been finally withdrawn or declared invalid, cancelled, destroyed or handed to the trustee for destruction, but not if they (those still outstanding) have been drawn or called but not yet retired or declared invalid. From January 1969, the redemption figures also include securities handed to the trustee for temporary safe custody. In the event of such paper being put on the market again by resales or additions to the issuer's own portfolio, redemptions for that month are reduced by these amounts. Any excess over redemptions is indicated by a minus sign.

Net sales means gross sales less redemptions. A minus sign indicates an excess of redemptions over the amount newly sold during the period under review.

Amounts outstanding also include debt securities repurchased by the issuer and added to his own portfolio (up to end-December 1968 also securities handed to the trustee for temporary safe custody) and securities drawn or called but not yet retired.

Amounts outstanding do not include:  
debt securities duly executed by the trustee and handed to the bank, but not yet sold;  
debt securities redeemed;  
from January 1969, also debt securities handed to the trustee for temporary safe custody, for the duration of such safe custody.

In the case of zero coupon bonds, the nominal value of sales, amounts outstanding and redemptions is deemed to be the value at the time of issue.

Debt securities provided in advance with different interest rates over time (eg Federal savings notes) are broken down by rate of interest at their average nominal interest rate.

## Tax considerations

Tax-free debt securities are those debt securities originally specified in sections 3 and 3a of the Income Tax Act (*Einkommenssteuergesetz*); this tax exemption was abolished with effect from 31 December 1991. Fully taxed debt securities are all debt securities issued after 1 January 1955, on the interest yield on which domestic holders have to pay income tax.

## Maturities

Maximum maturity as per the terms of issue means the period between the beginning of interest payment in accordance with the issue terms and the final maturity of the debt securities. No account is taken of specially agreed reductions in maturity. Residual maturity in the case of issues falling due en bloc means the period from the month under review until maturity. Maximum residual maturity, in the case of redeemable issues, means the period from the month under review until the maturity of the last instalment. Minimum residual maturity in the case of redeemable issues means the period from the month under review until the maturity of the next instalment. Mean residual maturity means the sum of the minimum and maximum residual maturities divided by two.

Computed residual maturity means the period after which a redeemable issue has to be redeemed en bloc if it is regarded as an issue falling due en bloc with a constant nominal interest rate, constant price and constant yield. If interest payments do not begin (under the terms of issue) until after the month under review, the calculation of the residual maturity is based on this later date.

## Computation of average prices

Average prices of securities sold are issue prices weighted by the amounts sold (at nominal value). The average prices of the debt securities outstanding are spot rates weighted by amounts outstanding at nominal value (up to 1985, average of the four bank-week return dates in a month including the last day of the preceding month). The annual figures are the unweighted means of the monthly figures; 12-monthly figures were not always available for the computation. From January 1977, the average price calculation is based on the same range of debt securities as the yield statistics (see below). Up to 1976, debt securities with a maximum residual maturity of over four years – including those with unscheduled redemptions – were included in the average price calculation.

## Computation of yields

Unlike the nominal interest rate, the bond yield indicates the interest actually received per annum. Its calculation takes account of all the factors influencing the earnings from a debt security. These comprise not only the nominal interest rate but also the frequency of interest payments, the purchase and redemption price, maturity and the mode of redemption (falling due en bloc, falling due in instalments). Yields calculated in this way permit a comparison of the interest actually received on different bonds or a comparison between bonds and other forms of investment (eg savings deposits, the yield on which is wholly dependent on the interest rate).

The yield statistics cover only fully taxed bearer debt securities with a maximum maturity according to the terms of issue of over four years. Convertible debt securities and the like, bank debt securities with unscheduled redemptions (from January 1973), zero coupon bonds, floating rate notes and bonds not denominated in Deutsche Mark/euro issued by residents are not included. The yields of redeemable issues are based on the mean

residual maturity and, from January 1973, on the computed residual maturity. From January 1971 to December 1976, such debt securities were included in the calculation of total yield and of yield by type of security only if their (maximum) residual maturity exceeded four years; from January 1977, the calculation covers securities with a mean residual maturity of more than three years. Group yields are weighted by the amounts outstanding at market prices (up to December 2001, by nominal amounts outstanding) or (in the case of issue yields) the amounts sold of the debt securities included in the calculation. Owing to the monthly changes in the composition of the debt securities included in the calculation, the movement of the computed yield is to be attributed not only to changes in the interest rate level but – particularly in the case of the issue yields – also to structural influences (eg changes in the maturity pattern). The monthly figures on yields outstanding are calculated on the basis of the yields based on the spot rates on all the trading days in a month; until 1986, on the basis of the yields on the four bank-week return dates in a month (including the yields on the last day of the preceding month). The annual figures are the unweighted means of the monthly figures; 12 monthly figures were not always available for the computation, especially in the case of issue yields.

#### Calculation of data on the term structure of interest rates (Table II.7(e))<sup>1</sup>

The term structure of interest rates in the bond market shows the relation between the interest rates and maturities of zero coupon bonds without a default risk. The data on the term structure of interest rates published here are estimates derived from the observed yields to maturity of coupon bonds outstanding. In contrast to the implied assumption when calculating yields to maturity that all payment flows of a coupon bond carry the same rate of return (namely the yield to maturity), the estimation of the term structure of interest rates assumes a different rate of return for each payment flow of a coupon bond at the interest rate corresponding to the current market conditions on the respective payment date. The individual payment flows of a coupon bond are regarded as redemptions of zero coupon bonds with different maturities and interest rates. The prices and interest rates of these notional individual zero coupon bonds are unknown, however, since they are only traded as a bundle in the form of the coupon bond. The price of the coupon bond, which is interpreted as the aggregate price of the

component zero coupon bonds, reflects the interest rate expectations of market participants which are to be captured in the envisaged term structure of interest rates. If the individual payment flows of a coupon bond were discounted at the respective interest rates of this (unknown) term structure of interest rates, the sum of the present values should theoretically equal the market price of the coupon bond and hence also its market yield.

This being so, the term structure of interest rates can be calculated with the help of a non-linear optimisation procedure. In this process, the individual payment flows of the coupon bonds are first discounted at the interest rates of a tentatively specified term structure and the notional coupon bond yields to maturity which are derived from the sum of the present values of the payment flows are compared with the actual yields to maturity observed in the market. The specified term structure is varied until the deviations between the notional yields to maturity and the market yields of the coupon bonds included in the estimate are minimised. The term structure of interest rates thus derived then approximately matches the term structure in the bond market which determines the market prices of coupon bonds.

The estimation of the term structure of interest rates is based on listed Federal bonds (Bunds), five-year Federal notes (Bobls) and Federal Treasury notes (Schätz). These securities are largely homogeneous, so that the maturity range of up to ten years, which is the focus of interest, is sufficiently well represented. To avoid distortions at the short end of the term structure, securities with a residual maturity (time to maturity) of less than three months are not included. However, the inclusion of bonds with a residual maturity of between three months and one year ensures that the one-year interest rate can be reliably estimated.

For the purpose of the estimation, an assumption is made about the functional relation between interest rates and residual maturities. In the estimation approach used here, the interest rate is defined as the sum of a constant and various exponential terms (where the re-

---

<sup>1</sup> Before the transition, in October 1997, to the regular computation of the term structure of interest rates, the yield curve was published; the latter continues to be calculated, and the results are still available to interested parties.

sidual maturity has a negative sign in the exponent) and as a function of a total of six parameters:

$$z(T, \beta, \tau) = \beta_0 + \beta_1 \left( \frac{1 - \exp(-T/\tau_1)}{(T/\tau_1)} \right) \\ + \beta_2 \left( \frac{1 - \exp(-T/\tau_1)}{(T/\tau_1)} - \exp(-T/\tau_1) \right) \\ + \beta_3 \left( \frac{1 - \exp(-T/\tau_2)}{(T/\tau_2)} - \exp(-T/\tau_2) \right)$$

where  $z(T, \beta, \tau)$  denotes the interest rate for maturity  $T$  in years as a function of the parameter vectors  $(\beta_0, \beta_1, \beta_2, \beta_3)$  and  $(\tau_1, \tau_2)$  denotes the parameters to be estimated.

This parametric approach is sufficiently flexible to reflect the data constellations observed in the market. These include monotonically rising, declining, U-shaped, inverted U-shaped and S-shaped curves. Unlike non-parametric approaches, this estimation procedure smooths out individual kinks in the curve so that the estimation results are relatively little influenced by individual observations. This makes them less suited to identify, for example, abnormalities in individual maturity segments or in individual securities. However, they provide curves which are relatively free of outliers and thus are easier to interpret for monetary policy analysis.

For further details of the process of estimating term structure data see Deutsche Bundesbank, Estimating the term structure of interest rates, *Monthly Report*, October 1997, pages 61-66.

### Debt securities issued by non-residents

The figures published for debt securities issued by non-residents refer to debt securities issued by German managed syndicates. Statistical results are shown only for debt securities denominated in Deutsche Mark or euro.

### Shares issued by residents

Sales of shares cover share issues against cash payment (including shares issued out of company profits) and the exchange of convertible debt securities. Partly paid-up shares are included in sales at the amount paid up.

Bonus shares comprise the shares issued under the Act on Capital Increases out of Company Resources and on the Profit and Loss Account (*Gesetz über die Kapitalerhöhung aus Geschäftsmitteln und über die Gewinn- und Verlustrechnung*) of 23 December 1959 and under the Companies Act (*Aktiengesetz*) of 6 September 1965, sections 207 to 220.

### Securities indices

To present the general price and earnings trends of securities, price indices and performance indices of shares or debt securities have to be computed. While pure price indices only reflect the price movements of constant securities deposits, performance indices show the value movements of a portfolio, in which current earnings are reinvested.

The CDAX share price index (formerly known as the all-share price index (FWBX)) of Deutsche Börse AG shows the average price movements of all shares of companies domiciled in Germany listed on the Frankfurt stock exchange in the Prime Standard and General Standard segments. When computing the index, price reductions and price distortions which arise in the case of capital changes (capital increases with subscription rights, capital adjustments, issues of bonus shares, capital reductions, admissions and retirements of public limited companies) are eliminated. By contrast, price movements in connection with the distribution of dividends are not eliminated.

The Composite DAX (CDAX) of Deutsche Börse AG is the performance index matching the CDAX share price index. It does not describe the price movements but the value movements of the securities portfolio analysed, with dividends and the proceeds of subscription rights being reinvested in the portfolio.

The German share index (DAX) of Deutsche Börse AG is also a performance index which describes the value movements of a portfolio of 30 standard shares. The index has been calculated on an original basis since the end of 1987; values dating even further back have been obtained by Deutsche Börse AG by linking up with the share price index published by the *Börsenzeitung*; from 1981, the share price index consisted of an unweighted performance index and, before that, of a price index.

Unlike the German share index (DAX), the DAX share price index tracks only the price movements of a portfolio comprising 30 blue chips. Changes in capital are treated in the same way as in the CDAX share price index. It contains no retrospective calculations for the period prior to 1987.

The German bond index (REX) is calculated by Deutsche Börse AG as the weighted average of the prices of 30 synthetic bonds with coupons of 6%, 7½% and 9% and with whole-year (residual) maturities of one to ten years that are constant over time. The prices are derived from the corresponding yields of an econometrically estimated yield pattern (based on the daily closing prices) of Federal bonds (including the German Unity Fund and the Treuhand agency). They are weighted jointly at constant weights which represent the significance of the individual bond categories in the German bond market, taking the average of the years from 1967 to 1991. The bonds in the REX portfolio have an average coupon of 7.44% and an average maturity of 5.49 years.

The REX performance index (REXP) of Deutsche Börse AG is the performance index matching the debt securities portfolio of the German bond index (REX). It depicts the value movement of the REX portfolio, with coupon payments being reinvested in the portfolio, while retaining the portfolio structure. It is assumed that the average coupon income, amounting to 7.44% per annum, accrues uniformly over all the days of a year and is reinvested regularly. The daily reinvested coupon income is discounted in such a way that, after taking due account of the compound interest effect running for less than one year, precisely the average annual income of 7.44% (seen over the entire year) is obtained.

The iBoxx € Germany bond price index calculated by Deutsche Börse AG on behalf of iBoxx GmbH shows the price movements of listed Federal securities issued by the Federal Government (Federal bonds (Bunds), five-year Federal notes (Bobls), Federal Treasury notes (Schätze)) and by the Treuhand agency. It is part of the iBoxx € bond index family, which depicts the market for fixed interest securities denominated in euro or the legacy currencies of the euro-area member states. Unlike the German bond index (REX), the portfolio in the iBoxx € Germany bond price index is not composed of synthetic securities but of Federal securities actually outstanding in the market. The index basket is adjusted at the start of each

month. The prices included in the calculation are based on current data from a fixed group of banks.

The iBoxx € Germany performance index is the performance index matching the iBoxx € Germany bond price index. In line with the monthly adjustment of the index basket, due coupon payments are reinvested in the portfolio only at the start of each month. The accrued interest accumulating between coupon payments is, however, included in the daily index calculation.

## Stock market turnover, options trading and futures contracts

The statistics detailed below are based on transactions on German stock exchanges and on trading in products listed on Eurex, which is a merger of the German Financial Futures Exchange (DTB) and the Swiss Options Financial Futures Exchange (Soffex). Prior to that merger and until June 1998, DTB transactions were shown in the statistics in place of Eurex transactions.

Up to the end of 1986, stock market turnover comprised the turnover in securities recorded on the stock exchanges in the Federal Republic of Germany through the intermediation of official and unofficial brokers (at uniform or variable prices).

Since January 1987, stock market turnover has been published by the Federation of German Stock Exchanges (from January 1993, by Deutsche Börse AG) in accordance with an expanded definition. In all transactions, both the buying side and the selling side are counted. In addition, trading among brokers is now generally included as well. Non-local securities transactions and direct interbank transactions which are keyed into the stock exchange computer are likewise recorded (in the case of debt securities, however, from 1988 only). Stock market turnover also includes the turnover in IBIS or Xetra trading.

Options and futures transactions are financial futures transactions which, as such, do not lead to an immediate flow of funds corresponding to the underlying principal amount. Options trading in shares and bonds, which was introduced on the German stock exchanges in 1970 and 1986 respectively, was severely curtailed and finally discontinued in April 1997 following the emergence of new

markets for derivative financial instruments; the traded stock options quoted there exclusively related to shares for which stock options were not offered on the German Financial Futures Exchange (DTB). The contracts (futures and options) listed below are among those traded on Eurex, which was designed as a computerised stock exchange.

DAX futures: From January 1999, the value of a contract has been €25 (previously DM100), multiplied by the number of index points of the DAX index. DAX futures contracts can be completed by means of cash settlement only. If the Xetra DAX value (final settlement price), which is calculated in an intraday auction on the last trading day, is above (or below) the price when the transaction was concluded, the seller (or buyer) is obliged to pay the difference to the buyer (or seller).

Bund futures: A Eurex Bund futures contract is a futures contract involving a typical debt securities issue of the Federal Republic of Germany with a nominal value of €100,000 (Euro Bund futures) or DM250,000 (Bund futures up to March 1999) and a nominal interest rate of 6%. For the delivery of long-term Bund futures, bonds issued by these borrowers with a residual maturity of eight and a half to ten and a half years (for contracts maturing up to September 1997, eight and a half to ten years) are eligible and, for medium-term Bund futures (Bobl futures), five-year Federal notes (Bobls) and Federal Treasury notes (Schätz) with a residual maturity of four and a half to five and a half years (for contracts maturing up to June 2000, three and a half to five years) and a minimum issue volume of DM4 billion, in the case of new issues, €2 billion from January 1999. The coupons of the eligible debt securities that deviate from the typical 6% issue are included in the computation of the final settlement price by means of a conversion factor.

Share options: From 18 December 1998, only options on shares included in the DAX have been offered. A share option contract normally relates to shares with a face value of DM500 or the corresponding equivalent in euro (before April 1998, DM2,500).

DAX options: The value of a contract is dependent on the current level of the DAX index, valued at €5 (DM10 up to the end of 1998) per index point. The buyer of a DAX put option (or call option) acquires the right to be paid the

difference by which the index level exceeds (or falls short of) the agreed strike price, multiplied by €5.

Options on medium-term and long-term Bund futures: Option contracts each relate to one of the Bund futures contracts tradeable at the same time on Eurex.

In the case of the statistical recording of Eurex transactions, the transaction between buyer and seller is counted only once (as one contract) – unlike the situation in the case of stock market turnover.

## Mutual funds

The statistics on mutual funds (previously statistics on investment companies) have been revised in accordance with the Investment Act (*Investmentgesetz*) which entered into force on 1 January 2004. These statistics cover investment assets built up, pursuant to the Investment Act of 19 December 2003 (Federal Law Gazette I, page 2676), by investment companies and investment companies established as public limited companies (with a variable or fixed equity capital). Investment fund assets are used for joint capital investment in accordance with the principle of risk diversification.

Investment companies are companies whose main purpose is to manage special funds (mutual funds) on behalf of investors. They are open-end funds with investors being entitled to return the shares.

A distinction based on investor groups needs to be made between funds open to the general public and specialised funds. As defined in the Investment Act, specialised funds are funds whose shares are held on the basis of a written agreement by no more than 30 shareholders that are not natural persons (up to December 2003, as defined in the Act on Investment Companies, by no more than ten such shareholders). All investment funds which are not covered by the definition of specialised funds are recorded as funds open to the general public.

Public limited investment companies are companies whose business objective is defined in their articles of agreement as investing and managing their resources for the purpose of joint capital investment in assets pursuant to the Investment Act. Public limited investment companies may be a vehicle for the launch of special funds

with additional risks (hedge funds) and/or for other products without any return entitlement.

The types of funds are defined in conformity with the Investment Act (up to December 2003 the Act on Investment Companies). Since their launch, money market funds (September 1994), pension investment funds

(October 1998), funds of funds (January 1999) and mixed securities-based and real estate funds (June 1999) have also been included. Since January 2004 mixed securities-based and real estate funds have been recorded under the broader category of mixed funds, as defined in the Investment Act.

\* Die Angaben beziehen sich auf den Kreis von Rentenwerten, der in die Rentenberechnung (Tab. 7b) einbezogen wird. Durch die laufenden Verschiebungen in der Struktur des Umlaufs kann die Veränderung der Durchschnittskurse für alle Zinssätze (bzw. für alle Wertpapierarten) deutlich von den Veränderungen der Durchschnittskurse für die einzelnen Zinssätze (bzw. für die einzelnen Wertpapierarten) abweichen.

II. Festverzinsliche Wertpapiere inländischer Emittenten

1 Renditen für vergleichbare Restlaufzeitklassen siehe Tabelle II. 7c — 2 Nur futurefähige Anleihen; als ungewogener Durchschnitt ermittelt. Monatsdurchschnitte bis einschließlich April 1994 aus den Renditen an den

vier Bankwochenstichtagen (einschließlich der Ultimorendite des Vormonats) berechnet. — 3 Aufteilung nach Emittentengruppen siehe Tabelle III. 2.

## II. Festverzinsliche Wertpapiere inländischer Emittenten

\* Zinssätze für (hypothetische) Null-Kupon-Anleihen ohne Kreditausfallrisiko, geschätzt nach dem in den Erläuterungen zu diesem Beiheft dargestellten Verfahren. Den Schätzungen liegen die Kurse von Bundesanleihen, Bundesobligationen und Bundesschatzanweisungen bzw. von Pfandbriefen (Hypothekenpfandbriefe und öffentliche Pfandbriefe) mit Restlaufzeiten

von mindestens drei Monaten zugrunde. Die Zinsen werden mit Hilfe eines nichtlinearen, parametrischen Ansatzes geschätzt. Angaben zu Restlaufzeiten von 11 bis 15 Jahren sowie die Parameter zur Berechnung der Zinsstruktur werden auf Anfrage zur Verfügung gestellt. Beziehungsweise stehen auf der Homepage der Deutschen Bundesbank zur Verfügung.

## II. Festverzinsliche Wertpapiere inländischer Emittenten

### 8a) Brutto-Absatz von Bank-Namensschuldverschreibungen

Bis Ende 1998 Mio DM, ab 1999 Mio € Nominalwert

| Zeit         | Insgesamt | Hypothekenpfandbriefe | Öffentliche Pfandbriefe | Schuldverschreibungen von Spezialkreditinstituten | Sonstige Bankschuldverschreibungen |
|--------------|-----------|-----------------------|-------------------------|---|------------------------------------|
