#### Footnotes to Table VI.1

- 1 Gold parity agreed with the International Monetary Fund or fixed autonomously, US\$ parity (or central rate) or official US\$ rate. The parities agreed with the IMF ceased to apply with the entry into force of the Second Amendment of the IMF Articles of Agreement on 1 April 1978.
- 2 The DM parities were calculated on the basis of the US\$ relationships (DM currency since 21 June 1948).
- 3 Multiple exchange rate system (Belgium since 1951, France from 21 August 1971 to 20 March 1974, Italy from 22 January 1973 to 21 March 1974).
- 4 Owing to the revaluation of the Deutsche Mark.
- 5 Central rate; in Switzerland: middle rate. See also the footnotes to Table VI.2.
- 6 DM comparative value, calculated on the basis of the US\$ relationship in conjunction with the central rate US\$ 1 = DM 3.2225 (until 13 February 1973) or US\$ 1 = DM 2.9003 (from 14 February to 18 March 1973).
- 7 Reciprocal value of the conversion rate of DM 1 = US\$ 0.30 fixed according to the JEIA Operational Memorandum No 25, Amendment No 1.
- 8 With effect from 1 January 1963: Fmk 100 (old) = Fmk 1 (new).
- 9 Valid until 25 January 1948.
- 10 Under the system of rates used in France, the pro rata conversion of the US dollar on the basis of the official and the free rate yielded DM equivalents which fluctuated on average between DM 1.23 and DM 1.27 for Ffr 100.
- 11 Between 2 February 1948 and 19 September 1949 a multiple exchange rate system.
- 12 Against the official rate of 26 January 1948.
- 13 Official US\$ major rate plus 20% premium (Ffr 350 + Ffr 70 = Ffr 420); from June 1958 the premium was included in the rate.

26 According to publications of the Swiss National Bank.

27 In German-Swiss payment transactions, the following bilateral exchange rates were applied: US\$ 1 = Sfr 4.31 (until 30 November 1948); US\$ 1 = Sfr 4.305 (between 1 December 1948 and 18 September 1949); US\$ 1 = Sfr 4.30 (between 19 September and 12 October 1949).

28 According to the Federal Coinage Act of 17 December 1952 (which came into force on 20 April 1953) the franc corresponded to 63/310 (0.20322 ...) grams of fine gold.

### Footnotes to Table VI.2

Special drawing rights, which were created as an international reserve asset in 1969, were equal in value to the US dollar (US\$ 1 = 0.888671 grams of fine gold) up to the Monetary Conference in Washington on 18 December 1971 as, in accordance with Article XXI (2) of the Articles of Agreement of the International Monetary Fund in the wording of 1969 (first amendment of the Articles of Agreement), the unit of value of special drawing rights corresponded to 0.888671 gram of fine gold. The introduction of central rates, which took place in accordance with the Washington Agreements (Smithsonian Agreement of 18 December 1971) on the basis of decision No 3463-(71/126) of 18 December 1971 by the IMF directors, which was amended by decision No 4083-(73/104) of 7 November 1973, made it possible for IMF member countries temporarily to fix new exchange rate relationships for their currencies. According to paragraph 2(b) of that decision, a central rate for a member currency could be reported in gold, in units of value of special drawing rights or in the currency of another member of the IMF. After the IMF parities had ceased to exist on 1 April 1978, the central rates reported to the IMF under the terms of the decision of 18 December 1971 were likewise of no practical significance, since with the deletion of Article IV 4(a) of the IMF Articles of Agreement in the former wording, they ceased to have any legal basis.

- 2 The following countries participated in the joint float: as from 19 March 1973 Belgium/Luxembourg, Denmark, Germany, France (until 18 January 1974 and between 10 July 1975 and 12 March 1976), the Netherlands, Norway (until 11 December 1978) and Sweden (until 26 August 1977). From 19 March 1973 the spot middle rates of those countries were kept within a fluctuation band of 2.25% (except Belgium/Luxembourg and the Netherlands, which had agreed on fluctuation margins of approx. 1.5% until 12 March 1976).
- 3 Because of the appreciation of the Deutsche Mark.
- 4 From 14 February 1973 (owing to the change in the central rate of the Deutsche Mark against the US dollar) the computed values are SDR 1 = DM 3.49877 and DM 1 = SDR 0.285814.
- 5 Central rate notified to the IMF by the Federal Government.
- 6 Effective until 18 March 1973; thereafter, the exchange rate of the Deutsche Mark floated against the currencies of those countries which did not participate in the joint float.

- 8 Computed relationship (not notified to the IMF as the central rate).
- 9 Sweden no longer participated in the joint float from 29 August 1977.

## Explanatory notes

### Exchange rates in the euro area and in Germany

---

#### **Euro reference rates of the European Central Bank and effective exchange rates of the euro**

On 1 January 1999 eleven member states of the European Union adopted the euro as their single currency (see Excerpts from official announcements, pp 21-26). On 1 January 2001, Greece joined the European Monetary Union, followed by Slovenia on 1 January 2007 and Cyprus and Malta on 1 January 2008 (for details see table I.6., p 8).

Since the introduction of the euro, there has been no autonomous foreign exchange market for the currencies replaced by the euro; the euro alone is quoted against non-euro-area currencies such as the US dollar, the yen etc. Since 4 January 1999 the ECB has published, each working day, reference rates for selected currencies. The reference rates are calculated on the basis of the daily concertation between central banks which takes place at 2.15 pm. Only one reference rate, ie the middle rate, is established by this procedure.

#### **Euro/US dollar exchange rates during the day**

The rates shown in the table are the buying rates predominating in the interbank market between 8.30 am and 4.30 pm; they have been compiled by the Deutsche Bundesbank from information disseminated by business news agencies. They are intended to provide a rough picture of the movement of the rates in the course of the day. It is not known whether deals were conducted at the quoted rates or, if they were, to what extent this occurred. In ascertaining the highest and lowest daily rates, account is taken of both the half-hourly recorded buying rates and all the data on rates communicated by the reporting banks.

The rates in the interbank market shown in this table are not to be confused with the euro reference exchange rate of the ECB for the day in question, which is listed as a memo item (see also Table I1).

## ECU values of the European Monetary System (EMS)

The ECU was the currency unit of the European Monetary System, which entered into force on 13 March 1979. It was used as a unit of account in all areas of the Community from 1981 and succeeded the European Unit of Account (introduced in 1975), with which it was identical in definition and value at the time of transition. At the start of the third stage of European Economic and Monetary Union on 1 January 1999, the euro replaced the ECU as the accounting unit of the European Communities in the ratio of 1:1.

According to the arrangements relating to the EMS, the intention was for the weights of the currencies to be reviewed every five years and revised if necessary. With the first revision (17 September 1984) the Greek drachma was included in the basket; since the admission of the Spanish peseta and the Portuguese escudo with effect from 21 September 1989 (second revision), the currencies of all EC member states at that time were included in the basket. The periodic review of the weights of the currencies in the ECU definition was discontinued upon the entry into force of the Treaty on European Union on 1 November 1993; the composition of the ECU currency basket was not subject to further change. The currencies of the three countries which acceded to the European Union on 1 January 1995 (Austrian schilling, Swedish krona, Finnish markka) were therefore not included in the ECU basket.

The arithmetical value of the ECU in terms of a given currency was the total of the equivalents of the amounts in that currency indicated in the table below.

The European Commission based its arithmetical calculation of the ECU daily rates on the representative US dollar rates at 2.15 pm. These rates were communicated to it by the central banks of the countries represented in the ECU basket of currencies. On the basis of these rates, the equivalent of the ECU was computed first in US dollars and then in all EU currencies.

Composition of the ECU basket			
	As from 13 Mar 1979	As from 17 Sep 1984	As from 21 Sep 1989
Deutsche Mark	0.828	0.719	0.6242
Pound sterling	0.0885	0.0878	0.08784
French franc	1.15	1.31	1.332
Italian lira	109.00	140.00	151.8
Dutch guilder	0.286	0.256	0.2198
Belgian franc	3.66	3.71	3.301
Luxembourg franc	0.14	0.14	0.130
Danish krone	0.217	0.219	0.1976
Irish pound	0.00759	0.00871	0.008552
Greek drachma	–	1.15	1.440
Spanish peseta	–	–	6.885
Portuguese escudo	–	–	1.393

These arithmetical daily rates of the ECU, expressed in terms of Community currencies (and some other currencies), were published regularly – to six significant figures – in the Official Journal of the European Communities (C series).

The ECU rates regularly quoted in the market for private ECU financial instruments could differ from these arithmetical rates because they reflected current supply and demand.

## Overview of the currencies of the world

### Currencies and exchange rates in particular countries

The rates listed in this table are in all cases the latest end-of-month rates known to us in a given month; in general they have been taken from reliable sources in the country in question. However, we do not know whether conversions were actually carried out at those rates in all cases.

In the case of multiple exchange rate systems, the types of rates are explained in footnotes. If no rates for the euro are available from a country, we have calculated comparative values at the exchange rates and relationships shown and marked them "W" in the column "type of rate".

The previous year average specified in this table was essentially calculated from all the rates or comparable figures available to us.

In addition to the generally accepted currency designation and its abbreviation, the three-character alphabetical ISO currency code (see also Table V) was developed by the International Organization for Standardization as ISO Standard 4217. This currency code is designed to enable uniformly abbreviated designations for currency-related values to be used in international financial transactions. This applies, *inter alia*, to all external payments under the SWIFT system (Society for Worldwide Interbank Financial Telecommunication). These abbreviations do not replace the official national short designations of the currencies.

## Values of the special drawing right

Since 1 April 1978 the value of the special drawing right, which was previously also defined in terms of gold, has been defined only as the sum of the values of fixed amounts of a number of currencies. Since 1 July 1974 the International Monetary Fund has been using this "standard basket" technique to determine the equivalent of an SDR unit in national currency.

Until the end of December 1980, the SDR basket comprised sixteen currencies. With effect from 1 January 1981, the number of currencies included in the basket was reduced from sixteen to five. With the introduction of the euro on 1 January 1999 this number was further reduced to four.

The composition of the currency basket as well as the weight and amount of the currency units in the basket are reviewed every five years. As a result of the latest review, conducted in 2005, since 1 January 2006 the SDR basket has contained the fixed currency amounts shown in column (a). They were fixed on 30 December 2005, on the basis of the average exchange rates in the

London spot exchange market in the fourth quarter of 2005, in such a way that they corresponded to the initial percentage weights listed in column (b) and generated the same SDR value on 30 December 2005 as did the basket until the end of 2005.

	(a)	(b)
US dollar	0.632	44
Euro	0.410	34
Yen	18.4	11
Pound sterling	0.0903	11

With the introduction of the euro as the single currency for initially eleven member states of the European Union, an adjustment of the selection criteria for the currencies of the SDR valuation basket was required. Hence the former criterion, whereby the currencies of the member states with the highest exports of goods and services were chosen, was extended in such a manner that it now also includes exports by monetary unions incorporating IMF members. In the case of a monetary union, exports of goods and services do not cover cross-border trade between the members of the monetary union.

Moreover, a second selection criterion was introduced so as to ensure that the currencies included in the basket are actually the commonest currencies used in international transactions. To that end, the IMF must state that a currency included in the basket is "freely usable". A currency is deemed to be freely usable if, in the estimation of the Executive Board of the IMF, it is widely used in payments for international transactions and is heavily traded in the major foreign exchange markets.

The weights of the various SDR basket currencies continue to depend on the value of exports of goods and services, and the value of the reserve balances held in those currencies by other member states of the IMF in the five years preceding the year of review.

The above-mentioned currency components are converted into US dollars on the basis of the market rates on every business day. In principle, the middle rates between the buying and selling rates fixed at noon in the London spot exchange market are used as market rates. The sum of the US dollar equivalents of the

currency components yields the rate for the SDR in terms of the US dollar. Exchange rates for the SDR in terms of all other currencies are ascertained, using the rate for the SDR in terms of the US dollar, from the representative market exchange rates of these currencies for the US dollar. The representative rate for the Deutsche Mark was the official middle rate for the US dollar on the Frankfurt Exchange, whereas for the euro it is the reference rate of the European Central Bank.

The SDR is used by the IMF as a unit of account for its transactions and for all conversions into national currencies. In addition, the SDR is used by public and private bodies in Germany and abroad, inter alia as the "successor" to those units of account which had hitherto been defined in terms of gold (eg gold francs).

Quelle: IWF, Washington. — 1 Die Währung eines anderen Landes ist als alleiniges gesetzliches Zahlungsmittel in Umlauf, oder das Mitglied gehört einer Währungsunion an, in der die Mitglieder der Union das gleiche gesetzliche Zahlungsmittel verwenden. — 2 Ostkaribische Währungsunion. — 3 Das Land praktiziert ein vom IWF unterstütztes oder sonstiges geldpolitisches Programm. — 4 Westafrikanische Wirtschafts- und Währungsunion. — 5 Zentralafrikanische Wirtschafts- und Währungsgemeinschaft. — 6 Währungssystem, aus dessen gesetzlicher Grundlage sich die Verpflichtung ergibt, Inlandswährung gegen eine bestimmte Auslandswährung zu einem festen Wechselkurs umzutauschen, wobei die Emissionsstelle Beschränkungen unterliegt, um die Erfüllung ihrer gesetzlichen Verpflichtung zu gewährleisten. — 7 Das Land hat mehr als einen nominalen Anker, an dem die Geldpolitik ausgerichtet werden kann. — 8 Das Land bindet seine Währung (formell oder de facto) mit einem festen Kurs an eine große Währung oder einen Währungskorb, wobei der Wechselkurs innerhalb einer engen Bandbreite von weniger als 1% um einen Leitkurs schwankt. — 9 Der Wert der Währung wird innerhalb von Schwankungs-

breiten eines formell oder de facto festen Kurses gehalten; dabei darf die Währung um mehr als 1% um einen Leitkurs schwanken. — 10 Die Währung wird regelmäßig in kleinen Schritten mit einem festen, vorher angekündigten Prozentsatz oder als Reaktion auf Veränderungen ausgewählter quantitativer Indikatoren angepasst. — 11 Die Währung wird innerhalb bestimmter Schwankungsbreiten um einen Leitkurs gehalten, der regelmäßig mit einem festen vorher angekündigten Prozentsatz oder als Reaktion auf Veränderungen ausgewählter quantitativer Indikatoren angepasst wird. — 12 Die Währungsbehörde beeinflusst die Wechselkursbewegungen durch aktive Interventionen am Devisenmarkt, ohne im Voraus einen Pfad für den Wechselkurs festzulegen und anzukündigen oder sich zur Einhaltung eines solchen Pfades zu verpflichten. — 13 Der Wechselkurs wird vom Markt bestimmt, wobei etwaige Devisenmarktinterventionen die Veränderungsrate dämpfen und übermäßige Wechselkursschwankungen verhindern, jedoch kein bestimmtes Kursniveau herbeiführen sollen. — 14 Abweichung von der Quelle; siehe Auszüge aus amtlichen Bekanntmachungen (Seite 69 ff.).
