12		Effects of TARGET2/T2S consolidation on the reporting of settlement references in credit and debit notifications and in account statements

## 1 Introduction

All items to be processed between the SEPA-Clearer and direct SEPA-Clearer participants are exchanged in the form of physical files. The formats of the individual files and bulks (logical files contained in files) are specified in the corresponding sections of this document.

If the XML format and syntax rules defined in the XSD schema files are not observed, a file rejection message is generated by the SEPA-Clearer. With regard to outgoing files, the data formats provided meet the specifications of this document.

In its SCT service, the SEPA-Clearer supports SEPA credit transfers in XML format in accordance with ISO 20022 and the EPC specifications. Checking rules that go beyond schema validations are described in the following sections.

Message type pacs.002.001.03SCL used in the CVF or QVF does not form part of the EPC specifications. It is a rejection message which the SEPA-Clearer sends to the submitter in the event of an error to inform them about rejected bulks or individual transactions (at the validation or settlement stage).

## 2 Duplication checks and cross-referencing checks

### 2.1 Duplication checks in the SEPA-Clearer

Participants in the RPS SEPA-Clearer are advised to unambiguously reference each individual transaction every business day. Ensuring that payments are unambiguous helps to avoid duplicate payments and makes it easier to classify and trace specific payments.

The SEPA-Clearer carries out duplication checks in the SCT service at file, bulk and individual transaction level. These cover the following criteria, from which an unambiguous key can be derived.

- Service
- Reference number
- Identification of the party that allocated the reference
- Interbank settlement date (determined by the processing window used in the SEPA-Clearer) or processing day in the SEPA-Clearer

The table below shows the duplication criteria applying at file, bulk and individual transaction levels.

	Origin	Service	Reference number	BIC	Date
Files	ICF / IQF file header	SCT	File reference If a file is rejected, it must always be given a new file reference before it is resubmitted.	Sending institution	-
ICF / IQF bulks	ICF / IQF group header or assignment	SCT	Message ID or identification It is necessary to ensure that the <Msgld> remains unambiguous for the pacs message types (pacs.008, pacs.004 and pacs.028) and the <Id> of the camt types (camt.027, camt.087, camt.056 and camt.029 (see explanatory note on <Msgld> and <Id>).	Instructing agent	Interbank settlement date
Credit transfer	pacs.008	SCT	Transaction ID	Debtor agent	Interbank settlement date
Return	pacs.004	SCT	Return ID	Original creditor agent	Interbank settlement date
Payment cancellation request	camt.056	SCT	Cancellation ID	Original debtor agent	SCL processing day

	Origin	Service	Reference number	BIC	Date
Resolution of investigation	camt.029	SCT	Cancellation Status ID (Version 03) or Modification Status ID (Version 08)	Original creditor agent	SCL processing day
Payment Status Request	pacs.028	SCT	Status Request ID	Original Debtor Agent	SCL processing day
Claim Non-Receipt	camt.027	SCT	Case ID	Original Debtor Agent	SCL processing day
Claim for Value Date Correction	camt.087	SCT	Case ID	Original Debtor Agent	SCT processing day

## 2.2 Duplication checks in other CSMs

The Deutsche Bundesbank routes SEPA credit transfers which cannot be processed in the SEPA-Clearer via other CSMs. To avoid rejections by other CSMs on account of other duplication checks, the references entered in the following message elements should be kept unambiguous for an extended period of time (at least three months) by, for example, applying a time stamp.

- Message identification (bulk level; pacs.008, pacs.004 and pacs.028)
- Identification (bulk level; camt.056, camt.029, camt.027 und camt.087)
- Transaction ID (individual transaction level; pacs.008)
- Return ID (individual transaction level; pacs.004)
- Cancellation ID (individual transaction level; camt.056)
- Cancellation status ID / Modification Status ID (individual transaction level; camt.029)
- Status Request ID (individual transaction level; pacs.028)
- Case ID (individual transaction level; camt.027)
- Case ID (individual transaction level; camt.087)

The individual participant is responsible for any rejections by other CSMs owing to duplicate submissions arising from that participant's non-compliance with the aforementioned rules for completing fields. Furthermore, that participant shall be liable for any resulting damages, breaches of return deadlines defined in the rulebook etc.

### **2.3 Cross-referencing checks by other CSMs**

Among other activities, the SEPA-Clearer routes R-transactions to other CSMs. Where applicable, other CSMs may subject these R-transactions to cross-referencing checks on the basis of references entered in the individual message elements and entries contained in other message elements of the original transaction as listed under the previous sub-item (eg the original interbank settlement date or the original interbank settlement amount), the aim being to establish whether the original transaction was also processed using this other CSM.

If the details contained in the R-transaction regarding the original transaction do not exactly match the data relating to the original transaction or if the original transaction has the wrong status, this may result in the R-transaction being rejected by the other CSM.

### 3 Daily reconciliation report for credit transfers (DRC)

Summary of the SCT bulks submitted to and delivered from the SEPA-Clearer's SCT service, a copy of which is made available to each SEPA-Clearer participant in EBCDIC format every business day at the end of that day's SEPA-Clearer processing schedule. The DRC is not in XML format.

The DRC files delivered by the SEPA-Clearer in ASCII format using the EBICS communication infrastructure do not incorporate any special characters for the line feed at the end of the data record.

#### 3.1 DRC header

Status	Field name	Format	Content	Position
M	Record type	4x	HDRC	0
M	Service identifier	3x	SCT	4
M	File type	3x	DRC	7
M	Sending institution	4!a2!a2!c	SEPA-Clearer's BIC (production: MARKDEFF; test: MARKDEF0)	10
M	Sender's file reference	16!x	SEPA-Clearer's reference	18
M	Date and time	6!n6!n	YYMMDDHHMMSS	34
M	Test code	1x	Either "T" (test) or "P" (production), depending on the processing environment	46
M	Receiving institution	4!a2!a2!c3!c	Originator's BIC/clearing institution's BIC ( <u>not</u> communication partner)	47
M	Business date	6!n	SEPA-Clearer business day	58

### 3.2 DRC (pacs.008) credit transfer bulks sent body

Submissions of original SEPA credit transfers to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DTSB	0
M	Bulk reference	35x	<Msgld> in group header	4
M	Number credit transfers processed	8n	Number of processed transactions in a bulk	39
M	Number credit transfers rejected	8n	Number of records rejected in a bulk	47
M	Value credit transfers processed	18d	Total value of processed transactions in a bulk. If an entire bulk is rejected: 0.00	55
M	Value credit transfers rejected	18d	Total value of records rejected in a bulk. If an entire bulk is rejected, total value of all transactions contained in the bulk	73
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes processing after the first submission window</li> <li>• A "91" denotes processing after the second submission window</li> <li>• A "92" denotes processing after the third submission window</li> <li>• A "95" denotes processing after the fourth submission window</li> <li>• A "96" denotes processing after the fifth submission window</li> <li>• A "99" denotes processing after the sixth submission window</li> </ul>	91

### 3.3 DRC (pacs.004) return bulks sent body

Submissions of returns to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DRSB	0
M	Bulk reference	35x	<MsgId> in group header	4
M	Number returns processed	8n	Number of processed transactions in a bulk	39
M	Number returns rejected	8n	Number of records rejected in a bulk	47
M	Value returns processed	18d	Total value of processed transactions in a bulk. If an entire bulk is rejected: 0.00	55
M	Value returns rejected	18d	Total value of records rejected in a bulk. If an entire bulk is rejected, total value of all transactions contained in the bulk	73
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes processing after the first submission window</li> <li>• A "91" denotes processing after the second submission window</li> <li>• A "92" denotes processing after the third submission window</li> <li>• A "95" denotes processing after the fourth submission window</li> <li>• A "96" denotes processing after the fifth submission window</li> <li>• A "99" denotes processing after the sixth submission window</li> </ul>	91

### 3.4 DRC (camt.056) payment cancellation requests sent body

Submissions of payment cancellation requests (PCRs) to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DCSB	0
M	Bulk reference	35x	<Id> belonging to assignment	4
M	Number PCRs processed	8n	Number of processed transactions in a bulk	39
M	Number PCRs rejected	8n	Number of records rejected in a bulk	47
M	Value PCRs processed	18d	Total value of processed transactions in a bulk. If an entire bulk is rejected: 0.00	55
M	Value PCRs rejected	18d	Total value of records rejected in a bulk. If an entire bulk is rejected, total value of all transactions contained in the bulk	73
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes processing after the first submission window</li> <li>• A "91" denotes processing after the second submission window</li> <li>• A "92" denotes processing after the third submission window</li> <li>• A "95" denotes processing after the fourth submission window</li> <li>• A "96" denotes processing after the fifth submission window</li> <li>• A "99" denotes processing after the sixth submission window</li> </ul>	91

### 3.5 DRC (camt.029.001.03) resolutions of investigation (ROIs) sent body

Submissions of resolutions of investigation (ROIs), version 03, to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DRIB	0
M	Bulk reference	35x	<Id> belonging to assignment	4
M	Number ROIs processed	8n	Number of processed transactions in a bulk	39
M	Number ROIs rejected	8n	Number of records rejected in a bulk	47
M	Value ROIs processed	18d	Total value of processed transactions in a bulk. If an entire bulk is rejected: 0.00	55
M	Value ROIs rejected	18d	Total value of records rejected in a bulk. If an entire bulk is rejected, total value of all transactions contained in the bulk	73
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes processing after the first submission window</li> <li>• A "91" denotes processing after the second submission window</li> <li>• A "92" denotes processing after the third submission window</li> <li>• A "95" denotes processing after the fourth submission window</li> <li>• A "96" denotes processing after the fifth submission window</li> <li>• A "99" denotes processing after the sixth submission window</li> </ul>	91

### 3.6 DRC (pacs.008) credit transfer bulks received body

Deliveries of original SEPA credit transfers from the SEPA-Clearer's SCT service to SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DTRB	0
M	Bulk reference	35x	<MsgId> in group header	4
M	Number credit transfers received	8n	Number of delivered transactions in a bulk	39
M	Value credit transfers received	18d	Total value of delivered transactions in a bulk	47
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes deliveries made from the first delivery window</li> <li>• A "91" denotes deliveries made from the second delivery window</li> <li>• A "92" denotes deliveries made from the third delivery window</li> <li>• A "95" denotes deliveries made from the fourth delivery window</li> <li>• A "96" denotes deliveries made from the fifth delivery window</li> <li>• A "97" denotes deliveries made from the sixth delivery window</li> <li>• A "98" denotes deliveries made from the seventh delivery window</li> <li>• A "99" denotes deliveries made from the eighth delivery window</li> </ul>	65

### 3.7 DRC (pacs.004) return bulks received body

Deliveries of returns from the SEPA-Clearer's SCT service to SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DRCB	0
M	Bulk reference	35x	<MsgId> in group header	4
M	Number returns received	8n	Number of delivered transactions in a bulk	39
M	Value returns received	18d	Total value of delivered transactions in a bulk	47
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes deliveries made from the first delivery window</li> <li>• A "91" denotes deliveries made from the second delivery window</li> <li>• A "92" denotes deliveries made from the third delivery window</li> <li>• A "95" denotes deliveries made from the fourth delivery window</li> <li>• A "96" denotes deliveries made from the fifth delivery window</li> <li>• A "97" denotes deliveries made from the sixth delivery window</li> <li>• A "98" denotes deliveries made from the seventh delivery window</li> <li>• A "99" denotes deliveries made from the eighth delivery window</li> </ul>	65

### 3.8 DRC (camt.056) payment cancellation requests received body

Deliveries of payment cancellation requests (PCRs) from the SEPA-Clearer's SCT service to SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DRRB	0
M	Bulk reference	35x	<Id> belonging to assignment	4
M	Number PCRs received	8n	Number of delivered transactions in a bulk	39
M	Value PCRs received	18d	Total value of delivered transactions in a bulk	47
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes deliveries made from the first delivery window</li> <li>• A "91" denotes deliveries made from the second delivery window</li> <li>• A "92" denotes deliveries made from the third delivery window</li> <li>• A "95" denotes deliveries made from the fourth delivery window</li> <li>• A "96" denotes deliveries made from the fifth delivery window</li> <li>• A "97" denotes deliveries made from the sixth delivery window</li> <li>• A "98" denotes deliveries made from the seventh delivery window</li> <li>• A "99" denotes deliveries made from the eighth delivery window</li> </ul>	65

### 3.9 DRC (camt.029.001.03) resolutions of investigation (ROIs) received body

Deliveries of resolutions of investigation (ROIs), version 03, from the SEPA-Clearer's SCT service to SEPA-Clearer participants

Status	Field name	Format	Content	Position
M	Record type	4x	DROB	0
M	Bulk reference	35x	<Id> belonging to assignment	4
M	Number ROIs received	8n	Number of delivered transactions in a bulk	39
M	Value ROIs received	18d	Total value of delivered transactions in a bulk	47
M	Processing cycle number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A "90" denotes deliveries made from the first delivery window</li> <li>• A "91" denotes deliveries made from the second delivery window</li> <li>• A "92" denotes deliveries made from the third delivery window</li> <li>• A "95" denotes deliveries made from the fourth delivery window</li> <li>• A "96" denotes deliveries made from the fifth delivery window</li> <li>• A "97" denotes deliveries made from the sixth delivery window</li> <li>• A "98" denotes deliveries made from the seventh delivery window</li> <li>• A "99" denotes deliveries made from the eighth delivery window</li> </ul>	65

### 3.10 DRC trailer

Status	Field name	Format	Content	Position
M	Record type	4x	TDRC	0
M	Total number records	6n	Number of DRC bodies	4

#### 4 Daily Reconciliation Report for SCT Inquiry Messages (DRQ)

Summary of the SCT Inquiry messages submitted to and delivered from the SEPA-Clearer's SCT service, a copy of which is made available to each SEPA-Clearer participant in EBCDIC format every business day at the end of that day's SEPA-Clearer processing schedule. The DRQ is not in XML format. Even pacs.028 messages that have been submitted in an ICF will be displayed in the DRQ, not in the DRC, and listed under the record types QSRS and QSRR.

The DRQ files delivered by the SEPA-Clearer in ASCII format using the EBICS communication infrastructure do not incorporate any special characters for the line feed at the end of the data record.

##### 4.1 DRQ Header

Status	Field Name	Format	Content	Position
M	Record Type	4x	HDRQ	0
M	Service Identifier	3x	SCT	4
M	File Type	3x	DRQ	7
M	Sending Institution	4!a2!a2!c	SEPA-Clearer's BIC (production: MARKDEFF; test: MARKDEF0)	10
M	Sender's File Reference	16!x	SEPA-Clearer's reference	18
M	Date And Time	6!n6!n	YYMMDDHHMMSS	34
M	Test Code	1x	Either "T" (test) or "P" (production), depending on the processing environment	46
M	Receiving Institution	4!a2!a2!c3!c	Originator BIC / clearing institution's BIC ( <u>not</u> communication partner)	47
M	Business Date	6!n	SEPA-Clearer business day	58

#### 4.2 DRQ (camt.027) Claim of non-receipt Bulks sent Body

Submissions of Claim of non-receipt bulks to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field Name	Format	Content	Position
M	Record Type	4x	QCNS	0
M	Bulk Reference	35x	<Id> in assignment	4
M	Number CNR Processed	8n	Number of processed transactions in a bulk	39
M	Number CNR Rejected	8n	Number of records rejected in a bulk	47
M	Value CNR Processed	18d	Total value of processed transactions in a bulk. If an entire bulk is rejected: 0,00	55
M	Value CNR Rejected	18d	Total value of records rejected in a bulk. If an entire bulk is rejected, total value of all transactions contained in the bulk	73
M	Processing Cycle Number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A „90“ denotes processing after the first submission window</li> <li>• A „91“ denotes processing after the second submission window</li> <li>• A „92“ denotes processing after the third submission window</li> <li>• A „95“ denotes processing after the fourth submission window</li> <li>• A „96“ denotes processing after the fifth submission window</li> <li>• A „99“ denotes processing after the sixth submission window</li> </ul>	91

### 4.3 DRQ (camt.087) Claim for value date correction Bulks sent Body

Submissions of Claim for value date correction bulks to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field Name	Format	Content	Position
M	Record Type	4x	QMPS	0
M	Bulk Reference	35x	<Id> in assignment	4
M	Number RMP Processed	8n	Number of processed transactions in a bulk	39
M	Number RMP Rejected	8n	Number of records rejected in a bulk	47
M	Value RMP Processed	18d	Total value of processed transactions in a bulk. If an entire bulk is rejected: 0,00	55
M	Value RMP Rejected	18d	Total value of records rejected in a bulk. If an entire bulk is rejected, total value of all transactions contained in the bulk	73
M	Processing Cycle Number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A „90“ denotes processing after the first submission window</li> <li>• A „91“ denotes processing after the second submission window</li> <li>• A „92“ denotes processing after the third submission window</li> <li>• A „95“ denotes processing after the fourth submission window</li> <li>• A „96“ denotes processing after the fifth submission window</li> <li>• A „99“ denotes processing after the sixth submission window</li> </ul>	91

#### 4.4 DRQ (camt.029.001.08) Resolution of Investigation Bulks sent Body

Submissions of Resolutions of Investigation (ROI), version 08, to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field Name	Format	Content	Position
M	Record Type	4x	QROS	0
M	Bulk Reference	35x	<Id> in assignment	4
M	Number ROQ Processed	8n	Number of processed transactions in a bulk	39
M	Number ROQ Rejected	8n	Number of records rejected in a bulk	47
M	Value ROQ Processed	18d	Total value of processed transactions in a bulk, as far as an amount is provided in the transactions. If an entire bulk is rejected: 0,00	55
M	Value ROQ Rejected	18d	Total value of records rejected in a bulk, as far as an amount is provided in the transactions. If an entire bulk is rejected, total value of all transactions contained in the bulk, as far as an amount is provided in the transactions.	73
M	Processing Cycle Number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A „90“ denotes processing after the first submission window</li> <li>• A „91“ denotes processing after the second submission window</li> <li>• A „92“ denotes processing after the third submission window</li> <li>• A „95“ denotes processing after the fourth submission window</li> <li>• A „96“ denotes processing after the fifth submission window</li> <li>• A „99“ denotes processing after the sixth submission window</li> </ul>	91

#### 4.5 DRQ (pacs.028) Payment Status Request Bulks sent Body

Submissions of Payment Status Requests (SR) to the SEPA-Clearer's SCT service by SEPA-Clearer participants

Status	Field Name	Format	Content	Position
M	Record Type	4x	QSRS	0
M	Bulk Reference	35x	<Id> in group header	4
M	Number SR Processed	8n	Number of processed transactions in a bulk	39
M	Number SR Rejected	8n	Number of records rejected in a bulk	47
M	Value SR Processed	18d	Total value of processed transactions in a bulk, as far as an amount is provided in the transactions. If an entire bulk is rejected: 0,00	55
M	Value SR Rejected	18d	Total value of records rejected in a bulk, as far as an amount is provided in the transactions. If an entire bulk is rejected, total value of all transactions contained in the bulk, as far as an amount is provided in the transactions.	73
M	Processing Cycle Number	2n	Processing cycle <ul style="list-style-type: none"> <li>• A „90“ denotes processing after the first submission window</li> <li>• A „91“ denotes processing after the second submission window</li> <li>• A „92“ denotes processing after the third submission window</li> <li>• A „95“ denotes processing after the fourth submission window</li> <li>• A „96“ denotes processing after the fifth submission window</li> <li>• A „99“ denotes processing after the sixth submission window</li> </ul>	91

#### 4.6 DRQ (camt.027) Claim of non-receipt Bulks received Body

Deliveries of Claim of non-receipt bulks from the SEPA-Clearer's SCT service to SEPA-Clearer participants

Status	Field Name	Format	Content	Position
M	Record Type	4x	QCNR	0
M	Bulk Reference	35x	<Id> in assignment	4
M	Number CNR Received	8n	Number of delivered transactions in a bulk	39

## 7 Use of the instructing agent and instructed agent

The following section provides an overview of how the *instructing agent*, the *instructed agent* and the *receiving institution* and *sending institution* are to be specified at the different message levels (file, bulk or individual transaction level). The “InstructedAgentRule” and the “InstructingAgentRule” must be observed in accordance with the ISO 20022 standard. The latter rule encompasses an exclusion principle, which clearly states that the *instructing agent* may be specified only in the group header or at individual transaction level. This principle also applies to the *instructed agent*.

The following information is **not** intended to depict all the data elements that can or must contain a BIC in a SEPA direct debit message but rather to identify the key actors involved in payment processing using the SEPA-Clearer.

### Brief overview of key individual agents

**Sending institution <SndgInst> in the file header:** should contain the BIC of the file sender (communication partner).

A file delivered to the SEPA-Clearer may contain bulks from one or more *instructing agents*. The BIC of the *sending institution* can deviate from that of the *instructing agent* and need not be listed in the SCL Directory. This is, for example, the case for technical service providers who themselves are not participants in the SEPA-Clearer.

A file sent by the SEPA-Clearer contains exactly one bulk. “MARKDEFF” (in the test: “MARKDEF0”) is entered as the *sending institution*.

**Receiving institution <RcvgInst> in the file header:** should contain the BIC of the file recipient (communication partner).

A file sent by the SEPA-Clearer contains exactly one bulk for an *instructed agent*. The BIC of the *receiving institution* can deviate from that of the *instructed agent* and need not be listed in the SCL Directory. This is, for example, the case for technical service providers who themselves are not participants in the SEPA-Clearer.

In a file delivered to the SEPA-Clearer “MARKDEFF” (in the test: “MARKDEF0”) must be specified as the *receiving institution*.

**Instructing agent <InstgAgt> in the group header<sup>1</sup>:** should contain the BIC of the submitter of a bulk submitted to the SEPA-Clearer. This BIC can, but need not necessarily, be listed in the SCL Directory. The countervalue of the submitted bulk is settled using the technical sub-account in TARGET specified by the submitter for the purpose of effecting financial settlement via the SEPA-Clearer during the corresponding SDD/SCC settlement cycle. The BIC of the *instructing agent* in the group header can deviate from that of the payment service provider at the individual transaction level.

---

<sup>1</sup> In the case of submissions, this applies equally to the assigner behind the assignment of the message types camt.056, camt.027 and camt.087.

In the files delivered by the SEPA-Clearer, the field *instructing agent* in the group header is left blank.

**Instructed agent <InstdAgt> in the group header:**<sup>2</sup> In the files delivered by the SEPA-Clearer, the field *instructed agent* contains the BIC of the SEPA-Clearer participant whose technical sub-account in T2 is used for the purpose of effecting financial settlement during the corresponding SDD/SCC settlement cycle. This BIC can, but need not necessarily, be listed in the SCL Directory. The BIC of the *instructed agent* can deviate from that of the *debtor/creditor agent* at the individual transaction level.

In the case of submissions to the SEPA-Clearer, this field must be left blank.

**Instructing agent <InstgAgt> at the individual transaction level:**<sup>3</sup> should contain the BIC of the original submitter to the SEPA-Clearer of the bulk in which the transaction was contained upon its submission to the SEPA-Clearer. Upon delivery of the transaction, this BIC is entered at individual transaction level by the SEPA-Clearer and can, but need not necessarily, be listed in the SCL Directory. The BIC of the *instructing agent* can deviate from that of the *debtor/creditor agent* at the individual transaction level.

In the case of submissions to the SEPA-Clearer, this field must be left blank.

**Instructed agent <InstdAgt> at the individual transaction level:**<sup>4</sup> this field is **not** supported at individual transaction level, nor is it a component of the SEPA-Clearer schema files.

**Debtor agent BIC <DbtrAgt> at the individual transaction level:** should contain the BIC of the payer's payment service provider (debtor PSP). It is essential that this BIC is listed in the SCL Directory as it is the key criterion for routing the payment in the SCT service.

**Creditor agent BIC <CdtrAgt> at the individual transaction level:** should contain the BIC of the payee's payment service provider (creditor PSP). This BIC must be listed in the SCL Directory.

---

<sup>2</sup> In the case of deliveries, this applies equally to the assignee behind the assignment of the message types camt.056, camt.027, camt.029, camt.087.

<sup>3</sup> In the case of deliveries, this applies equally to the assigner at the individual transaction level of the message types camt.056 and camt.029 (V03).

<sup>4</sup> In the case of deliveries, this applies equally to the assignee at the individual transaction level of the message types camt.056, camt.027, camt.029 and camt.087.

**Sample entry for the maximum number of different BICs in an SCT input credit file:**  
**File header:**

```
<?xml version="1.0" encoding="UTF-8"?>
<BBkICF:BBkICFBkCdtTrf xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:BBkICF="urn:BBkICF:xsd:$BBkICFBkCdtTrf"

  <CdtrAcct>...</CdtrAcct>
</CdtTrfTxInf>
```

BIC of the payer's payment service provider (debtor bank). This BIC must be listed in the SCL Directory.

BIC of the payee's payment service provider (creditor bank). This BIC must be listed in the SCL Directory.

## 8 Error codes/rejection reason codes

This section contains tables showing the error and rejection codes which payment service providers may use when submitting R-transactions or on the basis of which the SEPA-Clearer can reject and return erroneous files, bulks and transactions to the submitter.

In individual cases, rejections may occur in the context of a payment being forwarded to another CSM as a result of deviating plausibility checks even if the payment was processed without error in the SEPA-Clearer. Corresponding notifications of rejections by other CSMs are included in the message descriptions (see section 6).

### Error codes used in connection with the structural check of an input credit file (ICF/IQF) by the SEPA-Clearer

The errors described below result in the entire file being rejected by means of CVF/QVF (exception: A01)

Error code	Nature of error
A01	ICF/IQF was partially rejected.
R02	The file name designation does not conform with the rules (code currently not in use).
R04	The sender's BIC in the file name does not conform with the rules (code currently not in use).
R07	SWIFTNet FileAct request type does not conform with the rules.
R09	ICF/IQF was completely rejected as it does not conform with the rules for other reasons (eg character set data deviate from UTF-8).
R10	File does not correspond to the schema and therefore cannot be processed.
R11	Sender's BIC (<SndgInst>) is incorrect.
R12	Recipient's BIC (<RcvgInst>) is incorrect.
R13	ICF/IQF is a duplicate.
R14	Error in test code (<TstCode>).
R18	Number of credit transfer bulks contained in the ICF does not match the figure given in the file header.
R19	Number of payment cancellation request bulks contained in the ICF does not match the figure given in the file header.
R20	Number of return bulks contained in the ICF does not match the figure given in the file header.
R21	Number of result of investigation bulks contained in the ICF does not match the figure given in the file header.
R22	Number of request for status update bulks contained in the ICF does not match the figure given in the file header.
R23	Number of claim non-receipt bulks in the IQF does not match the figure given in the file header
R24	Number of request to modify payment bulks in the IQF does not match the figure given in the file header

Error code	Nature of error
R25	Number of resolution of investigation bulks in the IQF does not match the figure given in the file header
S01	File rejected as maximum permissible number of bulks in a file was exceeded.

**Error codes used in connection with the structural check of a bulk by the SEPA-Clearer**

The errors described below result in the entire bulk being rejected by means of CVF (exception: B01)

Error code	Nature of error	Type	paces.002SCL
AM04	Bulk was rejected due to insufficient funds.	ISO	X
B01	Bulk was partially rejected.	PRTRY	X
B02	Maximum permissible number of transactions contained in a bulk was exceeded.	PRTRY	X
B03	Number of transactions contained in a bulk does not match the figure given in the group header.	PRTRY	X
B05	Total value in the field <TtlIntrBkSttlmAmt> or <TtlRtrdIntrBkSttlmAmt> does not match the sum of the transactions in the bulk.	PRTRY	X
B09	Entire bulk was rejected as all transactions contained in it were rejected. The specific reasons for rejecting each transaction are stated accordingly.	PRTRY	X
B10	Entire bulk was rejected either because the instructing agent has to be included in the ICF group header or the specified instructing agent is not authorised to make submissions for the submitted payment type or the sending institution specified in the file header is not authorised to make submissions for the instructing agent specified in the group header.	PRTRY	X
B11	Entire bulk was rejected as the instructed agent must not be included in the ICF group header.	PRTRY	X
B12	Entire bulk was rejected as the assigner was not authorised to make submissions or the assignee data were incorrect or the institution specified in the file header is not authorised to make submissions for the instructing agent specified in the group header.	PRTRY	X
B14	Entire bulk was rejected as the <MsgId> or <Id> appears in duplicate.	PRTRY	X
B15	Entire bulk was rejected as the date in the field <IntrBkSttlmDt> or <OrgnlIntrBkSttlmDt> falls outside the permitted time period.	PRTRY	X
B40	Entire bulk was rejected as it contains more than 999 erroneous transactions. Specific reasons for rejection are only stated for the validated, erroneous individual transactions.	PRTRY	X
B98	Entire bulk was rejected as the <MsgId> (GrpHdr) or <Id> (Assgnmt) does not conform with the format rules.	PRTRY	X
B99	Bulk was rejected for other reasons.	PRTRY	X

Individual transaction-related error codes (SEPA-Clearer/SCL and other CSMs) or rejection codes (payment service provider (PSP) specific to the individual transaction<sup>5</sup>:

*The last four columns contain the message types in which the error code can be used as the reason for the R transaction or rejection*

Code	ISO 20022 designation	SEPA Core reason (pursuant to the EPC's SCT Inter-PSP Implementation Guidelines)	Nature of error	Initiator	Type	pacs.002SCL	pacs.004	camt.056	camt.029

## 9 Character set

The SEPA-Clearer supports the full UTF-8 character set.

Pursuant to the SEPA rulebooks, PSPs must be able to support the following Latin character set commonly used in international communication.

a b c d e f g h i j k l m n o p q r s t u v w x y z  
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

/ - ? : ( ) . ' ' +  
Space

However, it can be agreed on a bilateral or multilateral basis to support one or more UTF-8 character sets in addition to the Latin character set (eg the Greek character set). This applies above all to message elements containing the purpose of payment, name and address of the payer (creditor) and payee (debtor). Unless prevented by the schema parameters, the SEPA-Clearer therefore delivers data records featuring UTF-8 characters not contained in the Latin character set to the recipient in unchanged format.

### Checks by the SEPA-Clearer

(1) When files are submitted (ICFs), the SEPA-Clearer checks whether their prologue contains the following information in line with the usage rules applying to the UTF-8 character set.

```
<?xml version="1.0" encoding="UTF-8">
```

If any other character set is entered, the entire file is rejected using the error code R09.

(2) No character set checks beyond those covering compliance with the UTF-8 character set are carried out by the SEPA-Clearer.

## 10 Notes on format/status, special features of XML

### 10.1 Explanatory notes on the format of XML file headers and the daily reconciliation report

Format	Description
a	Alpha, capital letters
c	Alphanumeric, letters: capital letters
d	Decimal including decimal point and two decimal places
n	Numeric
x	Characters in accordance with Latin character set, in some cases restricted by XSD schema file (see also section entitled "Character set")
3!a	Precisely three alpha characters
ISODate	YYYY-MM-DD
ISODateTime	YYYY-MM-DDThh:mm:ss
<b>Status</b>	
M	Mandatory field
O	Optional field

### 10.2 Completing amount fields in line with the schema

Sample entry		Processing in the SEPA-Clearer
996.5	One decimal place	996.50
997.	No decimal places	997.00
998	No decimal point and no decimal places	998.00

Submitted files containing amounts with a comma and/or more than two decimal places do not conform to the schema and are therefore rejected using error code R10. Amounts may not be smaller than €0.01 and must not exceed €999999999.99.

### 10.3 Use of filling characters in the amount fields

The XML parser accepts characters that function as "fillers" in an XML context. These may be entered in the amount fields in an XML environment, however their use may result in

processing problems for the receiving/processing institution. We therefore advise against using such filling characters.

The fillers listed below are recognised by the XML parser and routed/processed as follows by the SCL.

1. Leading zeros before the decimal point<sup>7</sup>

The SEPA-Clearer ignores the redundant zeros and delivers the amount with the first and the last significant characters to the SCL participant.

Example:

Submission to the SCL:

```
<IntrBkSttlmAmt Ccy="EUR">000000000000000000000001.01</IntrBkSttlmAmt>
```

Delivery by the SCL:

```
<IntrBkSttlmAmt Ccy="EUR">1.01</IntrBkSttlmAmt>
```

2. Spaces in the amount field

The SEPA-Clearer ignores the redundant spaces and delivers the amount with the first and the last significant characters to the SCL participant.

Example:

Submission to the SCL:

```
<IntrBkSttlmAmt Ccy="EUR">                2.02                </IntrBkSttlmAmt>
```

Delivery by the SCL:

```
<IntrBkSttlmAmt Ccy="EUR">2.02</IntrBkSttlmAmt>
```

#### 10.4 Use of white spaces in XML fields, in this case the “collapsing” procedure

“White spaces” form part of the standard XML environment. They are also permitted for the decimal data type, which is set as standard for the amount field.

Neither the ISO 20022 standard nor the EPC’s Implementation Guidelines make provisions for any restrictions to this arrangement. As a rule, white spaces can be processed by XML parsers. However, problems can occur, eg when customised solutions have been programmed or the XML data records have been converted to different formats for further processing.

We therefore advise against using spaces in the tags, as this may result in processing problems for the receiving/processing institution.

CSMs have stipulated the following format rules for a variety of “string”-derived fields in their schema files. In the description, the white spaces facet was set to “collapse” in the schema files. Detailed information on the procedure used in XML parsing can be found in the document “W3C Recommendation 28 October 2004, XML Schema Part 2: Datatypes Second Edition”, the contents of which can be called up using the internet link provided below.

---

<sup>7</sup> Zeros after the second decimal place are excluded by the schema validation

<http://www.w3.org/TR/xmlschema-2/#rf-whiteSpace>

For reasons of interoperability, this “collapsing” procedure was integrated into the SEPA-Clearer’s schema files with the same level of effect, meaning that, overall, and wherever necessary both submissions to and deliveries from the SEPA-Clearer undergo the above procedure as part of the XML parsing process.

## 10.5 Namespace declaration

Message instances (ie messages exchanged between PSPs and the SEPA-Clearer) must contain the name space declaration at bulk level. This declaration thereafter applies to all tags contained in the message; individual tags therefore need not be identified with the prefix “sw”. SCL participants must take care to adhere to the stipulated entries/declaration.

SCL delivery messages to PSPs are likewise sent without a prefix at “tag level”.

Sample message instance:

```
<SCLSCT:pacs.008.001.02 xmlns="urn:iso:std:iso:20022:tech:xsd:sct:pacs.008.001.02">  
  <GrpHdr>  
    <MsgId>AAAAAAAAAAAAABCD123</MsgId>
```

## 11 Compression procedures

### 11.1 FileAct<sup>8</sup>

Files may be transmitted in either direction in compressed or uncompressed format as desired by the customer. To this end, the following compression procedures may be used.

- FLAM<sup>9</sup> (which uses the ADC compression mode as it offers the highest compression factor)
- ZIP
- GZIP

### 11.2 EBICS environment<sup>10</sup>

In EBICS, the ZIP compression procedure must be supported when transmitting files in either direction.

---

<sup>8</sup> See the procedural rules on communication via SWIFTNet FileAct for the Deutsche Bundesbank’s Retail Payment System (RPS) and the RPS SEPA-Clearer (SCL).

<sup>9</sup> FLAM (Frankenstein-Limes-Access-Method) is a registered trademark of limes datentechnik gmbh, Bad Homburg, Germany.

<sup>10</sup> See the Deutsche Bundesbank’s procedural rules on communication via EBICS with deposit-taking credit institutions and other account holders with a bank sort code.

## 12 TARGET referencing

TARGET issues settlement information (camt.054) and electronic account statements (camt.053) for all accounts held under its auspices. The aforementioned message types contain settlement references which serve to identify the SEPA credit transfers that are exchanged using the SEPA-Clearer. The BIC of the SEPA Clearer "MARKDEFFSCL" is shown in the element <DbtrAgt> under <TxDtIs> <RltdAgt>.

1 Liquidity transfer automatically generated by the SEPA-Clearer from the RTGS DCA to the relevant sub-account in the amount of the settlement sum total of the SEPA credit transfers arising from all ICFs submitted in a specific submission window.

Structure of the reference in the <EndtoEndId> of the camt-message under <TxDtIs><Refs>:

SCL	Format	Content
System	1-character alphabetical	"S" (SEPA-Clearer)
AS action	2-character alphabetical	"C" + No of cycles
Date	2-character, numeric	"TT" (processing day)
Constant	2-character, numeric	"00"
Serial number	9-character, numeric	Unambiguous serial number within the preceding reference information

In addition, the following information is provided in the unstructured remittance information (element <RmtInf><Ustrd> under <TxDtIs>) of the camt.054:

SCL	Format	Content
<u>Liquidity transfer</u>	3-character, constant	"CUO"
Processing cycle	2-character, numeric	Phase 90 to 99
Settlement cycle	2-character, alphabetical	First character: "I", "O" or "X" I = Input (settlement of bulks submitted to the SCL) O = Output (settlement of bulks delivered from the SCL) X = Error (settlement of rejected transactions)  Second character: A, B or C <sup>11</sup> A = SCT service B = SDD service C = SCC service

Furthermore, the code "LIAS" (Immediate LT – intra-service AS on behalf) in the element <LclInstrm><Prtry> indicates that this is a liquidity transfer initiated by the ancillary system.

<sup>11</sup> If a Liquidity transfer order refers to settlement of several services, only one indicator is specified (depending on the processing sequence of the bulk to be posted).

2 Settlement of submitted and delivered SCT bulks on the sub-account during the relevant SCT settlement cycles of a settlement procedure.

Structure of the reference in the <EndtoEndId> of the camt-message under <TxDtIs><Refs>:

SCL	Format	Content
System	1-character, alphanumeric	"S" (SEPA-Clearer)
AS action	2-character, alphabetical	First character: "I", "O" or "X" I = Input (settlement of bulks submitted to the SCL) O = Output (settlement of bulks delivered from the SCL) X = Error (settlement of rejected transactions)  Second character: A, B or C A = SCT service B = SDD service C = SCC service
Current date	2-character, numeric	Day of the current month
File ID	6-character, numeric	Internal file ID
Bulk ID	3-character, numeric	Bulk within the file
Serial number	2-character, numeric	Serial number

In addition, the following information is provided in the unstructured remittance information (element <RmtInf><Ustrd> under <TxDtIs>) of the camt.054:

SCL	Format	Content
Bulk ID	35-character, alphanumeric	Message identification (<MsgID>) in group header of the settled SCT bulk
Settlement date	6-character, numeric	DDMMYY
Instructing or instructed agent	11-character, alphanumeric	BIC in group header of settled SCT bulk: Submitted bulks: instructing agent Delivered bulks: instructed agent
Reference to partial settlement of a bulk	1-character, alphanumeric	F (= Full), constant

Furthermore, the code "ASTI" (AS Transfer) in the element <LclInstrm><Prtry> indicates that this is a settlement initiated by the ancillary system.

3 Return transfer of entire funds from the sub-account to the corresponding RTGS DCA after completion of all settlements in a settlement procedure (SCT and SDD/SCC settlement cycles), automatically initiated by the SEPA-Clearer.

When retransferring the (entire amount of) liquidity from the sub-account to the RTGS DCA, references are likewise assigned (provided in the <EndtoEndId> of the camt-messages under <TxDtIs><Refs>). This is an internal reference that always starts with the constant "SCP". Together with the BIC of the SEPA Clearer and the entry "LIIA" in the element <LclInstrm><Prtry>, the debits on the sub-account or the credits on the RTGS DCA can be unambiguously assigned to this business case.

## **XML-File-Header**

### Input Credit File (ICF) Header

#### **Verwendung**

- Einlieferung von pacs.008-, pacs.004-, camt.056-, camt.029\*- und pacs.028-Bulks in den SEPA-Clearer
- Parsing-Fehler führen zur File-Rückweisung mit dem Fehlercode R10
- Die Schemadatei „BBkICFBkCdtTrf“ spezifiziert den ICF

\*nur camt.029.001.03 (Einreichung von camt.029.001.08 erfolgt im Input Inquiry File (IQF))

#### **Use**

- Submission of pacs.008, pacs.004, camt.056, camt.029 and pacs.028 bulks to the SEPA-Clearer
- Parsing errors result in the file being rejected with the error code R10
- The schema file BBkICFBkCdtTrf specifies the ICF

\* camt.029.001.03 only (camt.029.001.08 are submitted in Input Inquiry Files (IQF))

## **XML-File-Header**

### Credit Validation File (CVF) Header

#### **Verwendung**

- File-, Bulk- und Einzeltransaktionsrückweisungen von ICF durch den SEPA-Clearer.
  - Parsing-Fehler führen zur kompletten Rückweisung des eingereichten ICF (File-Rückweisung) mit dem Fehlercode R10, dieser wird im Element *File Reject Reason* (<FileRjctRsn>) des CVF Headers eingestellt.
  - Bei Bulk- und Einzeltransaktionsrückweisungen wird der pacs.002.001.03SCLSCT zusätzlich dem CVF Header beigefügt.
- Der CVF Header wird sowohl für technische und fachliche Fehler als auch für fehlende Deckung verwendet.
- Der CVF Header plus pacs.002.001.03SCLSCT wird außerdem verwendet, um über die Stornierung einer mittels camt.056.001.01SCT zurückgerufenen SEPA-Überweisung vor deren Settlement bei einem anderen Clearinghaus zu informieren.
- Die Schemadatei „BBkCVFBkCdtTrf“ spezifiziert den CVF.

## Use

- File, bulk and individual transaction rejections of ICF by the SEPA-Clearer.
  - Parsing errors lead to the entire ICF that was submitted being rejected with the error code R10; this is entered into the Element *File Reject Reason* (<FileRjctRsn>) of the CVF header.
  - In the case of bulk and individual transaction rejections, the pacs.002.001.03SCLSCT is added to the CVF header.
- The CVF header is used for technical and functional errors and when there are insufficient funds.
- The CVF Header plus pacs.002.001.03SCLSCT is also used to provide notification of the cancellation of a SEPA credit transfer recalled via camt.056.001.01SCT before being settled at another clearing house.
- The schema BBkCVFBkCdtTrf specifies the CVF.

## **XML-File-Header**

### Inquiry Validation File (QVF) Header

#### **Verwendung**

- File-, Bulk- und Einzeltransaktionsrückweisungen von IQF durch den SEPA-Clearer.
  - Parsing-Fehler führen zur kompletten Rückweisung des eingereichten IQF (File-Rückweisung) mit dem Fehlercode R10, dieser wird im Element *File Reject Reason* (<FileRjctRsn>) des QVF Headers eingestellt.
  - Bei Bulk- und Einzeltransaktionsrückweisungen wird der pacs.002.001.03SCLSCT zusätzlich dem QVF Header beigefügt.
- Der QVF Header wird sowohl für technische als auch fachliche Fehler verwendet.
- Die Schemadatei „BBkQVFBkCdtTrf“ spezifiziert den QVF.

## Use

- File, bulk and individual transaction rejections of IQF by the SEPA-Clearer.
  - Parsing errors lead to the entire IQF that was submitted being rejected with the error code R10; this is entered into the Element *File Reject Reason* (<FileRjctRsn>) of the QVF header.
  - In the case of bulk and individual transaction rejections, the pacs.002.001.03SCLSCT is added to the QVF header.
- The QVF header is used for technical and functional errors.
- The schema BBkQVFBkCdtTrf specifies the QVF.

Inter-PSP Payment Dataset (DS-02) – pacs.008.001.02

Inter-PSP Fee and/or Compensation Payment Dataset (DS-11) – pacs.008.001.02

---

## **Nachricht / Message**

SEPA Credit Transfer – Inter-PSP Payment Dataset (DS-02)

SEPA Credit Transfer – Inter-PSP Fee and/or Compensation Payment Dataset (DS-11)

## **Verwendung des Inter-PSP Customer Credit Transfer Dataset (pacs.008.001.02)**

Diese Nachricht wird verwendet, um eine Zahlung vom Zahlungsdienstleister des Zahlers zum Zahlungsdienstleister des Zahlungsempfängers zu transportieren.

Die Nachricht berücksichtigt sowohl Sammelaufträge als auch einzelne Zahlungsaufträge.

## **ISO Nachrichtenstruktur**

Ein Interbank Payment Dataset beinhaltet:

- einen einzelnen Group Header (Bulk)
- eine oder mehrere „Credit Transfer Transaction Information“-Sequenzen, von denen jede einen Überweisungsauftrag enthält, wie in DS-02 bzw. DS-11 definiert.

## **Group Header**

Der Group Header enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

## **Use of Inter PSP Customer Credit Transfer Dataset (pacs.008.001.02)**

This message is used to transport the Payment Instruction from the Originator Bank to the Beneficiary Bank. The message caters for bulk and single payment instructions.

### **ISO message structure**

An Interbank Payment Dataset contains

- a single group header (bulk)
- one or more 'Credit transfer transaction information' sequences, each of which contains a credit transfer instruction as defined in DS-02 and DS-11.

### **Group header**

The group header contains information required to process the entire message.

## **Nachricht / Message**

SEPA Credit Transfer – Inter-PSP Reject SEPA Credit Transfer Dataset

## Verwendung des Inter-PSP Reject SEPA Credit Transfer Dataset (pacs.002.001.03SCLSCT)

Diese proprietäre Nachricht ist eine Rückweisungsnachricht vom SEPA-Clearer im Fehlerfall, um den SCL-Teilnehmer über zurückgewiesene Überweisungen, R-Nachrichten und Inquiry-Nachrichten (auf Validierungs- oder Buchungsebene) zu informieren. Eingereichte SCT-Bulks, die ungedeckt sind, werden mit dem Fehlercode AM04 (Fehlende Deckung) zurückgewiesen. Die Nachricht unterstützt sowohl Sammel- also auch einzelne Rückweisungen.

## Hauptunterschied der pacs.002SCL-Nachricht im Vergleich zur pacs.002-Nachricht (DS-03) gemäß SCT Interbank Implementation Guidelines:

1. Neben den ISO- bzw. SEPA- relevanten Fehlercodes werden im Feld StatusReason/Proprietary SEPA-Clearer (SCL) spezifische Fehlercodes (siehe gesonderte Aufstellung der Fehlercodes) vom SCL zurückgegeben.
2. Die Felder Instructing Agent und Instructed Agent sind im Group Header **nicht** vorgesehen.
3. Innerhalb der Datenstruktur Original Transaction Reference wird **keine** exakte Kopie zurückgegeben, sondern lediglich folgende Informationen:
  - <IntrBkSttlmAmt>: The amount of the original transaction
  - <IntrBkSttlmDt>: The original Interbank Settlement Date
  - <CdtrAgt><FinInstnId><BIC>: The original creditor agent
4. Mitgabe der Information „Number of Transactions per Status“ der vom SEPA-Clearer zurückgewiesenen Zahlungen in der Datenstruktur Original Group Information and Status (nur Negativquittung).

## Group Header

Der Group Header enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

## Use of the Inter-PSP Reject SEPA Credit Transfer Dataset (pacs.002.001.03SCLSCT)

This proprietary message is a rejection message from the SEPA-Clearer in the event of an error to notify the SCL participant about rejected credit transfers, return (“R”) messages or Inquiry messages (at the validation or settlement stage). Submitted bulks which are not covered are rejected with the error code AM04 (insufficient funds).

The message caters for bulk and single reject instructions.

### Main difference between pacs.002SCL and ‘Implementation Guideline’-compliant pacs.002 – message (DS-03):

1. Along with the relevant ISO and SEPA error codes, in the StatusReason/Proprietary field, error codes specific to the SEPA-Clearer (SCL) (see separate list of error codes) are also used by the SCL.
2. The group header does **not** contain an instructing agent or instructed agent.
3. Within the original transaction reference, **no** exact copy is returned; only the following information is given.
  - <IntrBkSttImAmt> the amount of the original transaction
  - <IntrBkSttImDt> the original interbank settlement date
  - <CdtrAgt><FinInstnId><BIC> the original creditor agent
4. The ‘number of transactions per status’ for the payments rejected by the SEPA-Clearer is provided in the ‘original group information and status’ sequence (only negative acknowledgement).

### Group header

The group header contains information required to process the entire message.

## Verwendung der Inter PSP Return Credit Transfer Message (pacs.004.001.02SCT)

Diese Nachricht wird verwendet, um Rückgaben zwischen Zahlungsdienstleistern zu transportieren.

Die Nachricht berücksichtigt **nur** einzelne Rückgaben (keine Bulk-Rückweisung).

### Hinweise:

- Attribut R1 wird vom Message Name pacs.004.001.02 und der Original Message Name Identification pacs.008.001.02 impliziert
- Nachrichtenelemente unter der Sequenz "Original Transaction Reference" basieren auf DS-02-Attributen.

## ISO Nachrichtenstruktur

Ein Inter-PSP Return Credit Transfer Dataset beinhaltet:

- einen einzelnen Group Header
- einen oder mehrere „Transaction Information“-Sequenzen, von der jede eine Rückgabe enthält, wie in DS-03 definiert.

## Group Header

Der Group Header enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

Inter-PSP Return SEPA Credit Transfer Dataset (DS-03) – pacs.004.001.02SCT  
Inter-PSP Positive Response to a Recall of SEPA Credit Transfer Dataset (DS-06) – pacs.004.001.02SCT  
Inter-PSP Positive Response to the Request for Recall by the Originator Dataset (DS-08) – pacs.004.001.02SCT

---

## Use of the inter-PSP return credit transfer message (pacs.004.001.02SCT)

The message is used to transport the Credit Transfer Return instruction between banks.

The message caters **only** for single return instructions (no bulk rejection).

### Notes

- Attribute R1 is implied by the Message Name 'pacs.004.001.02' and the Original Message Name Identification set to 'pacs.008.001.02'.
- Message elements under the “Original Transaction Reference” sequence are based on DS-02 attributes.

## ISO message structure

An Inter-PSP Return Credit Transfer Dataset contains:

- a single group header
- one or more “Transaction Information” sequences, each of which contains a credit transfer return instruction as defined in DS-03.

## Group header

The group header contains information required to process the entire message.

Inter-PSP Recall of SEPA Credit Transfer Dataset (DS-05) – camt.056.001.01SCT  
Request for Recall by the Originator Dataset (DS-07) – camt.056.001.01SCT

---

## **Nachricht / Message**

SEPA Credit Transfer – Inter-PSP Recall of SEPA Credit Transfer Dataset (DS-05)  
SEPA Credit Transfer – Request for Recall by the Originator Dataset (DS-07)

## Verwendung des Inter-PSP Payment Cancellation Request (camt.056.001.01SCT)

Diese Nachricht wird im SCT-Dienst des SEPA-Clearers verwendet, um einzelne Überweisungen beim Zahlungsempfänger zurückzurufen. Der Rückruf eines kompletten Bulks ist nicht möglich. Gemäß Rulebook kann der Rückruf bis zu zehn Geschäftstage nach Settlement beim SCT Recall im Fall von „TECH“ und „DUPL“ und im Fall von „FRAD“ bis zu 13 Monate nach Settlement erfolgen. Beim Request for Recall by the Originator beträgt die Frist generell bis zu 13 Monate nach Settlement. Diese Fristen werden vom SEPA-Clearer nicht validiert. Der Rückruf selbst ist nicht buchungsrelevant sondern dient lediglich als Information an den Zahlungsdienstleister des Zahlungsempfängers, der dann seinerseits verpflichtet ist, innerhalb von 15 Geschäftstagen aktiv auf den camt.056.001.001SCT zu reagieren:

- Rückgabe des Überweisungsbetrages – ggf. gekürzt um ein Bearbeitungsentgelt des <Creditor Agent> (<Charges Information>) und unter Verwendung des <Reason Code> „FOCR“ (F**O**llowing **C**ancellation **R**equest) an den Initiator des Rückrufs mittels buchungsrelevantem Return (pacs.004.001.02SCT)
- oder
- Versand einer ablehnenden, d. h. „negativen Nachricht“ (Resolution of Investigation, camt.029.001.03), mittels derer unter Angabe eines <Reason Code> erklärt wird, warum die angefragte Rückgabe des Überweisungsbetrages nicht erfolgt. Diese Nachricht ist nicht buchungsrelevant.

Im Fall der Weitergabe eines Rückrufes an ein anderes Clearinghaus, kann es zu einer Stornierung der ursprünglichen Überweisung vor deren Weitergabe an den Empfänger kommen. In diesem Fall wird der Einreicher der Anfrage durch den SEPA-Clearer mittels Credit Validation File (CVF)/pacs.002.001.03SCL über die Stornierung informiert und erhält eine Gutschrift über den Gegenwert der Überweisung.

Der SEPA-Clearer nimmt eine Doppeleinreichungskontrolle, aber keinerlei Cross-Referenzierung vor. So wird z. B. nicht geprüft, ob die Originalzahlung über den SEPA-Clearer abgewickelt wurde oder bereits ein Recall oder eine andere R-Transaktion für die Originalzahlung eingereicht wurde.

Die Nachricht ist einlieferungsseitig Bestandteil des Input Credit Files (ICF), auslieferungsseitig ist sie Bestandteil des Settled Credit Files (SCF).

## ISO Nachrichtenstruktur

Ein Interbank Recall of Credit Transfer Dataset bzw. Request for Recall by the Originator Dataset beinhaltet:

- ein einzelnes „Assignment“ (äquivalent dem Group Header in pacs-Nachrichtentypen)
- ein „Control Data“
- ein „Underlying“, das eine oder mehrere „Transaction Information“-Sequenzen enthält, die jeweils die Transaktionsdaten einer einzelnen zugrundeliegenden Überweisung (pacs.008.001.02) beinhalten.

## Assignment

Das Assignment enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

## Use of Inter-PSP Payment Cancellation Request (camt.056.001.01)

This message is used in the SEPA-Clearer SCT service to recall individual credit transfers from the recipient. It is not possible to recall an entire bulk payment. Pursuant to the rulebook, the Originator PSP must send out the Recall within the period of 10 Banking Business Days for the reasons 'Duplicate sending' and 'Technical problems resulting in erroneous SCTs', and within the period of 13 months for the reason 'Fraudulent originated SEPA Credit Transfer' following the execution date of the initial SEPA Credit Transfer Transaction subject to the Recall. For the Request for Recall by the Originator the period is generally up to 13 months after settlement. These deadlines are not validated in the SEPA-Clearer. The recall itself is not relevant for settlement and serves solely to inform the payment service provider of the beneficiary, who then is obliged to actively respond to the camt.056.001.001SCT within 15 further business days in one of two ways:

- Return of the transfer amount – possibly reduced by a processing fee of the <Creditor Agent> (<Charges Information>) and specifying the <Reason Code> "FOCR" (Following Cancellation Request) – to the originator of the cancellation request by means of a return relevant for settlement (pacs.004.001.02SCT)

or

- Sending a "negative message" (Resolution of Investigation, camt.029.001.03) stating why the requested return of the transfer does not take place using a <Reason Code>. This message is not relevant for settlement.

If a Recall is forwarded to another clearing house, the original credit transfer may be cancelled before it is forwarded to the recipient. In this case, the submitter of the request is informed about the cancellation by the SEPA-Clearer via Credit Validation File (CVF)/pacs.002.001.03SCL and receives a credit note for the value of the credit transfer.

The SEPA-Clearer carries out a duplication check but does not carry out cross-reference checking. For example, no check is made as to whether the original payment was processed in the SEPA-Clearer or whether a recall or any other R-transaction has already been submitted with respect to this original payment.

The message is a component of the Input Credit File (ICF) on the submitter side and a component of the Settled Credit File (SCF) on the delivery side.

## **ISO message structure**

An Interbank Recall of Credit Transfer Dataset contains:

- a single “assignment” (in pacs messages: Group Header)
- a “Control Data”
- an “Underlying” containing one or more “Transaction Information” sequences, each of which contains the transaction data of the individual underlying transfer (pacs.008.001.02).

## **Assignment**

The “Assignment” contains information required to process the entire message.

## **Nachricht / Message**

SEPA Credit Transfer – Inter-PSP Negative Response to a Recall of SEPA Credit Transfer Dataset (DS-06)

SEPA Credit Transfer – Inter-PSP Negative Response to the Request for Recall by the Originator Dataset (DS-08)

## **Verwendung der Resolution of Investigation (camt.029.001.03)**

Diese Nachricht wird im SCT-Dienst des SEPA-Clearers verwendet, um auf einen Recall / Request for Recall by the Originator (camt.056.001.01) – nach Settlement – oder einen Request for Status Update on a Recall / Request for Recall by the Originator (pacs.028.001.01) aktiv zu reagieren.

Gemäß Rulebook hat der Zahlungsdienstleister des Zahlungsempfängers innerhalb von 15 Geschäftstagen auf einen eingegangenen Recall / Request for Recall by the Originator bzw. eine entsprechende Statusnachfrage zu reagieren. Dies kann in Form einer ablehnenden, d. h. „negativen“ Antwort erfolgen. Die Einhaltung der genannten Frist wird vom SEPA-Clearer – in Analogie zu den Verarbeitungspraktiken einiger anderer CSM – nicht validiert.

Sofern der Zahlungsdienstleister des Zahlungsempfängers den Überweisungsbetrag nicht mittels Return (pacs.004.001.02) zurückgeben will, hat er die Möglichkeit, dem Initiator des Recalls den Grund hierfür in der Nachricht camt.029.001.03 unter Verwendung eines <Reason Code> mitzuteilen (ISO-Code bzw. proprietärer Code).

Die Nachricht camt.029.001.03 ist nicht buchungsrelevant, sondern stellt lediglich eine „negative Information“ an den Initiator des Recalls dar.

Der SEPA-Clearer nimmt eine Doppeleinreichungskontrolle, aber keinerlei Cross-Referenzierung vor. So wird z. B. nicht geprüft, ob die Originalzahlung über den SEPA-Clearer abgewickelt wurde oder ob überhaupt ein Recall vorgelegen hat. Ferner wird nicht geprüft, ob ein Recall bereits beantwortet wurde.

Die Nachricht ist einlieferungsseitig Bestandteil des Input Credit Files (ICF), im Ausgang Bestandteil des Settled Credit Files (SCF).

## ISO Nachrichtenstruktur

Ein Interbank Negative Answer to a Recall of a Credit Transfer Dataset bzw. Interbank Negative Response to the Request for Recall by the Originator Dataset beinhaltet:

- ein einzelnes „Assignment“ (äquivalent dem Group Header in pacs-Nachrichtentypen)
- einen „Status“, in dem der Codes RJCR (Rejected Cancellation Request) den Anwendungsfall der Nachricht kennzeichnet
- „Cancellation Details“, die eine oder mehrere „Transaction Information and Status“-Sequenzen enthalten, die jeweils die Transaktionsdaten einer einzelnen zugrundeliegenden Überweisung (pacs.008.001.02) sowie u. a. einen Reason Code für die negative Beantwortung des Recalls beinhalten.

## Assignment

Das Assignment enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

## Use of Resolution of Investigation (camt.029.001.03)

This message is used in the SCT service of the SEPA-Clearer in order for the creditor to actively respond to a Recall / Request for Recall by the Originator (camt.056.001.01) – after the funds have been credited – or a Request for Status Update on a Recall / Request for Recall by the Originator (pacs.028.001.01).

Pursuant to the rulebook, the payment service provider of the creditor must respond to an incoming Recall / Request for Recall of the Originator or corresponding status request within 15 business days. This can take the form of a declining, ie "negative" response. Compliance with this deadline is not validated in the SEPA-Clearer, by analogy with the processing practices of other CSMs.

If the payment service provider of the creditor does not wish to return the recalled payment using a Return (pacs.004.001.02), it has the option of communicating the reason for this to the party initiating the recall using message camt.029.001.03, stating a <Reason Code> (ISO code or proprietary code).

The message camt.029.001.03 is not relevant for settlement and merely represents a “negative information” to the party initiating the recall.

The SEPA-Clearer carries out a duplication check but does not carry out a cross reference checking. This means, for example, that no check is made as to whether the original payment was processed in the SEPA-Clearer or whether a recall has been made at all. Furthermore, it is not checked whether the recall has already been answered.

The message is a component of the Input Credit File (ICF) on the submitter side and a component of the Settled Credit File (SCF) on the delivery side.

## ISO message structure

A Interbank Negative Answer to a Recall of Credit Transfer Dataset or Interbank Negative Response to the Request for Recall by the Originator Dataset contains:

- a single “Assignment” (equivalent to the group header in pacs messages)
- a “Status” in which the code RJCR (Rejected Cancellation Request) implies the use case of the message
- “Cancellation Details” containing one or more “transaction information and status” sequences, each of which contains the transaction details of the individual underlying credit transfer (pacs.008.001.02) as well as a <Reason Code> for the non-acceptance of the recall.

## Assignment

The “assignment” contains information required to process the entire message.

## **Nachricht / Message**

SEPA Credit Transfer – Inter-PSP SCT Inquiry Dataset (DS-09) for Claim Non-Receipt

## **Verwendung des Claim Non Receipt (camt.027.001.06SCT)**

Diese Nachricht wird verwendet, um eine Nachfrage zum Verbleib einer SEPA-Überweisung von der Bank des Zahlers an die Bank des Zahlungsempfängers zu transportieren.

Die Nachricht dient zur Übermittlung einer einzelnen Nachfrage.

Gemäß Rulebook kann eine Nachfrage zum Verbleib einer SEPA-Überweisung bis zu 13 Monate nach der Belastung einer SEPA-Überweisung ausgelöst werden. Diese Frist wird vom SEPA-Clearer nicht geprüft.

Die Nachfrage selbst ist nicht buchungsrelevant sondern dient lediglich als Information an den Zahlungsdienstleister des Zahlungsempfängers, der dann seinerseits verpflichtet ist, innerhalb von 10 Geschäftstagen mit einer positiven oder negativen Antwort (camt.029.001.08) zu reagieren

Der SEPA-Clearer nimmt eine Doppeleinreichungskontrolle, aber keinerlei Cross-Referenzierung vor. So wird z. B. nicht geprüft, ob die Originalzahlung über den SEPA-Clearer abgewickelt wurde oder bereits eine Nachfrage zum Verbleib dieser Originalzahlung eingereicht wurde.

Die Nachricht ist einlieferungsseitig Bestandteil des Input Inquiry Files (IQF), auslieferungsseitig ist sie Bestandteil des Output Inquiry Files (OQF).

## ISO Nachrichtenstruktur

Ein Interbank SCT Inquiry Dataset for Claim Non-Receipt beinhaltet:

- ein einzelnes „Assignment“ (äquivalent dem Group Header in pacs-Nachrichtentypen)
- einen „Case“, der die SCT Inquiry identifiziert
- ein „Underlying“, das die Transaktionsdaten einer einzelnen zugrundeliegenden Überweisung beinhaltet.

## Assignment

Das Assignment enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

## **Use of Claim Non-Receipt (camt.027.001.06)**

This message is used to transport the Claim Non-Receipt from the Originator Bank to the Beneficiary Bank.

The message caters for a single claim only.

Pursuant to the rulebook, the Claim Non-Receipt can be initiated within 13 months after the debit date of the concerned SEPA credit transfer. This deadline is not checked in the SEPA-Clearer.

The Inquiry is not relevant for settlement and serves solely to inform the Beneficiary Bank, who then is obliged to actively respond within 10 business days with a positive or negative response (camt.029.001.08).

The SEPA-Clearer carries out a duplication check but does not carry out cross-reference checking. For example, no check is made as to whether the original payment was processed in the SEPA-Clearer or whether a Claim Non-Receipt has already been submitted with respect to this original payment.

The message is a component of the Input Inquiry File (IQF) on the submitter side and a component of the Output Inquiry File (OQF) on the delivery side.

## **ISO message structure**

An Interbank SCT Inquiry Dataset for Claim Non-Receipt contains:

- a single “assignment” (equivalent to the group header in pacs messages)
- a “Case” providing the specific SCT inquiry reference
- an “Underlying” containing the transaction data of one individual underlying transfer.

## **Assignment**

The “Assignment” contains information required to process the entire message.

## **Nachricht / Message**

SEPA Credit Transfer – Inter-PSP SCT Inquiry Dataset for Claim for Value Date Correction (DS-09)

## **Verwendung des Request to Modify Payment (camt.087.001.05)**

Diese Nachricht wird verwendet, um eine Anfrage zur Wertstellungsberichtigung bei verspäteter Ausführung einer SEPA-Überweisung von der Bank des Zahlers an die Bank des Zahlungsempfängers zu transportieren.

Die Nachricht dient zur Übermittlung einer einzelnen Anfrage.

Gemäß Rulebook kann eine Anfrage zur Wertstellungsberichtigung bis zu 13 Monate nach der Belastung einer SEPA-Überweisung ausgelöst werden. Diese Frist wird vom SEPA-Clearer nicht geprüft.

Die Anfrage selbst ist nicht buchungsrelevant sondern dient lediglich als Information an den Zahlungsdienstleister des Zahlungsempfängers, der dann seinerseits verpflichtet ist, innerhalb von 10 Geschäftstagen mit einer positiven oder negativen Antwort (camt.029.001.08) zu reagieren.

Der SEPA-Clearer nimmt eine Doppeleinreichungskontrolle, aber keinerlei Cross-Referenzierung vor. So wird z. B. nicht geprüft, ob die Originalzahlung über den SEPA-Clearer abgewickelt wurde oder bereits eine Anfrage zur Wertstellungsberichtigung für diese Originalzahlung eingereicht wurde.

Die Nachricht ist einlieferungsseitig Bestandteil des Input Inquiry Files (IQF), auslieferungsseitig ist sie Bestandteil des Output Inquiry Files (OQF).

## ISO Nachrichtenstruktur

Ein Interbank SCT Inquiry Dataset for Claim for Value Date Correction beinhaltet:

- ein einzelnes „Assignment“ (äquivalent dem Group Header in pacs-Nachrichtentypen)
- einen „Case“, der die SCT Inquiry identifiziert
- ein „Underlying“, das die Transaktionsdaten einer einzelnen zugrundeliegenden Überweisung beinhaltet.
- die Angabe des erwarteten Interbank Settlement Date unter „Modification“

## Assignment

Das Assignment enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

## **Use of Request to Modify Payment (camt.087.001.05)**

This message is used to transport the Claim for Value Date Correction from the Originator Bank to the Beneficiary Bank.

The message caters for a single claim only.

Pursuant to the rulebook, the Claim for Value Date Correction can be initiated within 13 months after the debit date of the concerned SEPA credit transfer. This deadline is not checked in the SEPA-Clearer.

The Inquiry is not relevant for settlement and serves solely to inform the Beneficiary Bank, who then is obliged to actively respond within 10 business days with a positive or negative response (camt.029.001.08).

The SEPA-Clearer carries out a duplication check but does not carry out cross-reference checking. For example, no check is made as to whether the original payment was processed in the SEPA-Clearer or whether a Claim for Value Date Correction has already been submitted with respect to this original payment.

The message is a component of the Input Inquiry File (IQF) on the submitter side and a component of the Output Inquiry File (OQF) on the delivery side.

## **ISO message structure**

An Interbank SCT Inquiry Dataset for Claim for Value Date Correction contains:

- a single “assignment” (equivalent to the group header in pacs messages)
- a “Case” providing the specific SCT inquiry reference
- an “Underlying” containing the transaction data of one individual underlying transfer
- the expected Interbank Settlement Date under “Modification”

## **Assignment**

The “Assignment” contains information required to process the entire message.

## **Verwendung der Resolution of Investigation (camt.029.001.08)**

Diese Nachricht wird verwendet, um auf eine SCT Inquiry-Nachricht (Claim Non-Receipt, camt.027.001.06, oder Claim for Value Date Correction, camt.087.001.05) aktiv zu reagieren.

Gemäß Rulebook hat der Zahlungsdienstleister des Zahlungsempfängers innerhalb von 10 Geschäftstagen auf eine eingegangene SCT Inquiry bzw. eine entsprechende Statusnachfrage zu reagieren (positiv oder negativ). Die Einhaltung dieser Frist wird vom SEPA-Clearer nicht geprüft.

Die Nachricht camt.029.001.08 ist nicht buchungsrelevant, sondern stellt lediglich eine Information an den Initiator der Inquiry-Nachricht dar.

Der SEPA-Clearer nimmt eine Doppeleinreichungskontrolle, aber keinerlei Cross-Referenzierung vor. So wird z. B. nicht geprüft, ob die Originalzahlung über den SEPA-Clearer abgewickelt wurde oder ob überhaupt eine Inquiry-Nachricht vorgelegen hat. Ferner wird nicht geprüft, ob eine Inquiry bereits beantwortet wurde.

Die Nachricht ist einlieferungsseitig Bestandteil des Input Inquiry Files (IQF), im Ausgang Bestandteil des Output Inquiry Files (OQF).

Inter-PSP Negative Response to Claim Non-Receipt (DS-10) – camt.029.001.08

Inter-PSP Positive Response to Claim Non-Receipt (DS-10) – camt.029.001.08

Inter-PSP Positive Response to Claim for Value Date Correction (DS-10) with Request for inter-PSP fee and/or interest compensation – camt.029.001.08

Inter-PSP Confirmed Positive Response to Claim for Value Date Correction (DS-10) – camt.029.001.08

---

## ISO Nachrichtenstruktur

Eine Resolution of Investigation beinhaltet:

- ein einzelnes „Assignment“ (äquivalent dem Group Header in pacs-Nachrichtentypen)
- ein „Resolved Case“
- einen „Status“, in dem ein Code den jeweiligen Anwendungsfall kennzeichnet:

*Interbank Negative Response to Claim Non-Receipt: RJNR*

*Interbank Positive Response to Claim Non-Receipt: ACNR*

*Interbank Negative Response to Claim for Value Date Correction: RJVA oder CVAA*

*Interbank Positive Response to Claim for Value Date Correction: ACVA*

*Interbank Confirmed Positive Response to Claim for Value Date Correction: MODI*

- „Modification Details“, die jeweils die Transaktionsdaten einer einzelnen zugrundeliegenden Überweisung beinhalten.

## Assignment

Das Assignment enthält Informationen, die für die Verarbeitung der gesamten Nachricht benötigt werden.

Inter-PSP Negative Response to Claim Non-Receipt (DS-10) – camt.029.001.08

Inter-PSP Positive Response to Claim Non-Receipt (DS-10) – camt.029.001.08

Inter-PSP Negative Response to Claim for Value Date Correction (DS-10) – camt.029.001.08

Inter-PSP Positive Response to Claim for Value Date Correction (DS-10) with Request for inter-PSP fee and/or interest compensation – camt.029.001.08

Inter-PSP Confirmed Positive Response to Claim for Value Date Correction (DS-10) – camt.029.001.08

---

## **Use of Resolution of Investigation (camt.029.001.08)**

This message is used in order for the creditor to actively respond to a SCT Inquiry (Claim Non-Receipt, camt.027.001.06, oder Claim for Value Date Correction, camt.087.001.05).

Pursuant to the rulebook, the payment service provider of the payee must respond to an incoming SCT Inquiry or corresponding status request within 10 business days (positive or negative response). Compliance with this deadline is not checked in the SEPA-Clearer.

The message camt.029.001.08 is not relevant for settlement and merely represents an information to the party initiating the Inquiry.

The SEPA-Clearer carries out a duplication check but does not carry out a cross reference checking. This means, for example, that no check is made as to whether the original payment has been processed in the SEPA-Clearer or whether an Inquiry has been made at all. Furthermore, it is not checked whether the Inquiry has already been answered.

The message is a component of the Input Inquiry File (IQF) on the submitter side and a component of the Output Inquiry File (OQF) on the delivery side.

Inter-PSP Negative Response to Claim Non-Receipt (DS-10) – camt.029.001.08

Inter-PSP Positive Response to Claim Non-Receipt (DS-10) – camt.029.001.08

Inter-PSP Negative Response to Claim for Value Date Correction (DS-10) – camt.029.001.08

Inter-PSP Positive Response to Claim for Value Date Correction (DS-10) with Request for inter-PSP fee and/or interest compensation – camt.029.001.08

Inter-PSP Confirmed Positive Response to Claim for Value Date Correction (DS-10) – camt.029.001.08

---

## ISO message structure

A Resolution of Investigation contains:

- a single “Assignment” (equivalent to the group header in pacs messages)
- a “Resolved Case”
- a “Status” in which a code implies the use case of the message.

*Interbank Negative Response to Claim Non-Receipt: RJNR*

*Interbank Positive Response to Claim Non-Receipt: ACNR*

*Interbank Negative Response to Claim for Value Date Correction: RJVA oder CVAA*

*Interbank Positive Response to Claim for Value Date Correction: ACVA*

*Interbank Confirmed Positive Response to Claim for Value Date Correction: MODI*

- “Modification Details” containing the transaction data of one individual underlying credit transfer

## Assignment

The “assignment” contains information required to process the entire message.

Request for Status Update on a Request for Recall by the Originator – pacs.028.001.01  
Request for Status Update on a SCT Inquiry – pacs.028.001.01

---

## **Verwendung des Inter-PSP Payment Status Request (pacs.028.001.01)**

Gemäß Rulebook hat der Zahlungsdienstleister des Zahlungsempfängers innerhalb von 15 Geschäftstagen auf einen eingegangenen Recall oder Request for Recall by the Originator zu reagieren. Dies kann in Form einer ablehnenden Antwort (camt.029.001.03) oder in Form einer Rückgabe des Überweisungsbetrages (pacs.004.001.02) erfolgen. Eine SCT Inquiry muss innerhalb von 10 Geschäftstagen beantwortet werden (camt.029.001.08).

Die Einhaltung der genannten Fristen wird vom SEPA-Clearer – in Analogie zu den Verarbeitungspraktiken einiger anderer CSM – nicht validiert.

Sofern der Zahlungsdienstleister des Zahlers innerhalb dieser Frist keine Antwort erhält, hat er die Möglichkeit, dem Zahlungsdienstleister des Zahlungsempfängers einen Request for Status Update (pacs.028.001.01) zu senden, um sich nach dem Stand der Angelegenheit zu erkundigen.

Die Nachricht pacs.028.001.01 ist nicht buchungsrelevant, sondern stellt lediglich eine Information an den Zahlungsdienstleister des Zahlungsempfängers dar.

Der SEPA-Clearer nimmt eine Doppeleinreichungskontrolle, aber keinerlei Cross-Referenzierung vor. So wird z. B. nicht geprüft, ob die Originalzahlung über den SEPA-Clearer abgewickelt wurde oder ob überhaupt ein Recall / ein Request for Recall by the Originator / eine SCT-Inquiry vorgelegen hat. Ferner wird nicht geprüft, ob die Bezugsnachricht bereits beantwortet wurde.

Die Nachricht kann einlieferungsseitig Bestandteil des Input Credit Files (ICF) oder des Input Inquiry Files (IQF) sein, im Ausgang ist sie stets Bestandteil des Output Inquiry Files (OQF).

## **ISO Nachrichtenstruktur**

Ein Interbank Payment Status Request beinhaltet:

- einen einzelnen „Group Header“
- eine „Original Group Information“
- eine oder mehrere „Transaction Information“-Sequenzen, von denen jede Transaktionsdaten eines einzelnen zugrundeliegenden Recall / Request for Recall by the Originator (camt.056.001.01) oder einer SCT Inquiry (camt.027.001.06 oder camt.087.001.05) enthält.

Request for Status Update on a Recall of SEPA Credit Transfer – pacs.028.001.01  
Request for Status Update on a Request for Recall by the Originator – pacs.028.001.01  
Request for Status Update on a SCT Inquiry – pacs.028.001.01

---

## Use of the Inter-PSP Payment Status Request (pacs.028.001.01)

Pursuant to the rulebook, the payment service provider of the payee must respond to an incoming Recall or Request for Recall by the Originator within 15 business days. This can take the form of a negative reply (camt.029.001.03) or the form of a return of the transfer amount (pacs.004.001.02). SCT Inquires must be answered within 10 business days (camt.029.001.08)

Compliance with the mentioned deadlines is not validated in the SEPA-Clearer, by analogy with the processing practices of other CSMs. If the payer's payment service provider does not receive a reply within this deadline, it has the option of sending a Request for Status Update (pacs.028.001.01) to the payee's payment service provider to inquire about the status of the matter.

The message pacs.028.001.01 is not relevant for settlement and merely represents an information to the payee's payment service provider.

The SEPA-Clearer carries out a duplication check but does not carry out a cross reference checking. This means, for example, that no check is made as to whether the original payment was processed in the SEPA-Clearer or a Recall / a Request for Recall by the Originator / an SCT Inquiry has been made at all. Furthermore, it is not checked whether the referred message has already been answered.

The message is a component of the Input Credit File (ICF) or the Input Inquiry File (IQF) on the submitter side and a component of the Output Inquiry File (OQF) on the delivery side.

## ISO message structure

A Interbank Payment Status Request contains:

- a single „Group Header“
- a „Original Group Information“
- one or more „Transaction Information“ sequences, each of which contains the transaction data of an individual underlying SCT Recall / Request for Recall by the Originator (camt.056.001.01) or an SCT Inquiry (camt.027.001.06 or camt.087.001.05).
