Test scenarios and general assumptions

1. Testing principles

- The following fundamental test cases are part of community testing:

Test case ID	Domain	Functionality	Test case name
ECMS_TC_CPTY_13	Monetary Policy Operations	Liquidity providing operations	Successful settlement of a LTRO operation with or without netting
ECMS_TC_CPTY_14	Monetary Policy Operations	Liquidity providing operations	Successful repayment of a LTRO operation at maturity with or without netting
ECMS_TC_CPTY_15	Monetary Policy Operations	Liquidity providing operations	Successful settlement of a non-euro LPO operation with or without netting
ECMS_TC_CPTY_16	Monetary Policy Operations	Liquidity providing operations	Successful repayment of a non-euro LPO operation at maturity with or without netting

ECMS_TC_CPTY_18	Monetary Policy Operations	Liquidity absorbing operations	Successful repayment of a LAO operation at maturity with or without netting

- To be able to conduct tests on open market operations, role no. 65 (ECMS Entity – U2A Open Market Operations Read Only) and role no. 72 (ECMS Entity – U2A Pool Position Execution) are required.

1. Testing principles

- Open market operations in euro are conducted by Deutsche Bundesbank in accordance with the test plan.
- Testing open market operations in foreign currency is only offered to counterparties, who have access to this kind of operation in the production environment at the beginning of the test period.
- Counterparties do not have to take any action to ensure a credit operation's allotment and settlement on its value date.
 - Sufficient collateral will be provided by Deutsche Bundesbank.
 - Allotment amounts are the same for every counterparty in the respective open market operation and will be registered by Deutsche Bundesbank.

1. Testing principles

- Payments in CLM should be checked on settlement and maturity days, but it is also possible to look at them at a later date.
- **Counterparties have to ensure sufficient liquidity in CLM** for the settlement of fixed-term deposits and the maturing of credit operations in euro.
- Some counterparties may depend on their parent to provide liquidity via TARGET/CLM, if liquidity management for their MCA has been transferred to this entity. Consequently, these institutes are responsible for the provision of liquidity (just like in the production environment). The co-managers have already been informed accordingly.
- Counterparties do not have to take any action when open market operations in foreign currency reach maturity.
- Bundesbank's BIC code for open market operations is MARKDEFFCMS.

Please send an e-mail to ecms-test@bundesbank.de in case of questions or if you notice any bugs or abnormalities.
